

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

International Motor Cyclopaedia

SPORT, INDUSTRY AND TRADE

Automobiles, Motorcycles, Motorboats and Aeronautics

YEAR BOOK

1908

A CYCLOPAEDIA giving the modern signification (illustrated by cuts) of technical terms and expressions used in connection with Automobiles, Motorcycles, Motor boats and Aeronautics.

A SPORT AND TRADE DIRECTORY

Arranged alphabetically
by trade, and
geographically

giving the names and addresses of all makers, dealers, American and Foreign, with short biographical sketches of contemporary notables in Motordom, including patrons of the new arts, writers and authors.

A COMPILATION OF

Calendar of Automobile events
Club members
Laws of United States and foreign countries
Touring information and customs regulations
Competitions, American
Competitions, Foreign
Tables of all 1908 cars
Body styles
Tables of horse power.

Copyright 1908 by
AUTOMOBILE TOPICS,
a New York corporation.

INTRODUCTORY

TO THE

INTERNATIONAL MOTOR CYCLOPAEDIA—YEAR BOOK 1908

In this work it is aimed to furnish, in complete form, conveniently arranged and classified, information for the motorist, whether such information relates to the motor itself or to its application, directly or indirectly, to automobiles, boats and aerial vehicles. Every phase and ramification of the subject has been covered, and these pages are believed to constitute a *vade mecum* of this latest and most important art—a handy reference work which may be consulted at all times.

Ten years ago the motor vehicle was still in the experimental stage. To-day it is a transportation necessity, utilized by a vast and steadily increasing number of people and destined to revolutionize existing systems on the land and water and in the air. Hundreds of millions of dollars of capital are invested and hundreds of thousand of people employed in the new art, and the industry has become one of the greatest in the world.

The use of automobiles and motor cycles has accelerated movement on the highways, shortened the distance between the cities and towns and the suburbs and country districts, and is bringing about a complete change in the laws regulating public traffic. In a thousand ways the motor has thrust itself into the social structure and become an inseparable part of every day life. It has enriched the language by the coinage of new terms and by new applications and extension of meanings of existing terms.

Notwithstanding all this the literature of the subject is compressed in the compass of less than a score of volumes; and these volumes are either highly specialized and devoted to one or two phases of the subject or of such a general character that for reference purposes they are of little value.

It is to the utter lack of any single, comprehensive work of reference that the appearance of the INTERNATIONAL MOTOR CYCLOPAEDIA is due.

The want existed. It was felt by the manufacturer, the jobber, the retailer, the garage keeper and by all the thousands of persons engaged or interested in the trade; by the student of the subject, such as the engineer, the designer and the inventor; by the owner or the user of the motor vehicle; by the pressman; and by the legislator and the lawyer. Each has need of it at one time or another. Heretofore the only recourse has been to motoring books, frequently scattered and difficult of access, treating of the subject in a desultory, fragmentary or haphazard way.

To bring all the available information between two covers, to classify and arrange it so that any inquiry could be answered, any topic turned to, without hesitation or delay—this was believed to be the existing need. How well it has been filled these pages will show.

E. E. SCHWARZKOPF, Publisher.

EXPLANATORY

This Year Book—the INTERNATIONAL MOTOR CYCLOPAEDIA, contains:

The modern significance (illustrated by cuts) of technical terms and expressions used in connection with Automobiles (Motor Cars), Motor Boats and Aeronautics.

A Directory—giving the names of everybody connected with the trade, classified

- a—alphabetically.
- b—by trades.
- c—geographically.

Biographical sketches of contemporary notables in Motordom—engineers, designers, makers, inventors, record holders, editors and patrons of the new arts—that is users.

Calendar of Automobile Events.

Club Members.

Laws of United States and Foreign Countries.

Touring Information and Customs Regulations.

Competitions, American.

Competitions, Foreign.

Tables of all 1908 Cars.

Body Styles.

Tables of Horse Power.

Following are a few of the thousands of questions which are daily asked in connection with the new arts:

Will you explain exactly what "compression" in the motor means?

I heard something of "self-starters." Can you tell me who manufactures them?

Will you tell me something about the notable automobile engineers, Charles Schmidt and A. L. Riker?

Who is the designer of the Pierce Arrow?

Where can I find the Eisemann Magneto in America?

In what year was the first Vanderbilt race run, who was the winner, and what was his average speed?

What are the automobile laws and regulations in Iowa?

In what year was the first Royal Tourist marketed?

What are the tariff duties in Austria on American automobiles?

Who is the Baltimore agent of the Stoddard-Dayton?

How can I join the A. A. A.?

Most of the above questions can be answered by consulting 20 or 30 different publications, which would take considerable time, but there is not a single publication now in existence which answers all these questions.

The INTERNATIONAL MOTOR CYCLOPAEDIA, which is here presented, will permit anybody who knows how to use a dictionary to get the information desired immediately. Every friend or adept of the automobile, motor boat or aerial navi-

gation, the engineer, the designer, the manufacturer, will use the Motor Cyclopaedia in order to obtain precise and immediate information.

The Cyclopaedia will be found in all libraries, public or private, newspaper offices, counting rooms, homes, social clubs, as well as automobile clubs, motor boat clubs, aero clubs, country clubs and hotels all over the world.

As the title "Year Book" implies, this work will be published yearly.

Expressions change continually as well as addresses. Such changes when occurring will be recorded in the succeeding Year Book.

An undertaking of such magnitude as the INTERNATIONAL MOTOR CYCLOPAEDIA cannot be perfected at the outset. The co-operation of its readers is essential, therefore, both in supplying omissions and in calling attention to such errors as may have crept in the present edition, as well as in suggesting additions or new features for future editions of the work.

The publishers have spared no expense and no labor to make the INTERNATIONAL MOTOR CYCLOPAEDIA complete and accurate, and they believe that they have succeeded measurably well. Criticisms of the volume herewith submitted are invited and will meet with due consideration.

A Technological Reference Book

A

A.—The symbol for "ampere."

a.—The first letter of the Greek alphabet, usually designates an "angle."

A-h.—Abbreviation of the expression "ampere-hour."

A-t.—Abbreviation of the expression "ampere-turn."

A. & J. Mfg. Co.—26 W. Randolph St., Chicago, Ill. Mfrs. crank hangers, brackets for motor cycles, brazing compounds for cast iron. Cap. \$2,000. Est. 1898. Charles L. Jenness, Pres. and Treas.; Howard C. Runsey, Sec.

A-Z Co., The.—527 W. 56th St., New York City. Mfrs. radiators, hoods, mud guards, sprocket covers, tanks, racing bodies, metal dashes, special fittings, aluminum brazing and beating, metal hampers and trunks, metal tool boxes, fans, mufflers, pipe and tube bending and brazing, repairing of all kinds. Member M. & A. M. Cap. \$5,000. Est. Sept., 1904. J. E. Woodbridge, Pres., Mgr. and Treas.; R. S. Woodbridge, Sec.

A. B. C. Motor Vehicle Co.—1512 Locust St., St. Louis, Mo. Makers of the A. B. C. car. First marketed, Oct., 1906. Two models made in 1907, six in 1908. Cap. \$45,000. A. B. Cole, Pres.; R. L. Steele, Vice-Pres.; H. C. Cole, Sec. and Supt.; F. E. Strous, Gen. Mgr., Treas., Pur. Agt., Sales and Advt. Mgr.; Louis Goss, Designer.

Aachener Stahlwarenfabrik Actien Gesellschaft.—Aix-la-Chapelle, Germany. Mfrs. automobiles, gas. (Fafnir cars); motors.

Abaft.—On the aft or hind part of a boat.

Abbe, A. N.—Pur. Agt. Corbin Motor Vehicle Corp., New Britain, Conn.

Abbey & Co., P. L.—Kalamazoo, Mich. Mfrs. emergency accident cabinets.

Abbott, A. J.—Pres. National Spring & Wire Co., Albion, Mich.

Abbot's Garage.—Fort Worth, Tex. (Buick); garage.

Abbott's Garage.—West Derry, N. H. Garage.

Abbot, W. H.—1263 Broadway, New York City. Mfrs. monograms, name plates.

Abbott, W. H.—Hudson, Mich. (Jackson.)

Abeam.—Opposite the center of a boat's side; on a line which forms a right angle with it.

Abell, Rollin.—370 Atlantic Ave., Boston, Mass. Mfrs. steam engines.

Abel Mfg. Co.—1112 Great Northern Bldg., Chicago, Ill. Mfrs. lamps.

Abelos, H.—11 rue Raspail, St.-Ouen, France. Mfr. spark plugs.

Abendroth & Root Mfg. Co.—Newburgh, N. Y. Mfrs. automobiles, gas. (Frontenac.)

Abercrombie & Fitch.—57 Reade St., New York City. Mfrs. collapsible buckets, auto covers.

Aberdeen Auto Co.—Aberdeen, So. Dak. (Cadillac.)

Abraham, Lawrence.—Member Long Island A. C., A. C. A. B., Dec. 3, 1872, at Brooklyn, N. Y. Graduate Cornell, 1895, degree B. L. Business, dry goods, 422 Fulton St. Res. 800 St. Marks Ave., Brooklyn, N. Y. Owned Locomobile steamer in 1902.

Abrahamson, H. A.—Pres., Sec., Treas. and Gen. Mgr. The Robert Instrument Co., 56 Shelby St., Detroit, Mich.

Abrams, Chas. E.—Chatham, N. Y. Repairing.

Abrasive.—Any hard substance for grinding or wearing away a softer substance. See Carborundum and Emery.

Abresch Co., Charles.—389 4th St., Milwaukee, Wis. Mfrs. wood and metallic bodies, auto tops.

Acceleration.—The variation in speed that a body undergoes in a unit of time. It is positive or negative, according as the speed increases or diminishes. It is expressed in feet per second per second.

If a body of a mass M be submitted to a force constantly equal to F it will undergo an acceleration expressed by the formula $a=F$.—"Angular acceleration" is the rate of increase of angular velocity (q.v.).

Accelerator.—A combination of levers and rods which can be actuated by the driver of a motor-car at will, and the object of which is to modify the action of the governor in order to increase the speed of the car.

The accelerator is, in most cases, controlled by a small pedal which is pulled back to its natural position by a spring as soon as the pressure of the driver's foot has ceased. It is sometimes also controlled by a lever or by a handle on the steering-wheel.

Accelerator-pedal.—See Pedal.

Accessories.—A term by which is to be understood all those objects which do not form an integral and constituent part of the frame or carriage-work of a motor-vehicle, such as the annunciator, lamps, horns, sirens, air-pumps, etc.

Accumobile.—A name proposed, but seldom employed, for an automobile actuated by accumulators.

Accumulateurs, T. E. M.—24 rue Folie-Méricourt, Paris, France. Mfrs. storage batteries.

Accumulator.—See Cell, Storage.

Acetone.—An inflammable, colorless, limpid liquid of an ethereal odor, having the chemical formula C_3H_6O and density of 0.81. It boils at $55.5^\circ C.$ ($132^\circ F.$), and the density of its vapor (referred to air) is 2.022. It has the peculiar property of dissolving many times its volume of acetylene gas, the amount varying with the pressure to which it is submitted. It burns with a bright blue flame in giving out acetic acid. It is miscible in all proportions with water, alcohol and ether.

Acetone is used in the automobile industry, (1) as a solvent of acetylene, (a) for automobile searchlights, (b) for certain soldering operations by the oxy-acetylene blowpipe; (2) as a solvent of celluloid for cementing accumulator troughs, and (3) as a carburetting agent in gas motors.

Acetylene.—A colorless gas with the formula C_2H_2 and density of 0.92, produced by the action of water upon calcium carbide. One pound of the latter with a little over half its weight of water will liberate $5\frac{3}{4}$ cubic feet of gas. It has a heat capacity of 18,260 B.t.u. per pound, or 1500 to 1558 per cubic foot, and weighs 0.0725 pound per cubic foot, or occupies $14\frac{1}{2}$ cubic feet to the pound. It has been compressed to a liquid at $20^\circ C.$ ($68^\circ F.$) by a pressure of 600 pounds per square inch. In burning, it gives a light next in brilliancy and beauty to the electric arc, if care be taken to use it under a certain pressure in burners with a very small aperture. In most cases such burners are provided with convergent tips which cause the jets of gas to meet and spread out in the form of a

wide, flat flame, which, on account of the wide surface of air with which it thus comes into contact, is very free from smoke. Standard acetylene burners yield 24 candle-power per $\frac{1}{2}$ foot of gas consumption per hour. Acetylene is largely used for lighting motor-car lamps, yacht and buoy lamps, etc. It has also been employed to a certain extent for operating vehicle motors, but thus far has been found too costly for such service. See Carburetter.

The piping for acetylene should be of iron, lead, brass or rubber, but never of copper, which forms with acetylene an explosive compound.

Acetylene, dissolved.—Acetylene dissolved in acetone, which possesses the remarkable property of being able to absorb twenty-five times its own volume of acetylene at atmospheric pressure, and at a temperature of $60^\circ F.$, its power of absorption increasing proportionately with the pressure. Compressed in cylinders it is used as an illuminant.

Acetylene Gas Illuminating Co.—105 Walker St., New York City. Mfrs. French "Candy" carbide, acetylene burners, acetylene tanks and generators. Cap. \$50,000. Est. 1897. E. Thomey-Cavalleris, Pres. and Treas.; Wm. H. Babcock, sec.; K. C. Thomey-Cavalleris, Vice-Pres.

Acetylene Generator.—An apparatus in which acetylene gas may be constantly produced through the action of water upon calcium carbide in quantities sufficient to keep one or more motor-car lamps supplied.

Acetylene Journal.—324 Dearborn St., Chicago, Ill. Pub. monthly by the Acetylene Journal Pub. Co.

Acetylite.—Calcium carbide treated with glucose, and having the property of regulating the action of water on the carbide in such a way as to render the production of acetylene slower and more uniform.

Acetyvone Co.—38 Park Row, New York City. Mfrs. carbide, acetylene generators.

Achard-Fontanel et Cie.—48 Chemin Ste-Geneviève, Lyon, France. Mfrs. bodies.

Achenbach und Co.—Hamburg, Germany. Mfrs. automobiles, gas. (Hexe cars.)

Acid, Chromic.—An acid in the form of quadrangular crystals of a deep red color. It is used in solution as a depolarizer in primary battery cells.

Acid Cure.—A preparation employed for patching rubber tires, and which produces an effect similar to vulcanization.

Acid, Hydrochloric.—A colorless gas ($H. Cl.$) with a keen acid smell, and very soluble in water. The solution of the gas found in commerce is a yellow

liquid commonly called "muriatic acid," or "spirits of salt." Scrap zinc added to the acid until it is neutralized, or, to use the popular term, "killed," is used in soldering. See Soldering.

Acid, Picric or Carbazotic.—An organic compound obtained by the action of concentrated nitric acid upon phenic acid or phenol, whence its scientific name of trinitrophenol.

It forms prismatic sulphur-colored crystals having an intensely bitter taste, sparingly soluble in water, but quite soluble in alcohol and ether. It fuses at 122° C. (251.5° F.). Heated suddenly it detonates. When fused it constitutes an explosive of great power, and is dangerous only in this or a highly compressed state.

Gasolene will absorb about 5 per cent. of its weight of picric acid, but the addition of a small quantity of kerosene will enable it to take up at least 10 per cent.

An increase of motor efficiency of from 15 to 20 per cent. is claimed for the picric gasolene mixture. About five ounces of the acid are required for each gallon of gasolene. The mixture should be allowed to stand for two days, with occasional agitating and then be filtered.

The explosive force of the acid is said to be very much overrated. In aqueous solution, picric acid is extremely efficacious against burns. It relieves the pain and hastens cicatrization. It should be applied in the form of a compress of picric gauze, or of a local bath immediately after the accident.

Acid Process.—The early form of the Bessemer process of steel making, in which the converter had a lining containing a high percentage of silica. This silicious or "acid" lining fails to remove phosphorus from the iron and has been replaced by the "basic process."

Acid, Sulphuric.—An acid resulting from the combination of sulphur and oxygen united with water. Its chemical formula is $\text{SO}_4 \text{H}_2$. It is used in the refining of petroleum products, in the manufacture of gun-cotton (for celluloid) and leather. It is utilized also for forming the electrolytic liquid of ignition accumulators, and enters into the composition of the exciting liquids of charging batteries.

Sulphuric acid, called also "oil of vitriol," is a colorless, odorless liquid of an oleaginous consistency, and for accumulator use should be free from arsenic, and, what is more important still, should be chemically pure.

Acidimeter.—A hydrometer for determining the specific gravity of acid used in running storage batteries, to determine when the charging is completed.

Acker, H.—Tottenville, Staten Island. Mfr. motor boats.

Ackerman, E. L.—Sec. and Treas. Jos. N. Smith & Co., Fourth and Porter Sts., Detroit, Mich.

Ackerman, W. K.—Pur. Agt. Reliance Motor Car Co., 89 Fort St., East, Detroit, Mich.

Ackerson, Chas. L.—Mgr. and Treas. Syraeuse Aluminum & Bronze Co., 530 Leavenworth Ave., Syracuse, N. Y.

Acme Auto Co.—310 Liberty St., Troy, N. Y. (Mora.)

Acme Automobile Co.—3944-46 Olive St., St. Louis, Mo. (Reo.)

Acme Fdry. Co.—Sweeney St., Cleveland, Ohio. Mfrs. gray iron castings.

Acme Garage.—443-445 Fourth St., Brooklyn, N. Y. Garage.

Acme Garage Co., Inc.—13th and Tacoma Ave., Tacoma, Wash. Garage. (Cadillac, Knox, Winton.)

Acme Motor Car Co.—8th and Elm Sts., Reading, Pa. Makers of the Acme car. First marketed, 1900. Seven models made since. Cap. \$300,000. H. M. Sternbergh, Pres. and Gen. Mgr.; R. E. Graham, Vice-Pres., Sales and Advt. Mgr.; H. L. Hoff, Sec., Treas. and Pur. Agt.; R. A. Hardy, Designer; O. H. Bickel, Supt. Agents: Scull, John I., 258 N. Broad St., Philadelphia, Pa.; Boston Motor Co., 43 Columbus Ave., Boston, Mass.; Keystone Motor Car Co., 644 Telegraph Ave., Oakland, Cal.; J. W. Mears, 9 Ocean Parkway, Brooklyn, N. Y.; Manhattan Motor Car Co., 1329 Michigan Ave., Chicago, Ill.; Pecos Auto Co., Pecos, Tex.; Arlington Motor Car Co., 5971 Center Ave., Pittsburg, Pa.; Brewster & Co., J. B., 7th Ave. and 49th St., New York City.

Acme Motor Co.—302 W. 8th St., Reading, Pa. Garage. (Acme.)

Acme Oil & Supply Co.—345 So. Canal St., Chicago, Ill. Mfrs. grease, oils, auto body soaps.

Acme Oil Engine Co.—Union Ave., near R. R., Bridgeport, Conn. Mfrs. motors (kerosene).

Acme Rubber Co.—925 Jefferson Ave., Toledo, Ohio. Garage and rental business; vulcanizing.

Acme Spring Check Co.—1717 Broadway, New York City. Mfrs. shock absorbers.

Acme Steel & Malleable Iron Works.—245 Military Rd., Buffalo, N. Y. Mfrs. steel and malleable iron castings. Est. 1895. E. G. Fetchonsen, Prop.

Acme White Lead & Color Works.—Detroit, Mich. Mfrs. paints, enamels and varnishes. Acme system automobile methods of finishing. Cap. \$1,250,000. Est. 1884. Wm. L. Davies, Pres.; Thos. Neal, Sec. and Gen. Mgr.; H. Kirke White, Vice-Pres.; A. E. F. White, Treas.; R. S. Brown, Sales Mgr. automobile Dept.

Acorn Brass Mfg. Co.—51 No. Peoria St., Chicago, Ill. Mfrs. timers, priming cups, carburetters, contract work. Cap. \$200,000. Est. 1890.

Active Auto Co.—605 Van Ness Ave., San Francisco, Cal. (Mora, Commerce.)
Acton Garage.—137 W. 89th St., New York City. Garage.

Adair, Robt. M.—Shop Supt. Union Automobile & Supply Co., Plainview, Tex.

Adamie e Co.—10 via Artisi, Florence Italy. Mfrs. automobiles, gas. (Rondine cars); motors (auto).

Adam.—Leipzigerstrasse 27, Berlin, Germany. Mfrs. wearing apparel (fur hats, fur caps, fur coats).

Adamite Abrasive Co.—Schenck St., Tonawanda, N. Y. Mfrs. emery wheels.

Adams & Elting Co.—155 W. Washington St., Chicago, Ill. Mfrs. enamel, paints, auto body polishes, metal polishes, varnishes.

Adams & Engs.—1712 Michigan Ave., Chicago, Ill. (Frayer-Miller, Earl.)

Adams & Hart.—47 N. Division St., Grand Rapids, Mich. (Indian, Franklin, Elmore, Peerless.)

Adams Automobile Co.—Winona, Minn. (Cadillac.)

Adams Co., The.—4th and White Sts., Dubuque, Ia. Makers of the Adams Farwell car. Mfrs. special automobile machinery. First automobile made in 1898 for private use, four models marketed since. Cap. \$100,000. Eugene Adams, Pres.; Herbert Adams, Sec. and Treas.; F. O. Farwell, Gen. Supt.

Adams Co., The.—Dubuque, Iowa. Mfrs. special automobile machinery.

Adams, Eugene.—Pres. The Adams Co., Dubuque, Iowa.

Adams, A. L.—45 Salem St., Worcester, Mass. Mfrs. hydrometers.

Adams, B. F.—Mgr. White Co., 16-18 R. R. Place, East Orange, N. J.

Adams, George S.—74 Grove Ave., Elgin, Ill. Garage.

Adams, H.—Tunbridge Wells, England. Mfrs. jacks.

Adams, Herbert.—Sec. and Treas. The Adams Co., Dubuque, Iowa.

Adams, Henry J.—Tiffin St., Fostoria, Ohio. (Reo.)

Adams Mfg. Co.—147 Queen Victoria St., London, England. Mfrs. automobiles, gas. (Adams.)

Adamson, Prescott.—Broad and Spring Garden Sts., Philadelphia, Pa. (Columbia, Renault.) Est. 1906. Repairing.

Adams, S. L.—Joplin, Mo. (Cadillac.)
Adams, W. J.—Hanover, Pa. (Maxwell.)

Adams, Wm. F.—339 Broadway, New York City. Mfr. cloth and carpet trimmings.

Adapt Machinery Co., The.—1624-34 Wabash Ave., Chicago, Ill. Mfrs. glass wind shields, automobile bumpers, gears, lubricators, springs, luggage carriers, chain tools and special gears to pattern; automobile repairing.

Addendum.—The difference between the real and the geometrical radius of a circular gear-wheel, that is to say, between the radius of the pitch-circle and the outer circle which touches the crests of the teeth. See Pitch Circle.

Adelsperger, C. C.—Sec. Union City Body Co.; factory West Pearl St., Union City, Ind.

Ader, Ltd., Société des Anciens Etablissements.—40 ter, ave de Suffren, Paris, France. Mfrs. automobiles, gas; automobiles, gas, commercial. (Ader cars and trucks.) Automobile motors, marine motors.

Adhesion.—The adhesion of two bodies is the force of friction developed by their contact and offering an opposition to their relative displacement. It is the friction corresponding to the unit of normal pressure. In designating it by f and the normal pressure by P , the force of friction Q will be expressed by the formula:

$$Q = Pf.$$

The friction therefore depends only upon the co-efficient f and upon the normal load P . It is independent of the surface of friction. In the case of parts of machines that have to slide upon each other, a wide development is given to the rubbing surfaces only with a view to reducing the wear.

The co-efficients of friction applying to journals and to sliding parts of cast iron vary from 0.07 to 0.1 with ordinary lubrication, and from 0.035 to 0.055 with continuous lubrication. The minimum values relate to polished steel rubbing upon hard bronze and to well polished cast iron. Iron journals exhibit black specks that necessitate an abundant lubrication and interfere with a perfect polish.

With metallic brakes it is perfectly safe to take $f=0.2$ (bronze upon cast iron dry and in motion) and $f=0.3$ (cast iron upon cast iron in the same conditions) in preference to soft iron upon hard iron. The friction diminishes when the velocity increases, in a proportion which is far from being negligible, contrary to the opinion that is generally held. Thus, the braking stress of a train at speeds of from 60 to 75 miles an hour is equal to half the stress obtained at the reduced speed of 20 miles an hour, with the same pressure of brake-shoes.

The adhesion of pneumatic tires to the ground probably greatly diminishes when the speed of the vehicle increases.

The adhesion of a belt or brake-band

upon a pulley permits of balancing a force, applied to one extremity by a force, much less, applied to the other extremity.

Adiabatic.—In thermodynamics, pertaining to a process that occurs without the transference of heat from or to the body concerned. Adiabatic compression is such compression of a fluid that no heat leaves or enters it. Adiabatic expansion is a form of expansion that takes place in a gas when there is no means of keeping up the temperature of the gas in the cylinder as it expands, but in which the gas cools by an amount equal in heat units to the external work overcome by the piston when driven by such expanding gas. Adiabatic curve or line is a curve or line that shows graphically the change in volume or degree of pressure of a fluid under adiabatic compression.

Adie & Nephew, Ltd.—156 Warstone Lane, Birmingham, England. Mfrs. tire pumps.

Adirondack Automobile Club.—E. E. Rugus, Sec., Sandy Hill, N. Y. Member A. A. A.

Adirondack Auto Co.—Lake Placid, N. Y. (Cadillac, Thomas, Indian.) Est. 1904. Cap. \$200,000. Godfrey Dewey, Mgr.; Henry Van Hovenberg, Engineer. Garage, 15 cars; repairing; supplies.

Adjustment.—Such regulation of an apparatus as will permit it properly to perform its functions.

Adland Motor Co.—900-902 Madison St., Chicago. (Lambert.)

Adland Storage & Auto Co.—240 7th Ave., Minneapolis, Minn. Garage.

Adler Fahrradwerke Vorm. Heinrich Kleyer.—Frankfort-am-Main, Germany. Mfrs. motorcycles, automobiles, gas.

Admission.—In a steam-engine the admission of steam into the cylinder. In such an engine, the admission stroke is the power stroke. It comprises two periods: the introduction, properly so-called, which lasts during a more or less important fraction of the stroke; and the expansion of the steam, which begins at the closing of the introduction and ceases at the opening of the exhaust. The opening and closing of the admission ports are assured by the distributing organs of the engine. In a gas-motor the admission stroke is a passive working one, in other words, a resistant stroke, since the piston has to suck in the mixture which will afterward be compressed before "exploding." In the gas-motors employed in automobilism, the admission generally utilizes the entire stroke. The quantity of the mixture sucked in is varied by throttling the current of gas or by preservation of a residuum of burned gases. See Suction.

Admission Pipe.—Called also "inlet pipe" and "intake pipe. See Pipe, Inlet.

Admission Valve.—See Valves.

Adolf Ungers Industrialstiebolag.—Arbra, Sweden. Mfrs. motors (auto).

Adrian Steel Casting Co.—Beecher St., Adrian, Mich. Mfrs. steel castings. Cap. \$30,000. Est. 1904. Geo. B. M. Seager, Pres.; H. Withington, Vice-Pres.; E. N. Smith, Treas.; O. T. Palmer, Sec.; Amos M. Kells, Gen. Mgr.

Advance Automobile Co.—18 St. Clair St., Cleveland, Ohio. Garage.

Advance Mfg. Co.—"B" St., 2 blocks north of Main St., Hamilton, O. Mfrs. gasoline motors; transmissions. Cap. \$35,000. O. N. Ritchie, Gen. Mgr. and Sole Proprietor.

Advance Mfg. Co.—Todd Bldg., Kalamazoo, Mich. Mfrs. babbitt metals, brass and copper metals.

Adwear Auto Tire Sleeve Co.—High and Washington Sts., North Attleboro, Mass. Mfrs. anti-skid devices, tire sleeves, tire treads.

A. E. C. Société.—24 rue Folie-Méricourt, Paris, France. Mfrs. spark plugs.

Aero & Marine Motor Co.—60 Pemberton Square, Boston, Mass. Mfrs. marine and aeronautical motors. Cap. \$200,000. Est. 1906. Geo. J. Altham, Pres., Designer and Factory Mgr. at Fall River, Mass. Thos. G. Washburn, Gen. Mgr. and Treas.

Aerocar Motor Co.—Detroit, Mich. Makers of the Aerocar.

Aero Club of America.—12 East 42nd St., New York City. Cortlandt Field Bishop, President; J. C. McCoy, Colgate Hoyt, Dave H. Morris, Vice-Presidents; Chas. Jerome Edwards, Treas.; Augustus Post, Sec'y.; Ernest La Rue Jones, Assistant Secretary. Organized Nov. 1, 1906, to "advance the development of the science of aeronautics and kindred sciences; to encourage and organize aerial navigation and excursions, conferences, expositions, congresses and races; to hold, maintain and conduct games, meets, contests, exhibitions and shows of airships, balloons or other inventions or constructions, designed to be propelled or travel through the air or otherwise; to maintain a club house or club houses, aero garages and other houses, club grounds, electric and gas equipments and other accessories, aeronautic or otherwise, incidental to the business of the corporation upon such terms as the Board of Directors may from time to time provide; to do everything necessary, suitable and proper for the accomplishment of any of the purposes or the furtherance of any of the powers hereinbefore set forth, and to do every act or acts incidental or appurtenant to or connected with the aforesaid business, sports

or powers or any part or parts thereof, provided the same be not inconsistent with the laws under which this corporation is organized." Former President, Captain Homer W. Hedge. Conducted exhibition in 69th Regiment Armory, New York City, January, 1906; exhibited in Grand Central Palace, December, 1906, and October, 1907. Promoted 33 balloon ascensions during 1906; won Gordon-Bennett Cup September 30, 1906; offered Lahm Cup for competition among balloonists, March, 1907. Organized and conducted second annual competition for Gordon-Bennett International Cup Race, St. Louis, Mo., October, 1907. Organized aeronautic exhibit in first building in history of expositions to be erected solely for aeronautics at Jamestown Exposition; held aeronautic congress, Jamestown Exhibition, October 28-29, 1907.

Aero Club de Belgique.—(Belgian Aero Club), Brussels, Belgium.

Aero-Club of France.—Society for the encouragement of aerial locomotion, 84 Rue du Faubourg-Saint-Honoré, Paris (Elysée). The Aero-Club of France, which embraces in its membership of 600 individuals the majority of the sporting and scientific men of France, who are interested in the progress of aerial locomotion, is at present the most important association of aeronauts. The president of the club is M. L. P. Cailletet, and the secretary general is M. George Besancon. The members of the club are entitled to numerous privileges that the committee, which meets monthly, is endeavoring to increase. At the club house there is a library, a reading and correspondence room, a bureau of information, telephone, etc. At the Park of Coteaux de Saint Cloud there is material for the inflation of balloons, a special gas intake, a vast shed capable of housing fully inflated balloons, grounds for the starting of ten balloons, an automobile garage, a lounging room for the members of the club, tennis courts, croquet grounds, a park open the entire year, etc.

Aero Club of Philadelphia.—Philadelphia, Pa. Sec., E. A. Auster, 713 Chestnut St., Philadelphia, Pa.

Aero Club Suisse.—(Aero Club of Switzerland.) Zurich, Switzerland. (Member F. A. I.)

Aero Club of the United Kingdom.—110 Picadilly, London, W., England. E. O. Pope, Sec. (Member F. A. I.)

Aerodrome.—A piece of ground set apart and specially arranged for the maneuvering and ascension of all kinds of aeronautic apparatus, and provided with a building for the storage and care of the same. (2). A name applied by the late Prof. S. P. Langley to a form

of aeroplane devised and experimented with by him.

Aeronaut.—One who navigates the air; a balloonist.

Aeronaute, L'.—19 rue Blanche, Paris, France. Aeronautical publication.

Aeronautical Journal, The.—Gough Square and Bolt Court, London, E. C., England.

Aeronautic Club of France.—58 Rue Jean-Jacques-Rousseau, Paris. Society for the popularization of aeronautic science founded in 1897. President, M. Saunier; secretaries, M. Roger Aubry and M. Riberyre. The Aeronautic Club of France is the sole society of the kind that permits its members to participate in ascensions, gratuitously and by turns.

Aeronautics.—The science of floating in or navigating the air. It involves the two departments of "aerostatics" and "aerodynamics," and the branch of mechanics termed "pneumatics." It includes all forms of aerial navigation.

Aeronautique L'.—58 rue Jean-Jacques-Rousseau, Paris, France. Published by the Aeronautic Club of France.

Aerophile L'.—84 rue du Faubourg Saint-Honoré, Paris, France. Monthly aeronautical magazine.

Aeroplane.—See Aviation.

Aerostat.—An apparatus for sustaining weights in the air: a balloon, a flying-machine.

Aerostatics.—That department of the science of mechanics which treats of the weight, pressure and equilibrium of aeriform fluids and of equilibrium of bodies sustained by them.

Aerostation.—The art or practice of aerial navigation.

Aerostation, L'.—14 rue des Goncourt, Paris, France. Aeronautical publication.

Aetna Brass Mfg. Co.—4800 Hamilton Ave., Cleveland, O. Mfrs. auto hinges, threadles, brass, bronze and aluminum goods of all descriptions. Cap. \$10,000. Est. May 1, 1906. W. J. McGrath, Pres. and Treas.; Thos. J. Flanigan, Vice-Pres. and Sec.

Aft.—At or toward the stern of a vessel.

After-burning.—The continued combustion of the charge after the explosion has occurred in a gas-motor.

After-firing.—A series of violent explosions in the muffler (sometimes incorrectly called "back-firing"), commonly caused by misfires in one or more cylinders, permitting of the accumulation in the muffler of unburned gas, which is ignited by the heat of the walls or by the exhaust of the firing cylinders.

Agou & McLagou.—1131 Welton St., Denver, Col. Repairing.

Aguayo, J.—Cochabamba, Bolivia. (Knox.)

Ahreleger, F. W.—Fredericksburg, Tex. (Waltham.)

Ahren, Fred.—Vice-Pres. and Supt. of Works, Waukesha Motor Co., 110 North St., Waukesha, Wis.

Aide-Memoire de L'Automobile.—(Automobile Law publication), Paris, France.

Aigle.—65 rue de Lafayette, Paris, France. Mfrs. automobiles, gas. (Aigle cars.)

Aiken, John P.—Sec., Gen. Mgr., Pur. Agt., Sales and Advt. Mgr., Bellefontaine Automobile Co., Bellefontaine, Ohio.

Ainslie, Geo.—1140 Dean St., Brooklyn, N. Y. Rental service.

Air.—Atmospheric air is a mixture, by volume, of 21 per cent. oxygen, 78 nitrogen, and 1 argon; and, by weight, of 23 oxygen, 75.66 nitrogen, 1.34 argon, with variable quantities of aqueous vapor, carbon dioxide, ammonia, ozone, acid compounds of nitrogen and sulphur, and small amounts of many other gases. 100 cubic inches at 60° F. (15.5° C.) and 30 inches barom. weigh 30.935 grains, and hence a cubic foot weighs 536.96 grains, which is 1-816 of the weight of a cubic foot of water at the same temperature. One pound of it occupies 13.8 cubic feet of space. It is the resistance of the air that is the principal obstacle to the speed of motor vehicles. Such resistance is further increased by the live force of the air in motion, the velocity of which varies from that which scarcely moves a leaf to that which levels a forest.

VELOCITY AND FORCE OF WIND.

	Velocity in miles per hour.	Force in pounds.
Hardly perceptible	1	
Gentle breeze	4	
Pleasant wind	6	
Brisk wind	10	
Very brisk wind	18	1.3
	15	
High wind	25.5	2.6
Very high wind	36	5.2
Storm wind	50	10.4
Great wind	62	15.6
	76	20.8
Hurricane	80	26.
	88	31.25
	95.2	36.5
Violent hurricane	101.6	41.7
	108	46.9

The resistance of the air, which is of slight consequence in the case of low speeds, becomes of considerable importance when a car attains a speed of 10 or 15 miles an hour.

The horse-power required to drive an automobile against the resistance of the air may be approximately calculated by the formula:

$$H.P. = \frac{V^3 \times A}{240,000}.$$

Where V is the velocity of the car in feet per second, A the projected area of the front of the car in square feet, and H.P. the horse-power required to overcome the resistance of the air.

To find approximately the horse-power required to drive a car against a wind of known velocity, the speed of the car must be added to that of the wind, and the horse-power may be found either by the use of the above formula or by reference to the following table, which gives the horse-power per square foot of projected surface necessary to propel a car against the resistance of the air, with varying speeds in miles per hour or velocities in feet per minute:

Miles per hour of car.	Feet per second.	H. P. per sq. ft. of surface.
10	14.7	0.013
15	22.7	0.44
20	24.6	0.105
25	36.7	0.205
30	44.	0.354
40	58.7	0.84
50	73.3	1.64
60	87.9	2.83
80	117.3	6.72
100	146.6	13.12

Air-bound.—See Air Lock.

Air Cooling.—See Cylinder Cooling.

Air-gap.—In a dynamo or electric motor, the space that intervenes between the poles of the field magnet and the armature. See Spark Gap.

Air-gauge.—See Gauge, Air.

Air-hole.—The same as Blow-hole, q. v.

Air-inlet.—A circular opening in the float chamber of the carburetter to permit of the entrance of air.

Air-inlet, Auxiliary.—An inlet in the carburetter, between the needle-valve and the motor cylinder to allow additional air to enter when the motor is running at extremely high speed.

Air-lock.—A trouble sometimes experienced with tube radiators through a small quantity of air becoming enclosed in the bend of one of the tubes and preventing the circulation of the water.

Air-pump.—See Pump, Air.

Air-regulator.—A device for varying the proportions of hot and cold air admitted to the carburetter.

Air-ship.—See Balloon, Dirigible.

Air-valve., Automatic.—See Valve, Air.

Ajax.—80 Hirschengraben, Zürich, Switzerland. Mfrs. automobiles, gas. (Ajax.)

Ajax-Grieb Rubber Co.—Trenton, N. J. Mfrs. automobile tires and moulded rubber specialties. Member M. & A. M. Cap. \$400,000. Est. Nov. 14, 1905. Horace DeLisser, Pres.; Wm. G. Grieb, Vice-Pres.; Harry Grieb, Sec. and Treas.; Louis P. Destribats, Supt. Branches: 57th St. and Broadway, New York City; 1418 Michigan Ave., Chicago, Ill.

Aker, E. S.—Pres. Victor Shock-Ab-

sorber Co., 1937 Broadway, New York City.

Akron Automobile Club.—Dr. F. W. Work, Sec., Akron, Ohio. Member A. A. A.

Akron Automobile Garage.—Cor. Main and Cedar Sts., Akron, Ohio. (Franklin, Winton.) Supplies; garage; repairs.

Akron Pneumatic Tire & Protector Co.—Akron, Ohio. Mfrs. anti-skid devices, tire shoes, tire sleeves, vulcanizers.

Akron Mfg. Co.—927 So. High St., Akron, Ohio. Mfrs. oil cans, tire treads.

Aktiebolagge Davy Robertsons Wasinfabrik, Guldbrasens & Son.—Göteborg, Sweden. Mfrs. motors (motor-cycle).

Aktiebolagge Octopedmotorbiblioteks-golau—Stockholm, Sweden. Mfrs. motors (auto).

Aktiengesellschaft vorm, J. Merlich.—Sophienstrasse 21, Berlin, Germany. Mfrs. chains.

Alameda County Automobile Club.—F. F. Weston, Sec., 1392 Webster St. Oakland, Cal.

Alameda Island Auto Club.—Alameda, Cal.

Alarm, Low-water.—A device used on steam-carriages, and which is so constructed that when the water from the boiler has fallen below the desired level a valve is opened and steam admitted to the whistle.

Albany Automobile Club.—C. D. Hakes, Sec., 61 Lancaster St., Albany, N. Y. Member A. A. A.

Albany Automobile Co.—Albany, Ind. Makers of the Albany runabout and surrey. First marketed May 14, 1907. Five different models made since. Cap. \$10,000. John L. Tulley, Pres., Designer and Supt.; Walter Bryan, Vice-Pres.; W. L. Cory, Sec., Treas., Gen. Mgr., Sales and Advt. Mgr.

Albany Engineering Co.—Goshen St., Camberwell, London, S. E., England. Mfrs. circulating pumps.

Albany Garage Co.—28-30 Howard St., Albany, N. Y. (Peerless, Matheson, Isotta, Stevens-Duryea.) Supplies; garage; repairing.

Albany Hardware & Iron Co.—48-50 State St., Albany, N. Y. Inc. 1891. Dealers in automobile supplies and sporting goods; complete line of general hardware. Chas. H. Turner, Pres.; Wm. I. Baker, Vice-Pres.; Jas. K. Dunscomb, Treas.; W. B. Wackerhagen, Sec.; W. E. Foskett, Mgr. of automobile supplies and sporting goods department.

Albany Hdwe. & Specialty Co.—Albany, Wis. (Waltham.)

Albany Mfg. Co., Ltd.—Cumberland Park, Willesden Junction, London, England. Mfrs. differential gears, radiators, metal wheels, springs, steering gears.

Albaugh Bros., Dover & Co.—Marshall Blvd. and 21st St., Chicago, Ill. Agts. Sterling Star cars. Est. 1901. Cap. \$1,000,000. H. P. Albaugh, Pres.; G. S. Albaugh, Treas.; O. T. Dover, Vice-Pres.; R. Myers, Sec.; Head of motor and automobile dept. F. H. Squires.

Albaugh, E. Ray.—Pres. Bellefontaine Automobile Co., Bellefontaine, Ohio.

Albaugh, G. S.—Treas. Albaugh Bros., Dover & Co., Marshall Blvd. and 21st St., Chicago, Ill.

Albaugh, H. P.—Pres. Albaugh Bros., Dover & Co., Marshall Blvd. and 21st St., Chicago, Ill.

Albercrombie, C. R.—Kansas City, Mo. (Monarch.)

Alberta Motor Co.—Medicine Hat, Alta., Canada. (Maxwell.)

Albertson, C. C.—540 Washington St., Camden, N. J. (Autocar.)

Albin, H. A.—152 No. Main St., Concord, N. H. Garage.

Albion Motor Car Co., Ltd.—South St., Glasgow, Scotland. Mfrs. automobiles, gas. (Albion.)

Alborak Auto Co.—Broadway and 62nd St., New York City. Garage.

Albright Auto Co.—Crawfordsville, Ind. (National.)

Albright Mfg. Co.—Columbus, Ohio. Mfrs. spark plugs.

Albro, L. F.—Vice-Pres. and Mgr. Agency Dept, Chelsea Auto Storage Co., 516-520 W. 37th St., New York City.

Albuquerque Cycle & Arms Co.—115 Gold St., Albuquerque, N. M. (Winton, Waltham.)

Alcohol.—A volatile, inflammable liquid of burning taste composed of carbon, hydrogen and oxygen. There are two kinds of alcohol used in the arts as sources of heat, viz., ethyl alcohol, the common form (C₄ H₆ O₂), and wood alcohol (C₂ H₄ O₂), called also wood naphtha.

Wood alcohol is obtained by the dry distillation of wood. It has a strong characteristic odor and boils at 66° C. (150° F.). A mixture of 90 per cent. raw spirit (crude ethyl alcohol) and 10 per cent. wood spirit (crude methyl alcohol), to which some paraffine oil has been added, is called "methylated spirit," and is used as a solvent and for burning and other purposes.

Ethyl alcohol is obtained by distillation from fermented infusions of cereal grains, such as corn, wheat, etc., and from potatoes and beets. It has a specific gravity of 0.792 and boils at 78° C. (173° F.).

Pure alcohol is very inflammable and burns with a pale blue smokeless flame, and, being very volatile, readily forms a vapor which, when mixed with air, is

Alcohol is of interest in connection with the automobile only because it may serve as a fuel for explosive motors.

For motor purposes, it is customary to mix alcohol with some other hydrocarbon usually belonging to the petroleum group. Such mixtures are undrinkable and are known as "denatured" alcohol.

Alcohol, Acetylated.—Alcohol in which a certain quantity of acetylene is dissolved in order to increase its value as a fuel, and render it unfit for drinking.

Alcohol, Denatured.—A common French mixture consists of ethyl alcohol 100 volumes, methyl alcohol 10 volumes and a petroleum distillate 0.5 volume. An alcohol mixture known as "electrine" is composed of equal parts of the above mixture and benzole, and has a specific gravity of .835 and a calorific power of 13,150. The United States Commission of Internal Revenue prescribes as agents for denaturing alcohol, methylic alcohol and benzine, in the proportions of 10 per cent. of the former and one-half of one per cent. of the latter, constituting completely denatured alcohol. Alcohol denatured in any other manner is claimed as special denatured alcohol.

An internal combustion motor that is to operate with alcohol should work with a higher compression of the charge before igniting than is satisfactory for gasoline or kerosene. The carburetting apparatus must also be kept hotter, especially if the alcohol is considerably hydrated.

In some trials in Paris, the thermal efficiency of four fuels used in motors was found to be:

Gasoline.....	14 to 18 per cent
Kerosene.....	13 "
Gas.....	18 to 31 "
Alcohol.....	24 to 28 "

In the winter of 1906-07 tests were conducted in this country in which gasoline, kerosene and denatured alcohol were used, and the respective efficiency of these fuels was found to be as follows:

Car	Weight	Cost Gal.	Con- sumption	Cost of Fuel	Cost per Car Mile	Cost per Ton Mile
Gasoline	2,270	\$0.20	24.75	\$4.95	\$0.019	\$0.0169
Kerosene	2,520	0.13	33.75	4.39	0.017	0.0159
Alcohol	2,750	0.37	40.75	15.07	0.06	0.0448

An objection which has revealed itself with motors using alcohol is that an excess of aqueous vapor forms in the cylinders, and that such vapor, absorbing the acetic acid which forms with the occasional incomplete combustion of the alcohol, attacks and corrodes metal surfaces and scores valves and valve-seats.

Alcoholmeter.—A form of hydrometer employed for determining the quantity of water contained in the alcohol tested.

Alcohol, Wood.—An alcohol, called

also "methylic alcohol," formed by the dry distillation of wood in iron retorts at a heat not above 900° F. Taken internally it nearly always causes blindness or death, and the internal use of it is now considered fatal. For this reason it is an admirable substance for denaturing ordinary alcohol, and, in fact, is one of the best for such a purpose. A mixture of wood alcohol and water forms an excellent anti-freezing solution.

Alcott, J. S. P.—Sec. Concord Motor Car Co., 64 Huntington Ave., Boston, Mass.

Alden, Geo. I.—Treas. Worcester Pressed Steel Co., Cor. North and Barber Aves., Worcester, Mass.

Alden, H. W.—Mechanical engineer, Timken Roller Bearing Axle Co., Canton, Ohio.

Alderman & Son, D. W.—Alcoln, S. C. (Cadillac.)

Aldigier.—110 rue d'Angoulême, Paris, France. Mfrs. spark plugs.

Aldrich Auto Co.—Atlanta, Ga. Garage.

Aldrich & Burbank.—St Johnsbury, Vt. (Stanley.)

Alexander & Co., H. T.—17 State St., New York City. Mfrs. oil.

Alexander & Co.—72 W. Monroe St., Chicago, Ill. Mfrs. marine and auto motors, reverse gears; complete line of marine and auto fittings. Est. 1900.

Alexander, W. B. D.—Pres. The National-Acme Mfg. Co., Cor. Stanton Ave. S. E. and E. 75th St., Cleveland, Ohio.

Alexander, W. G.—116 10th St., Toledo, Ohio. Garage.

Alger Laboratories.—Providence, R. I. Mfrs. anti-freezing solutions.

Alger, P. B.—244 Union St., Olean, N. Y. Garage.

Alger, R. A.—Vice-Pres. Packard Motor Car Co., Detroit, Mich.

Alignment.—The correct placing in line of the parts of a machine or apparatus.

Alldays and Onions, Ltd.—Fallows Road, Birmingham, England. Mfrs. automobiles, gas. (Alldays.)

Allgemeine Automobil-Zeitung.—Pub. in Vienna, Austria.

Allgemeine Berliner Motorwagen Gesellschaft.—21 Lüneburger Strasse, Berlin, Germany. Mfrs. automobiles, gas.

Allegheny Auto Co.—Pittsburg and Allegheny, Pa. (Austin, Glide, Rapid.)

Allen, Alex.—Chestnut Hill, Pa. (Cadillac.)

Allen, J. A.—372 Smith St., Providence, R. I. (Northern.)

Allen & Son, John C.—Gloversville, N. Y. Mfrs. wearing apparel (gloves and gauntlets).

Allen, Asten & Co.—Greenwich Ave., Greenwich, Conn. (Locomobile, Reo.)

Allen Auto Specialty Co.—1931 Broadway, New York City. Mfrs. tire holders, lamp covers, tire cases.

Allen, E. O.—Director, Carmichael-Bray Co., 370 Golden Gate Ave., San Francisco, Cal.

Allen Co., I. M.—116 South Portland St., Brooklyn, N. Y. (Stevens-Duryea.)

Allen-Kingston Motor Car Co.—3 W. 44th St., New York City. Selling agts. for the New York Car & Truck Co., Kingston, N. Y., makers of the Allen-Kingston car. Cap., \$300,000. E. R. Thomas, Pres.; W. Gould Brokaw, Vice-Pres.; Walter C. Allen, Sec. and Treas.

Allen, L. D.—Western Mgr. Magnolia Metal Co., Fisher Bldg., Chicago, Ill.

Allen Mfg. Co., W. D.—151 Lake St., Chicago, Ill. Mfrs. brass, bronze, aluminum and copper castings; tire holders.

Allen Motor Co.—42 Preble St., Portland, Me. (Cameron, Monarch.)

Allen-Swan Co.—1287-91 Bedford Ave., Brooklyn, N. Y. (Stearns.)

Allen, Walter C.—Sec. and Treas. Morris Park Motordrome Club. Times Bldg., 42nd St. and Broadway, New York City; Sec. and Treas. Allen-Kingston Motor Car Co., 3 W. 44th St., New York City.

Allen, Will, Dr.—Billings, Mont. (Wayne.)

Allenhurst Garage & Auto Station.—135-47 W. 37th St., New York City. B. L. Toplitz, Gen. Mgr. Garage; renting and repairing. (Aerocar.)

Allers & Co., Harry A.—136 Liberty St., New York City. Mfrs. metal polishes.

Allessio, Societa Anonima.—19 via Orto Botanico, Turin, Italy. Mfrs. bodies.

Alley & Gardner.—Tahoka, Tex. (Buick.)

Allez Frères.—2 rue Adolph-Adam, Paris, France. Mfrs. motorcycles.

Allfrey's Auto Garage.—William St., Johnston, N. Y. Est. 1905. (Thomas, Buick, Cadillac, Berlelt and Oldsmobile.) Garage to house 12 cars; repairing.

Allgemeine Automobil-Zeitung.—Weekly publication, 35 Deutsches Kolonialhaus, Berlin, W., Germany.

Allgemeine Automobil-Zeitung.—Weekly publication, 5 Fleischmarkt, Vienna, Austria.

Alliance Motor Car Co.—Court St., Alliance, Ohio. (Jackson.)

Alling & Fields.—331 Lyon St., Dunkirk, N. Y. (Maxwell.)

Allison, James A.—Sec. and Treas. Prest-o-lite Co., 20 So. East St., Indianapolis, Ind.

Allison Mfg. Co.—Philadelphia, Pa. Mfrs. lock nuts and washers.

Alloy.—Alloys may be regarded as solid solutions of metals in metals. Many consist of definite or equivalent proportions of the simple component metals, though some seem to form in any proportion. It is probable that peculiar properties belong to the equivalent or atomic ratio, as is exemplified in the superior quality of brass made in that proportion. Every alloy is, in reference to the arts and manufactures, a new metal on account of its chemical and physical properties. Very slight modifications often constitute very valuable improvements in metallic bodies; and in the industries it is very rarely that metals are used in a pure state. See Aluminum bronze, Antimony, Brass, Bronze, German Silver, Partinium, etc.

Alloy, Fusible.—What are called "fusible metals" are compounds that melt at a low temperature. One of the best known is composed of 1 part of tin, 1 part of lead and 2 parts of bismuth. Such alloys are especially employed for forming fusible plugs for steam boilers. If the pressure and temperature of the latter become too high, the plugs melt and allow the steam to escape. See Bismuth and Plug, Fusible.

Allsopp, James A.—331 Fourth St., Brooklyn, N. Y. Garage.

Allyn Brass Fdry. Co.—Cleveland, Detroit and Buffalo. Mfrs. aluminum, bronze and brass castings. Cap. \$150,000. Est. 1901. E. E. Allyn, Pres. and Mgr. Cleveland plant; Chas. B. Bohn, Sec., Treas. and Mgr. Detroit plant; W. P. King, Mgr. Buffalo plant.

Allyn, Chas. B.—Treas. Mianus Motor Works, Cos Cob, Conn.

Allyn, E. E.—Pres. and Mgr. Allyn Brass Foundry Co., Cleveland, Detroit and Buffalo; Mgr. Cleveland plant.

Alpha Dry Battery Co.—28 Cortlandt St., New York City. Mfrs. primary batteries.

Alpine Automobile Co.—238 West 108th St., New York City. Garage.

Alsten & Goulding.—36 Foster St., Worcester, Mass. Vulcanizing.

Altemus & Co., C. L.—4th and Locust Sts., Philadelphia, Pa. Mfrs. primary timers and secondary distributors, special types from manufacturers' specifications. Est. 1904. Partnership.

Altham, Geo. J.—Pres. Aero & Marine Motor Co., 60 Pemberton Sq., Boston, Mass. Gen. Mgr. at factory, Fall River, Mass.

Altland, M. J.—Alpena, Mich. (Cadillac, Northern.)

Altoona Motor Car Co.—718 Green Ave., Altoona, Pa. (Rambler, Reo, Ford, Jackson). Est. 1905. Officers: Geo. C. Eppelman, R. A. Rohrer, Louis Plack, Jr. Garage (25 cars); repairing.

Aluminoid.—A light, very ductile and easily machined alloy used for crank-chambers and gear-cases. It is composed, by weight, of 60 parts aluminum, 30 parts tin and 10 parts zinc. It possesses a tensile strength of 18,000 pounds per square inch.

Aluminum.—A grayish-white metal having a density of 2.56. It is very malleable and sonorous and is remarkable for its lightness. Its conductivity for heat and electricity is about one-third that of silver, of which it possesses about the same qualities of tenacity and hardness. It melts at about 1148° F. (620° C.). Its tensile strength is about 12 tons per square inch.

The metal occurs in clay, in cryolite, in bauxite, feldspar and china clay. It is obtained by the electrolysis of alumina extracted from bauxite (see Bauxite), an impure aluminum hydrate ($\text{Al Fe}_2 \text{O}_3 \text{H}_2 \text{O}$), or by heating aluminum oxide, as pure as possible, in an electric furnace. The latter is an iron vessel lined with carbon, the vessel itself forming the cathode or negative pole, and the anode consisting of a number of carbon rods. The charge consists of the pure oxide alone or mixed with cryolite (see Cryolite) to serve as a flux. In starting the furnace the electrodes are brought together, and then the anode is gradually raised; the arc rapidly fuses the charge, and the metal begins to separate. The process is continuous. Very pure aluminum is obtained by heating the double bromide of aluminum and sodium with pure sodium. The metal, when pure, is quite permanent in air; it oxidizes only at a very high temperature. Hot water slowly attacks it, forming the hydrate. Hydrochloric acid dissolves it; hot, strong sulphuric acid forms the sulphate, while nitric acid has very little action. Caustic soda solution readily dissolves it and forms sodium aluminate. Aluminum is soldered to itself and to other metals with difficulty. It is very rarely used in a pure state, but is largely employed in that of alloys with copper and iron. Of such alloys "aluminum bronze" (aluminum 10 parts and copper 90 parts) is the most important (see Bronze). It is the strongest of the copper alloys and has the color of gold. "Aluminum brass" is an alloy of copper, zinc and aluminum. See Brass.

The applications of aluminum in the automobile industry in the manufacture of car bodies and panels, gear-casings, water-jackets, etc., and in metallurgy as a reducing agent are rapidly increasing.

Aluminum Co. of America.—Buffalo Ave. and 19th St., Niagara Falls, N. Y. Mfrs. aluminum.

Aluminum Company of America.—Pittsburg, Pa. Mfrs. aluminum.

Aluminum Foundry Co.—Manitowoc, Wis. Mfrs. aluminum; brass, bronze, aluminum and copper castings.

Aluminum Mfg. Co.—Two Rivers, Wis. Mfrs. license numbers, name plates and oil cans.

Aluminum Solder.—See Solder, Aluminum.

Aluminum Solder & Refining Co.—Oswego, N. Y. Mfrs. aluminum solder.

Alundun.—The hardest, sharpest and most durable abrasive material known. For sharpening tools it is made into grinding wheels, which will not draw the temper of the finest steel.

Alvargonzalez.—Gijon, Spain. Mfrs. automobiles, gas. (Hormiga.)

Alvord, J. S.—Pres. Progressive Mfg. Co., 41 Norwood St., Torrington, Conn.

Amalgamation.—In order to prevent, through "local action" (as it is called), the wasting of the zinc electrodes of an ignition or other battery, while the latter is in an inoperative state, it is usual to amalgamate the surface of the zinc with mercury. The surface to be amalgamated should be cleaned by dipping into acid, and then a few drops of mercury should be poured over the surface and rubbed into it with a bit of linen rag tied to a stick. The mercury unites with the zinc at the surface, forming a pasty amalgam. As the zinc in the latter dissolves in the acid, the film of mercury unites with fresh portions of the zinc, and so presents always a clean, bright surface to the liquid.

A new and better process is to add about 4 per cent. of mercury to the molten zinc before casting into plates or rods. If the zinc plates of a battery are well amalgamated there should be no evolution of hydrogen bubbles.

Amarillo Auto Co.—Wichita, Kan. (Maxwell.)

Ambrose, Dr. O. A.—6125 Bartmer Ave., St. Louis, Mo. (Moline.)

Amelot.—Parthenay, Deux-Sèvres, France. Mfrs. elastic wheels.

American Aluminum Coating Co.—100 Diamond Bank Bldg., Pittsburg, Pa. Mfrs. aluminum coated steel sheets.

American Anti-Puncture Tire & Auto Co.—1693 Broadway, New York City. Mfrs. tire sleeves.

American Association of Engine & Boat Manufacturers.—McHenry, Ill. Officers: Everett Hunter, Pres.; W. J. Reynolds, First Vice-Pres.; J. M. Truscott, Second Vice-Pres. and Treas.; C. C. Gibson, Third Vice-Pres.; A. F. Dohn, Sec.; John B. Carpenter, Fourth Vice-Pres. Board of Directors: W. C. Anderson, John B. Carpenter, A. F. Dohn, Everett Hunter, C. C. Gibson, W. J. Reynolds and J. M. Truscott.

American Auto Brass Co.—181 W. Maple St., Columbus, O. Mfrs. cush-

ions, acetylene generators, lamps, metal trimmings.

American Automobile Association, The.—"A. A. A.", 437 Fifth Ave., New York City. Organized February, 1902. William H. Hotchkiss, Pres. (Automobile Club of Buffalo); Lewis R. Speare, 1st Vice-Pres. (Bay State Automobile Association); Asa Paine, 2nd Vice-Pres. (Florida East Coast Automobile Association); Ira M. Cobe, 3rd Vice-Pres. (Chicago Automobile Club); George E. Farrington, Treas. (Automobile Club of New Jersey); Frederick H. Elliott, Sec. (Automobile Club of Syracuse).

Organized at Chicago on March 4, 1902, as an association of clubs, the plan of having an individual membership being rejected. Up to that time the Automobile Club of America, the premier organization, had been the controlling body in the conduct of races, contests and similar functions having more than a local character, but upon the formation of the A. A. A. the latter assumed charge of such events. In 1906 it was decided to admit individual motorists and thus obtain the addition and support of the large number of users of the motor-vehicle not having club affiliations. In February, 1905, the association was incorporated in New Jersey.

Main Objects: "Uniting in one body of all the automobile clubs and individual motorists of the United States; and thus the promotion and furtherance of legislation, reasonable enforcement of motor laws and ordinances, sportsman-like contests and reliable records, as well as all movements both federal and local toward the construction and maintenance of good roads." Executive Committee: William H. Hotchkiss, Chairman; Lewis R. Speare, Jefferson De Mont Thompson, George E. Farrington, Amos G. Batchelder, William K. Vanderbilt, Jr., Sidney S. Gorham. Chairmen of Boards: Chas. Thaddeus Terry, Legislative, 100 Broadway, New York City; Frank B. Hower, Touring, 760 Main St., Buffalo, N. Y.; Robert P. Hooper, Good Roads, 509 Arch St., Philadelphia, Pa.; Jefferson DeMont Thompson, Racine, 26 West 27th St., New York City.

Former Presidents, W. E. Scarritt, Dr. Julian A. Chase, Harlan W. Whipple, Elliot C. Lee, John Farson, Jr.

American Automobile Co.—Mineapolis, Minn. (Stoddard-Dayton.)

American Automobile Co.—Houston, Tex. (American.)

American Automobile Co.—South 2nd and St. Helena Ave., Tacoma, Wash. Wing Bros., Mgrs. (Reo, Stoddard-Dayton.)

American Automobile Co.—Cedar Rapids, Ia. (American.)

American Automobile Co.—5928 Baum St., Pittsburg, Pa. (Pope-Toledo, Pope-Hartford, Pope-Waverley.)

American Auto Garage.—933 No. 7th St., Philadelphia, Pa. (American.)

American Auto Machine Co.—1927 1st Ave., So. Seattle, Wash. (Mitchell.)

American Auto Vehicle Co.—254 Jefferson Ave., Detroit, Mich. Mfrs. automobiles, gas.

American Ball Bearing Co.—Edgewater Park and L. S. & M. S. Ry., Cleveland, Ohio. Mfrs. front and rear automobile axles for chain or bevel drive, ball-bearing hubs, steering axles, ball-bearings, ball thrust bearings. Member M. & A. M. Cap. \$740,700 (paid in), (authorized \$1,000,000). Est. 1895. Walter C. Baker, Pres.; Fred R. White, Vice-Pres.; F. Philip Dorn, Sec., Frederick C. Dorn, Treas.; Frank H. Teagle, Pur. Agt.

American Ball Co.—Cor. Kinsley Ave. and Eagle St., Providence, R. I. Mfrs. steel balls, brass balls, thrust bearings, radial bearings and annular bearings. Cap. \$250,000. Est. 1894. W. Penn Mather, Pres.; W. T. Eyer, Sec. and Treas.

American Battery Co.—170-2 So. Clinton St., Chicago, Ill.

American Belting Co.—135 Oliver St., Boston, Mass. Mfrs. belting.

American Blower Co.—Detroit, Mich. Mfrs. forge equipment.

American Boat & Machine Co.—3517 So. 2nd St., St. Louis, Mo. Mfrs. motor boats.

American Brass Foundry Co.—Hyde Park, Mass. Mfrs. brass, bronze, aluminum and copper castings.

American & British Mfg. Co.—Crescent Ave., Bridgeport, Conn. Mfrs. motors, marine and automobile type, 40 to 80 hp.; pressed steel frames, forgings, McCabe lathes. Members M. & A. M. Cap. \$4,000,000. Est. 1902. Geo. W. Hoadley, Pres.; Charles L. Gulick, Vice-Pres.; W. R. Sheldon, Sec. and Treas.; E. B. Lausier, Sales Mgr.

American Bronze Co.—Berwyn, Pa. Mfrs. bronze metals.

American Buggy Auto Co.—4309 Olive St., St. Louis, Mo. Mfrs. automobiles, gas.

American Buffalo Robe Co.—Buffalo, N. Y. Mfrs. auto robes, miscellaneous wearing apparel.

American Carbolite Co.—Constantine, Mich. Mfrs. carbide.

American Carburetor Co.—907 Michigan Ave., Detroit, Mich. Mfrs. carburetors.

American Castings Co.—809 Columbus S. & F. Bldg., Columbus, Ohio. Mfrs. brass, bronze, aluminum and copper castings.

American Chauffeur.—Monthly. Pub. by the American Chauffeur, Inc., 1931 Broadway, New York City. J. A. Brown, Pres.; F. J. Wallace, Vice-Pres.; R. M. Stickle, Editor.

American Coil Co., Inc.—Cor. Wall and Cocasset Sts., Foxboro, Mass. Mfrs. spark plugs, coils, timers, lock switches, ammeters. Members M. & A. M. Cap., \$10,000. Est. 1900. A. M. Davenport, Pres.; Dr. F. A. Bragg, Treas.; W. Chesley, factory mgr.

American Coulthard Co.—Peabody, Mass. Mfrs. automobiles, steam, commercial.

American Die & Tool Co.—Reading, Pa. Mfrs. transmission gears, machine work (to order), gasoline motors (auto).

American Diesel Oil Engine Co.—11 Broadway, New York City. Mfrs. kerosene motors.

American Distributing Co., The.—Cleveland, O. Selling agents for the Long Arm System Co., Elyria Machine Parts Co., W. J. Sculley Mfg. Co., Imperial Wheel Co., Westinghouse Electric & Mfg. Co., McCutcheon Gear & Mfg. Co., Shepard Engineering Co., Cleveland Axle Mfg. Co.

American Dynamic Co.—Port Richmond, N. Y. Mfrs. motor boats.

American Electrical Novelty & Mfg. Co.—308 Hudson St., New York City. Mfrs. ammeters, voltmeters, primary batteries, auto clocks, water glass lamps, wire terminals.

American Electrical Works.—Providence, R. I. Mfrs. insulated wire.

American Electromobile Co.—Detroit, Mich. Mfrs. automobiles, electric; automobiles, commercial, electric.

American Enamel Co.—Providence, R. I. Mfrs. enamel.

American Foundry Co.—Leipsic, O. Mfrs. automobiles, gas. commercial.

American Foundry & Mfg. Co.—Herbert and Wright Sts., St. Louis, Mo. Mfrs. special gray iron cylinder castings, bronze trimmings and castings.

American Garage Co.—5123 Delmar Ave., St. Louis, Mo. (Dragon.)

American Gas Furnace Co.—23 John St., New York City. Mfrs. forge equipment.

American Gasoline Motor Co.—Baldwinsville, N. Y. Mfrs. marine motors, also in process a 2-cycle automobile motor. Cap. \$20,000. J. D. Sweet, Pres.; A. J. Tooley, Vice-Pres.; J. Tallmadge, Sec., Treas., Gen. Mgr., Pur. Agt., Sales and Advt. Mgr.

American Glove Co., The.—18 Churchhill St., Chicago, Ill. Mfrs. gloves and gauntlets.

American Injector Co.—Detroit, Mich.

Mfrs. grease cups, lubricators, oil cups, oil pumps.

American Institute of Electrical Engineers.—(Transactions.) Pub. monthly. 25 W. 39th St., New York City.

American Iron & Steel Mfg. Co.—Lebanon, Pa. Mfrs. bolts, nuts, bar iron and steel, washers.

American Karbel Co.—Jonesboro, Ark. Mfrs. auto covers.

American Lamp Co.—255 Jefferson Ave., Detroit, Mich. Mfrs. acetylene lamps and generators.

American Lamp Works.—253 W. 47th St., New York City. Mfrs. lamps.

American Lava Co.—27-33 William St., Chattanooga, Tenn. Mfrs. acetylene lamp gas burners, tire talc; spark plug cores, gas and gasoline engine insulation, lava. Cap. \$20,000. Est. 1897. P. J. Kruesi, Sec., Treas. and Gen. Mgr.

American Locomotive Automobile Co.—Kinsley Ave., Providence, R. I. Makers of the license Berliet car. First marketed November, 1905. Three models made since. Cap. \$300,000. W. H. Marshall, Pres.; H. F. Ball, Vice-Pres.; Leigh Best, Sec.; R. B. Van Dyke, Asst. to the Vice-Pres.; C. B. Denny, Treas.; James Joyce, Gen. Mgr.; B. D. Gray, Chief Engineer; F. R. Boynton, Supt.; Arthur N. Jarvis, Advt. Mgr. Branch and main offices at 1886 Broadway, New York City. Dealers: Park Square Auto Station, Boston, Mass.; Walden W. Shaw Co., Chicago, Ill.

American Locomotive Automobile Co.—Broadway and 62d St., New York City. (Berliet.)

American Lubricator Co.—Detroit, Mich. Mfrs. grease cups, lubricators, oil cups.

American Machine & Mfg. Co., The.—Cleveland, Ohio. Mfrs. machine work (to order).

American Machine Mfg. Co.—Cor. Champlain and Beaubien Sts., Detroit, Mich. Makers of the Commerce car. First marketed, Feb., 1907. One model made since. Cap. \$100,000. Harry S. Blumenthal, Pres.; D. Blumenthal, Vice-Pres.; Frank V. Nicol, Sec., Treas., Sales Mgr. and Gen. Mgr.; Chas. B. Rose, Designer and Pur. Agt.

American Machinery Mfg. Co.—41 Lewis Wharf, Boston, Mass. Mfrs. spark coils, spark plugs.

American Machinist.—Weekly. Publication offices, 505 Pearl St., New York City.

American Magazine of Aeronautics.—Published monthly at 142 W. 65th St., New York City. Ernest La Rue Jones, Editor.

American Metal Polish Co.—89 Winslow Ave., W. Somerville, Mass. Mfrs. metal polish, silver powder, bar powder,

silver polish, liquid metal polish, pomade, extract. Cap. \$50,000. E. H. Moulton, Pres.; W. G. Parsons, Treas.

American Mica Co.—Newton Lower Falls, Mass. Mrs. mica, gasolene auto motors, gas. marine motors.

American Motor Car Co.—So. Illinois and Henry Sts., Indianapolis, Ind. Makers of the American car. First marketed, July, 1905. Four models made since. Cap. \$100,000 (\$75,000 paid in). V. A. Longaker, Pres.; N. A. Gladding, Vice-Pres.; D. S. Menasco, Sec. and Treas.; F. I. Tone, Gen. Mgr. and Designer; C. M. Mohler, Supt.; W. H. Flowers, Pur. Agt.; American Motor Car Sales Co., New York City, Sales and Advt. Mgr. Dealers: American Automobile Co., Cedar Rapids, Ia.; American Automobile Co., Houston, Tex.; Dalley & Schill, 230 No. 22nd St., Philadelphia, Pa.; American Motor Car & Sales Co., 2230 Broadway, New York City; Elliot, E. W., 339 Bush St., San Francisco, Cal.; Frederick Co., W. A., 16 Columbus Ave., Boston, Mass.; Lewis, Jno. G., Buffalo, N. Y.; Oklahoma Motor Car Co., Oklahoma City, Okla.; Pardee & Canary, Inc., 1218 Michigan Ave., Chicago, Ill.; Peper Automobile Co., 3922 Olive St., St. Louis, Mo.; Renfros Garage, Tonopah, Nev.; Southern California Motor Car Co., 1811 So. Main St., Los Angeles, Cal.; Smith Automobile Co., 1420 Court Place, Denver, Colo.; Willys Co., J. N. Elmira, N. Y.

American Motor Car Manufacturers' Association.—29 W. 42nd St., New York City. Chairman, Benjamin Briscoe (Maxwell-Briscoe Motor Co.); Vice-Chairman, R. E. Olds (Reo Motor Car Co.); Treas., H. O. Smith (Premier Motor Mfg. Co.); Sec., Wm. Mitchell Lewis (Mitchell Motor Car Co.)

Organized February, 1905, as a result of efforts to unite in one organization all, or nearly all, makers of gasolene cars who refused to admit the validity of the Selden patent. The charter members were as follows: Acme Motor Car Co., Reading, Pa.; Aerocar Co., Detroit, Mich.; Ardsley Motor Car Co., Yonkers, N. Y.; Austin Automobile Co., Grand Rapids, Mich.; Bartholomew Company, Peoria, Ill.; Buckeye Mfg. Co., Anderson, Ind.; Crawford Automobile Co., Hagerstown, Md.; Dayton Motor Car Co., Dayton, O.; Dorris Motor Car Co., St. Louis, Mo.; Duryea Power Co., Reading, Pa.; Ford Motor Co., Detroit, Mich.; Jackson Automobile Co., Jackson, Mich.; Knox Motor Truck Co., Springfield, Mass.; Marion Motor Car Co., Indianapolis, Ind.; Maxwell-Briscoe Motor Co., Tarrytown, N. Y.; Mitchell Motor Car Co., Racine, Wis.; Moline Automobile Co., East Moline,

Ill.; Moon Motor Car Co., St. Louis, Mo.; National Motor Vehicle Co., Indianapolis, Ind.; Nordyke & Marmon Co., Indianapolis, Ind.; Premier Motor Mfg. Co., Indianapolis, Ind.; St. Louis Motor Car Co., Peoria, Ill.; Wayne Automobile Co., Detroit, Mich. In January, 1906, the association joined with the Automobile Club of America, which was promoting its Sixth Annual Show. It was held in the 69th Regiment Armory, then just completed. This move was necessitated by the fact that the Association of Licensed Automobile Manufacturers had secured control of Madison Square Garden and was to hold its show there, restricting the exhibit of gasolene cars to the product of licensees under the Selden patent. In January, 1907, and again in October, 1907, the Automobile Club of America and the Y. M. C. A. co-operated as before and held their show in the Grand Central Palace.

The officers and chairmen of committees and committee of management are as follows: Chairman, Benj. Briscoe (Maxwell-Briscoe Motor Co.); Vice-Chairman, R. E. Olds (Reo Motor Car Co.); Treas., H. O. Smith (Premier Motor Mfg. Co.); Sec., Wm. Mitchell Lewis (Mitchell Motor Car Co.); Show Committee, H. O. Smith (Premier Motor Mfg. Co.); Tours and Races, W. C. Marmon (Nordyke & Marmon Co.); Good Roads, Chas. Lewis (Jackson Automobile Co.); Legislation, R. E. Olds (Reo Motor Car Co.); Membership, W. H. Van Dervoort (Moline Automobile Co.); Finance, James Couzens (Ford Motor Co.); Standardization and Technical, John D. Maxwell (Maxwell-Briscoe Motor Co.); Freight and Transportation, W. G. Morley; Tires, Wm. Mitchell Lewis (Mitchell Motor Car Co.); Committee of Management: Chairman, Benj. Briscoe (Maxwell-Briscoe Motor Co.); Vice-Pres., R. E. Olds (Reo Motor Car Co.); Treas., H. O. Smith, (Premier Motor Mfg. Co.); Sec., Wm. Mitchell Lewis (Mitchell Motor Car Co.); Charles Lewis (Jackson Automobile Co.), W. H. Van Dervoort (Moline Automobile Co.), W. C. Marmon (Nordyke & Marmon Co.), Counsel, Job. E. Hedges; Gen. Mgr., Alfred Reeves.

The present membership is as follows:

Abendroth & Root Mfg. Co., Newburgh, N. Y.; Acme Motor Car Co., Reading, Pa.; Aerocar Motor Co., Detroit, Mich.; American Machine Mfg. Co., Detroit, Mich.; American Motor Car Co., Indianapolis, Ind.; Austin Automobile Co., Grand Rapids, Mich.; Atlas Motor Car Co., Springfield, Mass.; Bartholomew Co., The, Peoria, Ill.; B. L. M. Motor Car Co., 36 Delevan St., Brooklyn, N. Y.; Brush Runabout Co.,

Detroit, Mich.; Buckeye Mfg. Co., Anderson, Ind.; Chadwick Engineering Works, Philadelphia, Pa.; Continental Auto Mfg. Co., New Haven, Conn.; Crawford Automobile Co., Hagerstown, Md.; Dayton Motor Car Co., Dayton, O.; DeLux Motor Car Co., Detroit, Mich.; Dolson Automobile Co., Charlotte, Mich.; Dragon Motor Co., Philadelphia, Pa.; Dorris Motor Car Co., St. Louis, Mo.; Evansville Automobile Co., Evansville, Ind.; Ford Motor Company, Detroit, Mich.; Gaeth Automobile Works, Cleveland, O.; Gearless Transmission Co., Rochester, N. Y.; Imperial Motor Car Co., Williamsport, Pa.; Jackson Automobile Co., Jackson, Mich.; Mack Bros. Motor Car Co., Allentown, Pa.; Marion Motor Car Co., Indianapolis, Ind.; Maxwell-Briscoe Motor Co., Tarrytown, N. Y.; Mitchell Motor Car Co., Racine, Wis.; Moline Automobile Co., East Moline, Ill.; Moon Motor Car Co., St. Louis, Mo.; Mora Motor Car Co., Newark, N. Y.; Motorcar Co., Detroit, Mich.; National Motor Vehicle Co., Indianapolis, Ind.; New York Car & Truck Co., Kingston, N. Y.; Nordyke & Marmon Co., Indianapolis, Ind.; Overland Auto Co., Indianapolis, Ind.; Pennsylvania Auto-Motor Co., Bryn Mawr, Pa.; Pierce Engine Co., Racine, Wis.; Premier Motor Mfg. Co., Indianapolis, Ind.; Pullman Motor Car Co., Chicago, Ill.; Rapid Motor Vehicle Co., Pontiac, Mich.; Reliance Motor Car Co., Detroit, Mich.; Reo Motor Car Co., Lansing, Mich.; Simplex Motor Car Co., Mishawaka, Ind.; St. Louis Car Co. (auto dept.), St. Louis, Mo.; Wayne Automobile Co., Detroit, Mich.; Welch Motor Car Co., Pontiac, Mich.; York Motor Car Co., York, Pa.

American Motor & Cycle Co.—Battle Creek, Mich. (Buick, Franklin.)

American Motor Car & Sales Co.—2230 Broadway, New York City. Sales and Advt. Mgrs. American Motor Car Co., Indianapolis, Ind.

American Motor Co.—Brockton, Mass. Mfrs. motorcycles.

American Motordrome, Inc., The.—Land Title Bldg., Philadelphia, Pa. A corporation established to build a motordrome or automobile race track just outside of Philadelphia. Cap., \$500,000.

American Motor League.—Vanderbilt Building, 132 Nassau St., New York City. Isaac B. Potter, Pres.; Chas. E. Duryea, 1st Vice-Pres.; John A. Hawkins, 2nd Vice-Pres.; Henry Chandlee, 3rd Vice-Pres.; Robert O. Brockway, Sec.; Fred B. Hill, Treas. Organized October, 1895, reorganized February, 1902. Object, "to promote the interests of all users of motor-vehicles; to ascertain, protect and defend their rights; to oppose and pre-

vent the enactment of unreasonable and oppressive laws; to encourage the use and improvement of motor-vehicles by investigation, agitation and instruction; to provide its members with printed routes, maps and guide-books by which touring may be facilitated and encouraged; to promote the work of improving the public roads and the erection of proper guide-boards, and other signs, necessary to guide and warn the users of motor vehicles; to select and appoint official hotels, repair shops, storage and supply stations where its members may obtain reliable service at reasonable rates." Chairmen of committees: Road Improvement, R. D. Chapin. Technics, C. E. Duryea. Membership, W. K. Cowan. Legislation, George R. Bidwell. Touring, L. A. Voorhees. Rules and Regulations, C. A. Duchorme. Local Organization, Charles F. Potter. Former Presidents, Charles E. Duryea, Edwin F. Brown.

American Motor Parts Co.—21-25 Plymouth Court, Chicago, Ill. Mfrs. carbureters, exhaust horns, lamp brackets, oil cups, oil guns, wind shields (glass), tire holders, muffler cutout valves, gasoline strainers.

American Motor Truck Co.—Caledonia St., Lockport, N. Y. Makers of the "American" 3 and 5 ton trucks. Chas. R. Bishop, Pres.; H. C. Eddy, Vice-Pres.; Robt. Hall, Sec.; H. J. Babcock, Treas.; A. L. Lerch, Mgr. of Sales; E. Bunce, Supt.; H. C. Eddy, Western Sales Mgr., 1334 Monadnock Bldg., Chicago, Ill.

American Oak Leather Co.—176 South St., Boston, Mass. Mfrs. leather.

American Oak Leather Co.—Kenner St. and Dalton Ave., Cincinnati, Ohio. Mfrs. enamel leather for trimming automobiles. Cap. \$7,500,000. Est. 1881. J. E. Mooney, Pres.; Aug. Fabel, 1st Vice-Pres. and Treas.; H. H. Bechtel, 2nd Vice-Pres. and Sec.; C. L. Harrison, 3rd Vice-Pres.; J. F. Taylor, Asst. Sec. and Treas.; Frank Monk, Supt.

American Oil Co.—170-178 So. Water St., Jackson, Mich. Mfrs. oils, greases and compounds, varnish soap. Cap. \$10,000. Est. Jan. 1, 1904. Robert Campbell, Pres.; John W. Shove, Vice-Pres.; Fred H. Helmer, Treas.; A. J. Callaghan, Sec. and Gen. Mgr.

American Pin Co.—Waterbury, Conn. Mfrs. brass, bronze, aluminum and copper castings.

American Platinum Works.—251 N. J. R. R. Ave., Newark, N. J. Mfrs. platinum, sparking points.

American Portable House Co.—Seattle, Wash. Mfrs. portable houses and garages.

American Roller Bearing Co.—Tripp

St., So. Framingham, Mass. Mfrs. roller bearings for transmissions, axles, countershafts, etc. Also builders of front and rear axles on contract. Member M. & A. M. Cap. \$325,000. Est. 1899. Frederick B. Hill, Sec., Treas. and Gen. Mgr.; K. Franklin Peterson, 166 Lake St., Chicago, Western Factory Representative.

American Sheet Iron Co.—Phillipsburg, N. J. Mfrs. sheet iron and steel.

American Sheet Steel Co.—24 State St., New York City. Mfrs. sheet iron and steel.

American Society of Civil Engineers.—(Proceedings), pub. monthly. 320 W. 57th St., New York City.

American Society of Mechanical Engineers.—(Transactions), pub. monthly. 25 W. 39th St., New York City.

American Steam Gauge & Valve Co.—220 Camden St., Boston, Mass. Mfrs. steam and air gauges, pop safety valves. Est. 1851. R. B. Phillips, Treas. and Gen. Mgr.; H. B. Nickerson, Sec.; Gardner Cornett, Vice-Pres.; John McCandlish, Pres.

American Steam Packing Co.—Boston, Mass. Mfrs. packing.

American Steam Pump Co.—Battle Creek, Mich. Mfrs. air compressors; fuel, air and boiler pumps.

American Steel & Wire Co.—The Rookery, Chicago, Ill. Mfrs. steel shafting, insulated wire, sheet iron and steel, machinery springs.

American Steel Barrel Co.—204-6 Varet St., Brooklyn, N. Y. Mfrs. tool boxes, gasoline tank gauges, storage tanks.

American Steel Castings Co.—Chester, Pa. Mfrs. steel castings.

American Steel Hoop Co.—Pittsburg, Pa. Mfrs. angle, channel and tee iron and steel; bar iron and steel.

American Steel Wool Co.—451-3 Greenwich St., New York City. Mfrs. steel wool.

American Thermo-ware Co.—16 Warren St., New York City. Mfrs. eye shields, hydrometers.

American Thread Co.—Boston, Mass. Mfrs. thread (top and upholstery).

American Tire Co.—Owosso, Mich. Mfrs. anti-skid devices, tire treads, tires (leather).

American Top Co.—Jackson, Mich. Mfrs. tops (auto).

American Tube & Stamping Co.—Bridgeport, Conn. Mfrs. channels, oil cans, rims (steel), tubing (steel).

American Tube Works.—137 Milk St., Boston, Mass. Mfrs. tubing (brass and copper).

American Vanadium Co.—Frick Bldg., Pittsburg, Pa. Metals (Vanadium).

American Veneer Co.—Kenilworth,

N. J. Mfrs. laminated wood automobile mud guards and dash boards. Est. 1900. Wm. A. Bushfield, Pres. and Mgr.; Wm. H. Bushfield, Sec.; F. T. Perrine, Sales Mgr.

American Wood Rim Co.—Bradford, Pa. Mfrs. rims (wood), steering wheels.

American Yacht & Motor Co.—Cherokee and De Kalb Sts., St. Louis, Mo. Mfrs. motor boats.

Ames, C. B.—Adv. Mgr. Motor, 2 Duane St., New York City.

Amesbury Brass & Foundry Co.—Amesbury, Mass. Mfrs. bow separators castings (brass, bronze, aluminum and copper), seats (auto), top fixtures, trimmings (metal).

Amesbury Metal Body Co.—Cor. Clarke and Elm Sts., Amesbury, Mass. Mfrs. aluminum, iron and steel bodies. Est. April 1, 1907.

Amico dell Automobili, L.—Published at 19 rue Maria Vittoria, Turin, Italy.

Amidon, L. H.—Wheaton, Minn. (Waltham.)

Ammeter or Amperemeter.—A galvanometer graduated so that when inserted in a circuit its index reads directly on a scale the number of amperes flowing through a coil.

Ammonia.—A colorless gas (NH_3) with a characteristic smell. It is used in the form of an aqueous solution. A bottle of it should be kept close at hand by the automobilist when handling battery acid, and the ammonia be liberally applied to whatever the acid touches. The result will be a permanent disappearance of the red stains.

Ammonia Hydrochlorate.—A white salt of ammonia (NH_4Cl), very soluble in water and employed as a chemical reagent. Under the common name of "sal ammoniac," it is much used for cleaning soldering irons before using them, and is one of the principal constituents of dry batteries.

Amos Pierce Auto Co.—109 State St., Syracuse, N. Y. (Peerless, Stevens-Duryea.) Repairing.

Amoudruz, A.—24 rue d'Armaillé Paris, France. Mfrs. carburetters, pumps, tire pumps, circulating pumps, radiators.

Amperage.—The amount of current which can be carried by a given conductor. It varies with the conditions of ventilation and other factors which affect the cooling of the conductor.

Ampere.—The practical unit of electricity by which the intensity of a cur-

rent traversing a circuit is measured. The ampere is the intensity of the current flowing through a circuit of which the resistance is one ohm, when the difference of potential at the terminals of such circuit is one volt. It is also the intensity of the current necessary, in an electrolytic bath, to furnish a deposit of 1.118 milligramme of silver in one second. The number of amperes is measured by interposing an amperemeter in the circuit.

Ampere Hour.—The electrical unit signifying a current of electricity having a volume of one ampere flowing continuously for one hour. It is used to measure the capacity of accumulators.

Ampere Mfg. Co.—408-12 W. 13th St., New York City. Mfrs. dry batteries.

Ampere Turns.—The product of the number of turns in a coil and the number of amperes flowing through it.

Amy's Patent.—3 rue du Pas-de-la-Mule, Paris, France. Mfrs. shock absorbers.

Anchor.—A large five-armed grapnel attached to the balloon-ring by a rope from a hundred to a hundred and twenty feet in length. When the balloon is in the air the anchor is arranged so as to hang below it, and, when a descent is made, it is the first thing to touch the ground. ((2). A heavy iron instrument for retaining a vessel in place.

Anders & Van Heck.—Stevens Point, Wis. (Rambler.)

Anderson & Co., F. W.—Philadelphia, Pa. Office, 729 So. Broad St.; Factory 757 No. Uber St. Mfrs. auto tops, slip covers, tire cases, baggage racks, body upholstering and painting, auto iron and steel work, top envelopes, extra tonneau seat. Est. Dec., 1905. F. M. Anderson, Pres.; Jos. W. Anderson, Treas.

Anderson & Wilkens.—125 W. 49th St., New York City. Repairing.

Anderson, A. G.—Supt. of factory, Worcester Pressed Steel Co., 1064 Monadnock Block, Chicago, Ill.

Anderson Auto Co.—314 4th Ave., N., Nashville, Tenn. Garage.

Anderson Auto Co.—41 Downer Pl., Aurora, Ill. (Rambler, White); garage; repairing; supplies.

Anderson Automobile Co.—Anderson, S. C. Garage.

Anderson Bros.—117 Front St., Marietta, Ohio. (Buick.)

Anderson, E. L.—Chief Engineer, Waterman Marine Motor Co., 1506-12 Fort St. West, Detroit, Mich.

Anderson, Carl.—Pres. Anderson Engine Co., Shelbyville, Ill.

Anderson, D. C.—Part owner Edgeworth Machine Co., Meadow Road, Edgeworth, Pa.

Anderson Carriage Co.—Detroit, Mich. Mfrs. automobiles, gas.

Anderson Engine Co.—Shelbyville, Ill. Mfrs. gasoline engines (automobile and marine). Cap. \$30,000. Est. 1905. Carl Anderson, Pres.; W. C. Anderson, Sec. and Treas. Branches at 19 E. Huron St., Chicago, Ill.; 82 Warren St., New York; 420 No. Main St., St. Louis, Mo.; 500 Washington St., Buffalo, N. Y.

Anderson Forge & Machine Co.—Detroit, Mich. Mfrs. connecting rods, crank shafts, drop forgings.

Anderson, F. W.—467 Madison Ave., Albany, N. Y. (Indian.)

Anderson, F. W.—Pres. F. W. Anderson & Co., Philadelphia, Pa. Office, 729 So. Broad St.; factory, 757 No. Uber St.

Anderson, G. A.—Vice-Pres. D. W. Haydock Automobile Mfg. Co., 5975 Cote Brilliant Ave., St. Louis, Mo.

Anderson, H. B.—Engineer, Winton Motor Carriage Co., Cleveland, O.

Anderson, Howard S.—Head of carriage carpets, worsted, wool and jute depts., Schofield, Mason & Co., Fairhill, Reese and Cumberland Sts., Philadelphia, Pa.

Anderson, H. N.—Asst. Supt. Dayton Motor Car Co., Dayton, O.

Anderson, J. D.—Pres. Hartford Rubber Works Co., Hartford, Conn., and of The G. & J. Tire Co., Indianapolis, Ind.

Anderson, Jos. W.—Treas. F. W. Anderson & Co. Office, 729 So. Broad St.; factory, 757 No. Uber St., Philadelphia, Pa.

Anderson L. R.—Part owner Edgeworth Machine Co., Meadow Road, Edgeworth, Pa.

Anderson, Ross.—Supt. Matheson Motor Car Co., Wilkesbarre, Pa.

Anderson, W. C.—Sec. and Treas. Anderson Engine Co., Shelbyville, Ill.

Anderson, W. F.—7th and Harrison Sts., San Francisco, Cal. (Reliance.)

Andress, H. M.—635 W. Broad St., Elyria, Ohio. (Queen.) Est. 1906.

Andrews & Fite.—Georgetown, Ohio. (Jewel.)

Andrews, Miss Anna M.—Treas. Chicago Women's Motor Club, Chicago, Ill.

Andrews, Chas. A.—Winchendon, Mass. (Reo, Jackson, American Mercedes.)

Andrews, C. L.—Factory Supt. General Mfg. Co., Elkhart, Ind.

Andrews, George.—437 Pearl St., Buffalo, N. Y. Garage.

Andrews, J. D.—Vice-Pres. Hamilton Motor Car Co., 26 No. 2nd St., Hamilton, Ohio.

Andrews, Rolland B.—Leominster, Mass. (Rambler.)

Andrews, Dr. W. W.—Phillipsburg, Pa. (Cadillac.)

Aneroid.—A portable form of barometer which does not involve the use of a long column of fluid, and hence is invaluable for aeronauts in determining the altitude reached by a balloon. A good aneroid barometer is desirable also when long cruises are to be made on a motorboat, the instrument often giving warning of squalls and severe storms before they approach.

Angelii, Giovanni.—Man. Director. Fiat Automobile Co., Turin, Italy.

Angelus Motor Car Co.—110 E. 3rd St., Los Angeles, Cal. Garage.

Anglada.—Puerto de Santa Maria, Cadiz, Spain. Mfrs. automobiles, gas.

Angle Iron.—See Iron, angle.

Angle Steel.—See Steel, angle.

Anglian Motor Co., Ltd.—Beccles, Suffolk, England. Mfrs. automobiles, gas. (Anglian cars), differential gears, tricar (Anglian quads).

Angrove Bros.—88-90 Princess St., Kingston, Ont., Can. (Russell, Oldsmobile.)

Anhaltische Fahrzeugwerkstaette Krause.—Dessau, Germany. Mfr. jacks.

Anion.—A free atom, or group of atoms, in a solution, which travels toward the anode (see Anode) when the solution is subject to electrolysis.

Annales Techniques, Les.—Published at 52 rue Saint Georges, Paris, France.

Annealing.—A process of increasing the softness and toughness of a material by allowing it to cool slowly after heating. Metals, after much hammering or repeated shocks, become brittle, and their toughness can generally be restored by annealing. In like manner glass, after being worked in a hot state, is very brittle, and requires annealing. Steel articles may be most effectually softened by imbedding them in a mixture of charcoal and chalk and exposing them to a high heat.

Annett's Garage.—15-17 Harper St., Detroit, Mich. Garage.

Annis Oil Co., N. L.—139 Potomac Ave., Buffalo, N. Y. Mfrs. grease, oils, soaps (auto body).

Anniston Hdwe. Co.—1118 Noble St., Anniston, Ala. (Buick.)

Annuaire de la Carrosserie et de l'Automobile.—Year book of coach and automobile construction, 14 rue Lafayette, Paris, France.

Annuaire de la Traction Automobile.—(Directory.) 138 rue Amelot, Paris, France.

Annuaire Général de L'Automobile.—(Automobile Directory.) 38 bis, avenue de la Grande-Armée, Paris, France.

Annual Baudry de Saunier.—Year Book. 20 rue Duret, Paris, France.

Annunciator.—An electrical device for communicating with the driver from the interior of an automobile. The pressure of a button inside the vehicle instantly calls the driver's attention by ringing a bell and illuminating the proper corresponding signal word on the glass face of an external disc.

Anode.—The plate or piece of metal in a battery-cell by which the current enters the liquid. The term also designates the positive pole of a battery or accumulator. It is indicated by the sign + or by the red color of the terminals.

Ansaldi-Cierano.—Daniera Crocetta, Milan, Italy. Mfrs. automobiles, gas. (S. P. A.)

Ansonia Auto Co.—235 W. 69th St., New York City. Garage.

Ansonia Brass & Copper Co.—99 John St., New York City. Mfrs. brass and copper (sheet and rod), metals (brass, copper and bronze), tubing (brass and copper).

Ansonia Electrical Co.—Ansonia, Conn. Mfrs. bells.

Ansted Spring & Axle Co.—Connersville, Ind. Mfrs. springs (leaf).

Ansted, W. B.—Pres. Central Mfg. Co., Connersville, Ind.

Anthony, Chas. E.—Pres. Western Motor Car Co., Los Angeles, Cal.

Anthony, Chas. S.—112 E. 9th St., Los Angeles, Cal. (Federal.)

Anthony, Earl C.—Vice-Pres. and Asst. Mgr. Western Motor Car Co., Los Angeles, Cal.

Anthony, E. A.—Sec. Carlow Auto. Co., 51-59 Weir St., Taunton, Mass.

Anthony, H. K.—Sec. and Treas. Western Motor Car Co., Los Angeles, Cal.

Anthony, R. S.—Fresno, Cal. (Jewel.)

Anthony, Wm.—Pres. Sterling Mfg. Co., 416 American Trust Bldg., Cleveland, O.

Anthony Auto Garage.—253 Reid Ave., Brooklyn, N. Y. Garage.

Anti-Freezing Solutions.—Any liquid of low freezing point suitable for use in the cooling system of a water-cooled motor. The following have been recommended: (1) a mixture of glycerine and water in the proportion, by weight, of 25 per cent. of the former to 70 of the latter, to which is added 2 per cent. of sodium carbonate; (2) chemically pure calcium chloride, dissolved in hot water, in the proportion of 4 pounds to 1 gallon of water; (3) sodium chloride (kitchen salt) or magnesium chloride, dissolved in water, in the proportion of 1½ pound or 2 pounds to the gallon; (4) a mixture of wood alcohol and water, the percentage of which will depend upon the climatic conditions to which the car is exposed. A 15 per cent. solu-

tion will prevent freezing at a temperature of 15° above zero. A 40 per cent. solution will not freeze at 25° below zero. The advantage of this mixture is that it has no injurious action on either metal or rubber.

Antimony.—An important metal found chiefly in the state of sulphide. It is extracted mostly from "stibnite." It has a bluish-white color and strong luster; possesses a distinct crystalline platy structure; is extremely brittle, and is reduced to powder with the greatest ease. Its specific gravity is 6.8, and it melts at a temperature just short of redness (842° F. or 450° C.).

It is of the greatest importance in the arts, and, in combination with lead, forms "type metal." "Britannia metal" is an alloy of 9 parts of tin, and 1 part of antimony, frequently also containing small quantities of copper, zinc or bismuth. An alloy of 12 parts of tin, 2 parts of antimony and a small quantity of copper forms a superior kind of "pewter." Alloys of antimony with tin, or tin and lead are much used for the manufacture of anti-friction bearings for machinery.

Anti-skid.—See Non-skid.

Antony Motor & Mfg. Co.—Colorado Springs, Colo. Mfrs. motorcycles.

Antiderapatant Rittier.—167 bis, rue de Courcelles, Levallois-Perret, France. Mfr. non-skids.

Antler Stable & Garage Co.—Toledo, Ohio. Garage.

Antoinette, Société.—10 rue des Bas-Rogers, Puteaux, France. Mfrs. motors, aeronautic and automobile.

Antoine fils et Cie.—41 quai St. Leonard, Liège, Belgium. Mfrs. motors (auto), (Antoine motors); motors, (motorcycle); motorcycles (Antoine.)

Anvil.—A heavy block of wrought iron faced with hard steel on which metal work is hammered. It consists of

a "stock," C; of a polished plate, T; and of a conical, round, square or pyramidal "beaks," B. It is provided also with a square aperture, O, used for holding the accessory tools for making holes. It is placed on a block of wood called a "bed."

(2) The term "anvil" is applied also, in a make-and-break system of ignition, to a fixed insulated steel electrode against which a movable electrode called a "hammer" strikes and, through its contact, momentarily closes an electric circuit.

Apgar, M. H.—Summit, N. J. (Maxwell.)

Apparatebau-Anstalt Fischer.—Frank-

fort-Oberrad, Germany. Mfrs. magnetos (high tension).

Appelby, Ltd., Jos.—Birmingham, England. Mfrs. chains.

Apperson Bros. Automobile Co.—80 So. Main St., Kokomo, Ind. Makers of Apperson car. Elmer Apperson, Owner and Gen. Mgr.; A. G. Seiberling, Asst. Gen. Mgr. and Pur. Agt.; Edgar Apperson, Designer; Chas. Felske, Supt.; Geo. F. Ramer, Asst. Pur. Agt.; Geo. H. Strout, Sales Mgr. and Advt. Mgr. Agents: Jos. F. Gunther Co., 1240 Michigan Ave., Chicago, Ill.; Sidney B. Bowman Auto Co., 225 W. 49th St., New York City; John E. Fry, 1562 Broadway, Denver, Colo.; Howard Auto Co., 404 Golden Gate Ave., San Francisco, Cal.; Diamond Motor Car Co., Los Angeles, Cal.

Apperson, Edgar.—Designer, Apperson Bros. Automobile Co., Kokomo, Ind.

Apperson, Elmer.—Owner and Gen. Mgr. Apperson Bros. Automobile Co., Kokomo, Ind.

Appleby & Dill.—Spotwood, N. J. (Maxwell.)

Appliance Mfg. Co.—72-86 W. Jackson Blvd., Chicago, Ill. Mfrs. bumpers, horns, foot rests, robe rails, tire holders.

Apprin, P.—15 rue David, Lyon, France. Mfr. radiators.

Aprile, Rossi E. Cia.—3 via Luitprando, Pavia, Italy. Mfrs. motorcycles.

Apron.—A canvas, enamel cloth, rubber, or metal cover for the under side of the mechanism of a motor car to protect it against dirt. Called also a "dust apron," and, when of metal, a "pan."

Apron, Storm.—A waterproof cloth for protecting the occupants of a vehicle from rain. A variety containing head-openings which can be closed and the apron used as a vehicle cover is called a "cape apron."

Apstein, D.—Bridgeport, Conn. Mfr. tire plugs.

Aquafortis.—See Acid, Nitric.

Aquascutum, Ltd.—100 Regent St., London W., England. Wearing apparel (coats).

Aquila, Fabbrica Italiana di Automobili.—9 via Bonsignore, Turin, Italy. Mfrs. automobiles, gas. (Aquila); motors, (auto) (Aquila motors).

Arbenz und Co., Eugene.—17 Wolfbach Strasse, Zürich, Switzerland. Mfrs. automobiles, gas. commercial. (Arbenz.)

Arbor.—A general term for an axle or shaft, especially the principle one in a machine.

Arcade Machine Works.—New Milford, Conn. Garage.

Arcade Malleable Iron Co.—Worces-

ter, Mass. Mfrs. castings (malleable iron), castings (steel).

Archer & Co.—1597 Broadway, New York City. Importers, Hotchkiss car. Est. Oct. 1, 1905. Cap. \$10,000. A. M. Archer, Pres.; J. W. DeLamater, Vice-Pres.; C. T. Balcom, Sec. and Treas. Branch: M. B. Kent, 141 Massachusetts Ave., Boston, Mass. Repairing.

Archer Auto Tire Co., The.—548 W. Center St., Marion, Ohio. Mfrs. tires (cushion).

Archer, A. M.—Pres. Archer & Co., 1597 Broadway, New York City.

Archer, Chas. A.—Sec. Locke Regulator Co., 76 North St., Salem, Mass.

Archer, Wesley R.—78 West St., New Haven, Conn. Repairing.

Archibald Wheel Co.—Lawrence, Mass. Mfrs. wheels (wood).

Arc Spark Mfg. Co.—125 W. 32nd St., New York City. Mfrs. spark plugs.

Arc Toledo Spark Plug Co.—Toledo, O. Mfrs. spark plugs.

Arentsen and Kolling.—Dieren, Holland. Mfrs. motorcycles.

Areometer.—An apparatus for measuring the density of a liquid. See Hydrometer.

Argus Chenu.—10 rue Fontaine-St. Georges, Paris, France. Mfrs. motors (auto).

Argus Import Motor Co.—17 E. 34th St., New York, N. Y. Importers Argus cars.

Argus Motoren Gesellschaft, Jeannin und Co.—Prinz Luis-Ferdinand-strasse 1, Berlin, Germany. Mfrs. motors (auto); automobiles, gas. (Argus.)

Argyll Motors, Ltd.—Glasgow, Scotland. Mfrs. automobiles, gas. (Argyll.)

Ariel Motor Co., Ltd.—133 Long Acre London, England. Mfrs. automobiles, gas. (Ariel.)

Ariel Motors, Ltd.—101 New Bond St., London W., England. Mfrs. motorcycle motors.

Ariel Works.—Bournebrook, Birmingham, England. Mfrs. motorcycles (Ariel).

Aries, Société Anonyme des Automobiles.—39 quai d'Argenteuil, Villeneuve-la-Garenne, France. Mfrs. automobiles, gas. (Aries.)

Arion Automobile Co.—161 Commerce St., New Haven, Conn. Garage.

Arion Garage, Inc.—485 Park Ave., New York City. Garage.

Arizona Auto Co.—Phoenix, Ariz. Garage.

Arkansas Automobile Co.—Little Rock, Ark. (Cadillac, Oldsmobile.)

Arlington Co., The.—473-5 Broadway, New York City. Mfrs. celluloid sheets.

Arlington Motor Car Co.—Pittsburg, Pa. (Jackson, Acme.) Est. 1905. Chas. F. McLaughlin, Pres.; Jas. F. McLaugh-

lin, Sec. and Treas. Garage, 38 cars. Repairing.

Arm.—Anything branching out like an arm from the main body; of a gear-wheel, one of the spokes; of a motor-vehicle, that part of the axle which passes through the hub—the "spindle;" one of the lugs that support a motor-case from the sub-frame; one of the projecting members of an anchor; ending in a fluke; one of the wings of an angle-iron, etc.

Armac Motor Co.—472-8 Carroll Ave., Chicago, Ill. Mfrs. motorcycles, motors (gas. auto.) Garage.

Armature.—(1) The piece of soft iron which is placed in contact with the poles of a permanent magnet to prevent the gradual loss of its magnetism (Fig. 1 a); called also a "keeper." (2) A piece of soft iron on which a magnet acts by magnetic attraction in order to actuate some piece of electrical apparatus, such as a relay. (3) The part of a dynamo or magneto (Fig. 2a) which is submitted to the influence of the magnetic field developed by the inductor. As a consequence of phenomena of induction, there is created in the armature windings an electromotive force which generates the utilizable electric current. Armatures may be divided into four main types: (1) ring armatures; (2) drum armatures; (3) pole armatures; and (4) disk armatures.

Fig. 1.

Fig. 2.

In all dynamos or continuous-current motors the inductor is stationary and the armature movable. In alternators or alternating-current motors an exactly opposite arrangement is frequently employed, the inductor revolving and the armature being stationary.

In 1856 Werner Siemens devised an improved armature, in which the coils of wire were wound shuttle-wise upon a grooved iron core which concentrated the magnetic lines in a powerful field between the poles of a series of adjacent steel magnets. This is called the "Siemens H," or "Shuttle" type, and is the simplest form of wire-wound armature known. The "Slotted" type of armature has a more intricate system of winding than the shuttle type, but has a far greater electrical efficiency and gives off a steadier current. It is the form most generally used for automobile and street railway motors. The current generated

by both types is alternating and is converted into a direct current by means of a commutator of very complicated form.

Armbruster, S.—4 Porzellengasse, Vienna, Austria. Mfrs. bodies.

Armes, Cycles et Automobiles, Société Manufacturière d'.—rue Trefilerie, St. Etienne, France. Mfrs. automobiles, gas. (Svelte.)

Armes de Guerre, Fabrique Nationale d'.—Herstal-les-Liege, Belgium. Mfrs. automobiles, gas.

Armitage & Co., John L.—Newark, N. J. Mfrs. varnishes.

Armory Garage.—Franklin St., Lynn, Mass. (Jackson.)

Armour & Co.—Chicago, Ill. Mfrs. hair (curled).

Armstrong, Calvin R.—Lock Haven, Pa. (Pope-Toledo, Franklin, Buick, Cadillac.)

Armstrong & Co., M.—433 Chapel St., New Haven, Conn. Mfrs. bodies (wood and metallic).

Armstrong & Sons.—Maryville, Ohio. Garage.

Armstrong Bros. Tool Co.—104-124 No. Francisco Ave., Chicago, Ill. Mfrs. tools.

Armstrong Cork Co.—23rd St. and A. V. Ry., Pittsburg, Pa. Mfrs. carburetter floats (cork); washers.

Armstrong & Hunter.—356 13th St., Brooklyn, N. Y. Garage.

Armstrong Mfg. Co., The J. B.—Flint, Mich. Mfrs. springs (leaf).

Armstrong, Whitworth & Co., Ltd.—Great Peter St., Westminster, London, England. Mfrs. automobiles, gas. (Armstrong-Whitworth.)

Army Cycle Mfg. Co.—130-32 Meeting St., Charleston, S. C. (Cadillac, Buick.) Est. 1896. Cap. \$5,000. J. H. Rast, Pres., Treas. and Mgr.; W. E. Hughes, Sec. Garage, 25 cars. Fully equipped shop for repairing.

Arnold, E. L.—San Juan, Porto Rico. Garage.

Arnold, T. N.—Haverhill, Mass. (Premier.)

Arnold, W. H.—Bangor, N. Y. Garage.

Arnstein, Eugene.—45th and Shields Ave., Chicago, Ill. Supply house.

Arrison, W. D.—Vice-Pres. Carter Motor Car Corp., 409-10 Munsey Bldg., Washington, D. C.

Arrol Johnston Car Co., Ltd., The New.—Underwood, Paisley, Scotland. Mfrs. automobiles, gas. (Arrol Johnston.)

Arthur & Flessel.—53 Main St., Huntington, N. Y. (Waltham, Peerless.) Est. 1898. Garage, 3 cars. Repairing.

Arthur Co., The.—188 Front St., New York City. Mfrs. gear wheels (metal).

Artizan Brass Co.—204 Lincoln Park

Blvd., Chicago, Ill. Mfrs. tire pumps, valves (safety).

Artman, James.—Pres. and Editor Cycle and Automobile Trade Journal, 1213 Filbert St., Philadelphia, Pa.

Art Metal Construction Co.—Jamestown, N. Y. Mfrs. lockers.

Artzbarger, W. H.—Milroy Ave., Allegheny, Pa. (Model.)

Artz, J. D.—Sole owner Dayton Folding Tonneau Co., 1141 No. Main St., Dayton, Ohio.

Arverne Automobile Garage.—Arverne, N. Y. (Glide.)

Asay, J. E.—Rock Island, Ill. (Jewell.)

Asbestos.—A fibrous mineral, a double silicate of calcium and magnesium, very incombustible, and a non-conductor of heat. It is manufactured into cardboard and cord and used for making joints in pipes and parts of machinery where great heat is developed. It is also extensively used for "lagging" (covering) for steam and hot-water pipes where it is desired to prevent condensation and loss of heat. "Asbestos wick packing" is a packing composed of selected asbestos fiber, spun into strands and made into the form of a soft, strong lamp-wick, which may be wound and packed in any desired shape.

Asbestos Mfg. Co.—Philadelphia, Pa. Mfrs. asbestos.

Asch, A. C.—Vice-Pres. Toledo Storage Battery Co., 102 Oliver St., Toledo, O.

Aschaffenburg Co., Ltd.—821 Barrow St., New Orleans, La. Garage.

Aschenburg, Wm.—Madison Ave., Perth Amboy, N. J. Garage.

Ashbrook, H. D.—Mgr. Japalac Dept. Glidden Varnish Co., Rockefeller Bldg., Cleveland, O.

Ashcroft Mfg. Co.—87 Liberty St., New York City. Mfrs. gauges pressure.

Ash, Edward.—Foreman, Pope Automobile Co. of Washington, 817-819 14th St., Washington, D. C.

Asher, H. W.—Vice-Pres. New Haven Button Co., New Haven, Conn.

Asher, W. J.—Main St., Willimantic, Conn. (Rambler.)

Asheville Cycle & Auto Co.—15-17 Lexington Ave. and 18-20 Church St., Asheville, N. C. (Cadillac, Knox.) Est. 1894. E. C. Sawyer, Prop. and Mgr. Garage, 10,000 ft. floor space. Repairing.

Asheville Mica Co.—Asheville, N. C. Mfrs. and dealers of mica (sheet or cut), washers, discs. Est. 1899.

Ashland Automobile Club.—301 Second St. E. (Knight Hotel), Ashland, Wis. Pres., W. T. Rhienhart; Sec. and Treas., B. Maytor Hoppenyan. Organized July 1, 1907, to "secure the building and repairing of roads and promote club

runs for amusement of members." Chairmen of Committees: C. H. Ziehlsdorff, Counsel; J. M. Dodd, Road; C. M. Cushman, Carnival. Charter Members: W. T. Rheinhardt, J. M. Dodd, E. M. George, G. T. Sanborn, C. H. Ziehlsdorff, S. M. Cushman, B. Maytor Hoppenyan. Held race carnival, Sept., 1907. Present membership, 19.

Ashland Auto Garage.—87 Ashland Blvd., Chicago, Ill. (Auburn, Meiselbach.)

Ashley Machine Works.—714 University Ave., Rochester, N. Y. Machine work (to order), mfrs. steering apparatus, universal joints.

Ashley, W. G.—Olympia, Wash. (Indian.)

Ashtabula Carriage Bow Co.—99 Prospect St., Ashtabula, O. Mfrs. bow sockets.

Ashtabula Hide & Leather Co.—Ashtabula, O. Mfrs. leather.

Ashton, Albert C.—Sec. and Treas. Ashton Valve Co., 271 Franklin St., Boston, Mass.

Ashton Valve Co.—271 Franklin St., Boston, Mass. Mfrs. pop safety valves, pressure gauges, water gauges, gauge cocks. Cap. \$150,000. Est. 1871. John Avery, Pres.; Fred A. Carey, Vice-Pres.; Albert C. Ashton, Sec. and Treas.

Ashwell, Robt.—45 Vine St., Hartford, Conn. (Franklin.)

Asphalt or Asphaltum.—Called also "mineral pitch," "compact bitumen" and "Jew's pitch;" a substance occurring abundantly in many parts of the world, as in the neighborhood of Dead Sea in Judea and in Trinidad, in the famous Pitch Lake, and elsewhere. It resembles, in general aspect, common pitch, is easily melted, very inflammable, and burns with a red, smoky flame. It consists principally of a substance called "asphaltene," composed of $C_{20}H_{32}O_3$.

Mixed with a percentage of sand or other substances, it is much used as a paving material.

Aspenwall Hotel Co.—Lenox, Mass. Garage.

Aspirating Nozzle.—See Nozzle, Spray.

Assemble.—To fit or join together, as the parts of a machine.

Associated Automobile Clubs of New Jersey.—Trenton, N. J. Composed of clubs affiliated with the A. A. A. W. F. Sadler, Jr., Sec., Trenton, N. J.; Winthrop E. Scaritt, 1st Vice-Pres., East Orange, N. J.; George A. Post, 2nd Vice-Pres., Paterson, N. J.; Frank Eveland, Treas., 51 Madison Ave., Jersey City, N. J.; J. E. Gill, Sec., 10 South Broad St., Trenton, N. J. The membership is composed of the following: Atlantic City Automobile Club, Automobile Club of Hudson Co., Automobile Club of New Jersey, Cape May Automobile Club,

Mercer County Automobile Club, Monmouth Automobile Club, Motor Club of Wildwood, New Jersey Automobile and Motor Club, North Jersey Auto Club, Union County Automobile Association.

Association of Licensed Automobile Manufacturers.—7 East 42nd St., New York City. Charles Clifton, Pres. (George N. Pierce Co.); Thomas Henderson, Vice-Pres. (Winton Motor Carriage Co.); L. H. Kittredge, Sec. (Peerless Motor Car Co.); H. H. Franklin, Treas. (H. H. Franklin Co.); Milton J. Budlong, Gen. Mgr.

Organized in 1903, its objects being "primarily to protect the rights of its members and those of the dealers and users of cars manufactured under the fundamental patent on gasoline automobiles, known as the Selden patent."

At the beginning its membership consisted of a majority of the older and larger concerns, and this membership has been added to from year to year, until to-day it is composed of the following:

Licensees Under Selden Patent No. 549,160: Apperson Bros. Automobile Co., Autocar Co., Buick Motor Co., Cadillac Motor Car Co., Corbin Motor Vehicle Corp., Electric Vehicle Co., Elmore Mfg. Co.; H. H. Franklin Mfg. Co.; Haynes Automobile Co., Hewitt Motor Co., Knox Automobile Co., Locomobile Company of America, Lozier Motor Co., Matheson Motor Car Co., Northern Motor Car Co., Olds Motor Works, Packard Motor Car Co., Peerless Motor Car Co., George N. Pierce Co., Pope Manufacturing Co., Pope Motor Car Co., Royal Motor Car Co., Alden Sampson, 2nd, Selden Motor Vehicle Company, F. B. Stearns Co., Stevens-Duryea Co., Studebaker Automobile Co., E. R. Thomas Motor Co., Walter Automobile Co., Waltham Manufacturing Co., Winton Motor Carriage Co.

In 1905 the National Association of Automobile Manufacturers, the membership of which consisted of both A. L. A. M. and "independent" or "non-licensed" concerns, and which had been conducting the annual shows at Madison Square Garden, announced that it had decided to withdraw from the show field. The A. L. A. M. thereupon contracted with the Madison Square Garden Company for the exclusive use of that building for automobile exhibition purposes, and proceeded to hold shows restricted, so far as gasoline cars were concerned, to its own members. The first of these shows was held in January, 1907, and the second opened November 2, 1907.

The many departments formed by the Association, particularly the mechanical, traffic, agency, foreign and employment, are at the disposal of the members of the

Association, their dealers and patrons, and if a closer recognition of the work of these departments is observed, the Association believes that even greater results than heretofore may be derived.

The Selden patent No. 549,160 was granted to G. B. Selden on November 5th, 1895, the application having been filed May 8th, 1879. The claims of the patent are thus stated briefly:

"A self-propelled vehicle comprising steering wheels and steering mechanism, driving wheels, a liquid hydrocarbon engine of the compression type, the engine shaft running at a speed greater than the driven wheels, and disconnecting means between the engine and the driven wheels, the engine being such as to permit the inclusion in the combination of a body adapted for persons or goods."

"There are six claims in all, and some of the other claims relate to other features of construction. The main claims, summarized as above, cover all the combinations of the elements which have been found essential and which are to-day embodied in one form or another in all so-called gasoline automobiles. The patent will expire November 5th, 1912."

"November 4, 1899, Selden granted an exclusive license under his patent to the Electric Vehicle Company, who instituted suits for infringement shortly thereafter, the main one being against Winton Motor Carriage Co. The latter recognized the validity of the patent and acquired a license March 5th 1903, when ten other leading gasoline vehicle manufacturers acquired similar licenses, and together founded the Association of Licensed Automobile Manufacturers."

Chairmen of Committees: Executive, Charles Clifton; Trade, Wm. E. Metzger; Shows, George Pope; Handbook, L. K. Kittredge. Executive Committee: Thomas Henderson, Winton Motor Carriage Co.; Charles Clifton, Geo. N. Pierce Co.; S. T. Davis, Jr., Locomobile Company of America; Herbert Lloyd, Electric Vehicle Co.; William E. Metzger, Cadillac Motor Car Co. Trades Committee: William E. Metzger, Cadillac Motor Car Co.; George Pope, Pope Manufacturing Co.; H. H. Franklin, H. H. Franklin Manufacturing Co.; C. C. Hildebrand, Stevens-Duryea Co.; Thomas H. Henderson, Winton Motor Carriage Co., H. T. Clinton, Mgr. Committee on Tires: Albert L. Pope, Pope Manufacturing Co.; L. H. Kittredge, Peerless Motor Car Co.; S. D. Waldon, Packard Motor Car Co. Hand Book Committee: L. H. Kittredge, Peerless Motor Car Co.; William E. Metzger, Cadillac Motor Car Co.; Thomas H. Henderson, Winton Motor Carriage Co. Show Committee: George Pope, Pope

Manufacturing Co.; Charles Clifton, George N. Pierce Co.; Merle L. Downs, Sec., A. L. A. M. Traffic Committee: S. D. Waldon, Packard Motor Car Co.; Thomas H. Henderson, Winton Motor Carriage Co.; E. P. Chalfant, Waltham Manufacturing Co. Advertising and Publicity Committee: F. L. Smith, Olds Motor Works; E. R. Thomas, E. R. Thomas Motor Co.; Charles B. Shanks, Winton Motor Carriage Co.; J. A. Kingman, Locomobile Company of America. New York Office; Milton J. Budlong, General Manager. Patent Department, Herman E. Cuntz, Mgr. Traffic Department, James S. Marvin, Mgr. Advertising and Publicity Department, Harry T. Clinton, Mgr. Mechanical Branch: A. L. Riker, Chairman (Locomobile Co. of America); Coker F. Clarkson, Sec. (A. L. A. M.); Henry Souther, Metallurgist, Hartford, Conn. Committee on Tests: H. E. Coffin, Chairman E. R. Thomas Motor Co.; A. L. Riker, Ex-officio (Locomobile Company of America); H. P. Maxim, Electric Vehicle Co.; Charles B. King, Northern Motor Car Co.; John Wilkinson, H. H. Franklin Mfg. Co.; Russell Huff, Packard Motor Car Co.; John G. Utz, Autocar Co.

Association of Motor Car Owners, Inc.—Times Bldg., New York City. Est. Feb., 1907. Org. to "protect owners against every form of overcharge and imposition, and to supply immediate relief for every possible contingency or mishap."

Association Patents Co.—7 E. 42d St., New York City. A patent holding company composed of members of and controlled by the A. L. A. M.

Aster Co.—1610 Broadway, New York City. Importers of Aster motors, carburetters, ignition apparatus and general supplies.

Aster Garage.—123 W. 52nd St., New York City. Garage.

Aster, Société l'.—St. Denis, France. Mfrs. auto. motors, motorcycle motors.

Aston Automobile Repair & Storage Co.—1185 State St., Bridgeport, Conn. Garage.

Aston Motor Accessories Co.—Birmingham, England. Mfrs. circulating pumps.

Aston, T. R.—Bridgeport, Conn. (Wayne.)

Astor Garage.—56 Sherman Ave., Newark, N. J. Garage.

Astor, John Jacob.—Born, Rhinebeck, N. Y., July 13, 1864. Ed. St. Paul's School, Concord, N. H., and Harvard University. Member Automobile Club of America and its Board of Governors

and Good Roads Committee: one of the earliest users of automobiles in America. Inventor of a pneumatic machine to remove worn-out materials from roads before new stone is laid down, which received first prize at World's Columbian Exposition, 1893; also of a practical turbine engine, and other mechanical devices. Colonel on Gov. Morton's staff; commissioned Inspector-General, with rank of Lieut.-Col., U. S. V., May 15, 1898. Served in Cuba during Spanish-American War. Residences. Ferncliff, Rhinebeck, N. Y., and 840 5th Ave., New York City. Secretary's office, 23 W. 26th St., New York City.

Atchison Perforating Co.—303 Dearborn St., Chicago, Ill. Mfrs. metals (perforated)

Ateliers Amstoutz et Ravel—Ave. de Fontaine-Argent, Besançon (Doubs), France. Mfrs. auto motors, motorcycle motors.

Ateliers de Construction.—50 ave. de Normandie, Colombes, France Mfrs. marine motors. (A. C. D.)

Ateliers de Constructions Mécaniques.—105 rue de Fazilleau, Levallois, France. Mfrs. auto motors. (Signia.)

Ateliers des Télégraphes, G. Hasler.—Berne, Switzerland. Mfrs. speed indicators.

Ateliers et Chanetris Cosmos.—Ostend, Belgium. Mfrs. marine motors.

Ateliers F. R. M.—Sclessin, Liège, Belgium. Mfrs. differential gears. lamps, electric lamps, oil lamps.

Ateliers H. Leclerc, Société Anonyme.—33 quai St. Leonard, Liège, Belgium. Mfrs. coils, high and low tension magnetos, spark plugs, acetylene, electric and oil lamps.

Atha Steel Co.—Newark, N. J. Mfrs. castings (steel).

Atha Tool Co., The.—Newark, N. J. Mfrs. tools.

Y.; Burnap & Roser, Canajoharie, N. Y.; Frank E. Stiverson, Cleveland, O.; A. Fournier, New London, Conn.; Automobile Renting Co., St. Louis, Mo.; M. A. Shuey, So. Bend, Ind.; Simmons & Francis, Flandreau, S. D.; Chase Motor Truck Co., Syracuse, N. Y.; Northampton Garage, Northampton, Mass.; Van Fleet Mfg. Co., Joliet, Ill.

Atlas Motor Co.—102 W. 107th St., New York City. Garage.

Atlas, Société des Voitures Automobiles.—101 rue de la Convention, Paris, France. Mfrs. automobiles, gas.

Atmosphere.—The mass or body of gases, chiefly air (see Air), that surrounds the earth to a height that has been estimated at 50 miles. The hydrostatic pressure due to the weight of the air is approximately 15 pounds per square inch (1.033 kilogramme per cm²) at the surface of the earth, and can support a column of mercury about 30 inches in height.

For many purposes of reference, an arbitrary standard of atmospheric pressure equal to that of 76 cm of mercury is adopted. For some purposes a pressure of one million dynes per square centimetre is assumed, which is somewhat less than the "normal pressure," being nearly equal to 75 cm. of mercury.

Atom.—In the chemical sense, the smallest quantity of a single body capable of entering into molecular combination with one or more other bodies. For example, one atom of hydrogen (H) enters into combination with one atom of chlorine (Cl) to form hydrochloric acid gas (HCl).

Atomize.—To convert into a mist by spraying.

Atomizing Nozzle.—See Nozzle. Spray.
Atterburg, G. W.—Pres. Autocar Equipment Co., 77-79 Edward St., Buffalo, N. Y.

Attleboro Automobile Co.—74 Union St., Attleboro, Mass (Pope-Waverley, Stanley, Autocar, Stevens-Duryea, Pierce-Arrow. Est. 1903. W. A. Engley, Treas. Garage, 24 cars; repairing, electric charging and supplies.

Complete line of automobile accessories and tools (jobbers). George Lee Thompson, Pres.; Jos. A. Janney, Jr., Treas.; Jos. A. Steinmetz, Sec.; Paul P. Rippien, Gen. Mgr.

Autolyte Mfg. Co.—10-12 Thomas St., New York City. Mfrs. horns, lamps.

Automatic.—A term (from the Greek words auto, stem of autos, "self," and maomai, "I move"), applied to every apparatus, or part of a mechanical apparatus, that possesses a motion independent of the human will, or of a special mechanical control. Thus, an inlet-valve is called "automatic," when it opens of itself at the moment of suction, such opening being the consequence of the depression in the cylinder produced by the down-stroke of the piston.

Automatic Carburetter.—See Carburetter.

Automatic Ducasble.—5 ave du Roule, Neuilly (Seine), France. Mfrs. tires (pneumatic), rubber.

Automatic Inlet Valve.—See Valve, Inlet.

Automatic Machine Co., The.—Bridgeport, Conn. Mfrs. motors (gasoline marine.)

Automatisme, L'.—8 blvd. d'Asnières, Neuilly-sur-Seine, France. Mfrs. carburetters.

Automobile.—A hybrid adjective-substantive (from Greek auto, stem of autos, "self," and Latin mobilis, "movable"), adopted as a generic term for self-propelled vehicles adapted to run and be steered on common roads and to carry either articles or passengers other than exclusively for their own use or guidance. The word is quite commonly abbreviated to "auto" simply; while a devotee of the new mode of locomotion is very frequently styled an "autoist." It is sometimes employed also in its original adjective sense of "self-movable" to form self-explaining compounds, such as "automobile boat," and the like.

Automobil' Das.—Published at 7 Ohmachstrasse, Strasbourg (Alsace), Ger-

many. Official organ of the A. C. d'Alsace.

Automobile, L'.—Published at 12 via Aurelio Saffi, Milan, Italy.

Automobile, L'.—Published at 7 rue Saint-Benoit, Paris, France.

Automobile, The.—Flatiron Bldg., New York City. Published weekly by the Class Journal Company. H. M. Swetland, Pres.; A. G. Batchelder, managing editor; R. F. Kelsey, C. B. Hayward and W. F. Bradley, Editorial Dept.; Business Dept., A. B. Swetland, Bus. Mgr.; L. R. Smith, Frank B. Barnett, W. I. Ralph, C. H. Gurnett and H. E. Westerdale, adv. solicitors. The Automobile is a consolidation of The Automobile (monthly) and the Motor Review (weekly), May, 1902, Dealer and Repairman (monthly), Oct., 1903, and the Automobile Magazine (monthly), July, 1907.

Automobile Arcade.—Broadway and 49th St., New York City. Garage.

Automobile Association of Center County.—Robt. F. Hunter, Sec., Bellefonte, Pa. Member A. A. A.

Automobile Association, General.—Society for the encouragement of the automobile industry in France, founded under the patronage of the Automobile Club of France. Provisional quarters at 8 Place de la Concorde, Paris. President, M. de Dion; secretary general, E. Chaix. The object of the society is to second the Automobile Club of France and the Society of Encouragement in promoting the progress and extension of the industries connected with automobilism, in popularizing matters pertaining to mechanical locomotion, in studying and pursuing the realization of all useful measures of technical, administrative, legislative and economic order, and in grouping, for the defense of their common interests, all those who manufacture, sell or own motor vehicles, as well as all those who are interested in mechanical traction.

Automobile Club of America (A. C. A.).—54th St., West of Broadway, New

York City. Member A. A. A. Pres., Colgate Hoyt; 1st Vice-Pres., Schuyler Skaats Wheeler; 2nd Vice-Pres., John E. Borne; 3rd Vice-Pres., Gen. George Moore Smith; Treas., W. W. Fanshawe; Consulting Engineer, Schuyler Skaats Wheeler, Sc. D.; Chaplain, Rev. Wilton Merle Smith, D. D.; Sec., S. M. Butler.

Organized June 7, 1899, as the result of a call sent out by Whitney Lyon and George F. Chamberlain, which call contained the following statement: "In view of the rapidly increasing number who own and operate self-propelled pleasure vehicles in this country and the general widespread interest in the subject, both here and abroad, and the almost certain use of the automobile as a form of sport in the United States and the difficulty of procuring proper storage and care for the vehicles, it has been thought desirable to call this meeting of owners or intending owners of these vehicles for a conference looking toward the formation of a club which in due time shall have a clubhouse where the carriage may be properly stored and cared for by competent mechanics, and where may be found also literature on the development of the automobile as well as suitable meeting rooms for social intercourse and general interchange of views on the subject.

At this meeting, held at the Waldorf-Astoria, George F. Chamberlain was elected chairman and Homer W. Hedge, secretary. About thirty persons were present and a committee was selected to draft a constitution and by-laws and to perfect the organization. On August 16 a charter was granted under New York laws and the organization incorporated. On October 16 the constitution and by-laws were adopted and these officers were chosen: Acting Pres., Geo. F. Chamberlain; Treas., V. Everit Macy; Sec., Homer W. Hedge.

The club had its first parade and club run on Nov. 4, 1899, when 34 motor vehicles, headed by a band of music, started up Fifth avenue for the Claremont on Riverside Drive, which most of the vehicles reached safely. The club promoted its first road race on April 14, 1900, over a 50-mile course on Long Island. The race was won by A. L. Riker in a specially constructed electric vehicle, which covered the distance in 2 hrs., 3 min. and 30 seconds. There were ten entries. The first long run was in Philadelphia on June 2, 1900, in which 20 vehicles started and 16 finished. They left the Waldorf-Astoria at 7:30 a. m., and the first car reached Philadelphia at 7:20 p. m., the distance, by way of Trenton and Moorestown, being 117 miles. The first annual exhibition

was held in Madison Square Garden beginning Nov. 3, 1900, with 66 exhibits.

The first long run, styled an "endurance contest," began Sept. 9, 1901, from New York, Buffalo being the point of destination. Eighty cars started and 42 had reached Rochester September 13, when the run was declared off upon the receipt of the news that President McKinley, who had been shot just before the start of the run, had succumbed to his injuries. The first 100-mile non-stop endurance contest was held May 30, 1902, over a course from New York to Southport, just outside of Bridgeport, Conn., and return. There were 55 contesting cars, 44 of which finished, 20 of them making a non-stop run. On May 20 and 21, 1903, the first commercial vehicle contest was held over a course mapped out in New York City and suburbs. On the first day 11 vehicles started and 9 finished; on the second 9 started and 7 finished.

In May, 1905, the long-talked-of project to build a clubhouse took definite shape. A building committee was appointed consisting of Colgate Hoyt, Chairman; Dr. Schuyler Skaats Wheeler and Albert R. Shattuck. The land on which this clubhouse stands was purchased in May, 1905, for \$210,000, and the building itself is estimated to have cost about \$350,000. This clubhouse was the first building to be constructed in the city of New York of re-enforced concrete. It is believed to be absolutely fireproof. Ernest Flagg of New York City is the architect. The cornerstone was laid with appropriate ceremonies on May 21, 1906, and the house was opened in the summer of 1907, while the series of meetings began Friday, October 18, when cups won in the club's sealed mechanism contest were presented.

The governors and committees follow: Board of Governors: Colgate Hoyt, Pres.; Schuyler Skaats Wheeler, 1st Vice-Pres.; John E. Borne, 2nd Vice-Pres.; Gen. George Moore Smith, 3rd Vice-Pres. Executive Committee: Schuyler Skaats Wheeler, Chairman; A. R. Shattuck, Henry Sanderson; Christopher M. Lowther, Clerk of Committee. House Committee: Schuyler Skaats Wheeler, Chairman; A. R. Shattuck, Henry Sanderson, Dave H. Morris, George F. Chamberlain. Good Roads Committee: A. R. Shattuck, Chairman; Col. John Jacob Astor, John F. Plummer, Jr. Exhibition Committee: General George Moore Smith, Chairman; Alan R. Hawley, William Pierson Hamilton. Runs and Tours Committee: Waldron Williams, Chairman; Carl H. Page, Cortlandt Field Bishop, Augustus Post, A. R.

Shattuck, J. M. Porter, Winslow Tracy Williams. Library Committee: A. R. Shattuck, Chairman; Phillip T. Dodge, Rev. Wilton Merle Smith. Membership Committee: Melville D. Chapman, Chairman; Charles B. Dillingham, Gage E. Tarbell. Law and Ordinance Committee: W. W. Niles, Chairman; Winthrop E. Scarritt, William H. Page. Racing Committee: Robert Lee Morrell, Chairman; John A. Hill, E. T. Birdsall, A. H. Whiting. Map Committee: Cortlandt Field Bishop, Chairman; Henry R. Taylor. Building Committee: Schuyler Skaats Wheeler, Chairman; A. R. Shattuck, General George Moore Smith, Dave H. Morris. Sign Post Committee: Jefferson Seligman, Chairman; Melville D. Chapman, Irving Brokaw. Committee on City Streets: W. W. Niles, Chairman; Wm. R. Warren, C. E. Knoblauch, Orrel A. Parker, Charles S. Towle. Committee on Foreign Relations: J. Howard Johnston, Chairman; William K. Vanderbilt, Jr., J. Dunbar Wright, James L. Breese, William S. Hogan. Committee on Public Safety: Winthrop E. Scarritt, Chairman; George F. Chamberlain, A. R. Shattuck, Dave H. Morris.

Automobile Club of Auburn.—148 Genesee St., Auburn, N. Y. Pres., W. F. Wait; 1st Vice-Pres., S. C. Tallman; 2nd Vice-Pres., W. B. Barnes; Sec. and Treas., Dr. G. W. Whitney. Organized May 27, 1903. Chairmen of Committees: Irving W. Smith, Membership; Hon. W. E. Woodwin, Laws and Ordinances; Dr. R. B. Avery, Roads. Charter Members: W. F. Wait, S. C. Tallman, W. B. Barnes, Dr. G. W. Whitney, George Barrett, S. C. Sharp, Dr. R. B. Avery, Dr. W. H. Coe, Lester S. Wait, H. L. Stevens, Emory Caldwell, Dr. L. P. Meaker, C. T. Schilling, Bradford Tallman. Present membership, 52. Member A. A. A.

Automobile Club of Austria ("Oesterreicher Automobil Club").—10 Koernthnerring, Vienna, Austria.

Automobile Club of Baltimore City.—Baltimore, Md. Jas. S. Reese, Sec. Member A. A. A.

Automobile Club of Barcelona.—Rue de Rosselon, Barcelona, Spain.

Aviator.—A machine for self-support and propulsion through the air; a form of aeroplane.

Aviation.—That portion of aeronautics which pertains to aerial locomotion by purely mechanical means, without the aid of any gas lighter than the air. The apparatus employed in mechanical flight, and commonly called "flying machines" are of the following types: (1) The "helicopter," which consists of one or more helices or screws on a vertical or nearly vertical axis; (2) the "aeroplane," the types of which are innumerable, and which consists, in principle, of one or more planes, the sustentation and lateral progression of which are obtained either by the effect of their own gravity properly compounded with the resistance of the air, or by the action of one or more screws with a horizontal or nearly horizontal axis; (3) the "orthopter," or mechanical bird, which is sustained and propelled by two or more beating wings.

Axis.—The center line of a body, or the line about which a figure or solid is symmetrical. For example, the axis of a cylindrical bar of metal is the theoretical line which unites the center of the successive circles of the same or different diameters. By derivation, an axis

in mechanics is a cylindrical piece around which another piece, such as a wheel, lever, etc., can take on a rotary motion and which it serves as a line of centers. It is an immovable piece—a fixed shaft. A solid or hollow spindle upon which a wheel turns, for example, is an “axis.” In the figure, A, A' and A'' represent the axis of the shafts B and B' and the curved bar B''.

Axle.—In almost all automobiles the power is applied to the rear axle and wheels, while the steering is effected by the front wheels, which, for this purpose, are pivoted at the end of an axle that, unlike the front axle of a horse-drawn vehicle, is stationary.

In all motor-cars of standard design, the front axle, which is immovably attached beneath the body of the vehicle, is either of I-beam or tubular section, and is usually “dropped” in the center so that it may be the lowest part of the mechanism and thus receive the blows of road-objects, which, in event of their coming into contact with the crank-case and fan, might cause very serious damage. Near each end of the axle is a flat “seat” or “saddle” for the reception of the spring, and at each extreme end, and forged solid with it, is a jaw or yoke in

which is pivoted the steel spindle (Fig. 2A) upon which the road-wheel revolves. Forming a single-piece forging with the pivots (Fig. 2B) are two short steering arms (Fig. 2C), which are connected to each other by a drag-link. A lever forged with the steering arm, or brazed and pinned to a shoulder on the pivot of the right-hand side of the car, is connected, through an arm, with the gear at the base of the steering pillar, so that a movement of the drag-link produced thereby moves the pivoted ends of the axle and the wheels to correspond. Since the arms would, if they stood at right angles to the axle-ends, move each pivoted spindle through an equal angle, and the wheels would be parallel at all times, the steering arms are inclined toward each other and the drag-link made shorter than the distance between the axle pivots. If the drag-link be in front of the axle, a position preferred by some manufacturers, the steering arms are inclined outward. The result of such an arrangement is that when the drag-link is moved, one of the wheels swings through a greater angle than the other, and that the difference between the angle of each arm and the stationary part of the axle increases with a greater movement of the drag-link.

The steering knuckles in use at present are of two principle types: (1) a spindle and pivot of T-shape (like that shown in Fig. 2) and called the “Elliott pivot” and an axle with yoke or jaw ends; and (2) a pivot of L-shape and an axle with vertical hubs. In the latter, frequently termed the “Lemoine pivot,” the steering arm goes on the lower end of one pivot, while the other pivot carries a combined steering arm and lever. The outer end of the steering arm is provided with a ball to fit in the socket on the connecting-rod of the steering mechanism.

Tubular front axles are always made in three parts, consisting of cold-drawn, seamless tubing, bent to shape, and fitted with the usual steering yokes and pivots. Fig. 1 shows a typical forged axle of I-beam section of the Locomobile car.

Rear axles may be divided into two types, viz., “dead” axles and “live” axles. The dead axle is made of I-beam section or of steel tubing and is employed with the “jack-shaft” and double chain drive. It is provided with spindles which are in a piece with it, and upon which the wheels revolve. Power is transmitted through the intermedium of bevel-gears to the jack-shaft, or shaft passing across the car and carrying at its ends the sockets by which the road-wheels are driven. Fig. 2 represents a typical dead axle, a single piece of drop-forging used on the Locomobile car.

In the live axle type the rear wheels are connected to the axle-shaft and revolve with it, and the axle proper is surrounded by a non-revoluble steel tubular casting which is secured to the rear

extremity of the hub. By means of such an arrangement the whole weight of the car is received by the tubular casing, and the strain of the transmission solely comes upon the differential shaft. If,

Fig. 1

springs, and which not only relieves the driving part from the weight of the car, but also supports the differential and driving mechanism. In this casing run the two ends of the differential axle, and in the center of the cas-

Fig. 2

on the contrary, the wheels are mounted direct, the entire weight comes upon the shaft, the result of which is the producing of excessive friction, and sometimes a strain and fracture of the shaft.

Fig. 4 illustrates a live axle of the Rambler car. Here A and A are the live shaft bearings in the differential case; BB, the ball-bearings supporting the differential; C, the end of the live shaft

Fig. 3

ing is the differential itself and its housing. On the differential is bolted the bevel, sprocket, or worm-wheel, which drives it from the gear-box by means of a bevel, sprocket or worm. (Examples

keyed in the wheel-hub; D, the inner member of the roller-bearing in the wheel-hub; E, the outer member of the same; F, the expanding brake-ring; G, the lever for setting the brake-ring;

Fig. 4

of the bevel drive are found in the Peerless, Darracq, Autocar, Packard and Renault; of the sprocket drive in the Olds, Reo, Cadillac and Buick; and of the worm-drive in the Dennis and Garrard.)

The road-wheels are sometimes mounted directly on the ends of the differential axle, but most usually the hubs revolve on bearings outside the end of the tubular axle, while the shaft of the differential runs through the latter to the exterior, where it is coupled to the

HH, the differential case in halves, joined in the center; H, the spur-gears on the live shaft; J, the equalizing gear of the differential; and KK, the rings for adjusting the bearing BB.

Axle, Blind.—Same as "dead axle." See Axle.

Axle-box.—The bearing in which an axle revolves

Axle, Cardan.—A universally jointed axle. See Cardan.

Axle, Dead.—An axle which does not rotate, and has bearings at each end upon which the wheels revolve. See Axle.

Axle, Divided.—A type of live axle which is divided into two parts in order that a differential gear may be fitted between them. See Axle.

Axle, Floating.—A type of rear axle, so-called because it "floats," so to speak, in the axle-casing, by which the weight of the machine is supported and upon which the wheel revolves. See Axle.

Axle-journal.—The end of an axle on which a wheel turns. It is usually made of tempered steel, and terminates in a thread on which a nut screws, in order to hold the wheel in place. See Spindle.

Axle, Live.—An axle that revolves with the wheels, instead of the wheels turning upon it. See Axle.

Ayer Automobile Station.—E. Main

St., Ayer, Mass. Garage; repairing; supplies.

Bachten et Gallay.—Geneva, Switzerland. Mfrs. radiators.

Back Bay Automobile Co.—169-73 Huntington Ave., Boston, Mass. Garage.

Backe, T. A.—33 Herkimer Pl., Brooklyn, N. Y. Repairing.

Back-fire.—A term applied to a premature explosion that occurs in a gasoline motor, especially when starting, and which suddenly reverses the direction of the motor. The term is applied also to an explosion that takes place in the muffler from the ignition of an accumulation of unburned gas. See Barking.

Backing.—The resultant of gravity applied to a car on its way up or down hill. If the motor is too low powered, or if the brakes are not strong enough to resist the force gravity, the car will begin to back or start forward with a constantly accelerating speed, which if not checked, will result in a catastrophe. Backing may be prevented by a sprag, by good brakes, or by the motor itself, which, when the compression keeps up, and the ignition is cut out, will serve as a supplementary brake.

Back-kick.—See Back-fire.

Back-lash.—The amount of loose play between the two elements of a mechanism that have a tendency to move backward, as, for example, a gear-wheel and its pinion—the amount that the pinion can turn back without moving the wheel that drives it.

Back-on-the-gears.—An expression used to denote a change from the highest to a lower speed in bringing into action the change-speed gear.

Back Pressure.—A pressure contrary to the normal, such as that of the exhaust gases upon the piston of a gasoline motor during the exhaust-stroke, or that in the cylinder of a steam-engine due to the steam which is still escaping by the exhaust-port.

Backward Eccentric.—See Eccentric, Backward.

Bacon, Richard, Jr.—Mgr. Chicago branch Cleveland Motor Car Co., 1470 Michigan Ave., Chicago, Ill.

Bakker unt Zoon.—Ridderkerk, Holland. Mfrs. pneumatic tires.

Balance-gear.—See Gear, Balance.

Balancemobile Werke, C. E.—Buhler, Buttstadt im Thüringen, Germany. Mfrs. automobile motors.

Balancing.—A motor is balanced when it runs without tremor. The question of balancing is a very complex one, and can be exactly solved only by the use of special arrangements. It is a question here, of course, only of reciprocating motors, since rotary motors, such as turbines and dynamos, are naturally bal-

anced. The subject has been specially studied by Witz, in his Treatise on Gas Motors, from which it appears that the conditions necessary and sufficient for the balancing of a motor are: (1) That the resultant of the centrifugal forces due to the masses in rotation shall be null; (2) that the resultant of the forces of inertia of the parts in alternating motion shall be null; (3) that the reaction couple of the motor couple shall be balanced by an equal and contrary couple; (4) and, finally, such conditions must be fulfilled by any position whatever, and

Fig. 1

the opposite forces that annul each other be in the same plane.

These conditions are fulfilled in the various types of ordinary motors in the following manner:

(a) In the single-cylinder motor, the first alone is fulfilled by balancing the mass of the crank and a fraction of that of the connecting-rod by a counterweight. The force of inertia is attenuated by the use of very light movable parts (connecting-rods and pistons), and the abrupt variations of the motor couple by the use of a powerful fly-wheel.

(b) In two-cylinder motors, two cases are to be considered according as the cranks are keyed at 0° (Fig. 1), or at 180° (Fig. 2). In the first case, we have, from the view-point of balancing, exactly the same conditions as in a single-cylinder. The variations of the motor couple,

Fig. 2

however, are less prolonged for the reason that one "explosion" per revolution is obtained. It may be noted that the use of a counterweight in the fly-wheel seems to be rather faulty in that the stresses are not in the same plane (4th principle). The result is that the shaft tends to turn out of true and produces an abnormal

wear on the bearing, aside from the inevitable vibrations. The counterweights should always be placed at the crank. In the second case, the forces of inertia, as well as the centrifugal forces, are balanced, but in different planes. The result is oscillations of the motor in a longitudinal direction. Such oscillations, however, are less disagreeable on a car than transverse ones. Now, in the case of the motor considered, such oscillations attain a greater value than in the preceding by reason of the notable variations of the couple created by the dissymmetry of the strokes of the motor, which are, in fact, consecutive and followed by two passive strokes. On account of such disadvantages the motor keyed at 180° seems to be plainly inferior, from the view-point of regularity, if not from that of balancing, to the one at 0° .

The first arrangement is employed by Panhard, Decauville, etc., and the second by Brasier.

(c) The arrangement of the vertical 4-cylinder motor is plainly shown in Fig. 3. The efforts of inertia and centrifugal forces are balanced and in the same plane, since the pistons, which move in the same direction, are sym-

Fig. 3

metrically placed with respect to the center of the motor. The couples are not balanced. Their abrupt variation is attenuated by the use of a progressive regulation such as that generally employed on the admission, and by the use of a powerful fly-wheel. This remark also applies to the 1 and 2-cylinder motors already mentioned.

(d) The Bardon motor with horizontal cylinder and two opposed pistons (Fig.

Fig. 4

4) was designed according to the plan indicated by M. Crozet with a view to complete balancing. The pistons mov-

ing on each side of a common explosion chamber are connected to crank-shafts turning in the opposite directions and operatively connected by the longitudinal driving-shaft. The centrifugal forces are balanced by the addition of counterweights to the cranks. The forces of inertia and the reactions are balanced naturally.

(e) The Gobron motor (Fig. 5), which

Fig. 5

likewise has opposed pistons, one of which is connected to the central crank by means of a short connecting-rod acting by compression, while the other is connected to the side-cranks by means of two long connecting-rods acting by traction, comprises but a single shaft, which does not permit of balancing the reactions. The same is the case with opposed pistons in a horizontal cylinder actuating, through connecting-rods, the central shaft placed below. Such arrangements are, however, not much employed.

As regards 3-cylinder motors, when these have cranks at 120° , the motor strokes succeed each other at equal intervals, the stresses of inertia and centrifugal stresses are approximately balanced, but in different planes, and this produces rocking. It is possible, however, to balance the centrifugal stresses in their plane by counterweights at the cranks. Examples of such motors are found in the Westinghouse (stationary motors), Louet and Panhard. But the reactions are not always balanced. Upon the whole, such a motor is slightly inferior to the 4-cylinder one. It costs less and may have but two bearings. When it is desired to balance all the efforts in the same plane, Caplet's arrangement, which in some respects resembles a Roser Mazurier compound motor with central expansion cylinder for the burned gases is adopted. As the end cranks are at 180° from the central one, it is possible, by judiciously increasing the weight of the latter and its piston, to balance the centrifugal efforts and those of inertia in the same plane,

just as in the 4-cylinder. From the viewpoint of reaction, the motor with cranks at 120° is inferior on account of the irregular distribution of the motor strokes, which succeed each other three by three with a passive stroke interposed. On this subject the same remarks might be made as on the 2-cylinder motors at 0° and 180° , and, all things considered, it is permissible to believe that cranks at 120° are preferable, especially if the motor is one having a stroke less than the bore, as is usually the case. It is, moreover, not very logical to increase the weight of a crank and piston at will. In the Roser Mazurier such a result is obtained by the fact that, as the central cylinder is an expansion one, it is of wide diameter. Finally, the strokes succeed each other therein as in the 4-cylinder motors, the central piston alternately receiving the heating of the end ones.

Balata.—An elastic gum obtained from *Mimusops balata* (order Sapotaceae), a large tree, native of Venezuela, the Guianas and the West India Islands. The tree is particularly abundant in the Guianas, where the preparation of balata gum has, within the last five or six years, become an important industry. Balata is, in character, between rubber and gutta percha, having the elasticity of the one and the ductility of the other without the intractability of rubber or the brittleness of gutta percha. It is largely used as an insulating medium.

Balcom, C. T.—Sec. and Treas. Archer & Co., 1597 Broadway, New York City.

Baldauf, C. G.—Limbacherstrasse 37, Chemnitz, Germany. Mfrs. springs.

Baldner Motor Vehicle Co.—Church & Whitney St., Xenia, Ohio. Repairing.

Baldwin Bros. Co.—Rochester, Pa. (Pope-Hartford.)

Baldwin Chain & Mfg. Co.—199 Chandler St., Worcester, Mass. Mfrs. chains, sprockets. Member M. & A. M. Cap. \$100,000. Est. 1896. W. F. Brawn. Pres.; W. H. Gates. Treas.

Baldwin, L. F. N.—Providence, R. I. (Stanley.)

Baldwin Motor Works.—Merrick Rd., Freeport, L. I., N. Y. Supplies; garage.

Baldwin, William Earle.—B. Dec. 13, 1872, at Belchertown, Mass. Education, private and high schools. Sec. and Advt. Mgr. Automobile Topics, Times Bldg., New York City. Started first automobile newspaper department in New York Mail and Express.

Bales, Frank.—Kansas City, Mo. (Cadillac.)

Balfour, Robt. A.—Pres. Northwestern Motor Car Co., 1928-30 N. 20th St., Philadelphia, Pa.

Balkwill Pattern Works.—970 Hamilton St., Cleveland, Ohio. Pattern makers.

Ball, Chas. A.—58-62 Palmetto St., Brooklyn, N. Y. Repairing.

Ball, H. F.—Vice-Pres. American Locomotive Automobile Co., Providence, R. I.

Ball, H. H.—93 Broadway, Paterson, N. J. (Orient Buckboard.)

Ball, Jno. R.—Sec. and Treas., Purch. Agt., Sales and Advt. Mgr. Merkel Motor Co., 1090 26th Ave., Milwaukee, Wis.

Ball, J. V.—Loyalton, Cal. (Waltham.)

Ball, Leroy D.—Sec. Empire State Motor Car Co., 2148 Broadway, New York City.

Ballanger, W. S.—Treas. Buick Motor Co., Flint, Mich.

Ballast.—A term applied to the covering of roads generally; called also "metalling." (2) Any heavy substance placed in the hold of a boat or the car of a balloon in order to steady it.

Balnew, C. H.—Gen. Mgr. Miami Cycle & Mfg. Co., Grand Ave., Middletown, Ohio.

Ball-joint.—See Joint, Ball.

Balloon, Dirigible.—A balloon, usually spindle-shaped and fitted with some kind of propelling mechanism (actuated by steam, electricity or other form of energy) by which its movement is controlled and the balloon navigated and made to move to a certain extent independently of the direction and velocity of the wind. The dirigible balloon is now so far perfected as to constitute an important part of the equipment of every large army organization.

Ballooning and Aeronautics.—45 Graf-ton St., Tottenham Court Road, London, W. England. (Aeronautical Magazine.)

Balloon-records.—World's record for distance, 1293.5 miles, established by Count Henri de La Vaulx, aeronaut, commanding the "Centaur" (57,218 cubic feet) inflated with three-quarters hydrogen. Assistant, Count de Castillon de Saint-Victor. Started Oct. 9, 1900, at 2h. 5m. from Vincennes and landed at Karostychew, Russia, Oct. 11, at 10h. 5m., breaking the record made by Prof. John Wise on July 1, 1859, who covered a distance, measured by modern methods, of 870 miles from St. Louis to Henderson, N. Y.

World's record for duration, 44h. 2m., established by M. A. Le Blanc, aeronaut, commanding "L'Isle de France," inflated with illuminating gas. Assistant, E. W. Mix. Started Oct. 21, 1907, from St. Louis, Mo., and landed Oct. 23 at Herbertsville, N. J.

French record for altitude, 28,044 feet, established by M. Jacques Balsan, aeronaut, commanding the "Saint-Louis" (105,960 cubic feet) inflated with illuminating gas. Assistant, M. Louis Godard. Started from Vincennes Sept. 23, 1900,

at 13h. 50m. Landed at Passy-Enigny on the same day at 17h. 15m.

World's record for altitude, 33,784 feet, established by Dr. Berson, aeronaut, commanding a balloon of 284,560 cubic feet, inflated with three-quarters hydrogen. Assistant, M. Suring. Started from the aerostatic park of Berlin July 31. Landed at Cottbus, Germany.

Balloon-valve.—See Valve, Balloon.

Ballot et Cie.—105 bvd. Brune, Paris, France. Mfrs. auto and marine motors.

Ballou, J. P.—175 Washington St., North Attleboro, Mass. Garage; repairing and supplies.

Ballou & Wright.—86 Sixth St., Portland, Ore. (Indian.)

Ball-race.—In ball-bearings, the circular groove in which the balls travel.

Ball Tool Co.—253 A St., Boston, Mass. Mfrs. wrenches.

Ball-valve.—See Valve, Ball.

Balmer, U.—Moutier, Jura-Bernois, Switzerland. Mfrs. motorcycles.

Baltimore Ave. Garage.—49th and Baltimore Ave., Philadelphia, Pa. Garage.

Baltimore Buggy Top Co.—Baltimore, Md. Mfrs. automobile tops.

Baltimore County Motor Club.—Allen Schwartz, Sec., Baltimore, Md.

Baltimore Enamel & Novelty Co.—Foot of Allen St., Baltimore, Md. Mfrs. license numbers, name plates.

Baltimore Motor Carriage Co.—305 N. Howard St., Baltimore, Md. (Winton.)

Baltzinger, F.—Montbéliard, Doubs, France. Mfr. circulating pumps.

Balzer, Gus.—1556 Broadway, New York City. Mfr. radiator monograms, crests and signs, lamp and auto numbering devices. Mfrs. agent for shock absorbers, speedometers, grease guns, generators, oilers.

Band.—Any thin strap of metal or other material fixed around the circumference of an object.

Band-brake.—See Brake, Band.

Banfil, W. H.—78 Portland St., Boston, Mass. (Jewell.)

Bangor Auto Garage & Motor Co.—2nd and Market Sts., Bangor, Pa. (Rambler.)

Bangor Automobile Club.—A. Fred Seem, Sec., 104 Market St., Bangor, Pa.

Banker, Arthur L.—Pres. Banker Bros. Co., Baum & Beatty Sts., Pittsburg, Pa.

Banker Bros. Co.—Baum and Beatty Sts., Pittsburg, Pa. Dealers and Mfrs. of wind shields, capetops, limousine bodies. Agents; Pierce-Arrow, Stevens-Duryea, Cadillac, Autocar. Cap. \$100,000. Inc. Nov. 20, 1901. Arthur L. Banker, Pres.; M. Ray Stehley, Sec.; E. C. Hans, Supt.; C. O. DuMars, Purch. Agt.; R. P. McCurdy, Sales Mgr.

Banker Co., A. C.—36th St. and Grand Blvd., Chicago, Ill. (Logan, Compound.)

Banks Mfg. & Supply Co., Inc., 203 Broadway, New York City.

Banner, Frank.—Foreman of factory, The Breeze Carbureter Co., 276 Halsey St., Newark, N. J.

Bannister, Walter C.—Mgr. Standard Auto Renting Co., 186 E. 73rd St., New York City.

Banta, A. J.—1354 Michigan Ave., Chicago, Ill. (Locomobile.)

Bantam Anti-Friction Co.—Bantam, Conn. Mfrs. ball bearings. Garage.

Bapst, Frank L.—Vice-Pres. Babcock Electric Carriage Co., 226-242 W. Utica St., Buffalo, N. Y.

Bar.—A rod of metal of various forms of cross-section. A term applied also to certain mechanisms and parts of structures.

Bara, Pascault et Riga.—35 rue Victor-Massé, Paris, France. Mfrs. primary batteries, motorcycles, speed indicators.

Barad.—The C. G. S. unit of pressure; the pressure of one dyne per square centimetre.

Barber, A. G.—Pres. and Treas. Globe Optical Co., 403 Washington St., Boston, Mass.

Barber Bros.—101 Grape St., Syracuse, N. Y. Mfrs. gasoline automobile motors.

Barber, F. A.—Vice-Pres. Globe Optical Co., 403 Washington St., Boston, Mass.

Barber Mfg. Co.—Anderson, Ind. Mfrs. seat springs.

Barbier et Brandon.—112 rue d'Antony, St.-Etienne, France. Mfrs. radiators.

Barbou fils.—52 rue Montmartre, Paris, France. Mfrs. jacks.

Barbour, Plumb & Co.—2119 Third Ave., Birmingham, Ala. (Mitchell.)

Barbour, W. F.—Pres. Northern Motor Car Co., Champlain and Canton Sts., Detroit, Mich.

Barclay Auto Co.—246 Third Ave., Minneapolis, Minn. (Autocar, Stanley.)

Barclay, Jas.—Pres. Warner Instrument Co., 2022 Roosevelt Ave., Beloit, Wis.

Barco, Geo. C.—Olive St., West Palm Beach, Fla. Agent Rambler. Renting; repairing. Garage, 6 cars.

Barcus & Co., Geo.—Wabash, Ind. Mfrs. gray iron castings.

Barden, E. A.—Mgr. Barden Electric & Mchy. Co., 109 Main St., Houston, Tex.

Barden Electric & Machinery Co.—109 Main St., Houston, Tex. Agents Rambler, Reo, Mitchell, Frayer-Miller. Est. 1900. E. A. Barden Mgr.

Barden, Clérc et Cie.—12 bvd. Sebastopol, Paris, France. Mfrs. non-skid bands.

Barff Process.—A process of protecting iron from rust by heating to redness and exposing it to steam, thus producing a coat of the so-called magnetic oxide of iron, Fe₃O₄.

Bargain Auto Co.—1628 Broadway, New York City. Garage.

Barge & Co., Wm.—Bloomfield, Neb. (Holsman.)

Barger, W. H.—32 Edwards St., Buffalo, N. Y. (Waltham.)

Barger, W. H.—226 S. Lafayette St., South Bend, Ind. (Cadillac, Waltham.)

Barkdoll, A. R.—810 Great Northern Bldg., Chicago, Ill. (Simplicity.)

Barker, E. L.—Tiverton, R. I. (Maxwell.)

Barker Engine Co.—South Norwalk, Conn. Mfrs. gasoline marine motors.

Barker & Hitch.—Girard, Kan. (Northern.)

Barking.—A term applied to a series of violent explosions in the muffler due to after-firing. See After-Firing.

Barkman, A. B.—Sales Mgr. Maxwell-Briscoe Co., Tarrytown, N. Y.

Barkworth, Thos. E.—Vice-Pres. National Wheel Co., Jackson, Mich.

Barlow Foundry Co., The.—28 Orange St., Newark, N. J. Mfrs. gray iron and malleable iron castings.

Barlow Hardware Co.—Corry, Pa. (Winton.)

Barlow Mfg. Co.—Holyoke, Mass. Mfrs. robe rails, metal trimmings.

Barnard, J. A.—Treas. Moline Pump Co., Moline, Ill.

Barnard, Wm. H.—Pres. and Treas. De Barres Automobile Co., 1968 Broadway, New York City.

Bartlett, Geo. A.—Willimantic, Conn. (Columbia.)

Bartlett, W. D.—Supt. Cleveland Cap Screw Co., 2216 Clarkwood Road, Cleveland, Ohio.

Bartlett & Frasier.—106 N. Jefferson St., Huntington, Ind. (Buick.)

Barton, F. A.—Sec. H. H. Franklin Manufacturing Co., 302 S. Geddes St., Syracuse, N. Y.

Barton & Day.—South Union St., Cambridge, N. Y. (Cameron.)

Bartoo, Geo. E.—409 First Ave., Spokane, Wash. (Monarch, Reo.)

Barto, R. V.—Vice-Pres. and Gen. Mgr. Direct Drive Axle Co., 575 N. 4th St., Columbus, Ohio.

Barwise, R. M.—179th St., and Jerome Ave. (Chalfant.) Est. Oct., 1906. Garage (24 cars); repairing.

Base, Wheel.—The distance from the center of a front wheel of a vehicle to the center of a rear wheel on the same side.

Basic Process.—An improvement on the Bessemer steel process in which the converter is lined with magnesian limestone, a material nearly free from silica. This removes the phosphorus and silica, which are very detrimental to the iron, even in small quantities. See Acid Process.

Basset et Méline.—25 rue de Courcelles, Levallois-Perret, Seine, France. Mfrs. automobiles, gas. (Ibis cars.)

Bassette, Buell B.—Sec. and Treas. Corbin Motor Vehicle Co., New Britain, Conn.

Bassett, I. B.—Pres. Bassett-Pressley Co., Western Reserve Bldg., Cleveland, Ohio.

Bassett-Pressley Co.—Western Reserve Bldg., Cleveland, Ohio. Mfrs. special sheets for automobile bodies, hoods, fenders and tanks, iron and steel bars and sheets. Cap. \$200,000. Est. 1885. I. B. Bassett, Pres.; F. W. Sack, Vice-Pres.; F. H. Deitz, Sec. and Treas.; F. W. Beach, Sales Mgr.

Bassford, B. E.—Tonopah, Nev. (Maxwell.)

Bass, Theo.—Farmington, Ill. (Reo, Premier.)

Bastian Mfg. Co., Chas. L.—76 Illinois St., Chicago, Ill. Mfrs. brass, bronze, aluminum and copper castings.

Batavia Machine Co., The.—24 Main St., Batavia, N. Y. Automobile supplies; repairing.

Batavia Rubber Tire Co.—Batavia, N. Y. Mfrs. tires (solid rubber).

Batchelder, Amos G.—B. Sept. 8, 1869, at Akron, N. Y. Educated at Attica (N. Y.) Union School and Academy. Present occupation, Managing Editor The Automobile, New York City. Formerly automobile editor New York American, 1901-02; Evening Mail, 1903; editor Motor, 1903-05; Sec. American Automobile Association, 1905-06. Member of Executive Committee of the A. A. A. Board of Directors; also member of Racing Board and Vanderbilt Cup Commission; Vice-Pres. New York Motor Club; member of Automobile Club of America.

Batchelor, J. P.—Pres. Palace Auto Co., 1408-10 Walnut St., Kansas City, Mo.

Bate, J. W.—Gen. Supt. and Designer Mitchell Motor Car Co., Racine, Wis.

Bates Forge Co.—227 W. Merrill St., Indianapolis, Ind. Mfrs. crank shafts, drop forgings, axles.

Bates, Geo. A.—Englewood, N. J. (Cadillac.)

Bates-Odenbrett Auto Co.—503 Broadway, Milwaukee, Wis. (Buick, Winton.)

Bates-Tannahill Co.—Greenville, S. C. (Buick, Cadillac, Franklin, Oldsmobile.)

Bath, Albert.—Purch. Agt. Aerocar Motor Co., Mack & Beaufait Ave., Detroit, Mich.

Bath Automobile & Gas Engine Co.—Broad and Commercial Sts., Bath, Me. (Winton, Franklin, Cadillac.) Supplies, garage, repairs.

Bath Marine Construction Co.—Bath, Me. Mfrs. motor-boats.

Bat Motor Mfg. Co.—Peuge, London, S. E., England. Mfrs. Bat motorcycles.

Battery Garage.—Richmond, Va. Garage.

Battery.—A number of primary or secondary cells acting together; a term often incorrectly applied to a single cell. See Cell.

Battery Dry.—See Cell, Primary.

Battery, F. E.—357 Fountain St., Providence, R. I. Garage.

Battery Power Co.—247-253 Madison St., Milwaukee, Wis. Mfrs. storage batteries.

Battery, Storage.—See Cell, Storage.

Battery-syringe.—A rubber syringe used for withdrawing a portion of the electrolyte from a storage battery cell for the purpose of testing its specific gravity and density.

Battery-tester.—The same as ammeter, q. v.

Battery, Underswung.—In an electric vehicle, a battery carried in a frame suspended from the center of the main frame.

Battery, Wet.—See Cell, Primary.

Baudier, Ch.—30 rue Baudin, Levallois, Seine. France. Mfrs. pressed steel frames, radiators.

Baudry de Saunier (Charles Louis Baudry).—Born in Paris, France, March 2, 1865; the grandson of General de Saunier, 20 Rue Duret, Paris. Editor-in-chief of "Omnia." Author of *L'Histoire Générale de la Vélocipédie* (1891); *Le Cyclisme théorique et pratique* (1892); *Les Recettes et Procédés vélocipédiques* (1893); *L'Art de la Bicycleette* (1894); *Le Debutant* (philosophical work, 1895); *L'Automobile théorique et pratique* (Tome 1, 1897. Tome 2, 1900); *Les Recettes du Chauffeur* (1901); *Sa Majesté l'Alcool* (1904); *Les Motocyclettes* (1904); *L'Allumage dans les Moteurs a explosions* (1905).

Bauer, A.—14 rue de Hollande, Geneva, Switzerland. Mfrs. pneumatic tires.

Bauer Bros.—937 W. 8th St., Cincinnati, Ohio. Mfrs. auto tops.

Bauer, Geo. J.—112 Exchange St., Rochester, N. Y. (Aerocar.)

Bauer, William.—Director The Barndt-Johnston Auto Supply Co., 426 Donaldson St., Columbus, Ohio.

Baughner, J. L.—Central Ave., Staunton, Va. (Rambler.) Est. Sept, 1905. Garage (150 cars); repairing.

Baumgartner, W. E.—Stockholder Lawrence Motor Car Co., 13-17 W. Warren St., Lawrence, Kan.

Baum's Castorine Co.—104 N. George St., Rome, N. Y. Branch at Boston, Mass. Mfrs. engine oil, varnish, hand soap, cup and transmission grease, radiator compound. Cap. \$15,000. Est. 1881. T. J. Mowry, Pres.; T. C. Mowry, Sec. and Treas.; J. M. Bearisto, P. F. Nichols. Geo. B. Nason, Salesmen.

Bausch & Lomb Optical Co.—Rochester, N. Y. Mfrs. lamp reflectors and optical goods.

Bausch Machine Tool Co.—Wason Ave., Springfield, Mass. Mfrs. universal joints.

Bauxite.—An impure hydrate of aluminum ($Al_2O_3 \cdot 2H_2O$), with impurities of oxide of iron, phosphates, etc. It occurs in oolitic or clay-like deposits of whitish-brown or reddish-brown color, at Beaux in France and Foyers in Scotland, etc. It is now the principal workable ore of aluminum, and is known as "aluminum ore." When heated, it becomes extremely hard and is used as artificial emery.

Bawden, John H., Jr.—Freehold, N. J. (Rambler.)

Baxter, T. S.—317 Hastings St., Vancouver, B. C., Canada. (Haynes.)

Bayard, Ch.—80 rue Voie-de-Liege, Herstal, Belgium. Mfrs. Bayard motorcycles.

Bayard-Clément.—33 quai Michelet, Levallois-Perret, Seine, France. Mfrs. automobiles, gasolene.

Bay City Auto Co.—1016 Saginaw St., Bay City, Mich. (Cadillac.)

Bayless, Geo. C.—Treas. Tray Plate Battery Co., 5 Frederick St., Binghamton, N. Y.

Bayliss, Jas. E.—General Sales Agent. 1218 Michigan Ave., Chicago, Ill. (Elmore.)

Bayonet Clutch.—See Clutch, Bayonet.

Bay Ridge Launch Works.—Foot 39th St., Brooklyn, N. Y. Mfrs. motor boats.

Bay State Auto Co.—112 Norway St., Boston, Mass. Makers of the Bay State Forty car, first marketed 1907, one model. Cap. \$50,000. F. R. Bolz, Treas.; Julius Bolz, Pres.; Rossel Drisko, Purch. Agt., Sales, Advt. and Gen. Mgr.; Geo. E. Temple, Designer. Boston agts. Queen car.

Bay State Automobile Ass'n.—282 Dartmouth St., Boston, Mass. J. Fortescue, Sec.

Bay State Machine Co.—1302-06 Peach St., Erie, Pa. Mfrs. marine motors.

Bay State Stamping Co.—380 Chandler St., Worcester, Mass. Mfrs. oil cups, oil hole covers, sheet metal stampings. Not incorporated. Est. 1892. John H. Bennett, Prop. and Gen. Mgr., doing business under above name. Henry Larava, mechanic; John Stapleton, foreman press room.

Bazille Auto Co.—15 E. 9th St., St.

Paul, Minn. (Autocar, Stevens-Duryea, Buick, Baker.)

Beacham & Son, R. H.—Fleet St., Portsmouth, N. H. Est. 1904. Harry M. Tucker, Supt. Garage, 100 cars; repairing.

Beach, E.—Pres. and Director Neer Air Cooled Engine Co., Plain City, Ohio.

Beach, F. W.—Sales Mgr. auto products Bassett-Pressley Co., Western Reserve Bldg., Cleveland, Ohio.

Beach, J. A.—William and Market Sts., Elmira, N. Y. (Cadillac.)

Beach, J. C.—Sabinsville, Pa. (Buick.)

Beach, S. C.—Sales Mgr. McCook Auto Co., 308 W. Dennison St., McCook, Neb.

Bead.—That part of a pneumatic tire which enters and remains hooked into the rim and is held in place by the pressure of the air in the inner tube or by mechanical means.

Beak-iron.—The conical projection of an anvil. Called also a "bickern."

Beale, S. T.—Paw Paw, Ill. (Maxwell.)

Beals, Geo. C.—29 Erie County Bank Bldg., Buffalo, N. Y. Mfrs. iron and steel sheets and bars.

Beam.—One of several transverse pieces of timber stretching across a boat from one side to the other to support the deck and retain the sides at a proper distance.

Beam, Walking.—A part of the valve-control mechanism, called also a "rocker arm," placed on top of the cylinder and transferring the upward motion of the push-rod A (see figure), into a downward motion of the valve-stem S. A corruption of "working-beam."

Beaman & Smith Co., The.—Providence, R. I. Mfrs. special automobile machinery.

Beaman, E. A.—Pres. Tray Plate Battery Co., 5 Frederick St., Binghamton, N. Y.

Beamsderfer, A. B.—Lebanon, Pa. (Pope-Toledo.)

Bean, Sidney A.—1780-82 Broadway, New York City. Supplies.

Beardsley, Chas. S.—Vice-Pres. Hatcher Auto Parts Co., 2108 Superior Ave. Viaduct, Cleveland, Ohio.

Beardsley & Son.—Woodstock, Ill. Garage.

Bearing.—The support in which a shaft or other part of a machine revolves or pivots. The forms are chiefly distinguished from each other by the means used to diminish friction.

Bearing, Ball.—A bearing in which the shaft rests upon hard steel balls, which, rolling easily in their "races," re-

duce friction to a minimum. The balls should be of the best quality and perfectly accurate. The material for the housings ("shells," "sleeves," "cups," "races," "rings," or "cones," as they may be called), must be determined by the conditions. A steel that may be suitable in one condition may be totally unfit for duty in other conditions.

As there are but two original purposes of bearings, there are consequently but two original types. One of these serves

Fig. 1. Fig. 2.

for carrying the load directly upon, and at right angles to, the shaft or axle, and is termed a "radial" bearing (Fig. 1). The other type takes the load of the shaft or axle endwise, or parallel to it, and is termed a "thrust" bearing (Fig. 2).

The radial bearing consists of an inner race and outer race, with sometimes a series of separators. The balls roll in grooved tracks of circular cross-section, having a slightly larger curvature than the balls, so that these come in contact with the races only at the bottom of the grooves. The contact, therefore, is of the two-point order, as the ball-races are each a single complete ring without joint or opening of any kind. The balls serve to lock the whole together as a complete unit.

The thrust-bearing is made similar to the radial type, but is mounted to take the load parallel to the axis of the shaft, thrust-collars also being used to take the loads parallel to the axis of the shaft.

Two-point bearings are now made in sizes of balls running from $\frac{1}{4}$ to $1\frac{1}{2}$ inches in diameter and containing from 6 to 21 balls in each case. These modern ball-bearings are remarkable for the very small space they take up endwise, including the oil-retaining and dust-excluding arrangements, thus varying between $\frac{3}{4}$ and $1\frac{1}{2}$ times the shaft-diameter. The larger the shaft, of course, the less is the relative bearing space.

Ball bearings may be either "full" or "silent." The race of the full type

Fig. 3

(Fig. 3) is completely filled with balls,

while that of the silent type (Fig. 4)

Fig. 4

contains about half as many, either retained in a cage or held apart by spring separators, (3) containing felt, which absorbs oil and delivers it as the balls revolve.

The following table gives the allowable working load for steel balls of different diameters. It must be considered in this connection that the working load is carried by one ball at a time:

Diameter of ball	1-4	5-16	3-8	7-16	9-16	5-8
Working load per ball in pounds	500	780	1125	1530	2530	3125

Bearing, Collar.—A bearing fitted between two collars or rings, formed integral with or attached to a shaft, and permitting of rotary but not lateral motion.

Bearing, Cone.—A plain bearing in which a solid cone on the shaft-end revolves in a hollow cone of hard steel or brass.

Bearing, Plain.—A bearing in which smooth metal surfaces slide against each other, usually with a film of lubricant between them.

Bearing, Roller.—A bearing consisting of a series of hard steel rollers, each held in place by a pin, which is attached to plates forming a cage. Roller bearings are either cylindrical or taper, and

one well known form consists of a strip of metal rolled into a spiral. Taper or conical rollers are especially adapted for carrying both a radial and thrust-load at the same time. Roller bearings are largely used in automobile construction, wherein they have given excellent results both for rear axles and transmissions.

Bearing, Step.—A box or casing, C (see figure), called also a "step-box" or "foot-step-box," to enclose the pivot, P, of an upright shaft, and provided at the bottom with a cast-iron,

case-hardened iron or cup-shaped brass "step" or bearing G

Beau et Cie, C.—171 rue Lafayette, Lyon, France. Mfrs. tires, non-skid bands.

Beaufort Motor Co.—14 Baker St., London, England. Mfrs. automobiles, gas; automobiles, commercial, gas.

Beaujon.—9 rue de Chaillot, Paris, France. Mfrs. non-skid bands.

Beaulieu u Krone.—9 Schönebergerstrasse, Berlin, Germany. Mfrs. automobiles, gas. (Solidor cars.)

Beauman, Frank.—Lampassas, Tex. (Jewell.)

Beaver Dam Malleable Iron Co.—Beaver Dam, Wis. Mfrs. malleable iron castings.

Beaver Mfg. Co.—Barclay and Oregon Sts., Milwaukee, Wis. Mfrs. motors, automobile.

Beaver Valley Motor Club.—Paul H. Baldwin, Sec., Rochester, Pa.

Bechtel, H. H.—2nd Vice-Pres. and Sec. American Oak Leather Co., Kenner St. & Dalton Ave., Cincinnati, Ohio.

Bechtel, O. G.—Mgr. New York Branch Waltham Mfg. Co., 1615 Broadway, New York City.

Becker & Kurts.—456 State St., Rochester, N. Y. Garage.

Becker, August.—247 Atlantic Ave., Boston, Mass. Mfrs. name plates.

Becker, B. A.—Treas. Elmore Mfg. Co., Clyde, Ohio.

Becker-Brainard Milling Machine Co.—110 Business St., Hyde Park, Mass. Mfrs. milling machines, milling cutters, automatic gear cutters. Cap. \$750,000. E. N. Foss, Pres.; A. H. Lovejoy, Treas. and Gen. Mgr.

Becker, F. W.—Auto Dept. N. D. Griffin, 99 W. Fulton St., Gloversville, N. Y.

Becker Glass & Paint Co.—372 to 378 Pearl St., Buffalo, N. Y. Mfrs. paints.

Becker, H. V.—Pres. Elmore Mfg. Co., Clyde, Ohio.

Becker, James Howard.—Manufacturer Elmore automobiles. B. Red Creek, Wayne Co., N. Y., Dec. 4, 1864. Ed. high school. Sec. and Mgr. Elmore Mfg. Co. Director several companies. Mem. Cleveland, Buffalo, Chicago Automobile clubs. Res., Clyde, O. Recreations, automobiling, boating.

Becker, John.—Hyde Park, Mass. Mfrs. vaporizers.

Becker, Louis.—1717 Deming Pl., Chicago, Ill. Garage.

Becket.—A small loop of rope passed through holes in the transom of a motor boat and knotted on its ends outside.

Beck, J. P.—Genesee Ave., Saginaw, Mich. Maxwell, Rambler, Ford

Beckley, G. D.—Treas. The Beckley-Ralston Co., 80-84 Michigan Ave., Chicago, Ill.

Beckley-Ralston Co., The.—80-84 Michigan Ave., Chicago, Ill. Est. 1896. Dealers in sundries and supplies for motor cars, motor boats and bicycles. W. L. Beckley, Pres.; J. C. Ralston, Sec.; G. D. Beckley, Treas.

Beckley, W. L.—Pres. The Beckley-Ralston Co., 80-84 Michigan Ave., Chicago, Ill.

Beck Livery and Auto Garage.—719 N. Illinois St., Indianapolis, Ind. (Pope-Toledo.)

Beck, M. J.—New Haven, Conn. (Lambert.)

Beckwith-Chandler Co.—320 5th Ave., New York City; 201 Emmett St., Newark, N. J. Mfrs. varnishes.

Beckwith, D. B.—Supt. Pope Motor Car Co., Toledo, O.

Becroft, L. H.—Ogden, Utah. (Reo.)

Bedard & Carlisle.—Lake St., St. Albans, N. Y. Garage.

Bedford Auto Garage.—220 Clinton Pl., Brooklyn, N. Y. Garage.

Bedford Garage Co.—1287 Bedford Ave., Brooklyn, N. Y. Garage.

Bed-plate.—A metal casting forming the foundation for a steam or gasoline engine.

Beebe, A. M.—441 Elm St., New Haven, Conn. Mfrs. auto tops.

Beebe, B. V.—Anaheim, Cal. Garage.

Beebe, H. C.—Sec. and Purch. Agt. Detroit Motor Car & Supply Co., 2230 Broadway, New York City.

Beebe, O. N.—Essex, Conn. (Locomobile, Cadillac, Winton.)

Beebe, Thos. S.—40 Tennis St., Albany, N. Y. Garage.

Beecher, J. S.—21 E. Church St., Newark, Ohio. (Cadillac.)

Beecher, Walter N.—Sec. and Mgr. Limousine Carriage Mfg. Co., Michigan Ave. and 35th St., Chicago, Ill.

Beelby Supply Co.—39 Fountain St., Grand Rapids, Mich. (Model.)

Beelman, Chas. S.—400 W. State St., Freemont, Ohio. (Oldsmobile.)

Beers Bros. Engine Co.—Rochester, N. Y. Mfrs. motor boats.

Beers, H. T.—Treas. New Haven Button Co., New Haven, Conn.

Beesing, L. C.—Pres. and Mgr. Buffalo Auto Body & Trimming Co., 338-340 Ellicott St., Buffalo, N. Y.

Begole, C. M.—Pres. Buick Motor Co. Flint, Mich.

Begole, George D.—Denver, Colo. Garage.

Behen-Faught Motor Car Equipment Co.—3961 Olive St., St. Louis, Mo. Est. Nov., 1906. Dealers in automobile supplies and accessories. John J. Behen, Pres. and Treas.; F. S. Behen, Vice-Pres.; S. F. Behen, Sec.; T. K. Shannon, Mgr.

Behen, F. S.—Vice-Pres. Behen Faught Motor Car Equipment Co., 3961 Olive St., St. Louis, Mo.

Behen, John J.—Pres. and Treas. Behen-Faught Motor Car Equipment Co., 3961 Olive St., St. Louis, Mo.

Behen, S. F.—Sec. Behen-Faught Motor Car Equipment Co., 3961 Olive St., St. Louis, Mo.

Behrens & Bushwell.—Main St., Ivoryton, Conn. (Cadillac, Winton, Stevens-Duryea.) Est. 1901. Garage (12 cars); repairing.

Behr-Zoller.—Stuttgart, Germany. Mfrs. radiators.

Belcher, A. S.—Market St., Campello, Mass. Garage.

Belcher Motor Co.—Fall River, Mass. Mfrs. gasoline marine motors.

Belden Auto Transmission Co.—1005 Bessemer Bldg., Pittsburg, Pa. Mfrs. transmission gears.

Belden, E. H.—Pres. The Belden Motor Car Co., 720 Bessemer Bldg., Pittsburg, Pa.

Belden, E. T.—Pres. Belden Machine Co., Whalby Ave. & Tryon St., New Haven, Conn.

Belden, E. W.—Sec. Belden Machine Co., Whalby Ave. and Tryon St., New Haven, Conn.

Belden Machine Co.—Whalby Ave. & Tryon St., New Haven, Conn. Mfrs. drop forgings, hardware specialties—forgings from blue prints or model. Cap. \$13,300. Est. 1865. E. T. Belden, Pres.; E. W. Belden, Sec.; A. B. Reed, Treas. and Gen. Mgr.

Belden Motor Car Co., The.—720 Bessemer Bldg., Pittsburg, Pa. Mfrs. automobiles, gas. (Six-cylinder car.)

Belfield & Co., H.—Philadelphia, Pa. Mfrs. castings (brass, bronze, aluminum and copper), auto clocks, brass pipe fittings, pressure gauges.

Belfoy et Cie, Simon.—68 rue de Vliiers, Levallois, Seine, France. Mfrs. pneumatic tires.

Belgica.—rue Van der Straeten, Brussels, Belgium. Mfrs. automobiles, gas. (Belgica cars.)

Belknap Mfg. Co.—Bridgeport, Conn. Mfrs. brass pipe fittings.

Belknap Motor Car Co.—Detroit, Mich. Mfrs. automobiles, steam.

Bell, A. W.—Stamford, Conn. (Jackson.)

Bell, Billmyer & Rotke.—211 W. 87th St., New York City. Garage.

Bell Bros.—Ravensthorpe, Yorkshire, England. Mfrs. automobiles, gas. (Bell cars.)

Bell, B. T.—166 Third Ave., N., Nashville, Tenn. Garage.

Bell, Chas. L.—824 Oak St., Columbus, Ohio. (Waltham.)

Bell, D. M.—Franklin and Michigan Sts., Chicago, Ill. Mfrs. tire pumps.

Bell, Herbert.—Director Chadwick Engineering Works, 3207 Spring Garden St., Philadelphia, Pa.

Bell, John M.—1201 Pacific Ave., Tacoma, Wash. (Columbia.) Est. 1905. Not Inc. J. M. Bell, Sales Agt.

Bell Mfg. Co., The.—113 Morgan St., St. Louis, Mo. Mfrs. metal polish.

Bell, S. R.—Pres. and Treas. Union City Body Co. Factory, West Pearl St., Union City, Ind.

Bell, W. H.—Pres. Chicago Tire Club, Chicago, Ill.

Bell, William.—Vice-Pres. Boston Steam Specialty Co., 170 Congress St., Boston, Mass.

Bell, W. L.—Kansas City, Mo. Mfrs. automobiles, gas.

Belle City Mfg. Co.—Racine Junction, Wis. Mfrs. gray iron castings.

Bellefield Motor Co.—4518 Henry St., Pittsburgh, Pa. (De Luxe, Pennsylvania, Queen.)

Bellefontaine Automobile Company.—Bellefontaine, Ohio. Makers of the Traveler Car. Cap. \$100,000. E. Ray Albaugh, Pres.; N. U. Smith, Vice-Pres.; W. R. Niven, Treas.; John P. Aiken, Sec., Gen. Mgr., Purch. Agt., Sales and Advt. Mgr.; H. E. Bombort, Designer and Supt.

Belle Isle Motor Co.—Detroit, Mich. Mfrs. motor boats.

Belle-Jardinère, Magasin de la.—2 rue du Pont Neuf, Paris, France. Mfrs. wearing apparel (hats, caps and coats).

Bellevue Automobile Station.—Ham-monton, N. J. (Cadillac.)

Bellevue-Stratford Garage.—Philadel-phia, Pa. (Colt Runabout.)

Bellinger, H. P.—Sec. and Treas. Chase Motor Truck Co., Syracuse, N. Y.

Bellinger's Garage.—10-12 Landers St., near Broadway, Newburgh, N. Y. Sup-plies; garage; repairing.

Bellows, M. S.—Chateaugay Lake, N. Y. Mfrs. motor boats.

Belmar Garage.—521 Homewood Ave., Homewood, Pa. Garage.

Beloit Automobile Club.—Harry M. Vale, Sec., Beloit, Wis.

Beloit Glove & Mitten Co.—217 Grand Ave., Beloit, Wis. Mfrs. wearing apparel (gloves and gauntlets.)

Belsize Motors, Ltd.—Clayton, Man-chester, England. Mfrs. automobiles, gas. (Belsize cars.)

Belt.—An endless band or strap of leather, cotton, rubber, etc., for trans-mitting power by pulleys with a smooth surface. Belts unfortunately elongate or contract according to the humidity of the atmosphere, and hence are apt either to grip too tightly or slip a little under the influence of the belt-drive. For this reason they have long been dis-carded on motor-cars, although they are much employed on motor-cycles, where

it is easy to give them the necessary ten-sion, owing to their comparative short-ness. They are made of flat and of round, or V section, in order to increase their adhesion upon the pulleys, which are themselves flat or grooved. For actuating oil pumps, fans, etc., steel belts are very often employed.

Belt-coupling.—The method of join-ing the ends of a belt, usually by lacing, riveting or metal hooks.

Belt, Crossed.—A belt so arranged as to run from the top of one pulley to the bottom of another, and cause the driven pulley to revolve in a direction reverse that of the driver.

Belt-dressing.—A sticky compound applied to a belt in order to increase its adhesion upon the pulley over which it passes. Also material such as oils, tallow, etc., applied to a belt in order to preserve it.

Belt-drive.—The transmission of power from the motor to the jack-shaft by means of one or more belts—a method of transmission now practically confined to motor-cycles, though even here it is often replaced by a chain.

Belt-fastener.—A metal hook for unit-ing the two ends of a belt.

Belt-fork.—See Fork.

Belt-shifter.—A device for sliding a belt from one pulley to another along-side of it. See Fork.

Belt-tightener.—A device for increas-ing the tension of a belt or chain. See Pulley, Jockey.

Belt, V.—A belt of which the section has the form of a trapezium. Belts of this form are mostly employed on motor-cycles.

Belvallette.—21 rue Duret, Paris, France. Mfrs. bodies.

Bemens, Frank.—Director Chadwick Engineering Works.—3207 Spring Gar-den St., Philadelphia, Pa.

Bemis Machine Co.—Lincoln St., Marl-boro, Mass. Garage.

Bemus Co., T. Alton, Inc.—358 Atlan-tic Ave., Boston, Mass. Mfrs. timers and distributors. Cap. \$5,000. Est. Oct. 20, 1906. T. Alton Bemus, Pres.; Thos. H. O'Shea, Treas.; Vinal W. Smith, Sec.

Bemus, T. Alton.—Pres. T. Alton Be-mus Co., Inc.—358 Atlantic Ave., Bos-ton, Mass.

Bénard, E.—25 rue Louis-Dory, Pré-St.-Gervais, Paris, France. Mfrs. leather tires.

Bendix Co., The.—2107 N. 9th St., Chi-cago, Ill. Mfrs. transmission gears, auto motors and complete chassis.

Benedict & Burnham.—Waterbury, Conn. Mfrs. brass and copper tubing.

Benedict, J. H.—North Lewisburg, Ohio. (Waltham.)

Benefield Bros.—Columbus, Ind. (Queen.)

Benford, E. M.—497 W. Lincoln Ave., Mt. Vernon, N. Y. Mfrs. mica spark plugs. Est. 1902. M. Foltz, Head of Mechanical Dept.

Ben Hur Motor Co., The.—120 Randolph St., Chicago, Ill. Mfrs. gas automobiles, lubricators, automobile motors.

Benjamin, Charles Arthur.—B. July 26, 1869, at Syracuse, N. Y. Educated Syracuse High School. Occupation. General Mgr. and Director Aerocar Motor Co., Detroit, Mich. Member of Citizen's Club, Syracuse, N. Y.; New York

Motor Club, New York City; Automobile Club of Buffalo; Auto Club of Syracuse; Automobile Club of Cleveland; Commercial Club, Detroit, Mich. Residence address, 52 Marston Ave. & Beaufait Court, Detroit, Mich.; office address, cor. Mack

Ave. In the automobile trade since August, 1898; first owned car August, 1898; first car was an electric. purchased to start in the business; opened one of the first garages in New York State at Syracuse, N. Y., spring of 1899. Recreations, automobile touring and baseball.

Benjamin Electric Mfg. Co.—42 W. Jackson Blvd., Chicago, Ill. Mfrs. receptacle plug for charging storage batteries. Cap. \$50,000. Est. 1901. R. B. Benjamin, Pres.; W. D. Steele, Vice-Pres.

Benjamin Iron & Steel Co.—1102 D. S. Morgan Bldg., Buffalo, N. Y. Mfrs. iron and steel (sheet and bar.)

Benjamin, R. B.—Pres. Benjamin Electric Mfg. Co., 42 W. Jackson Blvd., Chicago Ill.

Benneckenstein, J.—Alte Jacobstrasse 139, Berlin, Germany. Mfrs. radiators.

Bennett, A. C.—24 N. 8th St., Minneapolis, Minn. (Winton.)

Bennet & Wood.—Sydney, Australia. (Monarch.)

Bennett, C. S.—Clarion, Iowa (Holman.)

Bennett, E., Jr.—1203 S. Main St. Los Angeles, Cal. (Wayne, Crawford.)

Bennett Auto Co., E. J.—Gauyama, Porto Rico. (Wayne.)

Bennett, G. W.—Mgr. New York branch The White Co., Broadway and 62nd St., New York City.

Bennett, James Gordon.—Prop. New York Herald. B. New York City, May 10, 1841. Educated by private tutors. Inherited The Herald and large fortune,

1872; for a time issued a London edition and still published a Paris edition of

The Herald; inaugurated publication in England of storm warnings transmitted from U. S.; sent Henry M. Stanley to Africa to find Livingston, 1874-77; fitted out Jeannot's polar expedition, 1897; established 1883 (with John W. Mackay) the

Commercial (Mackay-Bennett) Cable Co.; is a prominent automobilist and yachtsman; presented a cup to the Automobile Club of France for the purpose of inaugurating an international automobile race. This cup is known as the James Gordon Bennett cup and is competed for annually. He presented a cup to be competed for under similar conditions to the Aero Club of France, 1906, which was won in the first contest by Frank Lahm in the balloon United States, representing America. Lives most of his time in Paris, but keeps active management of The Herald by cable. Residence 120 Champs Elysees, Paris, France.

Bennett, J. H.—Prop. and Gen. Mgr. Bay State Stamping Co., 380 Chandler St., Worcester, Mass.

Bennett, R. A.—Pres. and Mgr. Dover Garage Company, 74 East Blackwell St., Dover, N. J.

Bennett, R. Nelson.—Treas. Matheson Motor Car Co., Wilkesbarre, Pa.

Bennett R. R.—267 Green Ave., Brooklyn, N. Y. Garage.

Bennett's Auto Garage.—Oakland, Cal. Garage.

Bennis, J. H.—Sec. N. Y. & N. J. Lubricant Co., 14 & 16 Church St., New York City.

Benoist, H.—30 bis rue Bergere, Paris, France. Mfrs. spark plugs

Bensfield, C. R.—Dallas, Tex., Garage.

Benson, B. F.—1311 Keystone Bldg., Pittsburg, Pa. (American Mercedes, Rainier.)

Benson, E. R.—Sec. Hartford Rubber Works Co., 691 Park St., Hartford, Conn.

Benson, E. S.—Sec. and Treas. The G. & J. Tire Co., 549-625 E. Georgia St., Indianapolis, Ind.

Benson, Judson.—Head of Blacksmithing Dept., Graves & Congdon Co., Oak St., Amesbury, Mass.

Benson, Williams S.—Gen. Mgr. Delta Mfg. Co., Bloomfield, N. J.

Bentel, Geo. R.—607 Laughlin Bldg., Los Angeles, Cal. (American Mercedes.)

Bentell, O. F.—Sea Bright, N. J. Garage.

Benter, Worth S.—Catskill, N. Y. Mfrs. motor boats.

Benth, John P.—111 N. William St., Moberly, Mo. (Cadillac.)

Bentley Hair Co., Joseph.—Methuen Mass. Mfrs. curled hair.

Bentley, W.—Supt. Universal Elec. Storage Battery Co. Offices 188 La Salle St., factory 36-38 Union Park Pl., Chicago, Ill.

Benton & Stone.—Bracebridge St., Birmingham, England. Mfrs. tire pumps, jacks, spark plugs.

Benton Harbor Bicycle & Auto Works.—Benton Harbor, Mich. Garage.

Benton, J. W.—Vice-Pres. Chicago Vulcanizing Co., 1461-63 Michigan Ave., Chicago, Ill.

Benz, W. G.—246-50 3d Ave., South Minneapolis, Minn. (Rapid, Gale, Moline, Jackson.)

Benzene, called also "benzin" and "benzine" (especially by the French and Germans).—A hydrocarbon (phenyl hydride) of the aromatic series having the chemical formula C_6H_6 . It is an inflammable, colorless, volatile liquid lighter than water, with a density of 0.899. It solidifies at $32^\circ F.$ ($0^\circ C.$) and boils at $176^\circ F.$ ($80^\circ C.$). It is insoluble in water, but soluble in alcohol, ether, sulphide of carbon, etc. It is obtained in large quantities from coal-tar. It is an excellent solvent of many substances, rich in carbon, such as fats, resins and rubber, and is the starting-point in the manufacture of aniline dyes. Under the synonymous name of "benzole" it has been used to some extent in England and Germany as a fuel for internal combustion motors. (2) Benzine (sometimes improperly written "benzene"). A commercial and popular name in the United States for an inflammable, colorless, volatile liquid, consisting of a mixture of hydrocarbons of the marsh-gas series, and having a specific gravity of from 0.67 to 0.675 at $250^\circ F.$ ($120^\circ C.$) and boiling point of $129.2^\circ F.$ ($54^\circ C.$). It is obtained by the fractional distillation of petroleum. It is quite different, chemically, from benzene, which is a single hydrocarbon of constant composition. It is employed as a substitute for turpentine in painting, cleaning type, etc.

Benzol or Benzole.—The same as benzene. q. v.

Benzoline.—A synonym for benzine. See Benzine (2).

Benz u Cie., Rheinische Gastmotoren Fabrik Actiengesellschaft.—Mannheim, Germany. Mfrs. automobiles, gas; auto motors. (Benz cars.)

Bercley Cycle & Motor Works.—171 ave. de la Reine, Brussels, Belgium. Mfrs. Bercley motorcycles.

Beresford, H. A.—444 Drayton St., Savannah, Ga. Garage.

Berg & Brehmer.—238 Jefferson Ave., Detroit, Mich. Garage.

Bergdoll Motor Car Co.—323 N. Broad St. Philadelphia, Pa. (Benz, Welch.)

Bergen & West Side Auto Co.—2535 Hudson Blvd., Jersey City, N. J. Garage.

Berger Co., Joseph.—310-20 Hart St., Dayton, Ohio. Mfrs. jacks.

Bergers Automobile Co.—2025 Farnam St., Omaha, Neb. (Auburn, Wayne.)

Bergman, L. J.—Head of credit dept., Pass & Seymour, Inc., 52 Boyd Ave., Solvay, N. Y.

Bergmann Industriewerke, G. M. b. H.—Gagenau, Baden Germany. Mfrs. automobiles, gas. (Bergmann cars.)

Bergman, N. J.—Alder and 15th Sts., Portland, Oregon, Garage.

Bergner, A. A.—Sec. Webb Mfg. Co., 60 Shipman St., Newark, N. J.

Bergougnan et Cie, Société Générale des Établissements.—9 rue Villaret-de-Joyeuse, Paris, France. Mfrs. solid tires, non-skid bands, pneumatic tires.

Bergstrom, C. H.—Neenah, Wis. (Rambler, Ford.)

Bergstrom, Oscar M.—310 So. 9th St., Minneapolis, Minn. (Aerocar.)

Beringer, Geo. N.—5th & Federal Sts., Camden, N. J. Mfrs. anti-freezing solutions.

Berkeley Auto Co.—Berkeley, Cal. (American.)

Berks Auto & Garage Co.—Cherry above 5th St., Reading, Pa. (Jackson, Maxwell.)

Berkshire Cycle & Automobile Co.—95 Main St., North Adams, Mass. Est. since 1890 as Berkshire Cycle Co. Inc. 1906. Cap. \$5,000. A. S. Williams, Pres.; W. G. Parker, Treas.; M. L. Fero, Sec. Garage (six cars). Repairing.

Berliet, Automobiles.—Chemin des Quartres Maisons, Lyon-Montplaisir France. Mfrs. Automobiles, gas. (Berliet cars), automatic starters.

Berliet, Marius.—12 Chemin des Quartre - Maisons, Lyon-Montplaisir (Rhône). Born at Lyons Jan. 20th. 1866.

General manager of the Berliet works. In 1899 he began the construction of automobiles with three workmen and a capital of 4,500 francs (\$900); the Berliet establishments now covers 215,000 square feet of ground, em-

ploys 600 workmen, and turn out 1,200 automobiles a year.

Berlin Auto Garage.—Berlin, New Hampshire. (Cameron)

Berline.—A closed vehicle having one seat in front and two seats in the interior facing each other, and provided with three windows on each side and one window in front.

Berliner Akkumulatoren-Werke.—Chauseestrasse 59, Neusilberhof, Berlin, Germany. Mfrs. storage batteries.

Berliner Motorwagenfabrik, G. m. b. H.—Tempelhof, Berlin, Germany. Mfrs. automobiles, gas.

Berliner Verein Für Luft-schiffahrt. (Berlin Aero Club) Dresdenerstrasse 38, Berlin S. 14, Germany.

Bernard.—39 rue du Sentier, Paris, France. Mfr. wearing apparel. (coats.)

Bernard et Patoureaux.—71 bvd. Beaumarchais, Paris, France. Mfrs. shock-absorbers.

Bernhardt, O. P.—Vice-Pres. and Gen'l Mgr. Forest City Motor Car Co., 101-149 Walnut St., Masillon, Ohio.

Berin, Maurice Georges.—B. March 11, 1880, in Tours, France. College education. Occupation, Supt. Renault Frères Selling Branch, 1776 Broadway, New York City. Has been connected with the automobile trade since 1898, and a racing driver since 1899.

Berry Bros., Ltd.—Detroit, Mich. Mfrs. enamels, paints, varnishes.

Berry Foundry Co.—St. Joseph, Missouri. (Reo.)

Berry, W. E.—Second Vice-Pres. Carter Motor Car Corp., 409-10 Munsey Bldg., Washington, D. C.

Berthon, P.—17 cité Dupont, Paris, France. Mfrs. tire pumps.

Berton, F.—17 rue de la Cour des Noues, Paris, France. Mfrs. horns, tire pumps.

Bertram, N. H.—Owner and Mgr. Nevada Auto & Supply Co., 115 Ramsey St., Goldfield, Nevada.

Bertrand, John C.—Vice-Pres. and Gen. Mgr. Puritan Soap Co., 500-504 Exchange St., Rochester, N. Y.

Berwin Automobile Co.—128-132 N. 8th St., Allentown, Pa. Agt. for Elmore, Oldsmobile, Locomobile. Est. 1904. Cap. \$10,000. J. B. Gery, Pres.; J. D. Reber, Vice-Pres., and W. F. Wink, Treas. Garage (75 cars); repairing.

Bealy & Co., C. H.—15-21 S. Clinton St., Chicago, Ill. Mfrs. spiral disc grinders, spiral circles, taps, machinists tools, oils, brass, copper. Factory at Beloit, Wis.

Besnard-Crespin.—St-Branchs, Indre-et-Loire, France. Mfrs. motorcycles (l'Originale).

Besnard, Maris et Antoine.—60 bvd. Beaumarchais, Paris, France. Mfrs. acetylene lamps.

Besse, Louis.—39 rue de Lappe, Paris, France. Mfrs. transmission gears.

Bessemer Process.—The conversion of cast iron to steel by oxidizing the carbon by means of a current of air blown

through the iron while molten. The air oxidizes the carbon to carbonic monoxide, and, at the same time, maintains the iron at a suitably high temperature by such oxidation, until practically the whole of the carbon is removed.

Best Auto Repair & Storage Co.—1548 Broadway, Denver, Col. Garage.

Best, Leigh.—Sec. American Locomotive Automobile Co., Providence, R. I.

Best Mfg. Co.—Pittsburg, Pa. Mfrs. brass pipe fittings.

Bethlehem Automobile Club.—Wm. E. Matin, Sec. and Treas., Bethlehem, Pa.

Bethlehem Automobile Co.—Bethlehem, Pa., Mfrs. automobiles, gas.

Bethlehem Steel Co.—So. Bethlehem, Pa. Mfrs. steel castings, drop forgings, pressed steel frames, steel, chrome-nickel steel.

Bettes, O. H.—590 San Jacinto St., Dallas, Tex. (Mitchell.)

Betts, Ritchie Gregory.—B. May 8, 1869, at New Orleans, La. School education. Present occupation, Editor The Motor World, 154 Nassau St. Residence, 770 St. Nicholas Ave., New York City.

Betzin und Werner.—Berlin, Germany. Mfrs. goggles.

Betzman, Nicholas.—Treas. Motor Car Maintenance Co.—247-49 W. 49th St., New York City.

Beucher, L.—rue St. Pierre, St. Callais, Sarthe, France. Mfrs. elastic wheels.

Bevel-gear.—See Gear, Bevel.

Bevel-pinion.—See Pinion, Bevel.

Bevan, Eben L.—628-29 Connell Bldg., Scranton, Pa. Sales Agt. Kitsee Storage Battery Co.

Beverly Mfg. Co.—Beverly, Mass. Mfrs. transmission gears, marine reverse gears, machine work to order, gasoline, automobile and marine motors. Garage. Automobiles, gasolene, made to order.

Bevin Bros. Mfg. Co.—East Hampton, Conn. Mfrs. bells.

Beyster, Thorpe Co.—1329 Woodward Ave., Detroit, Mich. (Aerocar.)

Bezault, R.—16 bvd. de Villiers, Levallois, Seine, France. Mfrs. pneumatic rubber tires, non-skids.

Bezel.—The sloping edge of a cutting tool.

Bezner, F. O.—Sec. and Purch Agt., E. R. Thomas-Detroit Co., Jefferson Ave., Detroit, Mich.

B. G. S., Société Nouvelle des Accumulateurs.—34 rue Pierret, Neuill-sur-Seine, France. Mfrs. storage batteries.

Bianchi, Ed. e Co., Fabbrica d'Automobile e Velocipedi.—21 via Nino Bixio, Milan, Italy. Mfrs. automobiles, gas (Bianchi cars.)

Biayas, B. H.—Cumberland, Md. (Maxwell.) Garage.

Bibb.—A faucet, or cock, of the ordi-

nary form in which the nozzle is bent downward.

Bickel, O. H.—Supt. Acme Motor Car Co., 8th & Elm Sts., Reading, Pa.

Bickford & Francis Belting Co.—35 Pearl St., Buffalo, N. Y. Mfrs. belting, packing.

Bicycle Step Ladder Co.—65 Randolph St., Chicago, Ill. Mfrs. tire protector jacks, turntable and pit. Not Inc. Est. 1890, automobile dept. 1905. E. M. Murray, Prop.

Bicycling World and Motorcycle Review, The.—Published weekly by the Bicycling World Company, 154 Nassau St., New York City. Joseph Goodman, Pres.; R. G. Betts, Treas.; F. W. Roche, Sec.

Biddle & Smart Co.—Amesbury, Mass. Mfrs. wood and metallic bodies.

Biddle, W. A.—Richwood, O. (Maxwell)

Biehl's Carriage Wks.—Reading, Pa. Garage.

Bielefelder Nachmaschinen und Fahrradwerke.—Bielefeld, Germany. Mfrs. motorcycles.

Bielefelder Press und Ziehwerke Actiengesellschaft.—Brackwede-Bielefeld, Germany. Mfrs. pressed steel frames.

Bielus Motor Co., The.—Saginaw St., & M. C. Ry., Lansing, Mich. Mfrs. gasoline automobile motors.

Biever, L. N.—56 Elizabeth St., Derby, Conn. (Maxwell.)

Big End.—The enlarged lower end of a gas-motor connecting-rod which carries the crank-pin bearing. The piston end of the rod is sometimes termed the "little end."

Big 4 Auto Co.—110 East 9th St., Los Angeles, Cal. (Marmon, Monarch, Model.)

Big 4 Spark Plug Co.—104 John R. St., Detroit, Mich. Mfrs. spark plugs.

Bight.—A loop in a rope or chain.

Biko Mfg. Co.—Hubbardson, Mass. Mfrs. tire fluid.

Bilge.—That part of the floor of a boat, on each side of the keel which approaches nearer to a horizontal than perpendicular direction and begins to round upward.

Bilge-pump.—A small pump to carry off water which may lodge around the lee bilge.

Bilgeri, Wurzer und Co.—Helioswerke, Bregenze-Laibach, Austria. Mfrs. motorcycles, automobiles, gas. (Helios.)

Billings & Spencer Co.—Russ & Lawrence Sts., Hartford, Conn. Mfrs. wrenches, machine wrenches, pliers, hammers, packer ratchets, lathe tools, screw-drivers, drop-hammers, automobile forgings, etc., etc. Cap. \$250,000. Est. 1869. C. E. Billings, Pres.; F. C. Billings, Vice-Pres. and Supt.; E. H. Stocker, Sec.; S. H. Holt, Treas.

Billings, C. E.—Pres. Billings & Spencer Co., Russ & Lawrence Sts., Hartford, Conn.

Billings-Chapin Co., The.—Cleveland, O. Mfrs. paints, varnishes.

Billings, F. C.—Vice-Pres. and Supt., Billings & Spencer Co., Russ & Lawrence Sts., Hartford, Conn.

Billings, Frank—Worcester, Mass. (Knox.)

Billington Motor Car Co.—605-7-9 W. 7th St., Los Angeles, Cal. (Knox trucks and automobiles.) Est. March 1, 1907.

Bill, John T.—10th & Main Sts., Los Angeles, Cal. (Stoddard Dayton.) Supplies.

Billy, C.—1 rue Jean Stas, Brussels, Belgium. Mfrs. oil and acetylene lamps.

Bilz, Chas.—1432-38 Court pl, Denver, Col. Agent; Packard, Franklin, Buick. Est. 1902, Charles Bilz, Prop.; W. J. Hunter, Shop Foreman. Garage (50 cars). Repairing.

Binding.—See Seizing.

Binding-post.—A screw clamp for attaching a conducting wire to an electrical instrument. In the figure, E is the connecting nut; P the post; and V the binding-screw.

Binding-screw.—See Screw, Binding.

Bindrim, Julius.—1057 Bedford Ave., Brooklyn, N. Y. Supplies.

Binford's Auto Station.—1287-1289 West Lake St., Chicago, Ill. Est. 1904. Todd E. Binford, owner. Garage (100 cars). Repairing.

Bingham's Auto Garage.—Grand River Ave. and 5th St., Detroit, Mich. Repairing.

Binghamton Automobile Club.—S. M. Frechie, Sec., Binghamton, N. Y.

Binghamton Motor Car Co.—172-176 State St., Binghamton, N. Y. Agts. Pope-Toledo, Pope-Hartford, Buick, Columbia, Knox, Babcock Electric, Pierce Arrow. Est. Jan. 1, 1906. H. W. Brown, Mgr. Garage (60 cars). Repairing.

Binkley, F. C.—Mgr. auto dept. The Turner Brass Works, Sycamore and Illinois Sts., Chicago, Ill.

Binnacle.—A housing for a vessel's compass.

Binns, Andy.—207 Grand Ave., Oklahoma City, Okla. (Pope-Toledo.)

Bird, A. D.—Treas. Camden Anchor-Rockland Machine Co., Camden, Me.

Bird, C.—Supt. Jackson Automobile Co., Jackson, Mich.

Bird, Geo. H.—Co-partner, Bird-Sykes Co., 1470 Michigan Ave., Chicago, Ill.

Bird, John.—Pres. and Mgr. Camden Anchor-Rockland Machine Co., Camden, Me.

Birdsall, Edward Tracy.—Chief Engineer Selden Motor Vehicle Co. B. at Cumberland, Md., April 14th, 1863; educated private and public schools C. C.

N. Y. and Stevens Institute of Technology ('86 M. E.). Member N. Y. Athletic, Rochester A. C., Rochester Yacht, Rochester, A. C. A., A. I. E. E., Soc. Auto. Eng. (Sec'y). Connected with motor field since 1899. Recreation: Yachting. Res., 68 Merriman St.; office, Berkley Bldg., Rochester, N. Y.

Birdsong & Potchernick.—San Antonio, Tex. (Maxwell.)

Bird-Sykes Co.—1470 Michigan Ave., Chicago, Ill. Middle West Distributors for Corbin cars. Est. 1904. Cap. \$10,000. Geo. H. Bird and B. G. Sykes, Proprietors; R. B. Nettleton, Sales Mgr.; E. H. Dooley, Head of Repair Department. Repairing.

Bird & Co., W. Hobart.—Coventry, Eng. Mfrs. Hobart motorcycles, quads, tricars.

Birmingham Garage.—121 South 20th St., Birmingham, Ala. (Maxwell, Stoddard-Dayton.)

Birmingham Small Arms & Metal Co.—Birmingham, Eng., Mfrs. chains, metallic wheels.

Birnie, H. T.—Sales Mgr. Bryant Motor Co., 110 W. 41st St. and 1675 Broadway, New York City.

Bishop & Co., The J. H.—Wyandotte, Mich. Mfrs. automobile robes.

Bishop, B. T.—Vice-Pres., Bishop, McCormick & Bishop, 18-20 Halsey St., Brooklyn, N. Y.

Bishop & Darling.—1291 Bedford Ave., Brooklyn, N. Y. (Berkshire.)

Bishop, Chas. R.—Pres. American Motor Truck Co., Caledonia St., Lockport, N. Y.

Bishop, C. M.—Sec. Bishop, McCormick & Bishop, 18-20 Halsey St., Brooklyn, N. Y.

Bishop, E. H.—Pres. Bishop McCormick & Bishop, 18-20 Halsey St., Brooklyn, N. Y.

Bishop, E. R.—Sec. and Treas. The Kilborn & Bishop Co., Lloyd St., cor. Chapel, New Haven, Conn.

Bishop Gutta-Percha Co.—425 E. 25th St., New York City. Mfrs. insulated wire.

Bishop, McCormick & Bishop.—18-20 Halsey St., Brooklyn, N. Y. Agts. Ford, Dragon. Est. Dec. 1906. Cap. \$51,000. E. H. Bishop, Pres.; J. McCormick, Jr., Treas.; B. T. Bishop, Vice-Pres.; C. M. Bishop, Sec. Garage (100 cars). Repairing.

Bishop, W. H.—Athens, Georgia. (Logan, Maxwell.)

Bisiaux, Georges.—11 rue Petit, Paris, France. Mfrs. radiators.

Bismarck Fahrradwerke Gesellschaft.—Bergerhof, Rheinisch-Preussen, Germany. Mfrs. Bismarck motorcycles.

Bismarkhütte Actiengesellschaft.—Bismarkhütte, Schientochlowitz, Silesia, Germany. Mfrs. pressed steel frames.

Bismuth.—A metal found disseminated through various rocks, from which it is separated by simple exposure to heat. It is highly crystalline and very brittle. It has a reddish white color and a density of 9.9. It melts at about 500° F. (260° C.). It is remarkable as being the most diamagnetic of all known bodies. An alloy consisting of 8 parts of bismuth, 5 of lead and 3 of tin constitutes what is known as fusible metal, which melts below 210° F. (100° C.).

Bispham, C. P.—Mgr. New York Branch Trident Tire Co., 1593 Broadway, New York City.

Bissell, Clarence H.—Gen. Supt. Murphy Varnish Co., Newark, N. J.

Bissett, F. H.—529 S. Second Ave., Minneapolis, Minn. (Indian.)

Bisantz, F.—Supt. Logan Construction Co., 2296 Carrol St., Chillicothe, O.

Bit.—A term applied to certain boring tools used with a brace, such as the twist bit, center bit, etc.

Bitt.—A post secured to the deck of a boat, and to which cables, etc., are made fast.

Bittner, M. & Co.—Thaborstrasse, 108, Vienna, Austria. Mfrs. acetylene lamps.

Bitumens.—A series of carbon compounds of the olefiant and paraffin groups, and which usually occur as mixtures. Some of the principal members are asphalt, naphtha, petroleum, etc. See Asphalt.

Bjorneby, Eliot.—KalisPELL, Mont. (Waltham.)

Black, A. B.—21 S. Market St., Boston, Mass. Mfrs. spark timing devices.

Black Auto Co., Sid.—630 Walnut St., Cincinnati, O. (Buick, Franklin, Lozier.) Supplies; garage; repairing; renting.

Blackburn Wm. M.—Purch. Agt., F. B. Stearns Co., Euclid Ave., Cleveland, O.

Black, C. A.—Vice-Pres. Cadillac Motor Car Co., 1343 Cass St., Detroit, Mich.

Black Lead.—See Graphite.

Black Mfg. Co.—Fort Wayne, Ind. Mfrs. gas automobiles.

Black, Sid.—Pres. Sid. Black Automobile Co.—630 Walnut St., Cincinnati, O.

Blackham & Son.—30 High St., Coventry, England. Mfrs. goggles.

Black Hills Mica Co.—Auburn, N. Y. Mfrs. mica.

Blackington & Co., V. H.—Attelboro Falls, Mass. Mfrs. name plates.

Blackiston, A. H.—Vice-Pres. Pittsburg Automatic Vise & Tool Co., Wabash Bldg., Pittsburg, Pa.

Blackiston, G. P.—Pres. and Gen. Mgr. Pittsburg Automatic Vise & Tool Co., Wabash Bldg., Pittsburg, Pa.

Blackmore, C. C.—Office Mgr. Citizen's Motor Car Co., N. E. cor. Seventh and Main Sts., Cincinnati, Ohio.

Black, S. C.—222 N. Church St., West Chester, Pa. (Rambler.)

Blair, C. M.—Billings, Mont. (White.)

Blairlight Co.—Northboro, Mass. Mfrs. automobiles, steam.

Blair, Wiley.—Wichita Falls, Tex. (Buick, Waltham.)

Blaisdell Bros.—Rockford, Ill. (Cadillac.)

Blaisdell Machine Works.—6th St. & C. R. R. of N. J., Vineland, N. J. (Pope-Toledo.)

Blaisdell, Walter F.—58 Palmetto St., Brooklyn, N. Y. (Walter.)

Blake Co., E. P.—21 Hawkins St., Boston, Mass. (Jackson, Monarch, Logan.)

Blake, Edwin J.—565 Winslow St., Hartford, Conn. Mfrs. brass, bronze, aluminum and copper castings, bronze metals.

Blake, G. W.—Colorado Springs, Col. (Merkel.)

Blake, H. M.—Supt. Locomobile Co. of America's branch at 400 Newbury St., Boston, Mass.

Blake & Johnson.—Waterbury, Conn. Mfrs. bolts, nuts, special automobile machinery, machine work to order, screw machine products, screws.

Blake Steam Pump Co.—356 Arborway, Jamaica Plain, Mass. Mfrs. condensers

Blakeslee, D. S.—Sec. and Treas. Blakeslee Forging Co., Plantsville, Conn.

Blakeslee Forging Co.—Plantsville, Conn. Mfrs. drop forgings, carriage hardware. Cap. \$50,000. Est. 1877. S. Blakeslee, Pres.; Geo. W. Blakeslee, Vice-Pres.; D. S. Blakeslee, Sec. and Treas.

Blakeslee, G. E.—Pres. and Gen. Mgr. Crescent Automobile Co., 2565 Boulevard, Jersey City, N. J.

Blakeslee, Geo. W.—Vice-Pres. Blakeslee Forging Co., Plantsville, Conn.

Blakeslee, L. J.—Treas. Crescent Automobile Co., 2565 Boulevard, Jersey City, N. J.

Blakeslee Mfg. Co.—Plantsville, Conn. Mfrs. metal trimmings.

Blakeslee, S.—Pres. Blakeslee Forging Co., Plantsville, Conn.

Blanchard, A. W.—10 Clinton St., Brooklyn, N. Y. Mfrs. tire tools.

Blanchard, E. H.—Waterbury, Conn. (Pope-Hartford.)

Blanchard, L. E.—Supt. The Hofecker Co., Motor Mart, Park Square, Boston, Mass.

Blanchard Machine Co.—64 State St., Cambridge, Mass. Repairing.

Blank.—A piece of metal roughly cut, cast or forged to a particular shape ready for accurate working up by hand or machine

Blankenagel, Gebrüder.—Bielefeld, Germany. Mfrs. tire pumps.

Blanke und Rest.—Leipzig-Plagwitz, Germany. Mfrs. circulating pumps, lubricators, carbureters.

Blasier Mfg. Co., M. E.—65 Columbia St., Utica, N. Y. Mfrs. automobile tops, glass wind shields. Cap. \$50,000. Est. 1885. M. E. Blasier, Pres. and Treas.; F. A. Klein, Vice-Pres. and Sec.

Blasier, M. E.—Pres. and Treas. M. E. Blasier Mfg. Co., 65 Columbia St., Utica, N. Y.

Bleeg, John P.—Sec. and Mgr. Henry H. Van Brunt Co., Sioux Falls, South Dakota

Blenner, B. A.—1602 W. Broad St., Richmond, Va. (White, Winton, Dragon, Pierce Arrow.)

Blériot, Société, Anonyme.—14 rue Duret, Paris, France. Mfrs. acetylene lamps.

Blessing, J. W.—Risingsun, Ohio. Agt. Cartercar. Est. in automobile business 1906. Not Inc.

Blewett, B. W.—Denton, Tex. (Waltham.)

Blin.—53 bis, rue Croulebarde, Paris, France. Mfrs. storage batteries.

Bliss, A. R.—Sec., Treas. and Gen. Mgr. New England Motor Co., 82-88 Fletcher St., Lowell, Mass.

Bliss, Chas. P.—Denver, Col. Mfrs. automobile tops.

Bliss-Chester Co.—31 Mathewson St., Providence, R. I. Mfrs. duplex wire terminals and flexible battery connectors.

Blisters.—Bunches or protuberances in the side of a pneumatic tire, caused either by sand working through a cut and collecting in one or more places, or by the separation and granulation of the rubber between each layer of fabric.

Blister Steel.—See Steel, Blister.

Blizard, Charles.—Third Vice-Pres. Electric Storage Battery Co., Allegheny Ave. and 19th St., Philadelphia, Pa.

Bloch, Julien Ernest.—B June 12,

1870, at Paris,

France. Graduate

of Mechanical

School. Inventor.

Present occupa-

tion. Importer

Motobloc cars.

Member of As-

sociation Génér-

ale Automobiles

(A. G. A.) France.

Connected with

automobile trade

since 1869. Resi-

dence, 250 W.

84th St., 244 W. 69th St., New York City.

Block.—A wood or metal frame carrying the pulleys in a lifting tackle. See Pulley.

Block Bros.—9 Water St., Mobile, Alabama. (Rambler.)

Block, Pillow.—See Pillow-block.

Blocker, A. L.—Columbia, Tenn. Garage.

Blodgett & Co., V. E.—Santa Ana, Cal. (Holsman.)

Blomberg & Co., Frank C.—346 Madison St., Memphis, Tenn. (Buick, White, Baker.)

Blomstrom Mfg. Co., The.—Detroit, Mich. Mfrs. automobiles, gas.

Blomstrom Mfg. Co., C. H.—Cor. Clark & Jefferson Aves., Detroit, Mich. Makers of the Queen car, first marketed 1902. Eight models made since. Cap. \$200,000. N. M. Kaufman, Pres.; D. W. Kaufman, Vice-Pres. and Gen. Mgr.; D. McCracken, Sec. and Treas.; F. S. Davis and J. A. Herzog, Designers; J. A. Locher, Supt.; W. A. Westcott, Purch. Agt.; Geo. Horn, Asst. Purch. Agt.; H. S. Leyman, Sales Mgr.; F. T. Larson, Advt. Mgr.

Blondel la Rougery.—24 passage du Havre, Paris, France. Mfrs. road maps.

Blood Bros. Machine Co.—Kalamazoo, Mich. Mfrs. gasoline tank gauges, steering apparatus, universal joints.

Bloom, A. J.—Hamburg, N. J. (Walsham.)

Bloomer, R. E.—Keithsburg, Ill. Mfrs. oil cans.

Bloomington Automobile Club.—Henry Thobro, Sec., Bloomington, Ill.

Bloomington Automobile Garage.—315 E. Front St., Bloomington, Ill. Garage.

Bloomsburg Automobile Club.—C. W. Funston, Sec., Bloomsburg, Pa.

Bloomsburg Auto Co.—East & Third Sts., Bloomsburg, Pa. (Franklin.)

Blough, W. R.—Treas. Harrisburg Auto Co., 39th and Hamilton Sts., Harrisburg, Pa.

Blount, F. J.—Head of Battery Dept., Helios Mfg. Co., Bridesburg, Philadelphia, Pa.

Blow.—An electrical fuse or cut-out is said to "blow" when it burns out and breaks the circuit.

Blow.—The same as "blow-hole," q. v.

Blow-back.—A return of gas, whether ignited or not, through the inlet-valve into the carburetter, and which causes a loud popping.

Blower.—A wheel with curved buckets revolving in a circular case and designed for the production of a current of air. The air is drawn in through an opening at the center and discharged through a pipe connected with an outlet at the periphery. The figure gives a diagram of a common form.

Blowhole.—A cavity, called also an "air hole," in a casting caused by a bubble of air which passes from the core outward and is retained in the metal.

Blowing Off.—Driving out all of the water in a steam boiler, in order to expel the sediment.

Blow-off Cock.—See Cock, Blow-off.

Blow-off Pipe.—A pipe fixed to the bottom of a steam boiler, for discharging sediment, by blowing through a portion of the water from the generator.

Blow-off Valve.—See Valve, Blow-off.

Blow-out.—A fracture in the casing and inner tube of a pneumatic tire caused by the gradual weakening of the fabric, through separation and chafing.

Blowpipe.—A curved tube with a fine aperture used to direct a jet of flame upon an object which has to be submitted to a high temperature.

The blowpipe used in the industries for soldering, brazing, etc., consists of two cylindrical tubes arranged concentrically in such a way as to leave an annular space between them. Through this space is sent, under pressure, a gas very rich in carbon (such as illuminating gas, for example), and the combustion of which is quickened by a blast of air sent through the central tube. Extremely high temperatures are obtained through the use of oxygen and hydrogen, mixed at the tip of the blowpipe.

The most powerful and economical blowpipe now used is one in which a mixture of acetylene and oxygen is employed. The temperature at the tip of this easily reaches 5430° F. (3000° C.), and permits of the autogenous soldering of such metals as iron, copper, nickel and aluminum. See Soldering, Autogenous.

Blow-torch.—See Torch, Blow.

Blueing.—In tempering steel, the production of a blue tint by heating the metal to about 570° F. (300° C.). Steel springs are so tempered.

Blue Grass Auto Co.—Lexington, Ky. (Stoddard-Dayton.)

Blue Ribbon Garage Co.—112 E. 75th St., New York City, Garage.

Blue Ribbon Garage.—291 Fairfield Ave., Bridgeport, Conn. (Columbia, Winton, Cadillac, Franklin, Lozier.) Supplies, garage, repairs.

Blue Ribbon Auto & Carriage Co.—130-170 Cannon St., Bridgeport, Conn. Mfrs. wood and metallic bodies, auto tops.

Blue-stone.—A common name for copper sulphate, q. v.

Blucmel, C. W. & Bros.—Wolston Coventry, England. Mfrs. storage batteries.

Blum, E.—130 ave d'orleans, Paris, France. Mfrs. coils.

Blumenthal, D.—Vice-Pres. American Machine Mfg. Co., cor. Champlain and Beaubien Sts., Detroit, Mich.

Blumenthal, Harry S.—Pres. American Machine Mfg. Co., Champlain and Beaubien Sts., Detroit, Mich.

Boardman, Mrs. N. J.—Sec. Chicago Women's Motor Club, Chicago, Ill.

Boas, Hans.—Krautstrasse 52, Berlin, Germany. Mfrs. high tension magnetos.

Boas, Rodriques, et Cie.—67 blvd. de Charonne, Paris, France. Mfrs. acetylene and oil lamps.

Boat, Gliding.—See Hydroplane.

Boat, Hydroplane.—A type of racing craft in which an effort is made to lift the boat clear, or partially clear, of the water and drive it along on a series of slightly inclined planes. One of the latest types, that of Levavasseur, consists of a front boat for holding the motor, and to which is attached a light wooden frame for carrying a long tail, at the rear end of which is the propeller.

Boat, Motor.—A term, along with "auto-boat," and "power-boat," now usually applied to small vessels propelled by an internal combustion motor using gasoline. The motor of such a boat is of some standard type. In the smaller types a motor with a two-stroke cycle is employed, since its lower speed is advantageous when the motor is connected directly to the shaft of the propeller, and as the two-cycle motor can be readily reversed this combination eliminates the necessity for a reversing-gear. The propeller is often made reversible (see Screw, reversible). The blades being capable of being moved in such a way as to reverse their direction, the necessary movement being effected by a lever in the boat, connected by a rod to a sleeve on the hub or boss of the propeller. A reversing-gear is most generally used where a high power motor is installed, being constructed of metal or rawhide gears, or of the planetary type. The size of the boats now in use is from 15 to over 100 feet in length, and of from 1½ to 150 h. p., or greater. The whole of the motor, with working parts, control-lever, etc., is carried on a single bed-plate so that the boat having been prepared, it falls into place without elaborate bolting or fitting, and the whole can be easily inspected.

Boat, Racing.—All motor-boats, for racing purposes, are divided into two classes, "racers," and "cruisers." A racing boat is one whose rating is at least two and one-half times the square root of her load water line length; all other boats are classed as cruisers. When a boat by reason of the difference in rating for horse-power between racer and cruiser may rate in either division she is classed as a racer.

Boats are rated for time allowance according to the following formula:

$$V = C \sqrt{\frac{P \times \sqrt{L}}{D}}$$

in which V is the speed in nautical miles per hour; C is a constant which for racers is 11 and for cruisers 9.7; P is the

power determined by the following horse-power formula; L is the length of the water line in running condition, and D is the displacement in cubic feet.

Horse-power: The horse-power for 4-cycle motors having a stroke of six inches or over, is determined by the following formula:

$$P = \frac{A \times N}{2}$$

The horse-power for 4-cycle motors having less than six inches stroke:

$$P = \frac{A \times N \times S}{12}$$

The horse-power for 2-cycle motors having a stroke of six inches or more, the formula becomes

$$P = \frac{A \times N}{1.65}$$

The horse-power for 2-cycle motors under six inch stroke:

$$P = \frac{A \times N \times S}{10.2}$$

In these formulas (P) equals horse power; (A) equals the area of one cylinder in square inches; (N) equals the number of cylinders; (S) equals the stroke in inches.

The above ratings and formulas have been adopted by the Motor Boat Club of America, under whose auspices the Hudson River races, etc., are run.

Bobbins.—A spool of wood or other material wound with insulated wire.

Bockhacker, Hans.—Sec. and Treas. Funk Engineering Co., 39-45 Fourteenth St., Hoboken, N. J.

Bocquet, J.—rue Jacques-Dolphin, Carouge-Genève, Switzerland. Mfrs. bodies.

Bock und Hollender.—72 Hauptstrasse, Vienna, Austria. Mfrs. automobiles, gas.

Boda & Co., Robert F.—20-22-24 East Rich St., Columbus, O. Agts. for National, Mitchell. Est. 1905. Garage, 50 cars. Repairing.

Body-hangers.—The same as spring-hangers, q. v.

Boehny, R.—Zürich, Switzerland. Mfrs. spark plugs.

Bogan, John G.—Treas. and Gen. Mgr. Sports Ltd., 2049 Bdw., New York City.

Boh, John F.—Head of Dept. New York and Brooklyn Auto Supply Co., 1717 Bdw., New York City.

Bohn, Chas. B.—Sec. and Treas. Allyn Brass Foundry Co., Cleveland, Detroit and Buffalo, Mgr. Detroit Plant.

Bohnet, Geo. J.—114 S. Franklin St., Saginaw, Mich. (Reo.)

Boiler.—The source of motive power of a steam-engine. The boilers used on steam-cars are of the tubular variety and either of one of two kinds design-

nated, respectively, as "fire-tube boilers" and "water-tube boilers" according as to whether the tubes are designed to contain hot gases of combustion or water.

(1) **Fire-tube Boilers.**—These generators, which have been chiefly developed in America, are rarely over a foot in diameter or height, but the wide heating surface obtained by the multiplicity of fire-flues renders them capable of generating a working-pressure of from 150 to 180 pounds to the square inch. The tubes of such boilers are usually of copper, cold-drawn and expanded into the tube-plates at each end of the steel boiler-shell. One of the most serious difficulties with these small boilers is the danger of "priming," although this in some instances is surmounted by the use of a baffle-plate fixed above the water-level, and, sometimes, in connection therewith, of a "separator"—a pipe of wide diameter extending across the top plate of the boiler and united to the motor by another pipe within it provided with a number of small holes.

(2) **Water-tube Boilers.**—In automobile practice, preference has been accorded to this type owing to the fact that by their use quicker steaming and greater durability are secured. Calcareous matter precipitated from the water is more easily prevented from forming "scale," since it is directed into a mud-drum at the bottom of the water-chamber, whence it can be readily removed. On the other hand, water-tube boilers have the drawback of bulkiness and complicated construction, and greater liability to foaming and priming.

Boiler, Finger-tube.—A type of steam generator which, instead of fire tubes or coils, has the bottom crown-plate fitted with a number of suspended "finger-tubes," through which the heated gases are forced to circulate.

Boiler, Flash.—A type of steam generator invented by Leon Serpollet in 1889, and which consisted of a coil of steel tubing flattened until the bore was of almost capillary width, and surrounded by a cast-iron covering. A pump at

each stroke injected into the coil a small quantity of water which was converted into steam almost instantaneously. Several manufacturers, working along the lines of Serpollet's "instantaneous gener-

ator," with its numerous advantages in point of quick steam, high pressure capacity, freedom from scale, etc., have produced improved "flash-boilers" of similar description. By making the tubes of such generators of sufficient capacity to vaporize a good quantity of water, high temperatures may be obtained in a short time and high power engines be driven with perfectly dry steam. The figures give a lateral view (without shell) of the White flash boiler.

Boiler-shell.—The external covering of a steam generator.

Boiler, Tube-plug.—A steam-car boiler in which the lower crown-plate contains threaded perforations, into which U-shaped tube-plugs are screwed. The circulation of the water is downward at the center of the tube clusters and upward through the outer legs. Quick and ready steaming, prevention of scale, and impossibility of burning are some of the advantages claimed for this construction.

Boiling.—In the ordinary sense, the production of vapor throughout the mass of a heated liquid, which occurs under normal pressures, at a definite temperature called the "boiling point." See Ebullition. (2) In the charging of secondary batteries, the bubbling of hydrogen and oxygen gases as they escape from the liquid. See Gassing. (3) The stage of the Bessemer process during which the carbon is being oxidized to carbon monoxide.

Boiron, J.—32 rue de Tilsit, Paris, France. Mfrs. spark plugs.

Boissette, Emile.—260 blvd. Voltaire, Paris, France. Mfrs. motorcycles.

Boker & Co., Herman.—101 Duane St., New York City. Mfrs. sparking points, steel, brass and copper metals.

Boland & Bros., F. E.—Grand and Oliver Sts., Rahway, N. J. (National.)

Boland Motor Co., F. E.—239 Halsey St., Newark, N. J. (National.)

Boldt & Son, G. H.—Locust and 4th Sts., Dubuque, Iowa. Garage.

Bolide, Société Anonyme des Automobiles.—5 rue Duranti, Paris, France. Mfrs. automobiles, gas. (Bolide cars.)

Bolleé, Usines Léon.—Le Mans, France. Mfrs. automobiles, gas. (Léon Bolleé.)

Bols, Petrus.—rue Haute, Malines, Belgium. Mfrs. wood wheels.

Bolton Automobile Co.—100-106 Dalplins St., Baltimore, Md. Agts.; Ford, Reo. and Premier. Est. May, 1906. Not Inc. A. S. Brown, Prop. Garage (24 cars). Repairing.

Bolt.—A bolt is a screw, usually of iron or steel, terminated by a nut, (Fig. 1). The shank of the bolt is generally distinguished from that of the screw in being but partially threaded. In diameter, length and threading, the

bolt varies greatly. Every nut forms a constituent part of its bolt.

The bolt is either free (Fig. 1) or per-

Fig. 1

manent. When it is free, that is to say, detachable from the pieces that it unites, it is sometimes provided with a snug (Fig. 2), a projection which engages with a recess in the piece. This arrange-

Fig. 2

ment is used when the bolt-head is difficult to reach, and an effort made to screw the nut upon it would cause it to revolve. The snug should be placed in the head of the bolt (Fig. 2, G'). If placed in the shank (Fig. 2, G), it weakens it, sometimes with disastrous consequences, especially in cases in which the defective bolts hold the bearings of connecting-rod heads.

The bolt is called a "stud-bolt" (Fig. 3) when a portion of its shank is screwed

Fig. 3

permanently into a piece, and becomes, in a manner, an integral part of it, through soldering or brazing, or simply through a forcible screwing to make the

threads grip it with tenacity. In such a case the bolt-head is replaced by the piece itself.

Bolts have heads of very different form: according to the purpose for which they are to be used. In common bolts, the kind mostly employed in carriage bodies, the head is sometimes square, and the nut six-paned, that is, provided with six facets on its periphery. Sometimes also the head has the same

Fig. 4

Fig. 5

form (Fig. 5), and occasionally it is made round, and, for particular purposes, it is conical, but oftener pyramidal (Fig. 4). When of the latter shape it is intended to come flush with the surface into which it is inserted, and in that case is said to be "countersunk."

The holes into which bolts are to be inserted should have, as nearly as possible, the same diameter as the bolts themselves, otherwise the latter might have a play that would quickly cause them to shear and break.

Bolt, Countersunk.—A bolt with a conical head to fill a countersink. See Bolt, Fig. 4.

Bolt, Double-ended.—A bolt used for holding together three objects independently of each other.

Bolt, Eye.—A bolt used for securing the gland to a stuffing box, or for other purposes, such as for receiving a ring, lever or rope.

Bolt, Fang.—A bolt with pointed teeth formed on the nut, and which sink into the wood through which the bolt passes and prevent its rotation.

Bolt, Flush.—One, the head of which is let down even with the surface.

Bolt, Gland.—One of the several bolts which hold a gland in place. See Gland.

Bolt, Holding-down.—A bolt used to hold down a machine, motor, etc.

Bolt, Lag.—See Screw, Lag.

Bolt, Rag.—A bolt with a jagged end to prevent withdrawal.

Bolt, Ring.—A bolt with an eye in the end, through which a ring passes.

Bolt, Security.—The same as "tire bolt."

Bolt, Set.—A bolt used by shipwrights in closing up planks.

Bolt, Snug.—A bolt provided with a "snug" or small projection under the head in order to prevent the bolt from turning. See Snug, Fig. 2.

Bolt, Stay.—See Bolt, Tire.

Bolt, Stirrup.—The same as "bridge and bolt," "yoke," and "dog," q. v.

Bolt, Stud.—A bolt threaded at each end, so that it can be screwed into a fixed piece at one end and have a nut screwed on at the other. See Bolt, Fig. 3.

Bolt, T.—A bolt with a rectangular head, forming a T.

Bolt, Tire.—A bolt provided with a rounded head and a wing-nut for securing the casing of a pneumatic tire to the wheel-rim. See Chaplet.

Bolz, F. R.—Treas. Bay State Auto Co., 112 Norway St., Boston, Mass.

Bolz, Julius.—Pres. Bay State Auto Co., 112 Norway St., Boston, Mass.

Bombort, H. E.—Designer and Supt.

Bellefontaine Automobile Co., Bellefontaine, O.

Bomeister, Carl.—Sec. and Treas. Diezemann Shock Absorber Co., 1311-13 Hudston St., Hoboken, N. J.

Bond Bros. Co.—Motor Mart, Boston, Mass. (Iroquois, Deere.)

Bond, Geo. R.—Treas. H. D. Smith & Co., Plantsville, Conn.

Bond, R. B.—Jessups, Md. (Cadillac.)

Bondin et Cie.—23 place du Chatelain, Brussels, Belgium. Mfrs. acetylene lamps.

Bon Marché, Grands Magazins du.—Rue de Sevrès, Paris, France. Mfrs. wearing apparel. (Coats.)

Bonnardi, Luigi.—Via Piazza, 3 Crocetta, Turin, Italy. Mfrs. motorcycles.

Bonnet.—The case or cover, occasionally called a "hood," placed over the engine of a motor-car or motor-boat. Bonnets, which are usually of sheet steel and of various sizes, according to the number of cylinders to be covered, and of different forms, according to the fancy of the designer, are sometimes provided with parallel slots to per-

mit of a free play of air around the motor in order to aid in cooling, and usually have hinged doors at the sides to permit of inspection of the parts of the motor. (2) A term sometimes applied to the steel or aluminum "pan" which protects the under part of the power-plant of a motor-car. (3) In mechanics, any case or covering. See Hood.

Bonnet.—4 Rue de la Bastille, Paris, France. Mfrs. marine motors.

Bonnet et Zecht.—14 rue de la Vega, Paris, France. Mfrs. Peerless motorcycles.

Bonney Motor Car Co.—1112 Locust St., Kansas City, Mo. (Jewel, Wayne.)

Bonney, V. A.—Lamb Auto Co., 207-9 6th Ave., Clinton, Iowa.

Bonsfield, C. J.—818 Fairagut St., Bay City, Mich. (Packard.) Garage.

Book, J. B.—Vice-Pres. and Director Wayne Automobile Co., cor. Piquette and Brush Sts., Detroit, Mich.

Boone, R.—Sales Mgr. Electrical & Mechanical Development Co., Asbury Park, N. J.

Boot.—An enameled-duck or leather casing for protecting bearings on the cross-rods where they join knuckle arms at the wheels. (2) A similar protection for a universal joint on shaft-driven cars.

(3) A receptacle behind a car for carrying luggage, parcels, etc.

Booth, N. E.—743-45 39th St., Brooklyn, N. Y. Mfrs. felt packings, dust rings and gaskets for automobiles, axles, etc. Est. 1904.

Bootjer, G. M.—Cumberland, Iowa. Garage

Borax.—A chemical compound resulting from the combination of boracic acid and soda ($\text{Na}_2\text{B}_4\text{O}_7 \cdot 10\text{H}_2\text{O}$). It is used as a flux in the operations of brazing and soldering, as is also boracic acid (BO_2H_3), from which it is formed. When mixed with shellac in the proportion of one part to five, borax renders that resin soluble in water, and forms with it a species of varnish, and also a good cement.

Borbein Auto Co.—2109-11 N. 9th St., St. Louis, Mo. Mfrs. and jobbers, running gears, bodies, wheels, axles, steering devices, complete chassis. Cap. \$10,000. Est. 1900. H. F. Borbein, Pres. and Mgr.; W. L. Johnson, Vice-Pres. and Sec.; Chas. Borbein, Treas.

Borbein, Chas.—Treas. Borbein Auto Co., 2109-11 N. 9th St., St. Louis, Mo.

Borbein, H. F.—Pres. and Mgr. Borbein Auto Co., 2109-11 N. 9th St., St. Louis, Mo.

Borchers, Dr.—Walstrasse 43, Berlin, Germany. Mfrs. elastic wheels.

Borchers Tonneau M'fg. Co.—Dayton, Ohio. Mfrs. wood and metallic bodies.

Borden, Harry E.—Mgr. David L. Parker & Co., 18 Market St., New Bedford, Mass.

Borderel.—135 rue de Cliguancourt, Paris, France. Mfrs. automobiles, gas. (Cail Borderel cars.)

Borderwisch & Glancy Auto Co.—12 N. Jefferson St., Dayton, O. (Ford, Queen.)

Bore.—The internal diameter of a motor-cylinder. The distance traveled by the piston is called its "stroke." The bore, stroke, and number of revolutions of the motor per minute give approximately its power. See Piston-stroke.

Borechansky.—26 rue Garnier, Neuilly, France. Mfrs. radiators.

Boru, C. Christian.—Pres. The Barndt-Johnston Auto Supply Co., 426 Donaldson St., Columbus, O.

Born, Henry.—Foreman J. E. Loneragan & Co., 211-215 Race St., Philadelphia, Pa.

Borne-Scrymser Co.—Claremont, N. J. Mfrs. Grease, oils, semi-solid oils.

Borough Automobile Co.—12 New York Ave. and 185 Herkimer St., Brooklyn, N. Y. Garage.

Borrisch, Emil.—Supt. Johnson Service Co., Michigan and Jefferson Sts., Milwaukee, Wis.

Bosch, Robert.—1945 Broadway, New York City. Mfrs. and importers mag-

netos and ignition dynamos, spark plugs, wire terminals.

Bosch, Robert.—Stuttgart, Germany. Mfrs. high tension magnetos.

Boss.—A cylindrical mass of metal forming part of a machine; the solid center of a pulley or wheel through which the shaft passes; the enlarged part of a shaft on which a wheel or the blades of a propeller are mounted; or any enlarged part of the diameter, as the end of a separate piece in a line of shafts connected by couplings.

Boss, J. G.—Sec. Chicago Vulcanizing Co., 1461-63 Michigan Ave., Chicago, Ill.

Boss Knitting Machine Works.—Reading, Pa. Mfrs. automobiles, steam.

Bossett, E. G.—146 Main St., Bristol, Conn. Garage.

Bossineau, N.—Head of Polishing Dept. Jos. N. Smith & Co., Fourth and Porter Sts., Detroit, Mich.

Boston Artificial Leather Co.—12 E. 18th St., New York City. Mfrs. artificial leather.

Boston Auto Gauge Co.—613 Old South Bldg., Boston, Mass. Mfrs. gasoline tank gauges.

Boston Auto School.—343 Tremont St., Boston, Mass. Automobile instruction.

Boston Automobile Dealers Association, Inc.—5 Park Sq., Boston, Mass. Object: "Mutual interest." Organized, 1902. Charter members: J. H. MacAlman, George H. Lowe, Chester I. Campbell, W. E. Eldridge, Harry Fosdick, A. P. Underhill, S. K. Dingle, K. A. Skinner, F. E. Randall, Benjamin Smith. Officers: Pres., J. H. MacAlman; Vice-Pres., Geo. H. Lowe; Treas., Harry Fosdick; Sec., Chester I. Campbell. J. H. MacAlman, Chairman of Comm. Former Presidents, K. A. Skinner and J. H. MacAlman. Has promoted six annual Boston Automobile Shows.

Boston Automobile Exchange.—177 Berkeley St., Boston, Mass. (Jackson, Monarch, Logan.) Mfrs. fuel pumps.

Boston Belting Co.—90 Pearl St., Buffalo, N. Y. Mfrs. belting.

Boston Gear Works.—Hayward St., Norfolk Downs, Mass. Mfrs. spur, bevel, spiral, worm gears, sprockets, etc. Est. 1889. Frank Burgess owner and proprietor.

Boston Insurance Co.—Boston, Mass. Automobile insurance, fire and theft.

Boston Mat & Basket Co.—62 Fulton St., Boston, Mass. Mfrs. hampers.

Boston Motor Co.—43 Columbus Ave., Boston, Mass. (Acme, Pungs-Finch.)

Boston Pressed Metal Co.—171-73 Union St., Worcester, Mass. Mfrs. ball retainers, brake bands, cups and cones, drop forgings, hub caps, hub flanges, pressed steel products, metal stampings.

Boston Steam Specialty Co.—170

Congress St. Mfrs. dealers and jobbers, needle valves, carbureters, priming cups, air cocks, cylinder cocks, brass fittings, steel fittings. Cap. \$50,000. Est. 1895. John A. Emery, Treas.; F. H. Plooff, Pres.; Wm. Bell, Vice-Pres.

Boston Tire Tread Co.—45 Stanhope St., Boston, Mass. Mfrs. tire treads.

Boston Varnish Co.—Everett Sta., Boston, Mass. Mfrs. varnishes.

Boston Woven Hose & Rubber Co.—29 Hampshire St., Cambridge, Mass. Mfrs. rubber mats, packing, tire tape, rubber tubing.

Boswell & Co.—25 No. Franklin St., Wilkesbarre, Pa. (Jackson.)

Boswell, Geo. C.—Broad St., Danielson, Conn. Garage.

Bothner Hardwood Moulding Co.—1945 Park Ave., New York City. Mfrs. wood panels, wood moulding, wood trimmings.

Botiaux et Cie.—28 rue Greffuhle, Levallois-Perret, Seine, France. Mfrs. bodies.

Bott Bros. Mfg. Co., The.—166 N. High St., Columbus, O. Mfrs. metal polishes.

Botterill, Tom.—1643 California St., Denver, Col., and Salt Lake City, Utah. (Pierce Arrow.)

Botto, W. H.—Gen. Sales Mgr. Palmer & Singer Mfg. Co., 1620-24 Broadway, New York City.

Boucher, J. J.—Designer and Supt. Monarch Motor Car Co., Chicago Heights, Ill.

Boudreaux, L.—8 rue Hautefeuille, Paris, France. Mfrs. marine motors.

Buggy, Clifford M.—Pres. Daimler Mfg. Co., 939 Steinway Ave., Long Island City, N. Y.

Boughey, F. M.—Sec. and Auditor, Fairbanks Morse & Co., Franklin and Monroe Sts., Chicago, Ill.

Bougie Vale.—97 Rue St. Lazare, Paris, France. Mfrs. spark plugs.

Bougie Westland.—9 Rue Théophile-Gautier, Neuilly-sur-Seine, France. Mfrs. spark plugs.

Bouillett, Léon.—St. Cheron, Seine-et-Oise, France. Mfrs. acetylene lamps.

Boulanger, J.—Revigny, Meuse, France. Mfrs. metallic wheels.

Boulevard Auto Co.—Fellsway, East Somerville, Mass. Garage.

Boulevard Auto Garage.—204 Lincoln Park Blvd., Chicago, Ill. Garage.

Boulevard Automobile Garage.—2975 Boulevard, Jersey City, N. J. Garage.

Boulevard Auto Station.—Pawtucketville, Mass. Garage.

Boulevard Garage Co.—Superior Ave. and Boulevard, Cleveland, O. (Queen.)

Bourdeaux, L.—16th Ave., Gramont, Tours, France. Mfrs. motorcycles.

Bourdereaux's Automobile Garage.—629 Main St., Peoria, Ill. Garage.

Bourdier-Villeve.—100 rue Bannier, Orleans, France. Mfrs. elastic wheels.

Bourdon, Edouard.—74 Faubourg du Temple, Paris, France. Mfrs. gauges.

Bourn Rubber Co.—Providence, R. I. Mfrs. insulated wire.

Bourquin, Veuve, Ferdinand.—10 cite Trévis, Paris, France. Mfrs. speed indicators

Bousfield, C. J.—Bay City, Mich. (Packard.)

Bouton, George Thadée.—36 Quai National, Puteaux (Seine). Born at Paris. 1847. Chevalier of the Legion of Honor. Copartner in the house of de Dion, Bouton and Company. He was a laborer

from 1865 to 1880, and then set up a small shop in which he engaged in mechanical work of precision, especially the manufacture of scientific apparatus for MM. Ducretet, Bourbouze and others. In 1882 he formed a partnership with

Count de Dion for the construction of a steam tricycle. He has been associated with Count de Dion since 1883, and, with him, created the first gasoline tricycles, which formed the basis of the great success with which the firm of de Dion-Bouton has met

Bouton, M. D.—Pres. Bryant Motor Co., 110 W. 41st St. and 1675 Broadway, New York City.

Bouvier fils.—51 rue du Tunnel, Valence, Drôme, France. Mfrs. non-skid bands.

Bow.—The curving fore part of a vessel

Bow.—One of several bent tubes or strips of wood that support the hood of a vehicle.

Bowe & Son, A.—231 W. Main St., Meriden, Conn. (Reo, Premier.)

Bowden, E. M., Patents Syndicate Ltd.—Baldiwin's Gardens, Gray's Inn road, London, E. C., England Mfrs. steering gears.

Bowden, Ltd. Syndicat Français des Brevets.—12 Ave. de la Grand Armée, Paris, France. Mfrs. horns, exhaust horns.

Bowen & Odery Mfg. Co.—Pomerooy St., New Cross, London, E., England. Mfrs. storage batteries.

Brady, L.—Officer, Croftan Storage Battery Co. 423-425 W. Queen St., Toronto, Canada.

Braeburn Steel Co.—Braeburn, Pa. Mfrs. bar iron and steel.

Bragg, Dr. F. A.—Treas. American Coil Co. Inc., cor. Wall and Cocal-st Sts., Foxboro, Mass.

Briansby & Sons—125 Long Acre, London W. C., England. Mfrs. bodies.

Brake—A mechanism for slowing down or stopping a vehicle, and which usually acts on a disk, drum or wheel. A block made to fit the periphery is forced into close contact therewith by levers or screws, or a flexible band is pulled into frictional contact with the external or internal surface of a drum.

The brakes employed on motor vehicles may be divided into three classes: Hub or rear-wheel, transmission and differential-gear brakes. The forms in use are single or double-acting, foot or hand-operated, and of the external or contracting band and internal or expanding-band types.

Brake, Band.—A brake which operates by tightening a leather-faced steel band or strap around a drum (Fig. 1), either

Fig. 1

Fig. 2

on the hub of the wheel or on the case of the differential gear, or by tightening a similar strap or band against the internal surface of a rotating drum or pulley (Fig. 2).

Brake-block.—The piece that forms the backing of a brake-shoe.

Brake, Compensating.—A brake which is applied simultaneously at two or more points, but so arranged that the braking power shall be equal at all points.

Brake, Constricting.—The same as "band-brake." q. v.

Brake, Drop.—A device called also a "sprag," to prevent accidents in hill-climbing. It is attached to the rear axle and lowered on the approach of an incline. See Sprag.

Brake-drum.—That part of the brake upon which the brake-shoe or band binds.

Brake, Drum.—See Brake, Band.

Brake, Expanding.—A drum-brake in which a strap of metal faced with leather, fiber or other suitable substance acts against the internal surface of a rotating drum. See Brake, Band.

Brake, Friction.—See Dynamometer.

Brake Horse-power.—The actual horse-power which is developed by a motor, and is absorbed by a brake dynamometer. It is distinguished from the "indicated" horse-power as being the amount of power which a motor can put out for useful purposes. See Dynamometer and Power, Horse.

Brake, Hub.—A brake applied to a drum at the hub of a wheel.

Brake, Prony's.—See Dynamometer.

Brake, Ribbon.—The same as band-brake. See Brake, Band.

Brake, Shoe.—A brake which operates by the pressure of the contact surface or shoe upon the periphery of the wheel-tire. As this form of brake proves detrimental to the tire, and, moreover, does not hold well on wet rubber, it has been practically abandoned.

Brake-shoe.—A flexible part of the brake, called also a brake-band; or that portion of a brake-block which comes into frictional contact with the disk, drum or other surface on which the brake acts.

Brake, Spoon.—A tire-brake provided

with a spoon-like shoe which is made to bear against the surface of the rubber tire.

Brake, Tire.—A brake which is applied against the surface of a tire.

Brake, Transmission.—A brake placed either on the jack-shaft of a double-chain car, or immediately behind the transmission of a shaft-driven one, or on a drum attached to the driving-sprocket of a single-chain driven planetary transmission car.

Braschi, H. T.—Mexico City, Mexico. (Rainier.)

Brasier, Henri Charles.—36 rue Molitor, Paris. Born at Ivry-la-Bataille (Eure), March 9, 1864. Chevalier of the Legion of Honor. Manager of the industrial part of the "Trèfle a Quatre Feuilles" Society. Entered the school

of Chalons in 1880; draughtsman to the Orleans Company in 1884, in the material and traction service; and member of the Mors establishment from 1886 to 1891, in which he occupied himself with the construction of the

first steam-carriage heated with gasoline, and also with the construction of steam-boats. In 1896 he manufactured some gasoline cars and the first 4-cylinder V-shaped motors. In the Tour de France with Levegh: Paris-Saint-Malo; Paris-Toulouse; Paris-Bordeaux (1901); Paris-Berlin (Class 4).

On November 1, 1901, he entered the Société des Anciens Etablissements Georges Richard as technical manager. M. Brasier restored the Bennett Cup to France in 1904, and, by his victories, preserved it in 1905.

Brasier, Société des Automobiles.—Ivry, Seine, Paris, France. Mfrs. automobiles, gas. (Brasier cars.)

Brass.—An alloy of from 63 to 72 parts of copper with from 27 to 34 of zinc. It is of a yellow color, and hard, but so ductile that it can be drawn out into fine wire. Brass is tougher and more flexible than copper, and does not tarnish so quickly. It is used for many parts of machinery where small and somewhat intricate castings are required, or where a certain degree of finish is desired for the sake of appearance, and especially as bearings for moving parts (such as shafts) of iron or steel. Red brass is composed of 11 parts of copper to 1 part of zinc; orange brass of 98.93 parts of copper and 0.73 of a part of zinc; and white brass of 34 parts of copper and 66 of zinc. (3) Brass is sometimes used as a synonym for gun-metal (q.v.). (3) Brass is a designation also for a bearing-box or a bush made of an alloy of copper and tin.

Brass, Aluminum.—An alloy of aluminum, copper and zinc.

Brassard, Joseph.—119 Lincoln St., Central Falls, R. I. Garage.

Braswell, O. E.—Rowland, N. C. Repairing.

Bratt, Ande.—1548 Broadway, Denver, Col. Repairing.

Brattleboro Automobile Co.—Brattleboro, Vt.

Braunschweiger Gummi-Export.—Braunschweig, Germany. Mfrs. pneumatic rubber tires, motor cycles.

Braunsdorf, Geo. W.—309 E. 43d St., New York City. Mfr. felt washers.

Bravo, Oscar F.—Mayaguez, Porto Rico. (Oldsmobile.)

Brawn, W. F.—Pres. Baldwin Chain & Mfg. Co., 199 Chandler St., Worcester, Mass.

Brazier Auto Works.—38th and Market Sts., Philadelphia, Pa. (Marmon.) Est. 1900. H. Bartol Brazier, Prop.; Joseph A. Hudson, Mgr. Garage, 30 cars. Repairing.

Brazier, H. Bartol.—Prop. Brazier Auto Works, 38th and Market Sts., Philadelphia, Pa.

Brazil Automobile Garage.—Main St., Brazil, Ind. Garage.

Brazing.—The uniting of two surfaces or edges of metals, such as iron, steel and brass by means of brass-solder. The joints are cleaned and covered with borax, and then some of the solder is placed over the joint and heated until it runs in; after which it is allowed to harden and any superfluous metal cleaned off. Brazing is much stronger than soldering and is applicable in many more cases.

Breads, F. A.—328 E. Water St., Syracuse, N. Y. Garage.

Break.—An open carriage having in front a seat which is some times higher than the one back of it, and two long parallel seats facing each other in the rear of these. The vehicle is entered from the back. When enclosed it forms an omnibus.

Break-contact, Friction.—See Ignition.

Breast-hooks.—Thick pieces of timber incurred in the form of knees and used to strengthen the fore part of a boat.

Breckenridge, E. P.—Sec., Treas. and Gen. Mgr. Toledo Storage Battery Co., 102 Oliver St., Toledo, O.

Breech-piece.—The detachable end of a cylinder or other similar piece.

Breeches-pipe.—A term sometimes applied to the inlet-pipe of a gas-motor, from its forked shape, somewhat resembling that of a pair of breeches (French "culotte"). See Manifold.

Breed, E. S.—40 Columbus Ave., Boston, Mass. Garage.

Breeze Carburetor Co.—Successor to Breeze Motor Mfg. Co., 276 Halsey St., Newark, N. J. Mfrs. carbureters, fuel strainers, muffler cutouts, nipples, coup-

lings, brass and iron castings, etc. Cap. \$50,000. Est. Jan. 31, 1907. George A. Breeze, Pres.; Colman S. O'Laughlin, Sec. and Treas. Directors, G. H. Breeze, C. S. O'Laughlin, Ira S. Heller, R. S. O'Laughlin, M. R. O'Laughlin. Foreman of Fractory, Frank Banner. Selling Agts., Breeze Carburetor of New York, New York City.

Breeze Carburetor Company of New York.—101 W. 66th St., New York City. Sole selling agents Breeze Automatic Carburetor, gasoline separators, muffler cutouts, nippers, couplings, brass and iron castings, etc. Cap. \$5,000. Est. April, 1907. Harry A. Robinson, Pres.; A. M. Reynaud, Sec.; I. J. Reynaud, Treas. and Gen. Mgr.; Harry A. Robinson, Chief Engineer.

Breeze, Geo. A.—Pres. and Director The Breeze Carburetor Co., 276 Halsey St., Newark, N. J.

Breger et Neveux.—50 rue des Marais, Paris, France. Mfrs. ball bearings.

Bréguet.—22 ave. de la Grande Armée, Paris, France. Mfrs. low tension magnetos.

Brehman A.—Sec. Northwestern Motor Car Co., 1928-1930 N. 20th St., Philadelphia, Pa.

Bremer, L. A.—25 Washington St., Gloversville, N. Y. Garage.

Brennan Mfg. Co.—Syracuse, N. Y. Mfrs. vaporizers.

Brennan Motor Co.—Syracuse, N. Y. Mfrs. gasoline automobile motors, gasoline marine motors, circulating pumps.

Brennan, Wm.—Church St., Seabright, N. J. Est. May, 1906. Garage, 25 cars. Repairing.

Bressler & Son, I. N.—408 E. 3rd St., Sterling, Ill. Partnership, I. N. Bressler and H. J. Bressler. Est. 1881. Not inc. H. J. Bressler head of automobile and motorcycle departments. Garage, 4 cars. Repairing. Mfrs. the Heaton motorcycle.

Bressler, H. J.—Partner and Gen. Mgr. I. N. Bressler & Son, 408 E. 3rd St., Sterling, Ill.

Bressler, I. N.—Partner I. N. Bressler & Son, 408 3rd St., Sterling, Ill.

Bretz Co., J. S.—Times Bldg., New York City. Selling agent and importer, magnetos, steering apparatus, ball bearings, universal joints.

Brewer, Elias.—42 Sudbury St., Boston, Mass. Mfrs. elevators for garages.

Brewer, F. F.—Purch. Agt. Chase Motor Truck Co., Syracuse, N. Y.

Brewer, W. W.—2787 6th Ave., Troy, N. Y. Garage.

Brewster & Co.—47th and Broadway, New York City. (Acme, Renault.) Mfrs. bodies.

Breyfogle, J. W.—Vice-Pres., Treas. and Designer, Gearless Transmission Co., Rochester, N. Y.

Bridge.—A horse-shoe shaped casting or forging. E (see figure), sometimes called a "dog" and "yoke," provided with

a threaded hole in the center for the reception of a T or other bolt, V; called also a "bridge and bolt," and, when there are three arms, a "crowfoot." (2) On French cars, a tube (housing), of wide diameter,

which encloses and supports the live axle; or a similar tube which supports the differential and change-speed case on a double chain-driven car. Rear-bridge (Pont arrière) is a name given by the French to the housing of the rear axle of a single chain or shaft-driven car.

Bridgeport Automobile Co.—388 Fairfield Ave., Bridgeport, Conn. (Pope-Hartford, Pope-Toledo, Baker.)

Bridgeport Brass Co.—Bridgeport, Conn. Mfrs. bellis, brass and copper sheets and rods, acetylene generators, brass and copper metals, fuel and air pumps, brass and copper tubing.

Bridgeport Coach Lace Co.—805 Wood Ave., Bridgeport, Conn. Mfrs. cloth and carpet trimmings.

Bridgeport Crucible Co.—Bridgeport, Conn. Mfrs. crucibles.

Bridgeport Cycle Co.—Bridgeport, Conn. (Indian.)

Bridgeport Deoxidized Bronze & Metal Co.—Bridgeport, Conn. Mfrs. aluminum, brass, bronze and copper castings, automobile gear cases, bronze metals.

Bridgeport Electric Plating Co.—Bridgeport, Conn. Mfrs. wrought iron and steel pipe, galvanizing.

Bridgeport Hardware Mfg. Co.—461-469 Iraniston Ave., Bridgeport, Conn. Mfrs. screw drivers, plyers, wire cutters, hack saws, etc. Cap. \$125,000. Est. 1892. W. F. Hobbs, Pres.; Harry B. Curtis, Sec. and Treas.

Bridgeport Malleable Iron Co.—Bridgeport, Conn. Mfrs. gray iron castings, malleable iron castings.

Bridgeport Motor Co.—Bridgeport, Conn. Mfrs. gasoline marine motors.

Bridgeport Vehicle Co.—South Ave. and Water St., Bridgeport, Conn. Mfrs., dealers and jobbers, automobile bodies (wood and metal), tops, slip covers, tool boxes, wind shields, lamp covers, fenders, hoods. Harry D. Miller, Pres. and Treas.; H. F. Brandes, Vice Pres.; Geo. C. Miller, Sec. Cap. \$50,000. Est. March 1, 1906.

Bridle.—The loop by which a slide-valve is connected to the valve-rod.

Briest.—119 rue de Rennes, Nantes, France. Mfrs. auto lamps and carburetors.

Briet et Cie, M.—7 rue Magenta. Pureaux, France. Mfrs. lubricators.

Briggs & Wade.—Sagamore St., Lynn., Mass. Mfrs. gasoline and alcohol motors for automobiles and motorboats. (2 stroke type.)

Briggs Carriage Co.—Amesbury, Mass. Mfrs. tops, wood and metallic bodies.

Briggs, E. C.—127 E. Jefferson St., South Bend, Ind. (Franklin.)

Briggs, W. H.—424 Bedford Ave., Brooklyn, N. Y. Mfrs. wire terminals.

Brigham & Saunders.—Commonwealth Ave. and Malvern Sts., Brighton, Mass. Garage.

Bright, Fred E.—Vice-Pres. and Treas. Hess-Bright Mfg. Co., 19th and Hamilton Sts., Philadelphia, Pa.

Brighton Garage.—58 Murdock St., Brighton, Mass. Garage.

Brignall, Geo.—5110 Calumet Ave., Chicago, Ill. Garage.

Brill Engine Works.—Appleton, Wis. Mfrs. gasoline marine motors.

Brillé, Automobiles, Eugene.—Havre, France. Mfrs. automobile motors, automobiles, gas. (Eugene Brillé.)

Brimstone.—See Sulphur.

Brinckmann Bros.—716 Franklin St., Michigan City, Ind. Garage.

Brinegar, E. P.—Pres. Pioneer Auto Co., 901-925 Golden Gate Ave., San Francisco, Cal.

Brinkmeyer, J. H.—Pres. and Head of Machine Shop, Pioneer Brass Works, 418-424 S. Penna St., Indianapolis, Ind.

Briquet et de Ract.—13 rue de Manchester, Brussels, Belgium. Mfrs. radiators.

Briscoe, Benjamin.—B. May 24, 1869, at Detroit, Mich. Educated at Detroit common and high schools. Present occupation, Pres. and Gen. Mgr. Maxwell-Briscoe Motor Co. Director in the following companies: Maxwell-Briscoe Motor Co., Tarrytown, N. Y.; Briscoe Mfg. Co., Detroit, Mich.; Maxwell-Briscoe, Inc., New York City; Maxwell-Briscoe - Boston Co., Boston, Mass.; Maxwell-

Briscoe McLeod Co., Detroit, Mich.; Maxwell-Briscoe-Chase Co., Chicago, Ill.; Maxwell-Briscoe-Wilcox Co., Los Angeles, Cal.; New Castle St. R. R. Co. and New Castle Realty Co., New Castle, Ind.; Willyoung Appliance Co., Yonkers, N. Y. Member of Auto Club of America, Westchester Motor Club. Pres. American Motor Car Manufacturers' Association. Res. Croton Ave., Tarrytown, N.

Y. Office address, Tarrytown, N. Y. Owned first automobile in 1903. Has been connected with automobile trade since 1902. Recreations; automobiling, fishing.

Briscoe, Frank.—Gen. Mgr. Brush Runabout Co., 14-16 Baltimore Ave., W., Detroit, Mich.

Briscoe Mfg. Co.—Detroit, Mich. and Newark, N. J. Mfrs. tool boxes, waste cans, dashes and fenders, hoods, mufflers, radiators, brass and copper tubing, tanks.

Bristol, A.—Treas. Schubert Bros. Gear Co., 42-44 Celar St., Oneida, N. Y.

Bristol Automobile Co.—Naugatuck Rd., Waterbury, Conn. (Thomas Flyer, Thomas Detroit.) Est. 1906. Cap. \$10,000. Edgar H. Bristol, Pres.; Bennett B. Bristol, Sec.; Watson E. Goodyear, Treas.; Frank C. Goodyear, Mgr. Garage, 25 cars. Repairing.

Bristol, Bennet B.—Sec. Bristol Automobile Co., Naugatuck Rd., Waterbury, Conn.

Bristol, Edger H.—Pres. Bristol Automobile Co., Naugatuck Rd., Waterbury, Conn.

Bristol Motor Car Co.—N. Main St., Attleboro, Mass. (Rambler, Cameron.)

Bristol Wagon and Carriage Works.—Bristol, England. Mfrs. automobiles, steam comm.

Bristow, Frederick.—Treas. Weston Electrical Instrument Co., Waverly Park, Newark, N. J.

British & French Motor Car Co.—Mutual St., Toronto, Canada. (Daimler, Panhard, Argyll, De Dion, Minerva, Swift.)

British Columbia Auto Co.—924 Granville St., Vancouver, B. C., Canada. (Buick, Pierce-Racine, Ford, Jewel, Russell, Humber, Rover.) Est. Aug. 1, 1906. Not inc. G. Corriveau, Sr., Mgr.; G. G. Corriveau, Jr., Ass't. Mgr.; Chas. A. Ross, Sales Mgr. Garage, 12 cars. Repairing.

Brittania Engineering Co.—Colchester, England. Mfrs. automobiles, gasoline (Brittania.)

Brittania Foundry Co.—Cox St., Coventry, England. Mfrs. jacks.

British Electric Car Co., Ltd.—Oxford Court, Camden St., London, England. Mfrs. automobiles, electric.

Britton, C. O.—Treas. R. D. & C. O. Britton Co., 115-121 Allyn St., Hartford, Conn.

Britton Co., R. D. & C. O.—115-121 Allyn St., Hartford, Conn. (Maxwell.) Est. 1900. Cap. \$40,000. R. D. Britton, Pres.; C. O. Britton, Treas. Repairing.

Britton, R. D.—Pres. R. D. & C. O. Britton Co., 115-121 Allyn St., Hartford, Conn.

Britz, J. N.—148 La Salle St., Aurora, Ill. (Model.)

Brixia-Züst, Fabbrica Automobili.—Brescia, Italy. Mfrs. automobiles, gas. (Brixia-Züst cars.)

Brixton Motor Works.—283 Brixton Rd., London, S. W., England. Mfrs. motors, (automobile.)

Broach.—A tapering tool for enlarging and finishing off round holes which have been drilled or punched. See Reamer.

Broad-Oak Garage.—621-627 E. Broad St., Columbus, Ohio. (Rambler.)

Broad St. Garage.—215-217 N. Broad St., Philadelphia, Pa. Garage.

Broadway Automobile Co., Inc.—Broadway and Madison Sts., Seattle, Wash. (Pierce Arrow, Autocar, Knox, Cadillac, Wood's Electric.) Est. 1902. Cap. \$15,000. (Surplus \$10,000.) F. A. Wing, Managing Owner; Dell Wright, Sales Mgr. Repairing.

Broadway Auto Exchange.—513 7th Ave., New York City. Garage.

Broadway Auto Renting Co.—164 W. 46th St., New York City. Garage.

Broadway Bicycle & Auto Supply Co.—60 Vesey St., New York City. Supplies.

Broadway Motor Car Co.—144 Broadway, Lawrence, Mass. Garage.

Broadway Rubber Tire Works.—1900 Broadway, New York City. Vulcanizing and tire repairing.

Broadwell, E. H.—Vice-Pres. The Fisk Rubber Co., Oak St., Chicopee Falls, Mass.

Broaterman, O. S. H.—Sec. and Gen. Mgr. The John Steptoe Shaper Co., 2961 Colerain Ave., Cincinnati, Ohio.

Broc-Barbier Auto Ignition Co.—143 W. 54th St., New York City. Mfrs. magnetos and ignition dynamos, spark coils, plugs, spark timing devices, electric switches.

Broc Co., The.—1665-1669 E. 40th St., 4021-4023 Payne Ave., Cleveland, Ohio. Mfrs. bodies, tops, wind shields, tire carriers, trimmings, paintings, etc. Cap. \$50,000. Est. 1901. O. P. Fisher, Pres.; P. J. Brown, Vice-Pres. and Mgr.; Gay S. Clappitt, Sec. and Treas.

Broc Co., The.—Payne Ave. and 40th St., Cleveland, O. Mfrs. automobiles, gas.

Brock, A. A.—140 Dearborn St., Chicago, Ill. Mfrs. carburetors.

Brockton Auto Exchange.—51 Ward St., Brockton, Mass. (Jackson, Rapid.)

Brockton Automobile Club.—Edward S. Bryant, Sec. 68 Main St., Brockton, Mass.

Brockway, C. M.—Mgr. Cleveland Branch Winton Motor Carriage Co.

Brodie Electric Co.—42 Pleasant St., Manchester, N. H. (Pope, Waverly.)

Brodie, J. R.—Vice-Pres. The Perfection

tion Reversing Gear & Supply Co., 45 Vesey St., New York City.

Brodie, W. H.—Pres. The Perfection Reversing Gear & Supply Co., 45 Vesey St., New York City.

Brodsky, John E.—Sec. and Treas. Welch Motor Car Co., 1871-1873 Broadway, New York City.

Broehl & Galvin.—Pana, Ill. Garage.

Broesel, Carl.—Gen. Mgr. Simplex Automobile Co., 614 E. 83rd St., New York City.

Broesel, Herman.—Mgr. Simplex Automobile Co., 614 E. 83rd St., New York City.

Brokaw, W. Gould.—Vice-Pres. Allen-Kingston Motor Car Co., 3 W. 44th St., New York City.

Brondow, Doctor Frank W.—86 North St., Pittsfield, Mass. Mfrs. Brondow combination lock switch. Shop 59 Bartlett Ave.

Bronson & Davis.—463 Fairmount Ave., Blue Island, Ill. Mfrs. charging apparatus.

Bronson, C. J.—42 Kent St., Grand Rapids, Mich. (Cadillac, Winton.)

Bronx Automobile Club.—J. Stewart Blackton, Sec. 310 Mott Ave., New York City.

Bronx Auto Garage.—1115 Boston Rd., New York City. Garage.

Bronxville Automobile Club.—Gramatan Inn., Bronxville, N. Y. Henry Burt, Sec. and Treas.

Bronze.—An alloy of tin 2 parts, copper 90 parts, zinc 5 parts and lead 2 parts. For axle-bearings: tin 25 parts, copper 160 parts, zinc 5 parts. For motor-bearings: tin 13 parts, copper 110 parts, zinc 1 part. For flanges: copper 32 parts, zinc 1 part, lead 1 part. For bushings: tin 16 parts, copper 130 parts, zinc 1 part.

Bronze, Aluminum.—A strong, gold-colored alloy, consisting of 10 parts of aluminum and 90 parts of copper.

Bronze, Manganese.—An alloy of copper with ferromanganese. Manganese bronze can be cast in more delicate and intricate shapes than any other, and hence the parts for which it can be employed in automobile construction are innumerable.

Bronze, Phosphor.—A yellow alloy composed of phosphorus, tin and copper. It is very hard and fine-grained, and suitable for the parts of machinery which are exposed to shock.

Brooke, J. W. & Co.—Adrain Works, Lowestoft, England. Mfrs. automobiles, gas. (Brooke cars.) Marine motors.

Brooke, M. E.—1422 Grant Ave., Denver, Col. Sole owner Brooke patents, automobile, motorcycle and vehicle tires.

Brooke Automobile Supply Co.—197 Fulton St., New York City. Supplies.

Brooke Patent Tire Co.—1422 Grant avenue, Denver, Col. Mfrs. automobile, motorcycle and vehicle cellular tires. Not inc. Est. since 1901. Sole owner, M. E. Brooke.

Brookline Garage.—50-60 Washington St., Brookline, Mass. Garage.

Brooklyn Auto & Garage Co.—Brooklyn, Iowa. (Reo, Moline.)

Brooklyn Auto Exchange.—224 State St., Brooklyn, N. Y. Garage.

Brooklyn Automobile Co.—12 New York Ave., Brooklyn, N. Y. Garage.

Brooklyn Coil & Carbureter Co.—77-79 Adams St., Brooklyn, N. Y. Mfrs. carburetors.

Brooklyn Launch Works.—Coney Island, N. Y. Mfrs. motor boats.

Brooklyn Motor Car Co.—1386 Bedford Ave., Brooklyn, N. Y. (Oldsmobile.)

Brooklyn Rubber Co.—397 Summer Ave., Brooklyn, N. Y. Mfrs. tire cement.

Brookner & Co.—Dixon, Ill. Garage.

Brooks, Arthur.—New London Auto Station, 94 Main St., New London, Conn.

Brooks, B. A.—Vice-Pres. Brooks Boat Mfg. Co., Saginaw, Mich.

Brooks Boat Mfg. Co.—Saginaw, Mich. Mfrs. motor boats, marine motors. Cap. \$100,000. C. C. Brooks, Pres. and Gen. Mgr. B. A. Brooks, Vice-Pres.; J. O. Pierce, Sec. and Treas.

Brooks Bros.—22nd St. and Broadway, New York City. Mfrs. miscellaneous wearing apparel.

Brooks, C. C.—Pres. and Gen. Mgr. Brooks Boat Mfg. Co., Saginaw, Mich.

Brooks, Emerson.—B. Nov. 19, 1860, at New York City. Educated at Jackson Military Institute, Tarrytown, N. Y.; King's School, Stamford, Conn.; Paris, France, and Dresden, Germany. Vice-Pres. J. M. Quimby Co., Newark, N. J. Director of the New York State A. C. A. four years as chairman of the Runs and Tours Committee. Organized the first large parade of automobiles in New York, 237 cars, 1903. Treas. of A. C. A. 1905-1906, when the club property was purchased and construction started; chairman membership committee 1905. Asst. starter Vanderbilt Cup Race, 1904-1905-1906. Member Automobile Club of America, Aero Club of America, New York Historical Society, Sons of the Revolution, Congregational Club, Egyptian Research Society, Society Prevention of Cruelty to Children, New England Society, Riding, Driving and Automobile Club, Montclair, N. J. Connected with automobile trade since 1895. Owned first car, 1903. Introduced the building of aluminum bodies in United

States. Recreations, travelling, touring, landscape gardening. Residence, Montclair, N. J.; office, 21-39 Division St., Newark, N. J.

Brooks, J. B. & Co., Ltd.—Great Charles St., Birmingham, England. Mfrs. tire bands, non-skids.

Brooks, J. W.—Head Sales Dept. Pass & Seymour, Inc., 52 Boyd Ave., Solvay, N. Y.

Brooks, Leslie E.—Pensacola, Fla. (Pope Hartford.)

Brooks Motor Car Co.—508 Howard St., Detroit, Mich. Mfrs. automobiles, gas.

Brooks, Stanley.—Mgr. Continental Caoutchouc Co., Detroit, Mich.

Brophy Belting & Supply Co.—La Grange, Ill. Mfrs. belting.

Brotherhood-Crocker Motors, Ltd.—19 Hanover Square, London, W., England. Mfrs. automobiles, gas. (Brotherhood cars.)

Brouhout, Usines.—Vierzon, Cher, France. Mfrs. automobiles, gas, trucks, automobile motors.

Brouse, W. B.—Massena, N. Y. (Rapid.)

Brouse, W. E.—Cleveland, O. Garage.

Brousseau, D.—Sauz-Vaussais, Deux-Sevres, France. Mfrs. tops.

Brower, C. E.—Portland, Me. Garage.

Brower, C. E.—Woodford, Me. (Haynes.)

Brower, Chas. Dr.—Pres. Nashville Motor Car Co., cor. Church and 9th Sts., Nashville, Tenn.

Brown, A. B.—Gloversville, N. Y. (Waltham.)

Brown, A. D.—Sec. American Auto Co., Cleveland, Ohio.

Brown, A. E.—Mechanical Dept. National Auto Co., 957 Main St., Los Angeles, Cal.

Brown, Alexander T.—B. Nov. 21, 1854, at Scott, Cortland Co., N. Y. Educated at common schools, privately and Homer (N. Y.) Academy. Pres. Smith Premier Typewriter Co. Director Brown Lipe Gear Co., H. H. Franklin Mfg. Co., Smith Premier Typewriter Co., Syracuse Aluminum & Bronze Co., Globe Malleable Iron Co., Syracuse Journal Co., Third National Bank, Clere Clothing Co., C. H. Wood Co. Member Transportation Club of New York, Syracuse Yacht Club, Citizens, Old Heidelberg, Century & Country Clubs of Syracuse, Adirondack League Club, Bankers & Brokers Club of Clayton, N. Y., Syracuse, Frontenac and Chippewa Bay Yacht Club, Frontenac Yacht Club. Trustee Syracuse University. Member Syracuse Chamber of Commerce. Trustee Hospital of the Good Shepherd. Member National Geographical Society. life member American Society Mechan-

ical Engineers. Connected with automobile trade since 1899. Owned first motorboat 1895, automobile 1900. Recreations, general. Residence 608 W. Onandaga St., Syracuse, N. Y.

Brown, Alfred J.—Vice-Pres. Couple-gear Freight Wheel Co.—Ashton Bldg., Grand Rapids, Mich.

Brown & Barlow.—16 Leveday St., Birmingham, England. Mfrs. carbureters.

Brown & Beck.—1737 Champa St., Denver, Col. Agts. American and M. & M. motorcycles. Mfrs. motorcycles.

Brown & Co., S. N.—Dayton, Ohio. Mfrs. top bows, top fixtures.

Brown & Co. (T. H.)—Corry, Pa. Garage.

Brown & Pinney.—Stafford Springs, Conn. (Maxwell.)

Brown & Schmidt.—10 Lee Place, Paterson, N. J. (Rambler, Maxwell, Grout.)

Brown & Scott Co.—Wellsville, N. Y. (Ford, National.)

Brown & Sharp Mfg. Co.—Providence, R. I.—Mfrs. special automobile machinery, circulating pumps.

Brown, A. S.—Prop. Bolton Automobile Co., 100-106 Dalplin St., Baltimore, Md.

Brown's Automobile Co.—177-179 Princess St., Winnipeg, Canada. (Rambler, Northern.)

Brown Auto Top Co.—Philadelphia, Pa. Mfrs. auto tops.

Brown, Birt.—Malone, N. Y. (Maxwell.)

Brown, B. L.—1126 S. Main St., Los Angeles, Cal. (Pope Waverly.)

Brown, B. P.—Sec. and Treas. Iowa Auto Co., Ottumwa, Iowa.

Brown Bros., Ltd.—Deansgate, Manchester, England. Mfrs. automobiles, gas. (Brown cars.)

Brown Bros., Ltd.—Great Eastern St., London, England. Mfrs. Brown motorcycles.

Brown, B. S.—Head of Purch. Dept. Willard Storage Battery Co.—1279-1281 Bank St., Cleveland, Ohio.

Brown Buggy Co.—Waterloo, Iowa. (Jackson.)

Brown, Caxton.—Sec. Western Electrical Co., Waverly Park, Newark, N. J.

Brown, Chas. A.—Woodfield, Ohio. (Jewel.)

Brown, Chas. M.—Mgr. San Francisco Branch Winton Motor Carriage Co.

Brown-Cochran Co., The.—Lorain, Ohio. Mfrs. marine gasoline motors.

Browne & Wright.—St. Johnsbury, Vt. (Maxwell.)

Brown, Edward H.—Sec. and Gen. Mgr. Brown-Talbot Co., 19 Oakland St., Salem, Mass.

Browne-Friend Motor Co.—230 Wisconsin St., Milwaukee, Wis. (Mitchell.)

Brownell & Burt.—Taunton, Mass. (Lambert.)

Brownell Motor Co., F. A.—634-6 Lexington Ave., Rochester, N. Y. Mfrs. automobile and marine motors, transmissions, carbureters, circulating pumps.

Brown, E. T.—Montgomery Center, Vt. (Waltham.)

Browne, W. D.—132 S. Genesee St., Waukegan, Ill. Garage.

Brown, E. W.—Vice-Pres. Keiser Van Leer Co., 505-507 N. East St., Bloomington, Ill.

Brown, Frank.—Sec. and Treas. Commercial Truck Co. of America, 1222 Arcade, Philadelphia, Pa.

Brown, Geo. H.—Sec. and Treas. Winton Motor Carriage Co., Cleveland, O.

Brown, H. A.—Oneonta, N. Y. (Waltham, Haynes.)

Brown, Henry D.—Treas. Imperial Motor Car Co., Third and Locust Sts., Williamsport, Pa.

Brown, Henry W.—517-521 E. Water St., Syracuse, N. Y. Mfrs. cylinder compression meters.

Brown, H. H.—Southbury, Conn. (Waltham, Cadillac.)

Brown, H. R.—Brown Mfg. Co., Greenville, Tenn. (Haynes.)

Brown, H. W.—Mgr. Binghamton Motor Car Co., 172-6 State St., Binghamton, N. Y.

Browning Bros. Co.—2461 Washington Ave., Ogden, Utah. Agts. Mitchell. Est. 1879. Cap. \$100,000. J. M. Browning, Pres.; M. S. Browning, Vice-Pres.; Geo. E. Browning, Sec. and Treas. Repairing.

Browning, F. U.—Pres. Uncas Specialty Co., 21 Shipping St., Norwich, Conn.

Browning, Geo. E.—Sec. and Treas. Browning Bros. Co., 2461 Washington Ave., Ogden, Utah.

Browning, J. M.—Pres. Browning Bros. Co., 2461 Washington Ave., Ogden, Utah.

Browning Mfg. Co.—Milwaukee, Wis. Mfrs. electric motors.

Browning, M. S.—Vice-Pres. Browning Bros. Co.—2461 Washington Ave., Ogden, Utah.

Brown, J. Addison.—Champaign, Ill. (Peerless.)

Brown, J. Burgess, Jr.—Advt. Mgr. Pope Motor Car Co., 139 S. East St., Indianapolis, Ind.

Brown, J. F.—Cynthiana, Ky. (Waltham.)

Brown, J. L.—Bisbee, Arizona. (Reo.)

Brown, J. M.—Mansfield, O. Garage.

Brown, J. W.—Mgr. Couple Gear Freight Wheel Co., Ashton Bldg., Grand Rapids, Mich.

Brown-Lipe Gear Co.—208 S. Geddes St., Syracuse, N. Y. Mfrs. sliding gear transmissions, differential gears, steer-

gears. Member M. & A. M. Cap. \$150,000. Est. 15 years. Alex. T. Brown, Pres.; Willard C. Lipe, Vice-Pres.; H. W. Chapin, Sec. and Treas.

Brown, L. W.—Elkland, Pa. Garage.

Brown Mfg. & Garage Co., J. C.—Buttler, Ind. Mfrs. anti-skid devices, chain tools.

Brown Mfg. Co.—J. B. Columbus, O. Mfrs. acetylene generators, lamps.

Brown Motor Co., H. Oscar.—229 N. Broad St., Philadelphia, Pa. (Berliet.)

Brown Oil Can Co.—Dawson St., Toledo, Ohio. Mfrs. oil cans, storage tanks.

Brown, Paul A.—Des Moines, Iowa. (Waltham.)

Brown, P. J.—Vice-Pres. and Mgr. The Broc Co., 1665-1669 E. 40th St., 4021-4023 Payne Ave., Cleveland, O.

Brown, R. S.—Mgr. of Sales Automobile Dept. Acme White Lead & Color Works, Detroit, Mich.

Brown's Garage.—60 St. George St., Toronto, Canada. Garage.

Brown Talbot Co.—19 Oakland St., Salem, Mass. Mfrs. gasoline motors. Cap. \$99,000. Est. 1903. John Talbot, Pres.; Dudley Talbot, Treas.; Edward H. Brown, Sec. and Gen. Mgr.

Brown, Thompson & Co.—Main St., Hartford, Conn. (Packard, Cadillac, Stevens-Duryea.)

Brown, W. B.—Pittsburg, Pa. (Dragon.)

Brown, Will H.—Purch. Agt. Pope Motor Car Co., 139 S. East St., Indianapolis, Ind.

Brown, W. J.—Wellman, Iowa. (Glide.)

Brown, W. T.—Treas. A. G. Spaulding & Bros., 29 W. 42d St., New York City.

Broyton, W. J.—Mgr. Tanberg Auto Co., La Crosse, Wis.

Bruce Motor Co., Inc.—100 Cass Ave., Joliet, Ill. (Buick, Knox, Haynes.)

Brugger & Smith.—Fond du Lac, Wis. (Waltham.)

Brummitt, T. J.—Evansville, Ind. Garage.

Bruneau et Cie.—12 rue Victor Hugo, Tours, France. Mfrs. motorcycles.

Brunell Auto Co.—38 Exchange Place, Worcester, Mass. (Jackson.)

Brunel, E. H.—359 Fulton St., Troy, N. Y. Garage.

Brunet-Loiseau Frères.—13 rue des Francs-Bourgeois, Paris, France. Mfrs. coils.

Brummeyer, L. H.—12 S. La Salle St., Aurora, Ill. (Premier, Reo.)

Brunner, A. N.—Pres. New Jersey Automobile Co. 855-857 Springfield Ave., Newark, N. J.

Brunn's Carriage Manufactory Co.—1140 Main St., Buffalo, N. Y. Mfrs.

wood and metallic bodies. (Stevens-Duryea.)

Bruno-Knapp Co.—Saginaw, W. S., Mich. Mfrs. gasoline marine motors.

Brunon et Vallette.—Rive-de-Gier, Loire, France. Mfrs. pressed steel frames.

Brunton, H. O.—Sec. and Treas. Cincinnati Auto Co., 215-219 E. 5th St., Cincinnati, Ohio.

Brunt Porcelain Works, G. F.—E. Liverpool, Ohio. Mfrs. porcelain.

Brush.—A contact device (originally a bunch of springy wires) built up of

strips of copper or copper gauze, or consisting of small blocks of carbon, for taking off the current from the revolving commutator of a dynamo (see figure); or for est-

ablishing contact at definite intervals, as in the contact-maker of a gasoline-motor.

Brush, Alanson P.—Designer, Brush Runabout Co., 14-16 Baltimore Ave., W., Detroit, Mich.

Brush.—A. P.—Quinby, Va. (Cadillac.)

Brush Electric Engineering Co.—Victoria Works, Bevedere Rd., Lambeth, London, England. Mfrs. automobiles, gas, comm. (Brush omnibus.)

Brush, File.—A cylindrical bundle of fine steel or brass wires, tied in the center and used for cleaning files; called also a "scratch brush."

Brush-holder.—The support in which is clamped the copper or carbon brush by means of which the current enters or leaves a motor or dynamo. It is usually carried by a "rocker frame."

Brush Runabout Co.—14-16 Baltimore Ave., W. Detroit, Mich. Makers of the Brush runabout. Cap. \$200,000. Est. 1907. Geo. B. Yerkes, Pres.; John A. Boyle, Vice-Pres.; Frederick A. Harris, Sec.; Emil D. Moessner, Treas.; Frank Briscoe, Gen. Mgr.; Alanson P. Brush, Designer; A. J. Kinnucan, Purch. Agt.

Brush, W. A.—Mgr., Packard Motor Co.'s branch, 1861 Broadway, New York City.

Bryan, Jonathan.—Pres. Richmond Forgings Corporation, Belle Isle, Richmond, Va.

Bryant & Berry Co.—34 West Atwater St., Detroit, Mich. Mfrs. automobile steering wheels. Cap. \$3,000. Est. 1907. John Walters, Pres.; Ellsworth S. Bryant, Vice-Pres.; Alexander Cohen, Sec. and Treas.

Bryant & Johnson.—120 E. 84th St., New York City. Garage.

Bryant, Ellsworth S.—Vice-Pres. Bry-

ant & Berry Co., 34 West Atwater St., Detroit, Mich.

Bryant Garage—50-56 W. 43d St., New York City. Est. October, 1905. Cap. \$10,000. Hermann L. Baer, Pres.; William H. Morgan, Treas.; A. Loucas, Storage Mgr.; William Charles, Foreman Mechanic. Garage, 100 cars. Repairing.

Bryant Motor Co.—110 W. 41st St. and 1675 Broadway, New York City. Est. 1904. M. D. Bouton, Pres.; James H. Scatt, Supt.; H. T. Birnie, Sales Mgr. Conduct automobile rental business.

Bryant Steel Wheel & Rim Co.—454 Hayden Bank Bldg., Columbus, Ohio. Mfrs. steel rims, tubular steel wheels.

Bryant, Walter.—Vice-Pres. Albany Automobile Co., Albany, Ind.

Bryson, T. A.—5-9 Perry St., East, Savannah, Ga. (Franklin, Cadillac, Columbia.) Est. 1892. J. E. Thompson, Supt. Repair Dept.; H. A. Jacobs, Supt. Elect. Dept. Garage, 150 cars. Repairing.

Bubb, H. H.—Sec. Imperial Motor Car Co., Third and Locust Sts., Williamsport, Pa.

Bubbs, Amos.—Glen Rock, Pa. (Maxwell.)

Buchanan, Wm.—Duluth, Minn. (Buick.)

Buchet, Paul.—13 rue du Général Dufour, Geneva, Switzerland. Mfrs. acetylene lamps.

Buchet, Usines.—Levallois-Perret, France. Mfrs. aeronautic and automobile motors.

Buchillet, P.—47 rue St., Ferdinand, Paris, France. Mfrs. pneumatic tires, non-skids.

Buch, Pedro.—2a Rivera de Santa Maria No. 7, Mexico City. Mexico. (Mitchell, Compound.)

Buck Automobile, Carriage & Implement Co.—Walsh Bldg., Davenport, Iowa. (Buick, Locomobile, Peerless, White, Franklin, Royal, Logan, Haynes.)

Buckboard.—A vehicle in which a long elastic plank takes the place of framing, and which is mounted on four wheels. It might be called a double spring suspension vehicle, since it is provided with a set of springs on each axle as well. Like the buggy, the "buckboard" is suitable for any kind of road. A typical example is the "Orient." Buckboards may have one or more seats, but never have tops except over one seat.

Buck Bros.—708 Garfield St., Bay City, Mich. (Queen.)

Bucket Valve.—See Valve, Bucket.

Buckeye Auto Co.—753 E. Long St., Columbus, Ohio. Repairing.

Buckeye Automobile Co.—441 Bank St., Cincinnati, O. (Monarch, Cameron.)

Buckeye Garage.—So. 8th St., near Main, Zanesville, O. (Reo, Ford.)

Buckeye Garage Co.—6112 Euclid Ave., Cleveland, O. Repairing.

Buckeye Iron & Brass Works.—324 E. 3rd St., Dayton, Ohio. Mfrs. aluminum, brass, bronze, copper castings, brass pipe fittings.

Buckeye Jack Mfg. Co.—Louisville, O. Mfrs. jacks.

Buckeye Mfg. Co.—1801 Columbus Ave., Anderson, Ind. Makers of the Lambert pleasure and commercial cars, first marketed 1900. Nine different models made since. Cap. \$100,000. B. F. Lambert, Pres. and Supt.; S. W. Lambert, Vice-Pres.; J. W. Lambert, Sec., Treas., Gen. Mgr. and Designer; A. R. Lambert, Purch. Agt.; G. B. Louderback, Sales and Advt. Mgr. Agents and dealers: Adland Motor Co., 900 Madison St., Chicago, Ill. Automobile Supply & Storage Co., 1416 Madison Ave., Baltimore, Md. Bailey, Geo., 421 Clinton St., Milwaukee, Wis. Bartoo, Geo. Burgess & Packard.—Board of Trade Bldg., Boston, Mass. Mfrs. motor boats.

Burghardt Mills Co., Louis.—211-213 W. 82d St., New York City. Garage.

Burgin Bros.—Springfield, Mass. Mfrs. automobile covers, tire cases.

Burke, C. R.—Vice-Pres. Columbia Lubricants Co. of New York. 78 Broad St., New York City.

Burke, O.—918 Larimer St., Denver, Col. Garage.

Photo by Spooner & Wells

Burke, William Wright.—Automobile dealer. B. May 9, 1868, at Oswego, N. Y. Educated at Oswego schools. Mgr. New York branch, the Mora Motor Car co. Member of New York Motor Club, Bay State Automobile Association. Connected with automobile trade since 1901. Owned first car 1901. Recreations, automobile, tennis. Res., 504 W. 113th St. Office, 52d St. and Broadway. New York.

Burkhardt, E. A.—Mgr. Repair Dept. Centaur Motor Co., 53-61 Franklin St., Buffalo, N. Y.

Burlap.—A fine fabric made of flax or hemp, used on motor cars as a straining material.

Burlat Frères.—89 bis, cours Lafayette plg., Lyon-Villeurbanne, France. Mfrs. automobile and marine motors.

Burlington Basket Co.—Burlington, Ia. Mfrs. hampers.

Burlington Machine & Repair Co.—166 Church St., Burlington, Vt. (Stanley.)

Burmester Rubber Co.—83 Church St., Boston, Mass. Repairing.

Burner.—For heating the boilers of steam-cars, the fuels most commonly employed are gasoline and kerosene, which are vaporized in a burner based

on the principle of the Bunsen as applied in gasoline stoves. The fuel is supplied from a tank in which is maintained an air-pressure of from 40 to 50 pounds to the square inch by a separate air-reservoir supplied by a pump. After the burner has been lighted, the fuel supply is automatically controlled by the steam pressure, which actuates a needle-valve on the supply-tube. The figure represents a burner of the Ofeldt type.

Burner, Acetylene.—A burner, usually of lava, specially constructed for use on acetylene gas-lamps.

Burner, Bunsen.—A gas-burner of which the central tube is

surrounded concentrically with a cylindrical jacket, in which the ascent of the gas creates a strong draught of air, which, uniting intimately with the burning gas, produces a mixture of high calorific power. These burners were formerly employed for heating the platinum ignition tubes of automobiles, and, in a modified form, are still used on steam-cars, for the heating of tubular boilers. See Burner.

Burnap & Roser.—Canajoharie, N. Y. (Atlas.)

Burnet, J. S.—Sec. and Treas. Universal Storage Battery Co., Offices 108 La Salle St., Factory 36-38 Union Park Pl., Chicago, Ill.

Burnett, L. H.—East Stroudsburg, Pa. (Holsman.)

Burney Bird Auto Co.—319 Wabash Ave., St. Paul, Minn. (Haynes, Mitchell.)

Burnham Geo. Co., The.—Worcester, Mass. Mfrs. tools.

Burnham, Geo. E.—Vice-Pres. Avery Portable Lighting Co., 18-22 Martin St., Milwaukee, Wis.

Burnham-Standeford Co.—Oakland, Cal. Mfrs. portable houses.

Burns Automobile Co.—31 Grant Sq., Brooklyn, N. Y. Garage.

Burning Back.—The ignition of the gas within the mixing chamber of a steam carriage burner of the Bunsen type. It is generally caused by a sudden gust of wind, and has the effect of cutting off heat from the boiler and producing a fall of steam pressure.

Burning On.—A process of adding a fresh part to an injured or incomplete casting.

Burns, Bert A.—Narragansett, R. I. Garage.

Burras, C. H.—Director Austin Automobile Club, Austin, Ill.

Burr, E. L. & A. M.—Rockford, Ill. (Waltham.)

Burrell, J. C.—Gen. Mgr. and Designer Outing Boat Co., Kankakee, Ill.

Burrill, C. F.—Head of Automobile Dept., S. L. Crosby & Co., 186 Exchange, Bangor, Me.

Burrington Motor Co.—24 Suffolk St., Holyoke, Mass. (Stoddard Dayton, Maxwell.)

Burris, James H.—Treas. The Auto Shop Co., 731 Vincent Ave. N. E., Cleveland, Ohio.

Burrowes, E. F.—Pres. Curtain Supply Co., 85-93 Ohio St., Chicago, Ill.

Burrows Co., E. T.—Portland, Me. Mfrs. drip pans, foot rests.

Burt, H. B.—25 N. Phelps St., Youngstown, Ohio. (Waltham.)

Burtis & Son.—18 Jay St., Schenectady, N. Y. Garage.

Burton, Reeves.—Freeport, Ill. Garage.

Burt & Co.—346 Halsey St., Newark, N. J. Garage

Burt Mfg. Co.—128 N. Edward St., Kalamazoo, Mich. Mfrs. gasoline automobile motors, timers.

Burwell, A. Jr.—7 W. 5th St., Charlotte, N. C. (Rambler.)

Burwell, G. B.—Supt. Olds Motor Works, Lansing, Mich.

Bus-bar.—A bar or rod for carrying a heavy current produced by a powerful electric source. An abbreviation of "omnibus bar," so called because it carries the whole current from one source or the current from all the electric sources with which it is connected.

Bush Bros.—Cor. Ohio and South Sts., Sidney, Ohio. (Reo.)

Bushfield, Wm. A.—Pres. and Mgr. American Veneer Co., Kenilworth, N. J.

Bushfield, Wm. H.—Sec. American Veneer Co., Kenilworth, N. J.

Bushing.—A lining of anti-friction or other metal for a bearing, in the form of a ring or of a hollow cylinder, in a single piece or divided in halves.

Bush, John J.—Partner in firm, National Auto Top Co. Main office 1904 Broadway, factory 244-250 W. 49th St., New York City.

Bushwick Garage.—58-62 Palmetto St., Brooklyn, N. Y. Garage.

Bush, Wm. E.—953 S. Main St., Los Angeles, Cal. (Pierce Arrow, Napier.)

Busick, C. J.—Sec. Mica Mfg. Co., 307 W. Broadway, New York City.

Bus.—An abbreviation of "omnibus," used in combination with other words as a designation for certain types of motor-vehicles for public conveyance, as "auto-bus," "motor-bus."

Bus-pipe.—A large pipe of round or square section for the conveyance of air or gases. An abbreviation of "bustle-pipe," a term borrowed from blast-furnace practice. See Manifold.

Busse, N. G.—479 Sumner Ave., Brooklyn, N. Y. Repairing.

Bussing, H.—Elmstrasse, Braunschweig, Germany. Mfrs. automobiles, gas, comm.

Bustle-pipe.—In a blast-furnace, an air-conduit. See Bus-pipe.

Butler Auto Co.—Hamilton, Canada. (Pope-Toledo.)

Butler, F. C.—Sec. Cook's Standard Tool Co., Kalamazoo, Mich.

Butler Motor Car Co.—Copley St.; garage, Harcourt St. side, Boston, Mass. (Cleveland, Pierce-Racine, Rapid.)

Butler, Samuel McKnight.—B. Dec. 13, 1866 at Camden, N. J. Educated at

public schools. Present occupation sec-

retary of the Automobile Club of America. Member and first secretary of Aero Club of America. Formerly, Asst. Sec. of Automobile Club of America, Oct., 1899. Owner of car and motor boat. Made balloon ascension in "Le Centaur" Nov. 3,

1906, 137 miles, Pittsfield to Long Island Sound. Military service, 12 months, with 1st Signal Corps, U. S. Army in Cuba. Residence, 58 Elm St., New Rochelle, N. Y. Office, 54th St., west of Broadway, New York City.

Butler, T. J.—Harrison Ave. and 5th St., Harrison, N. J. (Cadillac.)

Butrey, James.—Valley City, N. D. Garage.

Butt.—A joint formed by the planks in the strakes of a boat

Butterfield, William W.—Sec. Racine Boat Mfg. Co., Riverside, Muskegon, Mich.

Butterfield, H. K.—Pres. Kissel Motor Car Co., Hartford, Wis.

Butterfly-valve.—See Valve, Butterfly.

Butt, Joint.—See Joint, Butt.

Button, Push.—A button which, when depressed, opens or closes an electric circuit.

Butts, A. M.—246 Main St., Oneonta, N. Y. (Elmore.)

Butts, C. W.—Goddell, Ia. (Holzman.)

Butzer, John S.—Washington Ave., Ephrata, Pa. (Maxwell, Reo, Rambler.)

Buxton, Bronson C.—Sec. and Treas. Walden W. Shaw Co., 1532-1534 Michigan Ave., Chicago, Ill.

Buxton, W. B.—Mgr. Garage Dept. Park Sq. Auto Station, 43 Columbus Ave., Boston, Mass.

Buzby, Geo. H.—Vice-Pres. Cycle & Automobile Trade Journal, 1213 Filbert St., Philadelphia, Pa.

Buzzer.—The same as trembler or vibrator q. v.

Byers & Co., A. M.—Pittsburg, Pa. Mfrs. wrought iron and steel pipe.

By-pass.—A pipe or channel passing around a valve and allowing some fluid to flow by or out of the valve-chamber, although the valve is closed. A passage-way from the crank-chamber to the cylinder, through which the gas passes.

Byrne, C. T.—Treas. Byrne, Kingston & Co. Pres. Kokomo Electric Co., 339-351 Smith St., Kokomo, Ind.

Byrne, John T.—Pres. Auto Rail & Equipment Co., 113 Michigan Trust Bldg., Grand Rapids, Mich.

Byrne, Kingston & Co.—339-351 Smith St., Kokomo, Ind. Mfrs. car-

buretors, mufflers, pumps. Member M. & A. M. Cap. \$50,000. Est. 1902. Geo. Kingston, Pres.; J. F. Ryan, Vice-Pres.; J. W. Johnson, Sec.; C. T. Byrne, Treas.

C

C.—An abbreviation of "centigrade degree."

C.—Symbol for "capacity" and "coulomb."

C.—Symbol for "carbon"; Ca. for "calcium"; Cd. for "cadmium"; Cr. for "chromium"; Cu for "copper."

C. G. S.—Abbreviation of "centimetre-gramme-second."

C. G. S. System.—An abbreviation of "Centimetre-Gramme-Second," a system of units which has been universally employed in physics since 1881, for facilitating and unifying calculations, and which takes the centimetre (C) for the unit of length, the gramme (G) for the unit of weight, and the second (S), the unit of time. The principal units of the C. G. S. are: the "dyne," "erg," "joule," "farad," "coulomb," "ampere" and "volt."

Cab.—An enclosed four-wheeled vehicle with a single seat for two. One variety has an additional seat or rumble placed either in front of the single seat or at the rear and above the seat ("hansom cab.") The entrance is from the front, and the control is from the seat, all pedals, etc., being placed there. The motor is placed in front under a hood, as in ordinary practice.

Cabana, Martin, J.—Sec. G. A. Hosmer Co., 601-607 Northland Ave., Buffalo, N. Y.

Cabana, Oliver, Jr.—Pres. and Treas. G. A. Hosmer Co., 601-607 Northland Ave., Buffalo, N. Y.

Cable.—A heavily insulated wire or set of wires; often protected from injury by a very strong covering; used to convey large currents for lighting and power, or for the small currents required in telegraph or telephone work. (2) A stout rope of either hemp or steel. The name is applied also to a chain, especially that to which the anchor of a vessel is attached.

Cable-length.—In mariner's measurement, a "cable-length" is 100 fathoms, or 600 feet.

Cabot, E. J.—Pres. and Mgr. The DeWitt Auto Co., 248-250 W. 80th St., New York City.

Cachat & Co., C. M.—1718 Crawford Rd., Cleveland, O. Repairing.

Cadillac Automobile Co.—364 E. Market St., Indianapolis, Ind. (Cadillac.)

Cadillac Automobile Co. of Illinois.—1312 Michigan Ave., Chicago, Ill. (Cadillac.)

Cadillac Auto Station.—Wyomissing, Pa. Garage.

Cadillac Company of Dutchess Co.—Red Hook, N. Y. (Cadillac.) Est. 1905. Branches at Poughkeepsie and Kingston, N. Y.

Cadillac Motor Car Co.—265 Jefferson Ave., Detroit, Mich. Retail Dept. of Cadillac Motor Car Co. Est. 1905. Garage, 30 cars. Repairing.

Cadillac Motor Car Co.—1343 Cass Ave., Detroit, Mich. Makers of the Cadillac car. First marketed 1902, 11 different models made since. Cap. \$1,500,000. Lem W. Bowen, Pres.; C. A. Black, Vice-Pres.; Wm. H. Murphy, Treas.; W. C. Leland, Sec.; H. M. Leland, Gen. Mgr. Retail salesrooms 265 Jefferson Ave., Detroit, Mich.

Cadmium.—A white metal with a bluish tinge melting at 500° Fahr. (260° C.). It has properties very similar to those of zinc and forms a constituent of fusible metals, and of an alloy for bearings. It is employed for forming certain standard batteries and is utilized also in the form of sulphate in cadmium accumulators. Cadmium alloy for bearings consists of cadmium 45 parts, zinc 45 parts, antimony 10 parts.

Cadmus, Ernest H.—Treas. Central Motor Car Co., Bloomfield, N. J.

Cadogan Motor Co.—102 Sydney St., Chelsea, London, England. Mfrs. automobiles, gas, comm. (Cadogan.)

Caffort Frères.—125 bis, rue du chemin Vert, Paris, France. Mfrs. transmission gears.

Caffrey, A. R.—Sec. M. Caffrey Leather Co., Frelinghuysen Ave. and Meeker St., Newark, N. J.

Caffrey Leather Co., M.—Frelinghuysen Ave. and Meeker St., Newark, N. J., Mfrs. leather for tops, cushions and dashes. Cap. \$100,000. Est. 1879. Thos. F. S. Kearns, Pres. and Treas.; Mathew J. Caffrey, Vice-Pres.; A. R. Caffrey, Sec.

Caffrey, Mathew J.—Vice-Pres. M. Caffrey Leather Co., Frelinghuysen Ave. and Meeker St., Newark, N. J.

Cagno, Emilio.—B. in Milan, Italy, Sept. 5, 1879. A well-known driver of racing cars, winner of the Florio cup race in Sicily in 1906, driving an Itala car. Competed in the 1906 Vanderbilt cup race and was in seventh place on the ninth lap, but was called off before finishing.

Was at one time chauffeur for the Queen of Italy.

Cahen, Emile.—7 Avenue Niel, Paris, France. Born at Paris, Dec. 31, 1862. Chevalier of the Legion of Honor, officer of the Academy, former general manager of the Mors Society, laureate of the Institute, State engineer of manufactures. In conjunction with M. Serené he invented the S. C. matches without white phosphorus, and the S. C. machine for the continuous manufacture of

matches. He is consulting engineer and chief of the automobile service of the General Carriage Company of Paris.

Cahill Automobile Co.—1318 L. St., N. W., Washington, D. C. (Waltham.)

Cailleau et Cie.—20 rue des Walloons, Liege, Belgium. Mfrs. lubricators.

Caille Bros. Co., The.—2d Ave. and Amsterdam St., Detroit, Mich. Mfrs. gasoline marine motors.

Caillois, Gustav.—A French designer and racing man. He won the Gaillon hill climb in 1902 and was fifth in the Bennett cup race of 1904, driving a Brasier car. In 1906 he was a competitor in the Vanderbilt cup race, but did not finish. He had previously been retained by the E. R. Thomas Motor Co. as consulting

engineer, and in the spring of 1906 he came to America with Herbert Le Blon and superintended the designing and building of the two Thomas Vanderbilt

cup racers, which were driven by Le Blon and himself in that contest.

Cain, A. H.—Roodhouse, O. Repairing.

Cain, Frank.—202 4th Ave., Detr it, Mich. Mfrs. vulcanizers.

Calcium Carbide.—A chemical compound of carbon and calcium (CaC_2). It is produced commercially in the electric furnace. By the action of water it is decomposed into lime and acetylene gas, a very brilliant illuminant. See Acetylene.

Calcium Carbonate.—An amorphous white powder (CaCO_3) very sparingly soluble in pure water, and much more soluble in water containing carbon dioxide. Most well-water and sometimes river-water holds in solution a certain proportion of carbonate of lime, which, through boiling, deposits as a hard crust on the sides of the containing vessels, such as the water jacket of motors and the tubes of radiators and steam boilers. See Scale and Fur.

Calcium Chloride.—A white, deliquescent chemical (CaCl_2) much employed in solution as an anti-freezing agent in the cooling systems of water-cooled gas motors. This chemical, unlike common salt, will not rust or corrode metal of any kind. It dissolves very readily in water, of which it is a great absorbent. Its freezing point is many degrees below that of salt, the brine of which freezes at zero, while calcium brine has a maximum freezing point of 54°F . below zero.

Caldwell Co.—136 S. 14th St., Philadelphia, Pa. Mfrs. brake bands, brass, bronze, aluminum and copper castings.

Calgary Garage Co.—709 Centre St., Calgary, Alberta, Canada. (Rapid, Reo, Oldsmobile. Pope-Waverly.)

Calhoun, J. Edward.—Pres. and Director Dragon Motor Co., 31st, 32d and Chestnut Sts., Philadelphia, Pa.

Calibration.—A determination of the correct value of the graduation of a scale or some measuring instrument; or a determination of the dimensions of an object which is to be used as a standard of measurement. "Calibrated" is said of an instrument or scale graduated so that its action or readings shall be correct, particularly if the graduation is the result of tests rather than that of calculation.

California Automobile Co.—1224 Webster St., Oakland, Cal. (Maxwell, Mitchell.)

California Automobile Co.—318 E. Market St., Stockton, Cal. (Mitchell.)

California & Nevada Auto Co.—1363 Bush St., San Francisco, Cal. (Stearns.)

California Women's Automobile Club—San Francisco, Cal.

Caliper.—A tool for measuring the internal or external diameter of objects.

Two varieties, called "inside" (Fig. 1) and "outside" (Fig. 2) calipers, are commonly used.

Fig. 1

Fig. 2

Caliper, Micrometer.—An instrument of high precision, called also a "micrometer gauge," which is employed for measuring minute thicknesses and in particular the thickness of sheet metal, etc.

Callaghan, A. J.—Sec. and Gen. Mgr. American Oil Co., 170-178 S. Water St., Jackson, Mich.

Callahan, A. H.—Pres. Universal Electric Storage Battery Co. Office 108 La Salle St.; factory 36-38 Union Park Place, Chicago, Ill.

Callahan, Atkinson & Co.—1020 Morton St., Baltimore, Md. (Locomobile Pope Toledo, Pope-Hartford.)

Callanan & Hogg.—Parkersburg, W. Va. (Cadillac.)

Calman, Emil.—299 Pearl St., New York City. Mfr. varnishes.

Caloric.—A term formerly used to denote "heat," which was at one time supposed to be an imponderable, elastic fluid.

Calorie.—The unit of heat, called the "thermal unit," generally employed for comparison in scientific work. It is the quantity of heat required to raise the temperature of one gramme of water through 1 degree Centigrade. A "great caloric" is a thousand times this. These units of heat are often referred to as a gramme-degree Centigrade and a kilogramme degree Centigrade respectively. The pound-degree Centigrade, which is the quantity of heat necessary to raise one pound of water through one degree Centigrade, is often convenient to use. For very accurate work it is necessary to specify the exact temperature at which the water is taken. The temperature most usually agreed upon is 40° Centigrade, but other temperatures have from time to time been used. "Calorific value," the measure of the amount of heat obtainable from a given weight of fuel, is usually found by direct experiment, the fuel being completely burnt and the heat evolved measured by some form of calorimeter.

The following are, in round numbers, the number of calories disengaged by the combustion of 1 kilogramme of the principal fuels used for carburetion in internal combustion motors: Pure alcohol,

7,000 calories; denatured alcohol, 6,000 calories; carburetted alcohol, 7,000 to 8,000 calories; sulphuric ether, 8,000 calories; benzole, 10,000 to 11,000 calories; gasolene, 11,000 to 12,000 calories. See Calorimeter.

Calorimeter.—An instrument for measuring the quantity of heat given out by bodies in passing from one temperature to another. In its commonest form it consists of a thin metal vessel in which a known mass of water is placed. The rise or fall in temperature of this liquid, due to the introduction of a hot or cold body, is observed by means of a thermometer. The vessel is usually protected from loss or gain of heat through radiation by means of an outer vessel.

Calthorpe Motor Co., Ltd.—81 John Bright St., Birmingham, England. Mfrs. automobiles, gas. (Calthorpe.)

Calumet Auto Co.—116 E. 29th St., Chicago, Ill. Garage.

Calvert-Zusi Auto Co.—215 Clinton Ave., Newark, N. J. (Winton.)

Cam.—A metal disk with a projection (called a "cam-head" or "nose"), on its periphery which strikes a tappet and converts rotary into a desired irregular motion. It is mounted on a shaft called a "cam-shaft" and actuates the valve mechanism. The figures show the types in general use for lifting the inlet and exhaust valves of gasolene motors.

Cam, Edge.—A cam designed to give a variable motion in a direction parallel with the shafts on which it is mounted.

Cam, Exhaust.—A cam designed to lift the exhaust valve. See Cam.

Cam-gear.—The mechanism employed to drive a cam-shaft.

Cam-head.—See Cam.

Cam, Ignition.—A cam for actuating a contact-breaker or analogous device in an ignition system. See Cam and Contact-breaker.

Cam, Inlet.—A cam that actuates an inlet-valve. See Cam.

Cam-nose.—The projection on a cam-disk which lifts the part to be operated upon. See Cam-head.

Cam, Reversing.—A valve-cam which is so arranged that, by reversing its motion, it will cause a motor to reverse.

Cam-roller.—A small steel wheel, A (see figure), mounted at the lower end of a valve push-rod, R, and which, through the action of the cam-head, C, lifts the rod and, through it, the valve and its stem.

Cam-shaft.—A shaft revolving at half the velocity of the crank-shaft, and actuating the valve-mechanism through the medium of the "cam-gear," called also a half-time shaft.

Camshaft, Overhead.—In a gas-motor a camshaft situated above the cylinders, near the valves, instead of alongside of the crankcase.

Cam, Snap.—A cam which, once in a revolution, brings together the terminals of a sparking circuit. See Cam, Ignition.

Camber.—A general term for the amount of curvature of some object; as the downward bend of an axle designed to tip the wheels inward at the bottom and give them an outward direction at the top, the upward curvature of a boat's deck amidships, etc. To camber is to curve a piece of wood by fire or other means.

Cambered Frame.—See Frame, Cambered.

Cambered Road.—See Barrelled Road.

Cambon fils. — Rozières-sur-Mouzon, Vosges, France. Mfrs. ball bearings.

Cambria Forge Co.—Cleveland, Ohio and Johnston, Pa. Mfrs. axles, crank shafts, drop forgings, steering apparatus, steering wheels, universal joints, valve stems.

Cambria Steel Co.—440 Ellicott Sq., Buffalo, N. Y. Mfrs. steel.

Cambridge Auto Co.—Cambridge, Md. Garage.

Camden Anchor-Rockland Machine Co.—Camden, Me. Mfrs. marine and Stationary gasoline engines, bronze propellers, carbureters, anchors, hoists, motorboats. Cap. \$300,000. Est. 1901. John Bird, Pres. and Mgr.; A. D. Bird, Treas.; E. P. Lamb, Supt.

Camden Auto Exchange.—58-60 N. 2d St., Camden, N. J. (Dragon.)

Camden Auto Supply Co.—437 Broadway, Camden, N. J. (Dragon.)

Camel-hair.—A kind of yarn composed of wool and hair and used in the weaving of driving-belts.

Cameron Auto Co.—313-315 Commerce St., Dallas, Tex. (Buick, Franklin. Pope Toledo.) Est. 1905. Not inc. B. L. Cameron, Gen. Mgr. Garage. 34 cars. Repairing.

Cameron Car Co.—Brockton, Mass. Mfrs. automobiles, gas. (Cameron cars.)

Cameron Motor Car Co.—923 S. Main St., Los Angeles, Cal. (Cameron.)

Cameron Motor Car Co.—303-305 N. 15th St., Philadelphia, Pa. (Cameron.)

Cameron, R. L.—Gen Mgr. Cameron Auto Co., 313-315 Commerce St., Dallas, Tex.

Camp, L. W.—Akron, Ohio. (Haynes.)

Campistrou, Jean Maxime.—68 rue Marjolin, Levallois, Seine, France. Mfrs. pressed steel frames.

Campagné, E.—45 blvd. de Belleville, Paris, France. Mfrs. automobiles, gas, comm. (Lacoin fore-carriage.)

Campana, John M.—Post Rd., Port Chester, N. Y. Garage.

Campbell.—24 passage du Havre, Paris, France. Maps, touring routes.

Campbell & Co., C. G.—St. Albans, Vt. (Pope-Hartford.)

Campbell Auto Co.—1st and Adams St., Marion, Ind. (Cadillac, Winton, Autocar.) Vulcanizing and tire repairs.

Campbell Auto Co.—612 Mulberry St., Des Moines, Ia. and 508 Central Ave., Ft. Dodge, Ia. (Reo, Rambler, Mason.) Est. March, 1907. Cap. \$5,000. I. R. Campbell, Pres.; Norlan Snow, Sec. and Treas. Garage, 15 cars. Repairing.

Campbell, A. R.—Morrisville, Vt. (Maxwell.)

Campbell, A. V.—Kalamazoo, Mich. Garage.

Campbell, Chas. M.—Pres. Pope Automobile Company of Washington, 817-819 14th St., N. W., Washington, D. C.

Campbell Bros.—Danville, Ill. (Pope Toledo.)

Campbell-Corwin Co.—902 Union St., Brooklyn, N. Y. (Du Luxe.)

Campbell, F. J.—Advt. Mgr. Aerocar Motor Company, Mack and Beaufait Aves., Detroit, Mich.

Campbell, England & Markscheffe.—Colorado Springs, Col. (Peerless, Franklin, Oldsmobile, Columbus.)

Campbell Garage, The.—47 St. Louis St., Quebec, Canada. Supplies. Garage.

Campbell, I. R.—Pres. Campbell Auto Co., 612 Mulberry St., Des Moines, Ia. and 508 Central Ave., Fort Dodge, Ia.

Campbell, James.—455 Jackson Blvd., Chicago, Ill. Garage.

Campbell, J. F.—Sec. and Treas. Dayton Motor Car Co., Dayton, O.

Campbell Motor Co.—Wayzata, Minn. Mfrs. gasoline, marine motors.

Campbell, Robert.—Pres. American Oil Co., 170-178 S. Water St., Jackson, Mich.

Campbell, T. V.—Galena, Kan. Garage.

Campbell, W. E.—Pres. Direct Drive Axle, Co., 575 N. 4th St., Columbus, O.

Camp, Grover.—Vice-Pres. Sterling Motor Car Co., 180-184 Water St., Binghamton, N. Y.

Canada Cycle & Motor Co.—145 Bay St., Toronto, Canada. (Russell.)

Canada Standard Automobiles, Ltd.—124 Bay St., Toronto, Ont. (Peerless.)

Canadian Automobile Co.—342 Craig St., W. Montreal, Canada. (Oldsmobile. Cadillac.)

Canadian Cycle & Motor Co., Ltd.—Ottawa, Canada. (Russell.)

Canadian Electrical News and Engineering Journal.—Confederation Life Bldg., Toronto, Ont., Can. Pub. monthly by the C. H. Mortimer Pub. Co.

Canadian Motor, The.—1 Wellington St., W., Toronto, Ont., Can. Pub. monthly by The Vehicle Pubs., Ltd.

Candle-power or Standard Candle.—A unit of illumination based on the consumption of a sperm candle of 120 grains (about 7.8 grammes) of wax per hour. This, termed "the candle-power," is used in the determination of the illuminating power of other sources of light. Another unit, the light emitted by a square centimetre of melted platinum at the moment of solidification, is equal to about 15 standard candles.

C. and C. Electric Co.—143 Liberty St., New York City. Mfrs. electric motors.

Canfield Auto Station.—Canaan, Conn. (Knox, Stevens-Duryea, Waltham.) Est. 1905. W. H. Canfield, Mgr. Garage, 10 cars. Repairing.

Canfield, W. H.—Mgr. Canfield Auto Station, Canaan, Conn.

Canon City Automobile Club.—Dr. Otis Orendorff, Sec., Canon City, Colo.

Canonsburg Iron & Steel Co.—Pittsburg, Pa. Mfrs. sheet iron and steel.

Canopy or Canopy-top.—A non-folding top for a motor-car.

Cant.—An obtuse angle. (2) A slope, tilt or inclination.

Cantieri Automobilistichi Riuniti.—6 via Luigi Galvani, Palermo, Italy. Mfrs. automobiles, gas. (C. A. R. cars.)

Cantono.—13 Viale Paroli, Rome, Italy. Mfrs. automobiles, elect comm. (Cantono fore-carriage.)

Cantono Garage.—111 W. 37th St., New York City. (Cantono Electric.) Garage.

Cant-timber.—One of the timbers situated at the end of a vessel, and that rise obliquely from the keel.

Caoutchouc.—The same as india-rubber, q. v.

Cap.—A general term for a cover used to protect working parts from dirt or dust.

Capacity.—Ability to absorb or retain, as heat, electricity, etc.

Capacity, Calorific.—The quantity of heat which a body absorbs when its temperature rises through a given range, say from zero to 1°, compared with the quantity of heat which would be absorbed, under the same circumstances, by the

same weight of water; that is, when water is taken as the standard for comparison of specific heats.

Capacity, Cylinder.—See Cylinder-capacity.

Capacity, Electrical.—The quantity of electricity required to charge a conductor up to a unit potential; or, in other words, the ratio of the charge in a conductor to its potential.

Capacity, Storage-cell.—The "capacity" of a storage-cell, which depends on the number and size of the plates, is measured in terms of ampere-hours. Thus, if we say that the capacity of a cell is 100 ampere-hours, we mean that it can supply 1 ampere for 100 hours, 2 amperes for 50 hours, 5 for 20, and so on.

Cape Ann Tool Co.—Granite St., Pigeon Cove, Mass. Mfrs. drop forgings. Cap. \$16,000. Est. 1891. Inc. 1905. Edwin Hawkridge, Pres.; J. F. Hawkridge, Vice-Pres.; J. Judson Deane, Treas. and Gen. Mgr.

Cape Apron.—See Apron, Cape.

Cape May Automobile Club.—J. Hiscock, Sec., 438 S. Penn. Sq., Philadelphia, Pa.

Capen Motor Car Co.—4739 McPherson Ave., St. Louis, Mo. (Locomobile.)

Capillarity.—The peculiar form of adhesion which is exhibited between a liquid and a very small tube containing it; likewise between two plates placed very close together, and, generally speaking, whenever the surfaces of two walls are in close proximity. The effects of capillarity are diametrically opposite, according as the liquid wets or does not wet the walls. In the first case, there is an elevation (attraction) and, in the second, a depression (repulsion) of the liquid. The first is realized with water, and the second with mercury. Capillary elevation or depression depends upon the nature of the liquid and the wall, but all else being equal, it varies as the inverse of the square of the diameter of the tube. Examples of capillary ascension are found in lamps, wick-carburettors, wick-lubricators, etc.

Capital Auto Co.—Indianapolis, Ind. Mfrs. jacks, auto tops, glass wind shields.

• **Cap-screw.**—See Screw, Cap.

Caps, John.—Repair Dept. E. P. Moriarty & Co., 1612-1614 Grand Ave., Kansas City, Mo.

Capstan.—A machine whereon a boat's cable is wound in "weighing" anchor.

Car.—That part of a balloon or other apparatus for aerial navigation in which the aeronaut rides. (2) In automobilism, a general term for a vehicle of a type which, when horse-drawn, is called a "carriage."

Car, The.—168 Picadilly, London, W., England. Pub. weekly.

• **Carbide.**—The same as calcium carbide, q. v.

Carbide, Candy.—A preparation of calcium carbide having the property of regulating the action of water on the carbide in such a way as to render the production of acetylene slower and more uniform. See Acetylite.

Carbon.—An element with atomic weight 12, which is met with in three allotropic states, viz.: that of "crystalline carbon," or diamond; of "graphatoid carbon," or graphite, and of "amorphous carbon," in the form of charcoal, lamp-black, soft coal, anthracite, coke, etc. Carbon enters in inorganic chemistry, into the composition of innumerable compounds: hydrocarbons, alcohols, sugars, starches, cellulose, etc. It combines

with oxygen to form carbonic oxide, CO, and carbonic dioxide or carbonic acid gas, CO₂. It combines also at very high temperatures, directly with silicium, to form crystalline silicide of carbon, which has been much employed in the last few years as an abrasive under the name of "carborundum." q. v.

Carbon plays an important part in the automobile industry. In fact, the steel employed in almost all parts of the car is the result of a combination of iron and carbon; and, moreover, it supplies internal combustion motors with fuel in the form of gasolene, which is a hydro carburet, that is to say, a combination of hydrogen and carbon.

It forms the positive electrode in nearly all commercial forms of dry and primary batteries, and is used also for making brushes or current-distributers for both dynamos and electric motors. See Coke and Graphite. (2) A trade-name for naphthalene. q. v.

Carbon, Bisulphide.—A colorless, highly refractive liquid, CS₂, having a very offensive odor. It is largely used as a solvent for many substances, and particularly for india rubber to form "rubber cement."

Carbon, Gas.—A dense form of pure carbon found lining the retorts in coal-gas making. It is sometimes called "artificial graphite" and is used in making the carbon poles of primary cells and the carbon electrodes in arc lamps.

Carbon Monoxide.—A colorless gas formed by the imperfect oxidation or combustion of carbon or coal or carbonaceous substances under the action of oxygen or atmospheric air. Symbol CO. It is extremely poisonous and acts upon the human economy through the respiratory tracts. It is so much the more dangerous in that it is odorless and insipid and that its presence in the surrounding air is not perceptible to the senses. For this reason care should be taken to avoid the inhalation of gas from the exhaust-pipe which is almost always more or less charged with this dangerous gas.

Carbonado.—A very hard form of carbon, from Brazil. It is used for truing up emery-wheels.

Carbondale Chemical Co.—Carbondale, Pa. Mfrs. anti-freezing solutions.

Carbonize.—To charge with carbon, as in the cementation of steel. See Cementation.

Carborundum.—A silicide of carbon, SiC, which is used as an abrasive, and is exceeded in hardness only by the diamond. It is produced artificially at Niagara Falls by the action of a powerful electric current on a mixture of silicious sand and carbon.

Carborundum Co., The.—Buffalo and 18th Sts., Niagara Falls, N. Y. Mfrs. emery wheels.

Carburetted Air.—Air to which a certain proportion of the vapor of gasoline, alcohol, etc., has been added in order to form an explosive mixture.

Carburetter.—An apparatus in which is effected the mixing of the fuel necessary for the operation of internal combustion motors. Such mixture is composed of atmospheric air and the vapors of a liquid hydrocarbon in proper proportions. In order that it may give the best results, a carburetter should furnish an accurately proportioned mixture, that is to say, one containing just the proportions of fuel required, and, moreover, containing such fuel as nearly as possible in the state of vapor. Classified according to structure and operation, there are three classes of these apparatus, viz.:

(1) The "surface" carburetter, in which the engine suction draws the air over the surface of the gasoline. The air then becomes heavily charged with gasoline vapor, and, in its passage to the inlet-valve, is again diluted with more air in such proportions as to give the best "explosive" result.

(2) The "float feed" or "spray" carburetter, in which the principle is evenly to divide the spirit so that it presents a maximum amount of surface to the incoming air, and is capable of being held in suspension in the air-current during the short time necessary for the transformation from the liquid to the gaseous state. There are various ways of accomplishing this object; but, in most cases, the result is that a continual flow of air issues from a conical nozzle and creates a vacuum in the central portion of the flow, thus causing the suction of the motor to draw the air through a contracted tapered passage, over a nipple having a very fine aperture, or series of apertures. The vacuum produced by the rush of air causes the gasoline to issue in the form of a finely-divided spray, which, in meeting the current of induced air, is immediately vaporized and carried over to the motor-cylinder, after being mixed with a quantity of additional air admitted to the aperture in the up-take of the carburetter.

(3) The "ebullition" or "filtering" carburetter, in which the air is drawn by suction, through the liquid mass, so that it bubbles up through the liquid and escapes at the surface. Of these types, only the two first have been widely used with motor-car engines.

One of the earliest forms of the first was brought out for the early motor-cycles and is shown in Fig. 1. The gasoline is poured into the containing vessel and lies in the lower part. The

current of air is drawn down through the inlet, A, so that, underneath the plate, B, it spreads itself over the surface of the gasoline and picks up the vapor which rises to the surface. The level of the

Fig. 1.

plate, B, may be adjusted as that of the liquid varies. The volatility of the gasoline may be increased by passing hot exhaust gas through the tube, G, and out into the exhaust pipe at G'. The carburetted air rises through an opening at the top of the carburetter into the chamber, C, which is called the "twin-tap." The carburetted air meets an additional supply of air from outside through an aperture in C, which can be controlled by a lever (not shown). This control can be made to vary the proportion of fuel and air that passes through a conduit in the "tap," C, into the pipe, E, which delivers the mixture in explosive proportions to the motor-cylinder.

In the third, the filtering carburetter, the type originally used by Daimler, the mixture of the liquid with air takes place by way of evaporation, and all the improvements employed have been de-

Fig. 2.

signed to better the conditions under which such evaporation is effected by putting the liquid into contact with the air over the greatest surface possible. Fig. 2 gives an idea of such a carburetter. A porous cylinder, a, becomes saturated with the liquid into which its base dips. The air enters through circular orifices, b, becomes charged with combustible vapors in "licking" the wet surface, and goes to the motor through C. An additional air in-take, not shown in the figure, permits of correcting the proportioning of the mixture. The apparatus of the second class, the "float-feed" or "spray" carburetter, is now the prevailing type. Its chief advantage is that it can be adjusted to use gasoline or alcohol of any density, or even paraffine, after preliminary warming, for a few minutes on gasoline. The worst fault with this carburetter, unless it is provided with an auxiliary air-inlet, is that it will not generate the mixture in constant proportions at varying speeds; giving too rich a mixture at high speeds, which, if corrected, renders the mixture

weak at low speeds. The faster the air passes the jet, the greater will be the suction effect, so that when the motor increases its speed, the proportions of the mixture are apt to be altered. The speed of the air should be from 80 to 100 feet per second.

In principle, the apparatus consists of a spraying or "atomizing" nozzle, A (Fig.

Fig. 3.

3), of which the upper orifice debouches in the center of the suction-tube, B. The latter opens in the surrounding air, and the spraying nozzle is supplied with fuel by communication with a receptacle in which the level is maintained by a float. The liquid is first raised to the orifice of the spraying nozzle, and then carried along by the current of air in the state of infinitely small drops, a fact which has given these apparatus the name of "atomizing" carbureters.

The theory of this apparatus shows that a uniform mixture cannot be obtained with a single size of orifices for the flow of the liquid and air, or, in other words, with orifices that are invariable. It will always be possible with a given velocity of the motor to so manage that the elements of the mixture, liquid and air, shall be combined in the desired proportion to assure the best efficiency possible, that is to say, the completest and most instantaneous combustion possible. For this, it suffices to regulate one or both of the orifices at once. But such regulation will not prove satisfactory if the velocity of the motor increases or diminishes. The carburetion will become bad and the power of the piston-stroke will diminish until misfirings, and then a stoppage of the motor will occur.

In order that the carburetion shall remain constant, that is to say, that the ratio of the weights of the air and fuel shall be always constant, the relative size of the air and liquid orifices must change with the vacuum created in the apparatus by the suction of the motor. Such vacuum manifestly varies, and that, too, within very wide limits, with the velocity and charge of the motor.

Omitting details, it need merely be said that when the suction increases the section of the air-intake must be increased (that of the liquid remaining unchanged) in a proportion which is not fixed, but which is greater at the begin-

ning of the increase than afterward. This principle forms the basis of all automatically regulated or "automatic carbureters."

In such apparatus the orifice for the flow of liquid is fixed, as is also an air-orifice, which is opened only at the lowest speed of the motor, and consequently at the least suction. When the latter increases an extra air-inlet automatically opens to the necessary degree.

Figure 4 shows the arrangement of

Fig. 4.

the automatic extra air-inlet in the Krebs carburetor. The gasoline passes through a strainer into the float-chamber (not shown in the figure), whence it enters the spray-tube, D. When the suction of the motor occurs (the throttle, G, being in the position indicated in the figure), it draws a volume of air through the invariable inlet, A, and, from the jet, a quantity of gasoline corresponding to the aspiration produced by a speed of about 200 r. p. m.. The mixture thus formed passes through J to the motor. The spraying tube enters the pipe, A, which is perforated to permit of its passage, and serves as a conduit for the mixture formed therein.

The extra air necessary at speeds greater than 200 r. p. m. enters by the orifices M, and mixes with the gas formed, Fig. 5. It has been said that

Fig. 5.

the suction alone controls the opening of these additional orifices. Now, the slide-valve, G, which is denticulated on one of its edges so that it may progressively open or close at the end of its travel, is controlled by the governor and moved by an antagonistic spring oper-

ated by the driver, and serves to increase or diminish the speed of the motor by its action on the weight of the mixture admitted. It is therefore a cock, which must not be confused with the valve K, which alone yields to the suction. It will be understood, moreover, that the movements of the valve correspond, as a general thing, to that of the cock, since it is the latter which, giving more or less gas to the motor, regulates its velocity, and consequently determines the aspiration in the carburetter. The lower face of the piston, Q, is submitted to the vacuum which prevails in the apparatus, and its upper face to the atmospheric pressure through an aperture, S, sufficiently small to allow the air to enter, with relative slowness, the chamber O (the capacity of which increases very quickly), when the disk, Q, is submitted to the suction of the motor, and, conversely, to allow the air to escape therefrom slowly when, the effort of suction ceasing, the spring, R, draws the disk, P, back into contact with the cover.

Carburetter, Alcohol, Longuemare.—Alcohol carburetters do not differ much from gasoline ones, although their structural details are not the same. The Longuemare establishment has devised an excellent type of alcohol carburetter, which may be described as follows:

Fig. 6.

The suction of the motor takes place at Y (Fig. 6). The air enters at X, traverses the chamber P and O which, owing to the heat that it receives from the jacket V, through which passes a tube from the exhaust, is at a good temperature, and flows to the motor through Y. The alcohol is discharged through concentric slits at the bottom of the plug Z. The discharge is facilitated by the jacket, P N, which surrounds the spraying tube and increases the effect of the vacuum. On manipulating the disk O, through S, the driver permits the motor to aspire a greater or less quantity of gas.

Carburetter, Alcohol and Acetylene.—For some time past, experiments have been making with the simultaneous use of alcohol and acetylene as a fuel for internal combustion motors and the results obtained have been very encouraging. The experimental apparatus, devised by Messrs. Barker and White of New York,

consists of an ordinary carburetter in which the alcohol is atomized and mixed with air. This mixture, before entering the cylinder, passes through a wire gauze supporting calcium carbide. Alcohol usually contains 10 per cent. of water,

Fig. 7.

which is atomized with the mixture, acts upon the carbide, and forms acetylene gas. The result is that the calorific value of the mixture is considerably increased, and, moreover, the production of heat much greater. The apparatus employed is represented diagrammatically in Fig. 7. The alcohol enters through the pipe, c, and the air through d. A hopper, g, placed above the wire gauze, permits of the introduction of the carbide, the residuum of which makes its exit through the orifice n.

Carburetter, Kerosene.—In the carburation of air by means of kerosene, it is very necessary that particular attention be given to the vaporization process. The motor-cylinder either becomes coated with a hard carbon deposit due to the decomposition of the oil, or the cylinder becomes flooded with liquid oil which will not completely vaporize. If, however, the atomized mixture of carburetted air be drawn through a vaporizer at a nearly red heat, the carbon deposit will disappear; and when the carburetted air comes in contact with the main supply of air required for the combustion, and becomes thoroughly mixed there, the combustion appears to be practically complete without any deposit of carbon. Before the motor is started, the vaporization has to be effected by a separate heat source, or it may be started on a more volatile liquid, such as gasoline, for example, which may be changed for kerosene after the motor has become heated up. It is obvious, however, that where heat from the exhaust gases is used as a supply to meet the vaporizer, the regularity of its action must be affected by every condition that tends to vary the discharge of heat in the exhaust, so that every stroke without "explosion," every retardation with diminished fuel-

energy in the charge, etc., will interfere with its regularity.

One of the engineers who has worked most indefatigably over the difficult problem of creating a kerosene carburetter is M. Claudel. His device, which is illustrated in Fig. 8, comprises two

Fig. 8

spray-tubes, E, and J, each controlled by a different float. The first furnishes gasoline for the start, and the second kerosene. The suction takes place through the orifice E at the rear (at the center of the flange C). It will be seen that the spray-tube discharges against a tube, G (corrugated to prevent its expansion), which, being situated upon the passage H, of the motor-exhaust, thereby heats the kerosene.

Carburetters without Floats.—In the second class of carburetters, simplicity is attained by doing away with the float

Fig. 9

This pipe opens into the space surrounding the needle-valve, O, which regulates the jet into A, the mixing-chamber. F is a mushroom-valve, kept on its seat by a spring. G, collar, I, and cotter. H. To C is connected the air-pipe.

In A there is a port B (shown by dotted lines) which opens into the pipe leading to the motor. This port is opened or closed by a gate fastened to D and actuated by a rod E. A lever, M, working over a notched quadrant, is fastened to E and serves to open or close the gate or "throttle." A spring, N, holds M in any required position. L is a stuffing-box. J the cover, K a hollow bolt to take up wear, S a spring retaining the milled head, P, of the valve, O, in any desired position, T a lock-nut holding S, U the threaded nut in which O works.

The throttle being opened, the suction-stroke of the motor draws a jet of fuel-vapor, at the same time raising the mushroom F, and drawing air through from C. Continuing, the mixture passes into the motor. When the inlet-valve (of the motor) closes, the parts resume their original positions. A serious fault with the ordinary mixing valve is found in the fact that, as the valve closes, the fuel remaining on the seat is projected backward by the angle of the seat, causing the valve to "spit" or "slobber" the fuel.

Carburettion.—The mixture of air with the vapor of a hydrocarbon which is effected in a carburetter.

The carburetion is said to be good or bad according as the mixture contains or does not contain the proper proportion of combustible air; and to "regulate the carburetion" means to regulate the proportions of the mixture. Such mixture varies with the liquid employed. For one part of liquid it requires fifteen parts of air to one of gasoline, nine with ethylic alcohol, and seven with methylic alcohol—by weight of course.

Carburize.—To mix with a hydrocarbon, as in a carburetter.

Carcel.—The light of a carcel lamp burning 42 grammes of colza-oil an hour, with a flame 40 mm high; a photometric standard equal to 9.2 candle.

Card-board, Asbestos.—See Asbestos.

Cardan Joint.—See Joint, Universal.

Cardan Shaft.—See Shaft, Cardan.

Card-wire.—A brush of fine steel wire, used for cleaning files.

Case.—Every metallic box in a motor-vehicle is called a "case" when employed as a receptacle for working parts, such as the crank-shaft, sliding-gear, etc. The case is almost always of aluminum, although sometimes of bronze, and more rarely of cast steel. The motor-case is usually divided into two parts, which are very accurately adjusted to each other, and the joints of which must be perfectly tight, since the case always contains oil which is violently splashed in all directions by the rotation of the fly-wheel or crank-shaft. Externally, the sides of the motor-case are provided with arms which permit of attaching it to the frame.

Cassier's Magazine.—3 W. 29th St., New York City. Pub. monthly by the Cassier Magazine Co.

Castellated Nut.—See **Nut**, Castellated.

Caster Action.—A term applied to the action of steering wheels, which are so mounted as to trail behind their supporting point after the manner of a caster.

Castillon de Saint-Victor, Count Georges de.—74 Avenue Marceaux, Paris. France. Born at Chateau de la Grève in 1870. A celebrated aeronaut whose first ascent was made in 1870. This same year he made the splendid Paris-Vesterwick (Sweden) trip of 812 miles, in a straight line (record of the world at that time). He, Oct. 10, 1899,

established with Count de La Vaulx the world's record (Paris-Korostychew); and in October, 1903, the Paris-Silesia trip (671 miles in 19 hours) etc. He organized at Tunis the preliminary experiments for the aerial crossing of the Sahara. He is

treasurer of the Aero Club of France, of which he is one of the most respected directors and best champions.

Casting.—An object of metal formed by pouring molten metal into a mould of requisite shape. Cast metal is generally more brittle than wrought, that is to say, hammered or rolled metal. A casting shrinks considerably in cooling and allowance has to be made for this by giving the mould larger dimensions than the finished article is to have. (2) The process of producing objects from molten metal

Casting, Chilled.—Metal cast in iron moulds instead of sand.

Castings.—Cleveland, O. Pub. monthly by the Gardner Printing Co.

Cast Iron.—See Iron, Cast.

Cast Iron Brazing & Mfg. Co.—Manchester, N. H., Mfrs. braziers, brazing compound.

Castle, Fred'k. E.—B. Oct. 9, 1863, at Newburgh, N. Y. Educated at public schools. Occupation, Sales Mgr. Gray

& Davis Member Cleveland, Buffalo, Detroit Automobile Clubs, A. A. A. New York Motor Club. Residence, The Charlevoix, Detroit, Mich. Office, 214 Jefferson Ave., Detroit, Mich. Connected with automobile trade since 1901. Owned first Cadillac car in 1901

Castle, H. C. & C. D.—893 Boylston St., Boston, Mass.; 19 Lyman St., Springfield, Mass. (Lozier.)

Castor Oil.—See Oil, Castor.

Cast Steel.—See Steel, Cast.

Caswell Auto Co.—Lowell, Mass. (Maxwell.)

Catalysis.—A phenomenon through which one or more substances separate or combine under the somewhat mysterious influence of another body, which is itself in nowise influenced by the reaction that it produces. Thus, silver powder decomposes oxygenated water, without itself undergoing any chemical modification. In like manner, spongy platinum, charcoal, etc., without any change in chemical composition or physical appearance, bring about the combination of hydrogen and oxygen to form water.

Catalytic Ignition.—See Ignition.

Catch.—A term in mechanics for numerous devices which engage with and hold or fasten some object.

Catelein, Andre G.—1446 Indiana Ave., Chicago, Ill. Garage.

Cateract Machine & Automobile Co.—1-3 W. Niagara St., Niagara Falls, N. Y. Garage.

Caters, Baron Pierre de.—Berchem-des-Anvers, Belgium. Born at Antwerp. Dec. 25, 1875. Baron de Caters is one of the best known sportsmen of the automobile world.

He made his debut as a chauffeur in the Paris-Bordeaux race in 1901 upon a Mors car; then, in 1902, he ran the Paris-Vienna and the Circuit of Ardennes races. In 1903 he disputed the Turbia, in which he came in second, and the Nice-Salon-Arles race, in which he won the second place, and then the Bennett cup in Auvergne, and, finally, the Circuit of Ardennes, and the Saillon races, which he won. Baron de Caters ran, in addition, the majority of the speed tests at Ostende, Nice and Spa. For several months he held the kilometre record of the world. He is the creator of the Cater's cup, which he founded in 1902, and of another Cater's cup, reserved for the automobile clubs of the North

Cathay Hardware & Improvement Co.—Cathay, N. D. (Waltham.)

Cathcart, C. W.—Vice-Pres. Hess-Pontiac Spring & Axle Co., Pontiac, Mich.

Cathode.—The conductor or electrode by which an electric current leaves a conducting system, for example, a liquid or gas.

Cation.—In electrolysis, the "ion" (q. v) in a solution which travels toward the cathode, q. v.

Cavin, J. H.—McComb, O. (Jewel.)

Cavitation.—A phenomenon, called also "stern suction," which occurs when the propeller of a motor-boat is driven at too high a speed. Under such circumstances a cavity is formed astern, due to the reduction of the pressure being so great as to form a vacuum. When this phenomenon occurs, there is a great loss of efficiency in the propeller.

Cedarhurst Auto Co.—Lawrence, N. Y. Garage.

Cedar Rapids Automobile Club.—George Henderson, Sec. Cedar Rapids, Ia.

Cedar Rapids Auto & Supply Co.—307 3d Ave., Cedar Rapids, Ia. (Ford, Maxwell, Jackson, White.)

Cedrine, Emanuel.—A well-known driver of racing cars on both road and track. He competed in the second Vanderbilt race, driving a Fiat car in that event. On the track he has driven in the chief events, meeting with a fair amount of success. For several years he has been connected with the Hol-Tan Company in various capacities.

Cell, Primary.—A means of obtaining electrical energy by the actual consumption of some metallic element, usually zinc, which is converted into its sulphate or some other salt. The cell cannot thereafter be again employed without the introduction of entirely fresh material, and, in this, differs from the "secondary cell" or "accumulator." The principal forms of primary cells in common use are the "Bichromate," "Grove's," "Bunsen's," "Daniell's," "Lalande's" and "Leclanché." In the latter the negative plate is zinc acted upon by a solution of ammonium chloride (sal ammoniac), while the positive is a rod of carbon packed in a mass of manganese dioxide, which furnishes a supply of oxygen, and therefore acts as a depolarizer. After this cell has been in operation for a very short time, it becomes polarized, and it is some time before the manganese dioxide can destroy the polarization. If, however, a comparatively long rest be given the cells between short intervals

of use, it easily recovers and will last a very long time without any further attention than the addition of a little water. It is chiefly used for intermittent work, such as operating electric bells and telephones.

Two or more primary cells joined together to form a "battery" are used for supplying an electric current to operate ignition apparatus. Of these there are two types, "wet" and "dry." The "dry" battery, which usually consists of some form of Leclanché cells, in which the exciting fluid is mixed with a material to make it a kind of damp paste, is the one most commonly used on motor-cars, because of the small space it occupies and its cleanliness. This battery, which is sealed, usually consists of from four to six dry cells "in series." It is called an "open circuit" battery, because it is intended to be used where the circuit is open most of the time. Two such batteries are generally included in a car's outfit, either of them being switched into circuit as required, or both being connected "in multiple" to give a greater current at the same voltage. In many cases, the chemical battery is used only for sparking at the start of the motor, and until the magneto or dynamo has attained sufficient speed for continuous effect, and then being automatically switched out of circuit. "Wet" batteries, which also are of the open type, are employed only on motor-boats or for stationary gasoline engines where the saving of space is no object.

Cell, Storage.—A storage-cell, called also an "accumulator" or "secondary cell," is one so constructed that there can be imparted to it a charge of electricity which it will afterward give out as required.

Storage-cells are of two types, the first of which, the Planté, consists of an uneven number of lead plates placed face to face in a box, in which they are prevented from coming into contact by separators of celluloid or ebonite, etc. The alternate plates are connected and brought out to two terminals.

When such plates are connected to a primary source of electricity, and placed in a mixture of sulphuric acid and water ("electrolyte," as it is called), bubbles are given off from both surfaces of the plates, and, after a time, one will have been per-oxidized and become of a brown color, while the other, having been converted into spongy lead, will remain of a lead-gray color. The brown plate is the positive and the lead-gray one the negative. The amount of peroxide and spongy lead "formed" on the lead depends upon the length of time the plates are submitted to the action of the current. On disconnecting the wires of

the charging battery, the cell will retain its energy for a considerable time; and on being connected to any electric apparatus, will furnish a current until it is exhausted. The cell can then be recharged and the operation be repeated a great number of times. The "capacity" of cells made in this way and termed "formed" cells, may be regarded as being from 6 to 9 ampere-hours per pound of metal. The great objection to such cells is their weight, but, as an offset to this, they are long-lived, and, for their maintenance, cost relatively little.

The second, and most usual type of accumulator employed in motor-car work was introduced by Faure in 1881, and contains what are styled "pasted" plates. In this, the "active material," consists of a paste of red lead and litharge supported in gratings or "grids" of lead. Such paste forms a hard cement, and, when the plates are immersed in the electrolyte, and are connected with a source of electricity, the red lead is changed into brown peroxide of lead on the positive plates and gray, spongy lead on the negative ones. It may be readily seen that this plan not only permits of obtaining a wide surface in a small cell, but also of effecting a saving in the time that it takes to "form" plates.

A box containing one set of positive and one set of negative plates is termed a "cell," and the box divided into two or more divisions, each with its set of plates, is termed a "battery."

Charging.—A storage-battery may be charged by a 110-volt lighting circuit by connecting incandescent lamps into the circuit in multiple in such a way that the only current that can reach the battery must pass through the lamps. But the best current for charging is furnished by a direct current dynamo of which the voltage can be regulated to the amount required for the battery. The charging rate of a new battery at the initial charge should be not more than a 2-ampere rate. A battery should be charged whether used or not, and should be discharged to 1 7-10 volt and immediately recharged every two months in order to displace and replace all of the active material. This will preserve the maximum output. The normal output of a battery is the ampere-hour capacity divided by 8. This means that $\frac{1}{8}$ of the capacity can be drawn out steadily for eight hours. The ampere-hour capacity is the amount that can be drawn out in eight hours flowing at a steady rate.

Efficiency.—By efficiency of a storage battery is meant the ratio of energy which the battery gives out during discharge to that which it absorbs during the charge. The energy stored up in an

accumulator is measured by the potential at the terminals during the charging, multiplied by the strength of the current and by the time. The product gives the energy in volt-ampere-seconds or "joules." In like manner, the energy given out in the discharge is the potential into the current-strength into the time of discharge.

Cellular Radiator.—See Radiator, Cellular.

Cellular Tire.—See Tire, Cellular.

Celluloid.—A mixture of nitrated cellulose and natural or artificial camphor, which, after being saturated with alcohol, is submitted to very strong pressure in a hydraulic press. Celluloid is a hard, yellow, transparent substance with the odor of camphor and aspect of horn, and utilizable as a substitute for ivory, horn, bone, etc. It softens at about 176° F. (80° C.), is highly inflammable, and burns with a smoky flame. It is often colored by the addition of other substances and then loses its transparency. It is soluble in acetone and especially acetate of amyl. Such a solution, which is more or less sirupy, serves for cementing celluloid objects, such as accumulator boxes, etc.

Cement.—In metallurgy, a mixture of one part hard charcoal, one-tenth part of wood ashes, and one-twentieth part of common salt ground into a coarse powder and employed for the cementation of steel. See Cementation.

Cementation.—The older process for the manufacture of steel, which is now largely superseded by the "Bessemer Process," q. v. Bars of wrought iron are packed in fire-brick boxes or troughs, termed "converting pots," imbedded in "cement" and heated in a furnace for a few days. A part of the carbon is gradually absorbed by the iron, which is thus converted into steel.

Cementite.—The carbide of iron, FeO, which is present in high carbon steel.

Centaur Motor Co.—53-61 Franklin St., Buffalo, N. Y. Est. 1902. Cap. \$100,000. Agts.; Peerless, Pope-Toledo, Winton, Autocar, Oldsmobile, Cadillac, Darracq. Mfrs. steering gears, steering wheels, hoods, dashes, radiators, metal tool boxes, automobile sundries. J. B. Eccleston, Pres. and Treas.; U. S. Thomas, Sec.; A. J. Sanderson, Head Sales Dept.; E. A. Burkhardt, Repair Dept.; C. E. Hoffman, Sundry Dept.; H. H. Holton, Steering Wheel Dept.; O. L. Gooden, Garage Dept. Garage, 200 cars; repairing.

Centi.—A prefix which sometimes signifies a hundred (as in "centigrade"), but which has always the sense of "hundredth" part when it precedes the names of measures adopted in the metric system (as "centimetre," "centilitre").

Centigrade Scale.—A temperature scale called also "Celsius scale," universally used in science. See Thermometer.

Centimetre.—The centimetre is the unit of length of the C. G. S. system. It is the hundredth part of the length at 0°C. of a certain bar of platinum named the "International Metre."

Central Auto Co.—Alliance, O. Garage.

Central Auto Co.—18th St. and Grand Ave., Kansas City, Mo. Garage.

Central Auto Co.—Franklin St. and Jackson Blvd., Chicago, Ill. Dealers in 2nd hand cars. Garage, 150 cars. Repairing. Rental service. Est. 1902. Cap. \$5,000. F. D. Abbott, Pres. and Sec.; E. L. Abbott, Treas. and Gen. Mgr.

Chadwick, L. S.—Vice-Pres., Gen Mgr. and Supt. Chadwick Engineering Works. 3207 Spring Garden St., Philadelphia, Pa.

Chain.—A number of metal links flexibly connected at their extremities and employed for communicating motion from one sprocket-wheel to another in chain-driven motor vehicles. There are two chief types: (1) "Block chains" and (2) "roller chains," in which the screwed pin on which the links hinge runs through a tubular roller, which can revolve as it passes over the teeth of the sprocket, thereby diminishing the friction.

In operation, the first of these, the block chain, when it is somewhat slack, is apt to meet the sprocket with a continual clapping, which, at a high speed, becomes a continual rattle. The roller chain, on the contrary, is, to a great extent, free from this defect, and, moreover, being easier to operate, economizes power. For these reasons, as well as the fact of its being superior in strength to

the block chain, the roller chain (see figure) is now found in almost universal use on chain-driven motor vehicles.

The adjustment of the chain requires

care. If too tight, there will be a loss of power through undue friction, and a breakage may result; and should the chain cause a knock at any time through the jumping of a tooth, it is a sure sign that it is dangerously loose. In this case the trouble may be remedied by tightening the chain adjustment-nuts, or, if necessary, by taking out a complete link. Care should be taken to see that the "master-link" (called also a "repair-link" and "connecting link") which fastens the ends of a chain is secure. If one link is wearing faster than the others, it should be replaced with a new one, and, for this purpose, at least one or two spare links and pivots should be carried so as to be always ready at hand in case of emergency. Care should be taken, too, as to chain adjustments, since breakages on a hill or elsewhere may render the brake inefficient and cause a serious accident.

Chains should be taken off periodically, the links and rivet-holes examined, and, if necessary, the chain be immersed in melted fat or tallow, or all the rubbing surfaces be lubricated with a paste of paraffine and graphite applied with a brush. With a chain that is inclosed, it will probably suffice to rub it well with a thin paste of graphite and alcohol.

Chain-case.—A case for enclosing the chain of chain-driven cars and protecting it from the action of sand, mud and rain.

Chain-drive.—The transmission of power by chains from the jack-shaft to the road-wheels, or from the engine direct to a live axle, as in steam-cars.

Chain, Driving.—A chain through which the driving of the wheels of a motor-vehicle is effected.

Chain, Leaf.—A chain with flat links, called also a "cable."

Chain-lubrication.—See Lubrication.

Chain-ring.—The toothed ring which is secured to the spoke of the hub of a rear wheel on cars with side-chain transmission.

Chain, Pitch.—A metal chain, such as that used on a bicycle, for transmitting motion from one sprocket-wheel to another.

Chain, Side.—A chain arranged to drive from the ends of the jack-shaft to driving-wheels revolving upon a dead rear axle.

Chain-sprocket.—The chain-wheel at the end of the differential or counter-shaft. See Sprocket.

Chair, Spring.—Same as spring-saddle. q. v.

Chalfant, Edward Painter.—Sales and Advt. Mgr. Waltham Mfg. Co., Waltham, Mass. B. near Towsen, Md. Ed. Sherwood Academy, Ashton, Md. Mem. Bay State Auto Ass'n., Ad. Men's Club, Boston. Woodland Golf Club, Auburndale, Mass. Res. Woodland Park Hotel, Au-

burndale, Mass. In trade since Jan. 1, 1905. Used first automobile April 1, 1905. Recreations: Automobiling, golfing.

Chalfant Motor Car Co.—Lenover, Pa. Mfrs. automobiles, gas.

Chalk, French.—A soft and unctuous silicate of magnesia, called also "soap-stone," "talc" and "steatite," and which, in the state of a fine powder, is employed for keeping the inner tubes of pneumatic tires from adhering to their casings.

Chalmers, Hugh.—Pres. E. R. Thomas Detroit Co. Co., 2704-18 Jefferson Ave., Detroit, Mich.

Chamber, Combustion.—See Combustion-chamber.

Chamber, Crank.—See Crank-chamber.

Chamber, Float.—The portion of a carburetter in which the float is located.

Chamberlain, C.—434 Front St., Ionia, Mich. (Maxwell, Ford.)

Chamberlin, C. C.—Mgr. Charter & Co., 303 Dearborn St., Chicago, Ill.

Chamberlin, George Finch.—Lawyer; b. April 15, 1861, Croton Falls, N. Y.; graduate Lafayette College, 1881, and Columbia Law School, 1883; admitted to N. Y. bar, 1884.

Mem. Lafayette College and Dwight Alumni Assns. Together with Whitney Lyon, issued a call for a public meeting of automobile owners at the Waldorf-Astoria, June 7, 1899, which resulted in the formation of the

Automobile Club of America, of which he was elected first acting president. Member and club historian of Automobile Club of America, member American Yacht, City and Apawamis Clubs. Residence, 67 W. 52d St. Address, 31 Nassau St., New York City.

Chamberlin, C. E.—Vice-Pres. and Supt. Jos. N. Smith & Co., 4th and Porter Sts., Detroit, Mich.

Chamberlin, R. R.—Leoti, Kan. (Waltham.)

Chamber, Mixing.—The space in a gasoline motor in which the gas is mixed with air.

Chambers & Ainslee.—2 Commercial St., Newark, N. J. Brass fittings, specialties and patented articles in brass or bronze.

Chambers & Son, J. B.—304 N. Vermillion Ave., Danville, Ill. (Pope-Toledo.)

Chambers Motors, Ltd.—Cuba St. Works, Belfast, Ireland. Mfrs. automobiles, gas. (Chambers cars.)

Chameroy, E. at A.—roue de Sartrouville, Vesinet, Seine-et-Oise, France. Mfrs. non-skid bands.

Chamber, Valve.—See Valve-chamber.

Chamois.—A soft pliable leather used on automobiles as a material for straining gasoline.

Champaign Automobile Co.—Champaign, Ill. (Reo, Premier.) Garage, repairing. Inc. \$25,000. Incorporators, Jack C. Richmond, Manford Savage.

Champ, Duvall Co.—Canton, Ill. (Buick, Rapid.)

Champion Co., The Albert.—36 Whittier St., Boston, Mass. Mfrs. Gianoli magnetos, spark plugs, coils. Cap. \$5,000. Est. March, 1905. Albert Champion, Pres., Mgr. and Designer; Frank D. Stranahan, Treas.; Spencer Stranahan, Sec.; F. E. Sanborn, Supt.; Robert Stranahan, Sales Agt.

Champion Mfg. Co.—9-15 Alling St., Newark, N. J. Mfrs. mufflers.

Champion Oil Co.—39th St. and Lowe Ave., Chicago, Ill. Mfrs. oils.

Champion Wagon Co.—Owego, N. Y. Mfrs. automobiles, elec., comm.

Chandler & Sons, W. C.—Plymouth, Mass. Garage.

Chandler Co., The.—31 Taylor St., Springfield, Mass. Mfrs. stampings in brass or steel, name plates, steel stamps, letters and figures for hub caps, radiators, etc. Member M. & A. M. Cap. \$5,000. Est. 1893. Inc. 1902. M. H. Chandler, Pres.; L. J. Chandler, Treas. and Mgr.; C. H. Drude, Vice-Pres., Head of Engraving Dept.; C. H. Osborn, Head of Machine Dept.

Chandler, A. N.—Marshfield, Mass. (Waltham.)

Chandler, H. W.—Pres. and Mgr. Cleaner Mfg. Co., 28-42-44 Olive St., St. Louis, Mo.

Chandler, L. J.—Treas. and Mgr. The Chandler Co., 31 Taylor St., Springfield, Mass.

Chandler, M. H.—Pres. The Chandler Co., 31 Taylor St., Springfield, Mass.

Chandler Oil Cloth & Buckram Co.—East Taunton, Mass. Mfrs. cloth and carpet trimmings.

Chandler, W. N.—Sec. and Treas. Cleaner Mfg. Co., 28-42-44 Olive St., St. Louis, Mo.

Change-speed Gear.—See Gear, Change-speed.

Change-speed Lever.—A lever, usually hand-operated, by which the different speeds of a motor vehicle are controlled.

Channel.—The groove in the periphery of a pulley or wheel in which engages a cord or belt that receives or transmits motion.

Channel Iron.—See Iron, Channel.

Channel Steel.—See Steel, Channel.

Channon & Co., H.—Market and Randolph Sts., Chicago, Ill. Mfrs. automobile covers, tire repair kits.

Chapin, A. A.—1st and M Sts., N. E., Washington, D. C. (Rapid.)

Chanslor & Lyon Motor Supply Co.—542-544 Golden Gate Ave., San Francisco, Cal. Supplies, vulcanizing.

Chantemède.—47 ave de la Republique, Paris, France. Mfrs. motorcycles. (C. D. M. motorcycles.)

Chapell, C. Will.—Oneida, N. Y. Pres National Casket Co.

Chapin, H. Winfield.—B. Dec. 30, 1867, at Oswego, N. Y. Educated at Syracuse public schools. Occupation, Mgr., Sec. and Treas. Brown Lipe Gear Co.; Sec. Syracuse Aluminum & Bronze Co. Member of Citizens Club, Old Heidelberg Club, Mystic Krewe of Kanoona. Connected with automobile trade since 1899, owned first car in 1902. Member of Syracuse Chamber of Commerce, Syracuse Metal Trade Association. Residence, 1012 W. Genesee St. Address 206 S. Geddes St., Syracuse, N. Y.

Chapin, Roy Dikeman.—B. Feb. 23, 1880. Graduate Lansing high school, University of Michigan. Occupation,

Treas. and Gen. Mgr. E. R. Thomas Detroit Co. Director E. R. Thomas Detroit Co. Mem. University, Detroit, Detroit Boat. Detroit Club Yachtsmen, A. C. of Detroit, Country Club. Connected with automobile trade since 1901. Residence 525 Jefferson Ave.,

Detroit, Mich. Office address, E. R. Thomas Detroit Co.

Chaplet.—A form of tire-bolt, the head of which fits inside of the shoe, to which the bolt, passing through the rim, is held by a wing-nut. The head is faced with rubber fabric to prevent rubbing the tire. (2) A metal support for a core in the mould

Chapman & Co., J. B.—51 Taylor St., Springfield, Mass. Mfrs. bronze metals.

Chapman-Ball-Bearing Co.—40 Bristol St., Boston, Mass. Mfrs. ball bearings.

Chapman, H. A.—Pres. S. L. Crosby & Co., 186 Exchange St., Bangor, Me.

Chapman, L. S.—Vice-Pres. Syracuse & Eldridge Glove Co., 924 S. Salina St., Syracuse, N. Y.

Chapman, Treat P.—Brookfield, Mo. (Waltham.)

Chapp, C. C.—Purch. Agt. Glidden

Varnish Co., Rockefeller Bldg., Cleveland, Ohio.

Charcoal Iron.—See Iron, Charcoal.

Charge.—The quantity of electricity which is present on the surface of a body or conductor. (2) The mixture of air and gas drawn into the cylinder of a gas-motor at one stroke of the piston.

Charge, Electric.—See Electric Charge.

Charging.—The operation of forcing a current of electricity through a storage-cell, in order to regenerate it for further period of use. See Cell, Storage.

Charleston Motor Co.—161 Meeting St., Charleston, S. C. Agts. Reo. Premier. Est. November, 1906. Cap. \$5,000. T. B. Jenkins, Pres. and Treas.; J. E. Richard, Sec. and Mgr. Garage, 30 cars; repairing.

Charles, Wm.—Foreman Bryant Garage, 50-56 W. 43rd St., New York City.

Charlesworth Bodies, Ltd.—Coventry, England. Mfrs. tops.

Charley, C. L.—A Parisian automobile

dealer, at one time an important figure in the European trade. For a number of years he controlled the sale of Mercedes cars in Paris and the United States. The success of the Mercedes in winning the 1903 Bennett race gave

that car great prestige, and Charley took advantage of this fact to largely extend their sale.

Charlonneau & Sons, E.—Ironwood, Wis. (Rambler.)

Charron, Fernand.—Villa Grétry, Avenue Grétry, Maisons-Lafitte (Seine-et-Oise), and 45 Avenue de la Grande-Armée, Paris France. Born at Angers in 1866. Co-proprietor of the General Automobile Agency.

and manager of the Société des Automobiles Charron, Ltd., at Puteaux (Seine). He is one of the most prominent persons of the automobile world. He was three times bicycle and tricycle champion of France for en-

durance and speed. In 1885, he was employed by Rudge, with Cirry as manager. In 1892 he was manager of the house of Clement, Rue du Quatre Sep-

tembre; and in 1893, manager of the Humber cycles. In 1897, foreseeing the future of the automobile, he founded the General Automobile Agency. In 1900 he won the Marseilles-Nice, Paris-Amsterdam, Paris-Bordeaux and the first Bennett cup races. In 1901 he founded the C. V. G. manufacturing house, the amount of whose business has risen from \$200,000 the first year to \$1,200,000 the fourth.

Charron, Ltd.—7 rue Ampere, Putaux, Seine, France. Mfrs. automobiles, gas. (C. G. V. cars.)

Charter & Co.—303 Dearborn St., Chicago, Ill. Est. 1905. Mfrs. and jobbers, spark plugs, storage batteries, mechanical oilers. C. C. Chamberlin, Mgr

Chase, A. C.—Vice-Pres. Chase Motor Truck Co., Syracuse, N. Y.

Chase, Mrs. A. F.—Vice-Pres. Chicago Women's Motor Club, Chicago, Ill.

Chase, A. M.—Pres., Gen. Mgr. and Designer, Chase Motor Truck Co., Syracuse, N. Y.

Chase & Co., A. F.—418 3rd Ave., S., Minneapolis, Minn. (Brush, Maxwell.)

Chase & Nicson—936 Jefferson Ave., Detroit, Mich. Garage.

Chase Auto Co.—201 Pitman St., Providence, R. I. Garage.

Chase, Charles S.—Portland Me. (Buick.)

Chase Co., L. C.—Boston, Mass. Mfrs. rubber and leather goods.

Chase, H. M.—Sales and Advt. Mgr. Chase Motor Truck Co., Syracuse, N. Y.

Chase, J. M.—Enfield, N. H. (Jackson)

Chase, L. O.—193 Main St., Oshkosh, Wis. (Thomas.) Est. 1892. Repairing.

Chase Motor Co.—201 Pitman St., Providence, R. I. Mfrs. gasoline marine motors.

Chase Motor Truck Co.—232 E. Water St., Syracuse, N. Y. Makers of the Chase truck. Cap. \$40,000. A. M. Chase, Pres., Gen. Mgr., Designer; A. C. Chase, Vice-Pres.; H. P. Bellinger, Sec. and Treas.; Walter Killum, Supt.; F. F. Brewer, Purch. Agt.; H. M. Chase, Sales and Advt. Mgr. (Atlas, Stoddard-Dayton.)

Chase Motors.—Station Rd., Adderley, London, S. E., England. Mfrs. automobile motors.

Chase, Roberts & Co.—West Ave. and 5th St., Long Island City, N. Y. Mfrs. varnishes, wood fillers. Japans. Cap. \$50,000. Est. 1892. E. M. Roberts Pres. and Head of Selling Dept., William Murray, Vice-Pres. and Head of Mfg. Dept., S. W. North, Sec., Treas. and Head of office.

Chase Yacht & Engine Co.—Providence, R. I. Mfrs. Motorboats

Chasing.—The process of cutting screws on a lathe by means of a tool called a "chaser."

Chasse-loup-Laubat, Marquis Louis de.—Born at Paris, at the ministry of the marine, June 12, 1863. Chevalier of the Legion of Honor; officer of the Acad-

emy; engineer E. P. C.; manager of the Ateliers et Chantiers of the Gironde; treasurer of the Civil Engineers of France; member of the Bureau of the Maritime Technical Association; associate member of the Institute of Naval Architects of

London, and member of the managing committee of L'Auto. He took the initiative in changing the Paris-Bordeaux-Paris Committee, 1895, to a permanent committee, which M. de Dion converted into the A. C. F. He is laureate of the Society of Civil Engineers of France and founder and member of the administrative council of the A. F. C.

Chassis.—A term for the frame together with the power-plant and running gear, independently of the body of a motor-vehicle. In French it has come to mean all this, but originally it designated the frame only. See Frame.

Chateau des Beaux Arts.—Huntington, Long Island, Garage, 50 cars. Full line of automobile supplies; repairing.

Chater Lea, Ltd.—114 Golden Lane, London, E., England. Mfrs. tricars, motorcycles, transmission gears.

Chatfield, C. B.—1201 Center Ave., Bay City, Mich. (Haynes.) Est. 1904. Cap. \$50,000. Garage, 8 cars; repairing

Chatham Motor Car Co.—Chatham, Ontario Co., Canada. Mfrs. automobiles, gas.

Chattanooga Automobile Co.—Southern Hotel Bldg., Chattanooga, Tenn. (Franklin, Cadillac.)

Chatterton.—A black, pitchy material used for making insulated tape and for winding about the joints of electric wires, and also employed for cementing together sheets of gutta percha. It is composed of 100 parts of gutta percha, 30 parts of coal-tar, and 40 parts of resin.

Chauffeur.—A designation for a professional driver of a motor-vehicle, but, originally, and properly (as the name implies), a "stoker" or "fireman."

Chauffeur, Le.—Published at 9 rue Guénégaud, Paris, France.

Chauffeurs' Protection Association of America.—1947 Broadway, New York City. Organized for the purpose of protecting chauffeurs and automobile drivers in all legal matters or otherwise; to collect commissions, wages, royalties, etc.; to aid in framing laws beneficial to chauffeurs; furnish bail bonds; representing members when arrested for speed violations, etc. Edward F. Flammer, attorney for the association.

Chaufourier, M.—10 rue de Palikao, Paris, France. Mfrs. carbureters.

Chauvierre, E.—29 rue Chevallier, Levallois, France. Mfrs. tricarcs.

Chavand et Cie.—119 rue Sebastien-Gryphe, Lyons, France. Mfrs. non-skids.

Chazalnôel, Etienne.—Tarnac, Correze, France. Mfrs. motorcycles. (L'Elan.)

Chauvin et Arnoux.—186 rue Champignonnet, Paris, France. Mfrs. speed indicators.

Check.—A general name for a joint in which one part fits another.

Check-nut.—See Nut, Check.

Check-valve.—See Valve, Check.

Check.—A general term for one of the two corresponding sides or flanks of an object, as the sides of a vise or of a pulley block, etc.

Chelsea Auto Storage Co., The.—516-518-520 W. 37th St. and 517 W. 36th St. Office 520 W. 37th St. Agts.; Manhattan trucks and passenger cars. Est. 1905. Inc. 1907. Cap. \$75,000. A. M. Von, Pres. and Mgr.; F. T. Albro, Vice-Pres.; C. O. Snyder, Sec.; F. Frederick Komp, Treas. Garage, 50 cars; repair-ing.

Chelsea Clock Co.—16 State St., Boston, Mass. Mfrs. automobile clocks.

Chelsea Garage.—California Ave., Atlantic City, N. J. Garage.

Chenango County Automobile Club.—Burt W. Stover, Sec., Norwich, N. Y.

Chénard & Walcker, Société Anonyme des Anciens Etablissements.—rue du Moulin de-la-Tour, Gennevilliers, Seine, France. Mfrs. automobiles, gas. (Chénard & Walcker cars.)

Chenevert, Charles T.—Vice-Pres. Detroit Wire Spring Co., 295-305 Congress St., W., Detroit, Mich.

Chenevert, John D.—Sec. and Treas. Detroit Wire Spring Co., 295-305 Congress St., W., Detroit, Mich.

Chenoweth, W. B.—Snyder, Tex. Garage.

Chesapeake Launch & Motor Co.—Norfolk, Va. (Franklin.)

Chesapeake Motor Carriage Co.—North Ave., nr. Charles St., Baltimore, Md. (Pullman.)

Chesbro, Ernest P.—197 Pleasant St., Willimantic, Conn. (Buick, Cadillac, Waltham.)

Chesebrough, L. F.—2337 Telegraph Ave., Berkeley, Cal. (Cameron.)

Chesley, W.—Factory Mgr. American Coil Co. Inc. Cor. Wall and Cocasset Sts., Foxboro, Mass.

Chester Automobile Co.—Broad and Crosby Sts., Chester, Pa. (Cadillac, Baker.)

Chester Forging & Engineering Co., The.—Broad & Crosby Sts., Chester, Pa. Mfrs. crank shafts.

Chester Co., Jno. W.—114 3d Ave., Nashville, Tenn. (Lambert.)

Chesterton & Co., A. W.—64 India St., Boston, Mass. Mfrs. oils, packings.

Chestnut Hill Auto Garage.—199 Commonwealth Ave., Newton-Centre, Mass. Garage.

Chestnut Hill Motor Car Co.—Chestnut Ave. and Bethlehem Pike, Chestnut Hill, Pa. (Clement-Bayard.)

Chicago Art Metal Works.—67 Lake St., Chicago, Ill. Mfrs. name plates.

Chicago Automobile Club.—13-17 Plymouth Place, Chicago, Ill. Organized 1902, for the "advancement of motoring interests, local and western," and as a social down-town club. Inc. July 2, 1903. Incorporators; Samuel A. Miles, J. A. Ellis, Frank X. Mudd, John Farson, Chas. E. Bartley, Dr. F. H. Davis, Robt. Tarrant, Jr., Chas. W. Gray, W. H. Hoops, Dr. F. C. Greene. Board of Managers; Ira M. Cobe, Pres.; Frank H. Pietsch, 1st Vice-Pres.; Harry J. Powers, 2d Vice-Pres.; Sidney S. Gorham, Sec.; T. J. Hyman, Treas. Directors; John Farson, B. H. Marshall, S. K. Martin, L. E. Myers, Joseph F. Gunther, Charles E. Gregory. Standing Committees: House; Frank H. Pietsch, Chairman; S. K. Martin, N. H. Van Sicklen, W. G. Lloyd, Robert Tarrant, Jr. New Club House; W. G. Lloyd, Chairman; John R. Thompson, Frank H. Pietsch, Membership; T. J. Hyman, Chairman; Elmer H. Adams, Harry J. Powers, Auditing; Oscar G. Foreman, Chairman; Allen S. Ray, A. C. Frost, Runs and Tours; Joseph F. Gunther, Chairman; Guy G. Gibson, C. A. Coey, Racing; Charles E. Gregory, Chairman; Carroll Shaffer, C. A. Coey, Good Roads; Harry J. Powers, Chairman; Charles B. Wood, Frank K. Hoover, Legislation; Sidney S. Gorham, Chairman; Andrew R. Sheriff, L. E. Myers, Graham H. Harris, Entertainment; S. K. Martin, Chairman; B. H. Marshall, Robert Tarrant, Jr. Former Presidents; Arthur J. Eddy 1902; F. C. Donald 1902-3, John Farson 1903-4, Ira M. Cobe 1904-5, John Farson 1905-6, Ira M. Cobe 1906-7. Promoted races between Automobile Club of America and Chicago Automobile Club for Dr. Harold Thomas Trophy, 1904; race meet at Harlem, Chicago, 1905; Reliability-run, 1906;

Harlem race meet, 1907. Has aided in numerous runs and conducted club runs ranging from short jaunts to protracted tours. The St. Paul Carnival tour in 1905 was one of the principal of these.

Chicago Auto Garage Co.—3210 N. Clark St., Chicago, Ill. (Reo, Premier, Columbus.)

Chicago Auto Heater Co.—285 N. State St., Chicago, Ill. Mfrs. automobile heaters.

Chicago Auto Lamp Works.—71 W. Jackson Blvd., Chicago, Ill. Mfrs. acetylene generators, lamps.

Chicago Auto Robe Supply Co.—155-159 Market St., Chicago, Ill. Mfrs. and jobbers, fur cloth and waterproof robes, fur coats, fur gloves, fur floor rugs for automobiles, patentees of the "Spring-belt" auto drivers robes. Not inc. Est. 1905. H. L. Hoenigsberger, Mgr.

Chicago Battery Co.—Michigan Ave. and 14th St., Chicago, Ill. Mfrs. annunciators, storage batteries.

Chicago Brass Co.—Kenosha, Wis. Mfrs. brass and copper metals, rods, tubing.

Chicago by Auto Co., Inc.—247 Franklin St., Chicago, Ill. Est. 1907. Cap. \$2,500. Rental business exclusively.

Chicago Caloric Engine Co.—536 Wabash Ave., Chicago, Ill. Mfrs. marine motors, repairing.

Chicago Carriage & Trimming Co.—1908 Indiana Ave., Chicago, Ill. Mfrs. automobile tops.

Chicago Coach & Carriage Co.—1223-1231 Michigan Ave., Chicago, Ill. Makers of the Duer motorbuggy, first marketed, April 6, 1907. Mfrs. bodies (wood and metallic); tops, wind shields (glass). Cap. \$50,000. James Webster, Sec., Treas., Gen. Mgr. and Advt. Mgr.; Wm. J. Hughey, Pres.; Chas. Duer, Designer and Supt.

Chicago Commercial Auto Mfg. Co.—Chicago, Ill. Mfrs. automobiles, gas, comm.

Chicago Drop Forge & Foundry Co.—West Pullman, Ill. Mfrs. drop forgings.

Chicago Electric Mfg. Co.—435 N. Broad St., Philadelphia, Pa. Mfrs. auto-clocks.

Chicago Eye Shield Co.—143-145-147 S. Clinton St., Chicago, Ill. Mfrs. eye protectors, goggles, and eye shades. Cap. \$2,500. Est. 1896.

Chicago Flexible Shaft Co.—La Salle Ave. and Ontario St., Chicago, Ill. Mfrs. automobile heaters.

Chicago Hardware Foundry Co.—North Chicago, Ill. Mfrs. brass, bronze, aluminum and copper castings, gray iron castings.

Chicago Insulated Wire & Mfg. Co., The.—152-156 Lake St., Chicago, Ill. Mfrs. insulated electric wire.

Chicago Mica Company.—Valparaiso, Ind. Mfrs. mica.

Chicago Motor Car Co.—1615 Michigan Ave., Chicago, Ill. (Packard.)

Chicago Motor Club.—200 S. Clinton St., Chicago, Ill. Organized Sept. 10, 1906, the object being the promotion of automobilism, motor cycling and motor boating; to secure proper government of motoring; aid in the work of securing improved highways and protect its members and other motorists against unjust laws or other abuses. Charter members; O. P. Rotts, Wm. H. Arthur, Geo. G. Greenburg, and 97 others. Former presidents; Wm. H. Arthur. Present officers; F. C. Donald, Pres.; J. W. Hayden and J. F. Gunther, Vice-Pres.; Geo. G. Greenburg, Sec. and Treas. Promoted the annual hill climbing contests at Algonquin, Ill., in conjunction with the Chicago Trade Association.

Chicago Pneumatic Tool Co.—1010 Fisher Bldg., Chicago, Ill. Mfrs. air compressors, special automobile machinery, buffing machines, flexible drilling machines, tools.

Chicago Portable House Co.—4726 Shields Ave., Chicago, Ill. Mfrs. portable houses and garages.

Chicago Rawhide Mfg. Co.—75-77 Ohio St., Chicago, Ill. Mfrs. belting, rawhide gear wheels, packing, tire sleeves.

Chicago Recording Scale Co.—Waukegan, Ill. Mfrs. automobiles, gas.

Chicago Screw Co.—2 N. Canal St., Chicago, Ill. Mfrs. bolts, nuts, cups and cones, screw machine products.

Chicago Tire Club.—Secretary's address 81 Michigan Ave., Chicago, Ill. Organized, March 1907, object "sociability." Charter members; practically all Chicago representatives of tire companies. W. H. Bell, Pres.; G. E. Shugart, Sec.; A. F. Osterloh, Treas.

Chicago Tire Repair Co.—35th and Michigan Ave., Chicago, Ill. Repairing.

Chicago Trade Association.—Chicago, Ill. Organized 1903 to improve trade conditions and local selling. Joseph G. Gunther, Pres.; Henry Paulman, Vice-Pres.; W. A. Githens, Treas.; R. Dayton, Sec. Former president, Ralph Temple.

Chicago Varnish Co.—Dearborn Ave. and Henzie St., Chicago, Ill. Mfrs. varnishes.

Chicago Vulcanizing Co.—1461-1463 Michigan Ave., Chicago Ill. Vulcanizing and tire repairs. Est. October, 1905. Cap. \$20,000. H. W. Terriere, Pres.; J. W. Benton, Vice-Pres.; J. G. Boss, Sec. (Northern.) Garage, 10 cars; automobile rental service.

Chicago Women's Motor Club.—Chicago, Ill. Organized February, 1907, to increase popularity of motoring among women. Charter members: Mrs. C. H.

Foster, Mrs. N. J. Boardman, Mrs. A. F. Chase, Miss Anna M. Andrews. Officers: Mrs. W. C. Johnson. Pres.; Mrs. A. F. Chase, Vice-Pres.; Mrs. N. J. Boardman, Sec.; Miss Anna M. Andrews, Treas. Directors: Mrs. O. W. Close, Mrs. C. C. Brodie, Mrs. Mayne McKenna, Mrs. A. F. Chase, Mrs. N. J. Boardman. Former President, Mrs. C. H. Foster.

Chicot, S.—78 rue des Arts, Levallois, Seine. France. Mfrs. wood wheels, wood rims.

Childs & Co., Chas. H.—12 Lafayette St., Utica, N. Y. (Packard, Franklin, Pope-Waverley, Pope-Hartford, White, Autocar.) Garage.

Childs & Co., S. D.—200 S. Clark St., Chicago, Ill. Mfrs. license numbers, monograms, name plates.

Childs Co., O. J.—48-50 Liberty St., Utica, N. Y. Mfrs. fire extinguishers. Est. 1896. O. J. Childs, Pres.

Childs, O. J.—Pres. O. J. Childs Co. 48-50 Liberty St., Utica, N. Y.

Childs Co., The G. B.—499 Greenwich St., New York City. Mfrs. oils, metal polishes.

Childs, Walter H.—McKeesport, Pa. (Dolson.)

Chill.—A metallic mould used for chilling and casting.

Chilling.—The hardening of a casting by the use of a mould made of metal.

Chillingworth, Rud.—Nürnberg, Germany. Mfrs. pressed steel frames.

Chisel.—A steel tool with a sharp beveled end employed for chipping wood or metal, and of which there are several varieties, such as the "cape" (Fig. 1), "cold" or "chipping" (Fig. 2), "diamond-point" (Fig. 3), "flat" and "round-nosed chisel" (Fig. 4).

 Fig. 1.

 Fig. 2.

 Fig. 3.

 Fig. 4.

Chisholm, S. H.—Pres. Long Arm System Co., Lakeside Ave. and E. 38th St., Cleveland, O.

Chisholm-Phillips Automobile Co.—5906-8 Euclid Ave., Cleveland, O. (Stevens-Duryea.) Supplies, garage, repairing.

Chittenden, C. M.—Pres. Okey Motor Car Co., West Broad and Kimball Sts., Columbus, O.

Chock.—A piece of metal fastened to the deck of a boat and having jaws through which a rope or cable may pass.

Christ, E. J.—7 Franklin St., Hempstead, N. Y. Garage.

Christ, G. B.—Niagara Falls, N. Y. (Maxwell.)

Christiansen & Co., H. C.—63 St. Kon-

gensgade. Copenhagen, Denmark. Mfrs. automobiles, gas comm., motorcycles.

Christensen, N. A.—1212 Harman Bldg., Milwaukee, Wis. Mfr. fuel and air pumps.

Christenson & Co.—Galveston, Tex. (Ford.)

Christie Motor Co.—51st St. and 12th Ave., New York City. Garage.

Christopher Bros.—1049 Sheffield Ave., Chicago, Ill. Mfrs. carburettors. Garage.

Chrome Leather.—See Leather, Chrome.

Chromium.—A hard grayish-white metal (Cr.) of the atomic weight of 52.1, and density of 6.92. It is extremely hard, less fusible than platinum and is oxidizable in moist air. It is employed in metallurgy for the production of extra-hard steel. The use of chrome steel, chrome copper, etc., is becoming more and more widespread for manifold mechanical purposes. Chromium does not occur native, but exists in combination in chromite, chrome ochre, and selwynite. The salts of chromium have been employed in recent years for the manufacture of what is called "chrome leather" (q. v.), a material of which most anti-skids are made.

Chuck.—A device for holding work on the mandrel of a lathe; or for holding small drills. There are many forms.

Church, Alfred Whiting.—B. May 18th, 1877, in Elgin, Ill. Educated at Cornell. (Mechanical and civil engineering.) Oc-

cupation, Sec. Wyckoff, Church & Partridge. Director in five companies. Member of Chicago A. C., N. Y. Athletic Club, Chi Psi, Arctic, Rockford C. C., Rockford A. C., Elgin C. C., A. C. A., N. Y. Motor Club. Connected with automobile

trade since Oct. 15, 1902. Recreations. motoring, cruising, hunting, fishing. Address, 1743 Broadway, New York City.

Church & Caswell.—Narragansett, R. I. Garage.

Church, E. B.—140 W. 42nd St., New York City. Garage.

Church, E. S.—Gen. Mgr. Waltham Mfg. Co., Waltham, Mass.

Church, J. S.—Treas. Davis Mfg. Co., Milwaukee, Wis.

Church, M. Clay.—Sec. Couple-gear Freight Wheel Co., Ashton Bldg., and Sec. Holson Motor Patents Co., Pythian Temple. Grand Rapids, Mich.

Church, Melvin B.—Pres. Couple-gear Freight Wheel Co., Ashton Bldg., and Pres. and Gen. Mgr. Holston Motor Patents Co., Pythian Temple, Grand Rapids, Mich.

Church, M. J.—Sec. Davis Mfg. Co., Milwaukee, Wis.

Church Motor & Launch Co.—62 William St., New York City. Mfrs. motor-boats.

Churcher, W. B.—With Cincinnati Auto Vehicle Co., 117-21 Opera Pl., Cincinnati, O.

Churchill & Co., F. E.—52 High St., Brockton, Mass. Garage.

Churchill Cabinet Co.—72 Churchill Ct., Chicago, Ill. Mfrs. spark coil, dash coil and battery boxes. Cap. \$10,000. Est. 1904. John J. Keenan, Pres.; O. Gullicksen, Sec. and Treas.; August Heiser, Gen. Supt.

Churchill, C. W.—Mgr. New York City Branch Winton Motor Carriage Co., Broadway and 70th St.

Churchill, G. B.—Pres. Churchill Hardware Co., 238-240 Main St., Galesburg, Ill.

Churchill Hardware Co.—238-240 Main St., Galesburg, Ill. (Gale.) Est. 1882. Cap. \$20,000. G. B. Churchill, Pres.; L. L. Steele, Treas.

Churchill, N. L.—Vice-Pres. Welch Motor Car Co., Pontiac, Mich.

Churning, E. C.—Mgr. auto livery department McCook Auto Co., 308 W. Denison St., McCook, Neb.

Cia Pan-Americana de Vehiculos.—Mexico City, Mex. (Buick, Packard.)

Cia des Magnetos Simms-Bosch, Ltd.—22 rue Violet, Paris, France. Mfrs. spark plugs, magnetos.

Cimiotti Garage Co.—Broadway and 110th St., New York City. Garage.

Cincinnati Auto Co.—215-219 E. 5th St., Cincinnati, O. (Pope-Toledo, Pope-Hartford, Peerless.) Est. 1902. Cap. \$25,000. R. J. Hillenbrand, Pres.; H. O. Brunton, Sec., Treas. and Head of Sales Dept.; W. F. Meyers, Head Sundries and Supply Dept.; Wm. Wells, Head of Machine Shop. Garage, 50 cars. Repairing.

Cincinnati Electric Tool Co.—650-652 Evans St., Cincinnati, O. Mfrs. portable electric drills, grinders, blowers, motor-driven flexible shafts, electric buffing and polishing lathes. Cap. \$50,000. Est. Oct. 18, 1902. Louis Goldman, Pres.; Ben. Heidingsfeld, Vice-Pres. and Treas.; Harry Frohman, Sec.; Isider Rauh, Gen. Mgr.; Joseph Pflume, Supt.

Cincinnati Milling Machine Co.—Cincinnati, O. Mfrs. milling machines, universal cutters and tool grinders.

Cincinnati Motor Vehicle Co.—117-21 Opera Pl., Cincinnati, O. Agts. Pope-Waverley and Marmon; also Exide storage batteries. Est. January, 1906. W. B.

Churcher, Pres. and Gen. Mgr. Garage, 15 cars. Repairing.

Cinematics.—That part of mechanics in which is studied motion, independently of the forces brought into play for producing them.

Cinogène.—36 rue des Grandes-Carrières, Paris, France. Mfrs. automatic starters.

Circle-iron.—The same as fifth wheel. q. v.

Circle, Pitch.—See Pitch-circle.

Circuit.—The connecting wires and cables with receiver (such as lamp, motor, etc.) and generator forming a continuous conducting path for a current of electricity. When a "break" is made in the conductor so that a current no longer flows, the circuit is said to be "open," and when the connection is established so that the current flows, the circuit is said to be "closed."

Circuit-breaker.—A device which acts automatically to break the circuit of a storage-battery charging-plant, when too high or too low a voltage exists. (2) Another name for contact-breaker. q. v.

Circuit, Short.—A path of low resistance in an electrical circuit through which the current flows in preference to going in the right direction.

Clash-gear.—Same as sliding gear. See Gear. Sliding.

Circulating-pump.—See Pumps.

Citizen's Motor Car Co.—N. E. cor. 7th and Main Sts., Cincinnati, O. (Packard, Pierce, Cadillac, Columbus.) Est. 1906. Cap. \$150,000. I. M. Richardson, Pres.; J. W. Tarbill, Vice-Pres., Treas. and Gen. Mgr.; Robert Ramsey, Sec.; C. C. Blackmore, Office Mgr.; R. H. Thomas, Supt.; C. C. Crane, Repair Shop Foreman; Geo. Larkins, Garage Foreman. Garage, 125 cars. Repairing.

Citizen's Transit Co.—Cleveland, O. Garage.

City Automobile Co.—Crawfordsville, Ind. R. B. Irwin, Prop. Garage and supplies.

City Cycle & Auto Co.—29 Railroad St., Cortland, N. Y. Branch of Elmira Arms Co., Elmira, N. Y. Est. 1901. James A. Fawell, Mgr. Repairing.

City Hall Automobile Co.—66 Fulton St., San Francisco, Cal. (De Luxe, Auburn, American Mors.)

City Ignition Co.—14 Spencer St., Goswell Road, London E. C., England. Mfrs. spark plugs.

City Machine & Mfg. Co.—Detroit, Mich. Garage.

City Machine Co.—9-13 Orchard St., Detroit, Mich. Mfrs. axles, wood wheels.

City Motor Car Co.—1363 Bush St., San Francisco, Cal. (Stearns.)

Civelli de Bosch, Ltd.—Billancourt, Seine, France. Mfrs. automobiles, gas.

Clack-valve.—See Valve, Clack.

Clamp.—An appliance used for gripping a piece of work in order to force its parts into close contact, the requisite pressure being usually applied by means of a screw. (2) Pieces of wood or soft metal fitted to the jaws of a vise for holding polished or delicate objects. (3) The internal planking of a vessel upon which the deck-beams rest.

Clamp-dog.—A lathe-dog having a pair of clamping jaws.

Clamp, Screw.—A tool used for temporarily holding together two pieces to be united, either to mark the place of holes, or to make a fac simile by file or other tool of a piece held against another. It consists of a semi-circular piece of steel, one of the extremities of which is provided with a tempered screw, which can be tightened up by hand.

Clamp-screw.—A clamp operated by a thumb-screw.

Clamp, Spring.—The same as "screw clip." See Clip, Screw.

Clampitt, Gay S.—Sec. and Treas. The Broc Co., 1665-69 E. 40th St., 4021-23 Payne Ave., Cleveland, O.

Clancy, J. F.—Western Ave., Gloucester, Mass. Garage.

Clandon, C. J.—Fairbury, Ill. Garage.

Clanton, W. H.—Montgomery, Ala. (Jewel.)

Clapp Mfg. Co., E. D.—Auburn, N. Y. Mfrs. drop forgings.

Clapp, J. Reginald.—379 S. Main St., Geneva, N. Y. (Covert.)

Clarendon Auto Station.—2001 Clarendon Ave., Chicago, Ill. Garage.

Clarion Automobile Co.—Main St., Clarion, Pa. (Jackson.)

Clark Auto Co.—1201 Main St., Anderson, Ind. (Mitchell, Maxwell.)

Clark, A. E.—4th and Ohio Sts., Huron, S. Dak. Holsman agency for S. Dak. Est. 1906. Not inc. Garage, 12 cars.

Clark, Allis.—Medina, N. Y. Garage.

Clark Automobile Co., E. R., The.—Whetstone Bldg., Brattleboro, Vt. (Buick, Cadillac, Knox.) Cap. \$5,000. Incorporators: Mortimer Stoddard, A. F. Schwenk, Kittredge Hastings, A. B. Clapp, H. E. Eddy.

Clark Auto Co., E. R.—461 Worthington St., Springfield, Mass. (Cadillac.) Garage.

Clark, B. B.—Livingston, Orange County, Fla. (Waltham.) Est. 1907. Not inc. B. B. Clark, Mechanical and Sales Mgr.; H. B. Clark, Electrical and Operating Mgr. Garage, 12 cars. Repairing.

Clark Bros. Bolt Co.—Milldale, Conn. Mfrs. bolts, nuts, washers, screws. Cap. \$100,000. Est. 1854. C. H. Clark, Pres.;

Edwin S. Todd, Sec. and Treas.; Chas. C. Persiani, Factory Supt.

Clark, Chas. B.—N. Yakima, Wash. (Waltham.)

Clark, C. D.—Torrington, Conn. (Buick, Jackson.)

Clark, C. H.—Pres. Clark Bros. Bolt Co., Milldale, Conn.

Clark, Chas. S.—Sec. and Treas, Dover Garage Co., 74 E. Blackwell St., Dover, N. J.

Clark, C. W.—Sec. Clark Novelty Co., 380 Exchange St., Rochester, N. Y.

Clark, D. A.—Mgr. Southern Automobile Co., 1200 Mt. Royal Ave., Baltimore, Md.

Clark, Ed. S.—242 Freeport St., Boston, Mass. Mfrs. automobiles, steam; marine motors; automobile parts.

Clark, Fayette C.—Vice-Pres. The Grant Mfg. Co., 90 Silliman St., Bridgeport, Conn.

Clark, Frank.—Ass't Supt. Ellwood Ivins Tube Works, Philadelphia, Pa.

Clark, Frederick A.—Main and 3rd Sts., Zanesville, O. Garage.

Clark, Geo. F.—660 Main St., Worcester, Mass. (Indian.)

Clark Glove Co., The.—Peabody, Mass. Mfrs. gloves, gauntlets, leggins.

Clark, H. B.—Electrical Operating Mgr. B. B. Clark, Livingston, Orange County, Fla.

Clark, I. G.—616 San Antonio St., El Paso, Tex. (Holsman.)

Clark, I. M., Jr.—136 Bower St., Jersey City, N. J. (Waltham.)

Clark Insulation Co., The.—186 Freeport St., Boston, Mass. Mfrs. insulated wire.

Clark, J. A.—Eastern Ave., Herkimer, N. Y. (Maxwell.)

Clark, J. M.—Casino Terrace, Newport, R. I. (Dolson, Mercedes.)

Clark, J. M.—Yoakum, Tex. (Waltham.)

Clark, John.—1005 Park Ave., Chicago, Ill. Garage.

Clark, John W.—Albany, N. Y. Mfr. brass, bronze, aluminum and copper castings, bronze metals.

Clark, J. Y.—Leesburg, Fla. (Carter-car.)

Clark, L. A. & A. T.—Cottage St., Portland, Me. Garage.

Clark, Leroy.—Pres. The Safety Insulated Wire & Cable Co., 114 Liberty St., New York City. Factory, Bayonne, N. J.

Clark, M. F.—Pres. and Treas. Clark Novelty Co., 380 Exchange St., Rochester, N. Y.

Clark Motor Co., E. C.—Jackson, Mich. Mfrs. transmission gears, gasoline automobile motors.

Clark. Novelty Co.—380 Exchange St., Rochester, N. Y. Mfrs. tire clamps,

metal specialties, brass and steel parts, brass and iron rod, sheet steel and brass. Cap. \$50,000. Est. 1890. Inc. 1898. M. F. Clark, Pres. and Treas.; C. W. Clark, Sec.

Clark, Wm. C.—Head of paint shop, Fickling & Co., Inc., 154 E. 57th St., New York City.

Clark, W. L.—Vice-Pres. Greene Motor Car Co., 88-90 Washington St., Newark, N. J.

Clark's Auto Transit Co.—20 Ocean St., Jacksonville, Fla. (Pope-Hartford.)

Clark & Co., A. F.—2130 W. Susquehanna Ave., Philadelphia, Pa. Mfrs. storage batteries.

Clark & Son, A. N.—Plainville, Conn. Mfrs. washers.

Clarke, E. P.—Arcade, Utica, N. Y. Mfrs. gasoline strainers.

Clarke, J. S.—Pres. The Autocar Co., Ardmore, Pa.

Clarke, James M.—134 Washington St., Providence, R. I. (Mercedes.)

Clarke, L. S.—Vice-Pres and Consulting Engineer, The Autocar Co., Ardmore, Pa.

Clarke, W. S.—Cor. Broad and River Sts., Milford, Conn. (Ford, Lambert.)

Clarksdale Machinery & Supply Mfg. Co.—Clarksdale, Miss. Est. 1905. Cap. \$10,000. Repairing.

Clark's Garage.—Boston Post Road, Stamford, Conn. (Winton.) Garage.

Clarkson & Oliver.—601-603 Mesquite St., Corpus Christi, Tex. Agts. Northern, Ford, Rapid. Oldsmobile. Est. 1894. Garage, 20 cars. Repairing.

Clarkson, Ltd.—Moulsham Works, Chelmsford, England. Mfrs. automobiles, steam comm.

Clasen, W. H.—Head of footwear dept. Syracuse Rubber Co., 212-214 S. Clinton St., Syracuse, N. Y.

Clayton, Geo. L.—Oakland, Cal. (Dorris.)

Clayton & Lambert Mfg. Co.—Detroit, Mich. Mfrs. brass, bronze, aluminum castings, special bearing metal castings for automobile motors, gasoline fire pots, torches.

Clayton, W. C.—Key West, Fla. (Waltham.)

Cleaner Mfg. Co.—2842-44 Olive St., St. Louis, Mo. Mfrs. metal polishes. Est. 1895. H. W. Chandler, Pres.; W. N. Chandler, Sec. and Treas.; H. W. Chandler, Mgr.

Cleanola Co.—Fulton Bldg., Pittsburg, Pa. Mfrs. body polishes and soaps.

Clearance.—The amount of space left between two parts which have to fit or engage with each other. (2) The space between a piston and the end of the cylinder in an engine when the piston is at the end of its stroke. (3) The space be-

tween the bottom of a car-frame and the ground.

Cleat.—On a boat a wood or metal

contrivance on which the free end of a rope is coiled in order to make it fast.

Cleland, H. W.—61 E. Swain St., Buffalo, N. Y. Garage.

Clement, Albert.—B. in France, April 28, 1885; d. in May, 1907, as a result of

an accident in his car while practicing for the Grand Prix. Son of Gustave Adolphe Clement, head of the Bayard-Clement concern. Began racing in 1903, in the Mont Ventoux hill climb. Competed in the fourth and fifth Bennett races and

the first Vanderbilt cup contest. In the latter, held in 1904, he was leading on the last lap, but ultimately finished second to George Heath. He finished second to Szisz in the 1906 Grand Prix, and fourth in the 1906 Vanderbilt race.

Clement, Gustav Adolphe.—33 Quai Michelet, Levallois - Perret (Seine), France. Born at Pierrefonds (Oise), Sept. 22nd, 1855. Officer of the Legion of Honor. In 1878, he established himself

at No. 20 Rue Brunel, Paris, for the manufacture of "velocipèdes." In March, 1894, he organized the Clement Société des Velocipèdes, with a capital of \$800,000. In 1895 he became directing manager of the Clement-Gladiator Com-

pany, a position which he held until October, 1904. At present he is sole owner of the Bayard-Clement car, to the manufacture of which he is devoting his entire attention. The number of workmen employed by him at present exceeds 2,000.

Clement et Gladiator, Société Française des Cycles.—Pré-St-Gervais, Paris, France. Mfrs. motorcycles.

Clément-Talbot, Ltd.—Barlby Road, Kensington, England. Mfrs. automobiles, gas (Talbot cars.)

Clemick-Hirsch Co.—594 National

Ave., Milwaukee, Wis. Mfrs. carbureters, gasoline marine motors.

Cless und Plessing.—36 Grazergrasse, Graz, Styria, Austria. Mfrs. motorcycles.

Cleveland Automobile Club.—Hollenden Hotel, Cleveland, O. Organized Jan. 8, 1900, for the promotion of the motor vehicle industry and construction of improved highways. Charter members: Walter C. Baker, Thomas Henderson, A. S. Ingalls, H. S. Pickands, Walter S. Root, F. B. Stearns, E. L. Strong, Geo. L. Weiss, Alex. Winton, Rollin H. White, Windsor T. White. Officers: Fred. T. Sholes, Pres.; A. Ward Foote, 1st Vice-Pres.; Geo. Colliester, 2d Vice-Pres.; C. J. Forbes, Sec.; W. T. White, Treas. Chairmen of committees: F. T. Sholes, Executive; F. S. Porter, Auditing; F. N. Bindelan, House; Fred. R. White, Committee of Laws; Walter C. Baker, Highways; C. K. Chisholm, Touring. Former Presidents: E. L. Strong, E. Shriver Reese.

Cleveland Automobile Trade Association.—Cleveland, O.

Cleveland-Canton Spring Co., The.—Canton, O. Mfrs. leaf springs.

Cleveland Cap Screw Co.—2216 Clarkwood Road, Cleveland, O. Mfrs. screws and bolts, valves, transmission shafts, cam shafts, truss rods, etc. Cap. \$250,000. Est. 1901. C. E. Thompson, Gen. Mgr.; J. A. Krider, Sales Mgr.; W. D. Bartlett, Supt.

Cleveland Faucet Co., The.—706 Frankford Ave. N. W., Cleveland, O. Mfrs. automobile pumps. O. Horix Sales Mgr.

Cleveland Hardware Co.—1300 Lake St., Cleveland, O. Mfrs. drop forgings, automobile tops.

Cleveland Motor Car Co.—Home office and New York Branch, 1659 Broadway, New York City. Factory, Milwaukee, Wis. Makers of the Cleveland car; first marketed in 1904. Four models made since. Cap. \$300,000. James Laughlin, Pres., Sec. and Treas.; S. W. Hartley, Engineer, Designer, Pur. Agt. and Supt.; Charles G. Percival, Sales and Advt. Mgr. Chicago Branch, 1470 Michigan Ave.; Richard Bacon, Mgr. Dealers: Colonial Auto Co., Pittsburg, Pa. Van Auto Co., St. Louis, Mo. Butler Motor Car Co., Boston, Mass. Girard Motor Car Co., Philadelphia, Pa. Crescent City Auto Co., New Orleans, La. J. W. Leavitt & Co., San Francisco, Cal. Lord Motor Car Co., Los Angeles, Cal. C. W. Poole, Seattle, Wash. Dupont Garage Co., Washington, D. C.

Cleveland Motor Car Co.—Chicago Branch, 1470 Michigan Ave., Chicago, Ill. (Cleveland.) Richard Bacon, Jr., Gen. Mgr. Repairing.

Cleveland Tanning Co.—Jennings and

Dennison Ave., S. W., Cleveland, O. Mfrs. leather.

Cleveland Varnish Co.—Cleveland, O. Mfrs. varnishes.

Cleveland Wire Spring Co.—Cleveland, O. Mfrs. waste cans, machinery springs, seat springs.

Clèves de et Chevalier.—23 ave. du Roule, Neuilly-s-Seine, France. Mfrs. automobiles, gas. (Labor cars.)

Clevis.—A fitting used for connecting two rods in such a way as to permit of relative lateral motion between them. It consists of a piece terminating in a fork containing an aperture for the reception of a pin, the function of which is to connect one clevis with another having a tongue exactly fitting between the cheeks of the fork (male clevis); the pin passing through both and being held in place by a cotter-pin or split-pin inserted in a hole

in it. Clevises are to be found on every automobile. They are also called "yoke-ends" and are usually made of metal corresponding to that of the rods of which they form part.

Click.—A pivoted catch M (see figure) arranged to fall into the teeth of a ratchet-wheel as it revolves in one direction, to prevent a back motion when the wheel-moving power is withdrawn. It may act either by gravity or a spring.

R. See Pawl and Ratchet-wheel.

Clifton, Charles.—B. Sept. 20, 1853, in Buffalo, N. Y. Educated at public schools. Occupation, Treas. The George N. Pierce Co. Pres. A. L. A. M. Pres. Association Patent Co. Director, The George N. Pierce Co., Automobile Club of Buffalo. Pierce Cycle Co. N. A. A. M. Connected with automobile business since 1898. Member Buffalo Automobile Club, Buffalo Engineers

Club. New York residence, 61 Irving Pl. Address, 1601 Elmwood Ave., Buffalo, N. Y.

Clifton Hotel Garage.—Niagara Falls, Ontario, and Upper Bridge, Niagara Falls, N. Y. Garage.

Clifton Motor Works.—265 E. Clifton Ave., Cincinnati, O. Mfrs. gasoline marine motors.

Climax Igniter Co.—Amesbury, Mass. Mfrs. magnetos and ignition dynamos, spark plugs.

Clinch.—The flange-like edge of a clincher tire; called, also, a "bead."

Clincher.—The incurved part of a rim for pneumatic tires in which the "beading" is fitted and by which the tire is maintained in place when the air pressure within causes the "beads" to expand into the clinchers.

The diameter of a clincher-rim is measured from the interior part of the clincher to a symmetrical interior point, diametrically opposite.

Cline, J. W.—Brook, Ind. (Ford.)

Clinger, E. E.—Grand Island, Neb. Repairing.

Clinker.—A term applied to the strikes of a boat when their edges overlap; sometimes spelled "clinker."

Clinton Auto Co., H. D.—Binghamton, N. Y. (Matheson.)

Clinton, Harry T.—B. Feb. 28, 1877, at Attlebury, Dutchess County, N. Y. Educated at Pratt Institute. Occupation, Advt. Mgr. A. L. A. M. Member: A. C. A., New York Motor Club. Residence, Dobbs Ferry, N. Y. Address 7 E. 42nd St., New York City. Owned first car in 1903.

Clinton, Louis R.—17 Carhart St., Binghamton, N. Y. (Thomas Flyer.)

Clinton, Walter R.—34 Elm St., West Haven, Conn. Garage.

Clip.—A device for clasping and holding things together, as the leaves of a spring.

Clip, Spring.—An iron clamp in the shape of a flat-bottomed U, of which the branches, B, which pass through holes in the spring-pad, are threaded for the reception of tightening nuts to hold the spring on its seat; also a clasp embracing a spring to keep the leaves from spreading.

Clipper Pneumatic Tyre Co., Ltd.—Alma St., Coventry, England. Mfrs. pneumatic tires.

Close Bros.—405 Smith St., Schenectady, N. Y. (Knox. Cadillac.) Supplies, garage, repairs.

Closset, Ch.—rue Ste-Marie, Liège, Belgium. Mfrs. bodies.

Clough, C. R.—Partner, Southern Garage Co., 35-37 W. Mound St., Columbus, O.

Clough, M. P.—Treas. Waltham Mfg. Co., Waltham, Mass.

Clouser, M. E.—New Smyrna, Fla. Repairing.

Cloutier, A. J.—Vice-Pres. Douglass & Lomason Co., 302-310 Grand River, Detroit, Mich.

Clover Mfg. Co.—228 W. 58th St., New York City. Dealer in second-hand cars. Mfrs. grinding compound.

Cowes, Chas.—Good Ground, L. I., N. Y. Garage.

Club Garage.—729 S. Main St., Akron, O. (Lambert, Queen, Glide, Plymouth.)

Cluff, Wm. A.—Mgr. Hatcher Auto Parts Co., 2108 Superior Ave. Viaduct, Cleveland, O.

Clum & Atkinson.—575 Lyell Ave., Rochester, N. Y. Mfrs. aluminum, brass, bronze, phosphor bronze, manganese bronze, white brass castings, babbitt metal, white brass, bearing metals, aluminum solder, brass unions. Est. 1883.

Clutch.—A mechanism for connecting a shaft or transmission to the motor that actuates it. A clutch therefore must not be confused with a "coupling," which provides a continuous junction. There are numerous types of clutches, each named from its form or method of engagement, such as the cone, the external contracting, the internal expanding, the multiple disk, the hydraulic, the magnetic and the pneumatic clutches. The simplest type of these is the cone-clutch, of which there are many modifications, although the principle is the same throughout. Of this, one member forms part of

Fig. 1.

the fly-wheel, D (see Fig. 1, which represents the Renault clutch), while the other, C, is attached to the shaft, A, entering the gear-case. Such a clutch is held in place by a very stiff spring, R, which maintains a contact between the friction surfaces, one of which is faced with leather, until it is disengaged by a movement of a foot-lever, E, or the emergency brake-lever to which it is connected. In this form of clutch the wear between the two members is excessive and the clutch constantly requires adjustment. Owing to such disadvantages it has been replaced to a considerable extent by other types, such as the expanding and multiple-disk clutches.

Fig. 2 shows an internal expanding clutch of the Berliet type.

Here, the fly-wheel, V, carries in the center a hub, T, in the interior of which rub and then adhere two metallic segments, BC. The latter are joined at one point, A, in common, so that if the lever, F, be moved toward the left they will separate from each other of themselves, and that if, on the contrary, their elasticity be permitted to act, the two segments will approach each other. It will be seen that the separation of the seg-

Fig. 2.

ments will be so much the greater in proportion as the displacement of the lever F to the right is more pronounced. Such displacement is effected by a finger, D, with a pointed end, which first enters, by its extreme point, the aperture to the right of the lever F, and then forces its way deeper thereinto until the full clutching is effected. The finger, I, is constantly pushed inward in the clutching mechanism by a spiral spring, R. A large lever, P N M, actuated at P by the driver's foot, and jointed at N, is pushed back, through the finger D, in order to throw the clutch out.

The multiple disk clutch, which has been adopted by some of the leading makers of motor-cars, consists of multiple disks of metal, each alternate one of which is attached by its edge to the driving-member, while the other disks are attached at their centres to the driven member, or vice versa. Light springs cause these to separate sufficiently to be clear of engagement when the clutch is released. The total amount of surface is so large that the friction co-efficient may be very small. This form of clutch runs in oil and has no appreciable wear.

Clutch, Bayonet.—A device for engaging a moving fast pulley or wheel with a loose or idle one, by means of pins or "bayonets" that act upon a friction strap.

Clutch, Coil.—A clutch in which the gripping action is obtained by the automatic tightening of a spring steel coil upon the inside of a parallel or on the outside of a conical steel drum.

Clutch, Cone.—See Clutch.

Clutch, Contracting.—See Rim-clutch.

Clutch, Crab.—A clutch called also a

"jaw clutch," in which engagement is effected by the interlocking of two oppositely toothed collars.

Clutch, Dish-pan.—The same as cone-clutch. q. v.

Clutch, Disk.—See Clutch.

Clutch, Dog.—See Crab Clutch.

Clutch, Expanding.—A clutch in which one or two segmental sections are forced outwardly against the rim of a drum.

Clutch, Hele-Shaw.—A combination of the disk and cone clutch.

Clutch, Jaw.—The same as crab-clutch. q. v.

Clutch-pedal.—A pedal for operating a clutch.

Clutch, Plate.—The same as disk clutch. See Clutch.

Clutch, Rim.—A clutch, called also a "contracting clutch," which grips the outer periphery of a rotating drum.

Clutch-spring.—A spring for throwing a clutch into engagement.

Clute, A. J.—Pres and Sales Mgr. Clute Bros., 49 Mohawk St., Cohoes, N. Y.

Clute Bros.—49 Mohawk St., Cohoes, N. Y. Agts. Pope-Hartford, Pope-Waverly, Royal Tourist. Est. 1904. Cap. \$5,000. A. J. Clute, Pres. and Sales Mgr.; V. S. Clute, Treas. and Head Repair Dept. Repairing.

Clute, V. S.—Treas. and Head Repair Dept. Clute Bros., 49 Mohawk St., Cohoes, N. Y.

Coakley, J. J.—Advt. Mgr. Babcock Electric Carriage Co., 226-242 W. Utica St., Buffalo, N. Y.

Coale, H. M.—Sales Mgr. The Autocar Co., Ardmore, Pa.

Coaming.—Raised work higher than the deck about the edges of hatch-openings, to prevent water on deck from running down.

Coates Clipper Mfg. Co.—Worcester, Mass. Mfrs. buffing machines, flexible drilling machines, flexible shaftings, turntables, universal joints.

Coatesville Garage.—3rd Ave and Main St., Coatesville, Pa. (Pope-Waverly, Winton.)

Coats, Fred N.—Asst. Sales Mgr. Dayton Motor Car Co., Dayton, O.

Cobe, Ira M.—B. Oct. 29, 1866, in Boston, Mass. Educated at public schools and Boston University Law School. Present occupation, investments. Director, Chicago Title & Trust Co., Calumet Electric Street Railway Co., Assets Realization Co., etc. Owned first car 1900. Member Chicago Athletic. Hamilton, Chicago Automobile, South Shore Country, Midway Clubs. Residence, Kenwood Hotel. Address, 100 Washington St., Chicago, Ill.

Coblenser Verein fur Luft Schifffahrt.—(Coblens Aero Club), Coblenz, Germany.

Coburn & Beldon.—577 Central Ave., Newark, N. J. (Rainier.)

Coburn Heath & Co.—1008 Boylston St., Boston, Mass. (Cameron.)

Cochaux, Emile.—Deville, Ardennes, France. Mfr. radiators.

Cochrane, Garrett.—Pres. Imperial Motor Car Co., 3rd and Locust Sts., Williamsport, Pa.

Cochrane, J. J.—Moose Jaw, Canada. (Waltham.)

Cochran, H. T.—Buena Vista, Colo. (Waltham.)

Cock.—A valve consisting of a "shell" in which turns a "plug" controlled by a "key," and designed to permit or arrest

at pleasure the flow of liquid from some containing vessel or through a pipe. It may be considered as a circular sliding valve. A cock is "two-way," "three-

way" or "four-way" (see figure), when it is so arranged that by turning the central key the liquid may be made to run in two, three or four directions.

Cock, Bib.—A tap of ordinary shape, except that the nozzle is curved downward.

Cock, Blow-off.—An important attachment to all steam boilers and furnishing a ready means of removing water from the boiler under pressure of its own steam, which is called "blowing off."

Cock, Compression.—A cock which, placed on the motor cylinder, may be opened or closed at will for the purpose of testing the compression in the cylinder and determining whether the latter is firing properly.

Cock, Compression-relief.—A cock placed on the combustion-chamber and designed to relieve part of the compression in order to permit of easy hand starting. Called, also, "relief cock." In motors of very high pressure, the compression is generally relieved at the starting by means of one or more cams, which lift the exhaust-valves slightly.

Cock, Drain.—A cock, called also a "pet cock," placed at the lowest point in the water-circulating system, and under the crank-case or the carburetter to drain

off the contents.

Cock, Gauge.—One of the small cocks in a boiler, one above and one below the proper water-level.

Cock, Grease.—A cock used for lubricating purposes.

Cock, Mud.—A cock, called also a "purge-cock," for drawing off boiler sediment.

Cock, Pet.—A small tap fitted to the ends of motor cylinders to enable water to escape before the motor is started.

Cock, Purge.—Same as mud-cock. q. v.

Cock, Relief.—The same as compression-relief cocks. q. v.

Cock, Sea.—Any cock or valve communicating through a boat's hull with the sea.

Cock, Stop.—A term often applied to any kind of cock.

Cock, Try.—One of three cocks placed one above the other on a steam generator, to show the amount of water therein.

Cock, Waste.—The same as drain cock.

Cockerill, Société Anonyme, John.—Seraing, Belgium. Mfrs. automobiles, gas comm. (Nordenfelt trucks.)

Codman & Shurtleff, Inc.—120 Boylston St., Boston, Mass. Mfrs. tire pumps, oil pumps, nipples. Est. 1838.

Coe Brass Mfg. Co.—Torrington, Conn. Mfrs. sheet iron, brass, copper, brass and copper tubing.

Co-Eck Garage Co.—Oil City, Pa. Garage.

Coefficient.—A numerical quantity (commonly obtained by experiment), which enters into a formula as a multiplier.

Coes Wrench Co.—Worcester, Mass. Mfrs. wrenches.

Coey & Co., C. A.—1424 Michigan Ave., Chicago, Ill. Agts. Thomas Flyer, Thomas Detroit. Est. 1895. Cap. \$200,000. C. A. Coey, Pres. and Treas.; Geo. B. Levy, Sec.; Andrew Ott, Vice-Pres.

Coey, Chas. A.—B. July 19, 1870, in Redfield, N. Y. Educated at country schools and New York Business College.

Pres. and Treas. C. A. Coey & Co., Chicago, Ill. Director C. A. Coey & Co., Coey Auto Livery Co. Member Chicago Automobile Club, Illinois Athletic Club, So. Shore Country Club, Columbia Yacht Club, Chicago Yacht Club, Jackson Park Yacht

Club, Rotary Club. Connected with trade since 1901. Owned first car 1890. Recreation, automobile racing. Residence, Auditorium Annex. Address, 1424 Michigan Ave., Chicago, Ill.

Coffin Bros.—515 Greene Ave., Brooklyn, N. Y. (Pierce-Racine.)

Coffin, E. C.—330 D. F. Walker Bldg., Salt Lake City, Utah. (Lambert.)

Coffin, Howard E.—B. Sept. 6, 1873, at W. Milton, O. Educated at University of

Michigan. Occupation, Vice-Pres., Designer and Engineer and Director E. R. Thomas Detroit Co. Member Detroit Automobile Club, Detroit Boat Club, American Society Mechanical Engineers, Society of Automobile Engineers. Address,

care E. R. Thomas Detroit Co. Connected with automobile trade since 1902. Owned first car in 1898. Was Chief Engineer Olds Motor Works, 1905-1906.

Coffing Bros.—Attica, Ind. (Pope-Hartford.)

Cog.—The tooth of a gear-wheel, especially a wooden tooth, or any projecting catch or lifter that serves to move another machine element.

Cog-wheel.—A wheel with teeth made to mesh with those of a similar wheel, so that movement is transmitted from one to the other. See Gear-wheel.

Cohen, Alexander.—Sec. and Treas. Bryant & Berry Co., 34 W. Atwater St., Detroit, Mich.

Cohen & Co., Inc., Frank.—136 W. 23rd St., New York City. Factory, 765-771 Stone Ave., Brooklyn, N. Y. Mfrs. Boots.

Cohendet, A et Cie.—166 quai Jemappes, Paris, France. Mfrs. automobiles, gas comm. (A. Brétin trucks.) Steering gears, transmission gears, automobile motors.

Cohoes Automobile Club.—E. R. Clifton, Sec., Cohoes, N. Y.

Cohoes Auto Storage & Repair Station.—42 Van Rensselaer St., Cohoes, N. Y. Garage.

Coil.—In automobilism, the term "coil" used alone designates the "induction coil" or "transformer" employed for spark-plug ignition by batteries or accumulators. The low tension primary current from the battery is transformed into a high tension secondary current capable of jumping across the gap between the electrodes of the spark-plug. By virtue of the principle of the conservation of energy, it is very evident that the power of the secondary current cannot be greater than that of the primary. It is, in fact, less; what is gained in tension being lost in energy. The value of the e. m. f. induced in a current depends upon the number of spirals and upon the value of the flux of force cut in a unit of time. In dynamos the field is constant. The value of the flux is varied by cutting at a variable angle, so as to embrace a

variable number of lines of force. But the same results are obtained if the spirals are fixed and the value of the field variable. It is this latter mode of induction that is applied in the induction coil, which consists of a bundle of soft iron wires, surrounded by two separate windings, the first of coarse insulated wire. This wire is connected to the battery through a switch and commutator or timer. Around this coarse wire winding, termed the primary winding, is a secondary winding of several thousand feet of finer insulated wire, known as the secondary winding. Between the primary and secondary winding there is no connection. In fact, the windings are insulated from each other. One extremity of the fine wire is grounded and the other leads to the spark-plug. To every closing or breaking of the primary circuit there corresponds an inverse or direct induced current, which is made manifest by a spark at the plug. On account of the self-induction of the primary, the direct induced current (that which corresponds to a breaking) is of much higher tension than the inverse current and alone passes to the spark-plug. The coil is provided with a condenser, composed of a number of layers of tin-foil, separated by paraffine paper, and the object of which is to absorb the self-induced current of the primary winding, and thus prevent it from opposing the rapid fall of the current. It has become quite common to provide the spark-coil with an automatic or mechanical trembler, which sets up a vibrating motion

and produces a series of "fat," hot sparks, instead of one spark, at the plug. the instant the timer makes the circuit. With the trembler the very quick parting of the timer contact is not essential. Generally, there is one spark-coil unit for each cylinder of the motor, although usually the units are carried in a single box on the dash. By having a secondary distributor, it is possible to use one coil to ignite a 4-cylinder motor. Among the advantages of such a system are that the ignition is synchronous, the number of electrical connections is reduced and there is but one coil to adjust.

The figure gives a diagram of a wiring scheme for a 4-cylinder engine, where but one coil is used. Here, A is the bat-

tery, P the primary wire, S the secondary wire, I the commutator, D the distributor, C the condenser, T the trembler coil, M the grounded extremity of the secondary wire, and 1, 3, 4, 2 wires going to the spark-plugs.

Coil-clutch.—See Clutch, Coil.

Coil, Idle.—A coil in certain forms of armature which, at a given instant, has no induced e. m. f. acting in it.

Coil, Intensity.—The same as induction coil.

Coil, Quad.—An abbreviation of "quadruple coil," that is, four individual coils for sparking a 4-cylinder motor, enclosed in a box placed upon the dashboard.

Coil-radiator.—See Radiator.

Coil, Resistance.—A coil of wire (usually of German silver or platinum) of known electrical resistance, used for measuring resistance.

Coil, Ruhmkorff.—The same as induction coil.

Coil, Trembler.—A coil, called also a "vibrator coil," provided with a trembler for making and breaking contact. See Trembler.

Coil-vaporizer.—See Vaporizer, Coil.

Coindet, A.—137 ave. Gambetta, Paris, France. Mfrs. clutches.

Coir.—See Fiber, Cocoa.

Coit, S. J.—21 Chestnut St., Norwich, Conn. Garage.

Coke.—A product of the destructive distillation of coal. It is very hard, and a good conductor of heat and electricity. Among its uses is that of the preparation of pencils for electric arc-lamps, carbon plates for battery cells, and similar articles. The higher grades of such objects, however, are made from coke derived from the residue of petroleum stills. See Carbon.

Colbun, Web.—Sec. Dorris Motor Car Co., 22-38 S. Sarah St., St. Louis, Mo.

Colburn Automobile Co.—Denver, Colo. Mfrs. automobiles, gas.

Colburn Automobile Co., E. A.—15th St. and Colfax Ave., Denver, Colo. (Locomobile, Rauch & Lang, White.

Colby, F. A.—Head of Taxidermy Dept. S. L. Crosby & Co., 186 Exchange, Bangor, Me.

Colby, John W.—Norwalk, Conn. Garage.

Cold Chisel.—See Chisel. Fig. 2.

Coldewey, W. G.—Cincinnati, O. (Frayer-Miller.)

Cole, C. D. W.—Sec. and Treas. Automobile Owners' Supply Depot. 1655 Broadway, New York City.

Colegroove & Rollins.—South Side, Garret, Ind. Repairing.

Cole, J. C.—Vice-Pres. The Fisk Rubber Co., Oak St., Chicopee Falls, Mass.

Cole, Jos.—Patton, Pa. (Elmore.)

Cole, S. R.—39 E. 3rd St., Dunkirk, N. Y. Garage.

Cole, S. W., & Roebke, Wm.—Detroit, Mich. (Reo.)

Cole & Son.—Rockford, Ill. (Ford, Mitchell.) Mfrs. bells.

Cole & Whoop.—50 W. 67th St., New York City. Mfrs. tops, glass fronts, bodies, motor pans. Est. 1896. Geo. N. Cole, Pres.; Wm. Woop, Designer.

Coleman, A. C.—Garage Foreman Lakdel Auto Co., 5143 Delmar Blvd., St. Louis, Mo.

Coleman & Sons, Walter.—300 S. Water St., Providence, R. I. Mfrs. gasoline marine motors.

Coleman, Chas. S.—Treas. Continental Rubber Works, 19th and Liberty Sts., Erie, Pa.

Coleman, Galen.—11 Academy Ave., Middletown, N. Y. Garage.

Coleman, J. C.—234 Jefferson Ave., Detroit, Mich. Mfrs. steering wheels.

Coleman, John G.—Red Wing, Minn. (Waltham.)

Coleman, R. L.—Chairman of Board, National Battery Co., Buffalo, N. Y.

Colfax, R. L.—Pur. Agt. The North Pennsylvania Iron Co., 3rd and Venango Sts., Philadelphia, Pa.

Colgan Co., J. W.—Sudbury Bldg., Boston, Mass. Mfrs. monograms.

Colgan, Peter.—Sec. New Haven Button Co., New Haven, Conn.

Collar.—A metal ring attached to, or formed integral with, a spindle or shaft, and generally employed to prevent movement of the spindle in the direction of its length or axis, or of a piece of machinery along the spindle.

Collar-bearing.—See Bearing, Collar.

Collar, Compensating.—A ring or collar on a shaft that can be adjusted so as to take up wear. It is used especially in machines in which there is a longitudinal thrust on the shaft.

Collar, Pinch.—A clamping band C (see figure) placed around a rubber tube B, to hold it in place on the piping A of a water circulating system.

Collar, Thrust.—A ring or collar on a bearing which takes the longitudinal thrust in the propeller-shaft.

Collaton, Michael.—Foreman J. E. Lonergan & Co., 211-15 Race St., Philadelphia, Pa.

College St. Garage.—College St., Toronto, Canada. Repairing.

Collier, C. E.—Sec. and Treas. White Agency, 176 State St., Binghamton, N. Y.

Collier Tyres.—127 Long Acre, London, W. C., England. Mfrs. pneumatic tires.

Collier, William E.—Designer and Supt. Racine Boat Mfg. Co., Riverside, Muskegon, Mich.

Collignon, Julio.—Guadalajara, Mexico. (Mitchell.)

Collinge, J. Walter.—Riverside, Cal. (Queen.)

Collings, T. C.—Supt. Peerless Motor Car Co., 93rd and Quincy Ave., Cleveland, O.

Collingwood Garage Co.—Collingwood and Bancroft Ave., Toledo, O. Garage.

Collins & Co., D. P.—432 7th Ave., Pittsburg, Pa. (Columbia.)

Collins & Son, G. A.—Akron, O. Mfrs. automobile tops.

Collins Bros.—Steubenville, O. (Mitchell.)

Collins, Daniel.—Main St., Marcus, Ia. Garage.

Collins, J. M.—Purch. Agt. Knox Automobile Co., Springfield, Mass.

Collinson, M.—1253 Michigan Ave., Chicago, Ill. Mfr. automobile tops.

Collison's Garage.—Cor. Church and Maple Sts., Burlington, Vt. Garage, repairs, supplies.

Collister, Geo.—Co-Partner, Collister & Sayle, 224 Superior Ave., N. W., Cleveland, O.

Collister & Sayle.—224 Superior Ave., N. W., Cleveland, O. Est. 1893. Dealers in automobile supplies. Geo. Collister and W. F. Sayle Co-Partners, B. E. Hewitt, Head of automobile supplies dept. Agency for Prest-o-Lite tanks, Weed chain tire grips, Warner auto meters, Solar lamps, Gray & Davis lamps.

Colliy Bailo.—8 passage de la Paz, Barcelona, Spain. Mfrs. radiators.

Collmer Bros.—105 Vestula Ave., South Bend, Ind. Mfrs. sprockets.

Colonial Auto Co.—3944 Olive St., St. Louis, Mo. (Reo, White.)

Colonial Automobile Co.—5518-5520 Walnut St., Pittsburg, Pa. (Aerocar, Cleveland, Pungs-Finch, Baker, Cartercar, Brasier.) H. W. Klein, Pres.; H. N. Miller, Sec.; R. C. Succop, Treas. Directors: D. N. Miller, R. H. Mueller, J. H. Shaffer.

Colonial Auto Garage.—50-52 E. 39th St., Chicago, Ill. Garage.

Colonial Brass Co.—316-318 Seneca St., Cleveland, O. Mfrs. tire pumps.

Colonial Garage.—Narragansett Pier, R. I. Supplies, garage, repairs.

Colonial Garage.—220 W. 30th St., New York City. Est. 1905. John E. Lloyd, owner. Second-hand cars. Garage, 60 cars; repairing.

Colonial Rubber, Société Anonyme.—Grand Nord, France. Mfrs. pneumatic rubber tires.

Colorado Automobile Club.—214 Col-

burn Bldg., Denver, Colo. Member A. A. A. Organized May 15, 1902. Object, "Mutual protection of autoists." F. L. Bartlett, Pres.; Dr. J. W. O'Connor, Vice-Pres.; Louis Searing, Treas.; W. H. Bergtold, Sec. Former President, D. W. Brunton. Membership composed of the following: Canon City A. C., Longmont A. C., Weld County A. C.

Colorado Automobile Co.—1510 Court Pl., Denver, Colo. (Cadillac.)

Columbia Bridge Co.—Pittsburg, Pa. Mfrs. iron and steel bar, steel shafting.

Columbia Cyclery.—114 Circle, Palo Alto, Cal. (Winton.)

Columbia Electric Co.—Knightstown, Ind. Mfrs. automobiles, gas.

Columbia Engineering Works.—William and Emlay Sts., Brooklyn, N. Y. Mfrs. automobiles, steam comm.

Columbia Garage, Inc.—327 Front St., Spokane, Wash. (Cadillac, Winton.)

Columbia Insurance Co. of New Jersey.—Franz Herrmann, Vice-Pres. and Mgr. 37 Wall St., New York City. Automobile fire insurance.

Columbia Lubricants Co. of New York.—78 Broad St., New York City. Mfrs. monogram oils and greases. Cap. \$100,000. Est. 1902. H. J. Hall, Jr., Pres.; J. W. Knight, Treas.; C. R. Burke, Vice-Pres.; R. H. Gay, Sec.

Columbia Motor Vehicle Co.—74 Stanhope St., Boston, Mass. (Columbia.)

Columbia Nut & Bolt Co.—1500 Railroad Ave., Bridgeport, Conn. Mfrs. lock nuts. Member M. & A. M. Est. 1903.

Columbia Paint & Varnish Co.—12 Sandford St., Buffalo, N. Y. Mfrs. paints.

Columbia Road Auto Station.—610 Columbia Road, Boston, Mass. Garage.

Columbia Smelting & Refining Co.—365-367 West St., New York City. Mfrs. pig lead, spelter, solder, tin, babbitt metal, white brass, metal alloys. Not inc. Est. 1883. S. A. & M. Soloman, co-partners.

Columbia Smelting & Refining Works.—307 Water St., New York City. Mfrs. brass and copper metals.

Columbia Steel Co.—Elyria, O. Mfrs. steel, chrome-nickel steel.

Columbus Automobile Club.—C. A. Howell, Sec., Columbus, O.

Columbus Automobile Exchange.—1780 Broadway, New York City. Garage.

Columbus Bolt Works.—162 W. Randolph St., Columbus, O. Mfrs. bolts, nuts, drop forgings, metal trimmings.

Columbus Brass Co.—Columbus, O. Mfrs. brass, bronze, aluminum and copper castings.

Columbus Buggy Co.—10th and Main Sts., Los Angeles, Cal. (Columbus.)

Columbus Buggy Co.—Minneapolis, Minn. (Columbus.)

Columbus Buggy Co.—Dublin Ave. W., Columbus, O. Makers of the Columbus

electric car; first marketed 1903. C. D. Firestone, Pres.; J. F. Firestone, Vice-Pres.; C. E. Firestone, Sec.; O. H. Perry, Treas.; R. S. Fend, Supt. Auto Dept.; Dave W. Henry, Gen. Representative.

Columbus Electricitäts Gesellschaft.—Ludwigshafen-am-Rhein, Germany. Mfrs. primary batteries.

Columbus Machine Works.—Columbus, Ind. Garage.

Columbus Malleable Iron Co.—Columbus, O. Mfrs. malleable iron castings.

Columbus Screw & Machine Co.—Columbus, O. Mfrs. axles, screw machine products, steering apparatus, turntables, universal joints.

Columbus Varnish Co.—Columbus, O. Mfrs. varnishes.

Colver & Beale.—Kinsley, Kan. (Cadillac.)

Colvin, E. F.—Milton, Pa. (Cadillac.)

Colvin, James A.—Prop. Standard Metal Work Co., Thompsonville, Conn.

Combustion.—A physico-chemical phenomenon caused by the combinations of various simple or compound bodies. A typical example is afforded by the phenomena of oxidation. As examples of combustion may be mentioned: (1) Quick combustion, like that of alcohol in oxygen, which takes place with the production of a bright light and a characteristic elevation of temperature; and (2), slow combustion, such as that of alcohol by air in the presence of finely divided platinum, which takes place gradually without a characteristic rise of temperature or heat. In internal combustion motors supplied by gasoline or alcohol, air, after having been intimately mixed with the fuel by the carburetter, enters the motor-cylinder, wherein, through the elevation of temperature caused either by an abrupt compression ("self-ignition"), or by a flame, an incandescent body, or an electric spark, rapid combustion occurs, followed by a powerful expansion of the heat thus produced.

Combustion-chamber.—In a gas-motor, the space (called also "combustion-head") in the cylinder, not swept by the piston, in which the gas is first compressed and

then fired by the spark.

Combustion, Spontaneous.—The oxidation of a substance so rapidly as to generate sufficient heat to ignite it. Oily rags and cotton waste are particularly liable to burst into flame from this cause. Such material should, therefore, never be allowed to accumulate, nor be kept in a confined space, such as a toolbox, for any length of time.

Comiot, C.—87 bvd. Gouvion St. Cyr. Paris, France. Mfrs. tire pumps, horns.

Commelin et Cie., R. Vian.—45 rue Levis, Paris, France. Mfrs. storage batteries.

Commercial Acetylene Co.—80 Broadway, New York City. Mfrs. acetylene tanks.

Commercial Automobile Co.—1353 Garfield Bldg., Chicago, Ill. Mfrs. automobiles, gas.

Commercial Auto & Supply Co.—1313 New York Ave., Washington, D. C. (Wayne.)

Commercial Auto & Supply Co.—862 N. Howard St., Baltimore, Md. Garage.

Commercial Battery Co.—204-206 Michigan St., Chicago, Ill. Mfrs. sparking and all types of storage batteries. Cap. \$15,000 (paid in). Est. January, 1907. W. A. Tichenor, Pres.; N. L. Latham, Sec. and Treas.

Commercial Motor Car Co.—Times Bldg., Times Sq., New York City. Automobile engineers. Est. 1905. Cap. \$25,000. Inc. New York State. Paris S. Russell Pres.; Frederick A. Rumpf, Sec. and Treas.; Arthur J. Slade, Engineer. (Safir truck.)

Commercial Motor Car Co.—4390 Olive St., St. Louis, Mo. (Reliance.)

Commercial Motor Co.—Marion, N. J. Mfrs. automobiles, gas comm.

Commercial Motor, The.—Published at 15 Rosebery Ave., London, England.

Commercial Storage Battery Co.—140 W. Jackson Blvd., Chicago, Ill. Mfrs. storage batteries.

Commercial Truck & Power Co.—171 Main St., Rahway, N. J. Mfrs. automobiles, steam comm.

Commercial Truck Co. of America.—1222 Arcade Bldg., Philadelphia, Pa. Mfrs. automobiles, electric comm. H. S. Kerbaugh, Pres.; Frank Brown, Sec. and Treas.; J. M. Hill, Gen. Mgr.; L. A. Terrell and E. R. Whitney, Engineers; A. J. Doty, Supt.

Commercial Truck Co. of N. E.—255 Atlantic Ave., Boston, Mass. (Commercial.)

Commercial Vehicle, The.—Pub. monthly at 1402 Broadway, New York City by H. E. Donaldson.

Commergnat, A.—Auxerre, Yonne, France. Mfrs. metallic wheels.

Commission Auto Co.—1602 Michigan Ave., Chicago, Ill. Garage.

Commission Automobile Co.—742 7th Ave., New York City. Garage.

Common, G. W.—Sec. and Treas. Keystone Electrical Instrument Co., 9th St. and Montgomery Ave., Philadelphia, Pa.

Commonwealth Rubber Co.—Reading, Mass., and 1001 Flatiron Bldg., New York City. Mfrs. rubber cloths, pneumatic tires.

Commutator.—The device by which an alternating current produced in the rotating coils of a dynamo-armature is converted into a direct or continuous current in the rest of the circuit. (2) Another name for timer. q. v.

Commutator, Ignition.—An electrical device, called also a "distributor;" (1) for switching the current of an ignition system in and out of the electrical circuit at the proper time; (2) for transferring the battery current successively from one cell to another; and (3) for varying the point of time of ignition of the explosive charge in the combustion-chamber. See Timer, Current-breaker and Distributer.

Campagne, Belges de Construction, d'Automobiles.—10 rue Ruysdael, Brussels, Belgium. Mfrs. automobile motors, automobiles, gas. (Pipe cars.) Automobiles, gas comm.

Compagnie de Construction Mechaniques.—80 rue Jan-Breydel, Berchem-Anvers, Belgium. Mfrs. transmission gears, differential gears, automobiles, gas. (Royal Star), motorcycle motors, motorcycles.

Compagnie de l'Industrie Electrique et Mecanique.—Geneva, Switzerland. Mfrs. automobiles, gas (C. I. E. M.), automobiles, electric (Thury).

Compagnie des Magnetos Simms-Bosch, Ltd.—22 rue Violet, Paris, France. Mfrs. low and high tension magnetos.

Compagnie Duplex.—Ferriere-la-Grande, Nord, France. Mfrs. automobile motors.

Compagnie Française de Voitures Electromobiles.—49-51 rue Cardinet, Paris, France. Mfrs. automobiles electric.

Compagnie Française Westwood.—86 rue Eugène-Caron, Courbevoie, Seine, France. Mfrs. metallic rims.

Compagnie Generale des Refroidisseurs Vendome.—2 rue Danton, Levallois, France. Mfrs. radiators.

Compagnie Parisiennes des Voitures Electriques.—45 bvd. de Valmy, Paris, France. Mfrs. automobiles electric, automobiles, electric comm. (Krieger cars); omnibus and trucks.

Compania Mexicana de Vehiculos Electricos.—Primera Humboldt 12, Mexico City, Mex. (Locomobile. Mercedes, Panhard, Columbia, Pope-Toledo, Pope-Hartford, Cadillac, Atlas trucks, Clement-Bayard.)

Companion-way.—The stair-case or berthing of the ladder-way to the cabin of a vessel.

Compass.—An instrument used by mariners for determining direction. It is arranged in a box called a "binnacle." The magnetic needle, delicately poised on an agate socket, is attached to the lower side of a card, on which is printed the star of 32 points; the cardinal points being N. S. E. W. The compass-box is hung on "gimbals." By this method of supporting the box, it always remains horizontal, however the vessel may roll.

There are two kinds of compasses used on motor-boats. The one preferable is the mariner's "liquid compass," the larger sizes of which are the best. One four inches in diameter is about as small as can be depended upon, although the two and three-inch are often used by small boats.

Compensating-brake.—See Brake, Compensating.

Compensating-carburetter.—See Carburetter.

Compensating-collar.—See Collar, Compensating.

Compensating-gear.—See Gear, Differential.

Compensating-joint.—See Joint, Compensating.

Component.—In theoretical mechanics the components of a force are the various separate forces, which, acting together, would produce the same result as the given force. A force may be split up into any number of components. (2) A single separate part of a machine or structure.

Compound, Allumage Electrique.—Levallois, Seine, France, Mfrs. electric lamps, spark plugs.

Compound, Allumage Electrique.—135 ave. de Villiers, Paris, France. Mfrs. storage and primary batteries, compound batteries.

Compound Engine.—See Engine, Compound.

Compression.—The second period of the 4-period cycle. The piston forces the gas admitted and compresses it just at the moment at which the ignition is about to occur.

As a general thing, in an explosion-motor, of whatever kind it may be, the compression should be as high as possible (without, however, reaching the degree at which self-ignition would occur), since the efficiency and specific power of the motor is thereby increased. Thus, with a pressure of 60 pounds to the square inch, at the completion of its compression-stroke, the efficiency of the motor is about 37, that is to say, 37 per cent. of the fuel value of the charge is transformed into work of the engine. With 100 pounds pressure, the efficiency is increased to 45. Low compression means absence of sufficient gas mixture to give a good power effect.

If the compression be good it will prove almost impossible to turn even a 6 h.p. motor against the compression by hand. It therefore becomes necessary to provide a method of partially relieving the compression during starting operations, and for such a purpose there is mounted on the combustion chamber a small relief-cock, which may be opened to any extent required.

The danger of pre-ignition limits the compression to about 80 or 90 pounds, which, if desired, may be ascertained by means of a pressure-gauge screwed into the combustion-chamber.

In a multi-cylinder motor, each cylinder may be tested for compression by opening the cocks of all the other cylinders in succession and trying with the starting handle. (2) The "cushioning" or shutting in of a small amount of steam in a cylinder just before the return stroke after the exhaust-port is closed. (3) The reduction of the length or other dimensions of a body by the application of external force.

Compression Igniter.—See Igniter, Compression.

Compression-space.—The space in the cylinder above the piston, when the latter is at the inward end of its stroke.

Compression - stroke.—The piston movement which compresses the charge in an internal combustion motor.

Compression-tap.—The same as "relief cock." q. v.

Comptes Rendus de L'Academie des Sciences.—Pub. in Paris, France.

Comptoir des Ressorts de Carrosserie, Société Anonyme.—80 rue Taitbout, Paris, France. Mfrs. springs.

Comptoir d'Innovations Pour Automobiles.—16 Ave. de la Grande Armée, Paris, France. New York office, 1693 Broadway. Mfrs. tire pumps, air compressors, exhaust whistles.

Comson, S. A.—Sec. E. Keeler Co., 3rd and West Sts., Williamsport, Pa.

Comstock Shock Absorber Co., The.—1661 Broadway, New York City. Mfrs. shock absorbers. Est. 1907. Herbert C. Comstock, Gen. Mgr.; W. A. Moody, Mgr. Branch, 10 Columbus Ave., Boston, Mass.

Concannon, J. H.—Pub. The Auto Bulletin, 821 Prudential Bldg., Newark, N. J.

Concord Motor Car Co., The.—64 Huntington Ave., Boston, Mass. Agts. Waltham-Orient line. Est. 1906. Cap. \$10,000. S. K. Dingle, Pres.; J. E. Savell, Vice-Pres. and Gen. Mgr.; J. S. P. Alcott, Sec.; F. Alcott Pratt, Treas.

Condensation.—In chemistry, the union of two or more molecules, which may be the same or different, to form a

new molecule, the occurrence generally, but not always, being accompanied with the splitting off of water, alcohol, etc. Substances that induce this kind of change are termed "condensing agents." In physics, generally, the reduction of a gas or vapor to its liquid form by cold or pressure, or both combined; but, specifically, in electricity, the increase in an electric charge obtained by means of two conductors separated by a dielectric.

Condensation, Initial.—The condensation of steam on first entering a cylinder. The loss of steam thus caused is largely preventing by keeping the cylinder hot by means of a steam-jacket.

Condenser.—An apparatus usually composed of thin sheets of tin-foil separated by sheets of paraffined or waxed paper. Each alternate leaf of tin-foil projects beyond one end of the package, while the other leaves project at the opposite end. They are then connected so as to form a package of alternate layers of tin-foil separated from each other by sheets of paraffined or waxed paper, each layer being connected with a platinum contact of the vibrator.

The object of the apparatus is to reduce the sparking on the platinum contacts of the vibrator or contact-maker, and also to intensify the spark at the plug by rendering the make - and - break more prompt. (2) On a steam-car, an apparatus consisting

of a number of vertical thin brass tubes (see figure), into which the exhaust steam of the engine enters through a "header," and from which the water of condensation is returned to the tank by the back pressure.

Condon, Dr. C. M.—Carroll, Ia. (Waltham.)

Conductance.—The constant quantity for a given electrical conductor. It is the reverse of resistance, and is, in a manner, the conducting power of the conductor. It is expressed in "mhos," the term "mho" being an anagram of "ohm," the unit of resistance.

Conduction.—The transmission of heat, electricity, or sound through matter without motion of the affected body as a whole.

Conductivity.—In physics, the relative capacity of substances for heat and electricity. The reverse of specific resistance or "resistivity." The electric conductivity of a metal is measured in its relation to silver; that of silver being taken as 100, copper is 94, aluminum 55, and iron 16. See Electricity and Resistance.

Conductor.—A body capable of conducting electricity, heat, or other form of energy. A body is said to be a good or bad conductor of electricity, according to the less or greater resistance that its own mass offers to the transmission of the current, and according to the relative ability which it possess of preserving the charge that has been communicated to it. Air, glass, rubber, resin, silk, sulphur, etc., are bad conductors and, consequently, insulators. All the metals, water, the human body, the earth, etc., are good conductors. (2) A wire, in most cases copper (which offers but slight resistance) employed for transmitting an electric current from one point to another. Such a wire is either naked or covered with some insulating material such as rubber, thread, tarred cloth, etc. two halves of the bearing may be drawn together when the bearing becomes loose through wear. (2) A rod used for connecting one machine element to another.

Cone-bearing.—See Bearing.

Cone-clutch.—See Clutch.

Cone, Pulley.—Called also simply "cone." See Pulley.

Cone, Spraying.—A grooved or

striated metallic cone, called also "mushroom," placed in some carburettors just above the spray-tube, and against which the spirting gasoline impinges and is spread out in a thin mist

through which the incoming air must pass, thus assuring more perfect vaporization of the gasoline.

Cone, Truncated.—A cone of which the vertex has been cut off in a plane at right angles with its axis.

Coney, Edward.—Mgr. The Ohio Blower Co., 330 Prospect Ave. N. W., Cleveland, O.

Congdon, Arthur G.—Vice-Pres. and Head of Trimming Dept., Graves & Congdon Co., Oak St., Amesbury, Mass.

Congdon, S. H.—Vice-Pres. Baird-Banks Mfg. & Supply Co., Inc., 203 Broadway, New York City.

Congress Square Auto Station.—18 Forest Ave., Portland, Me. Garage.

Conical Spring.—See Spring, Conical.

Conklin, H. B.—Sec. and Treas. Sprague Umbrella Co., Norwalk, O.

Conklin, L. W.—Asst. Sales Mgr. Packard Motor Car Co., Detroit, Mich.

Connecticut Automobile Association.—Hartford, Conn. Member the A. A. A. W. T. Fuller, Hartford, Pres.; F. T. Staples, Bridgeport, Vice-Pres.; B. R. Hertzberg, Stamford, Treas.; G. K. Dus-

tin, Hartford, Sec. Membership composed of following: A. C. of Bridgeport, A. C. of Hartford, A. C. of New Britain, A. C. of Stamford, Yale University A. C.

Connecticut Electric Equipment Co.—15 Church St., Meriden, Conn. (Corbin.)

Connecticut Gauge Co.—Norwich, Conn. Mfrs. speed indicators.

Connecticut Supply Co.—Hartford Life Insurance Bldg., Hartford, Conn. Mfrs. vehicle washing apparatus.

Connecticut Telephone & Electric Co., Inc.—70 Britannia St., Meriden, Conn. Mfrs. spark coils, timers, switches, volt and ampere meters, coil current indicators, gasoline tank gauges. Member M. & A. M. Est. 1893. Cap. \$45,000. E. C. Wilcox, Pres.; B. L. Lawton, Vice-Pres. and Treas.; B. C. Rogers, Sec.

Connecting-plug.—A metallic plug used to join two parts of an electric circuit.

Connecting-rod.—In an internal combustion motor, a rod which connects the piston with the crank; in a steam engine, a rod that connects the piston with the crank through the intermedium of a cross-head. The figure represents the connecting-rod of an internal combustion motor. The connecting rods of such motors are generally of I-section and are drop forged from steel. The "big end" of the rod is provided with two white-metal or bronze bearings bushed with hardened steel or babbitt metal, while the "little end" has bearings of bronze, white-metal or steel. Both ends are usually made adjustable so that the

Connection.—A wire with a terminal soldered at each end, used to connect pieces of electrical apparatus.

Connell, W. J.—36 Columbus Ave., Boston, Mass. Supply house, carrying lamps, coils, speedometers, tire cases, etc. Est. 1905.

Connerat, R. V.—18 E. State St., Savannah, Ga. (Buick, Stevens-Duryea, Baker, Autocar.)

Cruikshank, Vice-Pres. and Head Sales Dept.; F. L. P. Small, Sec. and Treas.; C. G. Cruikshank, Purch. Agt.; Wm. Pelham, Head Repair Dept.; J. St. Mars, Head Sales Dept. Automobile repair-ing.

Consolidated Mfg. Co.—Toledo, O. Mfrs. motorcycles, drop forgings.

Consolidated Motor Co.—148 W. 56th St., New York City. Mfrs. automobiles, gas, commercial; motor boats.

Consolidated Rubber Tire Co.—Fac-tory, Akron, O. Main office, 39 Pine St., New York City. Mfrs. solid tires. Branches and dealers: 243-245 W. 47th St., New York City; 11-13 Hawkins St., Boston, Mass.; 435 Wabash Ave., Chi-cago, Ill.; 315 N. Broad St., Philadel-phia, Pa.; 2334 Olive St., St. Louis, Mo.; 294 Jefferson Ave., Detroit, Mich.; 641 Main St., Cincinnati, O.; 366 12th St., Oakland, Cal.; Cook and 3rd Aves., Ak-ron, O.

Consolidated Wagon & Machine Co.—Salt Lake City, Utah. (Buick, Colum-bus, Knox, Northern.)

Constant.—A quantity of which the value does not vary. The term "con-stant" is employed under very different circumstances. Thus, when in a formula a co-efficient has an invariable value, it is said of it that it is a "constant." In like manner we may use the term "constants" of a motor when speaking of its bore, its stroke, its normal velocity, etc. These are, in fact, very constant quantities.

Constantine Manufacturing Co.—Con-stantine, Mich. Mfrs. magnetos and ig-nition dynamos.

Constricting-brake.—Same as band-brake. See Brake, Band.

Constricting-clutch.—See Clutch, Con-stricting.

Contact.—A contact or contact-piece

is a piece of metal which "makes" the circuit; for example, the platinum con-tacts on the "contact-maker."

Contact-arm.—A lever, sometimes called a "hammer," which, in some forms of make-and-break ignition apparatus, is operated upon by the interrupter-catch and breaks contact with the igniter.

Contact-breaker.—A device, called also a "circuit-breaker," "commutator" and "timer" for interrupting the electric cir-cuit of an ignition system. See Commu-tator, Distributer and Timer.

Contact-maker.—A device used with a trembler coil for causing a spark to arc or jump between the points of the spark-plug in the combustion-chamber of a mo-tor. It consists of a disk, D (see figure), of some insulating material, generally vulcanized fiber or ebonite, rigidly se-cured to the half-speed shaft. Set into a portion of the edge is a contact-piece of brass, P, from which a connecting-wire is carried to the half-speed shaft, so as to make a continuous connection. A small spring, T, terminating in a piece of metal, M, rubs on the surface of the disk, and, once in every revolution, comes into contact with P. The spring is connected

to the pillar of the contact-breaker or vi-brator on the induction-coil, by a copper wire which passes thence through the primary to the battery and back again to the engine frame. For a short period in each revolution of the half-speed shaft, the contact-breaker, on the induction-coil, will be trembling, and sparks will be passing between the terminals of the sec-ondary. This device is sometimes called a "wipe-contact."

Contact-plug.—The same as Cut-off-plug.

Contact-screw.—See Screw, Contact.

Contact, Wipe.—The same as Contact-maker. q. v.

Contal.—64 ave. de la Grande Armée, Paris, France. Mfrs. tricar. (Mototri-Contal.)

Conte, J.—38 rue des Panoyaux, Paris, France. Mfrs. chains.

Continental Caoutchouc Co.—43 Warren St. and 2100 Broadway, New York City. Mfrs. and agts. Continental tires, tire tubes and tire accessories. Cap. \$60,000. Est. 1903. Willy Tischbein, Pres.; Wm. Knauth, Treas.; E. S. Williams, Sec.; Joe M. Gilbert, Gen. Mgr.; P. O. Echhardt, Office Mgr.; J. H. Sheldon, Sales Mgr.; C. G. Waldemann, Adjustment Mgr.; F. A. Lural, Cashier. Stanley Brooks, Mgr. Detroit, Mich., branch. W. A. Rutz, Mgr. Buffalo, N. Y., branch. F. S. Cutsler, Mgr. New York branch. H. W. Bogen, Mgr. San Francisco and Los Angeles, Cal., branches. Agts. Excelsior Supply Co., Chicago, Ill.; F. O. Sawyer, St. Louis, Mo.; Continental Agency Co., Cleveland, O.; Jas. L. Gibney & Bro., Philadelphia, Pa.; Post & Lester, all New England territory.

Continental Caoutchouc und Guttapercha Co.—Hanover and Seelze, Germany. Mfrs. Continental pneumatic tires, solid tires and non-skids. Est. since 1872. Factory covers many acres, employing 6,000 workmen and nearly 300 foremen, together with a large clerical force. One of the first European companies to house their employees in model dwellings, establish insurance funds, pension society, etc.

Continental Drive.—The same as Double-chain Drive.

Continental Motor Car Co.—West End Ave. and 20th St., Chicago, Ill. Mfrs. automobiles, gas.

Continental Motor Mfg. Co.—Muskegon, Mich. Mfrs. gasoline automobile and marine motors, transmissions, clutches. Cap. \$225,000. Est. 1903. Member M. & A. M. A. W. Tobin, Pres.; Benj. F. Tobin, Sec. and Treas.; R. W. Judson, Vice-Pres.; G. M. Ritchie, Supt. W. Tobin, Pres.; Benj. F. Tobin, Sec. and Treas.; R. W. Judson, Vice-Pres.; G. M. Ritchie, Supt.

Continental Rubber Works.—19th and Liberty Sts., Erie, Pa. Mfrs. automobile sundries, inner tubes, vulcanizing materials, automobile and motorcycle tires, mechanical rubber goods of all kinds. Member of A. & A. M. Cap. \$200,000. Est. July 1, 1903. T. R. Palmer, Pres. and Gen. Mgr.; Alex. Jarecki, Vice-Pres.; Chas. Jarecki, Sec.; Chas. S. Coleman, Treas.

Continental, Société Anonyme.—146 ave Malakoff, Paris, France. Branch of Continental Caoutchouc and Guttaper-

cha Co., Hanover, Germany. Solid and pneumatic tires and non-skid bands.

Contracting-clutch.—See Clutch, Contracting.

Contractors Electric Co.—9 Prospect St., Mt. Vernon, N. Y. Garage.

Converter.—In metallurgy, the pear-shaped vessel used in converting cast iron to steel in the Bessemer process. See Steel. (2) In electricity, a device called also a "transformer," by which a small current of high voltage or pressure is converted into a larger current at a lower voltage.

Controller.—A device by which the

speed of an electric vehicle is regulated by moving a lever backward and forward. This lever moves a commutating switch consisting of a revoluble, insulated cylinder upon which are arranged a number of contacts, making various circuits by being rotated into connection with brushes rubbing against them. To the terminals of these brushes are connected the accumulator, terminals, motor brushes, field and armature windings, rheostats, etc. The ordinary type of controller is usually arranged in such a way as to give four speeds ahead and two reverse. An "off position" cuts out the motor and connects the batteries in series for recharging. The figure represents the Pope controller.

Convection.—The passage of heat through liquids and gases by the actual motion of streams of heated particles, which, being lighter than the surrounding fluid, tend to rise as "convection currents." Convection usually plays a more important part than conduction in the spread of heat through a fluid. Water, for example, is so bad a conductor that if a comparatively short column be heated at the top, the upper layers can be made to boil while the lower layers are kept almost at the freezing point.

Honey-comb radiators lose much heat by convection, and little by radiation, while with finned-tube radiators the reverse is the case. To the coil-gilled radiator, as well as to the honey-comb, is adapted a fan which plays the part of a convection apparatus by the generation of currents of air that prove particularly efficacious for the cooling of motors while the car is at a standstill.

Converter, Rotary.—A machine by which a continuous current is changed into an alternating one, or vice versa; both currents traverse the same armature winding. The same as "rotary transformer."

Cook & Co., R. W.—1253 Michigan Ave., Chicago, Ill. (Royal Tourist.)

Cook & Spring.—440 Drayton St., Savannah, Ga. Repairing.

Cook & Stoddard.—22nd and P Sts., N. W., Washington, D. C. (Pierce Arrow, Franklin, White, Baker, Cadillac, Darracq.)

Cook Auto Carriage & Implement Co.—Orlando, Fla. (Buick, Cadillac.)

Cook, Benj., & Clark, Chas. J.—Sandwich, Mass. Garage.

Cook, C. E.—New London, Ia. (Holsman.)

Cook, E. D.—Gen. Supt. Salisbury Wheel & Mfg. Co., Jamestown, N. Y.

Cook Electric Garage.—144' Pacific Ave., Long Beach, Cal. Garage.

Cook, Eugene.—Pres. Cook's Standard Tool Co., Kalamazoo, Mich.

Cook, Fred W.—Niles, Mich. (Northern.) Est. 1905.

Cook, George.—Supt. Geo. N. Pierce Co., 1651 Elmwood Ave., Buffalo, N. Y.

Cook, H. F.—117 Main St., San Antonio, Tex. (Ford, Reo.)

Cook, H. H.—16 Baldwin St., Malden, Mass. Garage.

Cook, Le Roy.—B. Feb. 24, 1884, at Wadena, Minn. Educated at public schools. Occupation, on Editorial staff, Automobile Topics and International Motor Cyclopaedia. Address, Times Bldg., Times Sq., New York City.

Cook Machine Co.—Rushville, Ind. Garage.

Cook Motor Car Co.—15th and Washington Sts., Portland, Ore. (Autocar, Royal, Stevens-Duryea.)

Cook Motor Car Co.—Seattle, Wash. (Stevens-Duryea.)

Cook's Standard Tool Co.—Kalamazoo, Mich. Mfrs. automobile jacks, standard, single and double acting. Member M. & A. M. Cap. \$40,000. Est. since 1894. Eugene Cook, Pres.; F. C. Butler, Sec.

Cooley, B.—Pres. and Treas. Galena Auto & Garage Co., cor. 9th and Main Sts., Galena, Kan.

Cooley, G. W.—Sec. Galena Auto & Garage Co., cor. 9th and Main Sts., Galena, Kan.

Cooley Mfg. Co.—Waterbury, Vt. Mfrs. gasoline, marine motors.

Coolican, Oscar.—Sec. and Treas. The Auto Garage Co., Inc., 146-148 W. 39th St., New York City.

Cooling, Cylinder.—See Cylinder-cooling.

Coombs, E. H.—Mgr. Michigan Top Co., 17 Duffield St., Detroit, Mich.

Coon, Charles.—Head Mechanician Empire State Motor Car Co., 2148 Broadway, New York City.

Coon, Wm.—13th St., Lincoln, Neb. (Maxwell, Reo.)

Cooney & Ames.—Tremont, Ill. (Glide.)

Cooney Automobile Co.—Toledo, O. Garage.

Coop, Leonard G.—Riverside, Cal. (Maxwell.)

Cooper, Chas. S.—254 Clinton Ave., Newark, N. J. (Atlas.)

Cooper Hewitt Electric Co.—220 W. 29th St., New York City. Mfrs. and jobbers, mercury vapor lamps. Charles B. Hill, Vice-Pres. and Gen. Mgr.; Charles A. Terry, Sec. and Treas., 111 Broadway, New York City.

Cooper, I.—864 Bedford Ave., Brooklyn, N. Y. Repairing.

Cooper Process Co.—506 White Bldg., Buffalo, N. Y. Mfrs. paints.

Coops Co., C. W.—3 Appleton St., Boston, Mass. Mfrs. automobile seats, top fixtures, metal trimmings.

Co-ordinate.—A member of a system of lines or angles by means of which, as elements of reference, position is determined in relation to certain fixed lines or planes.

Copal.—A name applied to a number of semi-fossil resins, the most esteemed variety of which is the Sierra Leone. The resin is used in the manufacture of varnishes for carriage bodies and other purposes.

Cope.—The upper part of a mould.

Copeland & Taylor.—221 W. Washington St., Pontiac, Ill. Garage. (Jackson, Northern.)

Copeland, C. B.—Sec. and Mgr. Mason Car Sales Co., 3130 Main St., Kansas City, Mo.

Copelin, J. E.—223 W. 8th St., Los Angeles, Cal. (Holsman.)

Coppa Fratelli.—3 Piazzale Genova, Milan, Italy. Mfrs. motorcycles.

Copper.—A brownish-red metal of the atomic weight 63.6. It is fusible at about 1800° F. (1000° C.), is very ductile and malleable, and the best conductor of electricity, and, next to silver, the best conductor of heat known. In dry air it undergoes no change, but in moist air becomes covered with a film of carbonate of copper, called "patina." Hydrochloric acid has scarcely any action upon it. Sulphuric acid does not act upon it in the cold, but in a hot concentrated state forms copper sulphate and sulphur dioxide. Its true solvent is nitric acid (except when very pure) or "aqua fortis." In a pure state it is largely used in the

construction of electrical apparatus, and for making piping, wires, etc. In combination with tin it forms "bronze" (q. v.), and, with zinc, "brass" (q. v.). The principal salt of copper is the sulphate.

Copper Sulphate.—A white solid which readily absorbs water and becomes blue, forming what is commonly called "blue vitriol" or "blue stone" ($\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$). Crystallized copper sulphate is obtained from solutions of copper sulphate in water by allowing it to crystallize. On a large scale it is obtained from copper pyrites. It is used in the electrolytic deposition of copper, for making the exciting fluid of the Daniell cell, and for the closing of fissures in the sides of motors.

Copper, White.—A synonym for German silver. q. v.

Coppins, George T.—Sec. Walworth Mfg. Co., 128-138 Federal St. Boston, Mass.

Coppock, L. W.—Supt. Coppock Motor Car Co., Decatur, Ind.

Coppock Motor Car Co.—Decatur, Ind. Makers of the Coppock car. First marketed June 15, 1907. Cap. \$100,000. M. E. Brackett, Pres.; Harry Ward, Vice-Pres.; H. F. Reynolds, Sec.; W. H. Wiley, Treas. and Gen. Mgr.; L. W. Coppock, Supt.; E. P. Smith, Designer. Dealers: Morley Auto Co., 220 S. Spring St., Los Angeles, Cal.

Corbaley & Thorpe Auto Co.—443 Emerson St., Palo Alto, Cal. Agts. Autocar, Columbus, Sunset, Maxwell. Est. 1902. Cap. \$25,000. H. G. Corbaley, Pres.; Roy P. Thorpe, Sec. and Treas. Garage, 30 cars. Repairing.

Corbaley, H. G.—Pres. Corbaley & Thorpe Auto Co., 443-449 Emerson St., Palo Alto, Cal.

Corbett, E. J.—Director Maxwell Briscoe Motor Co., Tarrytown, N. Y.

Corbin Motor Vehicle Corporation.—New Britain, Conn. Makers of the Corbin car. First marketed 1903. Nine different models made since. Cap. \$200,000. Howard S. Hart, Pres.; Maxwell S. Hart, Vice-Pres. and Treas.; Buell B. Bassette, Sec. and Asst. Treas.; A. N. Manross, Designer; H. F. Bailey, Supt.; A. N. Abbe, Pur. Agt. Branch: Corbin Motor Vehicle Corp. of N. Y., 1888 Broadway, New York City, D. A. Harrington, Jr., Mgr. Agts. and dealers: Auto Repair Co., 557-61 7th Ave., Pittsburg, Pa. Bird-Sykes Co., 1470 Michigan Ave., Chicago, Ill. Buckeye Auto Station, Southport, Conn. Corbin Motor Vehicle Corp. of New York, 1888 Broadway, New York City. C. R. Dench, 455 W. 11th St., Erie, Pa. Genesee Motor Vehicle Company, Rochester, N. Y. Jordan Automobile Co., 217 S. 4th St. S., Minneapolis, Minn. Koehler, H. J. Sporting Goods Co., 845 Broad St., New-

ark, N. J. Kimball Co., E. T., Motor Mart, Park Sq., Boston, Mass. La France Motor Car Co., Elmira, N. Y. Maltby, W. S., Plainfield, N. J. Middleton Motor Car Co., 550 Golden Gate Ave., San Francisco, Cal. Norcross-Cameron Co., 57 Bridge St., Springfield, Mass. Phelps, George H., 38 Central St., Worcester, Mass. Pugh Bros., 15 Snow St., Providence, R. I. Perkins, Robert, Rockaway, N. J. South Side Automobile Co., 2339 S. Grand Ave., St. Louis, Mo. Wilcox, E. B., Meriden, Conn.

Corbin Motor Vehicle Corporation of New York.—Broadway and 62nd St., New York City. (Corbin.)

Corbin Screw Corp., The.—New Britain, Conn. Mfrs. screws, nuts, bolts, cones, motorcycle brakes, hubs, special screw work of all kinds. Cap. \$400,000. Est. 1855. Inc. July 1, 1903. Chas. Glover, Pres.; C. A. Earl, Vice-Pres.; T. E. Smith, Treas.; W. J. Surre, Sec. Branches: Chicago, Dayton, New York, Philadelphia.

Corcoran Lamp Co.—1712 Reading Rd., Cincinnati, O. Mfrs. lamps.

Corduoy Road.—A road made of closely placed logs, laid crosswise.

Cordz, Henry.—Austin, Tex. (Pungs-Finch.)

Core.—In a spark-coil, the bundle of soft iron wires over which the primary wire is wound. (2) A form of sand or loam placed in a mould and around which the metal is poured.

Core, G. W.—High St., Columbus Grove, O. (Mitchell.) Est. 1906. Not inc. G. W. Core, Proprietor. Garage, 10 cars. Repairing.

Cork.—The cambium of the cork oak. *Quercus suber*, of South France, Italy, and Spain. Cork possesses remarkable insulating properties, due essentially to its chemical composition and the presence of "suberine," an alkaloid isolated by Chevreul, who differentiated it from cellulose in that it is not alterable in damp surroundings. It is remarkable for its elasticity and lightness and is employed for carburettor floats, for facing gaskets, and making inserts for disk clutches, etc.

Cork Inserts.—Cushions of cork inserted into a series of holes in a metal-to-metal clutch in order to prevent the plates from gripping too "fiercely" and causing the car to start with a jerk.

Cork, Rock.—A light colored variety of asbestos. See Asbestos.

Corkhill, Thomas.—Supt. Gearless Transmission Co., Rochester, N. Y.

Corkran, H. W.—12 S. Maryland Ave., Atlantic City, N. J. (Columbus, Autocar.)

Corkran & Meloney.—12 S. Maryland Ave., Atlantic City, N. J. Garage.

Corliass Engine Works.—Providence, R. I. Mfrs. drop forgings.

Corliass, J. B.—Sec. Reliance Motor Car Co., 89 Fort St., E. Detroit, Mich.

Corn Belt Auto Co.—Waterloo, Ia. (Reo.)

Cornell, W. J.—Treas. Pioneer Auto Co., 901-925 Golden Gate Ave., San Francisco, Cal.

Cornell, W. W.—West New Brighton, Staten Island, N. Y. (Maxwell.)

Cornett, Gardner.—Vice-Pres. American Steam Gauge & Valve Co., 220 Camden St., Boston, Mass.

Cornilleau et Sainte Beuve.—67 bvd. Bessières, Paris, France. Mfrs. automobiles, gas. (Cornilleau et Sainte Beuve cars.)

Corning Auto Co.—45 W. Market St., Corning, N. Y. (Franklin, Cadillac, Holsman.)

Cornish-Friedberg Motor Car Co.—1233 Michigan Ave., Chicago, Ill. (Autocar, Gale, Cornish-Friedberg.) Mfrs. automobiles, gas.

Corominas, Ricardo.—45 Torrente de la Olla, Gracia, Barcelona, Spain. Mfrs. radiators.

Conora Fahrradwerke und Metallindustrie Actien Gesellschaft.—Brandenberg, Germany. Mfrs. motorcycles. (Corono.)

Corré, Compagnie Française des Automobiles.—Neuilly-sur-Seine, France. Mfrs. automobiles, gas, and automobiles, gas comm. (Corré cars.)

Corriveau, G., Jr.—Ass't Mgr. British Columbia Auto Co., 924 Granville St., Vancouver, B. C.

Corrosion.—A destruction of the surface of a metal by chemical action.

Corrugated.—Having alternate ridges and furrows. See Iron, Corrugated.

Corry Motor Club.—W. Edw. Marsh, Sec., Corry, Pa.

Corson, Myron L.—Springfield, Mass., and 110 Huntington Ave., Boston, Mass. (Mitchell.)

Corston, C. H.—Jefferson Ave., Detroit, Mich. Garage.

Cortland Automobile Co.—151 S. Main St., Cortland, N. Y. (Cadillac, Franklin.)

Cortland Carriage Goods Co.—Cortland, N. Y. Mfrs. bow sockets, metal trimmings.

Cortland Forging Co.—Cortland, N. Y. Mfrs. bow sockets, drop forgings, top fixtures, metal trimmings.

Cortland Specialty Co.—176 Railroad St., Cortland, N. Y. (Maxwell.) Mfrs. brazing compound.

Corundum.—A native sesquioxide of aluminum Al_2O_3 . A mineral next to the diamond in hardness and the massive form of which yields "emery." q. v. The finer colored and crystalline varie-

ties yield such gems as the ruby, sapphire and amethyst.

Coryell, Charles.—Bay City, Mich. (Mitchell.)

Coryell, R. S.—Union Bldg., Clinton St., Newark, N. J. Garage.

Cory, W. L.—Sec., Treas., Gen. Mgr., Purch. Agt., Sales and Advt. Mgr. Albany Automobile Co., Albany, Ind.

Corzine, W. T.—Litchfield, Ill. (Waltham.)

Cosby, W.—2602 S. Main St., Los Angeles, Cal. (Premier.)

Costa Motor Car Co., M. J.—Philadelphia, Pa. (Clement-Bayard.)

Coster, Maurice.—Gen. Mgr. Société Anonyme Westinghouse (American branch), 11 Pine St., New York City.

Cotta, Chas.—Rockford, Ill. Mfr. differential gears.

Cotter.—A tapering pin or wedge used for tightening up and fixing parts of machinery.

Cotter, Spring.—A piece of half-round wire folded together, forming an eye at one end, to be inserted in a bolt, to prevent the nut from coming off.

Cotter-way.—A tapered slot through which a cotter passes.

Cottereau Établissements.—Lentilleries, Dijon, France. Mfrs. tricars, automobiles, gas comm., motorcycle motors, motorcycles.

Cottet Frères.—11 quai de l'Hospital, Morez, Jura, France. Mfr. goggles.

Cottin & Desgouttes.—Place du Bachut, Lyon-Montplaisir, France. Mfrs. automobiles, gas. (Cottin & Desgouttes cars.)

Cotton, Gun.—A substance called also "pyroxylin," not unlike cotton in appearance, prepared by the action of concentrated sulphuric and nitric acids on cotton. With the addition of camphor it forms "celluloid." q. v.

Cotton, Spun.—Cotton spun into strands employed for caulking the seams of motor-boats.

Cotton-waste.—The refuse of cotton manufacture, used for cleaning machinery, and as a packing material.

Couach, et fils, J.—39 bvd. d'Haussez, Arcachon, Gironde, France. Mfrs. marine motors.

Couderc, H.—11 rue Bouret, Paris, France. Mfrs. speed indicators.

Coughing.—"Coughing at the carburetter" is a term used for explosions through the apparatus due to too weak a mixture.

Coulomb.—The quantity of electricity conveyed by a current of one ampere (q. v.) in one second.

Coulomb, Law of.—In electro-statics the force between two charges of elec-

tricity is proportional to their product, and inversely proportional to their distance apart. This may be summed up in the following simple formula:

$$f = k \frac{qq^1}{d^2}$$

identified with that of Newton's law; q and q^1 representing the electric charge of each body, or quantity of electricity that it possesses, d their distance, and k a constant function of the medium in which the actions considered are exerted. In the air $k=1$.

Coulter, J. F.—Main St., Saybrook, Conn. Garage.

Coulthard & Co.—Preston, England. Mfrs. automobiles, steam comm.

Council Bluffs Automobile Club.—T. S. Farnsworth, Sec. and Treas. Council Bluffs, Ia.

Counter.—The curved part of a vessel's stern.

Counterbore.—To enlarge a round hole at one end.

Counter, Revolution.—A small apparatus which is placed at the end of a shaft in motion or in proximity to a rotating part of a machine to measure the number of revolutions made in a given time.

Ccountershaft.—See Shaft, Counter.

Countersink.—To form a recess at the top of a drilled hole for the reception of a screw or bolt head, after the bolt has been screwed home, is said to be "countersunk." (2) A tool for countersinking, as a drill or conical-pointed punch.

Coupé.—A vehicle with a closed body, and an inside seat for two persons and an outside one for driver. A three-quarter coupé is a closed vehicle with side entrance, and two opposite seats, accommodating four persons. Its form differs from the two-passenger coupé by the addition of a bay in front of the body.

Couper, G. H.—Gen. Foreman Eclipse Machine Co., Elmira, N. Y.

Couple.—A system of two parallel forces applied at two different points and having opposite directions. A couple tends to produce a rotation of the body to which it is applied around a point, O , called the center of the couple.

Such point is situated upon the straight line PP' (see figure) and divides it into two parts inversely proportional to PF and $P'F'$, that is to say, that the products, OP , times PF , and OP' are equal. A couple can always be replaced by a single force such as RF , provided such force be parallel to the primitive forces and that we have $RF \times OR$ equal to the sum

of the products OP times PF and $O'P'$ times $P'F'$. This lever arm of the single force RF is measured by the perpendicular OR of the force by its lever arm. This product is called the "moment" of the couple. A couple is motive or resistant, according as it produces or consumes work. We may say the motive couple of a turbine, of a gasoline motor, of an electric motor, and the resistant couple of a fan, of a brake, or of a dynamo. (2) In electricity the term "couple" is applied to two dissimilar metals joined so that a difference of potential shall be established between them under the action of an external calorific or chemical energy. In the first case we have a "thermo-electric couple," and, in the second, an "electro-chemical" one. In the second case, which is by far the more important, there is reason for considering the "primary couples" in which the chemical energy is converted into electricity, and the "secondary couples" which are reversible, that is to say, that the passage of a current therein produces a chemical action which, on becoming annulled, will afterward give rise to a current. To the first group belong "primary cells" ($q.v.$), and and to the second belong "secondary cells" ($q.v.$) or "accumulators." Primary cells are therefore generators properly so-called, while secondary or storage cells (accumulators) are merely reservoirs of energy in which is accumulated the energy that they will restore later on, chemical action being in them only an intermediary. (3) In physics a "couple of forces" is a system of two equal parallel forces, acting toward contrary parts. A couple possesses the remarkable property of being incapable of being balanced by any single force whatever. Thus, when a couple is applied to a body, a motion of rotation, not of transition, is produced.

A couple is motive or resistant, according as it produces or consumes work. Thus, we may say the motive couple of a turbine, gasoline motor, electric motor, etc., and the resistant couple of a fan, brake, dynamo, etc.

Couple, Motor.—The "motor couple" is measured in erg-centimetres (C. G. S. system), or in kilogrammetres (practical units).

The power in kilogrammes per second produced by a motor will always be equal to the product of the motor couple in kilogrammetres by the angular velocity or number of revolutions per second. This applies to all direct rotary motors.

Couple of Rotation.—The "couple of rotation" is constant in what are called rotary motors (steam and gas turbines and electric motors), while it passes through zero twice per revolution (dead-

point) in piston-engines (steam and explosion motors). From the standpoint of regularity of motion and balancing (absence of vibration), motors of the first category are therefore the more desirable.

The expression of the work developed by a couple, F (see figure), revolving by an angle, α is given by $T=2rF\alpha$ where r is the radius. We know (see "Force") that the movement of the couple is equal to abF , that is to say, to $2rF$. The work is therefore $T=M\alpha$.

If we express the power developed, that is to say, the work in a unit of time, we have $P=M\omega$; in which ω is precisely the value of the angular velocity. We can therefore say that the power developed by a couple F is equal to the product of the motive moment by the angular velocity $P=M\omega$.

The starting occurs as soon as the value of the motive moment exceeds that of the resistant moment, represented in an automobile by the friction of the driving wheels of the vehicle upon the ground.

Couple-Gear Freight Wheel Co.—Ash-ton Bldg., Grand Rapids, Mich. Mfrs. electric commercial automobiles. First marketed July, 1906. Cap. \$500,000. Melvin B. Church, Pres.; Alfred J. Brown, Vice-Pres.; M. Clay Church, Sec.; Wesley W. Hyde, Treas.; Karsten Knudsen, Designer and Supt.; H. Groudahl, Asst. Supt.; J. W. Brown, Mgr. Dealers: Mississippi Valley Automobile Co., St. Louis, Mo. Auto Motor Car Co., Cincinnati, O.

Coupling.—A device for connecting pipes or rods, or for connecting any two pieces of mechanism so that they can operate in unison.

Coupling, Elbow.—See Elbow.

Coupling, Face-plate.—A coupling called also a "flange coupling, consisting of two castings, with flat flanges, by means of which two shafts can be connected by bolts.

Coupling, Flexible.—Same as Universal joint. See Joint, Universal.

Coupling, Friction.—A coupling in which two parts are caused to rotate together by the friction between the two halves of the coupling.

Coupling, Oldham.—A kind of universal joint that permits of slightly incorrect alignment, as well as want of parallelism in the shaft which it connects.

Coupling, Reducing.—A pipe-coupling for connecting one pipe to another of different diameter.

Coupling-sleeve.—See Sleeve. Coupling.

Coupling, Union.—A pipe or rod by which the two pieces can be united without turning anything but the coupling.

Coupling, Universal.—The same as Universal Joint" or "Cardan Joint." See Joint.

Courtenay, Dr. W. A.—Hancock, Mich. Garage.

Courty, A.—30 rue du Pont, Nully-sur-Seine, France. Mfrs. wood wheels.

Cousins & Howland.—Hanford, Cal. (Mitchell.)

Couteau, H.—95 rue d'Angouleme, Paris, France. Mfrs. lubricators.

Couverchel, V.—55 qui de Boulogne, Boulogne, France. Mfrs. automobiles, gas. (C. V. R. cars.)

Couzens, James.—Sec. and Treas. Ford Motor Co. B. Chatham, Ont., Aug. 26, 1872. Ed. school and business college. Director Ford Motor Co., Ford Motor Co. of Canada, Ltd. Mem. clubs: Fellowshipcraft A. C., Detroit, Detroit Curling Res., 80 Chanler Ave., Detroit, Mich. Office, Ford Motor Co., Detroit, Mich. In the automobile trade since 1903. Used first car July, 1903.

Covell, Herbert C.—Pres. Parkway Garage Co., 110th St. and Central Park West, New York City.

Covell, Joseph H.—Mgr. Rental Dept. Parkway Garage Co., Central Park West and 110th St., New York City.

Coventry Chain Co., Ltd.—Coventry, England. Mfrs. chains.

Covert & Williamson.—Ovid, N. Y. Garage.

Covert, B. V.—Sec. and Treas. Covert Motor Vehicle Co., 57-61 Richmond Ave., Lockport, N. Y.

Covert, C. E.—Pres. Covert Motor Vehicle Co., 57-61 Richmond Ave., Lockport, N. Y.

Covert Mfg. Co.—Troy, N. Y. Mfrs. automobile screw jacks.

Covert Motor Vehicle Co.—57-61 Richmond Ave., Lockport, N. Y. Makers of the Covert commercial car (½ ton capacity), front and rear axles, and transmissions. Cap. \$100,000. Est. 1902. C. E. Covert, Pres.; B. V. Covert, Sec. and Treas.; Edward J. Fritton, Supt.

Covey & Wallace Motor Co.—16th and Alder Sts., Portland, Ore. Agts. Pierce, Cadillac, Locomobile, Knox, Peerless. Est. 1905.

Covey, York.—Staceyville, Ia. (Holsman.)

Cowan, W. K.—830-34 Broadway, Los Angeles, Cal. Rambler agent for Southern California. Est. 1892. Garage, 50 cars. Repairing.

Cowen, H.—Ft. Morgan, Colo. (Waltham.)

Cowey Engineering Co.—1 Albermarle

St., Picadilly, London, W. England. Mfrs. gauges.

Cowle & Pierson.—1413 Grand Ave., St. Louis, Mo. Garage.

Cowles & Co., C.—New Haven, Conn. Mfrs. annunciators, bow separators, watch holders, lamps, metal trimmings.

Cowles, W. B.—Vice-Pres. and Treas. Long Arm System Co., Lakeside Ave. and E. 38th St., Cleveland, O.

Cowls, D. H.—Glens Falls, N. Y. (Ford.)

Cox, E. A.—Vice-Pres. Miami Cycle & Mfg. Co., Middletown, O.

Cox, H. G.—Sec. and Vice-Pres. Hercules Electric Co., Indianapolis, Ind.

Cox, James F.—508 State St., New Haven, Conn. (Indian.)

Cox, J. W.—Kensington, O. (Jewel.)

Cox, J. Wade.—1013-15 Main St., Houston, Tex. (Ford.)

Crab-clutch.—See Clutch, Claw.

Crabette.—92 rue Richelieu, Paris, France. Mfrs. wearing apparel (coats).

Cradle.—A kind of trough formed of several curved cross braces secured to the side-members of the car-frame and supporting the radiator or the motor and its accessories.

Crafts, H. L.—233 E. 33rd St., New York City. Garage.

Craig, F. S.—521 Chestnut St., Long Beach, Cal. (Dolson.)

Craig, Frederick T.—Supt. Knox Motor Truck Co., Springfield, Mass.

Craig Garage Co.—1213 Madison Ave., Toledo, O. (Jewel, Stoddard-Dayton, Wayne.)

Craig, James.—556 W. 34th St., New York City. Mfr. marine gasoline engines, propellers and marine fittings. Treas. National Ass'n Engine and Boat Mfrs. Est. 1900.

Cramer, J. A.—737 Main St., Buffalo, N. Y. (Stoddard-Dayton, Wayne, Mitchell.)

Cramp & Sons Ship & Engine Bldg. Co.—Beach and Ball Sts., Philadelphia, Pa. Mfrs. crank cases, axles, gear cases, gearing, levers, lamp and tire brackets, slat iron, seat castings. Member M. & A. M. Cap. \$6,098,000. Inc. 1873. Henry S. Grove, Pres.; H. W. Hand, Vice-Pres. and Gen. Mgr.; Chas. Taylor, Sec. and Treas.; W. P. Smith, Supt. of Sales; B. H. Cramp, Supt. of Brass Foundry. Agts. Carroll S. Smith, 100 Broadway, New York City. Richards & Co., 200 Causeway St., Boston, Mass.

Cramp, James.—85 Summer St., E. Boston, Mass. Mfr. steel rims.

Crandall, Stone & Co.—Binghamton, N. Y. Mfrs. bow sockets, top fixtures.

Crane Auto & Garage Co.—Providence, R. I. (Atlas.) Garage.

Crane & Brewster.—243 Tabot Ave., Dorchester, Mass. Garage.

Crane & Co.—519 S. Canal St., Chicago, Ill. Mfrs. brass pipe fittings, wrought iron and steel pipe.

Crane & Co., G. F.—40 Clark St., Cleveland, O. Garage.

Crane & McMahon.—8 Bridge St., New York City. Mfrs. bent automobile wheel rims, (hickory and oak). hickory spokes and spoke billets. Partnership. Est. 1879. John Crane and W. A. MacMahon co-partners.

Crane & Whitman.—94-104 W. 7th St., Bayonne, N. J. Makers of a new car to be marketed during 1908 season, also machine work to order. Cap. \$50,000. Est. Oct., 1906. H. M. Crane, Pres.; Allen E. Whitman, Vice-Pres. and Treas.; P. M. Ericksen, Sec.; R. W. Wasson, Supt.

Crane Co., W. N.—1131-1133 Broadway, New York City. Mfrs. gas lamp burners.

Crane, C. C.—Foreman repair shop, Citizens' Motor Car Co., n. e. cor. 7th and Main Sts., Cincinnati, O.

Crane, E. F.—Holland Garage, 200 S. 3rd St., Easton, Pa. (York, Pullman.)

Crane, F. W.—Automobile Editor, The New York Times, Times Bldg., New York City.

Crane, J. E.—922-930 18th St., Denver, Colo. Dealers in second-hand cars. Est. May 5th, 1895. J. E. Crane, Mgr.; J. Wilson, Foreman. Garage, 15 cars. Repairing. Open day and night.

Crane, John.—Partner in firm Crane & MacMahon, 8 Bridge St., New York City.

Crane, Jonathan H.—Vice-Pres. Manhattan Brass Co., 332 E. 28th St., New York City.

Crane, W. Murray.—Director Pittsfield Spark Coil Co., Dalton, Mass.

Crane, Zenas.—Director Pittsfield Spark Coil Co., Dalton, Mass.

Crank.—A term, when used of boat, meaning ill-balanced, so as to be easily capsized.

Crank.—A lever keyed at right angles to a shaft or formed integral with it, and by means of which the shaft is turned or imparts motion.

A "two-throw" crank is two cranks forged or secured to a shaft at an angle of 90° with each other; a "three-throw" crank is three cranks placed at an angle of 120°; and in a "four-throw" the cranks are placed 180° apart from the two inner cranks, this being the latest and most approved practice.

Crank, Balance.—A form of crank which is provided with a balance weight opposite the crank itself, and which is designed to balance the weight of the crank-throw and the mass of the piston and connecting rod.

Crank, Bell.—A lever with two arms at right angles, and the fulcrum at the angle or apex. It is used for changing the direction of a pull or thrust.

Crank-case.—A case enclosing the crank-shaft of a motor and forming a protection for the mechanism and a support for the cylinders.

Crank-case Explosion.—See Back-firing.

Crank-chamber.—The space within the crank-case.

Crank, Disk.—A crank formed by a disk of metal keyed on the crank-shaft. The crank-pin is placed near its periphery. It is simpler to make and more easy to balance than an ordinary crank. In many gasoline motors the pair of fly wheels forms the disk-crank.

Crank-pin.—The cylindrical stud or pin of a crank, to which the connecting-rod is attached.

Crank-shaft.—Any shaft that bears one or several cranks, the number depending on that of the cylinders or the motor. Crank-shafts, which were formerly laboriously forged by hand, or cut out of

a solid block of steel, are now, where made in large numbers, drop-forged from special steel, and afterward turned down to size. After they are within a few thousandths of an inch of the requisite diameter, they are carefully ground to fit the bearings for which they are intended. The crank-shaft shown in the figure is for a four-cylinder motor and of the three-bearing type. See Crank.

Crank, Starting.—A handle placed in front of the car and operating, through gear-wheels or chain-drive, on the crank-shaft in such a way as to start the motor.

Cranking.—Turning the starting handle of a motor car in order to effect the starting.

Cranska Thread Co., The.—Worcester, Mass. Mfrs. top and upholstering thread.

Cranston & Co., T. H.—58 Wabash Ave., Chicago, Ill. Garage.

Crary, W. P.—Pres. and Treas. 20th Century Mfg. Co., 19 Warren St., New York City.

Craven Garage.—Kellogg, Ia. Garage.

Crawford & Soper.—1010 Prospect Ave., Cleveland, O. Garage.

Crawford Agency.—152 W. 56th St., New York City. (Crawford.)

Crawford Auto Agency.—Bucyrus, O. (Winton.)

Crawford Auto Co.—Hagerstown, Md. Mfrs. automobiles, gas. (Crawford cars.)

Crawford, G. W. & H. D.—Delhi, N. Y. Mfrs. wood and metallic bodies.

Crawford, William Wilberforce.—B. in Washington, Conn. Educated at Beloit and Oberlin Colleges, University of Wisconsin. Occupation, Ass't Sec. Chicago Automobile Club. Formerly Automobile Editor Chicago Record-Herald, previously in general newspaper work in El Paso, Tex. At present free lance writer for a number of magazines and newspapers. Res. 5456 Greenwood Ave. Address 13-17 Plymouth Pl., Chicago, Ill.

Cray Bros.—1244 9th St., W., Cleveland, O. Mfrs. automobile tops, cushions, trimmings.

Cray, W. A.—Sec. H. E. Wilcox Motor Car Co., 1030 N. E. Marshall St., Minneapolis, Minn.

Creamer, Theodore B.—B. April 10, 1876, at Stevens, N. J. Education, Grammar School, Camden, N. J. Occupation, Automobile Editor Philadelphia Inquirer, Philadelphia, Pa.

Creasy, R. B.—Ballinger, Tex. (Ford.)

Creeping.—The tendency of a tire to rotate relatively to the rim. Creeping not only loosens the tire, but tends also to produce leakage through the strain set up at the valve. (2) A phenomenon of capillarity which often proves annoying in battery jars, and which consists in the tendency of certain solutions of salts to ascend the sides of the jar and leave thereon a solid deposit.

Cremona Motor Mfg. Co.—Lotts Rd., Chelsea, London, S. W. England. Mfrs. automobiles, steam. (Cremonie cars), automobile motors.

Crépet, V.—la Demi-Lune, Rhone, France. Mfrs. elastic wheels.

Crescent Auto & Machine Co.—Cor. E. 2nd and Marr Sts., Fond du Lac, Wis. Agts. Cadillac, Buick, Pope-Hartford, White. Est. 1906. Cap. \$10,000. F. S. Wiley, Pres.; W. H. Hathaway, Sec. and Mgr.; H. R. Potter, Treas.; H. S. Smith, Supt. Garage, 25 to 30 cars. Repairing.

Crescent Auto & Supply Co.—2254 Missouri Ave., St. Louis, Mo. Supplies.

Crescent Automobile Co.—2565 Boulevard, Jersey City, N. J. Agts. Cadillac, Pope-Hartford, Pope-Toledo. Est. 1900. Cap. \$50,000. G. E. Blakeslee, Pres. and Gen. Mgr.; L. J. Blakeslee, Treas.; E. E. Downs, Sec. Garage, 130 cars. Repairing.

Crescent Auto Top Co.—58 W. 43rd St., New York City. Mfrs. automobile tops, slip covers, dust hoods, extra seats,

glass fronts. Est. April, 1906. James C. Stoops, Mgr.; Marie E. Stoops, Sole Owner.

Crescent City Auto Co.—217 S. Rampart Ave., New Orleans, La. (Cleveland, Thomas Flyer, Northern, Dragon.)

Crescent Forgings Co.—Oakmont, Pa. Mfrs. drop forgings.

Crescent Garage.—McAllister and Gough Sts., San Francisco, Cal. (Moline.)

Crescent Parts Co., The.—1743 Broadway, New York City. Mfrs. removable rims. Cap. \$150,000. Est. Feb., 1907. C. F. Wyckoff, Pres.; S. S. Slater, Vice-Pres.; Oscar Warner, Sec. and Treas.

Crescent Phosphorized Metal Co.—2314-2318 Wood St., Philadelphia, Pa. Mfrs. brass and copper metals.

Crespo, Herman.—27 Arenal, Madrid, Spain. Mfrs. motorcycles.

Crétin-Billet Frères.—Morez-du-Jura, France. Mfrs. goggles.

Crim, Samuel M.—Pres. Reliance Automobile Co., 547-57 Fulton St., San Francisco, Cal.

Crispin Sheet Steel Metal Mfg. Co.—3038-3046 Chestnut St., Philadelphia, Pa. Mfrs. pressed steel products, stampings.

Crist, A. H.—Owner and Mgr. Crist, Scott & Parshall, Cooperstown, N. Y.

Crist, Scott & Parshall.—Coopers-town, N. Y. Est. 1906. A. H. Crist, Owner and Mgr. Garage, 20 cars. Repairing.

Critchley Machine Screw Co.—25 Union St., Worcester, Mass. Mfrs. ball bearings, screws.

Criterion Motor Co.—Des Moines, Ia. Mfrs. automobiles, gas. Inc. \$100,000.

Crittendon, Geo. A.—Lynn, Mass. (Baker, Panhard, Darracq.)

Crocker, C. M.—Sec. Automobile Road Map Co., 428 Lafayette St., New York City.

Crocker Cycle Co.—Falmouth, Mass. (Cadillac.)

Crocker House Garage.—Golden St., New London, Conn. Garage.

Crockett, D. E.—Director Dragon Motor Co., 31st, 32d and Chestnut Sts., Philadelphia, Pa.

Crocus.—A polishing powder consisting of peroxide of iron; used for polishing steel and brass.

Croff, A. C.—Main St., Sellersville, Pa. (Rambler.) Est. 1904. Garage, 6 cars. Repairing.

Croft, W. H.—Peekskill, N. Y. (Maxwell.)

Crofton Storage Battery Co., The.—423-425 W. Queen St., Toronto, Can. Mfrs., dealers and agents sparking batteries, storage batteries, sparking and lighting systems. Est. 1898. J. Wilfred Madigan, L. Brady, Benj. Pinkas, officers; John Carey, Head Automobile Dept. Garage.

Cronin Automobile Co.—569 S. Clinton St., Syracuse, N. Y. (Premier, Reo, Dragon.)

Croninger, R. Harry.—Mgr., Second Vice-Pres. Pennsylvania Auto Motor Co., Bryn Mawr, Pa. Mem. Merion Cricket, Haverford, Pa. Res. Bryn Mawr, Pa. In trade since 1899. Used first automobile January, 1899.

Cronk, E. B. & A. F.—7 Liberty St., Utica, N. Y. Garage.

Crook, Frank.—386 High St., Central Falls, R. I. Garage.

Crosby & Co., S. L.—186 Exchange St., Bangor, Me. Agts. Reo, Knox, Est. 1898. Cap. \$10,000. H. A. Chapman, Pres.; E. B. Sanger, Treas.; E. H. Dakin, Sec.; C. F. Burrill, Head of Auto Dept. Repairing.

Cros, J. et A. Laboureaux.—12 rue des Poissonniers, Neuilly-sur-Seine, France. Mfrs. spark plugs.

Crosby Co.—Buffalo, N. Y. Mfrs. ball retainers, brake drums, ball cups, auto gear cases, hub caps, hub flanges, lamp brackets, pressed steel products, shells, boiler steel.

Crosby Frisian Fur Co.—116 Mill St., Rochester, N. Y. Mfrs. automobile robes, gloves and gauntlets.

Crosby Steam Gate & Valve Co.—97 Oliver St., Boston, Mass. Mfrs. pressure gauges, safety valves.

Croselmire & Ackor Co.—42 Walnut St., Newark, N. J. Mfrs. platinum and iridium wire, rivets, etc., for sparking points. Cap. \$100,000. Est. 1901.

Cross.—The bolts, arranged at right angles, upon which the forks of a universal joint pivot.

Cross.—A connecting piece for four pipes which meet at right angles.

Cross-head.—A block sliding between guide-bars, and designed to give the piston-rod of a steam engine motion in a straight line axial with the cylinder.

Crossed Belt.—See Belt, Crossed.

Cross Engine Co., M. O.—800-806 Bellevue Ave., Detroit, Mich. Mfrs. carbureters, clutches, reverse marine gears, transmission gears, gasoline auto-motors, gasoline marine motors.

Cross-head Pin.—See Wrist-pin.

Cross-link.—Same as drag-link. See Link, Drag.

Cross-section.—A cut across any object at right angles to its length. (2) A drawing of such a section.

Cross-shaft.—The same as counter-shaft. See Shaft, Counter.

Crossett Mercantile Co.—Crossett, Ark. (Northern.)

Crossman, Willard.—Vice-Pres. The Auto Garage Co., Inc., 146-148 W. 39th St., New York City.

Cross, W. H.—18 Franklin St., Brooklyn, N. Y. Mfrs. metal polish, hand cleaners. Est. 1892.

Crouch, Chas. P. & Co.—484 Carroll Ave., Chicago, Ill. Mfrs. gasoline automobile and marine motors.

Crouch Motor Co.—Stoneham, Mass. Mfrs. motorcycles.

Crouse Hinds Co.—W. Jefferson St., Syracuse, N. Y. Mfrs. timers, distributors.

Crowe-Graham Motor Car Co.—Portland, Ore. (Knox.)

Crowe Metal Mfg. Co.—71 W. Jackson Blvd., Chicago, Ill. Mfrs. name plates.

Crowell, Gilmer.—292-296 Graham St., Brooklyn, N. Y. Mfrs. air compressors.

Crowley, G. G.—1319 E. Market St., Akron, O. Repairing.

Crown Battery Co.—992 Southern Blvd., New York City. Mfrs. primary batteries.

Crown Garage.—534 Washington St., Hudson, N. Y. (Franklin.) Garage.

Crown Motor Car Co.—23 Motor Mart, Boston. (Glide, Aurora.)

Crown-plate.—The upper and lower sheet of a steam-car boiler.

Crown-sheet.—The lower head of a steam boiler over the burner.

Crowthers, Robert C.—117 E. 7th St., Cincinnati, O. (Elmore, Marion.)

Croxton, H. A.—Pres. and Treas. Forest City Motor Car Co., 101-149 Walnut St., Massillon, O.

Crozier, Cary.—West Side, Muncie, Ind. Repairing.

Crucible Steel.—See Steel, Crucible.

Crucible Steel Castings Co.—Landsdown, Pa. Mfrs. steel castings.

Crucible Steel Castings Co.—Milwaukee, Wis. Mfrs. steel castings.

Crucible Steel Co. of America.—Empire Bldg., Pittsburg, Pa. Mfrs. bar iron and steel.

Cruikshank, C. Gordon.—Pres. Consolidated Bicycle & Motor Co., 185 Notre Dame E., Winnipeg, Can.

Cruikshank, C. L.—Vice-Pres. Consolidated Bicycle & Motor Co., 185 Notre Dame E., Winnipeg, Canada.

Cruiser.—A term applied to touring boats in contradistinction to racing boats, called "racers."

Crum & Co., H. C.—958-960 N. High St., Columbus, O. (Rambler, Jackson.)

Cryder & Co.—583-585 Park Ave., New York City. Importer Mors, Renault, Leon Bollée. Est. 1906. T. A. Havemeyer, Pres.; H. C. Cryder, Treas.; A. Harris, Garage Dept.; C. Morel, Head Repair Dept. Garage. 65 cars. Repairing.

Cryder, Henry C.—Treas. Cryder & Co., 583 Park Ave., New York City.

Cryolite.—A fluoride of aluminum and sodium. $3\text{NaF} \cdot \text{Al}_2\text{F}_3$. It is a white lamellated mineral with a perfect cleav-

age, small fragments of which easily fuse. It is one of the sources of aluminum.

Crypto-gear.—See Gear, Epicyclic.

Cubbertson Bros.—Sacramento St., Lodi, Cal. (Waltham.)

Cuddleback, E. R.—122-124-126 E. 4th St., Fremont, Neb. (Stoddard-Dayton, Reo, Ford, Mason, Premier.) Est. April 1, 1906. Garage, 30 cars. Repairing.

Cuddeback, F. L.—Pueblo, Colo. (Waltham.)

Cudell und Cie.—Reinikensdorferstrasse 65, Berlin, Germany. Mfrs. automobiles, gas comm., (Cudell trucks), automobile motors, motorcycles, motorcycle motors.

Cuenod, Ernest.—3 Rue Lafitte, Paris. Born in Switzerland. May 3, 1858. Commander of Isabelle-la-Catholique, Christ Militaire of Portugal. Counsel of various automobile societies; administrator of the League against Road Dust; member of the extra-parliamentary commission for automobile traffic; founder of the Compagnie Française des Bascules Automatiques of the Compagnie Parisienne des Voitures Electriques, of the Georges Richard Brasier establishments, of the Martin Automobile Company (Ltd.) at Saint Blaise, Switzerland, etc.

Cugnot.—A celebrated mechanic. Born in France in 1725 and died in 1804. In 1770 he invented the first steam carriage that ran upon a common road. This carriage, which had three wheels, is preserved at the Conservatoire des Arts et Métiers at Paris.

Cullman Wheel Co.—1030 Dunning St., Chicago, Ill. Mfrs. chains, differential gears, sprockets.

Culp Bros.—307 Forest Ave., Pacific Grove, Cal. Est. 1895. Garage. 20 cars. Repairing.

Culp, T. S.—625-631 Mahoning St., Canton, Stark County, O. Agts. Gale, Wayne. Dealer in second-hand cars. Est. March 15, 1887. T. S. Culp, Proprietor. Garage, 50 cars. Repairing.

Culver Novelty Co.—Culver, Ind. Mfrs. carbureters.

Cumbe, E. R.—1541 Cleveland Pl., Denver, Colo. (Rambler, Mitchell.)

Cumberland Steel Co.—William St. and B. & O. R. R. Cumberland, Md. Mfrs. steel shafting, flange couplings, safety set collars.

Cumberland Valley Automobile Ass'n.—Mechanicsburg, Cumberland County, Pa.

Cunningham, J. C.—Le Grand, Cal. (White.)

Cuntz, Hermann Francis.—B. July 21, 1872, in Hoboken, N. J. Educated at Stevens Inst. of Technology, degree of M. E. in 1893, Mechanical and other Engineering courses. Occupation, Mechanical Engineer, Patent Attorney and Expert. Retained principally with auto-

mobile interests. Member: The Engineers Club, Automobile Club of America, Aero Club of America, Transportation Club of N. Y., City Club of N. Y., Naval and Military Order of Spanish - American War, Connecticut Commandery, Hartford Club, Hartford Canoe, Golf, University Clubs. Connected with trade since 1895. First operated automobile in 1896. Residence, 65 Forest St., Hartford, Conn. Address, 5-7 E. 42nd st., New York City.

Cup, Priming.—A small cup designed to admit a small quantity of gasoline into the cylinder in cold weather. It is usually combined with a small relief cock which, if opened when the engine is started, relieves the compression and greatly facilitates the motor's operation.

Curé, Raoul E. Gasse et Cie.—Darneval, pres. Rouen, Nièvre, France. Mfrs. non-skids.

Curren, James.—Officer Delta Mfg Co., Bloomfield, N. J.

Current.—When a wire connects two conductors at different potentials, it becomes the seat of a flow of electricity going from a body at the highest potential (or positive) to that of the lowest potential (or negative). Such flow of electricity constitutes the current. The initial cause of an electric current is therefore a difference of potential between two points, and such difference of potential is produced by an electromotive force. If the points are united by a conductor, there will be a current, and the value of the latter will be proportionate to the difference of resistance thereof. The difference of potentials is measured in "volts," the intensity in "amperes," and the resistance in "ohms." As the passage of the current into a conductor produces an elevation of temperature of the latter, there will be an absorption of a certain energy which is measured in "watt-hours," the unit of power being the "watt."

Current, Alternating.—A current of electricity that changes or reverses direction rapidly instead of flowing steadily in one direction, as a direct or continuous current is supposed to. This type of current is of no use in charging ignition coils, but a rotary transformer or motor generator may be used for this purpose, taking an alternate current to drive the

motor and giving a continuous current from the generator.

The chief disadvantage attending the use of alternating currents is that they are less suited for the driving of electric motors than continuous ones; and when power has to be transmitted by their means, some special form of motor has to be used, and these forms can scarcely be said to have reached the same state of efficiency that has been obtained by the continuous current motor.

Two or more alternating currents differing from each other in "phase" by a constant amount are called "polyphased currents." "Synchronous currents" are alternating currents of the same period and agreeing in phase. Two alternating currents are "asynchronous" when they have not the same period.

Current, Continuous or Direct.—A current of constant direction and intensity. It is the simplest form of flow of electricity in conductors, and the one used in ordinary ignition circuits.

Current-density.—The amount of current per unit of area of cross-section of a conductor.

Current, Eddy.—A current produced entirely within a mass of metal through the movement or alteration in number of the magnetic lines of force passing through it. Eddy currents tend to occur in the cores of transformers, pole pieces of the field magnets and dynamos, etc.

Current, Establishment.—In the production of induced currents by means of a continuous inducing current, as in the case of ignition coils, it is expedient to set up the inducing or primary current at the exact instant at which the induced current should give a spark at the plug. This is accomplished by means of a mechanical interrupter controlled by the motor, or by a magnetic interrupter (trembler) operating in parallel with a distributor also controlled by the motor. In the case of a high-tension magneto the primary current is established by a distributor keyed to its shaft and working synchronously with the motor.

Current, Extra.—An induced current which develops in a circuit traversed by a variable current. Let a be a circuit (see figure) comprising a coil, b, designed to increase the self-induction, and

traversed by a current from a battery, P. If, by means of an interrupter, I, a current is set up, there will be produced in the coil, b, a reverse induced or "extra-current," which may be detected by a galvanometer, G. The needle, previously placed in its position of equilibrium, will be moved beyond such posi-

tion, thus indicating the superposition in the galvanometer of the current coming from the battery, and of that of opposite direction, coming from the coil. Upon opening the circuit there will be produced an extra-current that will be shown by a reverse impulsions of the galvanometer needle previously placed back of zero. It is the extra-current of the induced current that gives the make-and-break spark in ignition by an ordinary magnet.

Current, Inducing, and Induced.—A conductor movable in a fixed magnetic field, or fixed in a variable field, is the seat of an induction current. The magnetic field plays the part of inductor. A magnetic field may be created by a coil traversed by what is called an "inducing current." The current developed by induction in a circuit placed in the magnetic field of the inducing coil is called an "induced current." The industrial machines called alternators, dynamos, transformers, etc., are all based upon the phenomena of induction. The ignition coils employed on automobiles are "transformers" consisting of an inducing and induced coil.

Current-intensity.—The intensity of an electric current corresponds to the notion of grandeur and intensity of effect. In order to decompose water, for example, there must be a determinate voltage, and as long as such voltage is not attained, the decomposition will not take place. But after the necessary voltage is attained, the quantity of water decomposed will depend on the intensity. The greater the intensity, the greater will be the volume of water decomposed.

Currier-Cameron Co.—85 Elm St., Amesbury, Mass. Mfrs. wood and metallic bodies.

Currier, Gardner & Bullis.—Coudersport, Pa. Mfrs. differential gears.

Curry, Duncan.—Automobile reporter and editor, American. B. in New York, Nov. 12, 1864. Ed. at private and public schools. Res. Bayside, L. I. Office, 238 William St., New York City.

Curry Oil & Supply Co.—Boston, Mass. Mfrs. oil.

Curtain Supply Co.—85-93 Ohio St., Chicago, Ill. Mfrs. automobile tops and curtains. Cap. \$300,000. Est. 1899. E. T. Burrows, Pres.; W. W. Willets, Vice-Pres. and Treas.; W. H. Forsyth, Sec. and Gen. Mgr.

Curt & Adams.—420 Spruce St., Scranton, Pa. (Maxwell.)

Curtin-Herbert Co.—Gloversville, N. Y. (Northern.)

Curtin, Williams Auto Co.—122 Parsons Ave., Columbus, O. (Peerless, Pope-Toledo, Pope-Hartford, Autocar, Stevens-Duryea.)

Curtis Automobile Co.—Grand Ave., Milwaukee, Wis. (Ford.)

Curtis, Harry B.—Sec. and Treas. Bridgeport Hardware Mfg. Co., 461-469 Iraniston Ave., Bridgeport, Conn.

Curtis-Hawkins Motor Co.—Motor Mart, Boston, Mass. (Grout, Chadwick.)

Curtiss Auto Co.—70 Albany Ave., Brooklyn, N. Y. (Franklin, second-hand cars.)

Curtiss Mfg. Co., G. H.—Hammondsport, N. Y. Mfrs. motorcycles, motors (aeronautic and automobile). Agts. Frayer-Miller, Ford.

Curtner, A. D.—Sec. Osen Hunter Automobile Co., 407 Golden Gate Ave., San Francisco, Cal.

Cushing's Auto & Cycle Repository.—San Jose, Cal. (Model.)

Cushion, Pneumatic.—A cushion inflated with air instead of being stuffed with hair or being rendered elastic by springs.

Cushion-tire.—See Tire, Cushion.

Cushioning.—The gradual checking of the motion of the piston of an engine by the admission of steam or by the closing of the exhaust-port just before the end of the stroke.

Cushman, A. T.—Caribou, Me. (Jewel.)

Cushman, E. B.—Vice-Pres. Cushman Motor Co., 2020 N St. Lincoln, Neb.

Cushman, L. S.—Pres. Cushman Motor Co., 2020 N St., Lincoln, Neb.

Cushman Motor Co.—2020 N St., Lincoln, Neb. Mfrs. gasoline motors for motorboats, automobiles and stationary work. Propellers, carbureters and power fruit sprayers. Cap. \$50,000. Est. 1903. L. S. Cushman, Pres.; E. B. Cushman, Vice-Pres.; A. O. Taylor, Mgr. Agents: Denver Gas Engine & Appliance Co., Denver, Colo.; Seattle Hardware Co., Seattle, Wash.; W. W. Stephens, 6 Reade St., New York City.

Cutler, Elihu Herbert.—B. March 6, 1856, at Ashland, Mass. Education, High School. Director Knox Automobile Co., Springfield, Mass. Member Engineers' Club of New York. Residence, 84 Westminster St., Springfield, Mass. Address, care of Knox Automobile Co. Connected with automobile trade since 1900. Owned first car

1901. Recreations, automobiling, golf. Office, 7 E. 42d St., New York City.

Cutler, Austin.—La Porte, Ind. (Haynes.)

Cutler, S. C.—Vice-Pres. and Head of Machinery Dept., Republic Belting & Supply Co., 1616 W. 3rd St., Cleveland, O.

Cut-off.—The point at which the admission of steam to a cylinder is stopped. It usually varies from a quarter to three-quarters of the stroke, and is determined by the lap in case of the ordinary slide-valve.

Cut-off Plug.—A plug with which an electric switch is provided, and which can be used against tampering. Withdrawing the plug from the switch disconnects the batteries and renders it impossible for meddlers to start the motor. Called also a contact-plug.

Cut-out.—A device inserted in an electrical circuit in order to break it in the event of an excess of current passing through it. More commonly a fusible cut-out is used, but mechanical and automatic cut-outs of many kinds are employed.

Cut-out, Muffler.—A device whereby the gases may be exhausted directly into the air without passing through the muffler.

Cuyler, Lee.—453 Golden Gate Ave., San Francisco, Cal. (Packard, Cadillac.)

C. V. I. Motor Co.—Jackson, Mich. Mfrs. automobiles, gas.

Cycle.—A regular succession of transformations which a body undergoes when placed in known conditions. For example, a volume of gas formed in a carburetter always undergoes the following "cycle": it is drawn in, then compressed, then expanded, and then expelled, and so on. It undergoes a cycle of four phases. See Motors.

Cycle, Atkinson.—A modification of the four cycle and having as its essential feature periodic variations in the stroke of the motor-piston.

Cycle, Brayton.—A cycle of which the principle is the compression of a mixture of inflammable gas and air which is introduced into the working cylinder and there ignited, so as to burn in such a manner that the pressure shall not increase above a fixed constant value. The power is generated by the increase of volume at constant pressure due to the inflammation of the gas in the air.

Cycle, Carnot's Ideal.—The series of operations that would occur in a thermic motor theoretically perfect: (1) Adiabatic compression; (2) isothermal expansion; (3) adiabatic expansion; (4) isothermal compression. The Carnot cycle does not necessarily apply to the internal-combustion motor for the reason that the gas-motor does not operate necessarily under the conditions of such cycle.

Cycle, Diesel.—A cycle of four phases, which occur as follows: Air is inspired on the suction-stroke and then compressed to the temperature of incandescence on the compression-stroke, while during the explosion-stroke liquid fuel is atomized directly into the heated air within the cylinder.

Cycle, Magnetic.—A complete series of changes in the magnetic condition of a body, such that at the end of the series the body has returned to its original magnetic state.

Cycle, Motor.—See Motor-cycle.

Cycle, Otto.—Called also the Beau de Rochas cycle. The same as the four-phase cycle, or "four cycle," a term applied to a type of internal-combustion motors in which the four operations of suction, compression, heat-expansion and exhaust occur in as many distinct, successive strokes. See Motors.

Cycle, Steam-engine.—In the steam-engine the heat is added to the liquid, and its temperature sufficiently raised so that, under the conditions of pressure which are fixed upon, the liquid becomes a gas. In the second stage this gas is allowed to expand to as low a pressure as possible or convenient, and, by such expansion in the engine, do work upon the piston. The gas is then discharged either as a gas or as a liquid. This cycle is incapable of modification except in minor details.

Cycle et Automobile Industriels.—Published at 9 rue Buffault, Paris, France.

Cycle & Automobile Trade Journal.—1213 Filbert St., Philadelphia, Pa. Pub. monthly. James Artman, Pres.; Geo. H. Buzby, Vice-Pres.; C. A. Musselman, Sec. and Treas.

Cycle & Motorcycle Trader, Illustrated.—Published at 19 William St., London, England.

Cycle & Motor Trades Review.—Published at 20 Tudor St., London, England.

Cyclometer.—A small instrument for recording the distance made by a vehicle, by registering the number of revolutions of the wheels.

Cyclos Zarbref.—3 Calle de las Carrateras, Barbastro, Spain. Mfrs. motorcycles. (Zarbref.)

Cylinder-bore.—See Bore, Cylinder.

Cylinder-capacity.—The volume of a motor-cylinder, or, more accurately, the volume created by the maximum change of place of the piston.

In motors of a same type, such as those now employed on gasoline cars, a knowledge of the cylinder-capacity permits of roughly estimating the power of the motor; hence the origin of the "classification by cylinder-capacity" and of the "maximum cylinder-capacity." It may

be remarked that such methods of classification, with a view to a race, possess the inconvenience of favoring excessive speeds through the adoption of wide bores and short strokes. In the powerful motors of racing cars such a result is brought about through other reasons, upon which it is impossible to dwell in this place, and the principal ones of which have, as consequences, a lightness of the motor and of the gear-case. The cylinder-capacity of motors varies from 15.25 to 20.35 cubic inches (motor-cycles) to 915.5 to 976.5 cubic inches (racing cars).

If it be reflected that the ignition of a mixture, its combustion, and its expansion must take place within the extremely short time during which the power-stroke of the piston lasts, the importance that a powerful and precise ignition may have, especially in automobile motors in which the duration of such power-stroke is generally less than 5-100th of a second, can be readily understood.

To ignite an "explosive" mixture at a certain point is to bring about the self ignition of the mixture around such point, and as that ignition is both a direct function of the temperature and pressure, it can be as well obtained by a slight heating of the strongly compressed mixture as by a high temperature of the ignition point when the mixture is slightly compressed. As experience, however, shows that the propagating of the explosive wave around the point of inflammation is so much the more rapid and the combustion of the fuel so much more complete in proportion as the pressure of the mixture is greater, these two reasons militate again in favor of high compressions.

The advantages of electric ignition, which is now generally adopted in automobile motors, are of two orders, viz.: in the first place, the property that the spark possesses to the highest degree of simultaneously producing an extremely elevated compression and heating of the part of the mixture that surrounds it; and, in the second, the great facility presented by this mode of ignition of permitting of variations, at pleasure and instantaneously, of the precise moment of the ignition of the mixture before, during and after the passage of the piston to the dead-point.

Experience shows that the effective power, that is to say, the power utilisable upon the shaft of a given motor, does not increase indefinitely with its angular speed, but that such power passes, on the contrary, through a maximum. This leads to the supposition that the work of the cylinder volume must constantly diminishes in measure as the velocity increases.

As the quantity of the mixture admitted diminishes on the one hand, while the negative work of escapement of the burned gases increases on the other, these two causes concur in the reduction of the work of the cylinder volume in measure as the velocity increases.

The internal combustion motor presents the peculiarity of developing the same power at two different velocities, one less and the other greater than a certain critical velocity corresponding to its maximum power. Such maximum, moreover, is regulated by the structural peculiarities of the motor and particularly by the lift that can be given the suction and exhaust valves.

The characteristics of motors of recent construction is the substitution of a mechanically operated automatic valve, that is to say, a valve operating through the suction of the motor. The mechanical control of the suction valve permits of giving it very large dimensions and very high lifts and of thus obtaining much greater maximum powers. The automaticity of the suction valve, moreover, presents the serious drawback of preventing its intermediate opening as soon as the motor begins its suction, and of retarding its closing after the passing of the piston to the end of its suction-stroke, in giving the latter time to force into the atmosphere, through the carburetter, a fraction of the mixture aspired, which is so much greater in proportion as the motor revolves with greater velocity; whence the excess of carburetion, and, consequently, waste of fuel found at high speeds with the use of this kind of valves.

Cylinder Cooling.—The cooling of the walls of a gas-motor cylinder is rendered imperative for the reason that the heat produced when the mixture of gas and air is fired is fully as intense as that of a furnace, say 2,730° F. (1,500° C.). Were

Fig. 1.

not some means provided to reduce the temperature of the cylinder walls and combustion chamber to a reasonable degree they would quickly become heated to such a point as to cause the lubricating oil to burn and form a carbonaceous deposit, the compression would be lost, and, as a result of all this, the motor would refuse to operate. The process of keeping the heat of the walls of the cylinder down to a proper limit is termed "cooling the cylinder." The usual method of effecting such cooling is by causing

water to circulate through a jacket, b (see figure), surrounding the combustion space, and which is cast integral with the cylinder or is formed of sheet metal, such as aluminum or copper.

The circulation of the water designed to reduce the temperature of the cylinder walls of the motor is effected in either one or two ways: (1) By means of a small rotary pump, which forces the water through the jackets and then to a radiator so situated as to be exposed to the currents of air set up during the forward running of the car, or further cooled by a fan driven by the motor; or (2) by a thermosiphon. See Thermosiphon and Fan.

While the cooling of a gas-motor is most successfully accomplished by means of a circulation of water, many cars employ an air-cooling system, in which a number of flanges or radiating ribs or fins cast integral with the cylinder and having a large radiating surface is used (Fig. 2). Another method (Knox) consists in the use of corrugated steel pins, two inches in length, screwed into the surface of the cylinder,

Fig. 2. screwed into the surface of the cylinder,

in order to radiate the heat. Another method (Regas) consists in the use of slotted tubes on the cylinder. Still another system consists in surrounding the combustion-chamber with a jacket open at the bottom, and into which the air is blown from the top by a powerful blower.

Cylinder-head.—The same as Combustion-head or Combustion-chamber. q. v.

Cylinder-jacket.—See Jacket, Water.

Cylinder, Motor.—The part of a motor in which moves the piston, driven by the powerful expansion of the heat, or the pressure of the steam, according as the motor is an internal combustion or a steam one.

The combustion-head or chamber and cylinder of an internal combustion motor (which are usually of special gray iron) are sometimes cast separately, the two being then bolted together and the joint made tight by asbestos packing.

The difficulty, however, of keeping this tight and the possibility of the blowing out of the gasket, necessitating a somewhat lengthy repair, has brought the single-piece casting into general use.

Cylinder-oil.—A heavy lubricating oil for motor-cylinders which, at the temperature of the cylinder walls, becomes so fluid as to flow freely.

D

d. h. p.—Abbreviation of "delivered horse-power."

D. K. Electric Co.—106-110 Locust St., St. Louis, Mo. Mfrs. high and low tension magnetos. Not incorporated. Est. January, 1906. J. H. Duncan, Mgr.

Da-an-ite Auto Supply Co.—1912 Broadway, New York City. Supply house.

Dack, Fred E.—Galva, Ill. (Compound.)

Daclyn, H.—Place de l'Abondance, Lyons, France. Mfr. speed and grade indicators.

Dahl & Sons.—Aurora, Neb. (Reo.)

Daimler, Gottlieb.—A name celebrated in the automobile industry. Herr Daimler must be considered as one of the

great founders of automobilism, because of the very remarkable improvements that he introduced into internal combustion motors in applying them especially to mechanical locomotion. His first motor (single-cylinder vertical) was shown at the

Exposition Universelle of 1889 upon a street car. The patent was purchased by M. Peugeot, who afterward ceded it to M. Levassor, of the firm of Panhard & Levassor. Herr Daimler was born March 17, 1834, at Sohrndorf (Wurtemberg), and died March 6, 1900, at Cannstatt.

Daimler Mfg. Co.—1777 Broadway, New York City. (American Mercedes.)

Daimler Mfg. Co.—939 Steinway Ave., Long Island City, N. Y. Makers of the American Mercedes car, first marketed 1901. Seven models made since. Clifford M. Briggy, Pres.; Otto G. Nestle, Sec.; Alfred Kessler, Treas.

Daimler Motor Co., Ltd. (1904), The.—Daimler Works, Coventry, England. Mfrs. gasoline and commercial automobiles (Daimler).

Daimler Motoren Gesellschaft.—Utertukheim, Germany. Mfrs. marine motors, gasoline commercial automobiles (Daimler), gasoline automobiles (Mercedes and Maja).

Dain, F. W.—Peekskill, N. Y. (Waltham.)

Dakin, E. H.—Sec. S. L. Crosby & Co., 186 Exchange St., Bangor, Me.

Dale, Chas. J.—Plattsburg, N. Y. (Northern.)

Dale, John G.—Sec. Auto Import Co., 1786 Broadway, New York City.

Dalifol et Cie.—40 blvd. d'Asnières, Ile de la Jatte, Neuilly, France. Mfrs. carbureters, automobile and motorcycle motors.

Dallas, A. C.—36 La Salle St., Chicago, Ill. Mfrs. brass and copper tubing.

Dallas Automobile Club.—Eugene Corley, Sec., 315 Commerce St., Dallas, Tex.

Dalley & Barrows.—128 N. Broad St., Philadelphia, Pa. (Fiat.)

Dalley & Schill.—230 N. 22nd St., Philadelphia, Pa. (American.)

Dalsace, G.—23 rue Ruhmkorff, Paris, France. Mfr. oil lamps.

Dalsimer Auto Co.—1206 Market St., Philadelphia, Pa. (Haynes.)

Dalton Ingersoll Co.—Boston, Mass. Mfrs. brass pipe fittings.

Dalzel Axle Co.—S. Egremont, Mass. Mfrs. axles.

Damper.—A copper frame on which the wire in a galvanometer is sometimes coiled, and which "dampens" the oscillations of the needle. (2) A term sometimes applied to a device designed to counteract the recoil of a spring. See Shock-absorber.

Damping.—The checking of motion, particularly of vibratory motion, by the friction of the medium in which the moving body is placed, or by other retarding forces. (2) Preventing the indicator of an instrument from oscillating by virtue of its own inertia.

Dana, Howard.—Cobbleskill, N. Y. (Dolson.)

Danbury Hardware Co., The.—249-251 Main St., Danbury, Conn. (Rambler); supplies. Est. 1896. Cap. \$20,000. A. R. Jones, Pres.; J. R. Hill, Sec., Treas. and Buyer automobile goods.

Danielson & Co., J. S.—Jamestown, N. Y. Mfrs. tools.

Danielson, C. B.—Milwaukee, Wis. (Monarch.)

Danielson, O. M.—Leland, Ill. (Auburn.)

Dann Bros. & Co., The.—84 Franklin St., New Haven, Conn. Mfrs. bent wood bodies; seats (wood); dashes and fenders (wood); laminated wood roof panels; general woodwork to specification. Cap. \$40,000. Est. 1858. Clarence B. Dann, Pres.; Winfield P. Dann, Sec. and Treas.

Dann, Clarence B.—Pres. The Dann Bros. & Co., 84 Franklin St., New Haven, Conn.

Dann, Winfield P.—Sec. and Treas. Dann Bros. & Co., The, 84 Franklin St., New Haven, Conn.

Dann's Auto Station, J. T.—314 Main St., Danbury, Conn. Supplies; garage; repairs.

Dante, Cusi. — Michocan, Mex. (Wayne.)

Darbilly et Cie., H.—12 rue Vincent, Paris, France. Mfrs. chains, spark plugs.

Darby & Sons Co., Edward.—233 Arch St., Philadelphia, Pa. Mfrs. lockers.

D'Arcy Spring Co.—Kalamazoo, Mich. Mfrs. seat springs.

Darling Automobile Co.—Main and Franklin Sts., Auburn, Me. (Maxwell, Reo.)

Darling E. R.—138 Main St., Woonsocket, R. I. Garage.

Darling, K. C.—1686 Broadway, New York City. Second-hand cars; renting; supplies.

Darling Pump & Mfg. Co.—Williamsport, Pa. Mfrs. brass pipe fittings.

Darracq, Alexander.—12 Rue Eugène-Flachat, Paris. Borr at Bordeaux, Nov. 5, 1855. In 1891, M. Darracq organized

the firm of A. Darracq et Cie., 33 Quai de Suresnes, of which he is at present manager. In 1899, he was made chevalier of the Legion of Honor, and, in 1903, officer of the same order. He is an officer of the Mérite Agricole and of the Order

of the Crown of Italy, and president of the Syndical Chamber of the Cycle and Automobile.

Darracq et Cie., A.—33 quai de Suresnes, Paris, France. Mfrs. gasoline automobiles (Darracq cars).

Darracq Motor Car Co.—1989 Broadway, New York City. Importers Darracq cars. Est. 1902. Cap. \$50,000. G. M. MacWilliam, Pres.; C. D. Wilder, Treas.; Ben Wood, Sec. Dealers: Boston, Mass., A. F. MacWilliam, 171 Huntington Ave.; Chicago, Ill., J. T. MacWilliam, Mgr., 1502 Michigan Ave.; Los Angeles, Cal., F. E. Thayer, 1030 S. Main

St.; Philadelphia, Pa., International Motor Car Co., 514 N. Broad St.; Pittsburgh, Pa., E. D. Nevin, 307 Wood St.; Providence, R. I., Davis Automobile Co., 7 Dorrance St. Repair shop at 20 W. 60th St.

Darracq Motor Car Co.—171 Huntington Ave., Boston, Mass. (Darracq.)

Darracq Motor Car Co.—1502 Michigan Ave., Chicago, Ill. (Darracq.)

Darracq-Serpellet et Cie.—Suresnes, France. Mfrs. steam automobiles (Serpellet cars); steam commercial automobiles (Darracq-Serpellet trucks).

Darrough Garage.—613 Throckmorton St., Fort Worth, Tex. Garage.

Dart Mfg. Co.—524 Sheffield Ave., Chicago, Ill. Garage.

Dash-board.—A screen, usually of metal, placed upright in front of a motor-

car, or in the rear of the motor, and used as a protection and a support for various apparatus, such as the spark-coil, sight-

feed lubricator and various indicating devices

Dash-pot.—A device for preventing sudden motion of some part of a piece of mechanism by utilizing the viscosity or inertia of a fluid. A simple form consists of a small vessel of liquid in which a piston moves quickly. Another form consists of a cylinder with an air-tight piston.

Dasse, Gérard.—Verviers, Belgium. Mfrs. automobile motors, gasoline automobiles.

Datz, Alois S.—Treas. Northwestern Motor Car Co., 1928-1930 N. 20th St., Philadelphia, Pa.

Daucher und Mauz.—Stuttgart, Germany. Mfrs. tops

Dauch, J. J.—Treas. Sandusky Foundry & Machine Co., Sandusky, O.

Dauer Auto Co.—24 Richmond St., Providence, R. I. (Franklin.)

Daveluy, A.—10 bd. Alsace-Lorraine, Amiens, France. Mfrs. siren horns.

Davenport & Co.—108 Hatton Garden, London E. C., England. Mfrs. speed indicators, gauges.

Davenport, A. M.—Pres. American Coil Co., Inc. cor. Wall and Cocasset Sts., Foxboro, Mass.

Davenport Auto Co.—Davenport, Ia. Garage.

Davenport Barber Fireproof Garage.—106½ Main St., N. Adams, Mass. (Stanley, Pope-Hartford.)

Davenport Cycle Co.—Davenport, Ia. (Maxwell.)

Davenport, E. W.—Treas. Duplex Roller Bushing Co., Belfast, Me.

Daves & McCune.—991 Main St., Riverside, Cal. (Moline.)

Davey, J. E.—Pres. The Auto Garage Co., Inc., 146-148 W. 39th St., New York City.

Davey Tire Guard Co.—399 Franklin St., Buffalo, N. Y. Mfrs. anti-skid devices.

David et Cie.—16, rue Oberkampf, Paris, France. Mfrs. motorcycles (Caesar).

David et Cie., J.—Geneva-Acacias, Switzerland. Mfrs. motorcycle motors; motorcycles (la Moto Reve).

David, Wm. P.—Bridgeport, Pa. (Maxwell.)

Davidson & Co., J. S.—Jamestown, N. Y. Mfrs. wrenches.

Davidson, Adam.—13th Ave. and Lake St., Melrose Park, Ill. Repairing.

Davies, Wm. L.—Pres. Acme White Lead & Color Works, Detroit, Mich.

Davis & Co., E. C.—155 Falls St., Seneca Falls, N. Y. Garage.

Davis & Co., S. H.—68 Portland St., Boston, Mass. Mfrs. speedometers.

Davis, A. R.—Sec., Treas. and Purch. Agt. Cleveland Motor Car Co., 1372 E. 12th St., Cleveland, O.

Davis Automobile Co., Inc.—7 Dorrance St., Providence, R. I. Repair shop, 79-81 Mathewson St. (Winton, Peerless, Locomobile, Oldsmobile, Cadillac, Thomas Flyer, Darracq.) Est. 1902. Cap. \$100,000. J. A. Foster, Pres.; Nelson S. Davis, Vice-Pres.; Fred L. Smith, Treas.; Walter G. Pierce, Sec. Garage. 100 cars. Repairing.

Davis Boat Works.—Sandusky, O. Mfrs. motorboats.

Davis-Bournonville Acetylene Development Co.—Room 1511, 90 West St., New York City. Mfrs. special automobile machinery.

Davis, E. R.—18 Park St., Rockland, Me. Garage.

Davis, F. A. W.—Sec. Pioneer Brass Works, 418-424 S. Penna St., Indianapolis, Ind.

Davis, F. M.—Pres. Davis Mfg. Co., Milwaukee, Wis.

Davis, F. S.—Designer C. H. Blomstrom Motor Co., Clark and Jefferson Aves., Detroit, Mich.

Davis, Dr. H. A.—Dickinson, N. D. (Buick.)

Davis, Henry.—Clarksdale, Miss. (Oldsmobile.)

Davis, H. M.—Mgr. New York branch Knox Automobile Co., 1595 Broadway, New York City.

Davis Mfg. Co.—Milwaukee, Wis. Mfrs. gasoline motors. Cap. \$50,000. Est. April, 1905. F. M. Davis, Pres.; E. J. Koch, Vice-Pres.; J. S. Church, Treas.; M. J. Church, Sec.

Davis, Nelson S.—Vice-Pres. Davis Automobile Co., 7 Dorrance St., Providence, R. I.

Davis, Newton H.—La Rue, O. (Ford.)

Davis, O. E.—Front Ave., Winchester, Ind. (Marmon, Premier, Ford, Reo.)

Davis, O. W.—Designer and Supt. Gearless Transmission Co., Rochester, N. Y.

Davis, R. B.—Vice-Pres. Lothrop Davis Co., 105 Main St., Tonopah, Nev.

Davis, R. L.—1003 W. Chestnut St., Louisville, Ky. Garage.

Davis Robe Co., Inc.—1307 Champlain Bldg., Chicago, Ill. Mfrs. automobile robes, miscellaneous wearing apparel.

Davis, Andrew.—Sec. Salisbury Wheel & Mfg. Co., Jamestown, N. Y.

Davis, Samuel Todd, Jr.—Pres. Locomobile Co. of America. B. Washington, D. C., Feb. 8, 1873. Ed. Columbian College Preparatory School, and Civil Engineer's degree from Rensselaer Poly-

technic Institute, Troy, N. Y. Director Pequonock National Bank, Bridgeport; Locomobile Co. of America, The Lorana Co., Ardsley Electric Co., Ardsley Water Co., Bridgeport Specialty Co., Long Island Motor Parkway, Inc. Mem. N. Y. Yacht,

A. C. A., Ardsley, Brooklawn Country, A. C. of Bridgeport, Algonquin, Seaside, Bridgeport Yacht, University (Bridgeport), University (N. Y.), Aero Club of America, N. Y. Motor Club. Res. 110 Waldemere Ave., Bridgeport, Conn. Office, 2 Main St., Bridgeport. In trade since June 13, 1899. First car used June 13, 1899. Recreations, golf squash.

Davis, W. B.—02 Ontario St., Cleveland, O. (Jewel.)

Davis, W. F.—Cor. Main St. and Park Ave., Waterbury, Vt. Garage.

Davison, C. A.—Vice-Pres. and Treas. Rochm & Davison, Ltd., 91-95 W. Woodbridge St., Detroit, Mich.

Davison, J. L.—Supt. Rainier Co., Saginaw, Mich.

Davit.—Pieces of timber or iron projecting over a vessel's side or stern, having tackle by which to raise a boat.

Davy, Humphrey.—35 W. 43rd St., New York City. Garage

Dawson Machine Co.—2 Sargent St., Worcester, Mass. Garage.

Dawson, H. Allan.—Pres. United Motor Car Co., Philadelphia, Pa.

Dawson, J. T.—Owensboro, Ky. (Cadillac)

Day, A. M.—With A. Elliott Ranney & Co., 1851 Broadway, New York City.

Day, A. R.—Supt. Sprague Umbrella Co., Norwalk, O.

Day Auto Co.—1407 S. 12th St., Kansas City, Mo. Garage.

Day, B. C.—Mgr. Chicago Branch, Winton Motor Carriage Co., Chicago, Ill.

Day Foundry Co., The.—Illinois and Mary Sts., Buffalo, N. Y. Mfrs. brass, bronze, aluminum and copper castings, bronze metals.

Day, George H.—Founder of the Association of Licensed Automobile Manufacturers. B. Brooklyn, Conn., April 3, 1851. Died at Daytona, Fla., November 21, 1907. Long associated with Col. A. A. Pope in the manufacture and sale of Columbia bicycles, he turned his attention to automobiles in the middle nineties and became president of the Electric Vehicle Co., which acquired a controlling interest in the Selden patent. The formation of the A. L. A. M. followed in 1903, and Mr. Day became its general manager, a position which he held until early in 1907, when failing health led to his retirement. He continued to take part in the conduct of the affairs of that body until his death, which occurred very suddenly the week after the 1907 show of the A. L. A. M., from an affection of the heart.

Day, Louis J.—Purch. Agt. Schacht Mfg. Co., 2727-2731 Spring Grove Ave., Cincinnati, O.

Day, Dr. W. A.—Sparta, Minn. (Waltham.)

Daye, William S.—Division St., Amsterdam, N. Y. (Royal, Cadillac, Haynes, Waltham.)

Dayton Automobile Co.—Dayton, O. Stoddard-Dayton.)

Dayton Electrical Mfg. Co.—87 St. Clair St., Dayton, O. Mfrs. primary and storage batteries, electric generators and switches, magnetos and ignition dynamos, spark coils, spark plugs, spark timing devices.

Dayton Folding Tonneau Co.—1141 N. Main St., Dayton, O. Mfrs. folding tonneaus and automobile bodies. Not incorporated. Est. Nov. 1, 1904. J. D. Artz, sole owner.

Dayton Malleable Iron Co.—Dayton, O. Mfrs. malleable iron castings.

Dayton Mfg. Co.—2240 E. 3rd St., Dayton, O. Mfrs. storage batteries, lamps.

Dayton Motor Car Co.—Dayton, O. Makers of the Stoddard-Dayton car; first marketed 1905. Eight models made since. Cap., \$50,000. J. W. Stoddard, Pres.; C. G. Stoddard, Vice-Pres. and Gen. Mgr.; J. F. Campbell, Sec. and Treas.; H. J. Edwards, Chief Engineer; R. T. Houk, Supt.; Benj. Rhodes and H. N. Anderson, Asst. Supts.; H. W. Hayden, Pur. Agt.; C. S. Jameson, Sales Mgr.; Fred N. Coats, Asst. Dayton, F. E.—Sales and Adv. Mgr. Electric Vehicle Co., Hartford, Conn., previously Boston and Chicago Branch

Mgr. Office Hartford, Conn. In the trade since Dec., 1901.

Daytona Auto Transit Co.—Daytona, Fla. (Cadillac.)

Dead.—Neither moving nor imparting motion, as an axle which does not rotate, one which does not communicate motion to wheels, etc., but simply turns with them.

Dead-axle.—See Axle, Dead.

Dead-center.—See Center, Dead.

Dead-flat.—The broadest frame in a vessel.

Dead-heat.—A race in which the competitors come out even and there is no winner.

Dead-light.—A shutter for protecting a cabin window or porthole in foul weather.

Dead-point.—See Center, Dead.

Dead-rising.—That part of a boat which lies aft between the keel and the floor-timbers toward the stern-post.

Dead-weight.—A weight or load which is constant in position and amount. (2) Weight of a car empty.

Dead-wood.—A mass of wood built up on the keel of a vessel to support the cant-timbers.

Deal, R. B.—Lacota, Mich. (Waltham.)

Dean and Burden Bros., Ltd.—Salisbury, England. Mfrs. marine motors and gasoline automobiles (Scout cars).

Dean & Co., John M.—793 Westminster Ave., Providence, R. I. Garage.

Dean & Cook.—Rushville, Ind. (Reo.)

Dean Bros.—160 N. Ionia St., Grand Rapids, Mich. (Jackson.) Garage.

Dean, W. A.—427 Washington Ave., North Newark, N. J. Garage.

Dearborn Drug & Chemical Works.—Chicago, Ill. Mfrs. oils.

Deasy Motor Car Mfg. Co., Ltd., The.—Coventry, England. Mfrs. gasoline automobiles (Deasy cars).

Deaton, A.—Mgr. Central Mfg. Co., Connersville, Ind.

DeBarres Automobile Co.—Office and salesroom, 1966-1968 Broadway; garage, 587-589 Park Ave., New York City. Importers and head agency for U. S. and Canada, Delahaye and Piliat cars. Est. May, 1906. Wm. H. Barnard, Pres. and Treas.; Wm. H. MacIlroy, Sec. Garage, 45 cars. Repairing.

De Bertha, Louis.—Milford, Pa. (Northern, Buick, Cadillac.)

De Boisse, J.—85, rue Traverssière, Billancourt (Seine), France. Mfrs. lubricators, circulating pumps.

Deca.—Prefix indicating that the unit of measure to which it is joined is multiplied by ten; for example, one decametre equals ten metres.

De Cant.—3 Lansing Block, Watertown, N. Y. (Northern.)

Decarburization.—The removal of car-

bon from cast iron by the puddling process (q. v.), or the Bessemer process (q. v.).

De Caserta, Manuel.—43 Cedar St., New York City. Mgr. New York branch The Globe Automobile Exporters.

Decatur Automobile Club.—Tom W. Pitner, Sec. Decatur, Ill.

Decauville, Société Nouvelle des Établissements.—Corbeil (Seine-et-Oise), France. Mfrs. gasoline automobiles (Decauville cars).

Decauville, Société Nouvelle des Établissements.—Petit-Bourg (Seine-et-Oise), France. Mfrs. automobile motors, gasoline commercial automobiles (Decauville omnibus).

Dechartres, E.—3, cité des Envierges, Paris, France. Mfrs. marine motors.

Decl.—A prefix indicating that the unit of measure to which it is joined is divided by ten. Thus a deciliter is the tenth part of a litre.

Deck.—A platform laid longitudinally over a boat's transverse beams.

Deck-ring.—A ring with a cover, used on launches for giving access to the gasoline tank, steering-gear, shaft-bearings or other places where an opening with a cover is desirable.

Deck-light.—A thick piece of ribbed glass let into a deck to light the space below it.

Deck, Turtle.—A rounded deck over the forward part of a boat's hull designed for shedding water.

Deck Bros.—20 Indiana St., Buffalo, N. Y. Mfrs. brass castings.

Decker, J. B.—Supt. Sheldon Axle Co., Wilkesbarre, Pa.

Decker, W. M.—Baltimore, Md. (Monarch.)

Deckers, W., H.—95 Southampton St., Buffalo, N. Y. Garage.

Declutch.—To disengage or release a clutch

Decoudun, J.—101, rue du Faubourg St. Denis, Paris, France. Mfrs. gauges.

De Dietrich Import Co.—3 W. 44th St., New York City. Importers Loraine De Dietrich cars.

De Dion, Marquis Albert.—Avenue de la Grande Armée, Paris, and at Maubreville by Carquefou (Loire Inferieure.) Constructing engineer of automobiles; founder and vice-president of the A. C. F. Founder and president of the Automobile Syndical Chamber, principal founder and honorary president of

the Aero Club of France. One of the principal promoters of the automobile industry in France; organizer and manager of works at Puteaux, which employs 3,000 workmen.

De Dion, Bouton et Cie.—quai National, Puteaux (Seine), France. Mfrs. automobile, motorcycle and marine motors; tricar, quads, tricycles, steam commercial, gasoline commercial and gasoline automobiles (De Dion); spark plugs.

Deemster Machinery Co., W. R.—Kansas City, Mo. (Maxwell.)

Deere Plow Co., John.—Omaha, Neb. (Moline.)

Defiance Chain Co., The.—143 Federal St., Boston, Mass. Mfrs. tire chains.

Defiance Machine Works.—Defiance, O. Mfrs. special automobile machinery.

Deflection.—Deviation from an original position or direction, e. g., the sagging of a beam, girder, or spring, when supported at both ends.

Deflector.—See Baffle-plate.

Deflector, Spray.—The same as spraying cone. See Cone, Spraying

De Foe Boat & Motor Works.—Bay City, Mich. Mfrs. motorboats.

Deformation.—A general term signifying an alteration, permanent or otherwise, in the shape of a body.

De Fornier.—7, ave de la Capelette, Marseilles, France. Mfrs. non-skids.

Degaile.—85, rue Menilmontant, Paris, France. Mfrs. transmission gears.

De Garmo, T. F.—Gen. Sales Agt. Grip Nut Co., 152 Lake St., Chicago, Ill.; 500 5th Ave., New York City.

Degree.—A unit of various kinds, such as of temperature, measurement, etc.

De Haven Bros.—87 S. Center Ave., Chicago, Ill. (De Haven.)

Deitz, F. H.—Sec. and Treas. Bassett-Pressley Co., Western Reserve Bldg., Cleveland, O.

De Kalb Automobile & Garage Co.—142 W. Main St., De Kalb, Ill. (Ramblor, Ford.) Est. 1906. H. M. McGuckin, prop. and owner. Garage, 13 cars. Repairing.

De Klyn, W. F.—Norwalk, Conn. (Rapid.)

Delabays, J.—25 bis, rue de Carouge, Geneva, Switzerland. Mfrs. bodies.

De la Buire, Société Anonyme des Automobiles.—place de la Buire, Lyons, France. Mfrs. gasoline automobiles (La Buire cars).

De la Chapelle Frères et Cie.—St. Chamond (Loire), France. Mfrs. motorcycles. (Stimula.)

De la Chesnaye, Paul.—Automobile dealer. B. France, Aug. 13, 1872. Ed. Paris University (Law). Director Cantono Electric Tractor Co., Newark, N. J. Mem. A. C. of France, Cercle d'Eserine, Res., 414 W. 118th St., N. Y.; Paris, 21 rue Nitor. Office, 2148 Broadway, New

York. In trade since 1901. Used cars since 1895. Recreation, fencing. Won championship 1899.

Delage et Cie.—102 rue Baudin, Levallois, Paris, France. Mfrs. gasoline automobiles (Delage cars).

Delahaye et Cie, Société des Automobiles.—10 rue du Banquier, Paris, France. Mfrs. gasoline automobiles and commercial cars (Delahaye).

Delamare-Deboutteville.—A Rouen inventor. In 1883 he constructed a carriage which was actuated by gas under pressure, and which appears to have been the very first fast vehicle of the kind that really made a trip upon a common road.

Delamare-Deboutteville was also the originator of important improvements in gas generators and high-power motors.

De Lameter, E. B.—50 Market St., Poughkeepsie, N. Y. Garage.

De Lamater, J. W.—Vice-Pres. Archer & Co., 1597 Broadway, New York City.

De Lancy Garage.—22nd and Pine Sts., Philadelphia, Pa. Garage. (Earl.)

Delaney & Son, D.—Liberty and Hamilton Sts., Newark, N. J. Mfrs. leaf springs.

Delaunay - Belleville, Établissements.—St. Denis, Paris, France. Mfrs. gasoline automobiles (Delaunay-Belleville cars).

Delaware Auto Storage & Repair Co.—11th and West Sts., Wilmington, Del. (Pope-Waverley.)

Delaware Ave. Garage.—257 Delaware Ave., Buffalo, N. Y. Garage.

Delaware Seamless Tube Co.—Auburn, Pa. Mfrs. steel tubing.

De Lisser, Horace.—Pres. Ajax-Grieb Rubber Co., Trenton, N. J.

Delivery.—The discharge of a liquid by a pump. "Rate of delivery" is the usual expression for the amount of fluid pumped per minute.

Delivery-valve.—See Valve, Delivery.

Dell, Arthur.—Asst. Treas. Miami Cycle Mfg. Co., Middletown, O.

Dell Rapids Imp. Co.—Colton, S. D. (Ramblor.)

Delleani, A.—12 via Moncaliére, Turin, Italy. Mfr. radiators.

Delmar Motor Car Co.—St. Louis, Mo. Cap. \$3,000. Incorporators: C. C. Morris, George Neff, E. P. Nelson. Garage.

Deloffre, Auguste.—32 route de la Gare. Le Cateau (Nord), France. Mfr. circulating pumps.

Delta Mfg. Co.—Bloomfield, N. J. Mfrs. dry batteries, spark plugs. Est. 1901. Officers: William S. Benson, Gen. Mgr.; Peter I. Quinn, James Curren.

De Luxe Mfg. Co.—Buffalo, N. Y. Mfrs. spark plugs.

De Luxe Motor Car Co.—Cor. Clark and Jefferson Aves., Detroit, Mich. Makers of the De Luxe car, first mark-

eted January, 1907. Cap. \$1,000,000. N. M. Kaufman, Pres.; Geo. M. Verity, Vice-Pres.; D. W. Kaufman, Sec., Treas. and Gen. Mgr.; F. S. Davis and J. A. Herzog, Designers; J. A. Locher, Supt.; W. A. Westcott, Purch. Agt.; Geo. Horn, Asst. Pur. Agt.; H. S. Leyman, Sales Mgr.; T. F. Larson, Advt. Mgr. Agents and dealers: Bellefield Motor., 4518 Henry St., Pittsburg, Pa. B. F. Benson, 1311 Keystone Bldg., Pittsburg, Pa. City Hall Automobile Co., 66 Fulton St. De Luxe Motor Sales Co., Chicago, Ill. Lakedel Automobile Co., 5143 Delmar Blvd., St. Louis, Mo. McDuffee Automobile Co., The, 228-232 Wisconsin St., Milwaukee, Wis. McElroy & Co., D. W., 408-410 Market St., San Antonio, Tex. McDuffee Automobile Co., 1501-3-5 Michigan Ave., Chicago, Ill. Motor Sales Co., 251 Jefferson Ave., Detroit, Mich. Motor Sales Co., 1771 Broadway, New York City. Pacific Automobile Co., 1028 S. Main St., Los Angeles, Cal. Reliance Motor Car Co., 216 E. 3rd St., Cincinnati, O.

De Luxe Motor Sales Co.—216 E. 3rd St., Cincinnati, O. (De Luxe.)

De Magnin, A.—Asst. Mgr. Panhard & Levassor (American branch), 1881 Broadway, New York City.

Demar Co., J. E.—244-8 W. 49th St., New York City. Mfrs. auto tops, slip covers and fittings.

Demarest & Co., A. T.—335 5th Ave., New York City. Mfrs. bodies. (Panhard.)

Demarets et Cie., G.—208 rue St. Maur, Paris, France. Mfrs. gauges, horns.

Demeester.—22 ave de la Grande Armée, Paris, France. Mfrs. gasoline automobiles (Demeester cars), motorcycles.

Demler, Wm.—18 Kennedy St., Bradford, Penn. Garage.

Demmerle & Co.—248 W. 23rd St., New York City. Mfrs. wearing apparel, caps, gloves and gauntlets.

Demonbrum, B. R.—113 Public Sq., Nashville, Tenn. (Autocar.)

De Mooy Bros.—765-767 Wilson Ave., Cleveland, O. Mfrs. gasoline marine motors, motorboats.

Demorest, A. L.—New Haven, Conn. Mfrs. wood and metallic bodies.

Demory, A. R.—Gen. Supt. Timken Roller Bearing Axle Co., Canton, O.

Dempster Mill Mfg. Co.—Beatrice, Neb. Garage.

Demster Machinery Co., The W. R.—16th and Walnut Sts., Kansas City, Mo. Agts. Maxwell cars and mfrs. carburetors, automobile engines, transmissions to order only; garage, supplies and general repairing. Est. since 1900. Cap. \$15,000. W. R. Demster, Pres. and Gen. Mgr.; C. V. Eyke, Vice-Pres. and Sec.; J. D. Estes, Treas. Garage, 100 cars.

Demster, W. R.—Pres. and Gen. Mgr.

W. R. Demster Machinery Co., N. W.—Cor. 16th and Walnut Sts., Kansas City, Mo.

Denatured.—A term applied to alcohol which has been adulterated in order to unfit it for use as a beverage. See Alcohol. Denatured.

Dench, C. B.—455 W. 11th St., Erie, Pa. (Corbin.)

Dénes, Friedmann und Co.—14 Stubenring, Vienna, Austria. Mfrs. ball bearings.

Deneau et Cie.—86 bis, rue de Rome, Paris, France. Mfrs. wearing apparel, hats and caps.

Denich, A.—144 rue St. Maur, Paris, France. Mfrs. acetylene and oil lamps.

Denison, L. E.—Cairo, Ill. Garage.

Denman, Chas. S.—Care Des Moines Water Works, Des Moines, Ia. (Woods.)

Dennison, Julien.—New Haven, Conn. (Atlas.)

Denniston, E. E.—184 W. Mohawk St., Buffalo, N. Y. Mfrs. automobile tops, supplies.

Denny, C. B.—Treas. American Locomotive Automobile Co., Providence, R. I.

Densimeter.—An apparatus used for measuring the density or specific gravity of liquids. A densimeter is a "hydrometer" provided with a graduated rod which indicates, through a single reading, the density of the liquid (alcohol, gasoline, etc.) to be tested, and into which it is immersed. The apparatus has an invariable weight and sinks into the liquid so much the more in proportion as the density of the liquid is less. See Areometer and Hydrometer.

Density.—The quantity of material or matter contained in a unit volume. The specification of density, unlike specific gravity, always requires the use of two units—one of volume, and the other of mass. For example, density may be given in pounds per cubic foot, tons per cubic yard, grammes per cubic centimetre, etc. The following list gives the density of a few metals: Molten aluminum, 2.57; molten copper, 8.87; forged iron, 7.85; nickel, 8.50; molten zinc, 7.10; molten silver, 10.45; molten tin, 7.29; mercury, 13.59; molten lead, 11.34.

Density, Electric.—The quotient of the intensity of a current by the section of the conductor in which it circulates. It is expressed in amperes per square millimetre. The density of a current in a wire should not exceed a certain value lest heating occur. It is variable, occurring as to whether the wire is naked or insulated, or in the open air or in a conduit.

Denton, W.—Vice-Pres. Missouri Valley Auto Co., 1112-14 E. 15th St., Kansas City, Mo.

Denver Automobile Trade Assn.—Denver, Colo.

De Ploeg, S.—58 rue Michel-Bizot, Paris, France. Mfrs. spark plugs.

Depolarizer.—An oxidizing substance used for fixing the hydrogen derived from the decomposition of the acid by the zinc in batteries. In the Leclanché cell and its derivatives (dry cells) the depolarizer employed is black oxide of manganese surrounding the carbon.

Deposit.—Same as scale and fur. q. v.

Depot Carriage & Baggage Co.—Kansas City, Mo. (Rambler.)

De Prez, Eugene.—Mgr. Neustadt Auto & Supply Co., 3948-50 Olive St., St. Louis, Mo.

Derbab Mfg. Co.—Broad St., Lynn, Mass. Garage.

Derbler, J. B.—Mgr. Haynes Automobile Co., 1420 Michigan Ave., Chicago, Ill.

Derby Auto Co.—Seymour Ave., Derby, Conn. (Franklin, Haynes, Cadillac.)

Derby Mfg. Co.—Trenton, N. J. Mfrs. carburetters.

De Retz.—15 rue de Turenne, Aras, France. Mfrs. carburetters.

Deright Auto Co.—1816 Farnum St., Omaha, Neb. (Stoddard Dayton, Ford, Mason, Premier, Rapid.)

De Rivas, F. M.—Mutual Bldg., Mexico City, Mex. (National, Logan.)

Derozier, A.—Nemours, Seine-et-Marne, France. Mfrs. motorcycles. (Athena.)

Derry, Thos.—466 Vermont St., Buffalo, N. Y. Garage.

De Ruyter de Messine.—125 blvd. de la Senne, Brussels, Belgium. Mfrs. bod-ies.

Deschler, August.—18-20 E. Water St., Chillicothe, O. Mfrs. axles, hubs, gaso- line automobile motors.

Desclée, G. et Cie.—171 ave de la Reine, Brussels, Belgium. Mfrs. leather tires, non-skids.

Desclée et Cie., J.—159 ave Malakoff, Paris, France. Mfrs. non-skids.

Deselbrow Motor Car Co.—New Roch-elle, N. Y. Garage.

Desert Automobile Co.—71 S. State St., Salt Lake City, Utah. (Haynes, Au- tocar.)

Desjardin.—10 rue St. Pierre, Versail-les, France. Mfrs. leather tires.

Deshler, O. R.—Bangor, Pa. (Pope- Hartford.)

Desmarais & Co.—Prospect St., Bris- tol, Conn. Gasoline automobile manu- facturers.

Desmond, John.—Sec. Atlantic Motor Car Co.—1776 Broadway, New York City.

D'Espine, Achard et Cie.—52 quai de la Marne, Paris, France. Mfrs. gasoline

commercial automobiles (D. A. G. trucks).

Despouts.—150 rue Victor-Hugo, Le- vallois, Seine, France. Mfrs. tire pumps, acetylene lamps, radiators, horns.

Destribatis, Louis P.—Supt. Ajax- Grieb-Rubber Co., Trenton, N. J.

Detector.—A small electrical device consisting of a galvanometer or current indicator and several primary cells. It is employed for testing the continuity of electrical circuits.

Detent.—A device for stopping or checking motion, as a pin, lever, pawl, etc.

Detent-pin.—See Pin, Detent.

Detroit Auto Marine Co.—82 Congress St. E., Detroit, Mich. Mfrs. gasoline marine motors.

Detroit Auto. Specialty Co.—909-911 Greenwood Ave., Detroit, Mich. Mfrs. tool boxes, dashes and fenders, radiators, battery boxes.

Detroit Auto Top Co.—Detroit, Mich. Mfrs. automobile tops.

Detroit Automobile Top Co.—245 Jef- ferson Ave., Detroit, Mich. (Winton.)

Detroit Automobile Trade Assn.—De- troit, Mich.

Detroit Cap Mfg. Co.—11-17 Wood- bridge St. W., Detroit, Mich. Mfrs. wearing apparel, caps.

Detroit Carriage Co.—Cor. Clay and St. Aubin Aves., Detroit, Mich. Mfrs. automobile bodies. Cap. \$50,000. Est. in 1898. Herman Roehm, Pres.; Henry W. Patorn, Vice-Pres.; Albert H. Roehm, Sec., Treas. and Gen. Mgr.

Detroit Copper & Brass Rolling Mills.—Detroit, Mich. Mfrs. brass and cop- per sheet and rod, brass and copper me- tals, brass and copper tubing.

Detroit Forging Co.—Detroit, Mich. Mfrs. drop forgings.

Detroit Gas Engine & Machine Co.—Congress St., Detroit, Mich. Garage.

Detroit Leather Specialty Co.—De- troit, Mich. Mfrs. gloves and gauntlets.

Detroit Lubricator Co.—Trumbull and Lincoln Aves. and G. T. Ry., Detroit, Mich. Mfrs. forced feed oil pumps, lu- bricators, oilers. Member M. & A. M. Cap. \$1,000,000. Est. since 1879. H. C. Hodges, Chairman; C. H. Hodges, Pres.; C. B. Hodges, Vice-Pres.; F. W. Hodges, Sec. and Treas.; H. I. Lord, Mgr. Sales Dept.; Wm. P. Wilson, Mgr. Oil Pump Dept. Selling agents: Brandenburg & Co., New York, Chicago and Detroit.

Detroit Motor Car Supply Co.—1250 Jefferson Ave., Detroit, Mich. Mfrs. storm aprons and curtains, wood and metallic bodies.

Detroit-Oxford Mfg. Co.—Oxford, Mich. Garage.

Detroit River Boat & Oar Co., The.—Wyandotte, Mich. Motorboat manufac- turers.

Detroit Rubber Stamp Co.—99 Griswold St., Detroit, Mich. Mfrs. name plates.

Detroit Sanitary Supply Co.—Detroit, Mich. Mfrs. brass pipe fittings.

Detroit Screw Works.—Riopelle and Franklin Sts., Detroit, Mich. Mfrs. set and cap screws, steel taper pins, studs, coupling bolts, nuts. Cap. \$100,000. Est. 1880. W. B. Pearson, Pres.; Geo. Thrall, Sec. and Treas.; F. P. Johnston, Vice-Pres. and Mgr.

Detroit Seamless Steel Tube Co.—833 River St., Detroit, Mich. Mfrs. axles, steel tubing.

Detroit Steel Products Co.—91 E. Fort St., Detroit, Mich. Mfrs. automobile springs, drop forgings. Mem. M. & A. M. Cap. \$75,000. Est. 1904. Walter S. Russell, Pres.; John H. Avery, Vice-Pres.; Clair L. Barnes, Sec. and Gen. Sales Mgr.; John G. Rumney, Treas. and Gen. Mgr.; James H. Herron, Chief Engineer; A. J. Pullan, Supt.

Detroit Stoker & Foundry Co.—N. Grand Blvd. and Riopelle St., Detroit, Mich. Mfrs. gray iron castings.

Detroit White Lead Works.—5 Ohio St., Buffalo, N. Y. Mfrs. paints, varnishes.

Detroit White Lead Works.—532-560 E. Milwaukee Ave., Detroit, Mich. Mfrs. colors, color varnishes and varnishes for automobile finishing. Cap. \$700,000. Est. since December, 1880. Ford H. Roger, Pres.; Geo. Preck, Vice-Pres.; H. B. Levan, Treas.; H. Duffield, Sec.

Detroit Wire Spring Co.—295-305 Congress St., W., Detroit, Mich. Mfrs. automobile and carriage seat springs. Cap. \$30,000. Est. March, 14, 1906. Falconer O'Brien, Pres.; Charles T. Chenevert, Vice-Pres.; John D. Chenevert, Sec. and Treas.

Detroit Wrench Co.—Tolsma Bldg., 45 State St., Detroit, Mich. Mfrs. wrenches.

Deutsch, Henry (de la Meurthe).—4 Place des Etats Unis, Paris. Officer of the Legion of Honor; head (with his father, Emile) of the house of Le Fils de A. Deutsch, for the sale of mineral and vegetable oils and the refining of petroleum. He is one of the founders of the A. C. F.; donor of the 100,000 francs

prize won by Santos-Dumont in 1901; and founder of a prize for the automatic starting of automobiles.

Devil.—See Sprag.

Deutscher Luftschiffer Verband.—(German Aero Club), Silbermannstrasse 14, Strassburg, Germany. Member F. A. I., H. W. L. Moedebeck, Sec.

Deutsche Samson.—**Leder-Pneumatik Gesellschaft.**—Mittelstrasse 46, Berlin, Germany. Mfrs. Non-skids (Samson bands.)

Deutsche Signalinstrumentenfabrik Pfretzschner und Martin.—Markneukirchen, Saxony, Germany. Mfrs. horns.

Deutsche Triumph Fahrradwerke Actien Gesellschaft.—Doos-Nürnberg, Germany. Motorcycles (Triumph).

Deutsche Velographfabrik Gross.—Görschenstrasse 35, Berlin, Germany. Mfrs. speed indicators.

Deutsche Waffen-und Munitionsfabriken.—Dorotheenstrasse 44, Berlin, Germany. Mfrs. ball bearings.

Deville, E.—Grand-Croix, Loire, France. Mfrs. jacks.

De Vice, John J.—Pur. Agt. Racine Boat Mfg. Co., Riverside, Muskegon, Mich.

Devine, Wm.—Foreman J. E. Loneragan & Co., 211-15 Race St., Philadelphia, Pa.

Devlin & Co.—1407 Michigan Ave., Chicago, Ill. Garage.

Devoe, F. W. & C. T. Reynolds Co.—Fulton and William St., New York City. Mfrs. varnishes.

Dewey, F. S.—Marlboro, Mass. Garage.

Dewey, Godfrey.—Mgr. Adirondack Auto Co., Lake Placid, N. Y.

Dewey, M. A. Jr.—Hd. automobile dept. New York Sporting Goods Co., 17 Warren St., New York City.

Dewhurst Motor Car Co.—136 W. Main St., Lexington, Ky. (Queen.)

De Witt Auto Co., The.—248-250 W. 80th St., New York City. Est. 1905. Cap. \$5,000. E. J. Cabot, Pres. and Mgr.; F. D. De Witt, Treas.; W. A. De Witt, Sec. Garage. 125 gasoline and 50 electric cars. Repairing; recharging electrics.

De Witt, Fred.—Hd. of bicycle and motorcycle dept. New York Sporting Goods Co., 17 Warren St., New York City.

De Witt, T. D.—Treas. The De Witt Auto Co., 248-50 W. 80th St., New York City.

De Witt, W. A.—Sec. The De Witt Auto Co., 248 W. 80th St., New York City.

Diagram.—A mechanical plan or outline as distinguished from a perspective drawing. An "indicator diagram" is a tracing drawn automatically on an "indicator-card," by a steam-engine indicator as showing the pressure in the cylinder at every stroke. For explosion motors, which, running at a very high angular speed, do not permit of the taking of a diagram by such a process. The "mano-

graph" is usually employed. See Manograph.

Dial.—In general, a disk or plate on which are marked graduations which enable the position of some form of pointer or index to be read off.

Diamagnetic.—A body which is repulsed by a magnet, instead of being attracted, such as nickel, cobalt and all magnetic bodies. Such repulsion, however, is very slight, and can be observed only with a very strong magnet. A bar of a diamagnetic metal, placed in a magnetic field, tends to place itself across the lines of force, that is to say, crosswise with respect to the line of the poles.

Diamant Fahrradwerke.—Reichenbrand, Saxony, Germany. Mfrs. motorcycles (Diamant).

Diametral Pitch.—See Pitch-circle.

Diamond Chain Mfg. Co.—Indianapolis, Ind. Mfrs. chains for power transmission, automobile parts. Member M. & A. M. Cap. \$300,000. Est. 1890. L. M. Wainwright, Pres.; A. D. Johnson, Sec.

Diamond Motor Car Co.—1160 S. Main St., Los Angeles, Cal. (Apperson, Northern, Waltham.)

Diamond Porcelain Co.—Trenton, N. J. Mfrs. metal polishes.

Diamond Rubber Co., The.—Akron, O. Mfrs. rubber tires of all kinds and mechanical rubber goods. Member M. & A. M. Cap. \$5,000,000. Est. 1896. Francis A. Hardy, Pres.; Arthur A. Marks, Vice-Pres.; William B. Miller, Sec.; Andrew H. Noah, Treas. Branches: Boston, 174 Columbus Ave.; Buffalo, 715 Main St.; Chicago, 1523-31 Michigan Ave.; Cleveland, 1514 Euclid Ave.; Denver, 1735 Arapahoe St.; Detroit, 258 Jefferson Ave.; Los Angeles, 1207-09 Main St.; Minneapolis, 117 S. 6th St.; New York, 1876 Broadway; Oakland, 108-12 Telegraph Ave.; Philadelphia, 304-06 N. Broad St.; St. Louis, 3963-65 Olive St.; Toronto, 73 Adelaide St., W.

Diamond State Steel Co.—Wilmington, Del. Mfrs. iron and steel (bar).

Diamond T. Motor Car Co.—Chicago, Ill. Mfrs. gasoline automobiles.

Diaphragm.—A thin disk, usually flexible, of metal, rubber, etc.

Diaphragm Pump.—See Pump, Diaphragm.

Diaphragm Regulator.—See Regulator, Diaphragm.

Diatto-Clément, Societa Automobili.—Corso Frejus, Turin, Italy. Mfrs. gasoline automobile (Diatto-Clément cars).

Dibert, Dr. C. C.—Buffalo Falls, Pa. (Waltham.)

Dicker Ward.—Sec., Treas. and Supt. Sterling Motorcar Co., 180-84 Water St., Binghamton, N. Y.

Dickerson, E. N.—Stoveall, N. C. (Waltham.)

Dickey, E. J.—Clerk, Putnam Motor Mfg. Co., 57 Lebanon St., Springfield, Mass.

Dickinson, J. B.—Niantic, Conn. and New London, Conn. (Dolson, Logan.)

Dickson, Geo. M.—Sales and Advt. Mgr. National Motor Vehicle Co., E. 2nd St., Indianapolis, Ind.

Dickson, J. D.—113 Bellevue Ave., Newport, R. I. Garage.

Did'er, L.—7 rue Mercouer, Paris, France. Mfrs. plugs, make and break.

Die.—A tool used for cutting an external or "male" thread on a cylindrical piece. When used by hand it is fitted into a frame provided with handles, called a "stock," and when used in a machine it is held in a "die-holder." A die is really a hardened steel nut, divided into two parts, the ends of the threads where they are cut across serving as cutting edges for producing the new thread which is to be cut.

Dieble, Wm.—904 Lippincott Bldg., Philadelphia, Pa. Mfrs. spark plugs.

Diebold Auto Co.—5th and McKinley Sts., Canton, O. (Buick, Thomas Flyer, Franklin.)

Dieckman, C. F.—Supt. Meyrowitz Co., Inc., 104 E. 23rd St., New York City.

Dieffendorf, W. H.—Chief Engineer New Process Ray Hide Co., 500-514 Plum St., and officer of Syracuse Aluminum & Bronze Co., 520 Leavenworth Ave., Syracuse, N. Y.

Diehon, J. T.—Pres. The Frantz Body Co., cor. Stanton Ave. and Gety St., Akron, O.

Diem, E., et R. Poëy.—62 bis, ave. Parmentier, Paris, France. Mfrs. acetylene and oil lamps.

Dien, Ch.—43-45 W. 34th St., New York City. Agent Edouard Dubied & Co., Couvet, Switzerland.

Diesel Cycle.—See Cycle, Diesel.

Dieteren Frères.—54 chaussée de Charleroi, Brussels, Belgium. Mfrs. bodies.

Dieter Steam Engine Works.—123 Liberty St., New York City. Mfrs. steam engines, boiler feed pumps. Est. 1904.

Dietrich, L. M.—Gen. Mgr. and Designer, Kansas City Motor Car Co., Sheffield, Mo.

Dietrich, O. H.—24 N. 10th St., Allentown, Pa. (Buick, Thomas Flyer, Franklin, Cadillac.)

Dietrich, Société Lorraine des Anciens Établissements de.—Luneville, France. Mfrs. gasoline commercial automobiles (Dietrich trucks and omnibus), gasoline automobiles (Lorraine-Dietrich cars).

Dietz, C. E.—Sec. Moline Pump Co., Moline, Ill.

Dietz Co., R. E.—60 Laight St., New York City. Mfrs. acetylene generators, oil and acetylene lamps.

Diezemann, Gustav.—Supt. Diezemann Shock Absorber Co., 1311-1313 Hudson St., Hoboken, N. J.

Diezemann Shock Absorber Co.—1311-1313 Hudson St., Hoboken, N. J. Mfrs. shock absorbers. Mem. M. & A. M. Cap. \$200,000. Est. 1905. Sam Fisher, Pres.; Henry Fisher, Vice-Pres. and Mgr.; Carl Bomeisler, Sec. and Treas.; Gustav Diezemann, Supt.

Differential Gear.—See Gear, Differential.

Differential Pinion.—See Pinion, Differential.

Dill, James Brooks.—Lawyer. B. Spencerport, N. Y., July 25, 1854. Ed. Yale, 1876 (Law School), Univ. of New York, 1878. Mem. New Jersey Bar. Has been connected with the organization and management of important corporations as director or counsel. Author of several books. Was one of the early members of the A. C. A. and is an automobilist of note. In July, 1905, he was appointed one of the judges of Court of Errors and Appeals of the State of New Jersey. Res., East Orange, N. J. Office, 27 Pine St., New York City.

Dingfelder Motor Co.—Detroit, Mich. Mfrs. gasoline marine motors.

Dingle, S. K.—Pres. Concord Motor Car Co., 64 Huntington Ave., Boston, Mass.

Dinin, A.—2 quai National, Puteaux, France. Mfrs. storage batteries, primary batteries.

Dinner Co., Isaac H.—78 Bedford St., Boston, Mass. Mfr. wearing apparel (caps).

Dinsmore, B. B.—Prop. with Frederic A. Duggan, Imperial Porcelain Works, Mulberry St. and New York Ave., Trenton, N. J.

Dip.—The inclination given to the axles, E (see figure), of a vehicle in order that the spoke of the wheel, R, may be constantly at right angles with the ground. If a person stands in the rear of a vehicle (especially a horse-drawn one) he will observe that not only has the wheel a "dish" (see Dish), but also that its upper part is more distant from the vehicle body, V, than the lower. This is

due to the "dip" that the coachmaker is obliged to give the axle spindles for the reason that, in order that the wheels shall have adequate strength, it is necessary that the spokes shall always work at right angles with the surface of revolution.

Direct Current.—See Current, Direct.

Direct Drive.—A system for transmit-

ting movement directly without the use of other intermediate parts. In an automobile, as the motor always revolves more rapidly than the wheels and is never in any case directly coupled with them, it is said that there is a direct engagement when there is but a single reduction of speed between the motor and the differential shaft, whether the latter carries the wheels or the chain pinions.

in mesh at this moment is very small the mechanical noise of the car is very slight.

The accompanying figure gives a diagram of a direct drive of the Renault type. Here A A is the primary shaft; B, the speed-case; C, the cone-clutch; D, the differential; E, H, I, J, wheels giving the low speed; E Q F, the sliding gear; f, the jaw clutch of the sliding gear; j, the female part of the clutch connected to the gear J; K K, the secondary shaft; M, the motor; P, the bevel-pinion; Q, the bevel-wheel; R R, the driving wheels; and V, the fly-wheel.

Direct Process.—The production of wrought iron from the ore without the usual intermediate stage in which cast iron is produced.

Direct Drive Axle Co.—575 N. 4th St., Columbus, O. Mfrs. Pleukharp transmission axles. Mem. M. & A. M. Cap. \$150,000. Est. May, 1906. W. E. Campbell, Pres.; R. V. Barto, Vice-Pres. and Gen. Mgr.; C. T. Phillips, Sec.; F. O. Schoedinger, Treas.; I. H. Pleukharp, Chief Engineer.

Disbrow Bros.—Hillside Ave. and Hoffman Blvd., Jamaica, N. Y. (Rainier, Ford, White). Est. since 1901. Not incorporated. Officers, J. P. Disbrow; L. A. Disbrow, D. A. Disbrow; Sales Mgr., L. A. Disbrow; Head Repairing Dept., J. P. Disbrow; Head of Storage and Tire Dept., D. A. Disbrow. Garage, 70 cars. Repairing.

Disbrow, D. A.—Head Storage and Tire Dept., Disbrow Bros., Hillside Ave. and Hoffman Blvd., Jamaica, N. Y.

Disbrow, J. P.—Head Repair Dept., Disbrow Bros., Hillside Ave. and Hoffman Blvd., Jamaica, N. Y.

Disbrow, L. A.—Head Sales Dept., Disbrow Bros., Hillside Ave. and Hoffman Blvd., Jamaica, N. Y.

Discharge.—The rate of flow of a liquid, that is to say, the amount passing in a given unit of time.

Discharge-box.—The same as muffler. q. v.

Discharge, Electric.—In general, the flow of electricity from a conductor, charged at a certain potential, toward a conductor charged at a less potential.

Discharging.—The process of taking current from an electric cell or battery.

Disengaging Gear.—See Gear, Disengaging.

Dish.—An inclination given to the spokes of a wheel from the exterior plane of the rim to the center point of the axle spindle, so as to make the wheel a kind of flattened cone; greater stiffness being gained by such an arrangement. The dish of the wheels is usually balanced by slightly inclining the axle-spindle from its center line, thus bringing the lowest spoke to a nearly vertical position with relation to the ground.

A dished steering-wheel is one in which the rim is above the boss, so that the arms incline upwards toward the rim.

A hole in a board is said to be dished when the edge is bevelled.

Dish-pan Clutch.—See Clutch.

Disk.—A flat circular plate of any material.

Disk, Armature.—See Armature.

Disk, Brake.—See Brake, Disk.

Disk-clutch.—See Clutch, Disk.

Disk-crank.—See Crank, Disk.

Disk, Piston.—See Piston, Disk.

Disk, Valve.—The flattish head of an inlet or exhaust-valve.

Disk-wheel.—See Wheel, Disk.

Disnay, L. M.—Gen Mgr. Dolson Automobile Co., Charlotte, Mich.

Displacement.—The weight of water displaced by a body, such as a boat floating in it, such weight being equal to that of the body. With a motor-boat, one ton displacement is equal to 35 cubic feet displacement; and one cubic foot displacement equals 0.02857 ton displacement. (2) The space swept by the cylinder of a motor at each piston-stroke. It equals the area of the piston multiplied by the length of the stroke. (3) A supposed slight motion of electricity in a dielectric acted on by an e. m. f.

Distance-rod.—A rod or link, called also a "radius-rod," for keeping the same relative distance (often regulated by a

turn-buckle) between two machine elements. (2) Same as drag-link. See Link, Drag.

Distance-washer.—A piece of sheet metal placed between two portions of a mechanism to keep them a certain distance apart. See Shim.

Distributor.—A device for switching the current of an electric ignition system to the different cylinders of a multi-cylinder motor in proper sequence.

A distributor carries both primary and secondary current, whereas a timer carries only primary current. The two words are frequently confused, both being used in the sense of "timer."

In the construction of distributors, the currents of different tension (primary and secondary) must be carefully isolated. In this country, the distributor is not much employed, the timer with a coil

for each cylinder being used, thus dispensing with the distributor and its short-circuiting tendencies. The advantages of the use of a distributor lie in having but one or two coils and less wire in use. Its disadvantages are the liability to short-circuit and the inaccessibility of the second circuit (being usually placed behind the primary in the construction). The rotating parts are usually of brass, fixed to the axle and passing over brass segments, each being fitted into the casing and connected by proper wiring. Fiber or hard-rubber lines the casing, and the latter is revolvable through a large arc for varying the time of ignition, exactly like a timer.

Dittman, Christian.—Main St. and Broadway, Amityville, N. Y. (Maxwell, Cadillac.)

Dittman und Neuhaus.—Witten, Germany. Mfrs. springs.

Ditzler Paint & Color Works.—14 Baltimore Ave. W., Detroit, Mich. Mfrs. paints, varnishes.

Dividers.—Compasses used solely for measuring off distances.

Dixon Crucible Co., Jos.—Jersey City, N. J. Mfrs. brazing compound; crank shafts; graphite; grease; oils.

Doan, E. D.—926 Janis Ave., Saginaw, Mich. (Reo, Cartercar.)

Dobrick, Aug.—Supt. The Turner Brass Works, Sycamore and Illinois Sts., Chicago, Ill.

Doddridge, P. B.—Sec., Treas. and Head of Dept. Missouri Valley Auto Co., 1112-1114 E. 15th St., Kansas City, Mo.

Doddridge, W. H.—Supt. Hatcher Auto Parts Co., 2108 Superior Ave. Viaduct, Cleveland, O.

Doddridge, W. B.—Pres. Missouri Valley Auto Co., 1112-1114 E. 15th St., Kansas City, Mo.

Dodge Lubricator Co.—8 Waltham St., Boston, Mass. Mfrs. lubricators, timers.

Dodge Motor Vehicle Co.—223 Columbus Ave., Boston, Mass. (Pope-Toledo, Pope-Hartford, Pope-Waverley.)

Dodge, Henry Irving.—Writer on motor-boat and yachting topics, and associate editor Yachting. B. Kasoag, Oswego County, N. Y., April 11, 1861. Ed. common school. Address, 20 Vesey St., New York City.

Dodge, John E.—Vice-Pres. Ford Motor Co., Detroit, Mich.

Dodge, M. M.—Valparaiso, Ind. (Maxwell.)

Dodson, E.—West Liberty, O. (Winton.)

Dog.—A clamping device for a lathe, for firmly holding pieces of metal or wood to be machined, and which are driven by the rotation of a face-plate on which the dog is mounted. (2) A construction of similar form which supports the bushings of a die.

(3) A cramp consisting of a curved casting and a set-screw used on motors to keep the exhaust valves in place, and for holding together the pump in some machines. See Bridge. (4) A click or pawl C (see figure) designed to engage the teeth of a ratchet-wheel. See Click, Pawl and Ratchet.

Dog-clutch.—See Clutch.

Doherty, H. B.—24 Wall St., Binghamton, N. Y. (Cadillac, Franklin, Darracq, American Mercedes.) Est. 1904. H. B. Doherty, Prop.

Dohn, A. F.—Vice-Pres. Buffalo, Gasoline Motor Co.—1280-1290 Niagara St., Buffalo, N. Y.

Dolson Auto Co.—406 McKay Bldg., Portland, Ore. (Dolson.)

Dolson Automobile Co.—Charlotte, Mich. Makers of the Dolson car, first marketed in 1901. Three models made since. Cap. \$300,000. J. L. Dolson, Pres. and Treas.; D. E. Dolson, Sec., Designer and Purch. Agt.; L. M. Dismey, Sales Mgr. Agents and dealers: Auto Maintenance Co., 1239 Fulton St., Brooklyn, N. Y. Childs, Walter H., McKeesport, Pa. Continental Auto Co., 93 Jefferson Ave., Grand Rapids, Mich. Craig, Frank S., 521 Chestnut St., Long Beach, Cal. Dickinson, G. B., Niantic, Conn. Dolson Auto Co., 406 McKay Bldg., Portland, Ore. Eureka Motor Car Co., Seattle, Wash. Ford, H. N., Jamestown, N. Y. Fulper, Wm. H., Flemington, N. J. Hornburge Auto Co., C. H., 214 Post St., Spokane, Wash. Howard Dana, Cobleskill, N. Y. Jungclas Auto Co.,

Reading Rd. and June St., Cincinnati, O. Little Rock Auto Co., 118 E. Markham St., Little Rock, Ark. Livesey-Pionnie Co., 136 S. 11th St., Newark, N. Y. Moore, J. C., 809 Euclid Ave., Cleveland, O. O'Brien, Edw., 22 Wood Ave., Providence, R. I. Phila. Auto Sales Co., 332 Broad St., Philadelphia, Pa. Plank, A. E., Quincy, Ill. Puritan Motor Co., 43 Columbus Ave., Boston, Mass. W. F. Rabenold, Allentown, Pa. Reid, S. D., Euclid Garage, Cleveland, O. Rued, F. S., Akron, O. San Francisco Motor Car Co., Berkeley, Cal. Stewart & Kennedy, 5208 Lake Ave., Chicago, Ill. Tarrant, W. P., 12 Maple Ave., Saratoga, N. Y. Van Alstyne, T. B., 25 W. 42nd St., New York City. Warren Bros., 935 Fulton Bldg., Pittsburg, Pa. Zimbrich, A. M., 45-49 South Ave., Rochester, N. Y.

Dolson Automobile Co.—25 W. 42nd St., New York City. (Dolson.)

Dolson, D. E.—Sec., Designer and Pur. Agt. Dolson Automobile Co., Charlotte, Mich.

Dolson, J. L.—Pres. and Treas. Dolson Automobile Co., Charlotte, Mich.

Doman Co., H. C.—Oshkosh, Wis. Mfrs. gasoline marine motors, motor-boats.

Dome.—A term sometimes used to designate the part that covers an inlet-valve, and a bolt passing through the top of which holds the elbow of the inlet-pipe down on the valve.

Domecq-Cazau et Cie.—75 ave de Wagram, Paris, France. Mfrs. tire pumps.

Domestic Sewing Machine Co.—Warren and High Sts., Newark, N. J. Mfrs. gray iron castings.

Dominick, Wm.—542 Wabash Ave., Chicago, Ill. Repairing.

Dominion Auto Co.—Bay and Temperance Sts., Toronto, Canada. (Packard, Thomas Flyer, Stevens-Duryea, Winton, Ford, Russell.)

Dominion Auto Co.—310 Donald St., Winnipeg, Canada. (Winton, Russell, Ford.)

Dominion Automobile Co.—London, Ont., Canada. Garage.

Dominion Motor Car Co., Ltd.—11 Beaver Hall Hill, Montreal, Canada. Supplies, garage, repairing.

Donahoo-Emmons & Co.—1114 First St., Fresno, Cal. (Indian.)

Donahue, Geo. J.—389 Warren Ave., Brockton, Mass. (Rambler, Pope-Waverley, National, Reo, White.)

Donald, Francis C.—Commissioner Central Passenger Ass'n. B. Canfield, O., July 5, 1857. Ed. high school. Pres. and Director American Railway Guide Co., Central Railway Distributing Co.,

Director Chicago Motor Club, Chicago Railway Distributing Co. Mem. Union

League Club, Chicago Yacht Club, Midlothian Club, Chicago Motor Club, A. A. A. Address, Tribune Bldg., Chicago, Ill. Owned first car 1900 (steam and gasoline). One of three to organize Chicago A. C. Called meeting resulting in organization of

A. A. A. Designed and built, in 1902, a practicable three-cylinder gasoline car.

Donaldson Hardware Co.—Beaver, Pa. (Winton.)

Donaldson, R. G.—Sec. Pope Automobile Co. of Washington. 817-819 14th St., N. W., Washington, D. C.

Doninelli, Victor.—15 ave. de la Gere, Nice, France. Mfrs. goggles.

Donley & Dugan.—Morgantown, W. Va. (Cadillac)

Donnelly, John J.—Doyleston, Pa. Garage.

Donovan, C. J.—Hd. of Trimming Dept. Fickling & Co., Inc., 154 E. 57th St., New York City.

Dooley, E. H.—Hd. of Repair Dept. Bird-Sykes Co., 1470 Michigan Ave., Chicago, Ill.

Dooley Smith & Co.—San Juan, Porto Rico. (Reo)

Dop.—16 rue du Débarcadère, Paris, France. Mfrs. automobile motors.

Dope.—A thick axle-grease.

Dora, Societa Industriale Italiana.—Genoa, Italy. Mfrs. storage batteries.

Doran, H. W.—Dover, N. H. (Ramblor.)

Dorflingeresche Achsen und Federn-fabrik Actiengesellschaft.—Mannheim, Germany. Mfrs. springs.

Dorland, W. G.—Aurora, Neb. (Pope.)

Dorman, A. D.—Sec. General Mfg Co., Elkhart, Ind.

Dorman, F. D.—Sec. Maxwell-Briscoe Motor Co., Tarrytown, N. Y.

Dorn, F. Philip.—Sec. American Ball Bearing Co., Edgewater Park and L. S. and M. S. Ry., Cleveland, O.

Dorn, Frederick C.—Treas. American Ball Bearing Co., Edgewater Park and L. S. and M. S. Ry., Cleveland, O.

Dorris Co. of New Jersey.—21 Clinton St., Newark, N. J. (Dorris.)

Dorris, D. R.—Sec., Treas. and Sales Mgr. Nashville Motor Car Co., Church and 9th Sts., Nashville, Tenn

Dorris, Duncan A.—155 Spruce St., Nashville, Tenn. Garage.

Dorris, G. P.—Designer. Supt. and Vice-Pres. Dorris Motor Car Co., 22-38 S. Sarah St., St. Louis, Mo.

Dorris Motor Car Co.—22-38 S. Sarah St., St. Louis, Mo. Maker of the Dorris car, first marketed Dec. 1, 1906. Two models made since. Cap. \$55,000. H. B. Krenning, Pres.; Gen. Mgr. and Purch. Agt.; G. P. Dorris, Vice-Pres., Designer and Supt.; Webb. Colbun, Sec.; John T. Rumble, Sales Mgr. Agents and dealers: H. H. Holland, Fresno, Cal. Capt. C. A. Lundy, 320 S. Virginia St. Reno, Nev. Nashville Motor Car Co., Nashville, Tenn. South Broad Auto Co., 729 S. Broad St., Philadelphia, Pa. A. C. Stewart, 10th and Santee Sts., Los Angeles, Cal. Webb, Taylor & Perry, Austin, Tex. Geo. L. Clayton, Oakland, Cal.

Dorris Motor Car Co.—729 S. Broad St., Philadelphia, Pa. (Dorris.)

Dorsch, H. S.—1030 Albany St., Schenectady, N. Y. Garage.

Dorset Co., L. P.—17th and U Sts., N. W., Washington, D. C. (Glide.)

Dorsey, A. H.—Vice-Pres. and Gen. Mgr. United Motor Car Co., Philadelphia, Pa.

Dos-a-dos.—In a motor vehicle an arrangement of seats back to back.

Dosson Carriage Co.—909 Jefferson Ave., Toledo, O. (Holsman.)

Doty, A. J.—Supt. Commercial Truck Co. of America, 1222 Arcade, Philadelphia, Pa.

Doty, Ed.—Andalusia, Ala. (Waltham.)

Double-acting Engine.—See Engine, Double-acting.

Double-acting Pump.—See Pump, Double-acting.

Double-chain Drive.—A transmission system in which the motor drives, through a clutch, to a change-speed gear, thence by bevel-gear to a jack-shaft, and finally to the rear wheels by two side-chains.

Doubleday Co., W. A.—340 S. Warren St., Syracuse, N. Y. Garage.

Double-Friction Coil Clutch Co.—45 Canal St., Chicago, Ill. Mfrs. clutches.

Dougherty & Colt Mfg. Co.—105 W. Bridge St., Columbus, O. Mfrs. miscellaneous wearing apparel

Douglas & Lomason Co.—302-310 Grand River Ave., Detroit, Mich. Mfrs. brass handles, brackets, rails, hinges, catches, turnings, monitor lathe work of all kinds, stamping and punching. Cap. \$50,000. Est 1902. A. G. Douglas, Pres.; A. J. Cloutier, Vice-Pres.; H. A. Lomason, Sec. and Treas.

Douglas, A. G.—Pres. Douglas & Lomason Co., 302-310 Grand River Ave., Detroit, Mich.

Dounds, J. W.—Barnesville, O. (Mitchell.)

Dover Co., Geo. W.—80 Clifford St., Providence, R. I. Mfrs. screw machine products.

Dover Garage Company.—74 E. Blackwell St., Dover, N. J. (Rambler, Jackson, Rapid, Holsman.) Est. December, 1904. Cap. \$10,000. R. A. Bennett, Pres.; Chas. S. Clark, Sec. and Treas.; R. A. Bennett, Mgr. Garage, 30 cars. Repairing.

Dover Stamping & Mfg. Co.—385 Putnam Ave., Cambridge, Mass. Mfrs. waste cans, dashes and fenders, drip pans, gasoline funnels, hoods, oil cans.

Dover, O. T.—Vice-Pres. Albaugh Bros., Dover & Co., Marshall Blvd. and 21st St., Chicago, Ill.

Dovetail.—See Joint. Dovetail.

Dow & Whitman.—113-115 Golden Gate Ave., San Francisco, Cal. (Rambler.) Est. Aug. 1, 1906. Garage, 70 cars. Repairing.

Dow, Alexander.—Pres. Dow Tire Co., 104 W. 42nd St., New York City.

Dow, Alva M.—Pres. Dow Portable Electric Co., Adams St., Braintree, Mass.

Dow Portable Electric Co.—Adams St., Braintree, Mass. Mfrs. spark coils. Est. in 1893. Inc. in 1896. Cap. \$100,000. Alva M. Dow, Pres.; Willard E. Dow, Treas. and Gen. Mgr. Garage, 40 cars. Repairing.

Dow Tire Company.—Office, 104 W. 42d St., New York City. Factory foot 39th St., S. Brooklyn, N. Y. Mfrs. non-deflating tubes. Cap. \$1,500,000. Est. 1906. Alexander Dow, Pres.; Harry D. Gue, Vice-Pres.; A. V. R. Barnewall, 2d Vice-Pres.; Sidney R. Perry, Sec. and Treas.

Dow, Willard E.—Treas. and Mgr. Dow Portable Electric Co., Adams St., Braintree, Mass.

Dowagiac Mfg. Co.—Dowagiac, Mich. (Maxwell, Mitchell.)

Dowel.—A pin used to connect adjacent pieces, and penetrating for part of its length into each piece at right angles with the plane of junction.

Dowling's Garage.—26-30 Forest Ave., Portland, Me. (Thomas Flyer, Royal.) Supplies; garage; repairs.

Downey & Bingham.—159 Jay St., Albany, N. Y. Garage.

Downey, H. T.—Calgary, Alta, Canada. (Maxwell.)

Downing, Chas. J.—54 Warren St., New York City. Selling agents and importers. Lamp burners, gas pliers, wire cutters and pinchers, battery connectors, tires, horns.

Downing Grease Co.—14 Waltham St., Boston, Mass. Mfrs. grease.

Downington Garage & Repair Co., Inc.—E. Lancaster Ave., East Downington, Pa. (Waltham.)

Downs, Merle Leach.—Sec'y National

Automobile Shows, Madison Square Garden. B. Downs-ville, Delaware Co., N. Y., July 17, 1875. Ed. Owego Free Academy, 1893, Sibley College, Cornell University 1897. Res. 559 Sanford Ave., Flushing, L. I. Office, 7 E. 42nd St., New York. In the trade Novem-

ber, 1899. Recreations, automobiling, tennis, photography.

Doxsee, A. S.—1414 Chestnut St., St. Louis, Mo. (Aerocar.)

Doyle Hose Union Co.—810 Ann St., Homestead, Pa. Mfrs. hose couplings.

Doyleston Auto & Motor Cycle Repair Shop.—18 Donaldson St., Doyleston, Pa. (Cadillac, Pierce-Arrow.)

Draft.—The depth of water which a boat displaces, or of a body of fluid necessary to float a vessel.

Drag.—The bottom flask of a mould. (2) The mechanical force experienced by a conductor in which the current is flowing, when moved so as to cut the lines of force. Such drag is at right angles to the conductor and tangential to the armature, and tends to rip the winding off the surface of the core.

Drag-link.—See Link, Drag.

Drag-surface.—The surface of the blade of a screw propeller, which is next to the vessel.

Dragon Agency.—North Ave. and Charles St., Baltimore, Md. (Dragon.)

Dragon Auto Co.—1337 Michigan Ave., Chicago, Ill. (Dragon.)

Dragon Auto Garage of Hudson Co.—1318 Park Ave., Hoboken, N. J. (Dragon.)

Dragon Automobile Agency.—37 Wybosset St., Providence, R. I. (Dragon.)

Dragon Automobile Co.—Kittery, Me. Garage.

Dragon Automobile Co.—524 Golden Gate Ave., San Francisco, Cal. (Dragon.)

Dragon Motor Car Co.—620 Maryland Ave., Pittsburg, Pa. (Dragon.)

Dragon Motor Car Co.—130 E. 9th St., Los Angeles, Cal. (Dragon.)

Dragon Motor Co.—117 Massachusetts Ave., Boston, Mass. (Dragon.)

Dragon Motor Co.—Successor to Dragon Automobile Co., 31st, 32d and Chestnut Sts., Philadelphia, Pa. Makers of the Dragon car; first marketed Feb. 16, 1906. Three models made since. Cap., \$1,000,000, divided into \$500,000 7 per cent. preferred and \$500,000 common. Officers: J. Edward Calhoun, Pres.; R. G. Kelsey,

Sec. and Treas. Directors: J. E. Calhoun, J. H. Gray, D. E. Crockett, C. A. Pickard, H. Rawle, A. L. Kull, R. G. Kelsey, L. C. Kenan, Designer; R. G. Kelsey, Gen. Mgr.; H. Rawle, Asst. Mgr.; J. H. O'Brien, Supt. and Purch. Agt.; A. L. Hall, Asst. Purch. Agt.; A. L. Kull, Sales Mgr.; John W. Haynes, Asst. Sales Mgr.; Hugh Henry, Cashier and Asst. Treas.; M. L. Myers, Asst. Cashier. Branches in New York City, Boston and Philadelphia, Pa. Agents and dealers: American Garage Company, 5123 Delmar Ave., St. Louis, Mo. Auto Exchange, 501 Broadway, Milwaukee, Wis. Babcock Hardware Co., A. L., Billings, Mont. Bishop, McCormick & Bishop, 28 Halsey St., Brooklyn, N. Y. Blenner, B. A., 508 W. Broad St., Richmond, Va. Bransetter Motor Co., 1337 Michigan Ave., Chicago, Ill. Camden Auto Exchange, 58-60 N. 2nd St., Camden, N. J. Carrington Auto Co., Carrington, N. Dak. Crescent City Auto Co.—217 S. Rampart St., New Orleans, La. Cronin Auto Co., 567 S. Clinton St., Syracuse, N. Y. D'Arcy Scott & Co., 524 Golden Gate Ave., San Francisco, Cal. Dragon Agency, North Ave. and Charles St., Baltimore, Md. Dragon Auto Garage of Hudson County, 1318 Park Ave., Hoboken, N. J. Dragon Automobile Co., 117 Massachusetts Ave., Boston, Mass. Dragon Car Co., 620 Maryland Ave., Pittsburg, Pa. Dragon Motor Car Co., 130 E. 9th St., Los Angeles, Cal. Ebby Mfg. Co., Lincoln, Neb. Erickson, Louis, 1520 Belmont Ave., Seattle, Wash. Franklin, Wm. H., Hightstown, N. J. Hammerstrom, care of Trenton Rubber Mfg. Co., Trenton, N. J. Gates City Motor Car Co., 708 Empire Bldg., Atlanta, Ga. Indianapolis Motor Car Co., 117 Kentucky Ave., Indianapolis, Ind. International Auto Co., 101 Burnside Pl., Montreal, Can. International Auto Co., 16 Temperance St., Toronto, Can. Jungclas Auto Co., Reading Rd. and June St., Cincinnati, O. Kull, A. L., Automobile Co., 1677 Broadway, New York City. Lyndon, A. S., Ann Arbor, Mich. Mohler & DeGress, La Independencia 12, Mexico City, Mex. Motor Livery Co., 249 3rd Ave., S. Minneapolis, Minn. Mulcahy, Dr. L. L., Batavia, N. Y. Neil House Garage, The, 34 W. Capitol St., Columbus, O. O. K. Machine Works, 887 Main St., Stroudsburg, Pa. Rabe-nold, W. F., 28 N. 11th St., Allentown, Pa. Swezy, G. L., Middletown, N. Y. United Motor Car Co., 620 Orange St., Newark, N. J.

Drain-cock.—See Cock, Drain.

Drake & Sons, Harry R.—122 East Union St., Newark, N. Y. (Reo.) Est. 1905. Not Incorporated. Garage, 15 to 20 cars. Repairing.

Drake Auto Station.—Suffolk, Va. (Cadillac.)

Drake, E. J.—Norfolk, Va. (Elmore, Cadillac.)

Drake, Francis E.—Cleveland, O. (Napier.)

Drake, Irving L.—Pres. Orient Mfg. Co., 537 Albany St., Boston, Mass.

Drake, Wilton E.—Treas. and Sec. Orient Mfg. Co., 537 Albany St., Boston, Mass.

Draper Bros. Co.—Canton, Mass. Mfrs. waterproof automobile robes. Cap. \$200,000. Est. 1889. Thomas B. Draper, Pres.; Wm. J. Williams, Vice-Pres.; Walter S. Draper, Treas.

Draper Co., Walter H.—120-126 South Railroad Ave., Mount Vernon, N. Y. Mfrs. lubricants, greases and oils. Cap. \$10,000. Est. 1904. W. H. Draper, Pres.; H. N. Draper, Treas.; Lena Strass, Sec.

Draper Garage, The.—Main St., Northampton, Mass. Garage.

Draper, H. N.—Treas. Walter H. Draper Co., 120-126 S. Railroad Ave., Mount Vernon, N. Y.

Draper, Jesse Sargeant.—Gen. Sales Mgr. Mora Motor Car Co., Newark, N. Y. B. Meadville, Pa., Oct. 6, 1872. Ed. Toledo, O. Mem. Cleveland Auto Club, N. Y. Motor Club, Question Club. Res., 94 Mott Ave., Detroit, Mich. In trade since 1890. Recreations, hunting, fishing.

Draper, Thomas B.—Pres. Draper Bros. Co., Canton, Mass.

Draper, Walter H.—Pres. Walter H. Draper Co., 120-126 S. Railroad Ave., Mount Vernon, N. Y.

Draper, Walter S.—Treas. Draper Bros. Co., Canton, Mass.

Dratz.—21 rue de l'Hospital, Brussels, Belgium. Mfrs. goggles.

Draw.—In pattern-making the taper given to a flange in order to enable it to be drawn from the sand.

Draw-plate.—A perforated hardened steel plate through which wire is drawn.

Drawsbaugh, W. N.—39 Dickinson Ave., Carlisle, Pa. (Winton, Cadillac, Pope-Waverley.)

Draz, Theodore.—Treas. Automobile Topics. B. Brooklyn, N. Y., June 22, 1847. Ed. commercial schooling in Nuremberg, Germany. Director Automobile Topics. Mem. Liederkranz Club. Res., 148 Claremont Ave., Mount Vernon, N. Y. Office, 402 Times Building, New York.

Dresse et Cie., J.—99 rue de la Republique, St. Mandé, Seine, France. Mfrs. differential gears, transmission gears.

Dressler, W.—Annenstrasse 14, Berlin, Germany. Mfrs. marine motors.

Dresser, S. R.—Bradford, Pa. Garage.

Dressler & Co., Chas. E.—143-47 E. 23rd St., New York City. Mfrs. models,

patterns, repair work of every description, timers.

Drevdal et Cie., Binoche.—30 rue Amelot, Paris, France. Mfrs. make and break plugs, spark plugs.

Dreves, R. A.—Office Mgr. Palmer & Singer Mfg. Co., 1620-24 Broadway, New York City.

Drewitz & Son, A.—White Plains Road and 225th St., New York City. Garage.

Driesmere, Jacob.—Sandwich, Ill. (National.)

Drift.—A tool for giving a final form to drilled or punched holes into which it is driven by a hammer.

Drill.—A tool for piercing small holes in wood or metal, by means of a "bit" driven by an alternating rotary motion. For holes of more than $\frac{1}{8}$ -inch diameter this tool is too weak, and a brace is therefore used. See Brace.

Drilling.—The act of boring or piercing a hole by means of a "drill" (q. v.), driven either by a brace or a drill-press.

Drill, Pin.—A drill or bit for making countersinks for the heads of screw bolts.

Drill, Twist.—A drill having a cylindrical body or shaft with two or more

grooves or helical or screw-shape running around it.

Driscoll, M. A.—Washington St. and Broadway, Long Branch, N. J. (Smith.)

Driscoll, Martin A.—Haverstraw, N. Y. (Smith.)

Drisko, Rossell.—Gen. Mgr., Pur. Agt., Sales and Advt. Mgr. Bay State Auto Co., 112 Norway St., Boston, Mass.

Driver.—Of two wheels in gear, the one that communicates motion to the other, called the "follower."

Driver, Walter.—700 W. Lehigh Ave., Philadelphia, Pa. Mfr. motorcycles.

Driving-axle.—A live axle on which the driving-wheels of a motor-vehicle are mounted or by which such wheels are driven.

Driving-belt.—See Belt.

Driving-chain.—See Chain, Driving.

Driving-gear.—The gearing through which the power is transmitted from one part of a machine to another, for example, from the motor of a car to the driving-axle.

Driving-horns.—Projections which overcome the drag on armature conductors and cause them to rotate with the shaft and core of the armature.

Driving-lever.—See Lever, Driving.

Driving-shaft.—The same as propeller shaft. See Shaft, Propeller.

Driving-side.—The tight side of a belt, that is to say, the side that is in tension, and therefore transmits the power. See Idle-side.

Driving-wheel.—See Wheel, Driving.

Drop-brake.—See Sprag.

Drop-forging.—See Forging, Drop.

Drop-oiler.—A lubricator in which the oil is fed drop by drop. See Lubricator, Sight-feed.

Drop-valve.—See Valve, Drop.

Dropped.—Having a downward curvature in the center; as a "dropped axle," "dropped frame."

Dross.—The impurities which collect on the surface of molten metal. See Sullage.

Drouillard, J. P.—Treas. Miami Cycle & Mfg. Co., Grand Ave., Middletown, O.

Drude, C. H.—Vice-Pres. and Mgr. of Engraving Dept. The Chandler Co., 31 Taylor St., Springfield, Mass.

Drumb, W. A.—Grand Rapids, Wis. (Waltham.)

Drum.—The large pulleys of steel in which or on which the brake-bands or segments act in order to stop or diminish the speed of the shaft that carries them. Some manufacturers, in order to prevent the drum from heating, provide a cooling system, consisting of a fall of water, drop by drop, or a circulation of water in the interior.

Drum-armature.—See Armature.

Drum-brake.—See Brake, Drum.

Drum, Mud.—A receptacle on a steam boiler for collecting the sediment deposited by the water.

Druen, B. D.—71 Hamilton St., New Haven, Conn. Mfr. top fixtures.

Drumbor, Chas. E.—6 W. 3d St., S. Bethlehem, Pa. (Ford.)

Dry Battery.—See Coil, Primary.

Dry Steam.—See Steam, Dry.

Dryden, Geo. B.—Mgr. Dryden Rubber Tire Co., 447 Wabash Ave., Chicago, Ill. repairs.

Dryden Rubber Tire Co.—449 Wabash Ave., Chicago, Ill. Vulcanizing and tire

Duane & Co., W. J.—304 W. 54th St., New York City. Mfrs. automobile tops, slip covers, baggage racks, wind shields, all kinds of iron and steel work. Cap. \$5,000. Est. 1903. W. J. Duane, Pres.; F. A. Phillips, Sec. and Treas.

Duane, W. J.—Pres. W. J. Duane & Co., 304 W. 54th St., New York City.

Dubarry, V.—25 rue Soyer, Neuilly-sur-Seine, France. Mfr. wooden wheels.

Dubied et Cie., Edouard.—Couvet, Switzerland. Mfrs. spark plugs.

Dubois Searchlight Co.—220 Broadway, New York City. Mfrs. lamps.

Dubruelle, Louis.—28 bis rue Villeneuve, Clichy-sur-Seine, France. Mfrs. circulating pumps, lubricators.

Duc.—An open single-seated car for two persons, generally carrying a spider seat in the rear for a servant. A "duc" usually has what is called a victoria-phaeton body and is commonly called a

"victoria-phaeton." It ordinarily carries a victoria top.

Ducasse, Jean Elie François.—Gen. Mgr. Lavalette & Co., Pres. and Gen. Mgr. Franco-American Taximeter Co., New York. B. Bordeaux, France, June 2nd, 1862. Res., 13 Lafayette Ave., New Brighton. S. I. Office, 112-114 W. 42nd St., New York.

Ducellier, G.—25 passage Dubail, Paris, France. Mfr. acetylene and oil lamps.

Duck, Frictioned.—Canvas impregnated with a rubber preparation and used in the manufacturing of tire-casings. See Frictioned.

Duck, W. L.—Mgr. London Branch Winton Motor Carriage Co.

Ducker, A. C.—Sumter, S. C. (Holman.)

Ducker Co.—New York City. Mfrs. portable houses.

Duckworth Chain & Mfg. Co.—Springfield, Mass. Mfrs. chains.

Ducomet.—11 rue d'Abbeville, Paris, France. Mfrs. gauges.

Ducommon, H. Emile.—Cleghorn, Ia. (Waltham.)

Ducro Mfg. Co.—1378 Niagara St., Buffalo, N. Y. Mfrs. gasoline and marine motors.

Ductility.—The property possessed by many metals and other substances of being drawn out in length without breaking. When a body can be readily extended in all directions under the hammer it is said to be "malleable," and when into sheets under the rolling press, it is said to be "laminable."

Dudley Auto School Co.—250 Main St., Marlboro, Mass. Garage.

Dudley Mfg. Co., A.—Menominee, Mich. Mfrs. wrenches.

Dudley, Fred. F.—55 Berkeley St., Boston, Mass. Garage.

Dudley, J. Bliss.—Los Angeles, Cal. (Crawford.)

Dudley, S. W.—108 E. Broadway, Butte, Mont. (White.)

Duenas, Jose M.—P. O. Box 344, Havana, Cuba. (Winton.)

Duer, Chas.—Designer and Supt. Chicago Coach & Carriage Co., 1223-31 Michigan Ave., Chicago, Ill.

Duerr & Co., Inc., C. A.—2182-86 Broadway, New York City. Royal Tourist.) Est. 1902. Cap. \$30,000. C. A. Duerr, Pres.; C. H. Hyde, Vice-Pres.; H. B. Phinny, Treas.; S. K. Kellock, Sec. Garage, 150 cars; repairing; supplies; renting and second-hand cars.

Duerr, Charles Alfred.—President C. A. Duerr & Co., Inc. B. Cleveland, O., Jan. 31, 1874. Ed. school and college. Mem. A. C. A., N. Y. Athletic. L. I. A. C., N. Y. Motor, Cleveland A. C. Res. 93rd St. and Riverside Drive, New York. Office, 2182-86 Broadway, New York. In trade Nov., 1901. First car, April.

1899. Formerly engaged in engineering and contracting business. Recreation, automobiling.

Duerr, J. J.—122 Northwest St., Bellevue, O. (Jackson.) Est. 1900. Not incorporated. Garage, 12 cars. Mfrs. motorcycles, motorcycle motors.

Dufaux et Cie, H. et A.—Geneva, Switzerland. Mfrs. motorcycles (La Motosacoche) and motorcycle motors.

Duff & Gregg.—Nebraska City, Neb. (Rapid.)

Duff Mfg. Co.—Pittsburg, Pa. Mfrs. jacks.

Duffield & Funk.—3 Love Lane, Eastheap, London, E., England. Mfrs. tire pumps.

Duffield, H.—Sec. Detroit White Lead Works, 532-60 E. Milwaukee Ave., Detroit, Mich.

Duffield, Maus & Co.—347-49 Wabash Ave., Chicago, Ill. (Logan.)

Duffke, Louis.—Officer and Head of Steel Castings Dept. Nortmann-Duffke Foundry Co., 26th St. and Layton Ave., Milwaukee, Wis.

Car Co., 1871-73 Broadway, New York. Sts., Harrison, N. J.

Dufour jeune et fils.—22 rue de la Cerisaie, Charenton, France. Mfrs. non-skids.

Dufour, Société Anonyme des Camions et Moteurs.—19 rue de la Republique, Marseilles, France. Mfrs. gasoline commercial automobiles (Dufour trucks).

Dugan, G. W.—Shop Supt. Nevada Auto & Supply Co., 115 Ramsey St., Goldfield, Nev.

Dugas.—10 bvd. Sevastopol, Paris, France. Mfrs. wearing apparel, coats.

Duggan, Frederick A.—Prop, with B. B. Dinsmore, Imperial Porcelain Works, Mulberry St. and New York Ave., Trenton, N. J.

Duginer, H.—Treas. Geen Electrical Mfg. Co., 180 Lake St., Chicago, Ill.

Duluth Auto Co.—Duluth, Minn. (White, Maxwell.)

Duluth Automobile Club.—W. W. Walker, Sec., Duluth, Minn.

Duluth Gas Engine Works.—Cor Vine and Minnesota Ave., Duluth, Minn. Mfrs. marine and stationary gasoline motors, reversible feathering, non-feathering propellers. Cap. \$50,000. Est. 1900. A. A. Williams, Pres., Mgr. and Supt.; Axel Zimmerman, Sec.

DuMars, C. O.—Pur. Agt. Banker Bros. Co., Baum and Beatty Sts., Pittsburgh, Pa.

Dumas Auto Exchange.—15 Prospect St., Manchester, N. H. Garage. usually provided with apertures for the attachment of the front ends of the springs. See Spring-iron.

Dunbar & Mansir.—302 High St., Holyoke, Mass. (Elmore.)

Dunbar Bros.—Bristol, Conn. Mfrs. machinery springs.

Dunbar, W.—Gen. Supt. Pennsylvania Rubber Co., Jeannette, Pa.

Duncan, J. H.—Mgr. D. K. Electric Co., 106-10 Locust St., St. Louis, Mo.

Duncan, W. A.—Rolla, N. D. Garage.

Dunham & Son, Inc., D. B.—Rahway, N. J. Mfrs. limousine, landaulet and touring bodies; slip covers; cape, semi-mousine and canopy tops. Cap. \$50,000. Est. 1863.

Dunham, G. J.—182-8 Columbus Ave., Boston, Mass. (Royal.) Est. 1898. Repairing cars represented only.

Dunham, George Willis.—Chief engineer Olds Motor Works. B. Cleveland, O., May 4, 1876. Ed. Kenyon College. Res. 738 Ionia St. West. Office. Olds Motor Works, Lansing, Mich. In trade since 1900.

Dunham, Geo. W.—Designer Olds Motor Works, Lansing, Mich.

Dunham, M. H.—Great Barrington, Mass. Garage.

Dunham, M. H.—Main St., Sheffield, Mass. (Pope-Toledo). Est. 1905. Garage. 20 cars. Repairing; electric charging.

Dunhill, Ltd., Alfred.—Euston Road, London, N. W., England. Wearing apparel, fur coats, hats and caps; goggles.

Dunhoelter et Schoelzel.—148 Faubourg St Denis, Paris, France. Mfrs. speed indicators.

Dunk, Alfred O.—Treas. Designer and Gen. Mgr. Puritan Machine Co., 12-16 Gratiot Ave., Detroit, Mich.

Dunk, Thomas H.—Sec. Puritan Machine Co., 12-16 Gratiot Ave., Detroit, Mich.

Dunlap Motor Car Co.—Canton, O. (Mitchell)

Dunlop Pneumatic Tire Co.—Hanau, Germany. Mfrs. pneumatic rubber tires.

Dunlop Rubber Co., Ltd.—Manor Mills, Birmingham, England. Mfrs. detachable rims.

Dunlop, Société Française des Pneumatiques.—Argenteuil (Seine-et-Oise), France. Mfrs. pneumatic rubber tires.

Dunlop Tyre Co., Ltd.—Aston, Birmingham, England. Mfrs. pneumatic tires.

Dunn, H. T.—Pres. The Fisk Rubber Co., Oak St., Chicopee Falls, Mass.

Dunn, J. E.—Pres. and Mfg. Mgr. The Semi-Dry Battery Co., Fifth and Essex Sts., Harrison, N. J.

Dunn, Walter E.—Ogdensburg, N. Y. Mfrs. gasoline marine motors.

Dunne, D. W.—143 Federal St., Boston, Mass. Supplies.

Dunnett, M. L.—Abilene, Kan. (Walsham.)

Dunton & Co., M. W.—65 Atlantic Ave., Providence, R. I. Mfr. soldering paste, cotton and linen armature tapes and sleeveings; insulating paper.

Duplex Automobile Works.—4212 State St., Chicago, Ill. Mfrs. gasoline automobiles.

Duplex Coil Co.—Fond-du-Lac, Wis. Mfrs. spark coils.

Duplex Folding Pail Co.—420 W. 14th St., New York City. Mfrs. collapsible buckets.

Duplex Ignition Co., Inc.—307 W. 36th St., New York City. Mfrs. spark plugs.

Duplex Roller Bushing Co.—Belfast, Me. Mfrs. motor boats, gasoline engines, tackle blocks and all products of iron, brass and bronze foundries and machine shop. Cap. \$300,000. Est. 1887. Chas. A. Horton, Pres.; H. Holton Wood, Vice-Pres.; E. W. Davenport, Treas.; E. B. Gilchrist, Sec. Boston office, 6 Beacon St.

Dupoirer, H.—48 rue Claude-Decaen, Paris, France. Mfr. clutches.

Dupont, A.—36 quai de Suresnes, Suresnes, France. Mfrs. siren horns.

Dupont Garage Co.—2020 M St. N. W., Washington, D. C. (Columbia, Rambler, Waltham, Cleveland.)

DuPuy, H. W.—Vice-Pres. and Treas. Pennsylvania Rubber Co., Jeannette, Pa.

Duquesne Cycle Co.—Pittsburg, Pa. (Indian)

Duquet, Louis G.—107 W. 36th St., New York City. Est. March 1, 1906. Importer automobile supplies.

Durant, W. C.—Gen. Mgr. Buick Motor Co., Flint, Mich.

Duray, Arthur.—Driver of racing cars. B. at Brussels, Feb. 9, 1882. Began racing in 1898, and participated in all the big events since 1901. His greatest triumph was the winning of the Ardennes Circuit in 1906, in a De Dietrich car, when he covered the 372.7 miles at an average speed of 66.12 miles per hour. Participated in the 1906 Vanderbilt cup race, finishing in third place.

Dumb-iron.—The extreme forward ends of the sills of a motor-car frame

Durbster, Ralph.—Sec. Eclipse Machine Co., Elmira, N. Y.

Dürkopp und Co., Action Gesellschaft.—Bielefeld, Germany. Mfrs. gasoline commercial automobiles, gasoline automobiles (Dürkopp), jacks.

Durin, A. E.—Cedar Rapids, Ia. (American.)

Duro Mfg. Co.—935 S. Los Angeles, Cal. (Durocar.)

Durocar Mfg. Co.—1130 S. Main St.,

Los Angeles, Cal. Mfrs. gasoline automobiles.

Durr, H. H.—Pres. The Victor Rubber Co., Springfield, O.

Durst, J. H.—Sec. Pioneer Auto Co., 901-25 Golden Gate Ave., San Francisco, Cal.

Duryea, Chas. E.—Reading, Pa. Mfr. carburetters.

Duryea, Charles Edgar.—Consulting engineer A. M. C. M. A. and Corbin

Motor Vehicle Corp. B. near Canton. Fulton Co., Ill., Dec. 15, 1861. Ed. District school, Wyoming school, Gitting Seminary, Ill. Mem. American Society of Automobile Engineers. 1st V. P. American Motor League.

Res., Reading, Pa. In trade (automobiles) since 1891, (motorboats) since 1896, (aeronautic motors) since 1903. Author of "Roadside Troubles," test book on "Automobiles" for American School of Correspondence, Armour Institute of Tech. Ed. Gasolene Query Dept. Automobile Trade Journal. Recreations, automobiling, boating, kite-flying, etc.

Duryea, J. Frank.—Vice-Pres. and Factory Mgr. Stevens-Duryea Co. B. Washburn, Woodford Co., Ill., Oct. 8, 1869. Ed. Wyoming (Ill.) High School. Mem. Springfield Automobile Club, Noyasset Club of Springfield. Res., 34 Federal St., Springfield, Mass. In the trade since 1891. User of car to limited extent from 1891-1896, regularly since then. Designed, built and drove the winner of the Times-Herald race at Chicago, Thanksgiving, 1895. Also built and drove winner Cosmopolitan race, New York, 1896.

Dusenbergh, A. S.—Garner, Ia. Mfrs. motorcycles.

Dusenbury, Louis.—86-88 Worth St., New York City. Mfr. automobile robes, cloth and carpet trimmings.

Dussault Auto Works.—63 Buffalo St., Lockport, N. Y. (Cadillac, Winton.)

Dust-apron.—See Apron, Dust.

Dust-pan.—A metal pan placed beneath the power-plant of a motor-car and designed to protect it from mud and dust.

Dutcher, Charles.—Supt. Unique Metal Co., 25 Illinois St., Buffalo, N. Y.

Dutcher Co., J. A. & P. E.—Milwaukee, Wis. Mfrs. steel castings.

Dutemple, A.—33 rue de Seine, Ivry-Port, France. Mfrs. motorcycles.

Dutrix - Lamelin.—Lequesnoy, Nord, France. Mfrs. non-skids, shock-absorbers.

Duttman C.—Amityville, L. I. N. Y. (Maxwell.)

Dutton Co., W. H.—24 Washington St., Morristown, N. J. (Oldsmobile, Royal.)

Dutton Engineering Co.—Perth Amboy, N. J. Mfrs. motorboats.

Dutton, W. H.—Sec., Treas. and Mgr. Tokheim Mfg. Co., 815 N. First St., W., Cedar Rapids, Ia.

Dutton, W. H.—Sec. and Treas. The Van Dorn & Dutton Co., 2714 E. 79th St., Cleveland, O.

Duty.—The old system of measuring the efficiency of an engine. It is the number of foot-pounds of work performed by the combustion of one bushel of coal.

Duval, W. S.—1319 L St., N. W., Washington, D. C. (Pullman Flyer.) Garage.

Duvinaige, Camille.—232 rue de Longues-Haies, Roubaix, France. Mfr. wood rims.

D-valve.—See Valve D.

Dwight, P. D.—Sec. and Treas. C. R. Wilson Body Co., Detroit, Mich.

Dyckmans Garage.—Harper St., Stamford, N. Y. Garage.

Dyde & Richards Auto Supply Co.—1691 Broadway, New York City. Supplies.

Dye, C. T.—Remington, Ind. (Glide.)

Dyer's Auto Depot.—Cor. Pine and Bennett Sts., Manchester, Mass. (Pope line.)

Dyle et Bacalan, Société Anonyme de Travaux.—15 Ave. Matignon, Paris, France. Mfrs. pressed steel frames.

Dynamics.—The theory of forces which are not in equilibrium.

Dynamo.—A mechanical generator of electricity based upon the electro-magnetic induction produced in the field of an electro-magnet. Dynamos furnish an alternating or continuous current. A dynamo gives a direct current when its armature is provided with a commutator, and an alternating current when its armature is fitted with rings connected to the windings. In the first case it is called an "alternating current dynamo" or "alternator," and, in the second, a "continuous current dynamo," or simply "dynamo."

A dynamo comprises two essential parts, viz. (1) an inductor designed to produce the magnetic field in which are developed the phenomena of induction, and (2) an armature consisting of the conductors in which are generated the induced electromotive forces. The inductor is generally stationary and the armature movable.

Of the two forms of mechanical gen-

erators of electricity used for ignition purposes, dynamos and magnetos, the latter, on account of their simplicity of construction and low cost, are more generally employed. See Magneto.

Dynamometer.—An apparatus employed for measuring the force transmitted or produced by a receiving apparatus or a motor.

There are two kinds of dynamometers—"absorption" and "transmission." The first in most cases absorb work by friction. The best known type is the "Prony brake," which is employed for measuring

Fig. 1.

the effective power of a motor, that is to say, the power really furnished upon its shaft. It consists of a pulley, A (fig. 1), which is placed on the shaft of the motor the power of which it is desired to measure. The pulley, A, may be the fly-wheel of the motor. Upon this pulley are placed wooden shoes, C, held by an iron-plate strap, D, the extremities of which are connected to a wooden lever by means of hooked rods, a portion of which is threaded. This lever is provided at its upper part with a piece, F, upon which bears the pulley. The free extremity of the lever carries a pan, H, in which weights may be placed, or else the center

itself is provided with a weight that slides along it. The apparatus having been mounted, the motor is set in operation and allowed to attain its normal velocity and the shoes are then pressed against the fly-wheel. At this moment,

Fig. 2.

the lever-arm, E, has a tendency to be carried along in the direction of the revolution, but, in order to prevent this, two stops are arranged at G and G'. Weights are then placed in the pan, H, in order to keep the lever E horizontal.

The dynamometer measures the force by determining the path traversed by the point of application and the duration of the measurement. The work and power furnished are calculated by the force. Referring to the figure and designating by

F the force of friction of the circumference of the pulley;

R the radius of the pulley;

p the weight placed at H and keeping the lever horizontal for a power, P, produced upon the motor shaft;

p' the tare of the brake, balancing the unweighted lever;

ω the velocity of the shaft B in revolutions per minute

we have for the value of the power, when the beam, E, is horizontal:

$$P' = \frac{(p' + p') L x 2 \pi x \omega}{60} \text{ foot-pounds per sec.}$$

$$P = \frac{(p' + p') L x 2 \pi x \omega}{60 x 75} \text{ horse-power.}$$

The value of p' or "tare" of the brake, will be had by using marked weights for balancing the unweighted lever.

In order to make things plain, suppose that the following results have been found in the experiments:

Tare of the brake (p') 3.85 pounds.

Weight placed in the pan (p) 16 pounds.

Velocity in revolutions per minute (ω) 750.

Length of the lever-arm, 32 inches.

Then the result will be:

$$P = \frac{(p x p') L x 2 \pi x \omega}{60} = 4010 \text{ foot-pounds per second, or } 7.44 \text{ h. p.}$$

In order to obtain a serious result, it is necessary to continue the experiment for at least ten minutes. During such time it always happens that the force of friction diminishes in consequence of the variation in the tightness of the shoes. Now, it is necessary that this force shall remain constant, since, as the apparatus is weighted, the sum of the weights being greater than the force of friction, the lever would no longer be in equilibrium. This drawback is corrected by tightening the nuts. In order to prevent shocks, care is taken to place rubber disks under the washers. The stops G and G' prevent the lever, E, from taking dangerous positions when the equilibrium is broken. The friction of the shoes against the pulley naturally produces a certain amount of heat. As the mechanical work is here converted into heat, care must be taken, in order to prevent gripping, to lubricate the rubbing part with soap-suds.

The "rope brake" (fig. 2) is an absorption dynamometer, the measurements of which are effected by a transmission dynamometer.

If R be the radius of the fly-wheel keyed upon the motor shaft,

r the radius of the rope,

ω the velocity with which the shaft revolves per minute,

p the weight placed at D, sufficiently heavy to prevent it from being thrown off by the revolution of the fly-wheel,

p' the indication of equilibrium of the

transmission dynamometer corresponding to a power P .

$$P = \frac{(p-p')2\pi(R+r)\omega}{60} \text{ foot-pounds per sec.,}$$

and

$$P' = 0.001305(p-p')(R+r)\omega \text{ horse-power.}$$

A generating dynamo of which the efficiency η is known furnishes an excellent absorption dynamometer.

Let U be the difference of potential of the dynamo, and I the intensity of the current produced.

$$\text{Then } P' = \frac{UI}{736 + \eta} \text{ —horse-power.}$$

Transmission dynamometers are interposed, say between a motor and the shaft that it actuates, or between two contiguous pulleys having the same axis and the faces of which are in proximity. Such dynamometers make known, through the flexion of the spring, the intensity of the force that is traversing them. While the former take the place of apparatus actuated by the motor, the latter are capable of operating during the effective running.

These apparatus are graduated in pounds and are employed for measuring stresses of compression or traction, and also for measuring the force necessary to overcome the resistance of the running of a vehicle upon rails or upon roads.

What are called "spring balances" are dynamometers.

Among well-known dynamometers

may be mentioned those of Leroy, Rognier, Watt, Dollfus, Mieg, Hirn, Piguet and Morin. Those of the latter are either "curve-dynamometers," giving the work by plainmetrage, or "counter-dynamometers," giving the work by direct reading. For measuring the force of traction, or motor-couple exerted upon a vehicle there are also employed transmission dynamometers acting by the compression of water measured by a pressure-gauge or a dynamometric pendulum that automatically measures and inscribes the accelerations of vehicles in motion as a consequence of an external traction. From a knowledge of the acceleration is deduced the velocity and the motor stress.

In case of electric traction, an ammeter may be employed as a dynamometer.

From the standpoint of the C. G. S. system, the name dynamometer, that is to say, "measurer of dynes," is correctly applied only to transmission dynamometers, which measure forces, but is erroneously extended to those of absorption, which are rather measurers of power.

Dyne.—The name of the unit of the measurement of "force" in the C. G. S. System.]

It is the force necessary to give a mass of one gramme an acceleration of one centimetre per second. It is thus a little more than the force exerted by the earth on a mass of one milligramme.

E

e. m. f.—An abbreviation of "electromotive force." It is the difference of potential between any two given points in an electrical circuit.

Eadie Chain Co., Ltd.—Redditch, England. Mfrs. chains.

Eads, R. I.—Sales Mgr. Premier Motor Mfg. Co., Indianapolis, Ind.

Eagle Automobile Co.—Rahway, N. J. Mfrs. gasoline automobiles.

Eagle Auto Supply Co.—1780 Broadway, New York City. Supplies.

Eau Claire Motor Car Co.—Chase Bldg., Eau Claire, Wis. (Pope-Toledo, Waltham).

Eberhardt Bros. Machine Co.—66-68 Union St., Newark, N. J. Mfrs. metal gear wheels, special automobile machinery.

Eberhart & Son.—Bucyrus, O. Garage.

Ebonite.—A product composed of rubber treated with sulphur to a greater extent than ordinary vulcanized rubber. It is hard and slightly elastic, and capable of taking a durable polish. It is used in automobilism as an insulator in coils, magnetos, batteries, etc.

Ebullition.—A rapid evaporation of a liquid in which the vapor escapes in the form of bubbles, which are formed in the interior of the liquid, and, rising to the surface, collapse and permit the vapor to pass into the air. The cloudy vapor seen above the containing vessel, and commonly called "steam," is not steam, but minute globules of water, steam itself being invisible. The laws of ebullition are as follows: (1) The temperature of ebullition or the boiling point increases with the pressure. (2) For a given pressure, boiling begins at a certain temperature, which varies in different liquids, but which for equal pressures is always the same in the same liquid. (3) Whatever be the intensity of the source of

heat, as soon as boiling begins the temperature of the liquid remains stationary. The temperature at which a liquid boils is called its "boiling point." This is very different for different liquids. That of pure water is 212° F., when the pressure on its surface is equal to 30 inches of mercury, or, in other words, when the barometer stands at 30 inches. The nature of the containing vessel varies the boiling point. When the interior of the vessel is rough, the projecting points form centers for developing vapor, and the boiling point is lower than when the surface is smooth. Water boils at a lower temperature in iron than in glass vessels.

Ebullition Carburetter.—See Carburetter.

Eby Mfg. Co.—Lincoln, Neb. (Dragon).

Eccentric.—An arrangement for converting a continuous rotary into an alternate rectilinear motion without the use of a crank. An eccentric is irreversible,

i. e. it cannot produce reverse transformation. It is used for working the link in a link-motion or for operating oil and air pumps, etc., on automobiles. The disk, A, or eccentric sleeve, is secured to the shaft, B, by a key. It is confined by a strap or hoop, C, in which it moves with slight friction. This strap is provided with a groove into which the eccentric fits, while oil is run in between them. The strap is made in halves, the upper of which is fastened to the eccentric rod, D, and connected to the lower by bolts or set-screws. As the sleeve A turns, it gradually draws the rod D back and forth in a path equal to twice the eccentricity, e. The "eccentricity" or "throw of the eccentric" is the distance from the center of the sleeve to the center of the shaft, and equals half the distance which the end of the rod moves, that is, the travel of valve.

Eccentric, Backward.—The eccentric used when a steam-engine is reversed, that is to say, one of the pair always used with link-motion.

Eccentric, Fixed.—An eccentric keyed to its shaft; now almost universally used.

Eccentric, Forward.—The eccentric which drives the slide-valve of an engine while it is running in the forward direction.

Eccentric Pump.—See Pump, Eccentric.

Eccentric-rod.—A rod connected with the eccentric-strap. See Eccentric.

Eccentric-strap.—A metal band surrounding the eccentric and carrying the eccentric-rod. See Eccentric.

Eccles Co., Richard.—Clark and S. Division Sts., Auburn, N. Y. Mfrs. vehicle forgings. Cap. \$100,000. Est. 1880. Richard Eccles, Pres.; W. W. Eccles, Treas.; A. H. Johnson, Sec.

Eccleston, J. B.—Pres. and Treas. Centaur Motor Co., 53-61 Franklin St., Buffalo, N. Y.

Echo Co.—Young and Delaware Sts., Tonawanda, N. Y. Mfrs. gasolene and marine motors. (Waltham).

Eck Dynamo Motor Co.—Belleville, N. J. Mfrs. electric generators.

Eckel, Andrew.—1080 3rd Ave., Brooklyn, N. Y. Mfrs. vaporizers.

Ecker, J. D.—Keokuk, Ia. (Holsman).

Eckert, Gus.—Supt. Pungs-Finch Auto and Gas Eng. Co., 1524 Jefferson Ave., Detroit, Mich.

Eckert, Hunter.—Vice-Pres. Reading Automobile Co., 26 S. 5th St., Reading, Pa.

Eckhardt, J. C.—Cannstadt, bei Stuttgart, Germany. Mfrs. gauges.

Eckhardt, P. O.—Office Mgr. Continental Caoutchouc Co., 43 Warren St., 2100 Broadway, New York City.

Eckhart, Chas.—Pres. Auburn Auto Co., Auburn, Ind.

Eckhart, F. E.—Vice-Pres. Auburn Auto Co., Auburn, Ind.

Eckhart, Morris.—Sec., Treas. and Gen. Mgr. Auburn Auto Co., Auburn, Ind.

Eckhoff, John.—Anthony St., Waterbury, Conn. Garage.

Eclipse Automobile Co.—955 S. High St., Columbus, O. (Haynes).

Eclipse Auto & Construction Co.—101-107 S. 6th St., Brooklyn, N. Y. (Smith).

Eclipse Auto Rubber Tire Repairing Co.—305 Clifton Pl., Brooklyn, N. Y. Vulcanizing.

Eclipse Engine Works.—Mancelona, Mich. Mfrs. gasolene and marine motors.

Eclipse Machine Co.—Elmira, N. Y. Mfr. coaster brakes for bicycles and motorcycles; full line of machine screw parts, including A. L. A. M. Standard cap screws, hex and castellated nuts on contract. Cap. \$1,000,000. Est. 1902. D. L. Whittier, Pres.; Ray Tompkins, Vice-Pres.; Ralph D. Webster, Sec.; J. E. Morrow, Supt.; G. H. Couper, Gen. Foreman; F. S. Ellett, Foreman Tool Dept.;

Geo. Patterson, Foreman Machine Dept.; Frank Linhart, Foreman Nickel Plating Dept.; Chas. McPherson, Foreman Inspection Dept.

Eco Mfg. Co.—53 State St., Boston, Mass. Mfrs. and dealers, Eco storage tank and generator combined, acetylene torch for firing steam automobiles, dashboard gas lamps, cabin lamps, searchlight brackets. Cap. \$30,000. Est. Dec. 1905. Richard P. Elliott, Pres. and Gen. Mgr.; J. S. Pishon, Treas.; H. C. Elliott, Sec.

Economy Oil & Compound Co.—442 Clark St., Chicago, Ill. Mfrs. grease, oil.

Ecret, Isaac.—Vice-Pres. and Pur. Agt. Geo. W. Nock Co., Inc., 126 N. 4th St., Philadelphia, Pa.

Edaburn, H. W.—110 N. Elm St., Creston, Ia. (Buick; Cadillac).

Eddy Currents.—Currents, called also "Foucault currents," produced entirely within a mass of metal through the movement or alteration in number of the magnetic lines of force passing through it. They tend to occur in the pole-pieces of the field-magnets of dynamos, etc.

Eddy Electric Mfg. Co.—Windsor, Conn. Mfrs. electric generators and motors.

Eddy, H. C.—Vice-Pres. American Motor Truck Co., Caledonia St., Lockport, N. Y.

Edelman, Wm.—914 Pelham Ave., New York City. Garage. Repairing.

Edenfield, R. J.—Sole owner Moore Edenfield Elec. & Mfg. Co., 1033 Broad St., Augusta, Ga.

Edge-cam.—See Cam, Edge.

Edge, Selwyn Francis.—14 New Burlington St., London. Born at Sidney in 1868. General Manager of the S. F. Edge Co. (Limited), Napier automobile. A former bicycle racer who has made numerous records on the road. Manager of the Dunlop Pneumatic Tire Co. in 1869. He won the Bennett cup race in 1902 upon a 40 h.p. Napier and ran the Bennett cup race in 1903 and 1904 upon Napier cars. He has won numerous motor-boat races.

Edge, Selwyn F., Ltd.—14 New Burlington St., London W., England. Mfrs. gasolene automobiles. (Regent cars).

Edgewater Garage.—Evanston Ave. and Winona St., Chicago, Ill. (Buick).

Edgewood Auto Co.—376 Smith St., Edgewood, R. I. (Northern).

Edgeworth Machine Co.—Meadow Road, Edgeworth, Allegheny Co., Pa. (Packard, Franklin, Waltham, Pope-Waverley). Est. 1901. Not inc. Owners, R. L. Anderson, D. C. Anderson. Garage, 30 cars. Repairing.

Edison Storage Battery Co.—Orange, N. J. Mfrs. primary and storage batteries.

Edison, Thomas Alva.—Inventor. B. Milan, O., Feb. 11, 1874. Became newsboy at 12 years of age on Grand Trunk Ry., learned telegraphy, worked as operator, and invented many telegraphic devices. Perfected the incandescent lamp and made electric lighting commercially practical. Invented the phonograph, megaphone, aerophone, kinoscope and scores of other devices. Was made Chevalier, Officer and afterward Commandant, Legion of Honor, by French Gov't. Has been working for several years to perfect a storage battery for vehicle usage that combines long life and great capacity with a minimum weight. Res., West Orange, N. J.

Edler, X.—Hirson, Aisne, France. Mfrs. automobile motors.

Edmunds & Jones Mfg. Co.—315 Riopelle St., Detroit, Mich. Mfrs. automobile lamps and generators, searchlights (marine and auto), launch whistles. Member M. & A. M. Cap. \$40,000. Est. Sept. 1, 1904. D. M. Ireland, Pres.; Geo. E. Edmunds, Sec. and Treas.; W. T. Jones, Supt. Factory; Charles Godley, Foreman Factory.

Edmunds, Geo. E.—Sec. and Treas. Edmunds & Jones Mfg. Co., 315 Riopelle St., Detroit, Mich.

Edmundson, J. W.—Sec. Standard Leather Co., 296 Spring Garden Ave., Allegheny, Pa.

Edsall, J. M.—Treas. E. R. Thomas Motor Co., 1200 Niagara St., Buffalo, N. Y.

Edstrom, A.—1474 W. Madison St., Chicago, Ill. Garage.

Eduction.—The same as exhaust.

Edwards & Co.—405 E. 144th St., New York City. Mfrs. bells.

Edwards & Peck.—Rye, N. Y. (Pope-Hartford).

Edwards, A. G.—534 N. High St., Columbus, O. (Indian.)

Edwards, A. J. M.—Mgr. N. Y. Branch, Electric Vehicle Co., 134 W. 39th St., New York City.

Edwards Bros.—London, England. (Monarch).

Edwards, H. J.—Chief Engineer Dayton Motor Car Co., Dayton, O.

Edwards, L. K.—Masonic Block, Escanaba, Mich. (Cadillac).

Edwards Non-Skid Syndicate.—Queen Anne's Chambers, Westminster, London S. W., England. Mfrs. non-skids.

Edwards, Ralph.—Malvern, Pa. Garage.

Eerste Amsterdamsche Bandenrijwielen & Motorrijwielen Fabriek.—27 Helmerstrasse, Amsterdam, Holland. Mfrs. motorcycles.

Eerste Nederlandsche Rijwiefabriek.—Deventer, Holland. Mfrs. motorcycles.

Efficiency.—As applied to a motor, the "efficiency" is the ratio between the actual work performed and heat-unit supplied. As applied to a motor-vehicle, efficiency is the ratio between the power developed by the engine and that delivered at the rear wheels. In general, efficiency is the ratio between the useful energy obtained from a particular machine and the energy put into it.

Efficiency at the Wheel-rim.—What is called the efficiency at the wheel-rim in a motor-vehicle is the ratio of the effective power capable of being collected upon the wheels or at the rim of the wheels to the power of the motor. Such ratio measures, in a manner, the perfection of the transmission, since the residue indicates the losses due to the gearings, shafts and intermediate cardan joints of the transmission. The efficiency at the rim of car wheels is quite low (0.50 to 0.65). In electric cars it is usually 0.80. Such difference is doubtless due to the regularity of the motor-couple and to the more favorable load of the gearings, electric vehicles being generally of restricted power. Efficiency of the rim is measured by the brake.

E. G. A. (Entrepot General d'Automobiles).—209 Blvd. Pereire, Paris, France. Mfrs. gasoline automobiles (E. G. A. cars).

Egan & Grinnell.—Seabreeze, Fla. Garage.

Egbers, Th.—Hertogstrasse 58, Nimeguen, Holland. Mfrs. bodies.

Egg & Co., R.—46 rue de Lyon, Paris, France. Mfrs. gasoline automobiles (Eleva cars).

Eggermont, M. E.—9 rue du Petit-Dock, Gand, Belgium. Mfrs. marine motors.

Egglesore, W. H.—Mgr. Warsaw Garage Co., 208 Indiana St., Warsaw, Ind.

Ehlbert, Chas. A.—Greenville, Miss. Garage.

Ehrhardt, Heinrich.—Düsseldorf, Germany. Mfrs. gasoline commercial and gasoline automobiles (Ehrhardt cars).

Ehrlich & Son, J.—1345 Broadway, New York City. Mfr. eye shields.

Eib, Calvin C.—Vice-Pres. Pioneer Auto Co., 901-25 Golden Gate Ave., San Francisco, Cal.

Eichberg, Benjamin.—Pres. Auto Import Co., 1786 Broadway, New York City.

Eichorn & Black.—9 Hill St., Newark, N. J. (Crawford).

Eickemeyer & Osterheld.—5 Neppershan St., Yonkers, N. Y. Garage.

Eidam, Adam.—15 N. Wyoming St., Hazleton, Pa. Garage.

Eidam, Dr. C. H.—Lawrence, Mass. (Jackson).

Eikenberry, A. L.—126 W. 4th St., Greenville, O. (Northern).

Eilers & Klierath.—241 W. 107th St., New York City. Garage.

Eisemann und Co., Ernst.—Stuttgart, Germany. Mfrs. high and low tension magnetos.

Eisendrath Glove Co.—Armitage and Elston Ave., Chicago, Ill. Mfrs. wearing apparel (gloves and gauntlets).

Eisenhardt, C. A.—Sales and Adv. Mgr. Sayers & Scovill, 2247-61 Colerain Ave., Cincinnati, O.

Eisner, Felix A.—Designer and Engineer, Gearless Transmission Co., Rochester, N. Y.

Ekstromer Accumulator Co.—13 Walbrook, London E. C., England. Mfrs. electric automobiles (Ekstrom cars).

Elastes.—rue Danton, Levallois-Perret, France. Tire filling.

Elastic Limit.—The extent to which a body may be deformed or strained and still retain the power of completely recovering its original shape when the stress is removed. If the elastic limit be exceeded, the body does not recover its previous form on the removal of the stress, but retains a permanent alteration of form or a "set."

Elasticity.—A general property of bodies, by virtue of which they are capable, within certain limits, of resuming their original form, when the external force which deformed them has ceased to act. So long as such external force is no greater than the internal force holding the molecules together the bodies will resume their form.

Elasticity: Hooke's Law.—If an "elastic" substance be strained or loaded in any way, then, within certain limits of load varying with the nature of the substance used, the strains produced are proportional to the loads. The law is now usually expressed in the form

$$\frac{\text{stress}}{\text{strain}} = \text{constant},$$

and this constant is known as the "elasticity" of the substance.

Elastic Tire Filling Co.—52 Church St., Boston, Mass. Tire filling.

Elastro Co., The.—256 Broadway, New York City. Mfrs. tire filling compound.

Elastro Mfg. Co., The.—26 State St., Hartford, Conn. Mfrs. tire fluid.

Elbow.—A short length of pipe making a joint between two pipes at an angle usually of ninety degrees. (2) A joint where two pipes meet at angle.

Elbow, Return.—An elbow in a pipe itself like a letter U. Used in connecting the pipes of condensers and the like.

Elbridge Electric Co.—Elbridge, N. Y. Mfrs. electric generators, magnetos and ignition dynamos, spark coils, spark plugs.

Elder & Co., G. B.—Buoxi, Miss. Garage.

Eldredge Electric Mfg. Co.—7 Post Office Square, Springfield, Mass. Mfrs. ammeters and voltmeters, electric switches.

Eldridge Beebe Auto Garage Co.—1st Main and State Sts., Marshalltown, Ia. (Rambler).

Electrical & Mechanical Development Co.—Asbury Park, N. J. Mfrs. soldering sticks, electric current rectifiers.

Electrical Construction & Supply Co.—537 S. Main St., Findlay, O. (Columbus).

Electrical Construction Co.—Racine, Wis. (Mitchell).

Electrical Construction Co.—1126 S. Main St., Los Angeles, Cal. (Baker, Columbus, Dolson, Mora, Pope-Waverley).

Electrical Review.—13 Park Row, New York City. Pub. weekly by Electrical Review Pub. Co.

Electrical World.—239 W. 39th St., New York City. Pub. Weekly by McGraw Pub. Co.

Electric Automobile Co.—14 Bryan St., Savannah, Ga. (Columbus).

Electric Cab Co.—238 W. 50th St., New York City. Garage.

Electric Charge.—A definite quantity of electricity or of electrification.

Electric Charging Station.—200 Pearl St., Buffalo, N. Y. Garage.

Electric Contract Co.—202 Centre St., New York City. Mfrs. primary batteries, spark coils.

Electric Discharge.—The dissipation of electricity or loss of charge from a body. It may be accompanied with visible phenomena, such as sparks, etc., or it may be of a nature not evident to the senses, and only to be detected by electrical means.

Electric Energy.—See Energy, Transformation of.

Electric Field.—See Field, Electric.

Electrical Ignition.—See Ignition.

Electric Ignition Co.—Sparkbrook, Birmingham, England. Mfrs. spark plugs, coils, storage batteries (E. I. C.).

Electricity.—A powerful physical agent, which manifests itself mainly by attraction and repulsion, but also by luminous and heating effects, by violent shocks, by chemical decomposition, and many other phenomena.

The study of the properties of bodies charged with electricity and the charges of which are supposed to be in equilibrium is termed "electrostatics;" and the study of the properties of bodies of which the potentials are different, and

between which is established a current, is called "electrodynamics."

Electricity, High-tension.—Electricity of high pressure, such as that produced by an induction coil. High-tension electricity will jump, in the form of a spark, across a gap between two live conductors; but low-tension electricity will not.

Electric Launch Co., The.—Ave. A and North St., Bayonne, N. J. Makers of Elco motor boats, first marketed in 1892. H. R. Sutphen, Gen. Mgr.; A. E. Luders, Designer; E. A. Conrad, Pur. Agt.; T. S. Hanson, Adv. Mgr.

Electric Power.—See Power, Electric.

Electric Rubber Mfg. Co.—Rutherford, N. J. Mfrs. inner tire tubes.

Electric Signs & Signals Co.—177½ E. 87th St., New York City. Mfrs. annunciators, automobile mirrors.

Electric Smelting & Aluminum Co.—W. Jackson St., Lockport, N. Y. Mfrs. aluminum, brass and copper metals.

Electric Storage Battery Co.—Allegheny Ave. and 19th St., Philadelphia, Pa. Mfrs. "Exide" storage batteries. Member M. & A. M. Cap. \$20,000,000. Est. 1888. Herbert Lloyd, Pres.; Grant B. Schley, 1st Vice-Pres.; John R. Williams, 2nd Vice-Pres.; Chas. Blizard, 3rd Vice-Pres.; W. G. Henderson, Sec. and Treas. Branches, New York, Chicago, Boston, Cleveland, Atlanta, St. Louis, San Francisco and Toronto, Can. Agent, Canadian General Electric Co., Ltd., Toronto, Can.

Electric Supply Co.—309 Bull St., Savannah, Ga. (Ford, Queen, Pope-Waverley).

Electric Vehicle & Garage Co.—621 Grand Ave., Milwaukee, Wis. (Waltham).

Electric Vehicle & Supply Co.—621 Grand Ave., Milwaukee, Wis. Mfrs. storage batteries and charging apparatus.

Electric Vehicle Co.—502 N. Broad St., Philadelphia, Pa. (Columbia.) Garage.

Electric Vehicle Co.—1 Laurel St., Hartford, Conn. Maker of the Columbia car, first marketed, 1897. Thirty-six models made since. Cap. \$20,000,000. Walter G. Henderson, Pres.; J. B. Entz, 1st Vice-Pres. and Designer; H. W. Kyte, 2nd Vice-Pres. and Sales Mgr.; E. G. Steinmetz, Supt.; W. A. McAneeny, Purch Agt.; F. E. Dayton, Advt. Mgr.; A. J. M. Edwards, Mgr. New York Branch; F. W. Nichols, Supt. New York Repair Station; W. F. Fischer, Mgr. Chicago Branch. J. H. MacAlman, Mgr. Boston Branch.

Electric Vehicle Co.—134 W. 39th St., New York City. (Columbia.) Garage 621 W. 42nd St. Repairing.

Electric Vehicle Co.—1332 Michigan Ave., Chicago, Ill. (Columbia).

Electric Vehicle Equipment Co.—20th St. and Montgomery Ave., Philadelphia, Pa. Mfrs. electric controllers, motors and automobiles.

Electric Welding.—See Welding, Electric.

Electrode.—The conductor by which a current enters and leaves an electrolyte. The positive electrode is the "anode" and the negative the "cathode." See Electrolyte, Anode and Cathode.

Electrodynamics.—The laws in general which govern the mechanical action of currents between themselves. A current develops a magnetic field of which the circular lines of force surround the conductor in which it circulates. The direction of these lines of force is given by Maxwell's law: "The direction of the lines of force is that in which a corkscrew must turn in order to move in the direction of the current. (Fig. 1.)"

Fig. 1.

Fig. 2.

The field of a current is of the same nature as that of a magnet and has all its properties. The phenomena of attraction and repulsion are governed by Ampere's laws: "(1) Two parallel currents of the same direction attract each other; and, if of contrary direction, repel one another; (2) two currents forming an angle with each other attract each other and tend to place themselves parallel with each other when both recede from or approach the apex of the angle; (3) two rectilinear and parallel currents act upon each other with a force proportional to the product of their intensities by their lengths, divided by the square of their distance."

The mutual action of the circular and parallel currents of a solenoid (Fig. 2) modifies the field of each of them, so as to give a resultant field such as shown in the figure. A solenoid is therefore assimilable to a magnet. Its poles can be found by applying Maxwell's law.

Electro-Industrielle, Société Anonyme.—40 rue du Chemin-Vert, Paris, France. Mfrs. spark plugs.

Electrolysis.—The chemical decomposition of a body under the action of a current. The operation is usually performed upon a solution of the body to be decomposed called an "electrolyte."

The positive and negative conductors carrying the current are called respec-

tively the "anode" and "cathode." The liberated bodies or "ions" are "anions" at the anode, and "cations" at the cathode. The weight of electrolyte decomposed by the current is proportional to the quantity of electricity absorbed. The weights of anions and of cations set free are chemically equivalent.

Electrolyte.—A liquid having the property of conducting electricity by means of electrolysis, or the splitting up of its molecules into separate atoms or groups of atoms termed "ions." The ions themselves carry charges of electricity, and travel with a small but definite velocity through the liquid. See Ion.

Electro-magnet.—An apparatus consisting essentially of a coil wound around an iron core. The field due to the coil induces in the core a much greater flux than it would induce in the air, because of the great permeability of iron. When the current is shut off the greater part of the magnetism of the core vanishes. The residual magnetism or remanent magnetization depends on the nature of the core. It is minimum in soft iron and maximum in hard steel. A core of this last metal, magnetized by the passage of a current retains a notable proportion of its magnetism and constitutes a permanent magnet.

Electro-magnetism.—The study of the mutual actions of currents and magnets. A current develops a magnetic field of which the circular lines of force surround the conductor in which it circulates. As the currents may be assimilated to magnets, the attraction or repulsion of the lines of force, of parallel or inverse direction permits of deducing therefrom, a priori, the laws of the mutual action of magnets and currents, which laws are verified by experiment. The first of these laws, relative to the action of a current upon a magnetized needle, was discovered by Oersted. The calculation of the attractive and repulsive forces in play serves as a basis of all measuring apparatus, such as galvanometers and derived instruments. Finally, a category of electro-magnetic phenomena discovered by Faraday (the phenomena of electro-magnetic induction) forms the starting-point of all the industrial applications of electricity.

Electro-metallurgy.—Metallurgical processes carried on either by the heat of the electric furnace, or by the chemical action of an electric current. Aluminum and much of the pure copper used for electrical purposes is prepared in this way.

Electrometer.—An apparatus for measuring the difference of potential, and based upon electrostatic action. Other apparatus for the same purpose are: Gal-

vanometers, for electromagnetic action;

electrodynamometers, for electrodynamic action; thermic voltmeters, for thermic action. Electrometers consist essentially of fixed quadrants between which moves an armature. The quadrants and the armature are put in communication with the conductors of which it is a question of measuring the difference of

potential. The static charges of electricity which the quadrants and armature take exert between them an equivalent antagonistic effort, from which the difference of potential sought may be deduced.

The figure shows one of Lord Kelvin's direct-reading electrometers or electrostatic voltmeters adapted for measuring electromotive forces of from 40 to 800 volts. It is especially employed for alternating currents. It is formed of a series of superposed quadrants, *a*, between which moves a series of paddle-shaped needles; *b*, suspended at *c* by a wire that transmits the torsion effort and the current. The oscillations are absorbed by a disk, *d*, fixed to the movable portion and immersed in a liquid.

Electromobile.—A term used as a designation for an automobile driven by an electric motor. Electromobiles are divided into two classes: (1) accumulator vehicles, and (2) gasoline-electric vehicles (*a*, mixed; *b*, with electric transmission). The accumulator-vehicles are the most widely distributed and generally comprise a battery of 44 elements capable of being charged on a

110-volt circuit. Their motors are consequently supplied with about 88 volts. The modern cars are all provided with two motors or with one motor with two collectors.

Such an arrangement permits of regulating the speed by the coupling of the motors in series or in parallel, with or without resistance, without touching the battery. The old method of coupling the elements had the very serious disadvantage of causing them to work integrally. The motors are almost always of the series type, but sometimes of the compound type. The changes of coupling are effected by means of a controller (see Controller).

Fig. 1.

Fig. 2.

The drive is always through gearings.

Fig. 3.

The arrangements employed vary according as the carriage comprises two motors or one motor with two collectors. In the first case the differential is eliminated and each wheel, front and rear, is actuated by a motor. The suspension of the latter is always elastic (Fig. 1). In the second case chain drive is adopted (Fig. 2), or else the differential is controlled either by spur pinions (the motor being elastically mounted on the axle), or by bevel pinions and propeller shaft, the motor being fixed to the frame (Fig. 3). The arrangement shown in Fig. 3 is a rational one from several viewpoints. The motor is in a better place and better suspended than when attached to an axle, and the gearings run in the oil of the gear cases, a fact not always the case in other arrangements. The Milde arrangement, comprising a motor suspended from the rear axle, with a single inductor and two separate armatures actuating individually one driving-wheel is interesting and possesses the great advantage of doing away with the differential.

Electromobile Co., Ltd.—7 Curzon St., Mayfair, London W., England. Mfrs. electric automobiles (Electromobile cars).

Electromotive Force.—That which tends to cause the motion or flow of electricity. It is frequently termed "electric pressure," or simply "pressure" by electrical engineers.

Electron.—A term for the infinitely small particles of which bodies are composed, used in the recent theories as to matter and electric energy. A body in a neutral state is supposed to be formed of positive and negative "electrons" in equilibrium. Under the influence of external energies, the negative electrons detach themselves in order to communicate a negative charge to adjacent bodies, the body primitively neutral remaining charged positively. Universal attraction and chemical affinity are supposedly forms of electric action.

Electrostatics.—See Electricity.

Electrum.—An alloy of copper, zinc and nickel.

Elektrotechnischefabrik Lutz.—Hornergasse 12, Zürich, Switzerland. Mfrs. low tension magnetos.

Elevator Supply & Repair Co.—76 W. Monroe St., Chicago, Ill. Mfrs. lubricators.

Elgin Hardware Co.—Elgin, Ill. (Cartercar.)

Elliott-Blair Steel Co.—Taylor and Mercer Sts., New Castle, Pa. Mfrs. steel.

Elite Mfg. Co.—Ashland, O. Supplies. **Elizabeth Motor & Cycle Co.**—16 Julian Pl., Elizabeth, N. J. (Indian.)

Elizabeth Motor Car Co.—14 Westfield Ave., Elizabeth, N. J. (Maxwell, Rambler).

Elkhart Brass Mfg. Co.—Prospect St., Elkhart, Ind. Mfrs. primary batteries, brass, bronze, aluminum and copper castings, oil guns.

Elkhart Garage Co.—Elkhart, Ind. (White, Maxwell, Mitchell).

Ellas, Charles A.—Bath, N. Y. Garage.

Ellenberger, A. W.—Pres. Hydraulic Pressed Steel Co., E. 61st St., Cleveland, Ohio.

Ellerd Bros.—Plainview, Tex. (Acme).

Ellerd, J. J.—Vice-Pres. and Gen. Mgr. Union Automobile & Supply Co., Plainview, Tex.

Ellerd, Reuben M.—Pres. Union Automobile & Supply Co., Plainview, Tex.

Ellett, F. O.—Foreman Tool Dept., Eclipse Machine Co., Elmira, N. Y.

Elliot & Coleman.—339 Bush St., San Francisco, Cal. (American).

Elliott & Co., W. J.—185 Franklin St., Boston, Mass. Mfrs. tire irons.

Elliott, Allmand B.—Vice-Pres. and Elec. Engineer Witherbee Igniter Co., 541 W. 43rd St., New York City.

Elliott Bros.—Century Works, Lewisham, England. Mfrs. speed indicators.

Elliott, H. C.—Sec. Eco Mfg. Co., 53 State St., Boston, Mass.

Elliott, Richard P.—Pres. and Gen. Mgr. Eco Mfg. Co., 53 State St., Boston, Mass.

Elliptic Spring.—See Spring, Elliptic.

Ellis & Co., Jesse.—Maidstone, Kent, England. Mfrs. steam commercial automobiles.

Ellis & Edwards.—Rochester, Minn. Garage.

Ellis, Fred.—Methuen St., Lawrence, Mass. (Pope-Hartford).

Ellis, J. C.—210 Saginaw Ave., Flint, Mich. Garage.

Ellis Motor Car Co.—222 Halsey St., Newark, N. J. (Pierce-Arrow).

Ellisville Auto Co.—Ellisville, Ill. (Waltham).

Ellsworth & Thayer Mfg. Co.—Milwaukee, Wis. Mfrs. miscellaneous wearing apparel, gloves and gauntlets.

Ellsworth, F. V. P.—Hot Springs, Ark. (Waltham).

Ellsworth, J. M.—518 W. 22nd St., New York City. Mfrs. alloy steel automobile products.

Elm City Brass Co.—New Haven, Conn. Mfrs. brass, bronze, aluminum and copper castings.

Elmer Auto Co.—Hartford, Conn. (Ford, Rambler).

Elmira Automobile Club.—F. H. Richardson, Pres., Elmira, N. Y.

Elmore Auto Co.—1851 Broadway, New York City. (Elmore).

Elmore Mfg. Co.—Clyde, O. Makers of the Elmore car, first marketed, 1900. Fourteen models made since. H. V. Becker, Pres.; J. H. Becker, Sec.; B. A. Becker, Treas. Agents and dealers: Adams & Hart, 49 N. Division St., Grand Rapids, Mich. Atwood Automobile Co., 2815 Monroe St., Toledo, O. Berwin Auto Co., Allentown, Pa. Butts, A. M., Oneonta, N. Y. Murphy, A. H., Erie, Pa.

Elmore Motor Car Co.—1228 S. Figueroa St., Los Angeles, Cal. (Elmore).

Elmwood Garage.—189 Cleveland Ave., Buffalo, N. Y. Garage.

Elongation.—The amplitude of the angle described by a measuring apparatus which starts from zero and ends at a maximum value. This word is employed especially with galvanometers where the value of the elongation shows exactly the value of the current passing in the galvanometer.

Elongation of Metals.—When a bar of metal is submitted to efforts of traction,

it either breaks (the effort exceeding the limit of elasticity of the metal), or elongates to a greater or less extent. Such elongation is proportional to its length and to the load that it supports, and is inversely proportional to its straight section. Tool steel, when hardened and drawn to straw color elongates but very slightly; aluminum has almost no elongation; cast iron elongates but very slightly; wrought iron elongates enormously; Bessemer steel of good quality shows a fairly good elongation, thirty-point carbon steel of good quality shows up fairly well; nickel steel in the normal state gives a good test. Chrome nickel steel of good quality in the normal state gives a good test; and chrome nickel steel of good quality in the normal state elongates considerably.

El Paso Foundry & Machine Co.—El Paso, Tex. (Cadillac).

Elsass Elektrizitätswerke, Otto Schulze.—10 bis rue de l'Arcen-Ciel, Strassbourg (Elsass), Germany. Mfrs. speed indicators.

Elton Automobile Co.—156 E. Main St., Waterbury, Conn. (Reo, Rambler).

Elvey, Frank O.—Douglas, Ariz. (Cadillac).

Elwell Parker Electric Co.—1076 Hamilton St., Cleveland, O. Mfrs. electric controllers and motors.

Elwood, Kinner.—Gen. Mgr. Ohio Valley Auto Co., 3 Main St., Greenup, Ky.

Elyria Automobile Club.—H. N. Address, Sec., Elyria, O.

Elyria Machine Parts Co., The.—Elyria, O. Mfrs. brass, bronze, aluminum and copper castings, screw machine products and steering apparatus. Selling agts., The American Distributing Co., Cleveland, O.

Embley & Co., W. W.—614 Main St., Asbury Park, N. J. Garage.

Embree Co., W. F.—McGarry Bldg., Union and Washington Sts., Lynn, Mass. Garage.

Emeny Co., G. J.—Hubbard St., Fulton, N. Y. Garage.

Emergency-brake.—See Brake. Emergency.

Emergency Spring Repairer Co.—80 Broad St., New York City. Mfrs. spring repairers.

Emergency Wheel & Novelty Co.—Port Huron, Mich. Mfrs. gasoline tank gauges.

Emerson, F. M.—118 William St., Manchester, N. H. Garage.

Emery.—A variety of "corundum" much used as an abrading agent. It is found in many places, especially on the Island of Naxos, at Cape Emeri; whence it is exported in large quantities. The mineral is crushed, brayed, and brought by levigation to the state of powder. In

commerce the fineness of emery is designated by numbers, running from 1 to 120. No. 120 is nearly impalpable.

Emery is used for the polishing of metals, glass, etc. In automobilism it is used for polishing the surface of motor valves and grinding them in their seats. See *Corundum*.

Emery-buff.—See *Emery-wheel*.

Emery-cloth.—Powdered emery attached to cotton cloth by glue. It is used for finishing metal surfaces.

Emery-paper.—Powdered emery attached to paper by glue.

Emery-wheel.—A wheel consisting of powdered emery made up into a solid mass, with some kind of cement, and used for grinding metal surfaces and sharpening tools. Wheels made of the finest emery are used for polishing and are termed "emery-buffs."

Emery Bros.—Kennebunkport, Me. Repairing.

Emery, E. H.—Mgr. Iowa Auto Co., Ottumwa, Ia.

Emery, John A.—Treas. Boston Steam Specialty Co., 170 Congress St., Boston, Mass.

Emery Mfg. Co.—Bradford, Pa. Mfrs. grease, oil.

Emmert Mfg. Co.—Waynesboro, Pa. Mfrs. gray iron castings; vises.

Emmetsburg Auto & Gas Engine Co.—Emmetsburg, Ia. (Jackson).

Emmons Co., E. Gerry.—Swampscott, Mass. Mfrs. motor boats.

Emond, J. P. & W. H.—474 Parker St., Boston, Mass. Mfrs. wood and metallic bodies.

Empire Auto Co.—Greenwich, Conn. (Maxwell).

Empire Automobile Tire Co.—Trenton, N. J. Mfrs. tire cases, tire pumps, tire irons, patches, repair kits, inner tubes and pneumatic tires. Branches: 292 Devonshire St., Boston, Mass.; 20 La Salle St., Chicago, Ill.; 1615 Wabash Ave., Chicago, Ill.; 148 Chambers St., and 2230 Broadway, New York City.

Empire Depth Gauge Co.—120 Liberty St., New York City. Mfrs. gauges.

Empire Garage.—97 North St., Middletown, N. Y. (Cadillac).

Empire Gear & Top Co.—413 N. 22nd St., Philadelphia, Pa. Mfrs. automobile covers, cushions, foot rests, robe rails, automobile seats and tops, glass wind shields.

Empire Mfg. Co.—Helena St., Birmingham, England. Mfrs. jacks, chains.

Empire Rubber Co.—115-117 Worth St., New York City. Mfrs. lamp covers.

Empire Rubber Mfg. Co.—Trenton, N. J. Mfrs. rubber mats, cloth and tubing.

Empire State Dry Battery Co.—70 Fulton St., New York City. Mfrs. primary and storage batteries.

Empire State Engineering Works.—555

E. 116th St., New York City. Mfrs. gasoline commercial automobiles.

Empire State Motor Car Co.—2148 Broadway, New York City. (Queen). Est. 1906. Cap. 100,000. Herman Raub, Pres.; Otto Trieb, Treas.; Leroy D. Ball, Sec.; William Arnold Malone, Supt. of Garage; Charles Coon, Head Mechanician. Garage, 250 cars. Repairing.

Empire State Tire Co.—Buffalo, N. Y. Mfrs. tire pumps, repair vulcanizers, jacks, pneumatic tires, non-skids.

Enamelling.—The operation of covering the surface of metals with non-metallic coatings similar in aspect to varnish.

The following kinds are distinguished: (1) Vitrified enamelling, which consists in covering, at a red heat, the surface of a metal (most usually cast-iron) with a coat of vitrifiable materials, somewhat analogous to glass; (2) varnish enamelling, consisting in covering the metal at moderate temperatures with a varnish having more or less color. This is the process used for enamelling the tubes of bicycles and the chassis of motor-cars, and also the bodies of carriages, etc. The material can be applied cold, or each coat be hardened in an oven before the next is applied. The base of this class of enamels is resin, amber, or asphalt, dissolved in turpentine or boiled oil.

Enders, August.—Oberhamed bei Ludenscherd, Westphalia, Germany. Mfr. chains.

Endothermics.—Bodies of which the decomposition absorbs a certain quantity of heat. This is the case with the majority of compound bodies, which disengage a certain number of heat units at the moment of their formation and which must be restored to them when the decomposition is effected by heat. For example, the formation of sulphide of iron disengages a certain quantity of heat, which will have to be absorbed, without a rise of temperature, in the roasting or decomposition of the sulphide by heat.

End-thrust.—See *Thrust, End*.

Eneas, A. G.—50 Congress St., Boston, Mass. Mfr. aprons and storm curtains.

Energy.—The equivalent of work done, and work stored up in one form or another. Energy is, therefore, capacity for doing work. "Potential energy" is the capacity for doing work which a body possesses in consequence of its position or condition. "Kinetic energy" (energy of motion) is the capacity for doing work which a body possesses in consequence of its mass and velocity, and is measured by its mass multiplied by its velocity squared, or rather by the amount of work which has been done to impart its velocity to its mass.

Energy, Transformation of.—Energy, the cause of every phenomenon, is, at the same time, the effect of such phenomenon. The principle of the conservation of energy shows us that the energy of a system is an invariable quantity which can neither be increased nor diminished.

We expend, then, a certain energy under a given form, only to find it again under another form. This is what is termed "transformation of energy." Energy is exhibited in the following forms: (1), thermic energy; (2) mechanical energy; (3), chemical energy; (4), electric energy.

Whatever be its form, it always possesses a mechanical equivalent, and is therefore homogeneous with a work.

Thermic energy is transformed: (1), into "chemical energy" in the various chemical combinations which are endothermic, i. e., which are formed with absorption of heat; (2), into "mechanical energy" in thermic steam, gas or gasolene, and hot air engines, the starting point of which is the transformation of calorific energy according to the methods peculiar to each type of motor in the phenomena of change of physical state; (3), into "electric energy" in thermic batteries (thermo-electricity), which utilize the differences in temperature between two junctions for producing differences in potential of the points considered.

"Chemical energy" can be transformed: (1), into "electric energy" in batteries, in which the chemical energy of the various bodies brought into the presence give rise to electric energy; (2), into "mechanical energy" in the various phenomena of slow or rapid dissociation of bodies; (3), into "thermic energy" in the combinations which are formed with the introduction of heat, and which are called exothermic combinations.

"Mechanical energy" is transformed: (1), into "chemical energy" in certain combinations produced, for example, by the compression of gases. In most cases mechanical energy is transformed into chemical energy only through the intermedium of thermic or electric energy; (2), into "thermic energy" in shocks, friction, slidings, etc., and in the phenomena of compression or expansion of gases. The friction of shafts in their bearings, in transmissions, absorbs mechanical energy and transforms it into thermic energy, which is shown by the rise in temperature of the parts in contact; (3), into "electric energy" in generators of electricity, as magneto-electric, dynamo-electric and electro-static machines, whatever the form of electric energy considered.

"Electric energy" is transformed: (1), into "chemical energy" in the phenomena of electrolytic or electrothermic chemistry; (2), into "mechanical energy" in electro-motors, electro-magnets and all their applications (control of apparatus at a distance, telegraphy and transmission of vibrations in telephony); (3), into "thermic energy" for the production of electric light and electric soldering, for the production of the high temperatures used in electrothermics, and the heating of conductors.

All the forms of energy may present themselves in the most diverse forms and the same transformation may give rise to many forms of energy. Thus, the transformation of mechanical into electric energy in dynamo-electric machines gives rise, along with electric energy, to thermic energy by the friction of revolving parts, the heating of conductors, the phenomena of hysteresis, and Foucault currents. These are the productions of energy under thermic form that reduce the efficiency of such transformation of energy, taken only from the viewpoint of the production of electric energy. But all the energy brought in play is found again in some form or another, according to the immutable principle of the conservatism of energy enunciated in various forms by Lavoisier, Rumfort, Meyer and others.

Enfield Autocar Co.—Redditch, England. Mfrs. gasolene automobiles (Enfield cars).

Enfield Cycle Co.—Redditch, England. Mfrs. motorcycles.

Engel, Louis, Jr.—437 Pearl St., Buffalo, N. Y. (Cartecar).

Englebert fils et Cie., O.—29 rue des Vennes, Liège, Belgium. Mfrs. non-skids, solid tires and pneumatic tires.

Engelhard, F.—Treas. Hercules Float Works, 200 Franklin St., Springfield, Mass.

Engelhard, F. H.—Sec. Hercules Float Works, 200 Franklin St., Springfield, Mass.

Engelhard, W. A.—Gen. Supt. Hercules Float Works, 200 Franklin St., Springfield, Mass.

Engelmann, Paul.—Delitzscherstrasse 15, Leipzig-Eutritzsch, Germany. Mfr. springs.

Engine.—A piece of mechanism used to convert heat, or some other form of energy into mechanical work; in other words, a machine for the development of power from some source of energy, such as coal, gas, oil, etc. See Motor.

Engine, Compound.—A steam-engine in which steam is partly expanded in one cylinder and then allowed to enter a second, or low-pressure, cylinder, in which it is further expanded.

Engine, Diesel.—See Cycle, Diesel.

Engine, Explosion.—Same as internal combustion motor.

Engine, Gas.—An internal combustion engine in which the fuel used is hydrocarbon gas.

Engine, Gasolene.—An internal combustion engine in which the fuel used is an inflammable vapor formed by a mixture of gasolene and air.

Engine, Naphtha.—See Motor, Naphtha.

Engine, Rotary.—An engine in which the chief moving parts have a rotary instead of reciprocating motion.

Engine, Steam.—See Steam-engine.

Engineer, The.—Pub. at London, England.

Engineer, The.—355 Dearborn St., Chicago, Ill. Pub. by Taylor Pub. Co., s. m.

Engineering.—Pub. at London, England.

Engineering Record, The.—239 W. 39th St., New York City. McGraw Pub. Co., weekly.

Engineering Specialty Co., Inc.—143 Liberty St., New York City. Mfrs. electric generators, magnetos and ignition dynamos, charging apparatus.

Engineers' Review.—Cleveland, O. The Engineers' Review Co., pubs., m.

England, G. W.—2210 Brooklyn Ave., Kansas City, Mo. (Dolson).

Engle, A.—1103 Carson St., Pittsburg, Pa. Garage.

Englewood Auto Livery.—639 W. 63rd St., Chicago, Ill. Garage.

Engley, W. A.—Treas. Attleboro Automobile Co., 74 Union St., Attleboro, Mass.

English & Mersick Co.—New Haven, Conn. Mfrs. watch holders, lamps, name plates, top fixtures, metal trimmings.

Englund, J. A.—Kenmare. N. D. (Buick).

Ennes, J. M.—Princeton, Ill. Garage and repairing.

Ennis & Gavin.—14 Martin Ave., White Plains, N. Y. (Reo).

Ennis Geo. H.—215 Currier Bldg., Los Angeles, Cal. (Moon.)

Enos & Titterington.—Jerseyville, Ill. (Holsman).

Enrico, Sig.—Engineer and Designer, with Sig. Fornaca, of the Fiat Automobile Co., Turin, Italy.

Enterprise Foundry Co.—Detroit, Mich. Mfrs. brass, bronze, copper, aluminum and gray iron castings.

Enterprise Garage.—316-20 Washington St., Easton, Pa. Garage.

Enterprise Machine Works.—Cor. Park St. and Valley Ave., Spring Valley, Minn. (Reo).

Enterprise Machine Works.—308 N. 5th St., Richmond, Va. Mfrs. braziers.

Enterprise Rubber Co.—110 Federal

St., Boston, Mass. Mfrs. tire patches, tire plugs, miscellaneous wearing apparel.

Entrained.—A term applied to water that has been carried along with steam into the cylinder. See Priming.

Entrepôt Général d'Automobiles.—211 bdv. Pereire, Paris, France. Mfrs. automobile motors.

Entropy.—That property of a body which remains constant when there is no communication of heat, but which increases when heat enters and diminishes when it leaves the body. It is sometimes called the "thermodynamic function." The term has been erroneously used with the meaning of available energy.

Entz, Justus Buckley.—1st Vice-Pres. Electric Vehicle Co., Hartford, Conn. B.

New York June 16, 1867. Ed. private and public schools. College of City of New York. Mem. Germantown Cricket Club, Philadelphia, Huntingdon Valley Country Club, Philadelphia, Hartford A. C. Res. 869 Farm-

ington Ave., Hartford. In trade since 1897.

Eperson, F.—114 N. 11th St., La Crosse, Wis. (Pope-Waverley.)

Epicyclic Gear.—See Gear, Epicyclic.

Epicycloid.—A curve generated by any point of a circumference rolling without sliding upon another circumference, externally or internally.

Eppelman, Geo. C.—Altoona Motor Car Co., 78 Green Ave., Altoona, Pa.

Equalizer.—A device for rendering uniform the pull on two levers, as on the hub-brakes of an automobile. It consists of a floating bar at each end of which is attached a cable or rod connecting with the hub-brake, and, in the cen-

ter, to the pull-rod from the hand-lever or brake-pedal. A pull on the rod will equalize that on each hub-brake. Another form has a tube connected at one end to the hub-brake, and to a rocker at the other. There is one tube to each side. A pull-rod is provided with a grooved roller over which passes a cable, each end going to the rocker at the end of the above-mentioned tube. A pull on the rod equalizes that on the tubes

through the intermedium of the cable running in the grooved pulley. The tubes

and bar may be dispensed with if the cables to the hub-brakes run over suitable rollers or grooves. Equalizing the pull on the brakes tends to prevent side-slip, etc.

Equilibration.—Same as balancing, q. v.

Equilibrium.—The condition of two or more forces which, when acting together on a body, produce no motion. "Neutral equilibrium" is the condition of a body when in equilibrium which is neither stable nor unstable.

Erb, John.—345 Bridge St., Phoenixville, Pa. Garage.

Erd Motor Co.—Saginaw, Mich. Mfrs. gasoline and marine motors.

Erg.—The C. G. S. unit of work. It is the amount of work done when a force of one dyne is overcome through a distance of one centimetre. Its synonym is the "dyne-centimetre."

As the "erg" is a very small quantity, the "megerg" (1,000,000 ergs) is most often employed. In practice the "kilogrammetre" (kgm.) is used.

The "erg per second" is the C. G. S. unit of power. It is the power produced by one dyne acting through a distance of 1 cm. in 1 second. The megerg per second is equal to 1,000,000 ergs per second.

Ericka Mfg. Co., Inc.—Springfield, Mass. Mfrs. hand soaps.

Erickson, Louis.—1520 Belmont Ave., Seattle, Wash. (Dragon.)

Erie Forge Co.—Erie, Pa. Mfrs. connecting rods, crank shafts.

Erie Foundry Co.—Erie, Pa. Mfrs. gray iron castings.

Erie Motor Club.—W. O. Davis, Sec., Erie, Pa.

Erie Stamping & Mfg. Co.—646 W. 12th St., Erie, Pa. Mfrs. oil and grease cups. Cap. \$50,000. Est. 1903. Alfred Thompson, Pres.; Arthur Thompson, Vice-Pres.; W. H. F. Nick, Sec. and Treas.

Erlin, Geo. E.—Vice-Pres. Reliance Automobile Co., 547-57 Fulton St., San Francisco, Cal.

Ernesto Ciocca del fu Giacinto.—22 via Parma, Turin, Italy. Mfrs. bodies.

Ernst's Sons, C. F.—75 Lathrop St., Buffalo, N. Y. Mfrs. turntables.

Erskine & Hall.—S. Orange, N. J. (Rambler).

Erste Amsterdamsche Bandenfabriek, W. de Koff.—3 Helmerstraat 25, Amsterdam, Holland. Mfrs. pneumatic tires.

Escalante é Hijo.—E. Calle 63 No.,

Merida, Yucatan, Mex. (Ford, Maxwell).

Escanaba Cycle Works.—1011 and 602 Ludington St., Escanaba, Mich. (Rambler).

Eschinger, E. A.—715 E. 13th St., N. W., Washington, D. C. Repairing.

Español-Suiza, Sociedad Anonima.—54 calle Florida blanca, Barcelona, Spain. Mfrs. gasoline automobiles (Birkigt cars); marine and automobile motors.

Essex Auto Co.—518 Broad St., Newark, N. J. (Jackson).

Essex Automobile Co.—Oxford Garage, 197 Broad St., Lynn, Mass. (Ford).

Essex Brass Co., G. B.—480-6 Franklin St., Detroit, Mich. Mfrs. lubricators, grease pumps and oil syringe. Cap. \$45,000. Est. 1901. G. Bert Essex, Pres., Treas. and Mgr. Mfg. Dept.; L. E. Essex, Vice-Pres.; R. T. Gray, Sec. Agents: Auto Supply Co., Chicago, Ill.; Chanslor & Lyon Motor Supply Co., Los Angeles, Cal.; Chas. E. Miller, New York City; Neustadt Auto & Supply Co., St. Louis, Mo.

Essex Engine Co.—416 Union St., Lynn, Mass. Mfrs. marine gasoline engines. W. J. Young, Treas. and Gen. Mgr. Agents: Burns Motor Exchange, Jersey City, N. J.; J. King & Co., 119-125 Three Colt St., Limehouse E., London, England.

Essex, G. Bert.—Pres., Treas. and Mgr. Mfg. Dept. G. B. Essex Brass Co., 480-86 Franklin St., Detroit, Mich.

Essex, L. E.—Vice-Pres. G. B. Essex Brass Co., 480-86 Franklin St., Detroit, Mich.

Essex Motor Car Co.—60 State St., Boston, Mass. Mfrs. steam automobiles.

Esswein, Sam. A.—24 W. Broad St., Columbus, O. Garage.

Etablie Frères et Louis Etablie.—13 quai Valmy, Paris, France. Mfrs. radiators.

Estep, Edwin Ralph.—Adv. Mgr. Packard Motor Car Co., Detroit. B. Rantoul, Ill., Aug. 16, 1876; ed. High school. Mem. Chicago A. C. Office, Detroit, Mich. In trade since 1897.

Esterbrook, Ernest.—Mgr. Sporting Goods Dept., S. L. Crosby Co., 186 Exchange, Bangor, Me.

Estes, J. D.—Treas. W. R. Demster Mch. Co., N. W. cor. 16th and Walnut Sts., Kansas City, Mo.

Esty & Page.—Amherst, Mass. Dist. for Commonwealth Rubber Co., for New England, Pennsylvania, Indiana and Michigan.

Esty, Wm.—59 Mill St., Laconia, N. H. Mfr. steam engines.

Etablissements Peltier et Thuault.—7 ave de Robinson, Sceaux-Robinson, Seine, France. Mfrs. elastic wheels.

Ether, Sulphuric.—The ethers of alco-

hol are numerous (nitric, hydrochloric, acetic, etc.) "Sulphuric ether" is ethyl oxide ($C_2H_5)_2O$, obtained by the action of sulphuric acid on alcohol at $284-293^{\circ}F$, or $140-145^{\circ}C$.

Sulphuric ether is used in automobilism as an adjuvant in solutions of rubber. It has been proposed as a carburant for internal combustion motors. It has a calorific value of 8000. It can be used in winter for obtaining the preliminary "explosions" for starting. It boils at about $93^{\circ}F$, or $34^{\circ}C$.

Ethyl Alcohol.—See Alcohol.

Ettwine Motor Car Co.—5701 Main St., Kansas City, Mo. (Aerocar, Stoddard-Dayton, Welch).

Euclid Auto Exchange & Livery.—5017 Euclid Ave., Cleveland, O. Garage.

Euclid Garage.—10636 Euclid Ave., Cleveland, O. (Pungs-Finch, Compound).

Euclid Garage Co.—Euclid Ave., Upland, Cal. (Gale, Jackson).

Eudelin, M.—Joinville le-pont, Paris, France. Mfrs. gasoline automobiles (Eudelin cars).

Eureka Auto Agency.—2285 8th Ave., New York City. Garage.

Eureka Motor Co.—1409-11 Broadway, Seattle, Wash. (Dolson, American Mors).

Eureka Mower Co.—Utica, N. Y. Mfrs. jacks.

Eureka Nut Lock Co.—32nd and Smallman Sts., Pittsburgh, Pa. Mfrs. patent nut locks.

Eureka Pneumatic Spray Co.—92 Lafayette Ave., New York City. Mfrs. air compressors.

Eureka Spring Co.—347 Broadway, New York City. Mfrs. machinery springs.

Eureka Supply Co.—230 Broadway, Buffalo, N. Y. Supplies.

Eureka Tempered Copper Works.—Northeast, Pa. Mfrs. brass, bronze, aluminum and copper castings.

Eustace, E. J., Jr.—46 119th St., Whiting, Ind. Repairing.

Eustia, J. R.—Adv. Mgr. Palmer & Singer Mfg. Co., 1620-24 Broadway, New York City.

Euston Motor Co., Ltd.—124 Euston Road, London, England. Mfrs. gasoline automobiles (Courier cars).

Evans Automobile Co.—63 Fay St., Columbus, O. Garage.

Evans, C. C.—Pres. Evans Motor Car Co., Minneapolis, Minn.

Evans, C. W.—Dixon, Ill. (Northern).

Evans, Ellicott.—Sec. E. R. Thomas Motor Co., 1200 Niagara St., Buffalo, N. Y.

Evans, Fred. F.—Pres. Puget Sound Auto Co., 1405-7 Broadway, Seattle, Wash.

Evans, F. T.—136 S. Pittsburg St., Conellsville, Pa. (Rambler).

Evans, M. E. H. O.—Head Draughtsman J. E. Lonergan & Co., 211-15 Race St., Philadelphia, Pa.

Evans, H. O.—Mech. Eng. and Head Draughtsman J. E. Lonergan & Co., 211-215 Race St., Philadelphia, Pa.

Evans, J. P.—Sec. MacFarland Powell Auto Co., Denver, Colo.

Evans Mfg. Co.—118 N. Brookline St., Boston, Mass. Mfrs. bow separators, top fixtures.

Evans Motor Car Co.—522 S. 10th St., Minneapolis, Minn. (Jewell, Wayne, Mitchell). Cap. \$50,000. Inc. C. C. Evans, Pres. and Treas.

Evans, O. J.—Foreman W. H. & L. C. Wolfe, 1011 Chestnut Ave., Altoona, Pa.

Evansville Automobile Co.—Evansville, Ind. Makers of the Simplicity car. J. C. Zutt, Pres.; A. F. Karges, Vice-Pres.; W. M. Copeland, Sec. and Treas. Agents and dealers: Fitch Auto Co., 410 S. Main St., Los Angeles, Cal. Pitman Nelson Auto Co., Berkeley, Cal.

Evansville Battery & Electrical Co.—Evansville, Ind. Mfrs. storage batteries, gasoline automobiles.

Evaporation.—The process by which a liquid changes into a gas or vapor. Evaporation takes place slowly in the open air, owing chiefly to atmospheric pressure. If the pressure be partially removed, it will occur instantaneously, like the flash of gunpowder, especially if the liquid is very volatile. The principal causes which influence the amount and rapidity of evaporation are: Pressure, increased surface, increased temperature diminished quantity of vapor in the air, and renewal or circulation of the air over the fluid.

Evarts, Chas. O.—Pres. Puncture Proof Tire Co., Schofield Bldg., Cleveland, O.

Eveland, Frank.—Automobile dealer. B. Newark, N. J., March 14, 1860. Mgr. A. G. Spalding & Bros., New York and Philadelphia. V. Pres. N. Y. Auto Trade Association. Mem. A. C. A. V. Pres. Jersey City A. C. Res. 220 W. 49th St., New York. Office 29 W. 42nd St., New York. In trade since 1898.

Eveland, Winsor F.—Mgr. A. G. Spalding & Bros., branch, 336 N. Broad St., Philadelphia, Pa.

Eveno, A.—22 ave. de Neuilly, Neuilly, Paris, France. Mfr. carburettors.

Everest, J. H.—Lee Bldg., Oklahoma City, Okla. Garage.

Everett Automobile Co.—148 N. Ionia St., Grand Rapids, Mich. (Gale).

Everett, B. F.—Detroit, Mich. Mfr. dashes and fenders, automobile tops, cloth and carpet trimmings.

Everhart, H. C.—Taylorsville, N. C. (Maxwell).

Everitt, B. F.—Pres., Gen. Mgr. and Director Wayne Automobile Co., Piquette and Brush Sts., Detroit, Mich.

Eves, J.—Millville, Pa. (Cadillac.)

Excelsior Auto Co.—133 W. 32nd St., New York City. Garage.

Excelsior Auto Repair Station.—3925 Michigan Ave., Chicago, Ill. Garage.

Excelsior Carriage Co.—Main St., White River Junction, Vt. (Cadillac, Buick, Stanley). Jobbers and dealers in automobile supplies. Est. 1889. Cap. \$50,000. Geo. B. Massey, Pres.; H. R. Miller, Vice-Pres.; John M. Carpenter, Sec. and Treas. Garage 10 to 15 cars. Repairing.

Excelsior Fahrradwerke Actien Gesellschaft.—Brandenburg, Germany. Mfrs. motorcycles.

Excelsior Motor & Mfg. Co.—233-237 Randolph St., Chicago, Ill. Auto-cycle.

Excelsior Poultry & Provision Co.—69 Franktown Ave., Pittsburg, Pa. (Walsham).

Excelsior Spark Plug Co.—Cleveland, O. Mfrs. spark plugs.

Excelsior Steel Ball Co.—Military Rd., Buffalo, N. Y. Supplies.

Excelsior Supply Co.—233-7 Randolph St., Chicago, Ill. Supply house.

Excitation.—The magnetizing of the field magnets of a dynamo or motor by the passage of a current through the coils of wire on the limbs or cores of the magnets. The current is obtained either from the machine itself in self-exciting dynamos or is supplied from a separate source in separately excited dynamos.

Exhaust.—The period in which the burnt gases are discharged from the cylinder of an internal combustion motor, the fourth stroke of a four-cycle motor. To eliminate the noise of this discharge it is carried to a muffler *q. v.* The exhaust-ports should be sufficiently large to avoid any possible back-pressure. (2) The burned gases or expanded steam discharged from an engine after performing their work in the cylinder.

Exhaust-box.—The same as Mufflers, *q. v.*

Exhaust-pipe.—See Pipe, Exhaust.

Exhaust-stroke.—In a gasoline motor, the stroke during which the discharge of burned gases takes place.

Exhaust-valve.—See Valve, Exhaust.

Exothermic.—A term applied to compounds in the formation of which, from their elements, heat is evolved.

Expander.—A tapering tool employed for expanding tubes.

Expanding Brake.—See Brake, Expanding.

Expanding Clutch.—See Clutch, Expanding.

Expanding Metal.—Alloys of bismuth, which have the property of expanding on solidifying. See Bismuth.

Expanding Pulley.—See Pulley, Expanding.

Expansion.—The expansion of a gas or vapor is the diminution in pressure accompanying its increase in volume. The consideration of expansion is of prime importance in the study of thermic motors, such as steam-engines, internal combustion-motors, etc. Up to a certain limit the increase of expansion is a cause of increase of efficiency.

In steam-engines, the calorific efficiency is, in fact, defined by the formula

$$\text{of the Carnot cycle, viz.: } R = \frac{T_1 - T_2}{273 + T_1}$$

The value of *R* is so much greater in proportion as the difference *T*₁*T*₂ between the temperatures of the steam at the entrance into and exit from the engine is greater. It is possible to increase such difference by diminishing *T*₂ or increasing *T*₁. Now, *T*₂, the temperature of the condenser, is scarcely capable of diminution. It is therefore necessary to augment *T*₁ by increasing the pressure and especially by superheating the steam employed; and, in order to utilize all the expansive force, to bring about a sufficient expansion to lower the final temperature in the cylinder to *T*₂ or thereabout. Practice has demonstrated, however, that the running of the engine is not so much the more economical in proportion as the pressure is higher and the expansion greater. The influence of dead and cooling spaces is the cause of this; and so, beyond a certain expansion, the consumption of steam increases. The use of engines with successive expansions in several cylinders permits of high pressures and great expansions, in reducing the difference between the initial and final temperatures in the same cylinders, and consequently the extent of the condensations at the admission. All things equal, moreover, the operation of such engines is more economical than that of single cylinder ones.

In internal combustion motors the expansion is generally sufficient to lower the pressure to a value bordering on that of the atmosphere. The efficiency will therefore be increased by the obtaining of a high initial temperature requiring a strong preliminary compression. Such preliminary compression, in fact, produces an increase of the temperature of the gases favoring the rapidity of ignition, which should be instantaneous, that is to say, under a constant volume, if it

is desired to obtain a maximum efficiency, and, on the other hand, increases the pressure and the temperature nearly proportionally, in the cycle of four-period operation, the expansion may be increased by diminishing the pressure of admission, which amounts to the same thing as diminishing the admission-stroke with respect to the expansion stroke, but without there resulting therefrom a lowering of the compression. This is essential. In the Diesel cycle the expansion is variable and may become considerable. It operates in a manner analogous to that of steam-engines. See Steam, Carnot and Diesel Cycles. Any increase in the dimensions of a body, particularly the increase in volume of steam or other gases in a cylinder after the admission of steam has ceased, or after the charge in a gasolene motor has been fired. The explosion in the latter is not instantaneous, but is practically continuous through the stroke. At the moment of ignition the pressure is greatest, but the gases formed expand under the influence of the heat until the exhaust-valve is opened, and expansion is continued in the muffler. Thus, a fairly large part of the force of the expansion is not utilized.

Expansion Gear.—See Gear, Expansion.

Expansion Joint.—See Joint, Expansion.

Expert-Bezançon.—17 rue du Chateau-des-Rentiers, Paris, France. Mfrs. storage batteries.

Explosion.—A generally accepted, but

erroneous term for the powerful expansion of heat in the cylinder of a gasolene motor following the quick combustion of the mixture of gas and air compressed therein. (2) The destruction of a boiler through the pressure of the steam becoming too high.

Explosion, Crank-case.—See Back-firing.

Explosion Engine.—Same as Internal Combustion Motor.

Explosion, Muffler.—See Back-fire.

Exponent.—A figure indicating the power to which a number is to be raised. This is written in small characters at the upper right hand of the number. Thus, $10^3 = 10 \times 10 \times 10 = 1000$, and $(45.3)^2 = 45.3 \times 45.3 = 2052.09$.

Express Fahrradwerke Actien Gesellschaft.—Neumarkt, Nürnberg, Germany. Mfrs. motorcycles, gasolene automobiles (Express cars).

Extra Current.—See Current, Extra.

Eye.—A hole in any mechanical device, such as a wheel, crank, hammer, etc., for the insertion of a shaft, pin, ring or handle.

Eyke, C. V.—Vice-Pres. and Sec. The W. R. Demster Machinery Co., 16th and Walnut Sts., Kansas City, Mo.

Eymard et Cie.—19 rue Copernic. Paris, France. Mfrs. pneumatic rubber tires.

Eyre & Co.—Grosvenor Gardens, St. Leonard, Sussex, England. Mfrs. non-skids.

Eysink, D. H.—Amersfoort, Holland. Mfr. gasolene automobiles.

Ezell Automobile Co.—Nashville, Tenn. Garage.

F

F.—Abbreviation of "farad" and "force."

Fe.—The symbol for "iron."

F. R. V. Auto Parts Co.—116 Nassau St., New York City. Shock absorbers.

Fabbrica Automobili Standard.—20 corso Siccardi, Turin, Italy. Mfrs. gasoline automobiles. (Standard cars.)

Fabbrica di Automobili Florentia.—Via Ponte al-l'Asse, Florence, Italy. Mfrs. gasoline automobiles and gasoline commercial vehicles. (Florentia cars); automobile motors.

Fabbrica Italiana Automobili di Torino.—35 corso Dante, Turin, Italy. Mfrs. gasoline and gasoline commercial automobiles and marine motors. (Fiat cars.)

Fabbrica ligure di Automobili di Genova.—2 piazzetta Corvetto, Genoa, Italy. Mfrs. gasoline automobiles, gasoline commercial vehicles. (F. L. A. G. cars); marine motors.

Fabbrica Riuniti di Carrozzeria, C. Castagna e Co.—19 via Montevideo, Milan, Italy. Mfrs. bodies.

Fabel, Aug.—First vice-pres. and treas. American Oak Leather Co., Kenner St. and Dalton Ave., Cincinnati, O.

Faber & Co., Wm.—Oshkosh, Wis. (Cartercar.)

Fabric.—The woven or interlaid threads commonly employed in the construction of pneumatic tires.

Fabrik Elektrischerapparate, Dr. Max Levy.—Chausseestrasse 2, Berlin, Germany. Mfrs. coils.

Fabrique de Moteurs Zedel, Société Anonyme.—Pontarlier (Doubs), France. Mfrs. automobile motors.

Fabrique Nationale d'Armes de Guerre.—Herstal-lez-Liege, Belgium. Mfrs. gasoline automobiles. (F. N. cars.)

Face.—The working surface of a gear-tooth beyond the pitch-line; the striking surface of a hammer; the edge of a cutting-tool, etc.

Face-mask.—A mask worn by automobilists for protecting the face and eyes from dust and wind.

Face-plate Coupling.—See Coupling. Face-plate.

Fagoting.—In forging, the consolidation, under a power hammer, of several bars of iron, hooped together and raised to a welding heat; a method of work adopted for the production of a very

fibrous iron of great tensile strength for the manufacture of spindles, shafts, and other parts of ordinary machinery.

Fahrig Metal Co.—316 Hudson St., New York City. Mfrs. babbitt metal.

Fahrzeug, Das.—Published at Eisenach, Germany.

Fahrzeugfabrik Eisenach.—Eisenach, Germany. Mfrs. gasoline commercial automobiles. (Dixi delivery wagons); gasoline automobiles. (Eisenach and Dixi cars.)

Fair Bros.—1908 7th Ave., Beaver Falls, Pa. (Jackson.)

Fairbank, Dexter.—Sec. and treas. Casady Fairbank Mfg. Co., 6106-30 La Salle St., Chicago, Ill.

Fairbanks-Grant Mfg. Co.—Ithaca, N. Y. Mfrs. gasoline automobile and marine motors; motor boats; garage.

Fairbanks, Morse & Co.—Franklin and Monroe Sts., Chicago, Ill. Mfrs. Fairbanks-Morse motor boats, first marketed in 1900. Over 20 different models made since. Capital, \$1,000,000. C. H. Morse, pres.; W. E. Miller, first vice-pres. and gen. mgr.; H. C. McClary, second vice-pres.; H. M. Hollister, treas.; F. M. Boughey, sec. and auditor; S. F. Forbes, pur. agt.; A. G. Langworthy, adv. mgr.

Fairchild & Bro., M. H.—119 Michigan St., Chicago, Ill. Mfrs. metal polishes and automobile body soaps.

Fairchild, Frank.—Sherburne, N. Y. Garage.

Fairchild, H. Coulson.—Passaic, N. J. Garage.

Fairfield Motor Co.—172 Cannon St., Bridgeport, Conn. Mfrs. electric and gasoline marine motors.

Fairfield Rubber Co.—Fairfield, Conn. Mfrs. rubber cloth.

Fair-leader.—A thimble used on vessels for guiding a rope. See Thimble.

Fair Oak Garage.—Pasadena, Cal. (Rambler.)

Fake, Ed. D.—18 E. Clark St., Ilion, N. Y. Garage.

Falcon Motor Works.—114 Wick Ave., Youngstown, O. (Baker.)

Falconnet-Perodeaud.—Choisy-le-Roi (Seine), France. Mfrs. solid and pneumatic rubber tires.

Fall.—
which power is applied. See Pulley.

Fall River Auto Co.—345 Durfee St., Fall River, Mass. (Stanley.)

False Frame.—Same as Sub-frame. See Frame (1).

Fan.—A rotary apparatus consisting of from four to twelve helical blades of a light metal mounted on a boss, running on ball bearings, and driven by the

Fig. 1

motor through spur-gear, a wire belt, or a V-shaped, round or flat leather belt. (Fig. 1). It is used for cooling an air-cooled motor by increasing the circulation of air around the cylinders and, in a water-cooled motor, by drawing air through the radiator.

Fig. 2.

In another system, the fly-wheel arms are cast in such a shape (Fig. 2) as to form the blades of a fan; and, in still another, vanes, heli-

cally arranged, are secured to the periphery of the wheel.

Fancher & Morris.—Salt Lake City, Utah. (Maxwell.)

Fancher, Sayer.—21 Cottage St., Middletown, N. Y. (Lambert.)

Fang-bolt.—See Bolt, Fang.

Fanning Tire Co.—1470 Michigan Ave., Chicago, Ill. Tires and tire repairing.

Farad.—The electromagnetic unit of capacity. The practical unit adopted is the one millionth part of a farad, and is termed a "microfarad." This is about the capacity of three nautical miles of submarine cable.

Farcot Frères et Cie.—St. Ouen, France. Mfrs. automobile motors.

Fargo Auto Brokerage & Garage Co.—302 Broadway, Fargo, N. D. Garage.

Farhsworth & Glidden.—25 Euclid St., Rochester, N. Y. (Welch.)

Farout, Charles Ernest.—16 Rue Bachaumont, Paris. Born at Noyon, December 20, 1873. Editor of L'Auto. Educated at the Polytechnic School. Doctor of Mathematical Sciences. Formerly engineer to the Compagnie Générale des Omnibus; chemist at the Sacramento gold mines; engineer of the Milwaukee street railways, and consulting engineer, etc.

Farr, F. G.—Vice-pres. and mgr. Hydraulic Oil Storage Co., 820 Penobscot Bldg., Detroit, Mich.

Farr, H. G.—Sec. and supt. Knox Automobile Co., Springfield, Mass.

Farré, J.—179 calle Aragon, Barcelona, Spain. Mfrs. bodies.

Farrington, B. W.—Perth Amboy, N. J. (Waltham.)

Farrington, C. A. W.—Vice-pres. Automobile Owners' Supply Depot, 1655 Broadway, New York City.

Farrington, George Edward.—Treasurer A. A. A. and banker. B. Boston, Mass., April

6, 1871. Ed. Boston High School. Member Clubs: Union League (N. Y.), Lawyers (N. Y.), Essex Co. (Mass.), Country, Orange (N. J.) Res., 17 New England Terrace, Orange, N. J. Office, 36 Nassau St., New York. Used first

car 1900. Recreations, all outdoor sports, fishing and shooting.

Farry, A. J. G.—216 W. Main St., Madison, Ind. Garage.

Farson, John.—Lawyer. B. Union City, Ind., Oct. 8, 1855. Ed. public schools and Univ. of Ill., '76. Studied law in Chicago, admitted to bar 1880.

Org. firm of Farson, Leach & Co. in 1889, since changed 1906, to Farson Son & Co. Director Rockford and Interurban Ry. Co., Rockford & Freeport Ry. Co., Evansville Gas & Elec. Co. Pres. American Automobile Association. Vice-Pres.

Nat. Good Roads Ass'n. Mem. clubs: Chicago, Chicago Athletic, Chicago A. C. (Pres.), Chicago Yacht, Midday, Bankers. Illinois, Union League, Glen View Golf, Lawyers (Y. Y.), Oak Park. Res., Oak Park, Ill. Office, First Nat. Bank Bldg., Chicago, Ill., and 34 Pine St., New York City.

Farwell, F. O.—Gen supt. The Adams Co., Dubuque, Ia.

Fashion Auto Station.—4612 Cottage Grove St., Chicago, Ill. Garage.

Fashionable House.—16 bd. Montmartre, Paris, France. Mfrs. wearing apparel; coats.

Fashion-pieces.—The hindmost tim-

bers in the run of a vessel which terminate the breadth, and form the shape of the stern.

Fassitt, T.—Mgr. Easton Auto Co., 41 Delaware St., Easton, Pa.

Fast, Otto.—Greenfield and 25th Sts., Milwaukee, Wis. Mfrs. carburetters.

Fast Pulley.—See Pulley.

Fastener.—A device for fastening together the ends of driving-belts.

Fathom.—A measure used by sailors, and equal, approximately, to 6 feet.

Fatigue, Elastic.—A falling off in value of the elasticity of a body after it has been subjected to a long continued stress.

Faulkner & Bowers.—Troy, O. (Reo.)

Fault.—A weak spot in the insulation of the wires or other part of an electric circuit allowing leakage, or a broken connection preventing the passage of electricity.

Faurax et Cie.—La Jonction, Geneva, Switzerland. Mfrs. bodies.

Faure, Jacques.—32 Rue Washington, Paris. Born at Bellevue in 1873. After a residence in England, where he developed a taste for athletic sports (yachting and motor-boating), of which he was a brilliant champion, he gained, as an aeronaut, a well deserved celebrity. He obtained magnificent results in the competition at the Exposition of 1900, where he succeeded in classing himself third in the tests as a whole. He made four balloon trips from England to France (three in 1905), the most remarkable of which was from London to Paris in 6h. 30m. (Feb. 10, 1905). He won the first Grand Prix of the Aero Club of France, Paris-Kirchdrauf (Hungary), 1,314 kilometres, in 18h. 6m., on Oct. 15 and 16, 1905. By his boldness, his coolness, and his technical skill, M. Faure is one of the most brilliant representatives of the French school of aerostation.

Faurote, Fay Leone.—Advertising manager E. R. Thomas Motor Co. B. Terre coupe, Ind., July 26, 1881. Ed.

Niles High School (graduate 1899). Received degree B. S. (M. E.) at the University of Michigan, 1908. Mem. Aircraft Club of Detroit. Employed by Olds Motor Works July, 1903, to Jan. 1, 1908. Author of "A Busy Man's Text Book on Automobiles," "The

Howland Why of the Automobile," and "A Boy's Text Book on Gas Engines."

Fawcett, C. E.—119-121 3d Ave., Cedar Rapids, Ia. (National.) Est. 1886. C.

E. Fawcett, sole owner. Garage; 20 cars; repairing; supplies.

Fawkes Auto Co.—202-6 W. 6th St., St. Paul, Minn. (Holsman, National, Rambler, Glide.)

Fawkes Auto Co.—111 S. 6th St., Minneapolis, Minn. (Holsman, National, Rambler, Glide.)

Fawn River Mfg. Co.—Constantine, Mich. Mfrs. magnetos and ignition dynamos.

Faxon, E. R.—Sec. The Mutual Machine Co., 25 Wells St., Hartford, Conn.

Fay & Bowen Engine Co.—92 Lake St., Geneva, N. Y. Mfrs. gasoline marine motors, kerosene motors and motor boats.

Fay & Scott.—Dexter, Me. (Reo, Maxwell.) Machine tool builders; garage, 10 cars; repairing.

Fay, C. A.—210 6th Ave., Clinton, Ia. (Reo.)

Fay, Owen H.—243 Michigan Bvd., Chicago, Ill. (Elmore.)

Fayette Automobile Co.—76 E. Fayette St., Uniontown, Pa. (White, Peerless, Reo, Holsman, Winton.) Est. 1902. Garage, 50 cars; repairing.

Feather.—A slip inserted longitudinally into a shaft and projecting as a fin so as to fit a groove in the eye of a wheel, which may thus have a longitudinal, but not a rotary motion. (2) A longitudinal rib formed on a shaft or on the arm of a gear-wheel in order to strengthen it (3) The angular adjustment of a propeller-blade.

Feather, Sliding.—A feather formed integral with a wheel and sliding into a slot in the shaft.

Featherstone, J. E.—Aurora, Mo. (Holsman.)

Fedders Mfg. Co.—57-59 Tonawanda St., Buffalo, N. Y. Mfrs. auto radiators, tanks, hoods, etc. Est. 1897. Theo. C. Fedders, proprietor.

Fedders, Theo.—Proprietor Fedders Mfg. Co., 57-59 Tonawanda St., Buffalo, N. Y.

Federation Aeronautique Internationale.—84 Faubourg St., Honoré, Paris, France. Georges Besancon, sec. An association composed of the following clubs: Aero Club of America, Aero Club de France, Deutscher Luftschiffer-Verband, Aero Club de Belgique, Real Aero Club de Espana, Aero Club of the United Kingdom, Societa Aeronautica Italiana, Aero Club Suisse.

Federation of American Motorcyclists.—R. G. Betts, pres., 154 Nassau St., New York City. Organized Sept. 7, 1903. Objects: "To encourage the use of motorcycles and to promote the general interests of motorcycling; to ascertain, defend and protect the rights of motorcyclists; to facilitate touring; to assist in the good roads movement, and to govern and ad-

minister the sport of motorcycle racing and other competitions in which motorcycles engage." Henry J. Wehman, sec., 108 Park Row, New York City; G. B. Gibson, treas., 24 Main St., Westboro, Mass. Vice-presidents: For Eastern District, Theodore K. Hastings, 118 Nassau St., New York City; for Southern District, Howard A. French, 304 W. Baltimore St., Baltimore, Md.; for Western District, Irving R. Hall, 200 S. Oak Park Ave., Oak Park, Ill.; for Pacific District, Frank M. Byrne, 901 Eddy St., San Francisco, Cal.

Fee & Stewart Co.—Ft. Pierce, Fla. (Waltham.)

Fee-Bock Auto Co.—254 Jefferson Ave., Detroit, Mich. (Elmore, Woods.)

Fee Motor Car Co.—Detroit Mich. Mfrs. gasoline automobiles.

Feed.—In a motor-car, the supply of gasoline to the motor. (2) In a steam-car, the supply of water to the boiler, or of fuel to the burner.

Feed, Float.—See Float, Feed.

Feed-pipe.—The pipe which conveys water to a steam boiler.

Feed-pump.—A small pump, called a "force" or "plunger-pump," which forces water into a steam boiler.

Feed, Sight.—A lubricator in which oil is fed drop by drop in a transparent portion of the apparatus. See Lubricator, Sight-feed.

Feed-tank.—See Tank.

Feed-water.—The water supplied to a steam boiler. By measuring its amount, the quantity of steam generated in a given time may be found.

Feed, Water.—A term applied to acetylene generators in which water is dripped on the carbide.

Feed-water Heater.—A device for warming feed-water, usually by means of the exhaust steam or by the condenser.

Feick, Wm. G.—Garage. Mgr. Parkway Garage Co., Central Park West and 110th St., New York City.

Feine, August.—152 Terrace St., Buffalo, N. Y. Mfr. bolts and rods.

Feld, Carl.—Wald, Rheinland, Germany. Mfr. non-skids.

Feldmeir, Harvey.—Little Falls, N. Y. (Franklin.)

Felker Automobile Co.—1535 Tremont St., Denver, Colo. (Stevens-Duryea, Waltham, Pope-Waverley.) Est. Jan., 1900. Garage, 65 cars; repairing.

Felloe or Felly.—A segment of the rim of a wooden wheel; also, in familiar language, the entire rim.

Fellows & Fay.—126 Central Ave., Dunkirk, N. Y. Garage.

Fellwock Automobile & Mfg. Co.—Evansville, Ind. Office, salesroom and garage, 320-322 Upper 4th St. Factory, 210 E. Pa. St. (Maxwell, Mitchell, Stoddard-

Dayton, National, Baker, Ford.) Mfrs. wood and metallic bodies, automobile seats, tops, turntables, glass windshields. Est. 1906. Capital, \$20,000 authorized; \$12,000 paid in. W. E. Fellwock, pres and sales mgr.; J. F. Fellwock, vice-pres. and head of mfg. dept.; P. B. Fellwock, sec. treas. and gen. mgr. Garage, 30 cars; repairing.

Fellwock, J. F.—Vice-pres. Fellwock Auto & Mfg. Co., 320-322 Upper 4th St., Evansville, Ind.

Fellwock, P. B.—Sec. and treas. Fellwock Auto & Mfg. Co., 320-322 Upper 4th St., Evansville, Ind.

Fellwock, W. E.—Pres. and sales mgr. Fellwock Auto & Mfg. Co., 320-322 Upper 4th St., Evansville, Ind.

Felske, Chas.—Supt. Apperson Bros Automobile Co., Kokomo, Ind.

Felt.—A thick woolen fabric made without weaving; used in some motors as a wrapping for certain members in order to deaden the sound made by their vibrations; or as a lining for gear-boxes, in certain electric vehicles, for suppressing the noise made by the gearing. It is also used for making washers for the spring separators which hold apart the balls in the races of ball bearings.

Feltham, Arthur J.—Providence, R. I. (Cadillac.)

Felton, Sibley & Co.—136-140 N. 4th St., Philadelphia, Pa. Mfrs. enamel, paints, varnishes.

Female Screw.—The same as Nut, q. v.

Fend, R. S.—Supt. Electric Automobile Department Columbus Buggy Co., Dublin Ave. W., Columbus, O.

Fender.—A metal or other guard fixed to the sides of a car in order to prevent mud picked up by the road-wheels from being splashed over the car and its occupants. It is suspended by specially shaped brackets or hangers at a sufficient distance above the wheel to allow for the rise of the axle. The fenders are

connected to the foot-board of the car, in order to further prevent

the splashing of mud. (2) A device consisting of a rope plaiting, a bag stuffed with ground cork, etc., hung against a boat's side in order to prevent injury due to striking against a pier, another vessel, etc.

Fenker, Richard H.—Sec. and treas. Parkway Garage Co., Central Park W. and 110th St., New York City.

Fenn Bros.—122-124 E. 10th St., Sioux Falls, S. D. (Packard, Autocar, Buick.)

Fenner, F. H.—The Ridotto, 1009 Washington St., Bay City, Mich. (Jackson, Mitchell, Franklin.)

Fenner, F. N.—Marquette, Mich. (Caddillac.)

Fenske, H., Wagenbau-Anstalt.—Reinickendorferstrasse 78, Berlin, Germany. Mfrs. bodies.

Ferguson, August Lincoln.—Automobile designer and constructor. B. Boston, Mass., Aug. 27, 1865. Ed. Boston Grammar and High schools. Contributor to automobile publications from 1896 on. Founding editor of Motor Vehicle Review in Cleveland, O., Sept. 5, 1899.

Ferguson, B.—Orion, Ill. (Waltham.)

Ferguson, C. W.—Pres and treas. Connecticut Steel & Wire Co., 308 Pearl St., Hartford, Conn.

Fergusson, David.—Mechanical Engineer with G. N. Pierce Co., Buffalo, N. Y. B. Bradford, Eng., May 27, 1869. Ed. Bradford Grammar School and Bradford Technical College, graduating in 1888. From 1889 to 1896 occupied position as draughtsman and designer with prominent English engineering firms. Member A. C., of Buffalo; Society of

Automobile Engineers. Res., 286 Pennsylvania St., Buffalo, N. Y. In trade since 1897.

Ferguson Implement Co.—2105 E. 15th St., Kansas City, Mo. (Haynes, Gale.)

Ferguson, James.—Supt. The Safety Insulated Wire & Cable Co., 114 Liberty St., New York City. Factory, Bayonne, N. J.

Fernald Auto Co.—1548 Broadway Denver, Colo. (Maxwell, Auburn.)

Fernald, Geo. H.—North East, Pa. (Maxwell.)

Fernandez Smollera & Stevens.—Gualajajara, Mexico. (Compound.)

Fero, M. S.—Sec. Berkshire Cycle & Automobile Co., 95 Main St., North Adams, Mass.

Ferodowill Mfg. Co.—St. Paul, Minn. Mfrs. air compressors, jacks, tire pumps.

Ferre, E. E.—379 Washington, St., Buffalo, N. Y. Supplies.

Ferre, E. H.—Market St., Lockport, N. Y. Aluminum.

Ferrell, A. M.—Colby and California Sts., Everett, Wash. (Mason, Ford, National.) Est. March, 1907. Garage, 25 cars.

Ferres, John G.—118 W. Main St., Johnstown, N. Y. (Reo.) Supplies.

Ferretti, Alfredo.—151 via dei Fiori, Turin, Italy. Mfrs. circulating pumps.

Ferris, W. M.—Sales Dept., Park Sq. Auto Station, 43 Columbus Ave., Boston, Mass.

Ferro-aluminum.—An alloy of iron and aluminum, employed in metallurgy, for the refining of iron.

Ferro-chromium.—A ferro-metallic compound containing from 10 to 60 per cent. of chromium. Chromium, like tungsten, increases the elasticity and mechanical resistance of steel. Chromium-steels, obtained by the addition of ferro-chromium, have a tensile strength of 171,600 lbs. per square inch (120 kilogrammes per square millimetre).

Ferro-manganese.—The alloys of iron and manganese are special castings called "spiegels," when the content in manganese is not over 30 per cent.; "silico-spiegels" when the content of silicon and manganese is not over 36 per cent; and "ferro-manganese" when the content of manganese reaches 85 per cent. Ferro-manganese plays an important part in the metallurgy of iron. Manganese is, in fact, more oxidizable than iron and permits of the refining of it. It also prevents the formation of blow-holes. Manganese introduced into steel gives it special electrical and mechanical properties. Small quantities increase its resistance to traction, but the content in carbon must diminish. With more than 1 per cent. of manganese, steel becomes hard and "short," and with 4 to 5 per cent. this property is greatly increased. With 8 to 15 per cent. of manganese, steel behaves quite differently. A manganese steel containing 12 per cent. of manganese and 1 per cent. of carbon acquires, according to the process of forging and tempering, very great strength, its breaking load varying from 81,510 to 254,000 pounds per square inch. The same steel with 12 per cent. of manganese has a magnetic permeability equal to that of air. The presence of this metal in steel, therefore, diminishes its permeability and increases its resistivity, which in the case of 12 per cent. steel reaches 67 micro-centimetres, while the resistivity of iron varies from 9 to 10 microhm-centimetres.

Ferro-nickel.—An alloy of iron and nickel, frequently employed in the construction of rheostats. Its resistivity increases with the content of nickel. A nickel steel with 4.5 per cent. nickel has a resistivity of 29.5 microhm-centimetres. Ferro-nickels are manufactured having resistivities of 86 (rheostatic B) and 78 microhm-centimetres (type HX). This latter breaks under a load of 193,000 pounds to the square inch.

Ferro-silicium.—An alloy of iron and silicium employed in the metallurgy of iron.

Ferro Machine & Foundry Co.—115 Wade Bldg., Cleveland, O. Mfrs. brass, bronze, aluminum, copper and gray iron castings; machine work to order; gaso-

lene automobile motors; piston rings; patternmakers.

Ferry Cap & Set Screw Co.—2151 Scranton Rd., Cleveland, O. Mfrs. screws.

Fessoirat, E.—5 rue des Marais, Versailles, France. Mfrs. non-skids.

Fetch.—To prime a pump. See Prime.

Fetchonsen, E. G.—Prop, Acme Steel & Malleable Iron Works, Military Rd., Buffalo, N. Y.

Fewless-Leen Brass & Iron Co.—Cincinnati, O. Mfrs. pipe and brass fittings.

Fiat Automobile Co. (Fabbrica Italiana Automobili Torino.)—Corso-Dante, Turin, Italy. Makers of the Fiat car, first marketed June, 1897. From 35 to 40 models made since. Cap. \$2,250,000. Avv. Scarfioiti, Pres.; Giovanni Angelli, Managing Director; Enrico Marchesi, Gen. Mgr.; Sig. Enrico and Sig. Fornaca, Designers; Sig. Scachi, Supt. Branches: Teixeira Bros., Lisbon, Portugal; Fiat America, Latina, South America; Fiat Automobile Co., New York City; Fiat Co. of India, Calcutta, B. I.; Fiat Ltd., Melbourne and Sydney, Australia; Fiat Motors, Ltd., London, Eng.; Garages Reunis, Turin, Italy; Her. Mathis, Strassburg, Germany; Lamberjack, E. Paris, France.

Fiat Automobile Co.—1789 Broadway, New York City. U. S. Branch of the Fabbrica Italiana Automobili Torino, Turin, Italy, and importers of Fiat cars and parts.

Fiat, Lange & Cia.—Paseo de la Reforma, Mexico City, Mex. (Fiat.)

Fiber, Cocoa.—A fiber, called also "coir," obtained from the outside of the husk of the fruit of the cocoa-palm, and used for making floor-mats.

Fiber, Vulcanized.—A substance formed of vegetable fiber chemically treated and then strongly compressed and vulcanized. It is produced in two grades, hard and elastic, and of two colors. Both are insoluble in ordinary solvents. Hard fiber, which bears a close resemblance to horn, is very tough and strong, resists compression and maintains its elasticity under all ordinary conditions. Flexible fiber resembles close-grained leather, but is not so flexible. Hard fiber comes in the form of sheets, tubes, and square rods, and the elastic variety in the form of sheets. Vulcanized fiber, which is easily machined, is used as a lining for clutches and brake-bands, and for making noiseless cam-gears, the insulating parts of contact-makers and distributors, washers for steam-joints and gas-pipes, and for many other purposes.

Fich, H. Chr.—Copenhagen, Denmark. (Wayne.)

Fichtel und Cachs.—Schweinfürth, Germany. Mfrs. ball bearings.

Fickling & Co., Inc.—154 E. 57th St., New York City. Factory, New Haven, Conn. Mfrs. and agents for limousine, landaulette and runabout bodies, cape cart, Victoria and canopy tops, slip covers, motor boat tops, wind shields, tops recovered, extra and folding seats, foot rests and coat rails, lamp covers, dust shields, tire covers, painting bodies, upholstering, iron and steel work, trunk carriers, tire irons, lamp brackets, wheels repaired, battery and tool boxes, auto fenders, auto relief springs, "Fickling" ignition and lighting system. Capital, \$15,000. Est. 1905. Successors to Auto Cover & Top Co., September, 1906. W. Irvine Fickling, pres. and treas.; W. W. Fickling, sec.; Henry F. Holbrook, mgr.; C. J. Donovan, head of trimming dept.; W. C. Clark, head of paint shop; G. Smith, head of woodworking dept.; S. Hainpold, head of upholstery dept.; Mr. Byrnes, head of blacksmith dept.

Fickling, W. Irvine.—Pres. and treas. Fickling & Co., Inc., 154 E. 57th St., New York City.

Fickling, Wm. Webb.—Sec. Fickling & Co., Inc., 154 E. 57th St., New York City.

Fiedler, E.—Director Neer Air Cooled Engine Co., Plain City, O.

Field.—An "electric field" is the space in the vicinity of an electrified body, or bodies, in which electrical phenomena are produced by the body. A "magnetic field" is a space having the same relation to a magnetized body.

Field & Co.—Augusta, Ga. (Rambler, Pope-Waverley.)

Field Auto Co.—103 Pryor St., Atlanta, Ga. (Stoddard-Dayton.)

Field Co., Chas. H.—230 Chestnut St., Providence, R. I. Mfrs. special automobile machinery.

Field, C. W.—Pres. Fouch Disk Wheel Co., room 11, Tribune Bldg., Minneapolis, Minn.

Field, Frank C.—605 N. St. Clair St., Toledo, O. Mfr. monograms.

Field, Russell Ambler.—Secretary Long Island Automobile Club, automobile editor Brooklyn Daily Eagle. B. Taunton, Mass., Sept. 4, 1876. Ed. public schools, Taunton. Res., 641 St. Marks Ave., Brooklyn, N. Y. Office, Brooklyn Daily Eagle, Washington and Johnson Sts.,

Brooklyn, N. Y. Recreations, all outdoor sports.

Fieldhouse, J. W.—Elkhart, Ind. Garage.

Fifer, Chas.—Salem, O. (Mitchell.)

Fifield Bros.—Augusta, Me. (Maxwell.)

Fifield, Geo. W.—Pres. New England Motor Co., 82-88 Fletcher St., Lowell, Mass.

Fifth Avenue Garage.—45 W. 44th St., New York City. Garage.

Fifth Wheel.—A horizontal wheel-like bearing, called also a "circle-iron," placed on the front axle of a vehicle to permit of steering by turning the axle in a horizontal plane. Used on horse-drawn but seldom on motor-vehicles.

Fifty-first Street Auto Station.—51st St. and Beaumont Ave., Philadelphia, Pa. Garage.

Fifty-third St. Auto Co.—87 E. 53d St., Chicago, Ill. Garage.

File.—A strip of bar steel, the surface of which is cut into fine points or teeth that act by a species of cutting closely allied to abrasion. Files are made in endless variety, and many that are in all other respects alike differ in the forms and sizes of their teeth, three forms of which are made, viz., those of "double cut" files, those of "single cut" or "floats," and those of "rasps." Floats and rasps are used mostly for woods and soft material. The double-cut are used for metals and general purposes. These are made of several gradations of coarseness, named, respectively: "Rough," "bastard," "second cut," "smooth" and "dead smooth." Very heavy square files used for smooth work are called "rubbers."

After use it will be found that fragments of metal have lodged in the spaces between the teeth, to remove which a "scratch-brush" is employed. (See Pin.) Files should be kept separated by rags or waste to prevent nicking, which if it occurs causes rapid deterioration.

File-brush.—See Brush, File.

File-card.—A thick fabric studded with short fine steel wires, used for cleaning files.

Filiatrault, E. J.—Duluth, Minn. (Thomas Flyer.)

Fillet.—A filling for the sharp corners on pattern work.

Filley, F. B.—Pres. Mound City Oil & Supply Co., 204 N. Commercial St., St. Louis, Mo.

Filley, F. H.—Vice-pres. Mound City Oil & Supply Co., 204 N. Commercial St., St. Louis, Mo.

Fillingham, J. P.—Supt. Reo Motor Car Co., Lansing, Mich.

Fillow Garage, A. H.—87 West St., Danbury, Conn. Special cars built to order. Garage and repair shop. Est. 1890.

Fillegamo e Ca., D.—24 via Mille, Turin, Italy. Mfrs. non-skids, make-and-break plugs.

Filtering Carburetter.—See Carburetter.

Filtz, J.—13 ave. du Roule, Neuilly, France. Mfrs. automobile motors.

Fin.—A projection called also a "feather edge," on a drop forging due to the joints of the dies. (2) Flanges arranged along the piping of a tubular radiator in order to facilitate the cooling. See, Radiator, Fin, Gill and Flange.

Findlater Hardware Co.—San Angelo, Tex. (Holsman.)

Findlay Motor Car Co., The.—301 W. Crawford St., Findlay, O. Garage.

Fine, Horace E.—19 E. State St., Trenton, N. J. Mfr. automobile monograms, lamp numbers, license numbers, markers, straps and Fine's patented removable lamp numbers. Est. 1892. Horace E. Fine, sole prop.

Fine, Horace E.—Sole prop. Horace E. Fine, 19 E. State St., Trenton, N. J.

Finger.—A small projecting piece; a rod to stop a piece or limit its motion; a tappet.

Finger-nut.—The same as Wing-nut. See Nut, Wing.

Finger-screw.—See Screw, Finger.

Finger-tube Boiler.—See Boiler.

Finished Steel Co.—1623 Wilson Ave., Youngstown, O. Mfrs. steel.

Fink, August D.—58 Palmetto St., Brooklyn, N. Y. (Haynes.)

Finks, H. P.—Ft. Smith, Ark. (Holsman.)

Finsterwald, J. J.—Foreman Ohio Electric Works, Cleveland, O.

Fire-extinguisher.—Portable apparatus of one form or another, such, for example, as that of a small glass vessel containing carbon dioxide under pressure, which is broken by contact and liberates its contents, and which is called a "grenade;" or that of a cylinder containing sodium carbonate and in which is liberated a dilute solution of sulphuric acid, forming carbon-dioxide, which is squirted on the fire from a hose connected to the cylinder. The sulphuric acid is kept in a glass bottle, which is broken in order to start the formation of carbon dioxide.

Garages and other places where oil and gasoline are used should be provided with buckets or boxes of sand, which when thrown on a fire caused by the ignition of such combustibles will extinguish it before it has a chance to spread.

Fire-tube Boiler.—See Boiler.

Fireman's Fund Insurance Co.—California & Sansome Sts., San Francisco, Cal. Wm. M. Klinger, Mgr. Automobile fire insurance.

Fire-Proof Garage.—170th St. and Jerome Ave., New York City. Garage.

Fire-Proof Garage, The.—1061-2 Main St., North Adams, Mass. Garage; repairs; supplies.

Firestone, C. D.—Pres. Columbus Buggy Co., Dublin Ave., W. Columbus, O.

Firestone, C. E.—Sec. Columbus Buggy Co., Dublin Ave., Columbus, O.

Firestone, H. S.—Rubber tire manufacturer. B. Columbiana Co., Ohio, 1868. Ed. at Columbiana and Cleveland, Ohio. Res., Akron, O. Address, Firestone Tire & Rubber Co., Akron, O.

Firestone, J. F.—Vice-Pres. Columbus Buggy Co., Dublin Ave. W., Columbus, O.

Firestone Tire & Rubber Co.—Miller St. and Sweitzer Ave., Akron, O. Mfrs. solid and pneumatic tires. Branches: Ellicott & Tupper Sts., Buffalo, N. Y.; 5904 Penn Ave., Pittsburg, Pa.; 240-42 Jefferson Ave., Detroit, Mich.; 2226 Olive St., St. Louis, Mo.; 1442 Michigan Ave., Chicago, Ill.; 9 Park Sq., Boston, Mass.; 211 N. Broad St., Philadelphia, Pa.; 233 W. 58th St., near Broadway, New York City.

Firing.—A general term for ignition, especially ignition of the charge in internal combustion motors.

Fischbeck, Fred.—Pasadena, Cal. (Deere.)

Fischer, J. G.—Saginaw, Mich. (Monarch.)

Fischer, L. A.—Pres. Buffalo Gasolene Motor Co., 280-90 Niagara St., Buffalo, N. Y.

Fischer Special Mfg. Co.—2076-8 Reading Road, Cincinnati, O. Mfrs. spark coils and plugs.

Fischerre et Cie., Martin.—Spitzkekre, Zürich, Switzerland. Mfrs. gasolene automobiles.

Fish Automobile Co.—Bloomington, Ill. Mfrs. gasolene automobiles.

Fishback, R. W.—Supt. Waterman Marine Motor Co., 1506-12 Fort St. W., Detroit, Mich.

Fishbeck, Fred.—Tonopah, Nev. (Chadwick.)

Fish-plate.—A term for a tie-plate used for connecting the ends of rails; also sometimes employed as a synonym for fitch-plate q. v. From old French ficher, "to fix." "Fish," in nautical language, is a name for a splint used to repair a damaged spar.

Fisher, A.—310 Fort St., W., Detroit, Mich. Mfr. auto tops. Garage.

Fisher Auto Storage Co.—219 Ferry St., Easton, Pa. Garage.

Fisher Automobile Co.—330 N. Illinois St., Indianapolis, Ind. (National, Stoddard-Dayton, Mitchell, Maxwell.) Est. 1898. Cap. \$7,500. H. L. Hewitt, Pres.; F. L. Moore, Vice-Pres. and Sales Mgr.; F. B. Willis, Sec. and Head of Sundries Dept.; Carl G. Fisher, Treas.; M. E. Haywood, Head of Repairs Dept. Garage, 150 cars; repairing.

Fisher, Carl G.—Treas. Fisher Auto Co., 330 N. Illinois St., and Pres. Prest-O-Lite Co., 20 S. East St., Indianapolis, Ind.

Fisher Co., A. W.—South Bend, Ind. Mfrs. magnetos and ignition dynamos.

Fisher, F. J.—Vicksburg, Miss. (Reo.)

Fisher, Henry.—Vice-Pres. and Mgr. Diezemann Shock Absorber Co., 1311-13 Hudson St., Hoboken, N. J.

Fisher, J. L.—Maryville, Mo. (Waltham.)

Fisher, O. P.—Pres. The Broc Co., 1665-9 E. 40th St., 4021-3 Payne Ave., Cleveland, O.

Fisher, Peter J.—57 W. 66th St., New York City. Garage.

Fisher, Sam.—Pres. Diezemann Shock Absorber Co., 1311-13 Hudson St., Hoboken, N. J.

Fisk, Albert J.—Gen. Mgr. Witherbee Igniter Co., 541 W. 43rd St., New York City.

Fisk, Geo. C.—Pres. Fisk Mfg. Co., Walker St., Springfield, Mass.

Fisk, H. G.—Sec. The Fisk Rubber Co., Oak St., Chicopee Falls, Mass.

Fisk Mfg. Co.—Walker St., Springfield, Mass. Mfrs. automobile body soap. Cap. \$50,000. Est. 1857. Geo. C. Fisk, Pres.; W. S. L. Hawkins, Treas. and Gen. Mgr.

Fisk Rubber Co., The.—Oak St., Chicopee Falls, Mass. Mfrs. mechanically fastened and standard clincher automobile tires; single tube bicycle tires. Mem. M. & A. M. Cap. \$600,000. Est. 1897. H. T. Dunn, Pres.; E. H. Broadwell and J. C. Cole, Vice-Pres.; A. N. Mayo, Treas.; H. G. Fisk, Sec.; G. N. Carpenter, Head of Accounting Dept.; G. A. Ludington, Head of Factory. Branches: Atlanta, 103 N. Pryor St.; Boston, 239 Columbus Ave.; Buffalo, 718 Main St.; Chicago, 1440 Michigan Ave.; Cleveland, 318 Euclid Ave.; Denver, 1555 Tremont St.; Detroit, 262 Jefferson Ave.; Kansas City, 1330 Main St.; Los Angeles, 1034 S. Main St.; Minneapolis, 704 Hennepin Ave.; New York, 754 7th Ave.; Philadelphia, 140 N. Broad St.; San Francisco, 1036 Golden Gate Ave.; Seattle, 719 E. Pike St.; Springfield, 135 Bridge St. Agencies: F. O. Sawyer, 3908 Olive St.; St. Louis, Mo.; Rubber Tire Wheel Co., Toronto and Montreal; South British Trading Co., 13 Wilson St., London.

Fiske Auto Co.—167 Pine St., Providence, R. I. (Buick.)

Fiske Bros. Refining Co.—13-15 Oldslip, New York City. Mfrs. grease and oils.

Fiske, L. D.—43 Wells St., Hartford, Conn. (Fiat, Panhard, Locomobile.)

Fiss, Doerr & Carroll Co.—153 E. 24th St., New York City. (Reliance, American.) Est. 1895. Fred Wagner, Pres.; J. B. Carroll, Treas. and Sec.; L. B. Sanders, Gen. Mgr.; E. E. Haskins, M. E.

Fitch, L. M.—Pres. The Maxwell & Fitch Co., 218 S. Washington St., Rome, N. Y.

Fissures.—Cracks caused by the freeze-

ing of the circulating water in the jackets of a water-cooled motor or in the explosion-chamber. If the fissure is not too wide it can be "rusted over" by means of sal-ammoniac, etc.

Fitch Auto Co.—410 S. Main St., Los Angeles, Cal. (Simplicity.)

Fitch, L. M.—Pres. The Maxwell & Fitch Co., 218 S. Washington St., Rome, N. Y.

Fitchard & Co., H. T.—9 Columbia St., Utica, N. Y. (Maxwell.)

Fitchburg Auto School & Garage Co.—841 Elm St., Manchester, N. H. Garage.

Fitchburg Auto Transit Co.—Fitchburg, Mass. Garage.

Fitchburg Machine Works.—Fitchburg, Mass. Mfrs. special automobile machinery.

Fitt, James.—106 Commercial St., Rochester, N. Y. Repairing.

Fittings.—The smaller parts of a machine, etc., constructed separately and afterward added to the main part.

Fitts, E. A.—Sec. and Treas. The Auto-car Co., Ardmore, Pa.

Fitz, Chas. R.—Southampton, L. I., N. Y. (Maxwell.)

Fitzgibbon & Crisp Carriage & Auto Body Co.—Trenton, N. J. Mfrs. wood and metallic bodies and auto tops.

Fitzgibbon, John Edward.—Advertising manager and automobile editor of Milwaukee Sentinel. B. Neenah, Wis., Feb. 7, 1885. Ed. High School, Milwaukee. Office, Milwaukee Sentinel, Milwaukee, Wis.

Fixit Shop, The.—Moyer St., Canajoharie, N. Y. Est. Dec. 6, 1905. Willis Bullock, Jr., Mgr. Repairing.

Flaccus, G. E.—Sec. The J. Kowalsky Engine Co., Grant St. and Railroad Ave., Verona, Pa.

Flagg & Co., Stanley G.—Philadelphia, Pa. Mfrs. malleable iron and steel castings.

Flagler Co.—Brooklyn, N. Y. Garage. Cap. \$25,000. Incorporators: A. R. Pardington, F. W. Flagler, L. K. Israel, H. C. Umland, C. F. Hart, C. H. Bowden, P. J. Zimmerman.

Flagler, Henry M.—Capitalist. B. Canandaigua, N. Y., 1830. Ed. public schools. With Messrs. Rockefeller and Andrews organized firm of Rockefeller, Andrews and Flagler, which was succeeded by the Standard Oil Co., with which he is prominently identified. Director: Chicago, Rock Island & Pacific Ry., Minnesota Iron Co., Duluth & Iron Range R. R., Western Union Telegraph Co., International Bank Note Co., Jacksonville, Tampa & Key West Ry. Mem. New England Society, Union League, Metropolitan, New York, City, Larchmont, Am. Yacht, Knollwood Golf and Automobile Club of America. Has been prominent in the development of Florida as a winter resort, has built a number of hotels

and about 600 miles of railway in that State and has fathered the annual automobile race meets held by the Florida East Coast Automobile Ass'n. on the Ormond-Daytona beach. Address, 26 Broadway, New York City.

Flagler, John Haldane.—Capitalist. Officer and director in many corporations, including Nat. Tube Co., Am. Union Life Ins. Co., Nat. Bank of North America, Assurance Co. of America, Crocker-Wheeler Elec. Co., etc. Mem. S. A. R., A. C. A., Chamber of Commerce, Am. Inst. of Mining Eng., Am. Museum of Natural History, Met. Museum of Art, N. Y. Yacht, Lotos, Lawyers, Am. Yacht, Larchmont Yacht. Res., 15 Park Ave. Office, 196 Broadway, New York City.

Flame Ignition.—See Ignition.

Flammer, L.—28 rue des Prairies, Paris, France. Mfrs. goggles.

Flanders, W. E.—Factory Mgr. Ford Motor Co., Detroit, Mich.

Flange.—Any flat projecting rim used for strengthening a part, or for providing for its junction to another part. (2) A thin copper or cast iron ring imbedded in the external walls of an internal combustion cylinder in order to facilitate cooling. See Fin and Gill.

Flange-coupling.—See Coupling, Face-plate.

Flanigan, Thos. J.—Pres. and Sec. Aetna Brass Mfg. Co., 4800 Hamilton Ave., Cleveland, O.

Flank.—The lower part of the teeth of a spur-gear.

Flanner, D. D.—Pres. Milne Auto-Start Co., Toledo, O.

Flap-valve.—See Valve, Flap.

Flash Boiler.—See Boiler, Flash.

Flash-point.—A term used to indicate the temperature at which a mineral oil, on being slowly heated, will give off inflammable vapor in sufficient quantity to "flash" or ignite on the application of a light.

Flash Chemical Specialty Co.—7-9 Fulton Pl., Boston, Mass. Mfrs. automobile body soaps.

Flask.—The iron or wooden frame used in foundries to support and contain the sand used in moulding.

Flatbush Automobile Co.—50 Tilden Ave., Brooklyn, N. Y. (Deere.)

Flatbush Motor Car Co.—448 Snyder Ave., Brooklyn, N. Y. (Corbin, Columbus.) Est. July 1906. Cap. \$6,000. Louis Ruprecht, Treas. and Gen. Mgr. Garage, 100 cars; repairing.

Flat Rock Automobile Co., The.—Flat Rock, Ind. Est. June 1905. M. M. Nading, Pres.; H. M. Wright, Sec. and Treas. Garage, 15 cars; repairing; supplies.

Fleischmann, M.—Titania Werke, Vienna, Austria. Mfrs. primary batteries.

Fleischmann, Max C.—Vice-president

The Fleischman Co. B. Cincinnati, O., Feb. 26, 1877. Ed. Cincinnati and College Hill, O. Director of Fleischmann Co., Market National Bank, Riverside

Malting & Elevator Co., Cincinnati Exhibition Co., American Diamalt Co., Union Grain & Hay Co., all of Cincinnati, and Illinois - Vinegar Mfg. Co., Chicago, Ill. Mem. of N. Y. Yacht Club. Atlantic Yacht Club, Royal Nova Scotia

Yacht Club. Automobile Club of America, Queen City Club (Cinn.), Cinn. Country Club. Arctic Club, Explorers' Club, Aero Club Res. 3850 Clifton Ave., Cincinnati, O. Office, 419 Plum St., Cincinnati, O. Used first automobile 1897; balloon, 1907; boat, 1908. Recreations. outdoor sports, motoring, yachting, aeronautics.

Fleming & Brown.—Station St., Kankakee, Ill. (Rambler.)

Fleming, T. R.—Treas. and Mgr. Temple Pump Co., 15th St. and 15th Pl. near Canal St., Chicago, Ill.

Fleming, Institut Cartographique Carl.—Glogau, Germany. Pubs. maps.

Flescher, Louis.—1622 Capitol Ave., Omaha, Neb. (Indian.)

Fletcher, A. C.—Owner and Mgr. Ohio Electric Works, Cleveland, O.

Fletcher, H. M.—Sec. Long Arm System Co., Lakeside Ave. and E. 38th St. Cleveland, O.

Fletcher, R. L.—Mgr. Garage, Nashville Motor Car Co., Church and 9th Sts. Nashville, Tenn.

Flewelin, M. C.—Mendon, Mich. Garage.

Flexibility.—By the term "flexibility," as applied to a gasoline car, is meant that characteristic which permits of a motor being run at widely different velocities and which allows of such changes being realized with the utmost promptness.

Flexible Shaft.—See Shaft, Flexible.

Flexure.—The act, process, or mode of bending; specifically, in mechanics, the bending of planes into cones or cylinders

In the calculation of flexure, the moment of inertia of the body's profile and its neutral fiber are brought in, and the fibers of the body which work the most during flexure are considered.

Flick, W. C.—Ransom, Ill. Garage.

Flint Garage Co.—402 N. Saginaw St., Flint, Mich. Garage.

Flint Motor Car Co.—212 Union St., Providence, R. I. (Packard.)

Flitch-plate.—A metal plate bolted to a wooden beam in order to strengthen it.

Float.—In a carburetter, a cork or hollow metal cylinder, F (see figure), to which is fastened a needle-valve, B, of which the point enters a seat in the supply-pipe, A. When the level of the li-

quid becomes low, the valve opens the orifice of the supply-pipe and the gasoline enters. When the proper level is reached, the needle-valve closes the orifice and prevents any inflow of fuel until the level again descends.

(2) A file with but one series of teeth, which do not cross, as in an ordinary file. See File

Float-chamber.—The part of a float-feed-carburetter which encloses the float. See Float.

Float-feed.—A term for the type of carburetter in which the level of the gasoline is maintained by a float. See Carburetter.

Floating Axle.—See Axle, Floating.

Flock & McBee.—Mobile, Ala. (Buick.)

Flock, H. J.—Sterling, Ill. (Rambler, Premier.)

Flood & Conklin Co.—136 Chestnut St., Newark, N. J. Mfrs. varnishes.

Flooding.—A carburetter is said to be "flooded" when, through a leak in the float, the latter does not close the needle-valve and the chamber consequently becomes filled with gasoline. When such a leak occurs it can be easily stopped by a touch of solder after the gasoline enclosed in the float has been driven out.

Florida Automobile Association.—Dr. F. P. Hoover, Sec., Stockton-Budd Bldg., Jacksonville, Fla.

Florida East Coast Automobile Association.—Daytona, Fla. A. B. Foster, Cleveland, O., Pres.; Geo. E. Sebring, Sebring, O., 1st Vice-Pres.; S. H. Gove, Daytona, Fla., 2nd Vice Pres.; T. E. Fitzgerald, Daytona, Fla., Sec.; F. N. Conrad, Treas. Organized to promote international races, to be held each January on the Ormond-Daytona Beach.

Flower & Co., Walter L.—St. Louis, Mo. Mfrs. flexible tubings.

Flower, A. R.—Vice-Pres. H. H. Babcock Co., Factory Sq., Watertown, N. Y.

Flowers, W. H.—Pur. Agt. American Motor Car Co., Indianapolis, Ind.

Floyd, Robert M.—Gen. Mgr. General Vehicle Co., Broadway and 62nd St., New York City.

Flue.—One of the tubes of a steam boiler through which the hot gases of combustion pass.

Fluid.—A body which flows, which has no definite form and assumes that of the vessel which contains it. Gases come un-

der this definition, and, besides, possess the property of having no definite volume, since they always occupy the largest volume possible.

Fluids, which consequently comprise liquids and gases, are therefore characterized by the mobility of their molecules. Such mobility, moreover, is of the most variable character, and it is impossible to establish an absolute nomenclature of fluids from the fact that there are intermediate bodies which have no determinate form, and which nevertheless could not be termed fluids, such, for example, as syrups, pastes, etc.. Moreover, it is generally possible to bring a body to a fluid state under the effect of an increase of temperature or pressure. The mobility of liquid fluids is characterized by viscosity. It is possible to measure this by counting the number of drops which make their exit in a unit of time from a given orifice and under given conditions. See Viscosity.

Fluke.—The part of an anchor that engages the bottom.

Fluke, F. S.—6036 Woodlawn Ave., Chicago, Ill. Mfrs. lock nuts and washers.

Flurkey Carriage & Trimming Co.—566 Wabash Ave., Chicago, Ill. Mfrs. automobile tops.

Flush.—To clear out a space by passing a liquid through it. The valves of motors are "flushed" with gasoline to wash grit or deposit from the seats. (2) At the same level, forming part of the same surface.

Flush-bolt.—See Bolt. Flush.

Flusher.—A small plunger fitted in the float-chamber of a carburetter for the purpose of ensuring an adequate supply of gasoline vapor. See Ticker.

Flushing Auto Garage.—107 Broadway, Flushing, N. Y. Garage; repairing.

Flutcher, Joe T.—(Gadsden Garage), Gadsden Ala. (Cadillac.) Garage.

Flux.—The total number of lines of force which pass through any given space or cross any given area. (2) A chemical product capable, by its fusibility and reducing oxidizing properties, of acting like borax in the operation of soldering and brazing, or the fusion of metals. Among fluxes are zinc chloride, resin, stearine, borax, cream of tartar, the alkaline fluorides, silicic acid, ground glass, etc. See Zinc, Chloride.

Flying-machine.—See Machine, Flying.

Flynn, James J.—Sole Owner Capitol Hill Garage, 615 B. St., S. E., Washington, D. C.

Flynn, Roger L.—Mgr. Capitol Hill Garage, 615 B St., S. E., Washington, D. C.

Flynn, Walter F.—110 Market St., Youngstown, O. Garage.

Fly-nut.—The same as "wing-nut." See Nut, Wing.

Fly-wheel.—A heavy wheel, called also a "balance-wheel," usually of cast iron, attached to the end of the crank-shaft, and acting as an accumulator of energy, in the form of live power, to carry the piston over the dead-point, and adding also to the smooth running of the car by its tendency to reduce vibration. See Force, Centrifugal.

Foaming.—A technical term for the frothing in a steam boiler due to greasy or dirty water, etc.

Foley & Smith.—Greenburg. Ind. (Jackson. Rambler, Logan.)

Foley, E. T.—Supt. Greene Motor Car Co., 88-90 Washington St., Newark, N. J.

Foley, J. C.—Jerome Ave. and 162nd St., New York City. Garage.

Folitz, M.—Head of Mechanical Dept. E. M. Benford, 497 W. Lincoln Ave., Mt. Vernon, N. Y.

Follower.—Of two wheels in gear, the one to which motion is communicated by the other called the "driver."

Folsom Mfg. Co., C. G.—South Bend, Ind. Mfrs. fenders, tanks, hoods.

Fontaine, Emil.—Treas. Michelin Tire Co., Milltown, N. J.

Foot-brake.—See Brake, Foot.

Foot-pedal.—See Pedal, Foot.

Foot-valve.—See Valve, Foot.

Foot Bros. Gear & Machine Co.—24 S. Clinton St., Chicago, Ill. Mfrs. transmission gears.

Foote, H. L.—Adv. Mgr. Peerless Motor Car Co., 93rd and Quincy Ave., Cleveland, O.

Footstep Bearing.—See Bearing, Step.

Forbes, Allen H.—Amherst, Mass. (Waltham.)

Forbes, Geo.—Union St., Olean, N. Y. (Ford.)

Forbes, J. B.—Forbes Bldg., Coshocton, O. (Winton, Stoddard-Dayton.)

Forbes, S. F.—Pur. Agt. Fairbanks, Morse & Co., Franklin and Monroe Sts., Chicago, Ill.

Force.—In mechanics any cause that produces motion or modifies motion in material bodies. In this sense all known forces have their origin in three causes: (1) gravitation; (3), the unknown cause of heat, light and electricity; and (3), life or the mysterious agency producing motion of animals.

Force, Centrifugal.—The force by which a body revolving about a center, or about another body, has a tendency to recede from it. The centrifugal force of a body describing a circle with a uniform velocity is directly proportional to the square of the velocity, and inversely as the radius of the circle. In the case of a fly-wheel,

$$\frac{\text{velocity}^2 \times \text{weight}}{\text{radius} \times 32} = \text{centrifugal force.}$$

Force, Centripetal.—The force which tends to attract the material points of a revolving system toward the center of rotation.

Let us consider a point revolving about O as a center. It tends to fly off according to the tangent F, but is held back by the cohesion of the revolving body. It must be granted, then, that a force F attracts the point A toward the center; this is centripetal force.

Force, Electromotive.—The electric force which determines the passage of a current in a circuit. An analogy furnished by hydraulics explains the mode of action of the electromotive force.

If we take two communicating vessels, a and b (see figure), a current of water will be set up in the direction shown by the arrow, and the intensity will be directly proportional to the difference in level, and inversely proportional to the resistance offered by the pipe c—a resistance which, in order to be overcome, will absorb a certain quantity of energy.

In like manner, in the case of the electric current, the e. m. f. generates a current; the intensity of which depends on the "difference of potential" between two points and on the electric resistance between such points. This resistance occasions a fall or loss of volts equal to the product of the resistance by the intensity. The e. m. f. and the difference of potential is estimated in volts.

Force, Live.—What is called "live force" or "live power" of a body in motion is the product of its mass by the square of its velocity, say mv^2 .

Force, Magnetizing.—The force necessary to create a given induction in a magnetic circuit.

This magnetic force is so much the greater in proportion as the medium is less permeable, that is to say, opposes itself more to the passage of the lines of force.

Soft iron is very permeable, and cast iron much less so. The air and non-magnetic materials are very slightly permeable.

Force, Magnetomotive.—The magnetic force necessary to cause the passage, in a magnetic circuit of given length, of a flux of induction of given value. The magnetomotive force per unit of length, that is to say, per centimetre, is called the "magnetizing force." Theoretically,

magnetizing forces are estimated in "gilberts," and, practically, in ampere-turns. See Ampere-Turns.

Force, Moment of.—The product of the amount of a force by its perpendicular distance from a given point is called the "moment of the force" about such point. This product is called also "turning moment" and "torque."

Force-pump.—See Pump, Force.

Ford Agency.—127 Franklin St., Norwich, Conn. (Ford.)

Ford Auto Co.—Jefferson Ave., Detroit, Mich. (Ford.)

Ford Auto Co.—688 N. High St., Columbus, O. (Ford.)

Ford, Henry.—Automobile mfr. Pres., Gen Mgr. and Designer Ford Motor

Co. B. Greenfield, Mich., July 30, 1863. Ed. public school President Ford Motor Co., Member A. A. A. Res., 66 Edison Ave., Detroit, Mich. Office, Piquette and Beauvillien Sts., Detroit, Mich. In trade

since 1898. Used first car 1891.

Ford, H. N.—Jamestown, N. D. (Dolson.)

Ford Motor Co.—Detroit, Mich. Makers of the Ford car, first marketed in 1903. Eight models made since. Cap. \$100,000. Henry Ford, Pres., Gen. Mgr. and Designer; John F. Dodge, Vice-Pres.; Jas. Couzens, Sec. Treas.; Thos. Walburn, Supt.; H. Limbach, Purch. Agt.; W. E. Flanders, Factory Mgr.; N. A. Hawkins, Commercial Mgr.

Ford Motor Co.—445-51 N. Broad St., Philadelphia, Pa. (Ford.)

Ford Motor Co.—Kansas City, Mo. (Ford.)

Ford Motor Co.—147 Columbus Ave., Boston, Mass. (Ford.)

Ford Motor Co.—1444 Michigan Ave., Chicago, Ill. (Ford.)

Ford Motor Co.—1913 Euclid Ave., Cleveland, O. (Ford.)

Ford Motor Co.—1721 Broadway, New York City (Ford)

Ford Motor Co.—318 E. 11th St., Kansas City, Mo. (Ford.)

Ford Motor Co.—727 Main St., Buffalo, N. Y. (Ford.)

Ford Motor Co. of Canada, Ltd.—Walkerville, Ont., Canada. (Ford.) Garage.

Ford, S. N.—Pres. Humphreys Mfg. Co., 201 E. 5th St., Mansfield, O.

Ford, W. M.—1227 N. Washington Ave., Scranton, Pa. (Jackson.)

Forefoot.—The foremost piece of the keel of a boat.

Fore 'N' Aft.—Chicago, Ill. Pub. monthly by Howard I. Shaw.

Forest & Malone.—10 Norcross Ave., Rochester, N. Y. (Merkel.)

Forest & Monk.—115 Central Ave., Great Falls, Mont. Garage.

Forest Automobile Co.—St. Louis, Mo. Mfrs. gasoline automobiles. (Oldsmobile.) Garage.

Forest City Brass Works.—Cleveland, O. Mfrs. brass, bronze, aluminum and copper castings.

Forest City Motor Car Co.—101-149 Walnut St., Massillon, O. Makers of the Jewel car; first marketed December, 1904. Five models made since. Cap. \$50,000. H. A. Croxton, Pres. and Treas.; O. P. Bernhardt, Vice-Pres. and Gen Mgr.; W. E. N. Hemperly, Sec.; Chas. Kline, Designer; Chas. Stevens, Supt.; Mark C. O'Connor, Purch. Agt.; J. N. Merwin, Sales Mgr. and Advt. Mgr. Agents and dealers: Andrews & Fite, Georgetown, O. R. S. Anthony, Fresno, Cal. Asay, J. E., Rock Island, Ill. Banfil, W. H., 78 Portland St., Boston, Mass. Beauman, Frank, Lampassas, Tex. Bonney Motor Car Co., 1112 Locust St., Kansas City, Mo. British Columbia Auto Co., Vancouver, B. C. Brown, Chas. A., Woodfield, O. Brown, J. M., Mansfield, O. Bulger, W. J., Oswego, N. Y. Burgener, W. H., Canton, O. Burton, Reeves, Freeport, Ill. Cavin, I. H., McComb, O. Clanton, W. H., Montgomery, Ala. Cox, J. W., Kensington, O. Craig Garage, Toledo, O. Cushman, A. T., Caribou, Me. Forest City Spring Work.—Cleveland, O. Mfrs. leaf springs.

Forest et Cie., G.—32 bvd. Henri IV, Paris, France. Mfrs. acetylene lamps and radiators.

Forest Hill Garage.—Verona and Clinton Ave., Newark, N. J. Repairing.

Foresti Terzo.—4 via Chiaravalle, Milan, Italy. Mfrs. coils.

Forg, Peter.—Park St., Somerville, Mass. Mfr. body irons, gasoline and kerosene burners, sprockets, stampings, tube expanders.

Forge.—A hearth or fireplace, consisting of a cavity lined with fire-clay or brick upon which the ignited fuel is placed and upon the back and sides of which a powerful blast of air is driven by bellows. Forges, constructed so as to be portable, are made for use in garages and automobile repair shops.

Forges de Douai.—52 bvd. Haussmann, Paris, France. Mfrs. pressed steel frames and metallic wheels.

Forges et Ateliers du Nord.—Turcoing, France. Mfrs. pressed steel frames.

Forging.—A metallurgical operation, principally applied to iron and based upon the malleability of metals at appropriate temperatures. The work is effected by means of a tool (anvil) acting as a support for the piece to be forged, and by a tool (hammer) operating as a heavy weight for compressing the piece on the anvil.

Forging, Drop.—A steel or other metallic object forged while hot between dies which are pressed together by means of a drop-hammer.

Fork.—A device for shifting a belt from one pulley to another or for sliding gears into engagement. (2) In a motor-cycle, the part of the machine in which the front wheel revolves.

Forman Motor Mfg. Co.—Dayslane,

Coventry, England. Mfrs. automobile motors.

Formed.—The accumulator plates of the Planté variety are said to be "formed" after they have assumed a spongy character due to a process of repeated charging and discharging the cells. See Cell, Secondary.

Formetal.—A new alloy which is beginning to be used in the automobile industry for the construction of parts which must be able to resist great pulling or twisting strains.

The alloy contains, besides the normal elements of bronzes and brasses, other metals of high mechanical resistance. It can be cast, rolled and drawn in bars of any outline desired. Its resistance to breakage is 43 kilogrammes per square millimetre, or 617 pounds per square inch; its elastic limit, 27 to 28 kilometres per square millimetre, or 386 to 390 pounds per square inch, and its elongation 40 per cent.

Fornaca, Sig.—Engineer and designer, with Sig. Enrico, of the Fiat Automobile Co. (Fabbrica Italiana Automobili Torino), Turin, Italy.

Forry, Ed. S.—120 S. Meridian St., Portland, Ind. (Jewel.)

Forster, C. G.—Vice-Pres. A. O. Smith Co., Milwaukee, Wis.

Forsyth & Davis.—777 Broadway, Kingston, N. Y. Garage. Repairing.

Forsythe Mfg. Co.—308 Terrace, Buffalo, N. Y. Mfrs. stampings.

Forsyth, W. H.—Sec. and Gen. Mgr. Curtain Supply Co., 85-93 Ohio St., Chicago, Ill.

Fort Dodge Automobile Co.—Fort Dodge, Ia. (Cadillac. Pope-Hartford.)

Fortier-Beaulieu jeune.—Roanne, France. Mfrs. non-skids.

Fontin, Geo.—237 Court St., Kankakee, Ill. (Maxwell.)

Fortin Tool Co., B. P.—227 N. Main St., Woonsocket, R. I. Mfrs. special automobile machinery.

Fort Pitt Automobile Co.—Baum St. and Euclid Ave., Pittsburg, Pa. (Stearns, Locomobile, Oldsmobile.) Est. April, 1906. Cap. \$50,000. H. O. Evans, Pres.; Robt. M. Straub, Treas.; Thos. L. McGovern, Sec.; John H. Stubbe, Vice-Pres. Garage, 50 cars; repairing.

Fort Pitt Motor Mfg. Co.—New Kensington, Pa. Mfrs. gasoline automobiles, "Pittsburg Sixes." 4 models, 50 h. p.

Fort Wayne Electric Works.—Fort Wayne, Ind. Mfrs. electric motors.

Fort Wayne Gear Co.—North American Bldg., Fort Wayne, Ind. Mfrs. and jobbers transmission gearing, friction clutches. Cap. \$10,000. Est. 1905. Maurice I. Rosenthal, Pres.; Joseph Fueburger, Vice-Pres.; W. H. Olds, Sec. and Treas.

Fort Wayne Motor Car Co.—Fort Wayne, Ind. (Cadillac.)

Fort Worth Auto Co.—1422 Penn Ave., Fort Worth, Tex. (Elmore, Haynes, Franklin.)

Fosdick Co., Harry.—55 Stanhope St., Boston, Mass. (Atlas.)

Foss, E. N.—Pres. Becker-Brainard Milling Machine Co., 110 Business St., Hyde Park, Mass.

Foss-Hughes Motor Car Co.—221 N. Broad St., Philadelphia, Pa.; 512 Industrial Trust Bldg., Providence, R. I.; Wilmington, Del. (Great Arrow, Cadillac, Baker, Knox.) Storing and general garage work, electrical charging and repairing.

Fossil Wax.—The same as ozokerite, q. v.

Foster & Brown.—Main St., Westbrook, Me. Repairing. Mfrs. torch heaters.

Foster, A. B.—Pres. Nungesser Electric Battery Co., 3519 King Ave. N. E., Cleveland, O.

Foster, C. H.—Mgr. Gabriel Horn Mfg. Co., Cleveland, O.

Foster, Herbert.—Asst. Treas. Franklin H. Kalbfleisch Co., Broadway and 16th St., New York City.

Foster James H.—Vice-Pres. and Gen. Mgr. Hydraulic Pressed Steel Co., E. 61st St., Cleveland, O.

Foster, J. A.—Pres. Davis Automobile Co., Inc.—7 Dorrance St., Providence, R. I.

Fostoria Auto Machine Co.—McDougal and Poplar Sts., Fostoria, O. (Pope-Toledo.)

Forstoria Garage & Motor Co.—123 E. Tiffin St., Fostoria, O. (Franklin, Elmore, Pope-Hartford, Pope-Waverley.)

Foucalt Currents.—See Eddy Currents.

Fouch Disc Wheel Co.—Room 11, Tribune Bldg., Minneapolis, Minn. Mfrs. pressed steel automobile wheels, made in two halves forming the groove for the tire at the rim and complete with the exception of the hub. Cap. \$100,000. C. W. Field, Pres.; F. I. Whitney, Vice-Pres.; James R. Fouch, Sec., Treas. and Mgr.

Fouch, James R.—Sec., Treas. and Gen. Mgr. Fouch Disc Wheel Co., Room 11, Tribune Bldg., Minneapolis, Minn.

Fouche, Ira.—E. 4th St., Ashland, O. (Cameron.)

Fougerat, J. S.—Neuvy-sur-Loire (Nièvre), France. Mfrs. pneumatic rubber and leather tires.

Foullaron, G.—54 rue de Villers, Levallois-Perret (Seine), France. Mfrs. gasoline automobiles.

Founding.—The process of forming an object, such as a motor-cylinder, by casting it in a mould.

Foundry.—Browning Bldg., Cleveland, O. Penton Pub. Co., monthly.

Four-cycle Motor.—A common abbreviation of the expression "four-stroke cycle motor." See Cycle.

Fournier, A.—New London, Conn. (Atlas.)

Fournier, Edouard.—67 rue de Chabrol, Paris, France. Mfr. motorcycles.

Fournier et Pionchon.—42 bis rue de Sevastopol, Lyons, France. Mfrs. steering gears.

Fournier, Henry.—1 Rue du Midi, Neuilly-sur-Seine. Born at Mans, April 13, 1871. He is the celebrated winner of the Paris-Bordeaux and Paris-Berlin races. Fournier was first a mechanic, in

his father's shop at Mans. After many successes gained in cycling Charron took him to Paris and put him in the Clement establishment. This was the starting point of a long series of successes, which are familiar to all. He twice visited

the United States, and on his return thence from his second trip he, in conjunction with Messrs. Civet and Ra-bourdin, organized the Société et Garage Paris-Automobile, which has become one of the best known centers of the automobile industry of the present time. It may be added that Fournier has taken part in motor-boat races, and gained the victory at the Lucerne meeting in 1904, and became this same year the holder of the Gaston Menier Cup.

Fourth St. Automobile Co.—323 E. 4th St., Long Beach, Cal. (Maxwell.)

Four Traction Auto Co.—Mankato, Minn. Mfrs. gasoline commercial automobiles.

Four-way Cock.—See Cock.

Foust & Foust.—Warren, Ind. (Holman.)

Fowler Bros.—Putnam Ave., Greenwich, Conn. (Ford.)

Fowler, C. W.—Pueblo, Colo. (Reo.)

Fowler, Frank.—Springfield, Mass. Garage.

Fowler & Co., John.—Madgeburg, Germany. Mfrs. steam commercial automobiles (Tractors).

Fowler Machine Co.—1781 Middlesex St., Lowell, Mass. Mfrs. gasoline automobile and marine motors.

Fowler-Manson-Sherman Cycle Mfg. Co.—45-7 Fulton St., Chicago, Ill. Mfrs. motorcycles.

Fox, Fred.—Stronghurst, Ill. (Wal-tham.)

Fox Reversible Gasoline Engine Co.—Covington, Ky. Mfrs. gasoline marine motors.

Fox, W. A.—249 3rd Ave. S., Minneapolis, Minn. (Cartercar.)

Fraenkel.—28 rue du Quatre Septem-bre, Paris, France. Mfr. wearing apparel; coats.

Fraleigh Bros.—W. Market St., Rhinebeck, N. Y. Garage.

Frame.—That part of a motor-vehicle which supports the carriage body, motor, and transmission, and to which, beneath, are attached the wheel-axes. Frames are constructed in numerous ways, but, whatever be their material, are usually quadrilateral in contour. In early construction the material employed was drawn steel tubes brazed together, the arrangement being similar to that found in bicycles, but frames built in this manner, having for various reasons been found unsuitable for general automobile use, are scarcely employed at present except for light carriages and motorcycles. Subsequently, greater rigidity and strength was secured by the use of angle-steel, or that of "armored wood," that is to say, wood encased in steel or strengthened by steel fitch-plates, or steel plates bolted to the side-members. Although some manufacturers still adhere to the use of angle-steel and armored wood, the material now almost universally employed is pressed steel, which possesses strength and lightness, in addition to many other advantages. Frames are pressed (sometimes in an entire piece) between dies, from blanks of sheet-steel or hard sheet-steel. Although usually pressed cold, they are sometimes also hot pressed, a method that renders it possible to give them more intricate shapes. The accepted designs at present are those of the pressed steel channel of full width (Fig. 1) at the center and tapering at the front for the purpose of giving a wider range of move-

Fig. 1.

Fig. 2.

ment for the steering wheels and to permit of sharp turning (Fig. 2).

Some leading manufacturers have adopted the practice of dropping the

frame just forward of the rear axle with a view to lowering the center of gravity of the car and bringing the transmission and power shaft in a direct line with the motor; and such practice has recently been carried still farther by giving the frame a double drop, so that the entire center part is at a lower level than the forward and rear end. Some frames are provided with what is termed a "sub-frame," which is usually constructed somewhat lower than the main frame and is designed as a support for the power-plant. See Chassis. (2) Of a boat, the timbers that form the bottom and sides. (3) Of a dynamo, the bed-piece. (4) The supporting parts of a steam engine. (5) A term applied by some manufacturers to one of the side-members of a motor-vehicle frame.

Frame, Cambered.—A motor-vehicle frame, narrowed at the front in order to give the steering wheels wider range of motion and to permit of sharp turning. See Frame (Fig. 2).

Frame, Dropped.—See Frame.

Frame, False.—Same as Sub-frame. See Frame (Fig. 2.)

Frame-hangers.—The same as spring-hangers, q. v.

Frame, Midship.—The traverse section of the maximum width of a motor-boat. The submerged midship frame is that portion of it limited by the plane of the water. In the running of a boat it does not coincide with the midship frame of the hull, but is situated more to the rear, in consequence of a more or less pronounced tendency that a boat has to "squat" at the stern.

Frame, Pedestal.—A motor-car frame provided beneath with U-shaped guides, which embrace the axles, and prevent them from moving in any other than a vertical direction.

Frame, Sub.—See Frame.

Francis, H. M.—Sec. and Treas. General Vehicle Co., Broadway and 62nd St., New York City.

Franco-American Auto Supply Co.—1404-6 Michigan Ave., Chicago, Ill. (Clement-Bayard.) Supply house.

Franco-American Automobile Co.—417 Guy St., Montreal, Canada. Garage.

Franeau, Société Anonyme des Établissements.—15 rue Veyt, Brussels, Belgium. Mfrs. bodies.

Frank, Albert.—Beierfeld, Germany. Mfrs. metallic rims, electric lamps, horns.

Frank, Charles A.—Lawrence, Mass. (Compound.)

Frankfurter Gummiwarenfabrik, Carl Stoeckich.—Frankfurt-Niederror, Germany. Mfrs. pneumatic rubber tires.

Fränkischer Verein für Luftschiffahrt.—(Würzburg Aero Club), Würzburg, Germany.

Franklin Auto Co.—Franklin, Neb. (Holsman.)

Franklin Automobile Co.—Broadway and 73rd St., New York City. (Franklin.)

Franklin Automobile Co.—1450 Michigan Ave., Chicago, Ill. (Franklin.)

Franklin Garage.—1024 Sprague St., Spokane, Wash. (Franklin.)

Franklin Garage.—163 Johns St., Bridgeport, Conn. (Holsman, Crawford.)

Franklin Garage.—Hartford, Conn. Garage.

Franklin Garage.—347 Franklin St., Buffalo, N. Y. Garage.

Franklin, H. H.—Pres. and Gen. Mgr. H. H. Franklin Mfg. Co., 302 S. Geddes St., Syracuse, N. Y.

Franklin, Judge.—Norwalk, Conn. Garage.

Franklin Mfg. Co., H. H.—302 S. Geddes St., Syracuse, N. Y. Makers of the Franklin car; first marketed in 1903. H. H. Franklin, Pres. and Gen. Mgr.; C. H. Stilwell, Vice-Pres.; F. A. Barton, Sec.; H. B. Webb, Treas.; J. Wilkinson, Designer; F. J. Haynes, Supt.; W. G. Lindsey, Purch. Agt.; F. R. Bump, Sales Mgr.; J. E. Walker, Advt. Mgr.

Franklin Moore Co.—Winsted, Conn. Mfrs. bolts and nuts, aluminum, brass, bronze, copper and grey iron castings.

Franklin Motor Co.—Franklin, Pa. (Pope-Toledo.)

Franklin Portable Crane & Hoist Co.—Franklin, Pa. Mfrs. special automobile machinery; portable cranes and hoists.

Franklin, Wm. H.—Hightstown, N. J. (Dragon.)

Frankquist, Edward.—Designer and Supt. Simplex Automobile Co., 614 E. 83rd St., New York City.

Franskin, Felix.—35 rue Memling, Cureghem, Brussels, Belgium. Mfrs. tire pumps.

Frantz Auto Co.—Cherryville, Pa. Mfrs. body rions.

Frantz Body Co., The.—Stanton Ave. and Getz St., Akron, O. Mfrs. automobile bodies and seats. Cap. \$60,000. Est. 1898. J. T. Diehon, Pres.; Louis May, Sec. and Treas.; A. C. Loomis, Gen. Mgr.

Fraser & Reynolds.—214 S. 23rd St., Philadelphia, Pa. (Wayne, American Mercedes.)

Fraser, Charles.—Partner Rittenhouse Garage, 214-20 S. 23rd St., Philadelphia, Pa.

Fraser, H. A.—1010 Broadway, Bay City, Mich. (Waltham.)

Fraser-Hollow Spar & Boat Co.—Greenport, L. I. Mfrs. motor boats.

Frasse & Co., Peter A.—92-4 Fulton St., New York City. Importer tools, machinery, supplies, lubricators.

Frayer-Miller Co.—62nd St. and Broadway, New York City. (Frayer-Miller.) Est. September 1905. H. H. Knepper, Mgr. Repairing Frayer-Miller cars only.

Fraser & Jones Co.—Syracuse, N. Y. Mfrs. malleable iron and steel castings.

Frazier & Frazier.—South Bend, Ind. (Rambler.)

Frederick Co. W. A.—Motor Mart, 16 Columbus Ave., Boston, Mass. (American.)

Frederickson, H. E.—2046-48 Farnham St., Omaha, Neb. (Pierce-Arrow, Buick, Haynes, Wood.)

Fredericksen, Herman-Carl.—39 Roskildevej, Copenhagen, Denmark. Mfrs. motorcycles.

Freeboard.—That part of a boat's side between the water-line and the top of the deck.

Freed, A.—1507 Market St., San Francisco, Cal. (Gale, Merkel, Model.)

Freed & Branford.—Salt Lake City, Utah. (Wayne.)

Freeland Sons Co., B. F.—Sturgis, Mich. Mfrs. gasoline marine motors, tanks, storage tanks.

Freel & Trumpour.—4th and Johnson Sts., Bay City, Mich. (Ford.)

Freeman, A. E.—Pres. Trident Tire Co., 1539 Broadway, New York City.

Freeman, Brewster & McCabe, Inc.—455 Golden Gate Ave., San Francisco, Cal. (Aerocar.)

Freeman, E. J.—Reno, Nev. (National.)

Freeman, F. N.—Gouverneur, N. Y. (Maxwell.)

Freeman, F. P.—Irving St. and Elizabeth Ave., Rahway, N. J. (Ford, Crawford.)

Freeman, Joseph Edwin.—Lawyer. B. Unity, Me., Feb. 14, 1876. Ed. University of Chicago, Ph.B. 1898; Georgetown Law School, L. L. B. 1901, Harvard Law School 1902. President Martini Import Co., Seashore Municipal Railroad Co., director Link Chain Belt Co., Land & Lake Association, Van Ritter Construction Co. Mem. Harvard Club, Bar Association of New York City. Res., 82 Washington Pl., New York. Office, 60 Wall St., New York. Became president of the Martini Import Co. in 1907. Recreations, automobiling, tennis, golf.

Freeman, W. N.—Sec., treas., sales mgr. Mora Motor Car Co., Newark, N. Y.

Freer Gauge Co.—Everett Bldg., Akron, O. Mfrs. gasoline tank gauges.

Freese, A. D.—Nellie, O. (Jewel.)

Freezing.—A term occasionally used in the sense of "seizing." See Seizing.

Fremont Novelty Works.—507 W. State St., Fremont, O. (Pope-Waverley.)

Fremy, E.—57 bvd. du Hainaut, Brussels, Belgium. Mfrs. spark plugs.

French-American Motor Car Co.—40th

St. and Payne Ave., Cleveland, O. Mfrs. gasoline automobiles.

French Battery Co.—Madison, Wis. Mfrs primary batteries.

French Carriage Co.—92 Summer St., Boston, Mass. (Clement-Bayard.)

French Chalk.—See Soapstone.

French, L. E.—205 N. Broad St., Philadelphia, Pa. (Pullman.)

French Mfg. Co.—Grand View Ave. and Robbins St., Waterbury, Conn. Mfrs. brass and copper tubings.

French, O. J.—Concord, N. H. (Waltham.)

French, Warren.—Supt. Badger Brass Mfg. Co., 11th Ave., 36th to 37th Sts., New York City, and Kenosha, Wis.

Frenier & Son, J. H.—Rutland, Vt. (Rambler, Ford.)

Frequency.—The number of periods per second of an alternating current. The form of such current is well known. The "period" consists of two alternances of contrary direction. At low frequencies, lamps, such as arc ones, exhibit luminous fluctuations which are very disagreeable to the eye. In order to prevent these it is necessary to have a frequency of more than 50 periods per second.

Frera, Societa Anonima.—33 via Carlo Alberto, Milan, Italy. Mfrs. motorcycles. (Frera motorcycles.)

Fresche, A.—Pres. New Haven Button Co., New Haven, Conn., and Pres. The F. A. Nieder Co., Inc., Augusta, Ky.

Fréteilliere.—49 rue de Lorraine, Lavallois (Seine), France. Mfrs. elastic wheels.

Fretz, E. S.—Treas. Chadwick Engineering Works, 3207 Spring Garden St., Philadelphia, Pa.

Fretz, E. S.—Sec., treas. and gen. mgr. Light Mfg. & Foundry Co., 509 Queen St., Pottstown, Pa.

Freund, Gustav.—10 Georgenstrasse, Berlin, Germany. Mfrs. radiators.

Freyer, Chas. H.—Marietta, Ga. (Reo.)

Friction.—The resistance offered to the motion of a body when pressed upon the surface of another body, which does not partake of its motion. Friction is of two kinds: (1), "sliding," as when one body glides over another, as in the motion of an axle in its bearing; and (2), "rolling" friction, which occurs when one body rolls over another, as in the case of an ordinary wheel.

Friction is directly proportional to the pressure of the two surfaces against each other. The ratio of the force which must act merely to overcome friction to the pressure is called the "co-efficient of friction."

Friction-brake Contact.—See Ignition.

Friction-clutch.—See Clutch, Friction.

Friction-coupling.—See Coupling, Friction.

Friction-drive.—A system of transmission in which a wheel engages the flat surface of a disk and transmits power by pressure being brought to bear upon the contact surfaces (Fig. 1).

Fig. 2.

Fig. 1.

Another form of friction drive (Fig. 2) consists of two driving disks, the wheel bearing against both, so that its movement is more positive and there is less danger of slipping.

Friction-gear.—See Gear, Friction.

Friction-rollers.—Small wheels used to support the axle of a larger wheel.

Friction, Rolling.—See Friction.

Friction, Sliding.—See Friction.

Friction-wheel.—See Wheel, Friction.

Frictioned.—A term applied in the rubber tire industry to a fabric which has been impregnated with rubber.

Fridenstine, Fred.—Supt. rep. dept. of H. M. Leonard, 625 Broad St., Elyria, O.

Fried-Krupp Aktien Gesellschaft Germania Werft.—Kiel, Germany. Mfrs. steam commercial automobiles. (Krupp trucks)

Friedlander & Bro., Joseph.—8 Maiden Lane, New York City. Mfrs. eye shields.

Friedrichs und Engelking.—Brackwede, bei Bielefeld, Germany. Mfrs. metallic rims

Friedrich Wilhelm Bertram Söhne.—Remscheid, Germany. Mfrs. tops.

Friel, W. J.—Portsmouth, O. (Ford.)

Fries & Co.—89-93 Main St., Buffalo, N. Y. Mfrs. brass couplings, brass pipe, fittings, brass and copper metals, aluminum and brass castings.

Friet, Otto.—Treas. Empire State Motor Co., 2148 Broadway, New York City.

Frisbie Motor & Machine Works.—Middletown, Conn. Mfrs. gasoline automobile and marine motors.

Fritton, Edward J.—Supt. Covert Motor Vehicle Co., 57-61 Richmond Ave., Lockport, N. Y.

Fritts Hardware Co., T.—Chattanooga, Tenn. (Waltham.)

Fritts, W. H.—Vice-Pres. Kirchdorfer Auto Co., 1700-2 Baxter Ave., Louisville, Ky

Fritz Bros.—19 N. 6th St., Zanesville, O. (Winton, Cadillac.)

Fritz, J. S.—Cambridge, O. Est. July, 1906. Garage, 10 cars. Repairing.

Froelich, Jesse.—Treas. and sec. Times Square Auto Co., 1599-1601 Broadway, New York City.

Froelich, Morris.—Pres. Times Square Auto Co., 1599-1601 Broadway, New York City.

Frohman, Harry.—Sec. The Cincinnati Electric Tool Co., 650-652 Evans St., Cincinnati, O.

Frohman, Sidney.—Sec. Sandusky Foundry & Machine Co., Sandusky O.

Frolicher, John.—Supt. Reliance Automobile Co., 547-57 Fulton St., San Francisco, Cal.

Frommeyer, R. E.—Officer in Schaeffer & Budenburg, Mfg. Co., Foxboro, Mass.

Frontier Automobile Service Co.—437 Pearl St., Buffalo, N. Y. Garage.

Frontier Brass Foundry Co.—Whitney Lane, Niagara Falls, N. Y. Mfrs. brass castings.

Frost, F. E.—505 Main St., Worcester, Mass. (Pierce Racine.)

Froussart, G.—Charleville (Ardennes), France. Mfrs. jacks

Früs, Jul.—6 Osterfarimagsgade, Copenhagen, Denmark. Mfr. tire pumps.

Fry, John E.—1562 Broadway, Denver, Colo. (Apperson.)

Fry, Thomas C.—Sec. and treas. T. C. & W. L. Fry Co., 201 Brighton Ave., Rochester, Pa. (Haynes.)

Fry Co., T. C. & W. L.—201 Brighton Ave., Rochester, Pa. Mfrs. spark plugs. Cap. \$10,000. Est. 1907. John A. Miller, pres.; Thos. C. Fry, sec. and treas.; W. L. Fry, mgr

Fry, W. L.—Mgr. T. C. & W. L. Fry Co., 201 Brighton Ave., Rochester, Pa.

Fudge, Chas. B.—Vice-pres. Muncie Auto Parts Co., Elliott St. and L. E. & W. Yards, Muncie, Ind. (Columbus.)

Fudge, L.—Farmersville, O. (Holman)

Fueburger, Jos.—Vice-pres. Fort Wayne Gear Co., North American Bldg., Fort Wayne, Ind.

Fuhrman & Schmidt.—Commerce St., Shamokin, Pa. Garage.

Fulcrum.—The prop. support, or fixed point upon which a lever is sustained and about which it is supposed to turn freely.

Fuller & Thornton.—2028 Sansom St., Philadelphia, Pa. (Simplex.)

Fuller, Alvan T.—Motor Mart, Park Sq., Boston, Mass. (Packard, Cadillac.)

Fuller & Sullivan.—19 E. Elliott St., Boston, Mass. Mfrs. miscellaneous wearing apparel.

Fuller Co., The G. W.—182 Asylum St., Hartford, Conn. Mfrs. auto trunks and auto racks.

Fuller Co., The.—1619 Broadway, Detroit, Mich. Mfrs. gasoline commercial automobiles.

Fuller, E. B.—Sec. Haverhill Fire Appliance Co., office 40 Merrimack St., factory Island Park, Haverhill, Mass.

Fuller, E. D.—St. Albans, Vt. Garage.

Fuller & Son, John C.—Woodland Works, Wick Lane, Bow, London, England. Mfrs. coils and storage batteries.

Fuller's Earth.—A kind of clay which readily absorbs grease. It is employed for dressing clutch-leathers to prevent them from slipping, particularly if there is any oil upon them.

Fulgarus Gjuleri & Mekineriverk-stadsaktiebolag.—Upsala, Sweden. Mfrs. automobile motors.

Fulmen, Société Nouvelle de l'Accumulateur.—18 quai de Clichy, Clichy, France. Mfrs. storage batteries.

Fulmer, C. F.—Plainfield, N. J. Mfrs. air compressors, spark plugs and spark timing devices.

Fußer, W. H.—Flemington, N. J. (Dolson.)

Fultcher, Joe T.—Gadsden, Ala. Gadsden Garage. (Cadillac.)

Fulton Automobile Co.—103 N. Pryor St., Atlanta, Ga. Garage.

Fulton Foundry & Machine Works.—25 Furman St., Brooklyn, N. Y. Mfrs. gray iron castings. Pattern makers.

Fulton St., Garage Co.—Toledo, O. Garage.

Fulton, Thomas.—Washingtonville, N. Y. Garage.

Funnel.—A conical vessel terminating below in a spout and used for pouring liquid into a vessel which has a small opening. See Tun Dish.

A funnel for gasoline should have an involute rim and a strainer of fine gauze for preventing the entrance of dirt, pebbles, etc., into the vessel to be filled. The involute rim tends to prevent the liquid from spattering over the part of the body that contains the funnel.

Funk Engineering Co.—39-45 14th St., Hoboken, N. J. Mfrs. automobile forgings, crankshafts, gearblanks, German chrome nickel steels, axles, steering knuckles, Bischoff steel connecting rods, etc. Cap., \$100,000. R. W. Funk, pres. and gen. mgr.; Hans Bockhacker, sec. and treas.

Funk, R. W.—Pres. and gen. mgr. Funk Engineering Co., 39-45 14th St., Hoboken, N. J.

Funk, Upton.—Shippensburg, Pa. (Monarch.)

Fur.—The same as boiler "scale." See Scale.

Furan, Société des Ateliers du.—4 rue Barrouin, St. Étienne, Paris, France. Mfrs. transmission gears, automobile motors.

Furbish, Fred A.—28-34 River St., Rumford Falls, Me. Garage.

Furnace, Electric.—An arrangement whereby materials can be submitted to the heat of an electric arc.

Furnish, Ed.—Asst. Supt. Gilbert Mfg. Co., New Haven, Conn.

Fuse.—A piece of metal or wire, called also a "safety fuse," inserted in an electric circuit, of smaller section, or of lower melting point than the connecting wires, so that in case of an excessive current passing, the fuse melts before any damage has been done to the other wires, or to the apparatus.

Fuse-wire.—See Fuse.

Fusibility.—The property by which solids assume a fluid state. The following are the fusing points of some of the metals: Steel, 2550° F. or 1400° C.; aluminum, 1110° F., or 600° C.; bronze, 1650° F., or 900° C.; copper, 1930° F., or 1054° C.; brass, 1860° F., or 1015° C.; soft iron, 2912° F., or 1600° C.; gray iron, 2228° F., or 1220° C.; tin, 443° F., or 226° C.; lead, 635° F., or 335° C.; platinum, 3247° F., or 1775° C.; zinc, 773° F., or 412° C.

Fusible Plug.—See Plug, Fusible.

Futer, B. Franklin.—213 N. Duke St., Lancaster, Pa. (Maxwell, Acme.) Est. Jan., 1904. Garage, 50 cars. Repairing.

Futtocks.—The timbers between the floor timbers and top timbers of a boat.

Fyke, C. V.—Vice-Pres. and Sec. W. R. Demster Machinery Co., N. W. cor. 16th and Walnut Sts., Kansas City, Mo.

G

g.—Symbol for the acceleration produced by gravity, i. e., about 32.2 feet per second.

G. & J. Tire Co., The.—549-625 E. Georgia St., Indianapolis, Ind. Mfrs. automobile, bicycle and motorcycle tires. Member M. & A. M. J. D. Anderson, Pres.; E. S. Benson, Sec. and Treas.; G. H. Hamilton, Sales Mgr. Branches: Boston, Chicago, Cleveland, Detroit, New York, San Francisco. Distributing Agencies: G. & J. Tire Agency, 1528 Court Pl., Denver, Colo.; G. & J. Tire Co., 912 Main St., Buffalo, N. Y.; G. & J. Tire Agency, 711 N. Broad St., Philadelphia, Pa.; Western Rubber and Supply Co., 1010 S. Main St., Los Angeles, Cal.; Omaha Rubber Shoe Co., 11th and Farnum Sts., Omaha, Neb.; Pittsburg Rubber Co., 913-915 Liberty Ave., Pittsburg, Pa.; Enterprise Rubber Co., 110 Federal St., Boston, Mass.; Alexander Elyea Co., 35 N. Pryor St., Atlanta, Ga.; C. H. Mead Supply Co., Portland, Ore.; Plant Bros., 21 S. 2d St., Minneapolis, Minn.; Central Rubber Co., 84 Lake St., Chicago, Ill.; Syracuse Rubber Co., 212-14 S. Clinton St., Syracuse, N. Y.; Rochester Rubber Co., 55 Main St., E., Rochester, N. Y.; Jerome P. Parker Co., 181-3 Madison St., Memphis, Tenn.

Gab.—In a steam-engine, the hook on an eccentric-rod catching on the rock-shaft pin, in a valve-motion.

Gabillon, Jules-Ernst.—218 Chausée de Mons, Brussels, Belgium. Mfrs. radiators.

Gable, A. M.—18 E. Independent St., Shamokin, Pa. (Stanley.)

Gable, Frank.—Box 143, Alamosa, Colo. Est. 1903. Frank H. Gable, Prop. Garage to house 20 cars; repairing.

Gabriel Horn Mfg. Co.—1407 E. 40th St., N. E., Cleveland, Ohio. Mfrs. exhaust horns, shock absorbers and muffler cut-out valves. Member M. & A. M.

Gaeth Automobile Co., Inc., The.—2553 W. 25th St., Cleveland, O. Makers of the Gaeth car; first marketed in 1901. Eleven models made since. Cap. \$100,000. Paul Gaeth, Pres., Gen. Mgr. and Designer; R. E. Hawkins, Vice-Pres. and Sales Mgr.; Frank L. Pierce, Sec. and Treas.

Gadot, A.—90 route de la Révolte, Levallois, France. Mfr storage batteries.

Gaeth, Paul.—Pres., Gen. Mgr. and Designer The Gaeth Automobile Co., Inc., 2553 W. 25th St., Cleveland, Ohio.

Gaffney, E. P.—Pres. Pacific Coast Auto Co., 1416 Broadway, Seattle, Wash.

Gage Bros.—Lakefield, Minn. (Monarch.)

Gagemobile Co.—Saratoga Springs, N. Y. (White.)

Gaggenau, Süddeutsche Automobifabrik.—Gaggenau, Baden, Germany. Mfrs. gasolene automobiles. (Gaggenau cars.)

Gailey Bros.—Cardiff, Md. (Waltham.)

Gaillard's Auto Repair Sta.—265 Havemeyer St., Brooklyn, N. Y. Garage.

Gaines & Whitesell.—1207 Main St., Richmond, Ind. (Stoddard-Dayton, Maxwell, Holsman, White, Pope-Waverley.)

Gainsville Automobile Co.—Gainsville, Fla. Garage.

Gaiser's Garage.—103 Main St., Niagara Falls, N. Y. Garage.

Gaither-Owen Co.—40 W. 60th St., New York City. Mfrs. carbureters.

Gaiter.—See Sleeve. Tire.

Gaither, Wm.—28-30 N. Fountain Ave., Springfield, Ohio. (Franklin, Mitchell.)

Galalith.—A non-inflammable substitute for celluloid, made from casein (or albumin of milk), mixed with chalk or metallic bases. The mixture, made insoluble with formol and then laminated and compressed, can be bored, turned, sawed and polished. It has the appearance of celluloid or horn and can be used for the manufacture of various automobile accessories.

Gale Auto Co.—Prairie St., Galesburg, Ill. (Gale.)

Gale Garage.—1915 S. Hoover St., Los Angeles, Cal. (Gale.)

Gale, John A.—Pres. White Agency, 176 State St., Binghamton, N. Y.

Galena Auto & Garage Co.—Cor. 9th and Main Sts., Galena, Kan. (Pope-Toledo, Pope-Hartford, Northern, Reo.) Est. June 1, 1907. Cap. \$20,000. B. Cooley, Pres. and Treas.; O. W. Sparks, Vice-Pres.; G. H. Cooley, Sec. Garage, 100 cars; repairing.

Gall and Inglis.—Edinburgh, Scotland. Maps.

Gallagher, F. L.—Gen. Mgr. Modern Tool Co., 4th and State St., Erie, Pa.

Gallaher, Edward Beach.—Manager American Branch of the Maja Company, Ltd. B. Paris, France. April 28, 1873.

Ed. New York private schools, Stevens' Institute of Technology (degree of M. E., class 1894). Mem. Touring C. of France (Délégue a New York), Touring C. of Suisse (Délégue pour U. S.), American Society Electrical Engineers, N. Y. Athletic, A. C. A., Larchmont Yacht, N. Y. Press, The Hermit (Cleveland, O.), Aero C. A. Res., Hotel Regent, 70th St. and Broadway; Office, 228-230 W. 58th St., New York City.

Gallagher, J. C.—The Rathburn House, Elmira, N. Y. (Haynes.)

Galloway, G. W.—322 Pearl St., New York City. Mfrs. grease, oils.

Gallerand, H.—Nogent-le-Rotrou, Eure-et-Loire, France. Mfrs. tops.

Galley.—The cooking room on board a boat.

Gallia Electric Co.—43 E. 52nd St., New York City. Garage.

Galloway & Co., W.—Gateshead, England. (Stanley.)

Galloway Co., Wm.—Waterloo, Iowa. (Cadillac.)

Galoisy, Emile.—6 passage d'Isly, Levallois, Seine, France. Mfrs. pressed steel frames.

Galt, C. H.—Agent and Mgr. Carter-car Co., 7 W. 66th St., New York City.

Galvanized Iron.—See Iron, Galvanized.

Galvanizing Co.—525 N. Front St., Philadelphia, Pa. Mfrs. bolts and nuts, carburettors; galvanizing, angle, channel and tee iron and steel; bar iron and steel; washers.

Galvanometer.—An instrument for detecting an electric current, or, within certain limits, for measuring its value. It consists, in principle, of a magnet performing the part of a magnetized needle and a coil through which the current passes. The more intense the current, the greater the deflection or elongation of the needle.

Galveston Motor Car Co.—Galveston, Tex. (Rapid.)

Galvin Co., The J. F.—74-8 Fort St. E., Detroit, Mich. Mfrs. brass, bronze, aluminum and copper castings, gasoline strainers.

Game, Ltd., A. W.—Holborn, London, E. C., England. Mfrs. wearing apparel, coats, hats and caps, fur coats, fur hats and caps; goggles.

Gangloff Fils.—10 bdv. Helvetique, Geneva, Switzerland. Mfrs. bodies.

Gans, E. W.—Treas. and Gen. Mgr. Reliance Motor Car Co., 89 Fort St., E., Detroit, Mich.

Gap, Air.—See Air-gap.

Gap, External.—The same as spark intensified or spark-gap.

Gap, Spark.—See Spark-gap.

Garage.—A depot for the storage (and sometimes repair) of motor vehicles.

Like the terms "chauffeur" and "chassis," "garage" is a loan-word from the French.

Garage Anglo-Mexicano.—Calle de Providencio, Mexico City, Mex. Garage.

Garage Equipment Co.—Milwaukee, Wis. Mfrs. brake locks, brakes, muffler cut-out valves.

Garage Italiano.—Calle de San Diego y Colon, Mexico City, Mex. Repairing.

Garage Metropolitano.—Avenida Patoni y Calle Iturbide, Mexico City, Mex. (Darracq. Brasier, Itala, Cameron, Royal, Stearns, Triumph.)

Garboard.—One of the planks of a vessel's bottom next to the keel.

Garboard-strake.—The row of planks nearest to the keel on the outside of a vessel's bottom.

Garcia, Gomez.—22 Uyvalencia, Barcelona, Spain. Mfr. pneumatic tires.

Gardam & Son, Wm.—45-51 Rose St., New York City. Mfrs. special parts, machine work to order. Cap. \$10,000. Est 1870.

Garden City Garage.—Garden City, N. Y. (American Mercedes.)

Garden City Spring Works.—2000 Purple St., Chicago, Ill. Mfrs. leaf springs.

Gardiner Garage, Arthur.—S. E. Cor. Wisconsin and Exchange Sts., Kenosha, Wis. Garage.

Gardiner Metal Co.—454-6 W. Lake St., Chicago, Ill. Mfrs. babbitt metals, solder.

Gardiner, R. L.—Pulaski, Va. (Wal-tham.)

Gardner & Shearer.—6 Avenida Juarez, Mexico City, Mex. (Franklin.)

Gardner, Lawrence H.—Sec. Geo. N. Pierce Co., 1651 Elmwood Ave., Buffalo, N. Y.

Gardner Motor Co.—4388 Olive St., St. Louis, Mo. Repairing.

Gare Patent Tyre & Wheel Co., Ltd.—15 St. Vincent St., Liverpool, England. Mfrs. pneumatic tires.

Garfield Automobile Co.—1199 Garfield Boulevard, Chicago, Ill. Garage.

Garfield Park Automobile Co.—1891 W. Harrison St., Chicago, Ill. (Lambert.)

Garford, Arthur Lovett.—Manufacturer automobiles and parts. B. Elyria, O., Aug. 4. 1858. Ed. Elyria public school; graduated 1875. President and director of the Garford Co., Cleveland Automatic Machine Co., the Republican Printing Co., the Factory Mutual Insurance Co., director the Perry-Fay Co., the American Lace Co., the Garford Motor Car Co., of New York; the Garford Motor Car Co., of Cleveland; the Worthington Co., the Savings Deposit Bank & Trust Co., member Engineers, of New York; Union, of Cleveland; Elyria Country. Res., 509 Washington Ave., Elyria, O. Office. The

Garford Co., Elyria, O. In the trade since 1901. Used first car 1902. President of Elyria Chamber of Commerce. Trustee of Elyria Library and Memorial Hospital Assn. Recreations, golf and motoring.

Garford Co., The.—Elyria, O. Makers of the Garford car; first marketed in 1903. Five models made since. A. L. Garford, Pres.; Hayden Eames, Gen. Sales Mgr.; C. E. Hadley, Gen. Mgr.; F. N. Smith, Treas.; Carl Neracker, Designer; W. W. Austin, Supt.; F. E. Lytle, Purch. Agt. Branches: The Garford Motor Car Co., Cleveland, O.; A. R. Davis, Sec. and Gen. Mgr. The Garford Motor Car Co. of N. Y., W. B. Hurlburt, eGn. Mgr.

Garford Co.—Elyria, O. Mfrs. axles, brakes, channels, chassis, clutches, automobile gear cases, differential gears, transmission gears, levers, hubs, distance rods, running gears, sprockets, steel wool, steer-wheels, wire wheels.

Garford Motor Car Co., The.—Cleveland, O. (Garford.)

Garford Motor Car Co. of New York.—1540-2 Broadway, New York City. (Garford.) Est. 1899. Cap. \$300,000. W. B. Hurlburt, Pres. and Gen. Mgr.; C. R. Teaboldt, Sec., Treas. and Asst. Mgr.; S. J. Wise, Sales Mgr. Repairing.

Garland, R. F.—St. Paul, Minn. (Maxwell.)

Garlick-Auto Prop. Co.—Madison Ave. and Broadway, Paterson, N. J. Mfrs. jack. (Mason, Cadillac, Franklin, Haynes.)

Garlock & Co., O. J.—Palmyra, N. Y. (Peerless.)

Garlock Packing Co., The.—534 Elliott Sq., Buffalo, N. Y. Mfrs. packing.

Garner, A. B.—Sec., Vice-Pres. and Treas. Murphy Varnish Co., Newark, N. J.

Garnet-paper.—A kind of sand-paper used as an abrasive.

Garnier, E.—19 rue de la République, Orleans, France. Mfr. tire pumps.

Garnier, P.—16 rue Taitbout, Paris, France. Mfr. speed indicators.

Garrabrant, Arthur L.—Newark, N. J. (Haynes.)

Garret Engine Works.—Quincy St., Garret, Ind. Repairing.

Garretson Auto & Cycle Co.—132 Main St., Somerville, N. J. (Franklin, Oldsmobile.)

Garrity & Co., T. C.—Vesper, Kan. (Waltham.) T. C. Garrity, Gen. Mgr. Repairing.

Garrity, T. C.—Buyer and Mgr. T. C. Garrity & Co., Vesper, Kan.

Garrod, W. J.—Supt. and Pur. Agt. Holsman Automobile Co., 662 Monadnock Block, Chicago, Ill.

Gartin, Burt & Adams.—Salida, Colo. (Franklin.)

Gartland, H. J.—Pres. Scovill & Peck, 15 Wooster St., New Haven, Conn.

Garvin Machine Co.—Spring and Varick Sts., New York City. Mfrs. special automobile machinery, circulation pumps.

Gas.—A general term for all those elastic fluids which are permanent under a considerable pressure, and at the temperature of zero of Fahrenheit. In many of them, however, by the joint influence of excessive cold and pressure, the repulsive state of the particles may be balanced or subverted so as to transform the elastic gas into a liquid or solid. The volume of any gas is, generally speaking, inversely as the pressure to which it is exposed. Thus, under a double pressure its bulk becomes one-half; under a triple pressure, one-third, and so on. All gases expand the same quantity by the same increase of temperature, which from 32°

180
to 212° F. = $\frac{480}{180} = 2.3$, or 100 volumes becomes 1.375. For each degree of Fahrenheit the expansion is $\frac{1}{480}$.

Gas-carbon.—See Carbon, Gas.

Gas-engine.—A term often used as a synonym for internal combustion motor, but, properly, a motor using gas supplied by a separate plant.

Gas Engine, The.—514 Main St., Cincinnati, O. Pub. monthly by The Gas Engine Pub. Co.

Gas Engine & Power Co. & Chas. L. Seabury Co.—Morris Heights, N. Y. Mfrs. steam engines, motor boats. body irons, gasolene marine motors.

Gas, Producer.—A mixture consisting essentially of hydrogen, oxides of carbon, nitrogen, etc., formed by blowing air through red-hot coke, coarse coal, or other carbonaceous fuel. It is used for driving gas-engines.

Gasket.—A ring of compressible material, such as sheet asbestos, soft metals or copper, inserted between joints to make them gas or water-tight.

Gasket Supply Co.—1516 Sansom St., Philadelphia, Pa. Mfrs. gaskets.

Gaskins, R. L.—Suffolk, Va. (Maxwell.)

Gasolene.—A volatile distillate from crude petroleum, possessing a specific gravity ranging from the highest grade of about 88° Baumé down to 68°, or with a specific gravity range in the ordinary hygrometer-scale between 0.68 and 0.70. That having a specific gravity of 76° B., or .68 to .70, is the usual internal-combustion motor fuel. The boiling-point of gasolene ranges from 120° to 250° F., with an average range between 149° and 194° F. The vapor of gasolene is 3.05 times as heavy as that of air. Its calorific power is between 18,000 and 20,000

British thermal units. It is popularly supposed that gasoline is an explosive and will "go off" like gunpowder at the touch of a spark, but the fact is that while it will readily ignite from a blaze and burn, it will not "explode," although, when vaporized and mixed with air in the proper proportions, it will, when ignited in the cylinder of a gas-motor, produce a violent expansion of the gas, erroneously called an "explosion."

When gasoline accidentally catches fire the only thing to be done is to smother the flame. The most effectual way to do this is to throw dry sand or salt upon it. In all places where gasoline is stored a quantity of sand or salt should be kept on hand for such an emergency.

Gasoline sometimes contains a certain amount of water, which can be entirely removed from it by straining it through a large funnel fitted with a chamois skin before filling the tank. This not only removes the water, but also any particles of dirt that might be present, and which, working their way into the carburetter, would have a tendency to obstruct the spray nozzle, while water, in any appreciable quantity, would affect the operation of the carburetters. See Naphtha.

Gas Power.—St. Joseph, Mich. Pub. monthly by the Gas Power Pub. Co.

Gassing.—See Boiling.

Gassman, E.—Chief Ingenieur, Lavalette & Co., 112-14 W. 42nd St., New York City.

Gast, Madam du.—(Widow of Camille Crespin du Gast); 12 Rue Leroux, Paris.

A noted sporting woman; drove an automobile in the Paris-Berlin, Paris - Vienna and Paris-Madrid races. Has made numerous balloon ascensions, experiments in hovering flight, and parachute descents. Made captain of river

navigation and ran the Algiers-Toulon race in the "Camille." She is an ardent horsewoman and has won numerous prizes and medals in France and Belgium. She is a member of numerous sporting societies.

Gate.—The channel, called also "in-gate," "tedge," "runner" and "sprue," by which metal is poured into a mould.

Gate-quadrant.—See Quadrant, Gate.

Gate-valve.—See Valve, Gate.

Gate City Motor Car Co.—708 Empire Bldg., Atlanta, Ga. (Dragon.)

Gate City Motor Car Co.—815 Main St., Keokuk, Ia. (Nationai, Rambler.)

Est. 1904. L. H. Ayer, Jr., Mgr. Repairing.

Gates, Clyde A.—Sec. and Mgr. Sioux Falls Auto & Supply Co., 112-14 N. Main St., Sioux Falls, S. Dak.

Gates, C. S.—Westminster St., Bellows Falls, Vt. (Ford, Rambler, Jackson.) Supplies, repairs.

Gates, Geo. W.—35 Aren St., Hartford, Conn., and Windsor Locks, Conn. (Pope-Waverley, Franklin.) Garage.

Gates, L. Frank.—Oshkosh, Wis. (Premier.)

Gates, M. C.—Treas. Baldwin Chain & Mfg. Co., 199 Chandler St., Worcester, Mass.

Gathout, Chas. W.—160 Broad St., Newark, N. J. (Jackson.)

Gauge.—A synonym for "tread" and "track," q. v.

Gauge-cock.—See Cock, Gauge.

Gauge-lamp.—See Lamp, Gauge.

Gauge, Micrometer.—A form of screw gauge made with jaws sufficiently wide to permit of its use as a caliper for measuring with great accuracy the external dimensions of objects.

Gauge, Plate.—A gauge with notches of known width for gauging the thickness of plates.

Gauge, Plug.—A cylindrical piece of metal accurately turned to a given size and used as a standard of measurement.

Gauge, Pressure.—A device for showing the actual air pressure in a pneumatic tire. (2) See Manometer.

Gauge, Steam.—An instrument for showing the pressure of the steam within a boiler.

Gauge, Water.—A dial fixed to the dash of a motor vehicle and showing the pressure of the water in the circulating system due to the pump. (2) An instrument for showing the height of water in a steam boiler.

Gauge, Wire.—A tool for measuring the diameter of round wire, of the thickness of metal plate. The numbers and diameters, in fractions of an inch, of some of the principal sizes, according to the American gauge are: No. 0, .325; No. 1, .289; No. 2, .257; No. 4, .204; No. 6, .162; No. 8, .128; No. 10, .102; No. 12, .08; No. 14, .064; No. 18, .0508; No. 20, .03196; No. 25, .0179; No. 30, .01.

Gauger, Grant.—229 Court St., Kanakee, Ill. Garage.

Gaulios Tire Co.—1739 Broadway, New York City. Mfrs., Jobbers and Agents, tires, tubes and tire accessories. Est. 1905. R. H. Weaver, Mgr.

Gausler & Starr.—Philadelphia, Pa. Mfrs. automobile robes.

Gauss.—The C. G. S. unit of magnetic induction or magnetic flux.

Gausset, Fernand.—5 rue du-Jardin-Botanique, Liege, Belgium. Mfrs. wearing apparel, fur hats, caps, coats.

Gauthier et Trentelivres.—30 rue de Malines, Brussels, Belgium. Mfrs. coils, chains, lubricators, oil and acetylene lamps.

Gauthier Frères.—38 rue Balay, St. Etienne, France. Mfrs. differential gears.

Gautier & Co., D. G.—20 Cliff St., New York City. Mfrs. drop forgings, gear blanks, chrome-nickle steel.

Gautier, Paul.—11 rue Taine, Paris, France. Mfrs. automobile motors and transmission gears.

Gauze, Wire.—A fabric woven from wire and used as a straining material in funnels, etc.

Gavitt Auto & Supply Co.—Newton, Kan. (White.)

Gawthorp & Wister.—244 N. Broad St., Philadelphia, Pa. (Elmore.)

Gay et Bourgeons.—63 rue Louis-Blanc, Lyon, France. Mfrs. tubular frames.

Gay, R. A.—Effingham, Ill. (Waltham) Est. 1905.

Gay, R. H.—Sec. Columbia Lubricant Co. of New York, 78 Broad St., New York City.

Gay, Tony.—Thoissey, Ain, France. Mfrs. wearing apparel, fur hats, caps and coats.

Gaylord Co., F. L.—Ansonia, Conn. Mfrs. brass, bronze, aluminum and copper castings, tire chains.

Gaylord, E. P.—Prop. Ideal Carriage Washer Co., 383 Main St. E., Rochester, N. Y.

Gaylord, H. B.—Advt. Mgr. Ideal Carriage Washer Co., 383 Main St. E., Rochester, N. Y.

Gazzetta Dello Sport.—Pub. at 10 via Santa Radegonda, Milan, Italy.

Gear, Annular.—A gear-wheel, called an "internal gear," provided with teeth on the inner side of its rim.

Gear, Balance.—See Gear, Differential.

Gear, Bevel.—A gear-wheel, called also "conical gear," cut upon the surface of a cone or part of a cone and used for transmitting motion at an angle.

Gear, Cam.—The gear employed to drive a camshaft.

Gear-case.—The box or case containing the gear-change mechanism.

Gear, Change-speed.—A system of gear-wheels which permits the driving

shaft to be driven at varying velocities

while the velocity of the motor-shaft remains constant.

Gear, Change-speed, Magnetic.—An arrangement in which the change of speed is effected by means of magnetic plates, with which each speed is provided. The magnetic gear, which may be made either for a cardan or chain drive, is arranged as follows (see figure): Two plates of magnetic steel are placed opposite each

other at a short distance. One of the two is hollowed out to contain the winding necessary to pass a current of electricity round it and magnetize it. When this current, which is produced by a dynamo or accumulators, is allowed to pass through the wire, the two plates are attracted in a manner sufficiently powerful to obtain adherence. The pinions remain always in gear, but are free to revolve round the first speed shaft, except when the two plates corresponding to each separate speed are attracted together magnetically. Since the first speed pinion is attached to one of the plates, and since the other plate is attached to the first speed shaft, it will be seen that when these two plates adhere together the first speed pinion corresponding to them becomes operatively connected to the first speed shaft and drives the second speed shaft, which, in its turn, actuates the differential gear and turns the road wheels.

Gear, Clash.—The same as "sliding gear, q. v."

Gear, Compensating.—The same as

Gear, Conical.—The same as bevel-gear.

Gear, Crypto.—The same as planetary gear, q. v.

Gear Cutters.—Milling wheels or circular-toothed cutters used for forming or finishing off the teeth of gear-wheels.

Gear, Differential.—A mechanism, called also "balance gear" or "compensating gear," permitting the wheels of an automobile to revolve at different speeds

when turning a corner, and consisting of a train of mechanism connecting the two halves of the rear, or driving axle, with the shaft which transmits the power from the motor. The gear is so constructed that both driving-wheels revolve together when running straight forward.

The accompanying figure shows a bevel differential forming part of the change-gear in a chain-driven car. The separate shafts, 1 and 2, respectively, are

operatively connected to the driving-wheels by chains driving on pinions at the end of each shaft. At their interior end they carry planet bevels, 6, movable on the arms, 3, 3, of a spider mounted loose on the ends of the shafts, 1 and 2, to the interior of the bevel-pinions. This spider is driven by the case 4, or the differential box, on which pivot the arms 3. The box, 4, is operatively connected with the wheel, 7, driven by the pinion, 5. The box terminates in long bushes, serving as guides for shafts, 1 and 2. When the car is running straight ahead, the angular velocities of its wheels are equal, and the same is the case with those of the shafts, 1 and 2. It follows that the epicyclic train formed by the bevel pinions, 6 6, turns at the same speed as the box that carries them. If the car makes a turn, the wheel on the inside of the curve will turn less rapidly than the other, and the same will be the case with the corresponding shafts, 1 and 2.

Under such circumstances the angular speed of the case is neither the speed of one shaft nor that of the other, but equals the mean of the angular speeds of shafts 1 and 2.

One of the several objections to the differential gear is that if one wheel strikes a slippery spot and slips back-

ward, no power is transmitted to the other wheel, and propulsion ceases; this being due to the fact that the slipping wheel moves at double the angular veloc-

ity of the sprocket instead of at the same velocity as would be the case if both wheels were revolving at the same velocity. In the device illustrated herewith, the Hedgland solid axle, this trouble is obviated, and both wheels are driven alike. In rounding a curve, when the outer wheel is called upon to exceed the speed of the inner wheel, it automatically disengages and runs free of the axle until the axle catches up with it, when it again engages. The car is always driven square from behind. On a curve, the inner wheel does the driving, and counteracts the throw of the machine. The differential gear drives the wheel that is meeting the less resistance, which means that the wheel in difficulty quits work. But on the axle under consideration neither wheel can quit work until it is running faster than the axle is driving it. It is claimed that this device prevents skidding, which is mainly due to the differential gear.

Gear, Elliptical.—A wheel, called also a "face-gear," having teeth upon the flat surface instead of upon the periphery.

Gear, Epicyclic.—The same as planetary gear q. v.

Gear, Face.—See Elliptical Gear.

Gear, Friction.—Wheels which are caused to rotate together by the friction of one on the other, instead of by means of teeth.

Gear, Helical.—A gear in which each tooth forms part of a screw-thread of a very great pitch and the formation of

which makes it cross the face of the wheel diagonally.

Gear, Herring-bone.—A gear-wheel provided with V-shaped teeth on its periphery, and affording a perfectly smooth and even drive.

Gear, Idler.—A gear, called also an "intermediate gear," which runs between two other gears to increase the distance between their centers or change their direction of revolution.

Gear, Intermediate.—The same as Idler-gear, q. v.

Gear, Internal.—The same as annular gear, q. v.

Gear, Jack-in-the-box.—The same as differential gear, q. v.

Gear, Miter.—A bevel-wheel which is used when it is required to change the direction of motion 90° without altering its angular velocity, a case which occurs very frequently in practice.

Gear, Nest.—A set of inclosed gear-wheels.

Gear, Pinion.—See Pinion.

Gear, Planetary.—A number of small gears meshing with a large internal gear. The forward and reverse speeds are obtained by bringing these gears into action by means of a system of clutch-bands. On the high speed all

gears are locked and the transmission revolves as a unit.

Gear-pump.—See Pump, Gear.

Gear, Rack.—A straight bar of metal (see figure), provided with teeth; when it is curved on a pinion it forms an annular gear.

Gear, Reversing.—Any mechanism for reversing the direction of rotation. In a steam-engine it usually consists of link-motion or a loose eccentric; in other machinery, of belts and counter-shafts or of trains of gear-wheels.

Gear, Roller.—A system of gear-wheels provided with small rollers instead of teeth, in order to reduce friction.

Gear, Running.—The frame, springs, axles, motor and other parts of a vehicle, except the body.

Gear, Segment.—A gear, sometimes called a "sector-gear," of which the form is a sector of a spur-gear having teeth extending over the arc of a circle only.

Gear, Silent.—A gear-wheel made of rawhide or fiber.

Gear, Skew.—A form of gear-wheel used for transmitting a uniform velocity-ratio between two axes which are neither parallel nor intersecting.

Gear, Sliding.—A type of change-speed gear consisting of a number of gear-wheels of different diameter, which, actuated by the driver through a handle-lever which controls a fork, are capable of moving over a part (of square section) of the principal shaft of the speed-box. These gear-wheels are thus successively made to mesh with one of the toothed wheels which are mounted on

a shaft parallel with the one that carries the sliding train. In the figure, representing diagrammatically a two-speed box, the square shaft, A, actuated by the motor, carries a train of two gearings. E and M, connected by a sleeve. These two toothed wheels, E and M, can, through the lever L and fork F, be moved either to the right or left and be brought into contact with one or the other of the two toothed wheels, C and D, keyed upon the shaft, B, which will thus transmit different speeds to the wheels according to the will of the driver. If the toothed wheels, E and M, occupy the positions that they do in the figure they will naturally have no action upon the wheels, C and D, and the vehicle will be at a standstill.

There are change-speeds with one, two and three sliding trains. Those with two and three are evidently more complicated, but they offer the great advantage of necessitating but very short, and consequently, very strong shafts that are not much subject to vibration, the principal cause of the noise of gearings.

Gear, Speed.—The same as change-speed gear.

Gear, Spiral.—A type of gearing having teeth following a helical path and employed for the transmission of small power to a shaft set at an angle to the driving shaft.

Gear, Spur.—A wheel in which the teeth are arranged around its periphery in the direction of radii from its centre.

Gear, Steering.—The gear by which the motion of the steering-pillar is transmitted to the steering-rod. The three principal forms are the worm and sector, worm and nut, and rack and pinion. Of these, the first is the one most generally adopted. It gives a good positive control with a minimum of effort, and is irreversible, which means that motion cannot be transmitted back from the wheels to the hand of the driver. At the base of the steering-pillar in this form of gear, is a worm of coarse pitch which meshes

Fig. 1

with a sector (see Fig. 1), so that a greater revolution around the center of the gear is produced by the two or more turns of the steering-pillar. The whole is enclosed in a case filled with heavy oil or grease. Attached to the sector is an arm connected by a ball and socket joint (Fig. 2), or a knuckle-joint, to the steering-rod. The advantage of this arrangement, known as "lock-steering," is that

Fig. 2.

the worm locks the front wheel of the vehicle in position against obstacles or causes other than the will of the driver. The worm and nut type of gear consists of a forged steel screw of coarse pitch attached to the lower end of the steering-pillar and on which is placed a steel nut which is so affixed that it cannot revolve around the screw. Two blocks resting on pins, which are part of the nut, carry a yoke communicating by crank to a rod which attaches to the steering-knuckle on the right front wheel. As the steering-pillar rotates to the right or left, the screw moves up or down, carrying along the blocks and a hinged lever, which takes the place of the lever on the sector in the case of the worm and sector. Fig. 3 represents a steering-gear of quite novel construction devised by the Brown & Lipe Gear Co. Its novel feature consists in an internal worm cut on the inner surface of a cup attached to the steering-pillar. This worm meshes with a gear on the shaft of which is the steering-arm which is connected to the steering-lever of the front wheels. The cup containing the worm-gear is filled with oil, and consequently has but very little wear. One and a half turns of the steering-wheel operate the lever its full throw of 90°. The device is self-locking and irreversible, so that it is impossible for the front wheels to change their course if they run against an obstruction on the road. (2) The mechanism for moving the rudder of a vessel.

Fig. 3.

the worm locks the front wheel of the vehicle in position against obstacles or causes other than the will of the driver. The worm and nut type of gear consists of a forged steel screw of coarse pitch attached to the lower end of the steering-pillar and on which is placed a steel nut which is so affixed that it cannot revolve around the screw. Two blocks resting on pins, which are part of the nut, carry a yoke communicating by crank to a rod which attaches to the steering-knuckle on the right front wheel. As the steering-pillar rotates to the right or left, the screw moves up or down, carrying along the blocks and a hinged lever, which takes the place of the lever on the sector in the case of the worm and sector. Fig. 3 represents a steering-gear of quite novel construction devised by the Brown & Lipe Gear Co. Its novel feature consists in an internal worm cut on the inner surface of a cup attached to the steering-pillar. This worm meshes with a gear on the shaft of which is the steering-arm which is connected to the steering-lever of the front wheels. The cup containing the worm-gear is filled with oil, and consequently has but very little wear. One and a half turns of the steering-wheel operate the lever its full throw of 90°. The device is self-locking and irreversible, so that it is impossible for the front wheels to change their course if they run against an obstruction on the road. (2) The mechanism for moving the rudder of a vessel.

Gear, Sun and Planet.—The same as epicyclic gear.

Gear, Timing.—A device whereby the inlet and exhaust valves are made to open and close at the proper time.

Gear, Two-to-one.—In a four-cycle motor, the system of gears which drives a half-speed cam-shaft.

Gear, Worm.—A gear having teeth cut in a diagonal direction across its face.

Gearing.—A general term employed to denote a combination of mechanical organs interposed between the prime mover and the working parts of machinery. The signification, however, is frequently restricted to the series of toothed wheels by which the motion is conducted from one revolving axis to another, independently of the shaft and bearings that support them. The toothed wheels are said to "gear" or be "in mesh" when their teeth are engaged, and to be "out of gear" when separate and, consequently, out of action.

When two wheels gear, the one communicating motion is the "driver" or "leader," and the wheel impelled the "follower." Cast iron gear-wheels of all sizes above, and frequently below 18 inches in diameter are made with "arms," the number of which increases with the diameter of the wheel; but in the very small sized gears the arms are commonly omitted, and the rim and teeth are united to the central boss surrounding the "eye" by a thin continuous plate called a "web." Wheels of this kind are usually termed "plate-wheels." The flat arms or spokes of gear-wheels of larger size are cast with longitudinal "ribs" or "feathers" in order to give them greater strength. (2) A gear-wheel.

Gearless Transmission Co.—Rochester, N. Y. Makers of the Gearless car; first marketed in 1907. Three models made since. Cap. \$300,000. Julius Jackson, Pres.; J. W. Breyfogle, Vice-Pres. and Treas.; Burtin F. Kinsman, Sec.; George D. Wilcox, Gen. Mgr., Sales and Advt. Mgr.; Felix A. Eisner, Designer and Engineer; Thomas Corkhill, Supt.

Gebhart, E.—Whitesville, Mo. (Holzman.)

Geen Electrical Mfg. Co.—180 Lake St., Chicago, Ill. Mfrs. and jobbers dry batteries, spark coils, spark plugs, timers, volt and ammeters, wire, battery connections, carburetters. S. B. Geen, Pres.; C. Spanier, Sec.; H. Duginer, Treas.

Geen, S. B.—Pres. Geen Electrical Mfg. Co., 180 Lake St., Chicago, Ill.

Geer Co., Harry R.—St. Louis, Mo. Mfr. motorcycles.

Geisel Automobile Co.—36 Dwight St., Springfield, Mass. (Winton.)

Geissberger.—Zürich, Switzerland. Bodies.

Geiszler, Alois.—Treas. Geiszler Bros., 316 W. 42nd St., New York City.

Geiszler Bros.—316 W. 42nd St., New York City. Mfrs. storage batteries and storage battery igniters. Est. Oct., 1903. Experimented for 3 years. Product marketed April, 1907. Martin Geiszler, Jr.

Inventor and Mgr.; Alois Geiszler, Treas. Partnership.

Geiszler, Martin, Jr.—Inventor and Mgr. Geiszler Bros., 316 W. 42nd St., New York City.

Geitz, Fred.—205 N. Main St., St. Louis, Mo. (Holsman.)

Gem City Automobile Co.—114 N. 7th St., Quincy, Ill. Garage.

Gem Cycle Exchange.—73 Borden Ave., Long Island City, N. Y. Garage.

Gem Mfg. Co.—Spruce, nr. 33rd St., Pittsburg, Pa. Mfrs. buffing machines, flexible drilling machines, oil cans, flexible shaftings.

Gemehl, Camile.—1406 Chancellor St., Philadelphia, Pa. Garage.

Gemmer Mfg. Co.—Detroit, Mich. Mfrs. steering apparatus.

General Accumulator & Battery Co.—152 2nd St., Milwaukee, Wis. Mfrs. storage batteries.

General Automobile Supply Co.—1671 Broadway, New York City. Supplies.

General Drop Forge Co.—1738 Elwood Ave., Buffalo, N. Y. Mfrs. drop forgings.

General Electric Co.—Lynn, Mass. Mfrs. electric generators.

General Electric Co.—Schenectady, N. Y. Mfrs. mercury arc rectifiers, motor generators. Cap. \$80,000,000. Est. 1893.

General Mfg. Co.—Elkhart, Ind. Mfrs. clutches, transmissions, drills. Contract work. Cap. \$50,000. Est. 1906. D. E. McCarthy, Pres. and Treas.; Chas. G. Stevens, Vice-Pres.; A. D. Dorman, Sec.; A. L. Andrews, Factory Supt.; Alex. Miller, Bookkeeper and Cashier.

General Mercantile Co.—905-6 Mutual Life Bldg., Buffalo, N. Y. Mfrs. belting.

General Motor Car Co.—249 N. Broad St., Philadelphia, Pa. (Autocar.)

General Motor Car Co.—14th and Valencia St., San Francisco, Cal. (Locomobile, Fiat.)

General Power Co., The.—100 William St., New York City. Mfrs. charging apparatus.

General Vehicle Co.—Sales Dept., Broadway and 62nd St., New York City. Factory, Long Island City. Succeeded Vehicle Equipment Co., June 1, 1906. Makers of Electric carriages and wagons for all purposes. Cap. \$450,000 preferred stock. \$450,000 common stock. S. Z. Mitchell, 1st Vice-Pres.; J. Howard Hanson, 2nd Vice-Pres.; H. M. Francis, Sec. and Treas.; Robert M. A. Floyd, Gen. Mgr.; G. W. Wesley, Supt.; F. F. Phillips, Sales Mgr.

Generator, Acetylene.—An apparatus for producing acetylene gas by the action of water on calcium carbide, in quantities sufficient to supply one or more lamps. The carbide is either fed into the water or the water allowed to

drip upon it. It is the "gas-works," so to speak, of the motor-vehicle, and which supplies the headlights.

Generator, Attached.—An acetylene generator directly attached to or forming part of a lamp.

Generator, Electric.—Any apparatus that produces electricity. The kinds distinguished are:

(a) Mechanical generators; dynamos or alternators; (b) thermal generators; thermo-electric batteries that directly convert heat into electricity; (c) chemical generators; hydro-electric or batteries with fused salts as an electrolyte.

Accumulators are simply transformers, and not electric generators, since their function is to store up and then give out electric energy.

Generators, Primary.—See Primary Generators.

Generator, Steam.—See Boiler.

Generator-valve.—See Carburetter.

Genesee Motor Vehicle Co.—Court and Exchange Sts., Rochester, N. Y. (Corbin.)

Geneva Automobile Club.—Geneva, N. Y. Organized May 17, 1904. "to promote automobilists interests." Seventeen charter members. Officers: F. W. Herenden, Pres.; M. F. Blaine, Vice-Pres.; C. W. Fairfax, Sec. and Treas. Former Pres. H. L. Rose.

Geneva Automobile Co.—145 Castle St., Geneva, N. Y. (Cadillac.) Repairing; garage; supplies.

Gentil et Cie.—4 bvd. Bourdon, Neuilly, France. Mfrs. Alcyon motorcycles.

Geometric Tool Co.—Blake and Valley Sts., New Haven, Conn. Mfrs. special automobile machinery.

George, Albert.—67 rue du Téléphone, Brussels, Belgium. Mfrs. speed indicators.

George, Edwin S.—Detroit, Mich. (Oldsmobile.)

Georgi, C. E.—Officer of Schaeffer & Budenburg Mfg. Co., Foxboro, Mass.

Gérard.—36 rue des Guides-Carrières, Paris, France. Mfrs. solid tires.

Gerard & Hall.—Huntington, N. Y. (Aerocar.)

Gerard, William R.—Journalist. Member of the staff of Automobile Topics. Compiler of the technical portion of the International Motor Cyclopaedia.

Gere Launch & Engine Works.—Yonkers, N. Y. Mfrs. motor boats.

Gerhah, Jacob.—158-64 N. 3rd St., Philadelphia, Pa. Mfrs. drop forgings, cloth and carpet trimmings.

Gerkinet, Josef.—rue Hayeneux, Herstal, Belgium. Mfrs. motorcycles.

Germain, Société des Ateliers.—Monceau-sur-Sambre, Prés Charleroi, Belgium. Mfrs. gasoline automobile and commercial vehicles, automobile and marine motors..

German Silver.—An alloy of copper (50 to 60 per cent.), nickel (15 to 25 per cent.), and zinc (15 to 20 per cent.). A German silver containing from 1 to 2 per cent. of tungsten is called "platinoid." These alloys have a high electrical resistance.

Germantown Garage.—6225 Germantown Ave., Philadelphia, Pa. Garage.

Gérme, Ch.—37 rue Godot de Mauroy, Paris, France. Mfr. carbureters.

Gernsboick, Hugo.—Officer and Gen. Mgr. Royal Battery Co., 108-10 Duane St., New York City.

Gerome, T. F.—130-2 W. 18th St., New York City. Est. 1900. Garage, 50 cars; repairing.

Gerrie, John Howard.—Automobile editor New York Herald. B. Whitby, Ont., Can., Oct. 22, 1870. Ed. college at Hamilton, Stratford and Toronto, Can. Placed in charge of automobile news in New York Herald in 1897 and has been in charge ever since. Mgr. Importers' Automobile Salon, 1904-5. Previously was sporting editor Toronto Mail and Empire.

Gerrish, W. A.—First Ave. and Railway St., Enderlin, N. D. (Mitchell.) Est. 1906.

Gerson-Carey Co.—Kalamazoo St. and L. S. and M. S. R. R., Lansing, Mich. Mfrs. brass, manganese-bronze, phosphon-bronze and aluminum castings, patterns (metal and wood). Cap. \$15,000. Est. 1901. J. J. Carey, Pres. and Supt.; Jos. Gerson, Sec., Treas. and Sales Mgr.; Irving A. Murphy, Pur. Agt.

Gerson, Jos.—Sec., Treas. and Sales Mgr. Gerson-Carey Co., Kalamazoo St. and L. S. and M. S. R. R., Lansing, Mich.

Gery, J. B.—Pres. Berwin Automobile Co., 128-132 N. 8th St., Allentown, Pa.

Gesellschaft der Russisch-Französischen Gummii Guttapercha und Telegraphenwerke.—Riga, Russia. Mfrs. pneumatic tires.

Getchell, C. D.—Houlton, Me. (Cadillac.)

Getchell & Sons, S. C.—Woonsocket, R. I. Mfrs. tanks, storage tanks.

Geutach, Frank F.—Sec., Treas. and Gen. Mgr. Puncture Proof Tire Co., Guardian Bldg., Cleveland, O.

Gever, Clinton.—Muncy, Pa. (Cadillac.)

Gfrorer, J. F.—Auditor Palmer & Singer Mfg. Co., 1620-24 Broadway, New York City.

Gianoli, L.—26 bvd. Magenta, Paris, France. Mfrs. primary batteries, spark plugs, coils, high and low tension magnetos.

Gianoli, Luigi, filiale.—48 via Solferino, Milan, Italy. Mfrs. make and break plugs.

Gib.—A bar of metal with its ends bent at right angles to its length; used

with a cotter for holding in place the loose strap on the end of certain forms of connecting-rod.

Gibaud.—309 Faubourg St. Antoine, Paris, France. Mfrs. high and low tensioned magnetos.

Gibbs-Brower Co.—150 Nassau St., New York City. Mfrs. turntables.

Gibney & Bros., Jas. L.—211-213 N. Broad St., Philadelphia, Pa. Est. 1900. Supply house, handling tires and accessories. Jas. L. Gibney, Pres.; C. H. Walz, Gen. Mgr. and Mgr. Accessory Dept. Mfrs. Eleck-trick vulcanizers.

Gibney, Jas. L.—Pres. Jas. L. Gibney & Bros., 211-213 N. Broad St., Philadelphia, Pa.

Gibson & Walker.—Portland, Ore. (Dolson.)

Gibson Auto Co.—238 Mass. Ave., Indianapolis, Ind. (Ford, Marmon, Premier.) Est. 1900. Cap., \$10,000. E. M. Gibson, Pres.; C. Bauer, Sec. and Treas.; Cecil E. Gibson, Gen. Mgr. Repairing.

Gibson Co., Wm. D.—Huron and Kingsbury Sts., Chicago, Ill. Mfrs. springs, gasoline motors, machinery. Cap., \$50,000. Est. 1873. Silas Howe, Pres. and Treas.; Enoch Peterson, Vice-Pres. and Sec.

Gibson, John J.—Mgr. Buffalo Auto Exchange, 401 Franklin St., Buffalo, N. Y.

Gies, C. J.—Sec. Gies Gear Co., 345-347 Bellevue Ave., Detroit, Mich.

Gies, F. G.—Vice-Pres. Gies Gear Co., 345-347 Bellevue Ave., Detroit, Mich.

Gies Gear Co.—345-47 Bellevue Ave., Detroit, Mich. Mfrs. marine reverse gears. Cap., \$75,000. Est. Oct., 1906. H. E. Putnam, Pres.; F. G. Gies, Vice-Pres.; C. J. Gies, Sec.; H. D. Norton, Treas. and Gen. Mgr.

Giesey, E. M.—Wheeling, W. Va. (Jewel.)

Giffard, Victor.—54 due de Bondy, Paris, France. Mfrs. storage batteries, high-tension magnetos.

Giffin, H. M.—Car Dept., Pattinson Mfg. Co., rear 48 Stanhope, Boston, Mass.

Gifford & Son, John A.—25 Park Pl., New York City. Mfrs. lamp covers, machine work to order.

Gifford-Petit Mfg. Co.—1217 Devon Ave., Chicago, Ill. Automobile Mfrs., gas, commercial.

Giffords, W. F.—Sec. and Treas. National Cement & Rubber Mfg. Co., 3053-5-7-9 Monroe St., Toledo, O.

Gifford, T. J.—14 Market St., New Bedford, Mass. (Mora.)

Gifford-Wood Co.—Greene and Columbia Sts., Hudson, N. Y. Garage.

Gilbert.—The C. G. S. unit of magnetomotive force. A gilbert equals 0.8 of an ampere-turn, q. v.

Gilbert & Barker Mfg. Co.—80-82 4th

Ave., New York City. Mfrs. storage tanks, gasoline gauges, funnels.

Gilbert, Chas.—174 Calhoun St., Battle Creek, Mich. (Ford.)

Gilbert, E. G.—Treas and Mgr. Michigan Bolt & Nut Works, foot Mildrum Ave., Detroit, Mich.

Gilbert, F. C.—Sales Mgr. Pope Motor Car Co., Toledo, O.

Gilbert, Fred E.—37 Forsyth St., Jacksonville, Fla. (Stoddard-Dayton, Maxwell.)

Gilbert, John B.—Berlin, N. H. Garage.

Gilbert, Joe M.—General Manager Continental Ca-

outchouc Co. B. Cleveland, Ohio. April 30, 1874. Ed. public school. Member N. Y. A. C. Res., Chester Hill, Mt. Vernon, N. Y. Office, 43 Warren St., New York. In the trade since 1901. Used first car 1905. Recreations, fishing, hunting.

yachting, motoring.

Gilbert Mfg. Co.—New Haven, Conn. Mfrs. automobile fabric supplies, metal specialties. Mem. M. & A. M. Cap., \$12,000. Est. 1898. F. E. Bowers, Pres.; J. H. Martin, Vice-Pres.; T. G. Bowers, Sec. and Treas.; B. R. Comstock, Supt.; Ed. Furnish, Asst. Supt.

Gilchrist, E. B.—Sec. Duplex Roller Bushing Co., Belfast, Me.

Gill—The same as "fin." See Flange and Fin and Radiator.

Gill & Sons Forge & Machine Works, P. H.—1 Lorne St., Brooklyn, N. Y. Mfrs. axles, connecting rods, gear blanks, crank shafts.

Gill Electric Co.—Tyrone, Pa. (Reo.)

Gillain, Chas. H.—Sec. and Treas. Sheldon Axle Co., Wilkesbarre, Pa.

Gilles, W. A.—Pres. and Gen. Mgr. The Autocar Co., Ardmore, Pa.

Gillespie & Co., L. W.—Marion, Ind. Repairing

Gillespie & Sons, Chas. H.—125 Dey St., Jersey City, N. J. Mfrs. varnishes.

Gillespie, J.—Sec. and Treas. Plimley Automobile Co., Victoria, B. C.

Gillet, F. B.—Jonesville, Vt. (Cadillac)

Gillet-Forest, Société de Constructions et Exploitations des Automobiles.—23 quai President Carnot, Saint Cloud, Paris, France. Mfrs. gasoline and gasoline commercial automobiles. (Gillet Forest cars and trucks.)

Gillet et Cie., Réne.—10 villa Collet, rue Didot, Paris, France. Mfrs. motorcycle motors and motorcycles.

Gilley, H. E.—1158 S. Main St., Los Angeles, Cal. (Auburn, Sunset.)

Gillies, J. W.—Haverstraw, N. Y. (Franklin)

Gillies, Jones, Miller.—Santa Monica, Cal. Garage.

Gillotte, G.—88 rue de Villiers, Levallois, Seine, France. Mfr. tops.

Gilman Distributing Agency, M. A.—Westfield, Mass. (Haynes.)

Gilmore, B. G.—Pur. Agent Royal Motor Car Co., Gordon Park Blvd. and Lake Shore tracks, Cleveland, O.

Gilmore Electric Co.—625 1st St., Boston, Mass. Mfrs. electric motors.

Gilmore, W.—262 N. Broad St., Philadelphia, Pa. (Deere.)

Gilmour Mfg. Co., R. M.—105 John St., New York City. Mfrs. asbestos.

Gilson Auto Co., L. C.—881 Congress St., Portland, Me. (Ford, Premier, Reo, Stanley.)

Gilson, James Wilder.—Sales mgr., asst. sec. and treas. Mitchell Motor Car Co. B. St. Albans, Vt., July 7, 1871. Ed. high school. Director Mitchell Motor Car Co. Member Hartford, Hartford Yacht, Racine Gold, Cleveland A. C. Res., 1336 Main St., Racine, Wis. Office, Mitchell Motor Car Co., Racine, Wis. In the trade since May 11, 1896.

Gimbal-joint.—See Joint, Gimbal.

Gimbals.—Two rings for suspending a boat's compass, so as to keep it always horizontal.

Gimlet.—A fluted boring-tool terminating in a sharp screw beginning as a point and extending to the full diameter of the tool.

Ginter, J. M.—18 Walnut St., Wooster, O. (Reo)

Girard Cycle Co.—Lincoln, Neb. (Indian, Queen.)

Girard Motor Car Co.—236 N. Broad St., Philadelphia, Pa. (Cleveland.)

Girardot, Leonce.—15 Avenue Jeanne d'Arc, Chesney (Seine-et-Oise), France. Born in Paris, April 30, 1864. One of the oldest of the first promoters of the automobile industry. He has taken part in all the great automobile races and has gained numerous victories.

Girder.—One of the two longitudinal members of a motor-vehicle-frame. See Side-member, Sill, Reach and Rail.

Girard, M.—Rouillac, Charente, France. Mfr. jacks.

Gisholt Machine Co.—1300 Washington Ave., Madison, Wis. Mfrs. turret lathes, chucking machines, boring mills, tool grinders, reamers. Cap., \$1,250,000. Est. about 20 years.

Githens Bros. Co., The.—1328 Michigan Ave., Chicago, Ill. (Oldsmobile, Stearns). Est. Jan. 1, 1902. Cap., \$30,000. W. L. Githens, Pres. and Treas.; H. A. Githens, Vice-Pres. Repairing.

Githens, H. A.—Vice-Pres. Githens Bros. Co., 1328 Michigan Ave., Chicago, Ill.

Githens, Walter L.—Automobile dealer. B. Mendota, Ill., Feb. 3, 1863. Ed high school. Director Githens Bros. Co. Member Chicago A. C., Kenwood, Chicago Motor. Res., 177 E. 50th St., Chicago. Office, 1328 Michigan Ave., Chicago, Ill. In the trade since 1899. Used first car 1899. Recreation, automobiling.

Give.—Said of a joint or structure when it yields or breaks under a load.

Gladding, Leon A.—123 Main St., New Britain, Conn. (Pope-Hartford.)

Gladding, N. A.—Vice-Pres. American Motor Car Co., Indianapolis, Ind.

Gladding, Wm. B.—Vice-Pres. United Wire & Supply Co., 109-119 Summer St., Providence, R. I.

Gladiator, Société Française des Cycles et Automobiles.—Pré St. Gervais, Paris, France. Mfrs. gasoline automobiles. (Gladiator cars.)

Gladke, Morris.—101 E. Water St., Elmira, N. Y. (Thomas Flyer.)

Glaenger & Co.—26-28 Washington Pl., New York City. Mfrs. magnetos.

Glaenger et C^e.—35 bd. Strasbourg, Paris, France. Mfrs. differential gears.

Gland.—A tubular casting which fits into the cylinder stuffing-box, through which the piston slides.

Gland-bolt.—See Bolt. Gland.

Glasby, Wm. I.—Supt. Imperial Motor Car Co., 3d and Locust Sts., Williamsport, Pa.

Glasgow Motor Tire Co.—71 Waterloo St., Glasgow, Scotland. Mfrs. non-skids.

Glasner, Martin.—Ratibor. Ober-Schlesien, Germany. Mfrs. wood wheels, wood rims.

Glass-paper.—Sheets of strong paper covered with finely powdered glass caused to adhere by glue. It is used for the same purposes as sand-paper.

Glass, Water.—A strong glass tube placed vertically on a steam boiler, with both ends communicating with the interior to show the height of the water within.

Gleason, Dr. E. E.—Port Townsend, Wash. (Waltham.)

Gleason Peters Air Pump Co.—Mercer and Houston Sts., New York City. Mfrs. horns, oil guns, air pumps, tanks, storage tanks, power driven pumps.

Gleason, W. L.—Supt. Packard Motor Car Co., Detroit, Mich.

Glenn, C. L.—Spokane, Wash. (Gale.)

Glenn, Jas. H.—Caribou, Me. (Cadillac.)

Glenn, W. J.—Kenton, O. (Maxwell.)

Glenny, Walter R.—20 W. Bernard St., Westchester, Pa. (Cadillac.)

Glenny, Wm. H.—Vice-Pres. Noye Mfg. Co., 50 Lakeview Ave., Buffalo, N. Y.

Glidden, Charles Jasper.—B. Lowell, Mass., August 29, 1857. Ed. Lowell

public schools.

Member Aero Club of France, Touring Club of France, Aero Club of America, A. C. A., Massachusetts, Bay State, Providence, Worcester, Buffalo, Royal A. C. of Great Britain, Royal Geographical Society, American

Geographical, Arctic Circle Club, Algonquin (Boston). Exchange (Boston). Res. and office. Hotel Touraine, Boston, Mass. Used first car 1899. Recreation, motoring.

Glidden, F. A.—Vice-Pres. Glidden Varnish Co., Rockefeller Bldg., Cleveland, O.

Glidden, F. H.—Pres. Glidden Varnish Co., Rockefeller Bldg., Cleveland, O.

Glidden, F. K.—Sec. Glidden Varnish Co., Rockefeller Bldg., Cleveland, O.

Glidden Varnish Co.—Rockefeller Bldg., Cleveland, O. Mfrs. varnishes, japans, enamels. Cap., \$1,000,000. Est. 1875. F. H. Glidden, Pres.; F. A. Glidden, Vice-Pres.; F. K. Glidden, Sec.; W. J. Glidden, Treas.; H. G. Ashbrook, Mgr. Jap-a-Lac Dept.; Chas. Wells, Gen. Sales Mgr.; Jas. B. Ludlow, Mgr. Promotion Dept.; G. A. Kerkendale, Mgr. Architectural Dept.; C. C. Chapp, Pur. Agent.

Glidden, W. J.—Treas. Glidden Varnish Co., Rockefeller Bldg., Cleveland, O.

Glide Motor Car Co.—327 Baronne St., New Orleans, La. (Glide.)

Gliding Boat.—See Hydroplane.

Gliesman, H. A.—78 8th Ave., New York City. Agt. Curtiss motorcycles and motors.

Glisan, A. E.—Cumberland Md. (Cadillac.)

Gliemann, H. G.—Head Dry Sundries and Mechanical Dept., Syracuse Rubber Co., 212-214 S. Clinton St., Syracuse, N. Y.

Globe Automobile Exporters, The.—43 Cedar St., New York City, and 24 bis. bd. de Courcelles and 94 bd. Malesherbes, Paris France. Importers De

Dion Bouton, Spyker cars. Est. since 1900. Manuel De Caserta, sole representative for U. S.; Louis Suberbie, Mgr. of Paris office. Rental service, with chauffeurs, for the European Continent. Automobiles crated for shipment.

Globe Boat Co.—Oswego, N. Y. Mfrs. motor boats.

Globe Brass Works.—13 Macomb St., Detroit, Mich. Mfrs. bow separators, top fixtures, metal trimmings.

Globe Iron Works.—Menominee, Wis. Mfrs. motor boats.

Globe Machine & Stamping Co.—3868 Hamilton Ave., N. E., Cleveland, O. Mfrs. brakes, brake drums, hub flanges, stampings, water jackets, gaskets, pipe flanges. Mem. M. & A. M. Cap., \$25,000. Est. 1900. B. Krause, Pres.; J. W. Juengling, Vice-Pres.; A. F. Schroeder, Sec., Treas. and Gen. Mgr.; Oscar A. Loew, Supt.; Jac Schneider, head Tool Room; Hy. Goebelbecker, head Assembling Room; Wollenzier, head Press Rooms.

Globe Malleable Iron Co.—Greenway Ave., Syracuse, N. Y. Mfrs. malleable iron castings. Cap., \$100,000. Est. 1906. W. C. Lippe, Pres.; A. T. Brown, Vice-Pres.; S. J. Marshall, Treas.; J. S. Pickell, Sec.

Globe Optical Co.—403 Washington St., Boston, Mass. Mfrs., importers and exporters goggles, masks and eye shields. Cap. \$70,000. Est. 1889. A. G. Barber, Pres. and Treas.; F. A. Barber, Vice-Pres.; R. C. Thompson, Asst. Treas. and Gen. Mgr.; W. W. Slade, Sec. and Supt.

Globe-valve.—See Valve, Globe.

Glosser, S. A.—Jersey Shore, Pa. (Caddillac.)

Glover, Chas.—Pres. The Corbin Screw Corp., New Britain, Conn.

Gloyd, S. M.—Oklahoma City, Okla (Wayne.)

Glue, Marine.—A cement composed of rubber, shellac and naphtha. It is melted and applied to wood, etc., where a water-tight joint is required. It is used also as a cement for rubber.

Glycerine.—A triatomic alcohol, existing in fats, in combination with oleic and stearic acids, etc., under the form of ethers called glycerides. It is employed, in the proportion of from 1 part to 1½ part glycerine to 3 parts water, to prevent the freezing of the water in the jacket of a gasoline motor.

Gobron-Brillié, Société des Automobiles.—13 quai de Boulogne, Boulogne, France. Mfrs. gasoline automobiles. (Gobron-Brillié cars.)

Godet, Edouard.—12 Ave. d'Orleans, Paris, France. Mfr. coils.

Godley, Charles.—Factory foreman, Edmunds & Jones Mfg. Co. 315 Riopelle St., Detroit, Mich.

Godley, Harry.—3780 Highland Ave., Pittsburg, Pa. (Matheson.)

Godshalk & Co., E. H.—Camden, N. J. Mfrs. motor boats.

Godake, P. M.—Pres., Gen. Mgr. and Designer, Racine Boat Co., 16th and Racine Sts., Racine, Wis.

Goebel, F. A.—Marietta, O. Mfrs. electric switches, electric lock switches.

Goebelbecker, Henry.—Head of Assembling Room, Globe Machine & Stamping Co., 3868 Hamilton Ave., N. E., Cleveland, O.

Goering, A. P.—Prop., Mgr. and head of Sales Dept., Hamilton Garage Co., 133-5 King St., W., Hamilton, Ont., Canada.

Goerss, Herman.—162 Russel Ave., Cleveland, O. Mfrs. steering wheels.

Goetz, Theodore.—Head of Sales Dept., Witherbee Igniter Co., 541 W. 43d St., New York City.

Goggles.—A form of spectacles worn by motorists to protect the eyes from dust, wind, flies and the glare of the sun, and made of glass, mica or celluloid. Unless specially cut lenses are used for defective sight, the glasses should be flat. Every particle of draught should be excluded by setting the goggles into some cloth-like substance that fits the face like a mask.

Gold, Aluminum.—The same as aluminum bronze.

Goldberg Motor Car Devices Mfg. Co.—1253 Michigan Ave., Chicago, Ill. Mfrs. carbureters.

Golden, Percy.—Catskill, N. Y. (Maxwell.)

Goldman, Louis.—Pres. The Cincinnati Electric Tool Co., 650-652 Evans St., Cincinnati, O.

Goldsmith Bros. Smelting & Refining Works.—68-65 Washington St., Chicago, Ill. Mfrs. platinum.

Gouvy et Cie.—Oberhombourg, Lorraine, Germany. Mfrs. springs.

Governing.—The governing of a motor is an operation that consists in constantly proportioning its power to the external resistance with a view to maintaining its speed at the rate that has been assigned to it. The control of the speed of a motor is effected by an automatic governor, by hand, or by both processes at once. A number of methods (some of them fantastic) have been employed for regulating the speed of motors, but, at present, such processes are reduced to a single one, viz., that of varying the admission. Such variation, however, is either direct or indirect, and, in the latter case, is done through the intermedium of the exhaust. Besides, in gas-motors, it may comprise an arrangement that assures a uniformity of the compression, and that improves the efficiency of light loads. However this may be, the result is always the same and is exhibited by a variation in the motive fuel introduced by the piston-stroke.

Governing of internal combustion motors.—(a) By direct variation of the admission. This is effected by throttling the intake-pipe or by modifying the lift of the valves. In the first case, the governor actuates a valve, which is generally placed in the carburetter. In the second, the lift or the duration of opening of the valves, or both at once, are modified, a method which is particularly convenient with mechanically operated valves. In what precedes only the progressive variations of the admission have been considered. The direct variation by "hit-or-miss" is now no longer employed in automobilism. (b) By direct variation of

the exhaust.—This is effected by modifying the lift or the duration of opening of the valves, or by modifying the two at once, so that at the end of the exhaust there remains in the cylinder a variable quantity of burned gases that diminish by so much the quantity of fresh gas admitted.

Upon the whole, the process now most widely employed is that of direct governing on the admission, generally by throttling the intake, and more rarely by lift of the valves. See Hit-or-Miss.

Governor.—An apparatus designed to maintain the mean angular velocity of a motor within the narrowest possible limits. The fly-wheel assures the cyclic regularity of a motor, while preventing to a certain extent, through its inertia, the abrupt variations in mean velocity resulting from abrupt variations in external resistance. But it in nowise prevents a variation (which may be very great) of such mean speed when the equilibrium of the power and resistance is destroyed. It simply diminishes the rapidity of it through its inertia, which, by the way, is very useful and peculiarly facilitates the duty of the governor.

Governors are usually based upon the variations in centrifugal force of a weight of which the revolution is connected with that of the motor. Instead of balancing the centrifugal force of a heavy sleeve, as did Watt, the inventor of the first centrifugal governor, the tendency now is to employ springs, the advantages of which are lightness and ease

Fig. 1.

of regulation at a given speed. Fig. 1 represents, diagrammatically, a Kienast spring governor. It consists of a box, B, movable around a shaft which does not actuate it, as in most governors, through the intermedium of a key, but solely through the friction of a spring which bears, on the one hand, against a disk, P, fixed on the shaft, and on the other, against the bottom of the spring-box, B.

This arrangement eliminates the friction due to the key, which prevents the oscillations of the sleeve and slides in two grooves placed, one of them below in the sleeve, and the other above in the cover, thus constituting a perfect guide for the movable part. Two bent levers, L, oscillate around axes, T, fixed in lugs cast in a piece with the spring-box, B. One of the ends of these levers bears against the disk, P, through rollers, G. When the balls fly apart under the action of centrifugal force, the arms, L, bearing against the fixed disk, P, through the rollers, G, raise the box, B, and compress the spring. This governor, which

is of slight weight and extremely sensitive, exerts upon the distributing mechanism a prompt and energetic action.

The governors employed on automobiles are of a very rudimentary construction, and are not intended to be isochronous. They serve rather for preventing the racing of the motor, and with a given tension of the spring, regulate the velocity only within somewhat wide limits. In Fig. 2 is shown an example of one of them. A disk, A, keyed to the end of the cam shaft, B, carries two lugs, C, upon which are pivoted bent levers terminating at one extremity in the balls, D, and at the other extremity in the forks, F, which slide in the grooved collar, E, which actuates the control-rod

Fig. 2.

through the intermedium of an amplifying lever. A spring, L, balances the centrifugal force. The tension is calculated for the slowest velocity of the motor. Another spring, acting in the same direction, is attached to the control-rod by one extremity and by the other to a steering wheel lever and a pedal acting independently to overcome or increase its tension.

When the tension is overcome, the motor revolves at the reduced velocity allowed by the governor. When it is increased the motor revolves with so much the greater velocity in proportion as the tension is greater.

Governor, Hit-or-Miss.—A device for governing the power of gas-motors by cutting out a part of the fuel charge and causing the motor to miss some of the explosions. The "hit-or-miss governor" controls the admission of the charge either by arresting the exhaust-valve and holding it open or by acting upon a special fuel-valve that opens only when a power-stroke is necessary. See Hit-or-Miss and Governing.

Governor, Pneumatic.—A governor consisting of an air-pump, a cylinder containing a piston operating against a spring, and a throttle-valve connected to the piston. The governor can be controlled by a valve. When the speed of the motor increases, air is pumped into the governor cylinder faster than it can escape from the orifice, raising the pressure in the cylinder and moving the piston, thus closing the throttle.

Governor, Pump.—A form of governor depending upon the pressure of a liquid, either water or oil, against a flexible diaphragm or a piston. As the pump in this form of governor is driven in direct relation to the motor-speed, the amount of liquid forced against the diaphragm varies with the motor-speed, and, through

suitable levers, the movement of the governor-piston or diaphragm regulates the amount of gas admitted to the cylinders.

Governor, Ring.—An automatic governor used on the Cadillac car, and built up around a central vertical or inclined shaft, A (see figure), driven by gears

from a cam-shaft and running upon ball bearings. Pivoted on a pin passing through this shaft, and held in a tilted position by a spiral spring, C, is a ring, B, enclosed in a globe shaped casting. As the revolutions of the shaft, A, and ring, B, increase centrifugal force tends to make the ring assume a horizontal position, and, as it does so, it pushes upward on the link, D, and raises the collar, E. A shifting fork on this collar, as it is raised and lowered, rotates a shaft, K, and consequently moves back and forth the lever, F, which is connected by rod, G, to the throttle. In this manner the throttle-valve is closed. By varying the tension on the spring, C, the governor can be set so that it will not close the throttle beyond a desired point.

Goyon, H.—65 Ave. de la Bourdonnais, Paris, France. Mfrs. motorcycles.

Grabowsky, Max.—Vice-Pres. and Designer Rapid Motor Vehicle Co., Rapid St., Pontiac, Mich.

Grabowsky, Morris.—Sec. and Purch Agent, Rapid Motor Vehicle Co., Rapid St., Pontiac, Mich.

Grace, J. P.—Sec. Kokomo Electric Co., 339 Smith St., Kokomo, Ind.

Grade.—A French angle measurement—one of the divisions of a circle divided into 400 equal parts, instead of 360. A "grade" indicates also the hundredth part of a metrical scale divided into a hundred equal parts.

Grade, Indicator.—See Gradometer.

Gradient.—The degree of inclination of a road as compared with the horizontal. Gradients are usually expressed in percentages. Thus:

Per Cent.	Units.	Rise or Fall in One Mile.
		Feet.
20	1 in 5	1,056
17	1 " 6	880
14	1 " 7	754
12.5	1 " 8	635
11	1 " 9	586
10	1 " 10	528
9	1 " 11	480
8	1 " 12	440
7.75	1 " 13	406
7	1 " 14	337

6.5	1	"	15	352
6.25	1	"	16	330
6	1	"	17	310
5.5	1	"	18	293
5	1	"	19	277
5	1	"	20	204
4	1	"	25	218
3.3	1	"	30	155
2.8	1	"	35	151
2.5	1	"	40	132

Gradometer.—An instrument for showing the degree of a grade. It consists of a

curved glass tube filled with spirits, leaving a small bubble as in a spirit level tube. The tube is secured in a neat nickel-plated casing having graduations from 0 to 30 each way from the center. It is easily attached to the seat or other convenient place and the grade up to 30 per cent. can be read at a glance.

Grade Motorwerke.—Magdeburg, Germany. Mfrs. automobile motors.

Graeber, Carl.—Vice-Pres. Lawrence Motor Car Co., 13-17 W. Warren St., Lawrence, Kan.

Graef und Stift.—70 Weinberggasse, Vienna, Austria. Mfrs. gasoline automobiles. (Graef-Stift cars.)

Graham & Co., James.—293 Wooster St., New Haven, Conn. Mfrs. castings, composition brass, copper and aluminum, babbitt metals. Est. 1861.

Graham & Co., John H.—113 Chambers St., New York City. Selling agents Ham lamps. Branches, 123 California St., San Francisco, Cal.; 118-22 Holborn, London, E. C., England.

Graham & Goodman.—51-55 W. 93d St., New York City. Mfrs. shock absorbers. Garage.

Graham & Smith.—Flint, Mich. Garage.

Graham Automobile Co.—601-605 W. Madison St., Chicago, Ill. Garage.

Graham, C. E.—Vice-Pres., The Safety Insulated Wire & Cable Co., 114 Liberty St., New York City.

Graham, J. S.—Pres. Rochester Gas Engine Co., Rochester, N. Y.

Graham Mfg. Co.—Providence, R. I. Mfrs. vises.

Graham, R. E.—Vice-Pres., Sales and Advt. Mgr. Acme Motor Car Co., 8th and Elm Sts., Reading, Pa.

Graham, W. J.—Sec. and Treas. Rochester Gas Engine Co., Rochester, N. Y.

Gram, Wm. Jr.—Treas. Buffalo Dental Mfg. Co., 587-89 Main St., Buffalo, N. Y.

Gramatan Garage.—Bronxville, N. Y. Garage.

Gramlich Chemical Co.—167 Leveret St., Detroit, Mich. Mfrs. metal polishes.

Gramm, B. A.—Vice-Pres., Designer, Purch. Agent and Gen. Mgr. Logan Construction Co., 2d and Carrol Sts., Chilli-cothe. O.

Gramme.—The unit of measure of weight in the metric system. It is the mass of a cubic centimetre of pure water, weighed in a vacuum at a temperature of 4° C. (temperature of the density of water). Practically, the gramme is the 1000th part of the mass of a bar of platinum-iridium kept at the Paris Bureau of Weights and Measures, and known as the "International Kilogramme." A gramme equals 981 dynes; and 15.43 grains Troy.

Gramme-degree.—The unit of mass and temperature in relation to the specific heat or calorific capacity of different bodies. The quantity of heat that must be given to a gramme of a body to raise its temperature 1 degree or its calorific capacity by gramme-degree is called a "calorie," while the "great calorie" corresponds to a kilogramme-degree.

Gramme, Société.—20 rue d'Hautpoul, Paris, France. Mfrs. storage batteries.

Grammont, A.—Pont-de-Chéruy, Isère, France. Mfr. solid tires.

Granagan, P. J.—Jackson St., Sandusky, O. (Ford.) Est. 1899. Garage, 15 cars. Repairing.

Grand Auto Station.—204 E. 35th St., Chicago, Ill. Garage.

Grand Rapids Automobile Club.—Dr. D. Emmet Welch, Sec., Wonderly Bldg., Grand Rapids, Mich.

Grand Rapids Gas Engine & Yacht Co.—Grand Rapids, Mich. Mfrs. gasoline marine motors, kerosene motors.

Granger's Drop Forge Works.—Chicago, Ill. Mfrs. drop forgings, gear blanks, wrenches.

Granite State Automobile Club.—Albert L. Clough, Sec., Manchester, N. H.

Grant & Bros. Auto Co.—744 Woodward Ave., Detroit, Mich. (Buick, Thomas Flyer.)

Grant-Ferris Co.—Troy, N. Y. Mfrs. gasoline automobile motors.

Grant Gear Works.—6 Portland St., Boston, Mass. Mfrs. sprockets.

Grant Lees Machine Co., The.—Quincy Ave. and E. 69th St., Cleveland, O. Mfrs. special automobile machinery.

Grant Mfg. & Machine Co., The.—70 Silliman Ave., Bridgeport, Conn. Mfrs. spark plugs, carburettors, gasoline engines. Cap. \$50,000. Est. 1900. Inc. 1904. J. G. Kingsbury, Pres. and Treas.; Fayette C. Clark, Vice-Pres.; George B. Thorpe, Sec.; Jos. J. Wetzel, Sales Agt.

Grant, N. L.—206 Melrose St., Auburn-dale, Mass. Garage.

Grant Square Automobile Co.—1380 Bedford Ave., Brooklyn, N. Y. Garage.

Grant, W. C.—Winchester, Ind. (Holzman.)

Graphic Cycle & Auto Works.—Westhampton Beach, N. Y. (Cadillac, Oldsmobile, Reo.)

Graphite.—A mineral substance of a lead or iron-gray color, a metallic luster, and soft to the touch. It consists of carbon with a very minute proportion of iron. Graphite, called also "plumbago" and "black lead," occurs in gneiss, mica-slate, clay slates and limestone. The finest graphite and the most valuable for making lead-pencils is found at Borrodale, Cumberland (England). The mineral is found also in India, Ceylon, Bohemia, etc. Mixed with grease, it is used as a lubricant for gearing and drive-chains, and, in a dry state, for giving a gloss to the surface of cast iron, etc. See Carbon.

Graphite, Artificial.—See Carbon, Gas.

Grappel & Schneider.—Jerseyville, Ill. (Lambert.)

Gras, Alex.—13 bvd. de Versailles, Suresnes, France. Mfrs. elastic wheels.

Graschoff, Albert W.—West Hoboken, N. J. (Pierce, Rambler.)

Grate-generator.—A type of acetylene gas generator in which the carbide is contained in a grate-like cage which is dipped into a reservoir of water.

Gratz, H. T.—Mgr., Sec. and Treas. Kirchorfer Auto Co., 1700-2 Baxter Ave., Louisville, Ky.

Gratze Patents & Engineering Syndicate, Ltd.—44 Whitfield St., London W., England. Mfrs. speed indicators.

Graves & Congdon Co.—Oak St., Amesbury, Mass. Mfrs. automobile bodies, tops, revolving chair seats. Cap., \$10,000. Est. 1906. James R. Graves, Pres. and head of Body Bldg. Dept.; Arthur G. Congdon, Vice-Pres. and head of Trimming Dept.; Hulbert R. Jennings, Sec. and Treas.; Wm. F. Hatch, head of Paint Shop; Judson Benson, head of Blacksmithing Dept.

Graves & Conroy.—Northampton, Mass. (Reo.)

Graves, Bert.—Supt. The White Co., Rose Bldg., Cleveland, O.

Graves, George H.—Treas. Walworth Mfg. Co., 128-136 Federal St., Boston, Mass.

Graves, J. H.—836 W. Division St., Chicago, Ill. Garage.

Graves, J. R.—Pres. and head of Body Building Dept., Graves & Congdon Co., Oak St., Amesbury, Mass.

Graves, T. A.—Caven St., Ligonier, Ind. Garage.

Gravitation: Gravity.—The force with which one mass attracts another; particularly, the force of attraction exerted by the earth on a body. The actual attraction between two bodies on the earth's surface is very minute and can be detected only by special apparatus of great delicacy.

Gravity, Center of.—That point of a body in which its weight acts vertically downward, and which must therefore be supported and fixed in order that in every position the body may remain at rest. Every vertical straight line in which such point lies is called the "line of gravity;" and every plane passing through the center of gravity, the "plane of gravity." The center of gravity is determined by the intersection of two lines of gravity, or that of a line of gravity and a plane of gravity, or by the intersection of the planes of gravity.

Gray & Co., Wm. S.—76 William St., New York City. Mfrs. denatured alcohol.

Gray & Davis.—Amesbury, Mass. Mfrs. gas, electric and oil lamps, acetylene gas generators. Mem. M. & A. M. Est. 1897. Partnership Wm. Gray and Lambert Hollander.

Gray & Prior Machine Co.—Hartford, Conn. Mfrs. gasoline marine motors, universal joints.

Gray & Sons, Peter.—90 Union St., Boston, Mass. Mfrs. tool boxes, dashes and fenders, gasoline funnels, acetylene generators, lamps, tanks.

Gray Auto Co.—1548 Broadway, Denver, Colo. (Stanley.)

Gray, B. D.—Chief Engineer and Pur-Agent American Locomotive Automobile Co., Providence, R. I.

Gray, Chauncey W.—5 Taggart Block, Watertown, N. Y. (Franklin.)

Gray, Emmet P.—Pres. Gray-Hawley Mfg. Co., 605-609 W. Fort St., Detroit, Mich.

Gray, George.—Pres. Mianus Motor Works, Cos Cob, Conn.

Gray-Hawley Mfg. Co.—605-609 W. Fort St., Detroit, Mich. Mfrs. automobile and marine mufflers, exhaust horns, muffler cut-outs, foot pedals, valves, whistles. Mem. M. & A. M. Est. 1902. Emmet P. Gray, Pres.; O. P. Hawley, Vice-Pres.; Geo. E. Hawley, Sec. and Treas.

Gray, Herbert.—Pres. Kilgore Mfg. Co., 101 Main St., Old Town, Me.

Gray, J. H.—Director Dragon Motor Co., 31st, 32d and Chestnut Sts., Philadelphia, Pa.

Gray Motor Co.—Lieb and Larned Sts., Detroit, Mich. Mfrs. gasoline marine motors.

Gray, R. T.—Sec. G. B. Essex Brass Co., 480-86 Franklin St., Detroit, Mich.

Gray, W. C.—Patchogue, L. I., N. Y. (Maxwell.)

Gray, Wm.—Partner in firm of Gray & Davis, Amesbury, Mass.

Graybill, Jno. E.—Pres. and Mgr. York Electric & Machine Co., 30-34 N. Penn St., York, Pa.

Grayhill, S. G.—Elizabethtown, Pa. (Cadillac, Winton.)

Greacen & Co., Water.—12 Mechanic St., Newark, N. J. Mfrs. license numbers, name plates.

Grease-cock.—See Cock, Grease.

Grease-cup.—An arrangement for forcing grease to a bearing. It usually consists of a cup with an arrangement of springs for forcing the grease through a channel passing through the cup shank, which

holds it in place. The illustration shows the Stauffer grease-cup, which consists of a cup, G, which, after being filled full of grease is closed by screwing on the bottom, E. As the grease, H, is compressed between the top and bottom, it can escape only through the orifice, O, from which it is led to the point to be lubricated.

Grease-gun.—An instrument that should be carried by every automobile, since there are cases in which it would be impossible to inject the least quantity of lubricant in a mechanical part without it. The grease-gun must be actuated by a screw in

order to permit the driver to exert a strong pressure on the grease without much effort.

Grease-pump.—See Pump, Grease.

Greases.—Fatty materials used in lubricating and consisting of viscous hydrocarbons, analogous to vaseline, obtained at the end of the distillation of petroleum. Used in the change-speed boxes, differentials, etc., of automobiles.

Great Western Mfg. Co.—La Porte, Ind. Mfrs. motorcycles.

Green Bay Machine Co.—Green Bay, Wis. Mfrs. gasoline marine motors.

Green, C. F.—Waynoka, Okla. (Cadillac.)

Green, Harry C.—Sec. and Treas. Puritan Soap Co., 500-504 Exchange St., Rochester, N. Y.

Green, Jr., J. W.—Main St., Danbury, Conn. (Winton.)

Green & Warnick.—Stewart St., Amsterdam, N. Y. (Pope-Toledo, Stevens-Duryea.) Repairs; supplies; garage.

Grendlen, C. P.—Mgr. Oil City Oil & Grease Co., Oil City, Pa.

Greuter, Charles Robert.—Mechanical Engineer Matheson Motor Car Co. B. Philadelphia, Pa., March 26, 1861. Ed. St. Gallen and Winterthur (Switzerland). Director Matheson Motor Car Co., Wilkes-Barre, Pa. Mem. Wilkes-Barre A. C. Res. 46 N. Washington St., Wilkes-Barre, Pa. Office, Matheson Motor Car Co., Wilkes-Barre, Pa. In the trade since 1897. Used first car 1896.

Grey Iron Castings Co.—Mt. Joy, Pa. Mfrs. grey iron castings.

Grid.—An accumulator plate provided with numerous pockets or perforations into which the active material is introduced in the form of a paste. See Cell, Storage.

Gridiron-valve.—See Valve, Gridiron.

Grieb, Harry.—Sec. and Treas. Ajax-Grieb Rubber Co., Trenton, N. J.

Grieb, Wm. G.—Vice-Pres. Ajax-Grieb Rubber Co., Trenton, N. J.

Grieger, L. F.—Plainview, Minn. Garage.

Greip, H. C.—Carthage, Mo. (Maxwell.)

Griffault, J.—274 route de la Révolte, Levallois-Perret, Paris, France. Mfrs. tops.

Griffin & Kilmer.—Chicago, Ill. (Smith.)

Griffin Motor Car Co.—118 W. Wayne St., Fort Wayne, Ind. (National, Maxwell, White.)

Griffin, N. D.—99 W. Fulton St., Gloversville, N. Y. (Pope-Hartford, Pope-Toledo, Pope-Waverley. Est. (in automobile business) 1904. F. W. Becker, head of Automobile Dept. Garage, 6 cars. Repairing; supplies.

Griggs Automobile & Bicycle Co.—418 Santa Fe Ave., Pueblo, Colo. Garage.

Grimes & Harris.—92 Pleasant St., Leominster, Mass. Garage.

Grimesman, F. J.—Sec. Hess Pontiac Spring & Axle Co., Pontiac, Mich.

Grinard Inserted Leather Auto Shoe Co.—Buffalo, N. Y. Mfrs. tire shoes.

Grinding in.—The operation of fitting a valve accurately to its seat by applying an abrasive, such as emery flour or finely ground glass, mixed with oil, to the face of the valve and rotating the latter until

a perfect fit is secured. The grinding is best performed by the use of a screw-driver and in turning the valve in its seat half a turn one way and then another, with a frequent lifting of the valve clear of its seat in order that no particle of the abrasive shall become imbedded in it with a consequent damage to the seat. Great care must be taken during the operation to prevent any emery from entering the cylinder.

Grinnell Garage Co.—Grinnell, Ia. (Ford, Reo.)

Grip Nut Co.—152 Lake St., Chicago, Ill.; 500 5th Ave., New York City. Mfrs. lock nuts. Cap., \$7,500. Est. 1905. E. R. Hibbard, Pres., Chicago; J. W. Hibbard, Sec., New York; R. S. Wickersbau, Gen. Mgr.; T. F. De Garno, Gen. Sales Agt.; B. F. Stewart, Mgr. Elec. Dept.

Gripe.—The lower part of the stem of a boat.

Gripping.—See Seizing.

Grisinger, A. H.—Santa Cruz, Cal. (Northern.)

Grison und Co.—Hamburg, Germany. Mfrs. clutches.

Griswold, A. H.—Holly, Colo., and Garden City, Kan. (Jackson.)

Griswold, Roger W.—Sec. and Treas. Auto Rail & Equipment Co., 113 Michigan Trust Bldg., Grand Rapids, Mich.

Griswold, T. F.—Covina, Cal. (Maxwell.)

Groff, A. C.—Main St., Sellersville, Pa. (Rambler.)

Gron Dahl, H.—Asst. Supt. Couplegear Freight Wheel Co., Ashton Bldg., Grand Rapids, Mich.

Grose, J. W.—Pur, Agt. Wayne Automobile Co., Piquette and Brush Sts., Detroit, Mich.

Grose, Ltd.—Northampton, England. Mfrs. pneumatic tires, non-skids.

Gross, Martin.—41 Luisenstrasse, Berlin, Germany. Mfrs. goggles.

Gross Terrace Garage.—Rear 1396 Madison St., Chicago, Ill. Garage; repairing; supplies.

Grosman, Ch.—11 rue Boubillot, Paris, France. Mfrs. motorcycles.

Gross, J.—89 rue de la Mare, Paris, France. Mfrs. tricar. (J. O. G. tricar.)

Grosshaus, L.—Sutton, Neb. (Waltham.)

Grossman, Emil.—Pres Motor Car Equipment Co. B. Homok, Hungary, July 1, 1871. Ed. public schools in Hungary and Cleveland, O. Pres. and Director in Motor Car Equipment Co., National Sales Corp., Royal Battery Co., International Sales Corp., Royal Battery Co., International Sales Corp. (Paris, France). Mem. Am. Motor League, A. A. A. A. C. of Buffalo, Cleveland A. C. Res.

22 Morningside Ave., New York. Office, 296 Broadway and 55 Warren St., New York. In the trade since 1897. Imported one of the first French machines. Was founder and publisher of the Cycling Gazette, Motor Vehicle Review (now the Automobile), and Good Roads Magazine. Established the Continental Caoutchouc Co. in America and was Sec. and Gen. Mgr. for 3 years.

Grossman, Geo. J.—Gen. Mgr. Mammoth Garage Co., Mamaroneck Ave. and Post Rd., White Plains, N. Y.

Grossman, Geo. J.—1649 Broadway, New York City. (Cadillac.)

Grossman, M.—Pres. Mammoth Garage Co., Mamaroneck Ave. and Post Rd., White Plains, N. Y.

Grossman, M. M.—Vice-Pres. and Sec. Mammoth Garage Co., Mamaroneck Ave. and Post Rd., White Plains, N. Y.

Grossman, W. G.—Vice-Pres. and Treas. Mammoth Garage Co., Mamaroneck Ave. and Post Rd., White Plains, N. Y.

Groth, Geo. H.—Hilliesboro, O. (Jewel, Waltham.)

Ground.—From the electrician's point of view, the earth is a conductor of which the potential is always zero. Any two points in an electrical system which are connected to the ground are therefore regarded as being connected together; hence the earth is utilized in many cases as part of an electric circuit; in telegraphy, for example, where the earth forms a return wire. In motor vehicles, the metal of the engine and chassis is taken to represent the "ground," and is utilized to return the current to its source. This method is called "grounding" (or, sometimes, "earthing") the return. A "grounded" circuit requires careful insulation of the "lead" (the wire by which the current flows from the generator to its work), since, as it is liable to come into contact with the "ground" (the engine metal) a break in the insulation would allow the current to leak and return to the generator without doing its work, a condition which is termed a "short circuit." Batteries, magnetos, timers and spark-plugs all have a pole "to ground."

Grout Bros. Automobile Co.—Orange, Mass. Mfrs. solder, aluminum solder.

Grouvelle, H. Arquembourg et Cie.—71 rue du Moulin Vert, Paris, France. Mfrs. carburettors, circulating pumps, tire pumps, radiators.

Grove, W. G.—Sec. and Treas. Unique Metal Co., 25 Illinois St., Buffalo, N. Y.

Grover & Danbar.—11 W. Canal St., Wabash, Ind. (Rambler, White, Jewel, Pope-Waverley.)

Grover, W. H.—Norfolk, Va. (Ford, Reo, Premier, Maxwell.)

Groves, H. B.—Garner, Ia., 609 Pierce St., Sioux City, Ia., and Webster City, Ia. (Northern. Thomas Flyer, Buick, Cadillac, Pope-Waverley.) Garage.

Grow Automobile Co.—Osage, Ia. (Mora.)

Grow Auto Garage & Machine Shop.—300 F St., Marysville, Cal. (Oldsmobile, Winton.) Garage; repairing.

Grub-screw.—See Screw. Grub.

Grubb, W. J.—Supt. Light Mfg. and Foundry Co., 509 Queen St., Pottstown, Pa.

Gruber, L. W.—Sec. Tindel-Morris Co., Eddystone, Pa.

Gruenewald, E.—Designer and Supt. Moline Auto Co., East Moline, Ill.

Gruenfeldt, E.—Engineer and Designer Baker Motor Vehicle Co., 80th St., N. W., Cleveland, O.

Gründler, Max.—Liebenwalderstrasse 31, Berlin, Germany. Mfrs. bodies.

Guarantee Auto Co.—162 W. 56th St., New York City. Instruction, automobile; repairing.

Gudgeon-pin.—Another name for wrist-pin or piston-pin.

Gudger & Ewing.—Stockton, Kan. Garage.

Gue, Harry D.—Vice-Pres. Dow Tire Co., 104 W. 42d St., New York City.

Guenet, J.—5 rue de Montmorency, Paris, France. Mfrs. spark plugs, coils.

Guenther, E. P.—High and Boulevard, West Hoboken, N. J. Garage.

Guerin.—24 rue de Pantin, Bagnolet, Seine, France. Mfrs. metallic rims.

Guerin, Frères.—10 rue de Laborde, Paris, France. Mfrs. automobile motors.

Guérot.—54 rue Daguerre, Paris, France. Mfrs. primary batteries.

Guerra & Co.—Merida, Yucatan. Mex. (Northern.)

Guerry et Bourguignon.—116 bvd. de Grenelle, Paris, France. Mfrs. motorcycles.

Guétat, J.—7 rue Boutard, Neuilly, France. Mfrs. radiators.

Gugin, Robt.—550 Seymour St., Vancouver, Canada. (Franklin.)

Guide-bars.—The straight bars which cause the slide-blocks of a steam-engine to move in a straight line.

Guide, Cross-head.—The slideways between which the cross-head of a reciprocating engine moves.

Guide Michelin.—155 bvd. Pereire, Paris, France. Pub. maps.

Guide-rope.—A strong rope about one hundred feet in length suspended from the hoop or ring of a balloon, and which, in a descent, acts as a substitute for ballast, since every inch resting on the ground relieves the balloon of an equivalent portion of its weight.

Guide Routier Continental.—146 Ave. Malakoff, Paris, France. Pub. maps.

Guide, Vulcan.—8 Place de la Concorde, Paris, France. Pub. maps.

Guillott Metal Gasket Co.—97 S. Clinton St., Chicago, Ill. Mfrs. gaskets.

Guillott Gasket Co., Wm.—1108 W. West Ave., Buffalo, N. Y. Mfrs. packing.

Gulf Auto & Machine Works.—101 Franklin St., Tampa, Fla. (Franklin.)

Guillemin & Cie., H.—12 rue de Metz Courbevoie, Seine, France. Mfrs. gasoline automobiles. (Guy cars.)

Guillierme, F.—17 rue de Billancourt, Paris, France. Mfrs. gasoline commercial vehicles.

Gullicksen, O. C.—Sec. and Treas. Churchill Cabinet Co., 72 Churchill St., Chicago, Ill.

Gulstine & Waskey.—Madison, S. D. (Buick.) Est. 1889. Not inc. Cap. \$75,000. H. H. Gulstine and Geo. H. Waskey, partners; repairing.

Gulstine, H. H.—Co-partner, Gulstine & Waskey, Madison, S. D.

Gumelastic Tire Co.—920-22 Boliver Rd., Cleveland, O. Mfrs. tire fluid.

Gum Lac.—See Shellac.

Gummiwerke Fulda.—Fulda, Germany. Mfrs. pneumatic rubber tires.

Gummiwerke Oberspree.—Oberschönweide, Berlin, Germany. Mfrs. pneumatic rubber tires.

Gump Automobile Co., A. W.—1118 S. Main St., Los Angeles, Cal. (Jackson, Glide.)

Gunby Co., L. W.—Salisbury, Md. (Atlas trucks.)

Gunderson, G. B.—Vice-pres. Northern Motor Car Co., Champlain and Canton Sts., Detroit, Mich.

Gunderson, Victor Martin.—Sec. and Treas. and Gen. Mgr. Northern Motor Car Co. B. Chicago, Ill., Oct. 11, 1869. Ed. high school graduate. Director Northern Motor Car Co. Mem. Detroit A. C. Res., 220 Seyburn Ave. Office, Champlain and Canton Sts., Detroit, Mich. In trade since 1901.

Gun-cotton.—See Cotton, Gun.

Gun-metal.—A kind of brass, composed of 9 parts of copper and 1 part of tin. It is employed for the manufacture of bearings and is suitable also for valves.

Gunther Bros.—1633 Madison Rd., Cincinnati, O. (Royal Tourist.)

Gunther Co., Jos. F.—1240 Michigan Ave., Chicago, Ill. (Apperson.)

Gunther, Jos. F.—Manager Rambler Garage Co. B. Chicago, Ill. Ed. Wells and St. Michael. Director Rambler Garage Co. Pres. Chicago Auto Trade Ass'n., Vice-Pres. Chicago Motor, Director Chicago A. C. Res., 1733 Waveland Ave. Office, 1462 Michigan Ave., Chicago, Ill. In the trade 7 years.

Gunther's Sons, G. C.—184 5th Ave.,

New York City. Mfrs. miscellaneous wearing apparel, furs.

Gunthorpe, McKean Co.—Mobile, Ala. (Maxwell.)

Gunwale.—The lengthwise strip covering the upper end of the framing-timbers in a boat.

Gurner Machine Works, The.—410 W. 7th St., Hanford, Cal. (Ford, Buick, Auburn, Reo.) Est. Dec. 1, 1905. Garage, 20 cars. Repairing.

Gurnett, C. H.—Advt. Dept., The Automobile, Flatiron Bldg., New York City.

Gusset.—A re-enforcing piece, G (see figure), in the form of a triangle for strengthening the angles of an automobile frame, C C, of pressed steel. It is rivetted to the frame or pressed at the same time as the frame itself.

Gusstahlkugelfabrik Bamberg,, Heim Co.—Bamberg, Germany. Mfrs. ball bearings.

Gustin Auto Co.—1309 Sycamore St., Cincinnati, O. (Lambert.)

Gutches & Smith.—Havana, Cuba. (Knox.)

Guthrie, Geo. H.—Supt. Muncie Auto Parts Co., Elliott St. and L. E. & W. Yards, Muncie, Ind.

Guth und Wolff.—Liegnitz, Germany. Mfrs. wood wheels.

Gutta-percha.—The inspissated juice of *Isonandra gutta*, a large forest tree, reaching a height of 60 to 70 feet, with a trunk 2 to 3 feet in diameter. It is a native of the islands of Southern India, especially Borneo and Sumatra. The raw gutta-percha is exported in lumps weighing five to six pounds. It is prepared for use by cutting it up in slices, which are softened by being immersed in hot water, and are then torn into fine shreds, by rapidly revolving cylinders set with sharp teeth, and thrown into cold water, when the impurities sink, and the gutta-percha floats to the surface. The shreds are then transferred to hot water, and are made into solid masses, which are afterward kneaded by machinery, in order to expel the extraneous moisture. It is used for driving-bands for small machinery, for battery boxes, and extensively as an insulator for electric cables or wires.

Gutta Percha & Rubber Mfg. Co.—126 Duane St., New York City. Mfrs. collapsible buckets.

Guy, Mark.—Asbury Park, N. J. Repairing.

Guyénot, J.—rue du Printemps, Paris, France. Mfrs. lubricators.

Guyon, H. A.—62 Broad St., Bed Bank, N. J. Garage.

Guyot et Cie., Henri.—41 rue St. Fer-

dinand, Paris, France. Mfrs. carbureters.

Gyax, J.—Bienne, Switzerland. Mfrs. bodies.

Gydeson, C. F.—Mgr. Houston Motor Car Co., San Jacinto and Prairie St., Houston, Tex.

Gyroplane.—A flying machine on the

helicopter (see Helicopter) principle, constructed by Messrs. Breguet and Richet, and in which the lifting action is secured by the reaction upon the air obtained from four gyratory systems, each consisting of eight revolving aeroplanes. The latter are driven by a motor placed in the center of the apparatus.

H

H.—Symbol for the "magnetizing force" at a point.

H.—Abbreviation of "henry" (electricity).

h. p.—An abbreviation of "horse-power."

h.—Symbol of "height," "hour" and "hecto."

H-quadrant.—See Quadrant, Gate.

H-section.—A form of steel bars having a cross-section resembling the letter H.

H. & H. Dry Battery Co.—754 Michigan St., South Bend, Ind. Mfrs. primary batteries.

Haarlemsche Automobielen Motorrijwielabriek.—Zooete Strasse, Haarlem, Holland. Mfrs. motorcycles.

Haas & Co., Cyrus A.—Fullerton Bldg., St. Louis, Mo. Designers and contractors, special machinery, patterns, models and laboratory tests.

Haase Motor Works.—1019 Lloyd St., Milwaukee, Wis. Mfrs. gasoline marine motors.

Hachette et Cie.—79 Blvd. Saint-Germain, Paris, France. Pubs. maps.

Hackensack Auto Co.—Main St., Hackensack, N. J. (Maxwell.) Garage and repairing.

Hackett, George B.—Treas. Hackett Motor Car Co., 218 Paterson St., Paterson, N. J.

Hackett Motor Car Co.—218 Paterson St., Paterson, N. J. (Manhattan trucks.) Est. March, 1907. Cap. \$100,000. George Hardy Payne, Pres.; George B. Hackett, Treas.; L. W. Gilmore, Sec. and hd. New York office, Transportation Dept., 498 Broome St. Garage, 15 cars; repairing cars represented only.

Hack-saw.—A fine-toothed frame-saw for cutting metals.

Hadley, C. E.—Gen. Mgr. The Garford Company, Elyria, O.

Hadley, Henry.—Gardner, Mass. Garage.

Hadlock, W. Y.—15 N. Main St., Manchester, N. H. (Rambler, Queen.) Supplies; garage; repairing.

Haendler, Arthur.—Heidestrasse 52, Berlin, Germany. Mfrs. bodies.

Haelet, Jas. G.—Designer Rainier Co., Saginaw, Mich.

Hagedorn & Co., A.—12 Paul St., Finsbury, London, E. C., England. Mfrs. tire pumps.

Hagendorfer und Werdermann.—Treb-
bin, Germany. Mfrs. tire pumps.

Hagen, Gottfried.—Kalk bei Köln, Germany. Mfrs. electric automobiles (Urbanus cars); electric commercial automobiles (Hagen trucks); storage batteries.

Hager Carburetter Co.—819 Broadway, Nashville, Tenn. Mfrs. carburetters.

Hager, Wm.—1308 Cascade Ave., Colorado Springs, Colo. (Isotta Fraschini.)

Hagerstown Automobile Club.—Hagerstown, Md. Chas. M. Danzel, Sec.

Hagerstown Spoke & Bending Co.—Hagerstown, Ind. Mfrs. wood rims and wheels.

Hagmann & Hammerly.—1077 W. Harrison St., Chicago, Ill. (Jewel, Deere, Cartercar.)

Hahn & Hahn.—Bridgeton, N. J. (Ford.)

Hahn, H. J.—St. Charles, Ill. Garage.

Hahn, S. A. D.—Helena, Mont. (Cadillac.)

Haigh, Chas.—Boston, Mass. (Pennsylvania.)

Haines, Egbert.—Goshen, Ind. (White.)

Haines, F. A.—Sec. and Treas. Smith-Haines, 1673 Broadway, New York City.

Haines, W. B.—804 E. Market St., Sunbury, Pa. Garage.

Hainpold, S.—Hd. of Upholstery Dept. Fickling & Co., Inc., 154 E. 57th St., New York City.

Halderman, O. A.—Marion, Ind. Mfrs. adjustable lamp brackets.

Hale, E. T.—University Garage, New Haven, Conn. (Knox.)

Hale, Ralph.—Willet and Crouse Sts., Fort Plain, N. Y. Garage.

Hales, J. C.—Wilson, N. C. (Ford.)

Halesite.—Huntington Harbor, L. I., N. Y. Mfrs. motor boats.

Half-center.—The position of a motor-crank when at right angles to the line of the piston-rod.

Half-elliptic Spring.—See Springs.

Half-lap Joint.—See Joint, Half-lap.

Half-speed Shaft.—Same as half-time shaft, half-motion shaft and two-to-one-shaft. See Cam-shaft.

Hall & Son, E. O.—Honolulu, Hawaiian Islands. (Cadillac, Pope-Hartford, Franklin.)

Hall, A. L.—Asst. Pur. Agent Dragon Motor Co., 31st, 32nd and Chestnut Sts., Philadelphia, Pa.

Hall Bros.—1613 Euclid Ave., Cleveland, O. (Cartercar, Reliance, Rapid, Climax.) Est. Oct., 1906. Not Inc.

Hall, C. A.—Des Moines, Ia. (Maxwell.)

Hall, C. M.—Adv. Mgr. Royal Equipment Co., 165 Housatonic Ave., Bridgeport, Conn.

Hall, Charles M.—Salesman. B. Millersburg, O., Oct. 29, 1867. Mem. Chicago Athletic, Kenosha Country, Cleveland A. C., Buffalo A. C. Res., Kenosha, Wis. Office, Badger Brass Mfg. Co. In automobile trade since 1900.

Hall Co., Chas. E.—108 Broadway, Buffalo, N. Y. Mfrs. tools, stampings, wrenches.

Hall Co., Inc., E. H.—12 Elm St., Rochester, N. Y. Mfrs. carbureters, dashes and fenders.

Hall, C. R.—Collingwood, N. J. (Cadillac.)

Hall, E. G.—111 E. Broadway, Brownwood, Tex. (Cadillac.) Est. 1895. Garage, 15 cars. Repairing.

Hall, E. H.—Prairie City, Ore (Waltham.)

Hall, Henry I.—Vice-Pres. The Alden Speares Sons & Co., 369 Atlantic Ave., Boston, Mass.

Hall, H. J., Jr.—Pres. Columbia Lubricants Co. of New York, 78 Broad St., New York City.

Hall, J. K. P.—Pres. Stackpole Battery Co., St. Mary's, Pa.

Hall, John W.—10th Ave., Clinton, Ia. (Maxwell.)

Hall, Robert.—Sec. American Motor Truck Co., Caledonia St., Lockport, N. Y.

Hall, Spencer.—1401 Park St., Racine, Wis. (Holsman.)

Hallada, G.—Dortheenstrasse 22, Berlin, Germany. Mfrs. grade indicators.

Halladay, Floyd.—Hotel Downey, Lansing, Mich. (Buick.)

Hallet & Son, J. N.—Carson City, Mich. (Jackson.)

Hallet, E. M.—Pur. Agt. Stanley Motor Co., Newton, Mass.

Halliday, C. A.—42 Cedar St., Oneida, N. Y. Mfr. cloth and carpet trimmings, and Sec. Schubert Bros. Gear Co.

Halliday Co., The.—Streator, Ill. Garage.

Halliwell, Thos. D.—Vice-Pres. Tower & Lyon Co., 95 Chambers St., New York City.

Halsey & Smith, J. H.—Shipman and Springfield Aves., Newark, N. J. Mfrs. leathers.

Halsey Automobile Co.—3910 Olive St., St. Louis, Mo. (Buick, Packard, Stevens-Duryea, Franklin, Knox.)

Halsey James T.—336 W. York Ave., Philadelphia, Pa. Mfr. steam automobiles.

Halverson, H.—Whitewater, Wis. (Cadillac.)

Halz, C. H.—Gen. Mgr. Jas. L. Gibney & Bro., 211-13 N. Broad St., Philadelphia, Pa.

Ham & Ross.—23 S. College St., Charlotte, N. C. (Maxwell.) Est. 1906. Partnership J. H. Ham and J. H. Ross, under name of Ham & Ross. Garage, 12 cars; repairing.

Ham, Geo. W.—Pres. and Treas. C. T. Ham Mfg. Co., 731 Oak St., Rochester, N. Y.

Ham Mfg. Co., C. T.—731 Oak St., Rochester, N. Y. Mfrs. cold blast side and tail lamps. Mem. M. & A. M. Cap., \$100,000. Est. 1886. Geo. W. Ham, Pres. and Treas.; P. McCutchen, Asst. Treas.; Jas. Barnes, Sec.; Jno. H. Graham & Co., Selling Agents, 113 Chambers St., New York City.

Hambrick Motor Car Co.—Washington, Ind. Mfrs. gasoline commercial automobiles, gasoline automobiles.

Hamelle, H.—21 quai Valmy, Paris, France. Mfr. lubricators.

Hamerstrom, F. N.—Care Trenton Rubber Mfg. Co., Trenton, N. J. (Dragon.)

Hamill, Colonel.—San Juan, Porto Rico. (Franklin.)

Hamill, W. D.—601 W. 3d St., Williamsport, Pa. (Baker.)

Hamilton, Albert Gould.—Sec. Fiat Automobile Co. B. South Orange, N. J., Aug. 21, 1866. Ed. public school and college. Director Fiat Automobile Co. Mem. Larchmont Yacht. Res., Larchmont Manor, N. Y. Office, 1751 Broadway, New York City. In the trade since March 1, 1900. Used first car May, 1899, in Paris.

Hamilton Auto Co.—2312 Madison Ave., Baltimore, Md. (Stoddard-Dayton.)

Hamilton Auto Co.—221 Eagle St., Dunkirk, N. Y. Garage.

Hamilton Auto Co.—206 N. Broad St., Philadelphia, Pa. (Stoddard-Dayton.)

Hamilton Automobile Club.—Hamilton, Canada. S. O. Greening, Pres.

Hamilton Automobile Co.—1251 Michigan Ave., Chicago, Ill. (Panhard, Mercedes, Isotta, Chadwick.)

Hamilton, C. M.—1620-24 Broadway, New York City. (Isotta Fraschini.)

Hamilton Garage Co.—133-135 King St., W., Hamilton, Canada. (Oldsmobile, Franklin, Maxwell.) Est. 1906. A. P. Goering, Prop. and Mgr.; A. R. Goering, head Sales Dept.; Jack Wilson, head Repair Dept. Garage, 30 cars; repairing.

Hamilton, G. H.—Sales Mgr. The G. & J. Tire Co., 549-65 E. Georgia St., Indianapolis, Ind.

Hamilton, Harry.—Greenburg, Ind. (Rambler.)

Hamilton, H. G.—Treas. and Gen. Mgr. Rapid Motor Vehicle Co., Rapid St., Pontiac, Mich.

Hamilton, J. H.—Charlotte, N. C. (Pope-Hartford.)

Hamilton Motor Car Co.—26 N. 2d St., Hamilton, O. (Buick, Elmore.) Est. Jan. 1, 1907. Cap., \$10,000. Lee N. Parrish, Pres.; J. D. Andrews, Vice-Pres.; C. D. Wilson, Sec. and Treas. Garage, 25 cars; repairing.

Hamilton, P. H.—Youngstown, O. (Jewel.)

Hamilton, Walter.—Asst. Mgr. Nevada Automobile & Supply Co., 115 Ramsey St., Goldfield, Nev.

Hamlin & Emery Brass Co.—Boston, Mass. Mfrs. brass fittings.

Hamlin, R. C.—1806 S. Main St., Los Angeles, Cal. (Franklin, Lozier.)

Hammacher, Schlemmer & Co.—133 4th Ave., New York City. Mfrs. tools.

Hammann, G. E.—Sec. and Treas. Progressive Mfg. Co., 41 Norwood St., Torrington, Conn.

Hammar Mfg. Co., H.—170 E. Madison St., Chicago, Ill. Mfrs. mufflers.

Hammend, J. W.—79-81 W. Main St., Fredonia, N. Y. (Waltham.)

Hammer.—There are a large number of kinds of hammers, of different forms and weights. The most frequently employed by automobilists are the "ball pein," copper and lead hammers.

Metallic pieces provided with a thread or the parts of which are fragile are struck with lead, copper or rawhide-faced hammers or by wooden or fiber mallets which do not deform them.

An automobile should always carry a steel ball pein hammer (see figure) in the tool-box for use with chisels, punches and drifts, and a copper or lead hammer for dismounting fragile pieces or threaded parts which need blows to rejoin them. (2) A term also for the moving electrode which comes in contact with the "anvil" in a make-and-brake ignition system. (3) The piece of metal in a trembler which comes in contact with the coil-core.

Hammer-break Ignition.—See Ignition.

Hammond Wrench Co.—26-30 Atlantic Ave., Boston, Mass. Mfrs. wrenches.

Hamoir, Duchesne et Cie.—Herstal, Belgium. Mfrs. pressed steel frames.

Hampden Auto Co.—60 Main St., Springfield, Mass., and Westfield, Mass. (Pope-Hartford, Pope-Toledo, Pope-Waverley.)

Hanaire, Société des Accumulateurs.—7 rue Danton, Levallois-Perret, France. Mfrs. storage batteries.

Hanauer Automobile Co.—118 E. 7th St., Cincinnati, O. (Locomobile, Winton.)

Hancock & Heller.—184-190 Water St., Binghamton, N. Y. Mfrs. tire tools.

Hancock Inspirator Co.—85 Liberty St., New York City. Mfrs. stampings.

Hancock Mfg. Co.—770 E. Henry St., Charlotte, Mich. Mfrs. lubricators.

Hancock, W. C.—Concord, Mass. Garage.

Hand-drill.—See Drill.

Hand-hole.—An aperture formed in a gear-case to permit of an inspection, cleaning and lubrication of the enclosed mechanism, and which is closed by a "hand-hole plate."

Hand-lever.—See Lever, Hand.

Hand-wheel.—See Wheel, Hand.

Handicap.—A condition imposed in order, as far as possible, to render the chances of competitors in a race equal, such as carrying of extra weight, or the requirement of a greater distance or a later start than is assigned to an inferior competitor.

Handy, Robert.—West Midland St., Bay City, Mich. Garage.

Haney Gas Engine Co.—Ligonier, Ind. Mfrs. gasoline automobile and marine motors.

Hanford Agricultural Works.—Hanford, Cal. (Oldsmobile, Winton.)

Hanger, Body.—The same as spring-hanger, q. v.

Hanger-bolts, Motor.—Bolts that screw through the car frame and into the end of the cylinder, and form the two end supports for the motor.

Hanger, Frame.—The same as Spring-hanger, q. v.

Hanger, Spring.—See Spring-hanger.

Hankey & Congdon.—414 Main St., Santa Ana, Cal. (Pope-Waverley, Tourist.)

Hankins Bros.—Elsie Mich. (National.)

Hankinson & Thompson.—Pine Bluff, Ark. (Cadillac.)

Hankins, W. B.—Advt. Mgr. Pope Motor Car Co., Toledo, O.

Hankscraft Co.—Madison, Wis. Mfrs. motor boats.

Hanley, I. E.—Huntington, W. Va. (Jewel.)

Hanna Storage Battery Co.—McCordsville, Ind. Mfrs. storage batteries.

Hannan & Henry Motor Co.—29-31 Catherine St., Ogdensburg, N. Y. (Cadillac, Buick.) Est. 1904. Garage, 30 cars. Repairing.

Hannan, Geo. E.—1441 Welton St., Denver, Colo. (Jewel, Jackson.)

Hannoversche Actiengummiwarenfabrik.—Linden, Hanover, Germany. Mfrs. pneumatic rubber tires.

Hannoversche Gummikamm Co.—Hanover, Germany. Mfrs. pneumatic rubber tires.

Hannoversche Holzbearbeitung und Wagonfabriken.—Linden, Hanover, Germany. Mfrs. wood rims.

Hannoversche Maschinenbau Actien Gesellschaft.—Linden, Hanover, Germany. Mfrs. steam commercial automobiles. (Stoltz trucks.)

Hannoyer et fils.—30 rue Fouquet, Levallois-Perret, France. Mfrs. springs.

Hanote-Dartois, Veuve.—Faubourg de Valenciennes, Douai, France. Mfrs. wood wheels.

Hans Co., Edmund E.—Minneapolis, Minn. Mfrs. gasoline indicators.

Hans, E. C.—Supt. Banker Bros. Co., Baum and Beatty Sts., Pittsburg, Pa.

Hans Motor Car Co.—424 S. 4th St., Minneapolis, Minn. (Stearns.)

Hans, Renold.—Brook St., Manchester, England. Mfr. chains.

Hansa Automobile Gesellschaft.—Varel-Oldenburg, Germany. Mfrs. gasoline automobiles.

Hansen & Co., A.—14 Hubbard St., Chicago, Ill. Repairing.

Hansen Machine Works.—Helena, Mont. (Cadillac.)

Hansen Mfg. Co., O. C.—156 E. Water St., Milwaukee, Wis. Mfrs. wearing apparel, gloves and gauntlets.

Hansom.—A type of enclosed vehicle having a single seat at the rear, access to which is obtained by a front door.

Hanson, A.—Alpena, Mich. (Maxwell.)

Hanson, Chas.—1406 Grand Ave., Kansas City, Mo. (Indian.)

Hanson, J. Howard.—Second Vice-Pres. General Vehicle Co., Broadway and 62d St., New York City.

Hanson, N. R.—Huron, S. D. (Jackson.)

Hanson, T. S.—Advt Mgr. The Electric Launch Co., Ave. A and North St., Bayonne, N. J.

Hanway, H. D.—Belair, Md. (Cadillac.)

Hapgood, O. D.—Rep. Dept. of Geo. A. Sanger, 206 W. Main St., Orange, Franklin Co., Mass.

Hara, J. S.—Merriton, Canada. (Waltham.)

Haradon, Wm. M.—Sec., Treas. and Mgr. Victor Auto Storage Co., 147-149 W. 55th St., New York City.

Harbottle Co.—Watertown, N. Y. (Waltham.)

Harburgh Tire Co.—234 W. 58th St., New York City. Mfrs. pneumatic tires.

Hard, Dr. A. D.—Marshall, Minn. (Waltham.) Est. 1903. Repairing.

Hardegan, Emil C.—Supt. Pope Motor Car Co., 139 S. East St., Indianapolis, Ind.

Hardening.—The process of heating and sudden cooling of steel which gives the maximum amount of hardness to the metal. This is afterwards modified by "tempering," q. v.

Hardening, Case.—A process consisting in adding such a percentage of carbon to a relatively thin external layer of iron or mild steel as will, on correct quenching, produce a hardened surface, while the inner core of the metal retains its initial character. It differs from cementation in that in the latter process the carbon is allowed to penetrate through or nearly through the metal, and is not interrupted so as to form merely a surface or "case" of carburized metal. Among the mechanical parts of automobiles that require to be case-hardened are wrist-pins, roller and ball-bearings, chains, bushes, parts of cam-shafts, gear-wheels of all kinds, valve-levers, etc.

Hardness.—That modification of cohesive attraction which enables bodies to resist any effort made to abrade their surfaces. Its relative intensity is measured by the power which they possess of cutting or scratching other substances.

Hardening, Oil.—The hardening of steel by heating it to redness and plunging it into oil.

Harder, J. Emmot.—Asst Business Mgr. Harder's Gun Works, 10 Market St., Clearfield, Pa.

Harder, John E.—Gen. Business Mgr. Harder's Gun Works, 10 Market St., Clearfield, Pa.

Harder's Gun Works.—10 Market St., Clearfield, Pa. (Waltham, Thomas, Buick, Franklin, Cadillac, Pope-Waverley.) Est. 1878. Not inc. John E. Harder, Gen. Business Mgr.; J. Emmet Harder, Asst. Business Mgr. Garage, 10 cars. Repairing.

Harding, Geo. S.—1401 Michigan Ave., Chicago, Ill. Garage.

Hardin, John R.—First Vice-Pres. Weston Electrical Instrument Co., Waverley Park, Newark, N. J.

Hard Rubber.—Same as Ebonite, q. v.

Hard Solder.—See Solder.

Hardware Specialty Mfg. Co.—724 W. 8th St., Anderson, Ind. Mfrs. automobile tops.

Hardy Automobile Co., C. H.—529 2d St., Alleghany, Pa. Garage.

Hardy Co., R. E.—86 Watts St., New York City. Mfrs. spark coils, spark plugs, timers.

Hardy, Francis A.—Pres. The Diamond Rubber Co., Akron, O.

Hardy, Lawrence P.—Automobile editor New York World. B. Peacham, Vt., July 14, 1883. Ed. Caledonia County, Vt., Grammar School, Nichols Latin School, Lewistown, Me.; Dartmouth College, Hanover, N. H. Ran automobile Department for Newark (N. J.) Advertiser, 1904, 1905.

Hardy, R. A.—Designer Acme Motor Car Co., 8th and Elm Sts., Reading, Pa.

Harl, John C.—Punxsutawney, Pa. (Maxwell.)

Harlem Automobile Co.—159 W. 127th St., New York City. Garage.

Harley-Davidson Motor Co.—315 39th St., Milwaukee, Wis. Mfrs. motorcycles.

Harmon, S. F.—Tacoma, Wash. Garage.

Harness, Wiedner Co.—Calumet, Mich. (Maxwell.)

Harper Buggy Co.—Columbia City, La. Mfrs. gasoline automobiles.

Harlow, Wm. O.—Kalamazoo, Mich. (Maxwell.)

Harmon, A. E.—10th and Granby Sts., Norfolk, Va. (Mitchell, Waltham.)

Harmon, H. A.—87 Cross St., Portland, Me. (American Mors, Aerocar, White.)

Harper Co., Walter J.—225-231 Mulberry St., Newark, N. J. Mfrs. bow separators, top bows, lamp brackets, lamp covers, robe rails, tire holders, top fixtures, metal trimmings.

Harper, D. Walter.—2503 N. Carlisle St., Philadelphia, Pa. Garage.

Harper Garage Co.—Salem, Mass. Cap., \$4,000. Incorporators, William A. Rowe, George A. Rowe and Fred R. Harper. Garage.

Harper's Garage Co.—Beverly, Mass. (Reo, Premier, National.)

Harphan, E. L.—Sec. and Treas. Knox Auto Co. of Ill., 1208 Michigan Ave., Chicago, Ill.

Harping or Harpin.—A ribband trimmed to the shape of, and bolted to the cant-bodies of a boat to hold them together till planked. (2) A wale of the bow of extra strength.

Harrell, Geo. H.—685 Chapel St., New Haven, Conn. Garage.

Harrington & King Perforating Co.—N. Union St., Chicago, Ill. Mfrs. perforated metals.

Harrington Garage.—Worcester, Mass. G. H. Phelps and F. L. Sanford, Props. Garage and supplies.

Harrington, D. A., Jr.—Branch Mgr. Corbin Motor Vehicle Corp. of New York, 1888 Broadway, New York City.

Harrington, John S.—36 Central St., Worcester, Mass. (Thomas Flyer.)

Harrington Lubricant Co.—1691 Broadway, New York City. Mfrs. oils.

Harris, Alexander.—Supt. Cryder & Co., 583 Park Ave., New York City.

Harris & Dunlap.—Lompoc, Cal. (Reo.)

Harris & Wilson.—326 Main St., Niagara Falls, N. Y. Garage.

Harris Bros. Co.—O'Reilly 104, Havana, Cuba. Garage.

Harris, D. P.—Vice-Pres. Reading Standard Co., Water St., Reading, Pa.

Harris, Frederick A.—Sec. Brush Runabout Co., 14-16 Baltimore Ave. W., Detroit, Mich.

Harris Oil Co., A. W.—330 Water St., Providence, R. I. Mfrs. grease, oils, semi-solid oils, metal polishes.

Harris Safety Co.—39 E. 20th St., New York City. Mfrs. fire extinguishers.

Harris Steam Engine Co., W. A.—Park and Promenade St., Providence, R. I. (Mitchell.)

Harrisburg Pipe & Pipe Bending Co.—Harrisburg, Pa. Mfrs. wrought iron and steel pipe.

Harrisburg Auto Co.—3rd & Hamilton Sts., Harrisburg, Pa. (Stanley, Reo, Rambler, Logan, National, Babcock.) Est. 1902. Cap., \$200,000. Not inc. Geo. G. McFarland, Pres. and Gen. Mgr.; W. R. Blough, Treas.; W. C. Randal, head Clerical Dept.; Paul Messner, head Repair Dept. Garage (4-story, fireproof). Repairing.

Harrison Auto Co., W. T.—1804 4th Ave., Birmingham, Ala. (Cadillac.)

Harrison Co., H. O.—1210 S. Main St., Los Angeles, Cal. (Oldsmobile, Corbin, Peerless.)

Harrison, C. L.—Third Vice-Pres. American Oak Leather Co., Kenner St. and Dalton Ave., Cincinnati, O.

Harrison Garage, The.—310 Harrison St., Syracuse, N. Y. (Dolson, Northern.)

Harrison, Gorham.—Rockford, Ill. (Oldsmobile.)

Harrison, O.—Washington St., Woodstock, Ill. Garage.

Harrolds Motor Car Co.—233 W. 54th St., New York City. (Pierce Arrow.)

Harrison Auto Co.—212 Union St., Providence, R. I. Garage.

Hart & Hegeman Mfg. Co.—Hartford, Conn. Mfrs. electric switches. Cap., \$21,000. Est. 1890. A. H. Pease, Pres.; Shiras Morris, Sec. and Treas.

Hart, A. V.—30 Carleton St., Rochester, N. Y. (Thomas Flyer, Elmore, Haynes, Studebaker, Columbus.)

Hart, Howard S.—Pres. Corbin Motor Vehicle Corp., New Britain, Conn.

Hart, J. M.—Oroville, Cal. (Rambler, Reo.)

Hart Mfg. Co.—370 Atlantic Ave., Boston, Mass. Mfrs. trunk racks.

Hart, Maxwell S.—Vice-Pres. and Treas. Corbin Motor Vehicle Corp., New Britain, Conn.

Hartel, J. V.—Doylestown, O. (Holsman.)

Hartford Auto Body Works.—809 Asylum Ave., Hartford, Conn. Mfrs. wood and metallic bodies, automobile tops, glass wind shields.

Hartford Auto Parts Co.—Howard Bldg., Hartford, Conn. Mfrs. steering apparatus, universal joints.

Hartford, Edward Vassallo.—Sec. Great Atlantic & Pacific Tea Co. B. Orange, N. J., May 28, 1870. Ed. Orange High School, Stevens Institute, 1892. Pres. Hartford Suspension Co., Sec. Great American Tea Co. Mem. Deal Country, Orange Camera. Res., Deal, N. J. Office, 67 Vestry St., New York.

Experimented with automobiles in France in 1897, and about this time brought a 2½ hp. De Dion tricycle to America.

Hartford, J. A.—Sec. Hartford Suspension Co., 212 W. 88th St. and 67 Vestry St., New York City.

Hartford Machine Screw Co.—476 Capitol Ave., Hartford, Conn. Mfrs. steel balls, bolts and nuts, brake and clutch cork inserts, ball cups, cups and cones, gear blanks, gear wheels, metal gear wheels, hub caps, hub flanges, special automobile machinery, machine work to order, nipples, nuts and lock washers, screw machine products, screws, washers.

Hartford Pattern & Model Co.—14 Hicks St., Hartford, Conn. Mfrs. patterns.

Hartford Rubber Works Co.—691 Park St., Hartford, Conn. Mfrs. pneumatic, solid and cushion tires. Mem. M. & A. M. Est. 1881. J. D. Anderson, Pres.; V. B. Lang, Vice-Pres. and Gen. Mgr.; E. R. Benson, Sec.; Henry Plow, Treas. Branches: Atlanta, Ga., 55 Auburn Ave.; Boston, 492 Atlantic Ave. and 1020 Boylston St.; Buffalo, 725 Main St.; Chicago, 83 Michigan Ave.; Cleveland, 1831 Euclid Ave.; Denver, 1564 Broadway; Detroit, 256 Jefferson Ave.; Los Angeles, 1505 S. Main St.; New York, 88 Chambers St. and 1773 Broadway; Philadelphia, 1425 Vine St.; San Francisco, 423-433 Golden Gate Ave. Agencies: Campana Mexicana de Vehiculos Electricos, Mexico City; Gugler Electric Mfg. Co., Minneapolis, Minn.; Keenan Co., F. P., Portland, Oregon; Mercantile Lumber & Supply Co., Kansas City, Mo.; Perry & Co., Geo. W., St. Louis, Mo.; Pittsburg Rubber Co., 913-15 Liberty Ave., Pittsburg, Pa.; Salt Lake Hardware Co., Salt Lake City, Utah.

Hartford Suspension Co.—67 Vestry and 212 W. 88th Sts., New York City. Mfrs and dealers Truffault-Hartford shock absorbers. Importers Gobron-Brillié cars. Mem. M. & A. M. Est. 1904. Cap., \$100,000. E. V. Hartford, Pres.; A. G. Hoffman, Treas.; J. A. Hartford, Sec. Garage, 30 cars; repairing.

Hartigan, F. L.—5206 Lake Ave., Chicago, Ill. Garage.

Hartley, C. H.—Waynesburg, Pa. (Maxwell.)

Hartley, S. W.—Designer and Supt. Cleveland Motor Car Co., Cleveland, O.

Hartman & Co., Ltd.—230 Main St., Nashua, N. H. (Franklin.)

Hartog, A.—303 West 54th St., New York City. Garage.

Hartwell, Guy J.—Mobile, Ala. (Glide.)

Hartz, M. M.—23d and Spring Garden Sts., Philadelphia, Pa. Garage.

Harvard Automobile Co.—1230 Massachusetts Ave., Cambridge, Mass. Garage.

Harvard Marine & Auto Co.—25 Eliot St., Cambridge, Mass. Mfrs. gasoline automobile and marine motors. Garage.

Harvey Chemical Co.—Lafayette, Ind. Mfrs. polishes.

Harvey, E. J.—Vice-Pres. and Supt. Harvey Spring Co., Racine, Wis.

Harvey, Fred P.—Salesman Cartcar Co., 7 W. 60th St., New York City.

Harvey, L. B.—Bet. M and N Sts., Sacramento, Cal. (Rambler.)

Harvey Spring Co.—Racine, Wis. Mfrs. automobile springs. Est. 1889. W. J. Harvey, Pres.; E. J. Harvey, Vice-Pres. and Supt.; W. T. Harvey, Sec. and Treas.

Harvey, W. J.—Pres. Harvey Spring Co., Racine, Wis.

Harvey, W. T.—Sec. and Treas. Harvey Spring Co., Racine, Wis.

Hasbrouck Motor Works, Inc.—155 Water St., New London, Conn. Mfrs. gasoline marine motors. (Rambler.)

Haschke Compound Storage Battery Co.—89 Ashland Blvd., Chicago, Ill. Mfrs. storage batteries.

Hase, Chas. F.—Sec. and Treas. A. O. Smith Co., Park and Clinton Sts., Milwaukee, Wis.

Haseltine, W. E.—Head of Motor Dept., Holtzer-Cabot Electric Co., Brookline, Mass.

Haskell Bros.—Washington and Wabash Aves., Chicago, Ill. Mfrs. automobile trunks.

Haskins, E. E.—Mechanical Engineer. Motor Car Dept., Fiss, Doerr & Carroll Co., 153 E. 24th St., New York City.

Hass Electric & Mfg. Co., R.—Springfield, Mass. (De Luxe, Kisselcar.)

Hassell Wagon & Harness Co.—Broadway and Hudson Ave., Albany, N. Y. Garage.

Hassenflue, J. W.—Prop. Central Motor Car Co., 150 S. Howard St., Akron, Ohio.

Hassler Co., Owen C.—1543 Milwaukee Ave., Chicago, Ill. Mfrs. metal polishes.

Hastings, H. N.—Vice-Pres. Tanberg Auto Co., cor. Gibson and River Sts., Eau Claire, Wis.

Hastings Imp. Co.—Hastings, Neb. Garage.

Hatch.—An opening in a vessel's deck affording access to the hold; also its cover.

Hatch Accumulator Co.—Charlestown, Boston, Mass. Mfrs. storage batteries.

Hatch, Wm. F.—Head of Paint Shop, Graves & Congdon Co., Oak St., Amesbury, Mass.

Hatch, Mason Barrows.—Sales Mgr.,

Hawkins, W. A.—Commercial Mgr. Ford Motor Co., Detroit, Mich.

Hawkins, W. S. L.—Treas. and Gen. Mgr. Fisk Mfg. Co., Walker St., Springfield, Mass.

Hawkinson, O.—Maynard, Minn. (Waltham.) Est. Oct., 1906. Garage; repairing.

Hawkrige, Edwin.—Pres. Cape Ann Tool Co., Granite St., Pigeon Cove, Mass.

Hawkrige, J. F.—Vice-Pres. Cape Ann Tool Co., Granite St., Pigeon Cove, Mass.

Hawley Automobile Co., Ltd.—Constantine, Mich. Mfrs. gasoline automobiles.

Hawley, F. B.—Treas. and Mgr. Spring Perch Co., 232 John St., Bridgeport, Conn.

Hawley, Geo. E.—Sec. and Treas. Gray Hawley Mfg. Co., 605-609 W. Fort St., Detroit, Mich.

Hawley, O. P.—Vice-Pres. Gray, Hawley Mfg. Co., 605-609 W. Fort St., Detroit, Mich.

Hawley, Wm. J.—227 S. Main St., Canandaigua, N. Y. Garage.

Haws, F. A.—Partner Geo. A. Haws, 73 Pine St., New York City.

Haws, George A.—73 Pine St., New York City. Mfr. cylinder oil, transmission gear case compound, anti-fluid, cup grease. Cap., \$35,000. Not inc. Est. 1870. Co-partnership F. A. Haws and M. J. Martin, operating under above title.

Hawse-pipe.—A hole through which a boat's cable runs out.

Hay-Berg Motor Car Co.—Burleigh and Well Sts., Milwaukee, Wis. Mfrs. gasoline automobiles.

Hay, W. R.—Pres. and Gen. Mgr. Sturgeon Bay Boat Mfg. Co., Sturgeon Bay, Wis.

Hayden Co., N. L.—Columbus, O. Mfrs. axles, clutches, gasoline automobile motors.

Hayden, H. W.—Pur. Agt. Dayton Motor Car Co., Dayton, O.

Haydenville Co.—Haydenville, Mass. Mfrs. brass pipe fittings.

Haydock Automobile Mfg. Co., D. W.—5975 Cote Brillant Ave., St. Louis, Mo. Makers of the Cosmopolitan car; first marketed in 1906. Cap. \$100,000. D. W. Haydock, Pres., Treas., Gen. Mgr., Purch. Agt. and Advt. Mgr.; G. A. Anderson, Vice-Pres.; L. N. Haldock, Sec.; Winters Haydock, Designer and Supt.; C. L. Haydock, Sales Manager.

Haydock, C. L.—Sales Mgr. D. W. Haydock Automobile Mfg. Co., 5975 Cote Brilliant Ave., St. Louis, Mo.

Haydock, D. W.—Pres., Treas., Gen. Mgr., Pur. Agt. and Advt. Mgr. D. W. Haydock Automobile Mfg. Co., 5975 Cote Brilliant Ave., St. Louis, Mo.

Haydock, L. N.—Sec. D. W. Haydock Automobile Mfg. Co., 5975 Cote Brilliant Ave., St. Louis, Mo.

Haydock, Winters.—Designer and Supt. D. W. Haydock Auto Mfg. Co., 5975 Cote Brilliant Ave., St. Louis, Mo.

Hayes & Dam.—Honolulu, Hawaiian Islands. (Frayer-Miller.)

Hayes, A. H., Jr.—428 Golden Gate Ave., San Francisco, Cal. (Rainier, Frayer-Miller, F. N. Motorcycles.)

Hayes, C. F.—Riverton, Ia. Garage.

Hayes Foundry Co.—Lynn, Mass. Mfrs. gray iron castings.

Hayes, J. C.—Treas. Haverhill Fire Appliance Co., office, 40 Merrimack St., factory, Island Park, Haverhill, Mass.

Hayes Mfg. Co.—360-370 Maybury Ave., Detroit, Mich. Mfrs. wood and metallic bodies, battery boxes, tool boxes, dashes and fenders, drip pans, hoods, mufflers.

Hayes, Walter.—1116 Main St., Buffalo, N. Y. (Jewel White.) Supplies.

Haynes, A. K., & L. B.—144 N. Washington St., Rome, N. Y. Garage.

Haynes Automobile Co.—1420 Michigan Ave., Chicago, Ill. Est. 1902. J. B. Derbler, Mgr. (Haynes.) Repairing Haynes cars only.

Haynes Automobile Co., The.—Main St., Kokomo, Ind. Makers of the Haynes car; first marketed in 1905. Twelve models made since. Cap. \$300,000. Elwood Haynes, Pres., Gen. Mgr. and Designer; C. C. Cartwright, Vice-Pres.; C. H. Haynes, Sec., Treas. and Purch. Agt.; Herbert Muden, Supt.; C. B. Warren, Sales and Advt. Mgr.; James Worthington, Asst. Designer. Branch Managers: J. B. Deibler, Chicago, Ill.; E. W. Headington, New York City.

Haynes Automobile Co.—1715 Broadway, New York City. (Haynes.) E. W. Headington, Mgr. (Repairing Haynes cars only.)

Haynes Automobile Co.—220 S. 6th St., Minneapolis, Minn. (White.)

Haynes, Elwood.—Pres. and Chief Engineer Haynes Automobile Co. B. Portland, Ind., Oct. 14, 1857. Ed. Portland public school. Worcester Polytechnic, Johns Hopkins University. Director Haynes Automobile Co. Mem. Chicago A. C. Res., 27 North Washington St., Kokomo, Ind. In the trade since 1893. Used first car 1894.

Haynes, F. J.—Supt. H. H. Franklin Mfg. Co., 302 S. Geddes St., Syracuse, N. Y.

Haynes, John W.—Asst. Sales Mgr. Dragon Motor Co., 31st, 32d and Chestnut Sts., Philadelphia, Pa.

Haynes Motor Car Co.—1030 Golden Gate Ave., San Francisco, Cal. (Haynes.) Repairing.

Hayney, Geo. F.—Lynn, Mass. Mfrs. mufflers.

Hays Bros.—109 S. 4th St., Waco, Tex. (Buick.) Est. 1905. Not inc. T. D. Hays and W. B. Hays, head of departments; A. F. Hawkins, Chief Machinist.

Hays, Carl W.—Lexington, Mo. (Monarch.)

Hays, David.—Supt. Healy Leather Tire Co., 90 Gold St., New York City.

Haythorn, J. W.—Richmond, Ill. Garage.

Hayward & Co., S. F.—20 Warren St., New York City. Mfrs. fire extinguishers.

Hayward, C. B.—Editorial Dept., The Automobile, Flatiron Bldg., New York City.

Haywood & Summers.—Romney, Ind. (Ford.)

Haywood, M. E.—Head Repair Dept., Fisher Auto Co., 330 N. Ill. St., Indianapolis, Ind.

Hazard Mfg. Co.—Wilkesbarre, Pa. Mfrs. insulated wire.

Head.—The height in a reservoir of a body of fluid which determines the pressure at any given point below the surface. (2) The upper part of a mechanism or tool, as of a connecting-rod, cylinder, hammer, etc. ((3) The projection on a cam. See Cam.

Head, Combustion.—See Combustion-chamber.

Head-light.—A projector destined to show the road for an automobile. It is supplied either with acetylene or electricity (batteries or dynamo). When the head-light is supplied by a separate generator, it is called "searchlight."

Head-valve.—See Valve, Head.

Header.—A receptacle on the top of a boiler in which steam can collect, and from which the steam-pipe leading to the cylinder runs.

Headington, E. W.—Mgr. New York Branch Haynes Automobile Co., 1715 Broadway, New York City.

Heagle, James.—Cor. 1st and Market Sts., Johnstown, N. Y. Mfrs. wearing apparel, gloves and gauntlets.

Heald & Co., J. C.—Independence, Ia. (Winton.)

Heald, J. Franklin.—Sheridan, Wyo. (Jewel.)

Heald Mach. Co.—Worcester, Mass. Mfrs. special automobile machinery.

Healy & Co.—51st St. and Broadway, New York City. Mfrs. wood and metallic bodies.

Healy, Frank.—Partner Healy Leather Tire Co., 90 Gold St., New York City.

Healy Leather Tire Co.—90 Gold St., New York City. Mfrs. leather tires, rubber inner tubes, non-skids. Est. 1906. Frank Healy and Raymond Healy, part-

ners; David Hays, Supt.; Raymond Healy, Mgr. Branches: Boston, 10 Columbus Ave., W. A. Moody, Mgr.; Chicago, 1251 Michigan Ave., F. W. Wood, Mgr.; New York City, 1906 Broadway, H. L. Graff, Mgr.

Healy, Raymond.—Partner and Mgr., Healy Leather Tire Co., 90 Gold St., New York City.

Hearsey Vehicle Co.—113 W. Market St., Indianapolis, Ind. (White, Rambler, Marmon.)

Hearth.—The part of a forge containing the fire.

Hearth, Open.—A process for the production of steel from pig iron in a reverberatory furnace, as distinguished from the cementation or Bessemer processes.

Heat.—The cause of a rise of temperature of bodies. Its real nature, like that of light and electricity, is unknown. Considered from a general point of view, heat is one of the forms of "energy." Modern science, as we know, is but a study of the transformations of energy. Now an intimate connection exists between the different forms of energy (calorific energy, mechanical energy, electric energy, chemical affinity), and, to a certain quantity of heat, usefully absorbed, say in a gasoline motor, corresponds a certain quantity of work in mechanical energy. Every form of energy, moreover, can be transformed, directly or not, into another form. Calorific energy is, in a manner, an inferior form of energy, since it is the final point of every transformation, and the form in which losses (heat resulting from the friction of parts in motion, heating of wires conducting electricity, etc.) manifest themselves. The "degree of heat" defines the temperature. It is estimated by means of a thermometer, an apparatus based upon the expansion of bodies. The "quantity of heat" defines the calorific energy.

It is estimated by means of a calorimeter, and is expressed in calories. See Calories.

Heat disengaged by the combustion of gasoline in a motor—M. L. Lacoïn, and, with him, a number of engineers, admit that the heat disengaged by the combustion of gasoline in a motor is thus distributed: 20 per cent. in effective work; 20 per cent. in the exhaust; 60 per cent. through the walls, say, $2\frac{1}{2}$ times that which is employed in the effective work.

A 1 h.p. motor develops 75 kilogrammetres (543.75 foot-pounds) per second, and as 425 kilogrammetres (3080 foot-pounds) are equivalent to 1 calorie, 1 h.p. corresponds to 0.1765 of a calorie per second. The loss through the walls is consequently $0.1765 \times 2.6 = 0.441$ of a calorie per horse-power per second.

Heat, Convection of.—A physical phenomenon which occurs when a warm body is surrounded by a gas or liquid. The molecules of such gas or liquid expand in contact with the warm body, ascend, and are replaced by other molecules, which, in turn, undergo the same phenomenon. There are then produced ascending and descending gaseous or liquid currents called "convection currents." Honeycomb radiators lose much heat by convection and little by radiation. With gilled-tube radiators the contrary is the case. The fan used in connection with radiators performs the function of a convection apparatus by creating currents of air that are particularly valuable for cooling the motor during an inoperative state.

Heat, Latent.—The quantity of heat necessary to produce a change in the physical state of unit mass of a substance, without producing any change in temperature. For example, 536 calories are necessary to convert one gramme of boiling water into steam at 212° F. (100° C.); therefore, 536 is the latent heat for the physical change involved, that is to say, the vaporization of water.

Heat, Radiant.—Heat which passes from a hot body or source through an intervening intermedium which transmits, but does not absorb it.

Heat-radiator.—See Radiator.

Heat, Specific.—When the same quantity of heat is communicated to equal weights of two different bodies, the temperature is not the same in both, but is proportional to a factor called "specific heat." The phenomenon become easily comprehensible if we suppose two cylinders of different diameters into which the same quantity of water is put. The height of the water will evidently not be the same in both cylinders.

Thus, the specific heat of cast iron is 0.13, and that of brass 0.09. If 100 calories be furnished to a pound of these two metals, the temperature of the iron will be increased by 13 degrees, while that of the brass will be increased by but 9.

Heat, Unit of.—One British thermal unit (B. t. u.) is the amount of heat which will raise 1 pound of water 1° F., viz., from a temperature of 60° F. It is equivalent to the work of lifting 772.55 pounds one foot in height, or to lifting a weight of one pound through a vertical distance of 772.55 feet. The unit of heat is sometimes called "one-pound-degree Fahrenheit." It is equal to 251.9 French units of heat called "calories," or therms. See Calories.

Heath, C. H.—Fort Dodge, Ia. Garage.

Heath Dry Gas Co.—1937 Broadway, New York City. Mfrs. carburetters.

Heath, Ed.—Oxford, Ind. (Haynes.)

Heath, Mark W.—Mgr. Chicago Branch Witherbee Igniter Co., 1429 Michigan Ave., Chicago, Ill.

Heath, Walter C.—Treas. Webb Mfg. Co., 60 Shipman St., Newark, N. J.

Hebb, George A.—70 William St., Newark, N. J. Mfr. machinery and seat springs.

Heck—6 Place Voltaire, Paris, France. Mfr. storage batteries.

Heck, Chas.—Nashville, Tenn. Garage.

Heck, H. A.—119 Main St., Spring City, Pa. Garage.

Heckler, T. C.—222 Penn St., Reading, Pa. Garage.

Hecto.—A prefix in the metric system to denote a multiple of 100 times the measure to which the prefix is applied.

Hector, C. B.—103 Main St., Napa, Cal. (Rambler, Napier, Waltham.)

Hectowatt-hour.—An electrical unit of energy, equivalent to watt-hours. See Watt-hour.

Hedge, E. P.—107 Lincoln Ave., Hastings, Neb. (Cadillac.)

Hedge, Homer Washington.—Publicity promoter. B. Norwich, Conn., Sept. 29, 1863. Ed. public and private schools. Pres. Homer W. Hedge Co. Mem. A. C. A., Aero C. A., N. Y. Golf. Res., Hotel Aberdeen, 17 W. 32d St.; office, 11 W. 32d St., New York City. Used first car (Columbia Electric) 1899. Was first sec. and charter member of A. C. A. Founder of Aero Club of America. Recreations, automobiling, golf, horseback riding.

Hedgeland Mfg. Co.—Canton, O. Mfrs. differential gears.

Hedges Cycle Co.—Main St., Foxboro, Mass. Garage.

Hedges, S. P.—13 Main St., Greenport, N. Y. (Ford.)

Hedges, W. H.—Wainscott, N. Y. Garage.

Heer, Chris.—Pres. and Gen. Mgr. Ideal Mfg. Co., Portsmouth, O.

Hefter, Jos.—15 Oak Grove Ave., Buffalo, N. Y. Mfr. paints.

Hege Co., Oscar F.—317 Main St., Winston-Salem, N. C. (Cadillac.) Est. 1896. Cap., \$3,000. O. F. Hege. Gen. Mgr. Garage, 10 cars; repairing; supplies.

Hege, O. F.—Gen. Mgr. Oscar F. Hege Co., Winston-Salem, N. C.

Heideman, George H.—Sec., Treas. and Mgr. Knoblock-Heideman Mfg. Co., So. Bend, Ind.

Heidingsfeld, Ben.—Vice-Pres. and Treas. The Cincinnati Electric Tool Co., 650-652 Evans St., Cincinnati, O.

Heierman & Bros., Frank.—117-123 E. 5th St., Austin, Tex. (Jewel.) Repairing.

Height Over All.—The distance from the ground to the uppermost part of a

car. If the car is provided with a top, the height over all includes the top.

Heilbronner Fahrzeugfabrik.—Heilbronn, Germany. Mfrs. gasoline automobiles.

Heilbronn Fahrzeugfabrik Inhaber Paul Gunther.—Heilbronn, Germany. Mfrs. bodies.

Hein & Casper.—501 Broadway, Milwaukee, Wis. Garage.

Hein, Burchard R.—Sec., Treas. and Mgr. Liberty Association, 12 State St., Chicago, Ill.

Hein, Josiah T.—Pres. Liberty Assn., 12 State St., Chicago, Ill.

Hein und Wegelin.—Oberhausen, Germany. Mfrs. motorcycles.

Heindel, C. H.—Pres. Heindel Mfg. Co., Hanover, Pa.

Heindel Co., H. A.—Wilmington, Del. Mfrs. gasoline marine motors.

Heindel Mfg. Co.—Hanover, Pa. Mfrs. crank cases and cylinders. Cap., \$50,000. Est. 1902. C. H. Heindel, Pres.; W. F. Kintzing, Sec., Treas. and Gen. Supt.; A. R. Lentz, Asst. Supt.

Heine Velox Motor Car Co.—San Francisco, Cal. Mfrs. gas, commercial automobiles.

Heineman, Pearson.—1018 S. Main St., Los Angeles, Cal. Supplies.

Heininger, Max.—29 Coulouvrenière, Geneva, Switzerland. Mfr. coils.

Heinz.—27 rue Cave, Levallois-Perret, France. Mfr. storage batteries.

Heinze Electric Co.—Lowell, Mass. Mfrs. spark coils.

Heinzerling, A. W.—Sec. and Treas. and Gen. Mgr. Puget South Auto Co., 1405-7 Broadway, Seattle, Wash.

Heiser, August.—Gen. Supt. Churchill Cabinet Co., 72 Churchill St., Chicago, Ill.

Heitger Carburetter Co.—205-207 W. South St., Indianapolis, Ind. Mfrs. carburetters.

Held, A. S.—Freeport, Ill. (Winton.)

Hele-Shaw Patent Clutch Co., Ltd.—36 Chatham St., Liverpool, England. Mfrs. clutches.

Heifer, Wm. T.—Sales Mgr. Springfield Metal Body Co., Birney Ave., Springfield, Mass.

Helfrich, Geo.—Asst. Sec. and Office Mgr. Willyoung Appliance Co., Ludlow Station, Yonkers, N. Y.

Helical Gear.—See Gear, Helical.

Helical Spring.—See Spring, Helical.

Helicopter.—A flying machine in which the lifting action is brought about by two horizontal propellers revolving in opposite directions.

Helios Electricitäts Actien Gesellschaft.—Köln-Ehrenfeld, Germany. Mfrs. gas commercial automobiles. (Hagen trucks.)

Helios Mfg. Co.—Bridesburg, Philadelphia, Pa. Mfrs. lamps, storage batteries, ignition batteries, switches, switch and

panel boards; watt meters. Cap. \$250,000. Est. 1890. King Upton, Pres.; G. H. Rettew, Vice-Pres. and Gen. Mgr.; A. P. Swoyer, Treas. and Sec.; W. M. States, hd. Accounting dept.; G. W. Rettew, hd. Sales dept.; F. W. Braddock, hd. Mfg. dept.; F. J. Blount, hd. Battery dept.; Thos. Spencer, hd. originating and experimental dept.

Heller, F. L.—Caldwell, N. J. (Lambert.)

Heller, Ira S.—Director The Breeze Carburetter Co., 276 Halsey St., Newark, N. J.

Heller, L. L.—1015 Kilmer Bldg., Binghamton, N. Y. (Marmon.)

Heller-Spaw Motor Car Co.—Binghamton, N. Y. (Marmon.)

Hellesens Enke & V. Ludwigsen.—17 Blaagaardsgade, Copenhagen, Denmark. Mfrs. primary batteries.

Helligrass, H. M.—Locust St., Columbia, Pa. Garage.

Helm.—The apparatus, including the rudder, tiller and wheel, by which a boat is steered.

Helm, August.—10 Lützowstrasse, Frankfurt, Germany. Mfrs. jacks.

Helmer, Fred H.—Treas. American O'l Co., 170-178 S. Water St., Jackson, Mich.

Hemery, Victor.—Born at Mans Nov. 18, 1876. He first became connected with the Leon Bollée establishment, in which

he remained for seven years in the capacity of draughtsman. In 1899 he entered the Darracq establishment, where he gave his attention to racing-cars. He made his debut in the Circuit of the North in 1902. He ran the Paris-Madrid

race in 1903, and the Circuit of Ardennes in 1904. In 1905 he won the Circuit of Ardennes and the Vanderbilt cup race.

Hemperley, W. E. N.—Sec. Forest City Motor Car Co., 101-149 Walnut St., Massillon, O.

Hemwall, John.—46th St. and Washington Blvd., Chicago, Ill. (Buick.)

Hendee, Geo. M.—Pres. and Treas. Hendee Mfg. Co., 837 State St., Springfield, Mass.

Hendee Mfg. Co.—837 State St., Springfield, Mass. Makers of the Indian motorcycle, first marketed in 1901. Two models made since. Geo. M. Hendee, Pres. and Treas. Agents and Dealers: F. W. Anderson, 467 Madison Ave., Albany, N. Y.; Adams & Hart, 47 N. Division St., Grand Rapids, Mich.; Ashley, W. G., Olympia, Wash.; Baker & Co., F.

A., 37 Warren St., New York City, and 1080 Bedford Ave., Brooklyn, N. Y.; Ballou & Wright, 86 6th St., Portland, Ore.; Bissett, F. H., 529 2d Ave., S., Minneapolis, Minn.; Bridgeport Cycle Co., Bridgeport, Conn.; Clark, George F., 660 Main St., Worcester, Mass.; Connor, B. F., S. Main St., Wilkes Barre, Pa.; Cox & Sons, James F., 508 State St., New Haven, Conn.; Donahoo-Emmons & Co., 1114 I St., Fresno, Cal.; Edwards, A. G., 534 N. High St., Columbus, O.; Duquesne Cycle Co., E. E., Pittsburg, Pa.; Elizabeth Motor & Cycle Co., 16 Julian Pl., Elizabeth, N. J.; Flescher, Louis, 1622 Capitol Ave., Omaha, Neb.; Girard Cycle Co., 140 N. 14th St., Lincoln, Neb.; Hanson, Charles, 1406 Grand Ave., Kansas City, Mo.; Harrisburg Auto Co., Harrisburg, Pa.; Hathaway, S. T., 11th and Wewatta Sts., Denver, Colo.; Holden, George N., 17 Dwight St., Springfield, Mass.; Hurck Motor & Cycle Co., 109 N. 12th St., St. Louis, Mo.; Koehler Sporting Goods Co., H. J., 845 Broad St., Newark, N. J.; Krauss, Charles, 1406 Oxford St., Philadelphia, Pa.; League Cycle Store, 325 Southwest Temple St., Salt Lake City, Utah; Le Jeal Cycle & Mobile Works, 1721 Sasafra St., Erie, Pa.; Lewis, John C., 3033 Monroe St., Toledo, O.; Lyons & Co., 314 De Mers Ave., Grand Forks, N. D.; Metzger, Wm. E., 252 Woodward Ave., Detroit, Mich.; Middlesex Motor Co., New Brunswick, N. J.; Miner Co., George L., Clinton Ave., Rochester, N. Y.; Motorcycle Specialty Co., 258 Columbus Ave., Boston, Mass.; Mueller, L. J., 6417 Woodland Ave., Cleveland, O.; Neal, Clark & Neal Co., 645 Main St., Buffalo, N. Y.; Neubling, John G., 8843 Penn. Ave., Reading, Pa.; Olmstead & Son, H. R., Syracuse, N. Y.; Pickering Hardware Co., Cincinnati, O.; Ridsen, C. W., 223 W. 8th St., Los Angeles, Cal.; Robling, Edward, Scranton, Pa.; Schaeffer & Co., W. B., 11 E. 2d St., Dayton, O.; Shirley, Amos, 935 8th Ave., New York City; Skinner, L. H., Colorado Springs, Colo.; Smith, Alex., 35 Mulberry St., Hartford, Conn.; Spinning, F. M., 1310 2d Ave., Seattle, Wash.; Westing Co., G. H., 219 Massachusetts Ave., Indianapolis, Ind.; Widmayer, F. B., 2312 Broadway, New York City; Wisconsin Motorcycle Co., Monroe, Wis.; Whipple, "The Motorcycle Man," 260 W. Jackson Blvd., Chicago, Ill.; Wolf, John F., Forge and Willow Sts., Lebanon, Pa.; Swenson, B. A., 185 Prairie Ave., Providence, R. I.; Hopkins, C. C., 729 Gough St., San Francisco, Cal.

Henderson Auto Co.—4th Ave., Cedar Rapids, Ia. (Buick, Rapid, Cadillac, Franklin, Pope-Waverley.)

Henderson Bros.—Woodward Ave., Detroit, Mich. Garage.

Henderson, Corkrum & Co.—Walla Walla, Wash. (Ford.)

Henderson Iron Works & Supply Co.—Spring, Caddis & Commerce Sts., Shreveport, La. (Ford.)

Henderson, Oscar B.—Sales Mgr. Pope Motor Car Co., 139 S. East St., Indianapolis, Ind.

Henderson, R.—Asst. Marine Dept., A. A. King, Lake Hopatcong, N. J.

Henderson, Thomas.—Vice-Pres. Winton Motor Carriage Co. B. Glasgow, Scotland, Aug. 28, 1849. Director Winton Motor Carriage Co., Cleveland. Cap Screw Co., Lindsay Wire Weaving Co., West Cleveland. Banking Co. Pres. N. A. A. M., Vice-Pres. A. L. A. M. Mem. Cleveland A. C. Res. 7402 Franklin Ave., N. W., Cleveland, O. In automobile trade since 1896. Used first car 1896.

Henderson, T. N.—Mgr. Tampa Harness & Wagon Co., 1007-1009 Franklin St., Tampa, Fla.

Henderson T. W.—Mgr. Detroit Branch Winton Motor Carriage Co.

Henderson, W. G.—Sec. and Treas. Electric Storage Battery Co., Allegheny Ave. and 19th St., Philadelphia, Pa., and Pres. Electric Vehicle Co., 1 Laurel St., Hartford, Conn.

Hendricks Bros.—49 Cliff St., New York City. Mfrs. sheet and rod brass and copper.

Hendryx & Co., Andrew B.—New Haven, Conn. Mfrs. brass, bronze, aluminum and copper castings.

Henion & Hubbell.—69 N. Jefferson St., Chicago, Ill. Mfrs. fuel and air pumps.

Henke, W. O.—Greenwood Ave., Montclair, N. J. Garage.

Henkel Bros.—Brattleboro, Vt. Garage.

Henkelman, Chas. E.—1724 Atlantic Ave., Atlantic City, N. J. Est. 1905. Garage. 30 cars; repairing.

Henley, J. L.—Cresco, Ia. (Holsman.)

Henley, M. C.—Richmond, Ind. (Haynes.)

Henn, A. W.—Sec. The National-Acme Mfg. Co., cor. Stanton Ave., S. E., and E. 75th St., Cleveland, O.

Henn, E. C.—Vice-Pres. and Supt. The National Acme Mfg. Co., cor. Stanton Ave S. E. and E. 75th St., Cleveland, O.

Henne Co., Louis.—New Braumfield, Tex. Garage.

Hennegrave et Agnus.—30 rue Perrier, Levallois-Perret, France. Mfrs. storage

batteries, spark plugs, make and break plugs, high and low tension magnetos.

Henning, Fred.—Supt. Pungs-Finch Auto & Gas Eng. Co., 1524 Jefferson Ave., Detroit, Mich.

Henning, Jos. A.—205 Stevens Ave., Mount Vernon, N. Y. (Winton.)

Hendricks Novelty Co.—130 S. Capital Ave., Indianapolis, Ind. Mfrs. magnetos and ignition dynamos.

Henrique, Jean-François.—54 quai de Courbevoie, Courbevoie, France. Mfrs. primary batteries, make and break plugs.

Henry.—The unit of the co-efficient of induction (named after the English physicist, which serves for measuring the value of the self-induction and of the mutual induction of circuits.

Henry & Sheffler Co.—Greenburg, Pa. (Cameron.)

Henry Auto Co.—Edwards St., Henry, Ill. (Rambler, Holsman.)

Henry, Chester C.—Summit, N. J. (Pope-Hartford.)

Henry, Dave W.—Gen. Rep. Columbus Buggy Co., Dublin Ave. W., Columbus, Ohio.

Henry, Hugh.—Cashier and Asst. Treas. Dragon Motor Co., 31st, 32d and Chestnut Sts., Philadelphia, Pa.

Henry, Lenud et Cie.—51 rue de Turenne, Paris, France. Mfrs. electric lamps.

Henry, Walter M.—162 S. Main St., Canandaigua, N. Y. Garage.

Hensel Battery & Mfg. Co.—Michigan Ave. and Eldredge Court, Chicago, Ill. Mfrs. storage batteries.

Hensemberger.—Monza, Lombardy, Italy. Mfr. storage batteries.

Henshaw Motor Car Co.—288 Columbus Ave., Boston, Mass. (Haynes.)

Henzler, C. W.—Bismark, N. D. (Buick.)

Hepburn, J. W.—Toledo, O. Mfr. motor boats.

Hérald Société Anonyme de Moteurs et Automobiles.—5 rue Carnot, Levallois, Seine, France. Mfrs. gasoline automobiles and automobile motors. (Herald.)

Herbert, J. L.—Mgr. Iowa Vulcanizing & Tire Co., 408 Main St., Davenport, Ia.

Herbert, W. H.—3312 Wabash Ave., Chicago, Ill. Mfr. spark plugs, spark timing devices.

Herbst, Frank.—110 S. 2d St., Wilmington, N. C. (Maxwell.)

Hercules Auto Specialty Co.—115 Dearborn St., Chicago, Ill., and 936 Denver Ave., Los Angeles, Cal. Mfrs. shock absorbers, jobbers automobile specialties. Cap. \$100,000. Est. Jan., 1906. J. Arthur Scatt, Pres., Dir. and Pacific Coast Rep.; G. N. Scott, Vice-Pres.; Dr. D. W. Russell, Sec. and Treas., also Dir.; James Vidin, Dir.

Hercules Electric & Mfg. Co.—Indianapolis, Ind. Mfrs. ignition magnetos. Cap. \$15,000. Est. 1903. J. A. Kurtz, Pres.; H. G. Cox, Vice-Pres.; S. H. Kurtz, Sec. and Mgr.; Herman Hess, Supt.

Hercules Float Works.—200 Franklin St., Springfield, Mass. Mfrs. floats for carbureters, brass, bronze, composition and aluminum castings. Cap., \$5,000. Est. 1894. F. Engelhard, Treas.; F. H. Engelhard, Sec.; W. A. Engelhard, Supt.; J. J. Keveney, Supt, Foundry Dept.

Herdtlé et Bruneau.—38 bis, rue de la Chine, Paris, France. Mfrs. Hardtlé motorcycles.

Hering, W. C.—26 E. 4th St., Mansfield, O. (Jackson, Ford.)

Herkimer Automobile Club.—Wm. I. Feber, Sec., Herkimer, N. Y.

Herkimer Motor Car Co.—124-26 Albany St., Herkimer, N. Y. (Maxwell.) Supplies, garage and repairs.

Herluison, Clément.—Route de Paris, Nangis, Seine-et-Marne, France. Mfrs. automobile motors.

Herman, Andrew.—Partner National Auto Top Co., Main Office, 1904 Broadway; factory, 244-50 W. 49th St., New York City.

Hermans, F. W.—Vice-Pres. Racine Boat Co., 16th and Racine Sts., Racine, Wis.

Hermann, H. T.—Asst. Advt. Mgr. Logan Construction Co., 2d and Carrol Sts., Chillicothe, O.

Hermes, Société Italienne d'Automobiles.—Naples, Italy. Mfrs. gasoline automobiles. (Hermes cars.)

Hermitage Auto Co., The.—170 3d Ave., Nashville, Tenn. (Stevens-Dur-yea.)

Hernandez, J. C.—90 Wall St., New York City. (Locomobile.) Export only.

Herreshoff Mfg. Co.—Bristol, R. I. Mfrs. motor boats.

Herrick, A. E.—Pocono, Lake, Pa. (Elmore.)

Herrick, Bros.—Bethel, Me. (Maxwell, Reo.) Repairing.

Herring, C. M.—Pres. Jackson Motor Car Co., 103 Court St., Brooklyn, N. Y.

Herringbone-gear.—See Gear, Herringbone.

Herringbone-tread.—A pneumatic tire of which the tread is provided with V-shaped projections. See Tread.

Herron, James H.—Chief Engineer Detroit Steel Products Co., 91 E. Fort St., Detroit, Mich.

Hersant et Rousseau.—1 rue Banier, Nantes, France. Mfrs. marine motors.

Herschell-Spillman Co.—North Tonawanda, N. Y. Mfrs. gasoline automobile and marine motors.

Herz & Co.—203-5 Lafayette St., New York City. Mfrs., importers and jobbers storage batteries, gaskets, magnetos and ignition dynamos, shock absorbers, spark

coils, spark plugs, spark timers, electric switches, wire terminals, tire pumps.

Herzog, J. A.—Designer De Luxe Motor Car Co., Clark and Jefferson Ave., Detroit, Mich.

Herzog, Rudolph.—Breitestrasse 15, Berlin, Germany. Mfrs. wearing apparel, fur coats, hats and caps.

Hess & White's New Garage.—61 S. 3rd St., Newark, O. (National, Mitchell.)

Hess Automobile Co.—701 Quincy St., Brooklyn, N. Y. Garage.

Hess-Bright Mfg. Co.—19th and Hamilton Sts., Philadelphia, Pa. Mfrs. ball bearings. Mem. M. & A. M. Henry Hess, Pres. and Sec.; Fred E. Bright, Vice-Pres. and Sec.

Hess, E. J.—Pres. Hess-Pontiac Spring & Axle Co., Pontiac, Mich.

Hess, Henry.—Pres. and Sec. Hess-Bright Mfg. Co., 19th and Hamilton Sts., Philadelphia, Pa.

Hess, Herman.—Supt. Hercules Electric Co., Indianapolis, Ind.

Hess, J. Archie.—Seattle, Wash. (Corbin.)

Hess-Pontiac Spring & Axle Co.—Pontiac, Mich. Mfrs. automobile springs. Cap. \$145,000. Est. 1905. E. J. Hess, Pres.; C. W. Cathcart, Vice-Pres.; F. J. Grinelman, Sec.; B. A. Litchfield, Treas.; Jos. Obrecht, Gen. Supt.; C. W. Cathcart, Sales Mgr.

Hessels' Garage, E. S.—15 Brookfield St., White Plains, N. Y. Garage; supplies.

Heucken Söhne und Co.—Aix-la-Chapelle, Germany. Mfrs. non-skids.

Heusch, Louis.—31 rue du Marché, Paris, France. Mfr. tricars. (Lusio tricars.)

Heustis, Thos.—Bristol, R. I. Repairing.

Hewitt, B. E.—Mgr. Auto Supply Dept., Collister & Sayle, 224 Superior Ave., N. W., Cleveland, O.

Hewitt, E. L.—Purch. Agt. The White Co., Rose Bldg., Cleveland, O.

Hewitt, H. B.—Pur. Agt., Premier Motor Mfg. Co., Indianapolis, Ind.

Hewitt, H. L.—Pres. Fisher Auto Co., 330 N. Illinois St., Indianapolis, Ind.

Hewitt Motor Co.—6-10 E. 31st St., New York City. Makers of the Hewitt Touring cars, delivery, bus and 5-ton trucks. Eight different models marketed. E. R. Hewitt, Pres. and Designer; R. C. Gildersleeve, Treas.; F. E. Alden, Advt. and Gen. Mgr. Garage.

Hewitt, R. M.—Lansing, Mich. (Cartercar.)

Heyer, Arthur P.—Bloomfield, N. J. and 34 Valley Rd., Montclair, N. J. (Haynes.)

Heymann Motor Car Co.—Boston, Mass. Mfrs. gasoline automobiles.

Heywood Bros. & Wakefield Co.—174

Portland St., Boston, Mass. Mfrs. hampers.

Hibbard Automobile Co.—187 Wisconsin St., Milwaukee, Wis. (Pierce Arrow.) Oldsmobile, Haynes.)

Hibbard, Thos.—Treas. Geo. Lawley & Son Corp., 696 E. 1st St., Boston, Mass.

Hickman Automobile Co.—Attica, Ind. Garage.

Hickman, Kraemer & Croll Co.—508 Merrill Bldg., Milwaukee, Wis. (Cartercar.)

Hickok Mfg. Co., W. O.—North and Canal Sts., Harrisburg, Pa. (Mitchell.)

Hicks Speed Indicator Co.—1384 Bedford Ave., Brooklyn, N. Y. Mfrs. speedometers.

Hicks, W. R.—Mgr. Toronto Automobile Co., 6 Adelaide St., Toronto, Can.

Hiestand, Dr. Daniel.—140 N. 7th St., Allentown, Pa. (Maxwell.)

Hifnes Motor Co.—134 E. Short St., Lexington, Ky. (Pope.)

Higgins, Arthur P.—Head of Pur. Dept., Worcester Pressed Steel Co., cor. North and Barber Aves., Worcester, Mass.

Higgins, C. C.—Woodmere, N. Y. Garage.

Higgins, John W.—Sec. and Gen. Mgr. Worcester Pressed Steel Co., cor. North and Barber Aves., Worcester, Mass.

Higgins, Milton P.—Pres. Worcester Pressed Steel Co., cor. North and Barber Aves., Worcester, Mass.

Highgrade Autocar Co.—9-11 Hill St., Newark, N. J. Repairing.

Highland Park Auto Station.—Cor. Park and St. Johns Aves., Highland Park, Ill. Garage.

High Pressure.—A term applied to the cylinder of a compound engine in which the steam is expanded before passing on to the remaining cylinder or cylinders, in which the expansion is completed.

High Tension.—A term, applied to an electric current of high voltage.

Hiland Automobile Co.—5811-17 Centre Ave., Pittsburg, Pa. (Buick.) Est. Nov., 1905. Cap., \$100,000. P. R. Budd, Pres.; Geo. A. Urling, Treas.; F. D. Sanff, Sec.; W. A. Richwine, Mgr. Garage. 60 cars; repairing.

Hildebrand, Chas. Conrad.—Sales Mgr. Stevens-Duryea Co. B. Loutre Island, Mo., July 28, 1865. Ed country schools. Mem. Springfield A. C. Residence, Chicopee Falls, Mass. In the automobile trade since December, 1900. Recreation, big game hunting.

Hildreth Mfg. Co., The.—Lansing, Mich. Mfrs. marine motors, grey iron castings. Cap., \$75,000. Est. 1887. Lawrence Price, Pres.; R. H. Scott, Vice-Pres.; E. F. Peer, Treas.; E. E. Peake, Sec. and Gen. Mgr.; N. E. Hildreth, Supt. Motor Dept.; Jacob Siegreist, Supt. Foundry Dept.

Hildreth, N. E.—Supt. Motor Dept. The Hildreth Mfg. Co., Lansing, Mich.

Hildreth, P.—Franklin, Neb. Garage.

Hildreth Varnish Co.—32 Broadway, New York City. Mfrs. paints, varnishes.

Hildreth, Ward.—Vice-Pres., Treas., Sales and Advt. Mgr. Holsman Automobile Co., 662 Monadnock Block, Chicago, Ill.

Hileman, E. E.—New Castle, Pa. (Queen, Rambler.)

Hill & Holt.—Medford and Walnut Sts., Somerville, Mass. (Columbia, Rambler, Maxwell.)

Hill & Kennedy.—24 Main St., Batavia, N. Y. (Maxwell.)

Hill, A. A.—Editor Automobile Dealer and Repairer, 24 Murray St., New York City.

Hill Auto Co.—Dallas, Tex. Garage.

Hill, C. F.—327 Ferry St., Easton, Pa. Garage.

Hill, Charles B.—Vice-Pres. and Gen. Mgr. Cooper-Hewitt Electric Co., 111 Broadway, New York City.

Hill, C. H.—234 Main St., Poughkeepsie, N. Y. (Reo, Premier.)

Hill, Clark & Co.—156 Oliver St., Boston, Mass. Mfrs. special automobile machinery.

Hill Co., Geo. Q.—326 A St., Boston, Mass. Mfrs. screw machine products, machine work to order, screws, stampings.

Hill, E. H.—56 Broomhall, Sheffield, England. Mfrs. circulating pumps, tire pumps, lubricators.

Hill, Eveleth V.—Sales Mgr. Worcester Pressed Steel Co., cor North and Barber Aves., Worcester, Mass.

Hill, Frederick B.—Sec., Treas. and Gen. Mgr. American Roller Bearing Co., Tripp St., South Framingham, Mass.

Hill, F. R.—Greentown, Ind. Garage.

Hill, Geo. R.—20 Main St., Towanda, Pa. (Mitchell.)

Hill, John Alexander.—Publisher. B. near Bennington, Vt., Feb. 22, 1858. Ed. public schools of Wisconsin. Worked in printing offices, 1873-78; ran locomotive eight year; contributed to technical press from 1880, founder 1885, and editor Pueblo (Colo.) Daily Press; editor Locomotive Engineering, 1888-97; Pres. and Treas. Hill Publishing Co., publishers of the American Machinist, from 1896, and Power, from 1902; Pres. Engineering and Mining Journal from 1904. Res., 80 Munn Ave., E. Orange, N. J. Address. 505 Pearl St., New York City.

Hill, J. M.—Gen. Mgr. Commercial Truck Co. of America, 1222 Arcade, Philadelphia, Pa.

Hill, J. R.—Sec., Treas. and Buyer of automobile goods, Danbury Hardware Co., 249-251 Main St., Danbury, Conn.

Hill Mfg. Co.—27 Fuller St., Buffalo, N. Y. Mfrs. tops, bodies, windshields, removable seats. Est. 1882. William Hill, Mgr.

Hill Motor Car Co.—Haverhill, Mass. (Maxwell.) Garage. Mfrs. automobiles, gasoline.

Hill Brass Co., N. N.—East Hampton, Conn., Mfrs. bells.

Hill, R. S.—78 E. Fort St., Detroit, Mich. Mfrs. gasoline marine motors.

Hillenbrand, R. J.—Pres. Cincinnati Auto Co., 215-219 E. 5th St., Cincinnati, Ohio.

Hillman Plating Co.—446 Tremont St., Boston, Mass. Mfrs. foot rests, monograms, brass and nickel plating, robe rails, tire holders.

Hill's Auto Station.—125 Church St., Willimantic, Conn. (Maxwell, Stanley, Ford.)

Hills, H. H.—Asst. Sales Mgr. Buick Motor Co., Flint, Mich.

Hills, Horace B.—5 Park Sq., Boston, Mass. (Rochet-Schneider.)

Hills Motor Car Co.—130 N. Broad St., Philadelphia, Pa. (Royal Tourist, Rochet-Schneider.)

Hilton, Chas. E.—Pres. Hydraulic Oil Storage Co., 820 Penobscot Bldg., Detroit, Mich.

Hilton Machine Works.—16 E. 3d St., Dunkirk, N. Y. Garage.

Himes-Eden Auto Co.—115 W. Maryland St., Indianapolis, Ind. Garage.

Hinchcliffe, F. A.—Mgr. Boston Branch Winton Motor Carriage Co., Boston, Mass.

Hinde & Dauch.—Sandusky, O. Mfrs. gasoline commercial automobiles.

Hinds & Coon.—126 Pearl St., Boston, Mass. Mfrs. metal polishes.

Hine Watt Mfg. Co.—60 Wabash Ave., Chicago, Ill. Mfrs. acetylene generators, lamps.

Hine, W. C.—Pres. Igniter Appliance Co., 723 Central Ave., Cleveland, O.

Hinkle, G. W.—Harvard, Ia. (Holsman.)

Hinman, B.—Newport, Vt. (Buick.)

Hinman, J.—326 Main St., Oshkosh, Wis. (Haynes.)

Hirsch, Étienne.—26 rue Crussol, Paris, France. Mfrs. speed indicators, horns, electric lamps.

Hiscox, Dwight.—Pacific Coast Rep. Magnolia Metal Co., Merchants' Exchange Bldg., San Francisco, Cal.

Hisey Wolf Machine Co.—Cincinnati, O. Mfrs. special automobile machinery.

Hislop, J. A.—Sec. and head of Woodwork Dept., Buffalo Auto Body & Trimming Co., 338-40 Ellicott St., Buffalo, N. Y.

Hit-or-Miss.—In old "explosion" motors the governing was always done by "hit-or-miss," that is to say, when the motor exceeded its normal number of revolutions per minute the governor intervened and entirely closed the pipe leading the gaseous mixture to the motor or else prevented the exhaust from being effected until the motor had resumed its speed. The motor thus passed through alternations of full fuel supply or no fuel supply, which was provocative, moreover, of considerable noise and vibration. See Governing and Governor Hit-or-Miss.

Hixson-Wittmer Auto Co.—16 E. 5th Ave., Columbus, O. (Premier.)

Hjorth Wrench Co.—Jamestown, N. Y. Mfrs. tools, wrenches.

Hoar Auto Co.—Tombstone, Ariz. (Queen.)

Hobart, M. M.—Sec. Nungesser Electric Battery Co., 3519 King Ave., N. E., Cleveland, O.

Hub.—The central part of a vehicle wheel, consisting of a wooden box or nave which revolves around the axle-spindle, and the periphery of which is provided with mortises into which are

inserted the tenons of the wooden spokes.

This primitive form of wooden hub has been entirely discarded in automobilism, in which it has been replaced by what is called an "artillery hub" (see figure) of

metal with wide cheeks embracing the base of the spokes (R), which are secured thereto by bolts (A C). The hub is held in place by a nut which is screwed upon the end of the spindle. The extremity of the hub terminates in a thread (F) upon which is screwed a cap designed to retain the grease or oil and prevent access of mud or dust to the axle-box.

Hub, Artillery.—See Hub.

Hub-brake.—See Brake, Hub.

Hub-cap.—A cap placed at the extremity of a hub to prevent dirt from reaching the bearing of the wheel.

Hub, Steering.—See Steering-hub.

Hydraulics.—The science dealing with liquids in motion, in connection with their useful application, as distinguished from hydrodynamics.

Hydrocarbon Motor.—The same as Gas-motor.

Hydrocarbons.—Organic compounds formed by the combination of carbon and hydrogen. They are usually classified: 1. As hydrocarbons of the fat series, comprising (A) the saturated or paraffinic hydrocarbons (generators of petroleum); (B) the ethylenic hydrocarbons; (C) the acetylene hydrocarbons (acetylene) 2. As hydrocarbons of the aromatic series, comprising benzene, toluene, naphthalene, etc. 3. As hydrocarbons of the terpene series, comprising spirit of turpentine, india rubber, gutta percha, etc.

Hydrochloric Acid.—See Acid, Hydrochloric.

Hydrogen.—A colorless, odorless gas. It is the unit of the atomic theory, and the lightest of known gases. It is a conductor of heat and electricity; and is uni-

versally diffused in nature in combination with oxygen in the form of hydrogen-monoxide (H_2O) or water. A mixture of hydrogen with oxygen in the proportion of 2 volumes of the first to 1 of the second constitutes a compound which, with a minimum of weight, is capable of disengaging by ignition a maximum of energy. Of such reaction advantage is taken in internal combustion motors, which utilize the vapors of hydrogen associated with carbon (hydrocarburet) for mixing with oxygen diluted with nitrogen derived from the atmospheric air. Hydrogen is used in filling balloons and air-ships, and in the oxy-hydrogen flame.

Hydrolithe.—An industrial hydride of calcium, which, when treated with water, gives off hydrogen available for inflating balloons.

Hydrometer.—An apparatus for measuring the specific gravity of liquids.

There are two kinds, viz.: hydrometers of constant volume and variable weight, such as those of Fahrenheit and Nicholson, and hydrometers of constant weight and variable volume, such as those of Baumé, Gay Lussac, Cartier, etc. Those of the last class are the only ones in common use. The figure represents a hydrometer for testing gasoline. The liquid to be tried is placed in a test-glass, and the instrument floated in it. The denser the liquid, the higher the hydrometer will float, and the

less dense, the deeper it will sink. When the instrument comes to rest, the mark on the stem at the fluid-level may be read off.

Hydrodynamics.—The purely theoretical science dealing with the motions of fluids.

Hydroplane.—See Boat, Hydroplane.

Hydrostatics.—The science that deals with the forces exerted by or on fluids at rest.

Hydro-Palm Soap Co.—22 Minot St., Naponset, Boston, Mass. Mfrs. automobile soap. A. C. Wallis, Mgr.

Idium Metals Co.—Boston, Mass. Mfrs. sparking points.

Idle.—In a machine, a part that moves without doing any useful work.

Idle-coil.—See Coil, Idle.

Idle-pulley.—See Pulley.

Idle-side.—Of a driving belt, the loose

or slack side, D (see figure), as opposed to tight or driving side, C.

Idler.—A wheel, C (see figure) in a train of gears which rides loose on its

shaft and does not affect the ratio of the velocities of the other wheels (A, B) in the train.

Igniter.—A metallic contact-piece, called also an "anvil," somewhat resembling a spark-plug (see figure), and which is screwed through the cylinder-walls of a motor and forms the stationary electrode in the make-and-break system of ignition. (2) A name also for the complete firing device in the same system.

The figure represents the Brasier igniter, in which the method of breaking contact is very ingenious. Here, B is the tappet rod; C, the trip or actuating lifter; D the spindle of the rocking-lever;

E, the hammer forming part of the rocking-lever inside the cylinder; F, the tappet-rod head on which the trip, C, swivels; G, the arm of the striker to which the spring, S, is attached; H, the guide for the tappet-rod, B; K, the end of the striker upon which the spring acts; M, the anvil; N, the guide-roller which takes C out of engagement with K; R, the spring that returns the tappet-rod to position in contact with the cam on the half-time shaft; S, the spring attached to G, which sharply takes E out of contact with the anvil, M, when C is out of engagement with the hammer, K. It will be seen that as C is pushed upward, the roller N acts upon its inclined face and thus forces C to the right until it slips off the sharp edge at K, when the spring, S, forces E and M apart and thus causes a spark gap. See Ignition.

Igniter, Compression.—A device through which the pressure of compression of a motor is utilized for effecting electric ignition. The igniter (see figure) is simply screwed into the motor-cylinder through any proper opening and operates as follows: When the compression acts upon the piston sufficiently, the latter rises and comes into contact with a pawl inserted in the rocker-arm at the top of the device. Consequently the arm is raised and this re-

leases a movable electrode, which is then forced by a spring to come into contact with the stationary electrode or point. As the rocker-arm continues upward the pawl rides off the piston and a spring just below it returns it instantly to normal position. As the rocker-arm drops, it engages the movable electrode, quickly separates the igniter points and ignites the charge. The igniter piston remains up until after the "explosion" and until the pressure in the cylinder decreases to such a point that the spring above the piston can bring it down to the first position.

With this system there are no moving parts in the ignition mechanism outside of the device itself. This gives it many of the advantages of the jump-spark without the disadvantages of the make-and-break.

Ignition.—In the development of the internal combustion motor many methods of firing the "mixture" have been employed, the oldest of which (the Barnett) is "flame ignition." In this an igniting jet of gas burned within a shell or casing which rotated like a valve and

Fig. 1.

presented an opening in the shell alternately to the explosive mixture in the cylinder and the igniting jet which burned outside of it. In the earlier forms of the Otto motor the firing of the charge was effected by what has been termed "slide-valve ignition." In this method a port, C (Fig. 1), in a peculiarly constructed slide-valve, filled with "mixture" when opposite the charging port, A, and igniting it from a constantly burning gas-jet, D, transferred flame to the igniting port, B. In the Brayton motor the igniting flame was kept burning continuously within the cylinder itself. Another system termed "hot metal ignition," avoided bringing a flame or jet into the cylinder, but fired the mixture by introducing into it a heated metal surface through a slide-valve. Flame ignition, which is now obsolete, was followed by "hot-tube ignition," or

Fig. 2.

"lamp ignition." In this method, which originated with Daimler, a tube of platinum or porcelain, with the outer end closed (Fig. 2), was secured by an asbestos-packed nut, C, to a coupling, A, screwed into the wall of the cylinder and connected with the compression space. This tube was maintained at a red heat by a Bunsen burner or similar device on the exterior. A part of the charge was forced into the tube by the compression stroke and ignited by the intense heat of the outer closed end. With some engines using hot-tube ignition, the connection with the cylinder is controlled by a slide-valve, which opens and admits the compressed mixture into the hot tube at the proper point of the cycle. With others there is no valve at all, the compression alone forcing the mixture into the tube. Such an arrangement, however, is liable to cause premature ignition under certain conditions, and is inferior to a device for timing the moment of ignition. With a number of gas-motors a "timing valve," operated from the cam-shaft, has therefore been employed. As shown in Fig. 3, the lever, A, attached to the push-rod, B, is raised, thus pulling out the rod, C, by action of the arm, D, and opening the port, E, leading into the cylinder space, F. The compressed gases in the cylinder are then admitted into the hot tube, G, surrounded by a gas-flame, and the process of ignition begins, spreading from the gas within the tube into the combustion-chamber of the cylinder. The time of ignition may be varied by adjusting the throw of the cam, so as to bring the opening of the valve, E, to any desired point. Another method

Fig. 3.

called "catalytic ignition," takes advantage of the catalytic action of spongy platinum, the impact of a jet of combustible gas upon which so raises its temperature that it acts as an igniter. This method has the objection that with a mixture of varying richness the ignition is neither positive nor reliable. In another method, "incandescent wire ignition," a coil of platinum wire, rendered incandescent by an electric current, is carried on a slide, from which it is insulated, and introduced white-hot into the explosive mixture. "Ignition by compression," in which the explosive charge is compressed to such a degree as to cause it to heat and ignite spontaneously has been used in some stationary engines; but the objection to the system is its

uncertainty with low and variable compressions and widely varying loads. Another method of firing the charge is that called "hot-head ignition." In this a closed chamber is connected by a narrow passage with the rear end of the cylinder, and into this extends a vaporizing-nozzle connected with the fuel supply. On starting the motor the chamber is heated by a suitable torch. On the suction-stroke a spray of oil is forced through the nozzle into the hot chamber. The return-stroke compresses the air in the cylinder clearance to a very high degree and forces a certain portion through the narrow passage, and ignition at once begins. Although some very effective types of gasolene motors still use the hot-tube ignition method, the majority employ electric ignition, of which there are two systems, viz., the primary, or "make-and-break spark," called also "touch-spark," "wipe-spark," "kiss-spark," "snap-spark," "contact" and "hammer-spark," and the secondary or "jump-spark." Both of these systems must have some separate source of electric energy, such as a battery of galvanic cells, a small dynamo, or a magneto-generator, a coil, a device for making and breaking the circuit, and an igniter or spark-plug as the case may be. The spark-coil acts as a reservoir, as it were, to store up the energy of the current when it is made, and to discharge it when it is broken; and such discharge between two points, within the compression space, forms the spark that ignites the charge. In the make-and-break system the circuit is made and broken within the compression space, a fact which gives the system its name.

The make-and-break device, of which there are many forms, consists of two electrodes, one of them stationary and the other movable. The stationary electrode (Fig. 4) called an "anvil" and sometimes an "igniter," although the latter term is applied also to the entire ignition device, somewhat resembles a spark-plug and is screwed through the walls of the cylinder and insulated from the other parts of the motor.

Fig. 4.

The movable electrode, which is not insulated from the motor, has the form of a lever, one arm of which, inside the cylinder, is normally in contact with the insulated plug or anvil. At the proper moment the mechanism of the motor causes the contact-arm to be separated by a blow, as from a hammer, from the surface of the insulated anvil against which it rests. This has caused the method of ignition under consideration to be sometimes known as the "hammer-break" system.

The spark-coil for primary or make-and-break ignition consists of a bundle of soft iron wire around which is wound a quantity of insulated copper wire. The current from this coil is a primary or low tension one, and this is why the make-and-break ignition is called also primary ignition. For the secondary or "jump spark" system the spark-coil receives another winding of several thousand feet of fine insulated wire called a "secondary winding." This makes a jump-spark or high-tension coil. The electric circuit for this system of ignition is interrupted at any convenient point on the motor and causes a spark to jump between two points carried by a spark-plug screwed into an opening in the combustion-chamber. For jump-spark ignition, see Coil, Induction.

Ignition, Advance.—See Spark-advance.

Charter members, E. T. Birdsall, E. B. Gallaher, E. R. Hollander, C. R. Mabley, J. S. Josephs, F. A. La Roche, E. T. Kimball, S. B. Bowman. Officers: C. W. Wyckoff, Treas.; S. B. Bowman, Sec.; E. R. Hollander, Vice-Pres.; J. S. Josephs, Pres.; Andre Massenat, Chairman Show Committee; Percy Owen, Chairman Trade and Contests Committee. Walter R. Lee, Gen. Mgr. C. R. Mabley was formerly Pres. and Gen. Mgr. In 1905 the Importers' Automobile Salon held in Herald Square Hall the first exclusive importers automobile show in America. Present members: Walter C. Allen, A. M. Archer, Wm. H. Barnard, R. Bertelli, Julien E. Bloch, S. B. Bowman, Maurice Coster, Edward B. Gallaher, E. R. Hollander, J. S. Josephs, Paul La Croix, Egbert Lillie, Carlton R. Mabley, Geo. M. MacWilliam, Walter C. Martin, Andre Massenat, Henry Neubauer, Percy Owen, F. D. Palmer, Gaston R. Rheims, I. Henry Walker, C. F. Wyckoff.

Impulse.—A suddenly applied force; a term applied especially to the force of the heat-expansion ("explosion") in an internal combustion motor.

Inboard.—Situated on the inside of a boat; the reverse of "outboard."

Incandescence.—Glowing, self-illuminous (emitting light), owing to high temperature, as red hot iron, molten iron, etc. The motors in which ignition was effected by a platinum tube maintained at a red heat were said to be "fired by incandescence."

Incerti E. Co., R.—Villar Perosa, Pinero, Italy. Mfrs. ball bearings.

Inch-pound.—A unit of work occasionally used; the work done when one pound is raised one inch.

Incrustation.—The same as scale or fur, q. v.

Independent Auto Co.—5989 Center Ave., Pittsburg, Pa. Repairing.

Independent Automobile Co., Ltd.—1016 Common St., New Orleans, La. (Stoddard-Dayton.)

Independent Steel & Wire Co.—House St., Chicago, Ill. Mfrs. machinery springs and seat springs.

Independent Tire & Rubber Co.—Akron, O. Mfrs. pneumatic tires, clincher type. Est. 1906. Inc. Diamond Rubber Co., sole selling agents.

Inderground, W. F.—Sec. New Jersey Automobile Co., 855-7 Springfield Ave., Newark, N. J.

Indestructible Steel Wheel Co.—1303 Michigan Ave., Chicago, Ill. Mfrs. sheet steel, stampings, steel wheels.

Index.—A hand or pointer arranged to move over a dial or scale.

Indiana Auto Co.—220 N. Y. St., Indianapolis, Ind. (Peerless, Winton, Franklin, Autocar, Baker, Pope-Hartford.)

Indiana Automobile Club.—R. A. Brown, Sec., Indianapolis, Ind.

Indiana Brass & Bronze Co.—Marion, Ind. Mfrs. brass, bronze, aluminum and copper castings.

Indiana Electric Co.—724 Philadelphia St., Indiana, Pa. Supplies.

Indianapolis Automobile Racing Assn.—F. M. Hoblitt, Sec., 220 E. N. Y. St., Indianapolis, Ind.

Indianapolis Bolster Spring Co.—326 W. Georgia St., Indianapolis, Ind. Mfrs. shock absorbers.

Indianapolis Buggy Top Co.—2116 S. Meridian St., Indianapolis, Ind. Mfrs. automobile tops.

Indianapolis Dash Co.—Indianapolis, Ind. Mfrs. dashes and fenders, dos-a-dos seats.

Indianapolis Drop Forging Co.—Indianapolis, Ind. Mfrs. automobile drop forgings, drop forged wrenches. Cap., \$85,000. Est. 1896. Walter Kessler, Pres.; Fred Barnickol, Vice-Pres.; P. M. Watson, Sec and Treas.

Indianapolis Foundry Co.—Indianapolis, Ind. Mfrs. gray iron castings.

Indianapolis Motor Co.—111 Kentucky Ave., Indianapolis, Ind. (Dragon, Rapid.)

Indianapolis Motor Car Co.—West Plains, Mo. (Dragon, Logan.)

Indiana Rubber & Insulated Wire Co.—Jonesboro, Ind. Mfrs. insulated wire.

India-rubber.—See rubber.

India Rubber, Gutta Percha & Telegraph Works Co., Ltd.—Persan-Beaumont, Seine-et-Oise, France. Mfrs. pneumatic and solid tires.

India Rubber & Gutta Percha Insulating Co.—253 Broadway, New York City. Mfrs. insulated wire.

India Rubber Review.—Akron, O. Theodore E. Smith, Pub.: monthly.

India Rubber Tire Co.—477 Wabash Ave., Chicago, Ill. Mfrs. bow separators.

India Rubber World.—35 W. 21st St., New York City. India Rubber Pub. Co.; monthly.

Indiana State Automobile Assn.—In-

dianapolis, Ind. H. O. Smith, Pres.; John S. Cox, First Vice-Pres.; Horace Kizer, Second Vice-Pres.; J. A. Speckenhier, Treas.; Edgar Apperson, Kokomo, Ind., Sec. Membership: Automobile Club of Wayne County, Cass County Auto Club, of Logansport; Indiana Automobile Club, South Bend Automobile Club, Terre Haute Automobile Club.

Indicated Horse-power.—See Horse-power, Indicated.

Indicator.—An apparatus for showing the force of the steam in an engine and the state of exhaustion in the cylinder during the stroke.

Indicator-card.—The card on which an indicator diagram is drawn, or the diagram itself.

Indicator-diagram.—A figure showing the pressure in the cylinder at every point of the stroke.

Indicator, Polarity.—See Polarity-indicator.

Indicator, Speed.—Same as tachometer, q. v.

Induced Current.—See Current, Induced.

Inductance.—The co-efficient of induction of a circuit. It is measured in "henrys," equal to 10^9 C. G. S. units of inductance. Inductance and impedance intervene in the calculations of lines designed to carry alternating currents.

Induction.—The production of electricity in a coil or apparatus at a distance from the inducing current, and not connected thereto by conductors. (2) The drawing of the explosive mixture into the motor.

Induction-coil.—See Coil, Induction.

Induction, Magnetic.—The production of magnetic properties in soft wires, etc., when placed in a magnetic field. (2) The magnetic flux density in any material placed in a magnetic field.

Induction, Self.—When a current flows in a circuit, a magnetic field of greater or less strength is always produced, and such field, while appearing or disappearing, necessarily cuts the circuit itself, and in so doing, sets up an induced e. m. f. With steady currents this effect occurs only at its starting or stopping, the result being that the rise of a current is opposed by the self-induced e. m. f. in the opposite direction, and its stoppage also opposed by another self-induced e. m. f. in the same direction, the effects being most conspicuous in the case of coils of wire having iron cores. The result is that an electric current behaves as if it possessed inertia, and is unable to start or stop instantaneously.

Induction-stroke.—The same as suction-stroke."

Induction-valve.—See Inlet-valve.

Inductor.—That part of a dynamo or magneto that furnishes the magnetic field necessary for the operation of the apparatus. In dynamos the inductor is an electro-magnet, and the current that produces the magnetic field in the inductor is called the "exciting current."

In a magneto the inductor is not an electro-magnet, but a permanent artificial magnet.

Industrial Motor Review.—Pub. at 89 Fleet St., London, England.

Industrie Vélocipédique et Automobile.—Pub. at 75 rue Vielle-du-Temple, Paris, France.

Inertia.—The property of matter in virtue of which it cannot of itself change its own state of motion or rest. If a body is at rest it remains so until some force acts upon it, and if it is in motion this motion can be changed only by the application of some force.

Ingalls, C. E.—Prop. Montgomery Auto Transfer, 207 Monred St., Montgomery, Ala.

Ingalls, C. E.—Vice-Pres. Austin Automobile Club, Austin, Ill.

Ingalls Garage Co.—State St., Newburyport, Mass. Supplies; garage; repairs.

Ingate.—The channel, called also "tedge," through which metal is poured into a mould.

Inge, W. M.—Sales Mgr. Loring Speed Gauge Co., 91 Marshall St., Somerville, Mass.

Ingersoll-Rand Co.—11 Broadway, New York City. Mfrs. air compressors, hose couplings.

Ingot.—A mass of metal which has been poured into a mould in order to give it a shape (usually that of a short rectangular bar), convenient for handling.

Initial Condensation.—See Condensation. Initial.

Initial Pressure.—See Pressure, Initial.

Injector.—An apparatus for forcing water into a boiler through the intermedium of a jet of steam.

Inks, W. B.—Ligonier, Ind. (Ford.)

Inland Auto Co.—Spokane and Alder Sts., Walla Walla, Wash. (Franklin, Buick, Thomas, Oldsmobile.)

Inlet-cam.—See Cam, Inlet.

Inlet-pipe.—See Pipe, Inlet.

Inlet-valve.—See Valve, Inlet.

Inner Shoe Tire Co.—64 Monroe St., Grand Rapids, Mich. Mfrs. anti-skid devices, tire cases, tire patches, tire shoes.

Inner Tube.—In a pneumatic tire, an air-tight tube which fits in the outer casing.

Inserts, Cork.—See Cork Inserts.

Inspection-pit.—A pit in the floor of a

garage from which access can be gained to the underside of a motor-car.

Inspection-plate.—The same as hand-hole plate. See Hand-hole.

Insular Auto Co.—San Juan, Porto Rico. (Knox.)

Insulation.—A coating of non-conducting material applied to a wire or other electrical conductor to prevent the escape of the current through contact with external objects.

Insulator.—A substance that is a non-conductor of electricity. The specific resistance of some important materials is as follows: Mica, 8.4x10¹⁷ megohms; glass, 9x10¹⁷ megohms; gutta percha, 4.5x10¹⁸ megohms; shellac, 9x10¹⁸ megohms; ebonite, 2.8x10¹⁸ megohms; paraffine wax, 3.4x10¹⁸ megohms.

Intake.—The same as Inlet-pipe.

Integral.—All of one piece.

Intensifier, Spark.—See Spark-gap.

Interconnected.—In a mechanism, parts that are operatively connected.

Interlock.—The same as "mesh," q. v.

Intermédiaire Automobile, L'.—Pub. at 39 rue d'Isly, Algiers, Algeria.

Internal Gear.—See Gear, Internal.

International Auto Horn Mfg. Co.—151 E. 126th St., New York City. Mfrs. horns and tubings.

International Automobile Co.—101 Burnside Pl., Montreal, Canada. (Dragon, Gale, Wayne.)

International Automobile Co.—Toronto, Canada. (Wayne.)

International Automobile Exchange, The.—250 W. 49th St., New York City. (Second-hand cars.)

International Correspondence School.—Scranton, Pa. Automobile instruction, correspondence.

International Harvester Co.—Akron, O. Mfrs. gasoline automobiles.

International Motor Car Co.—514-16 N. Broad St., Philadelphia, Pa. (Walter, Darracq.)

International Motor Cyclopaedia.—Times Bldg., New York City. Pub. yearly.

International Motor Review, The.—Pub. at 30 rue de Londres, Paris, France.

International Power Vehicle Co.—216 Pacific St., Stamford, Conn. Mfrs. kerosene motors.

International Taxametergesellschaft.—79 Landsbergerstrasse, Berlin, Germany. Mfrs. speed indicators.

Interrupter.—A device for the rapid making and breaking of an electric circuit. The same as trembler, q. v.

Interstate Auto & Supply Co.—Sioux City, Ia. (Premier.)

Interstate Foundry Co.—Cleveland, O. Mfrs. gray iron castings.

Interurban Motor Car Co.—1920

Broadway, Oakland, Cal. (American, Knox.)

Interurban Motor Traction Co.—W. Main St., Lexington, Ky. (Manhattan.)

Invicta, Société.—5 rue Déves, Neuilly, Seine, France. Mfrs. storage batteries, spark plugs, coils, low tension magnetos.

Invincible Tire Armor Co.—Hartley, Ia. Mfrs. tire treads.

Ion.—A term introduced by Faraday to denote current-carriers in electrolysis. "Ions" include "anions" and "cations." The anions go from the anode and the cations from the cathode.

Iowa Auto & Supply Co.—407 4th St., Des Moines, Ia. (White.)

Iowa Auto Co.—Ottumwa, Ia. (Ford.) Est. 1903. E. H. Emery, Mgr.; B. P. Brown, Sec. and Treas.

Iowa Automobile Club.—W. B. McNutt, Sec., Des Moines, Ia.

Iowa Brass & Novelty Works.—717 Grand Ave., Des Moines, Ia. Garage.

Iowa Marine Engine & Launch Works.—Bellevue, Ia. Mfrs. motor boats.

Iowa Vulcanizing & Tire Co.—408 Main St., Davenport, Ia. (Pope-Hartford, Pope-Toledo, Babcock.) Est. 1906. J. L. Herbert, Mgr. Garage, 30 cars; repairing.

Irby, R. V.—Laurence, S. C. (Maxwell.)

Ireland, D. M.—Pres. Edmunds & Jones Mfg. Co., 315 Riopelle St., Detroit, Mich.

Iridium.—A shining white metal, and next to osmium, the heaviest known element. It occurs naturally along with platinum, to which it is allied. The standard metre is an alloy of 10 per cent. iridium and 90 per cent. platinum. Iridium and iridio-platinum alloy, because of their resistance to wear and corrosion, are used for making make-and-break and trembler terminals, and the electrodes of spark-plugs.

Iron.—The most important of all metals, but of exceedingly rare occurrence in a metallic state. Pure iron has a white color and perfect luster. It is extremely soft and tough, and has a specific gravity of 7.8. In good bar iron or wire a distinct fibrous texture may always be observed when the metal has been attacked by an acid, and upon the perfection of such fiber much of its strength and value depends. Iron is the most tenacious of all the metals, a wire 1-36 of an inch bearing a weight of 60 pounds. It is very difficult of fusion, and before becoming liquid passes through a soft or pasty state. Iron is extracted from its ores in a blast-furnace, the product of which is crude or cast-iron, of which there are several varieties, distinguished by differences of

color, hardness and composition and known by the names of "gray," "black," and "white" iron. Gray pig-iron is used for castings, and white in making steel. The black and gray kinds probably contain a mechanical mixture of graphite. "Wrought" iron is the purest form of useful iron, and is usually made from gray iron by a process called "puddling," previous to which it commonly undergoes a process called "refining." This "refined" product is cast into "bar" iron. To make the best iron, the bar is cut into pieces and submitted to a process called "fagoting" (see Fagot). Iron containing but 0.005 to 0.015 per cent. of carbon gives steel. The properties of iron are also much modified by other simple bodies, thus: Silicon will harden iron and make it brittle, but in the presence of carbon, by inducing the carbon to take the graphitic instead of the combined form, it leaves the iron softer and coarser in grain. Sulphur has a strong, steady effect on the iron. It closes the grain, hardens the cold metal, makes it red short and causes it to run thick and pasty when melted. The effect of phosphorus is to make the metal cold short. It seems to have but little effect on the breaking strain, if the load be gradually applied, but renders it susceptible to shocks. Manganese closes the grain of iron. It fluxes out the disseminated oxides and, in moderate percentages, tends to produce sound, tough castings. In the higher percentages it removes the sulphur, but is likely to increase the hardness so as to render the iron unmanageable. Carbon exists in iron in two conditions, combined and graphitic. The combined hardens the iron and the graphitic softens it, giving crystalline formation on fracture. A proper ratio of these elements may be made to influence the iron so as to turn out almost any type of metal desired.

Iron, Angle.—A bar of wrought iron, the cross-section of which has the form of the letter L (see figure).

Iron-cement.—See Joint. Rust.

Iron, Channel.—A form of angle-iron having a web and two flanges extending on one side only of the web.

Iron, Charcoal.—Iron prepared in a furnace in which charcoal is the sole fuel. It is the finest and purest variety of iron, and of great value for electrical work, such as transformer cores, armature disks, etc.

Iron, Circle.—See Fifth Wheel.

Iron, Dumb.—The forward ends of the sills of a motor-car frame to which the forward ends of the springs are attached. See Spring-horn.

Iron, Galvanized.—Sheet iron coated with zinc to prevent oxidation. The process is not electrical as the name implies, but consists simply in dipping the iron into molten zinc.

Iron, I.—A bar of iron with a cross-section like the letter I.

Iron, Meteoric.—See Steel, Nickel.

Iron-plate.—Iron rolled into the form of plates.

Iron, Refined.—White cast-iron which has been partially deprived of its carbon previous to the process of puddling. See Puddling.

Iron-rust.—See Rust.

Iron, Sheet.—Iron in the form of thin plates, usually formed by rolling or hammering.

Iron, Soldering.—See Soldering-iron.

Iron, T.—A bar of iron of which the cross-section has the form of the letter T.

Iron, Wrought.—Pure iron containing from 99.6 to 99.8 per cent. of the metal. It has the highest melting point of any of the useful forms of iron, is soft and fibrous, and strongly magnetic. It cannot be hardened or tempered, is easily welded, and is malleable and ductile.

Iron Age, The.—14 Park Pl., New York City. David Williams Co., Pubs.; weekly.

Iron City Auto Co.—613 5th Ave., Pittsburg, Pa. Garage.

Iron Clad Mfg. Co.—204 Varet St., Brooklyn, N. Y. Mfrs. tanks, storage tanks, enameled ware.

Iron Moulders' Journal.—Cincinnati, O. International Moulders' Union of N. A., Pub.; monthly.

Iroquois Motor Car Co.—Seneca Falls, N. Y. (Iroquois.)

Iroquois Rubber Co., The.—478-483 Washington St., Buffalo, N. Y. (Morgan & Wright tires.)

Irreversible.—A term applied to a steering-gear in which the steering-device moves the road-wheels, but cannot be moved by them.

Irvin Machine Works.—335 Golden Gate Ave., San Francisco, Cal. Repairing.

Irvin, Richard.—Treas Maxwell-Briscoe-Chase Co., 1407-9 Michigan Ave., Chicago, Ill., and Treas. Maxwell-Briscoe Motor Co., Tarrytown, N. Y.

Irvin & Co., Richard.—25 Broad St., New York City. (Maxwell.)

Irving Auto Station.—128 E. 29th St., New York City. Garage.

Irwin, Robert C.—Head of Repair

Dept., C. P. Kimball & Co., 315-318 Michigan Ave., Chicago, Ill.

Isbell, J. J.—113 N. Mitchell St., Kendallville, Ind. (Auburn.)

Isbell & Co., Wm. G.—1413 Michigan Ave., Chicago, Ill. (Simplex.) Est. May 3, 1907. Not inc. John S. Gorham, E. E., electric vehicle expert.

Iseminger, Floid G.—311 E. Front St., Bloomington, Ill., and Normal, Ill. (Ford, Mitchell.)

Isham Co.—Norwich, Conn. Mfrs. motor boats.

Isnard.—36 Ave d'Alsace-Lorraine, Grenoble, France. Mfrs. automatic starters.

Isochronous.—A word meaning "what is done in equal times." With motors it is synonymous with the term "balanced."

Isotta-Fraschini, Societa Anonima.—79 Monte Rosa, Milan, Italy. Mfrs. gasoline automobiles. (Isotta-Fraschini.) Automobile motors.

Isotta Import Co., The.—1620-24 Broadway, New York City. (Isotta-Fraschini.) C. M. Hamilton, Prop.

Israel, Abe.—139 Broadway, Paterson, N. J. Garage.

Itala Import Co.—41 W. 65th St., New York City. (Itala.)

Itala, Societa Anonima Fabbrica di Automobili.—29 via Petrarco, Turin, Italy. Mfrs. gasoline automobiles. (Itala cars.)

Ithaca Carriage Co.—Ithaca, N. Y. Mfrs. automobile seats.

"It" Locknut Concern.—515 E. 63d St., Chicago, Ill. Mfrs. locknuts and washers.

Ivel Agricultural Motors, Ltd.—45 Great Marlborough St., London, England. Mfrs. agricultural implements, tractors, harvesters, lawn movers, automobile motors.

Iverson & Co., J. C.—425 Water St., Milwaukee, Wis. Mfrs. gasoline automobiles.

Ivery Realty Co.—Montgomery, Ala. Garage.

Ivins, Ellwood.—Prop. Ellwood Ivins Tube Works, Oak Lane Station, Philadelphia, Pa.

Ivins Tube Works, Ellwood.—Oak Lane Station, Philadelphia, Pa. Mfrs. seamless steel, brass, copper and aluminum tubing. Est. 1876. Ellwood Ivins, Prop.; Lewis Boyd, Supt.; Frank Clark, Asst. Supt.

Ivry Car & Motor Works.—15 Victoria St., Westminster, London, England. Mfrs. tricar. (Ivry.)

J

J.—Abbreviation of "joule."

J.—Symbol of "intensity of magnetization."

Jack.—A lever jack, called also a "lifting jack" (of which there are various forms), designed to lift an axle so as to raise the wheel in order that it or its tire may be removed or repairs be made. (2) A spring-clip called also "spring-jack" or "knife-jack," by which a connection may be readily made in electric circuits.

Jack-in-the-Box Gear.—See Gear, Differential.

Jack-shaft.—The same as Counter-shaft. See Shaft, Counter.

Jacket, Steam.—A hollow casing around the cylinder of a steam-engine, and which, kept supplied with hot steam, maintains the temperature of the cylinder.

Jacket, Water.—A casing around the cylinder of a gas-motor, forming a chamber for carrying water for cooling purposes. The jacket is usually cast integral with the cylinder, and is sometimes galvanized and sometimes coated with an electrolytic deposit of copper to prevent oxidation. Some motors, on the contrary, have attached water-jackets of plain or corrugated copper or of brass, which, although they permit of a somewhat simpler cylinder casting and of a saving in weight, have the disadvantage of being liable to leak. See Cylinder Cooling.

Jack, M. L.—Rochester, Pa. (Rambler.)

Jacks, E. D.—Napa, Cal. (Thomas, Winton, Oldsmobile, Royal, Buick.)

Jackson.—104 rue Oberkampf, Paris. France. Mfr. horns.

Jackson, A. F.—Vice-Pres., Treas. and Gen. Mgr. The Semi-Dry Battery Co., cor. 5th and Essex Sts., Harrison, N. J.

Jackson Agency.—Des Moines, Ia. (Jackson.)

Jackson, A. J.—Proprietor and Mgr. Auto Specialty Co., 6 E. Madison St., Chicago, Ill.

Jackson Automobile Co.—South Park Ave., Jackson, Mich. Makers of the Jackson car; first marketed in 1900. Five models made since. Cap. \$24,000. Chas. Lewis, Pres.; G. A. Mathews, Sec.

Treas. and Purch. Agt.; F. L. Holmes, Gen. Mgr.; C. Bird, Supt.; Chas. Van Horne, Advt. Mgr. Agents and dealers: Arlington Motor Car Co., 5969 Center Ave., Pittsburg, Pa. Jacobs, H. W.—Akron, Colo. (Waltham.)

Jacobsen, E. C.—Sec. and Treas. E. C. Walker & Co., 1913-23 Logan St., Louisville, Ky.

Jacobson Machine Mfg. Co.—Warren, Pa. Mfrs. air compressors.

Jacobson, C. B.—Director Pittsfield Spark Coil Co., Dalton, Mass.

Jacoby, K. R.—Sec., Pur. Agt., Sales and Advt. Mgr. Miami Cycle & Mfg. Co., Grand Ave., Middletown, O.

Jacquemin, J. B.—Route de la Mouille, Morez, Jura, France. Mfr. goggles.

Jacquot, Georges.—30 rue de Prieze, Troyes, France. Mfrs. motorcycles.

Jager Gas Engine Co.—33 Canal St., Providence, R. I. Mfrs. gasoline marine motors.

James & Brown, Ltd.—395 Oxford St., London W., England. Mfrs. clutches.

James & Co., Fred S.—171 La Salle St., Chicago, Ill. Automobile insurance against fire, theft, transportation and collision.

James Co., A.—1st and King St., La Crosse, Wis. (Winton.)

James, J. M.—Treas. Lane Motor Vehicle Co., Poughkeepsie, N. Y.

James, J. T.—Loveday St., Birmingham, England. Mfr. metallic rims.

James, M.—62 rue St. Antoine, Paris, France. Mfr. electric lamps.

Jamison, C. S.—Sales Mgr. Dayton Motor Car Co., Dayton, O.

Jamestown Iron Works Co.—11 Shrannan Pl., Jamestown, N. Y. Est. 1906. Garage, 10 cars; repairing.

Jamesville Mfg. Co.—Jamesville, N. Y. Mfrs. hubs, nipples, steel rims, steering apparatus, steering wheels, wire wheels, wood wheels.

Jamming.—The "seizing" or fixing of a bearing which sometimes occurs when, through inadequate lubrication, it becomes hot. See Seizing.

Janesville Automobile Club.—Frank H. Blodgett, Sec., Janesville, Wis.

Janney Auto & Launch Co.—6040 Hurst St., New Orleans, La. (Lambert.)

Janney, Joa. A., Jr.—Treas. The Auto-light & Motor Supply Co., Inc., 506-8 N. Broad St., Philadelphia, Pa.

Janney Motor Co.—Flint, Mich. Mfrs. automobiles, gasoline.

Janney Steinmetz & Co.—4th and Market Sts., Philadelphia, Pa. Mfrs. malleable iron castings, stampings, tanks, tire irons, gasoline lock valves, wrenches, pressed steel products.

Jansen & Huestis.—Fonda, N. Y. Garage.

Janassens, Ateliers, A.—Rue du Gazometre, St. Nicholas, Belgium. Mfrs. steering gears.

Jardet, B.—22 Bvd. Bourdon, Neuilly, France. Mfrs. radiators.

Jardine, Robert.—Chief Engineer of the Royal Motor Car Co., Cleveland, O. B. Cleveland. Oct. 8, 1876. Ed. Cleveland public schools, Birmingham Technical School, International Correspondence Schools. Mem. Century Club. Res. 1860 E. 70th St. Office. The Royal Motor Car Co., Cleveland, O. In the trade since 1898.

Jarecki, Alex.—Vice-Pres. Continental Rubber Works, 19th and Liberty Sts., Erie, Pa.

Jarecki, Chas.—Sec. Continental Rubber Works, 19th and Liberty Sts., Erie, Pa.

Jarecki Mfg. Co.—Erie Pa. Mfrs. brass fittings.

Jarrott, Charles.—45 Great Marlborough St., London. B. in England in 1875. Mem. of the Automobile Clubs of France, England, Germany and Ireland. Manager of the De Dion-Bouton Co., Ltd., and of Vedrine, Ltd. Represented England in the Bennett Cup race in 1903 and 1904, and won the Circuit of Ardennes.

Jarvis, Levi.—Pingree, Stutsman Co., N. D. (Jewel.) Est. 1907. Repairing.

Jaw.—The part of a vise, clamp, chuck, clutch, etc., which actually comes into contact with the piece of work to be held.

Jaw-clutch.—See Clutch, Jaw.

Jaynes & Co., W. C.—721 Main St., Buffalo, N. Y. (Royal, Knox.)

Jaynes Auto Supply Co.—806 Main St., Buffalo, N. Y. Est. 1906. Supply house, handling Prest-O-Lite tanks, Weed chain grips, Witherbee storage igniter, M. & M. cement and a general line of automobile supplies. W. C. Jaynes, Prop.

Jaynes, W. C.—Proprietor Jaynes Auto Supply Co., 806 Main St., Buffalo, N. Y.

Jeannerot et Perrin.—27 rue de Vendome, Lyons, France. Mfrs. non-skids.

Jeantaud.—51 rue de Ponthieu, Paris, France. Mfrs. storage batteries.

Jeantaud, Charles.—Engineer. 51 Rue de Ponthieu, Paris. Born at Limoges, Dec. 23, 1843; died Dec. 1, 1906. Officer of the Academy, Chevalier of the Legion of Honor, former president of the Syndical Chamber of the Automobile. In 1881 he constructed the first electric carriage with accumulators. In 1905 he invented the E. I. accumulator.

Jeantet, Eugene.—238 Grande Rue, Morez, Jura, France. Mfr goggles.

Jeck, Henry.—Head Athletic Supply Dept. Collister & Sayle, 224 Superior Ave. N. W., Cleveland, O.

Jef Mfg. Co.—1562 Broadway, Denver, Colo. Mfrs. valve grinders.

Jefferson Brass Foundry.—209 E. King St., Brooklyn, N. Y. Mfrs. brass, bronze, aluminum and copper castings.

Jeffery & Co., Thos. B.—145 Columbus Ave., Boston, Mass. (Rambler.)

Jeffery & Co., Thos. B.—302-304 Wabash Ave., Chicago, Ill. (Rambler.)

Jeffery & Co., Thos. B.—455 Broadway, Milwaukee, Wis. (Rambler.) Incorporators, Chas. T. Jeffery, Pres.; Harold W. Jeffery, Vice-Pres. and

Treas.; C. C. Hutchinson, Sec.; A. W. Shattuck, Resident Mgr.

Jeffery & Co., Thos. B.—3 Marshall St., Newark, N. J. (Rambler.)

Jeffery & Co., Thos. B.—207 N. Broad St., Philadelphia, Pa. (Rambler.)

Jeffery & Co., Thos. B.—121 Valencia St., San Francisco, Cal. (Rambler.)

Jeffrey & Co., Thos. B.—Kenosha, Wis. Mfrs. gasoline automobiles and commercial vehicles. (Rambler cars.)

Jeffery-Dewitt Co.—219 High St., Newark, N. J. Mfrs. spark plugs. J. A. Jeffery, Pres.; B. A. Jeffery, Vice-Pres.; M. C. Dewitt, Sec. and Treas.

Jeffords. Witherspoon.—58 Queen St., Charleston, S. C. (Maxwell, Waltham.)

Jenatzy.—A well-known automobile racer. In 1903 he won the Bennett Cup race in Ireland and classed himself as fifth in the Vanderbilt Cup race in 1906. He is the inventor and manufacturer of the pneumatic tire that bears his name.

Jenatzy-Leleux, Manufacture Générale de Caoutchouc.—10 rue Stephenson, Brussels, Belgium. Mfrs. solid tires, non-skids, pneumatic tires.

Jencick Motor Mfg. Co.—Port Chester, N. Y. Mfrs. gasoline automobile and marine motors. Garage.

Jenkins & Co., W. M.—286 Columbus Ave., Boston, Mass. (Mitchell.)

Jenkins Bros.—1607 W. Broad St., Richmond, Va. (Pope-Hartford.)

Jenkins Motor Co., E. A.—1216 Main St., Columbia, S. C. (Stoddard-Dayton, Rambler.)

Jenkins, J. W.—237 Rutgers St., Rochester, N. Y. (Jenkins Spec.)

Jenkins, T. B.—Pres. and Treas. Charleston Motor Co., 161 Meeting St., Charleston, S. C.

Jenkins, T. B., Jr.—Sumter, S. C. (Reo.)

Jenkins, Warner Haddon.—Gen. Mgr. N. Y. News Bureau. B. Philadelphia, Pa., Feb. 27, 1865. Ed. Friends' School, University Class of Newton School, and private tuition. Pres. and Prop. Financial Bulletin. Pres. Motor Print Co., 418-20 Sansom St., Philadelphia, Pa.

Jenks, W. L.—Treas. The Lee Mfg. Co., Conners St., Port Huron, Mich.

Jenness, Charles L.—Pres. and Treas. A. & J. Mfg. Co., 26 W. Randolph St., Chicago, Ill.

Jennings, Hulbert R.—Sec. and Treas. Graves & Congdon Co., Oak St., Amesbury, Mass.

Jensen Auto Co.—206 W. 65th St., New York City. Garage.

Jephson, Geo. S.—Asst. Gen. Mgr. J. M. Quinby & Co., 21-39 Division St., Newark, N. J.

Jergens Co., Andrew.—Cincinnati, O. Mfrs. hand soaps.

Jerome Auto Garage.—Jerome Ave. and 166th St., New York City. Garage.

Jerome, F. S.—Vice-Pres. Uncas Specialty Co., 21 Shipping St., Norwich, Conn.

Jersey Brake Co.—93 Green St., Newark, N. J. Mfrs. jacks.

Jersey Shore Cycle Co.—Jersey Shore, Pa. (Winton.)

Jervia, Arthur Nichols.—Adv. Mgr. American Locomotive Automobile Co.,

free lance writer and press agent. B. Amityville, L. I., May 26, 1865. Ed. grammar school. Mem. N. Y. Motor, N. Y. Press, Pleaides. Res., Hotel Monticello. Office, 29 W. 42d St., New York City. In trade since 1894. Used first motorcycle

1874. Was author of automobile articles in the New York Sun, 1896.

Joseph & Co., W. R.—499 Clinton St., Buffalo, N. Y. Mfrs. annunciators.

Jet.—A fine stream of fluid. (2) The nozzle from which a stream of such fluid issues; for example, the nozzle from which gas issues for burning, or from which the gasoline is drawn in order to cause it to spray in the mixing chamber of the carburetter. See Nozzle and Nipple.

Jewel Auto Co.—117 W. 16th St., Los Angeles, Cal. (Jewel.)

Jewel Automobile Co.—Washington, D. C. (Jewel.)

Jewel Automobile Sales Agency.—1375 Ontario St., Cleveland, O. (Jewel.)

Jewett, Alfred R.—Abington, Mass. (Cadillac.)

Jewett City Auto Station.—Jewett City, Conn. Garage.

Jewett's Garage.—58 Pleasant St., Claremont, N. H. (Rambler, Maxwell.) Est. 1907. Garage, 25 cars. Repairing. B. M. Jewett, Prop.

Jew's Pitch.—See Asphaltum.

Jig.—A device for holding parts of machinery in their relative position while they are being operated on by hand or otherwise.

Jobusch, W.—21 Nürnbergerstrasse, Berlin, Germany. Mfrs. horns.

Jockey Pulley.—See Pulley, Jockey.

Joel, Chas.—Master Mechanic Martini Import Co., 239 W. 50th St., New York City.

Johns & Armartrout.—Fitzgerald, Ga. Garage.

Johns-Manville Co., H. W.—100 William St., New York City. Mfrs. fire extinguishers, gaskets, packing, asbestos.

Johnson & Co., Isaac G.—Spuyten Duyvil, New York City. Mfrs. malleable iron castings, steel castings, chrome-nickel steel.

Johnson & Giles.—P. O. Box 533, Tampa, Fla. (Buick.)

Johnson & Son, Geo. E.—Chestnut St., New Paltz, N. Y. (Jackson, Ford.) Garage.

Johnson, A. D.—1446 Wabash Ave., Chicago, Ill. Mfr. automobile tops.

Johnson, A. D.—Sec. Diamond Chain & Mfg. Co., Indianapolis, Ind.

Johnson, A. H.—Sec. Richard Eccles Co., Clark and S. Division Sts., Auburn, N. Y.

Johnson, Alfred.—89-97 Orange St., New Haven, Conn. (Springfield.)

Johnson, A. S.—Sec. Maxwell-Briscoe-Chase Co., 1407-9 Michigan Ave., Chicago, Ill.

Johnson, Dr. P. T.—23 E. 9th St., Erie, Pa. (Frayer-Miller, Lambert.) Est. 1905.

Johnson Carriage Co.—Forest St. and East Ave., New Canaan, Conn. Est. 1873. Partnership Howard F. Johnson, Geo. Herbert Johnson. Two-story brick fireproof garage; repairing, accessories, etc.

Johnson, C. H.—55 S. Forsythe St., Atlanta, Ga. (Stevens-Duryea.)

Johnson, C. W.—W. Peter St., Uniontown, Pa. (Franklin, Pope line.)

Johnson, D. E.—Ambler, Pa. Garage.

Johnson, E. C.—Compton, Cal. (Maxwell.)

Johnson, Fred L.—86 N. Main St., Concord, N. H. Garage.

Johnson Garage, The.—Wisconsin and Blunt Sts., Charles City, Ia. Garage.

Johnson, Geo. Herbert.—Partner Johnson Carriage Co., Forest St. and E. Ave., New Canaan, Conn.

Johnson, Gus J.—Pres. Laramie Cycle & Garage Co., 314 2d St., Laramie, Wyo.

Johnson, Henry S.—Clayton, N. Y. (Waltham.)

Johnson, Howard F.—Partner Johnson Carriage Co., Forest St. and East Ave., New Canaan, Conn.

Johnson, Itheul M.—Main St., Corning, N. Y. Garage.

Johnson, John E.—Central St., Fall River, Mass. (Cadillac.)

Johnson, J. W.—Treas. Kokomo Electric Co., 339 Smith St., Kokomo, Ind.

Johnson, Llewellyn H.—Pres. National Auto Co., 957 S. Main St., Los Angeles, Cal.

Johnson Motor Co., The.—Chester, Pa. Mfrs. gasoline automobile motors.

Johnson, P. A.—Cambridge, Ill. (Rapid, Glide.)

Johnson, Paul F.—Sec., Pur. Agt. Johnson Service Co., Mich. and Jefferson Sts., Milwaukee, Wis.

Johnson Service Co.—Cor. Michigan and Jefferson Sts., Milwaukee, Wis. Makers of the Johnson Steamless steam car; first marketed in 1905. Three models made since. Cap. \$900,000. W. S. Johnson, Pres. and Gen. Mgr.; Paul F. J. Johnson, Sec. and Purch. Agt.; Emil Borisch, Supt.

Johnson Service Co.—20th St. and Broadway, New York City. (Johnson.)

Johnson-Shields Auto Co.—Long Beach, Cal. (Oldsmobile.)

Johnson Sporting Goods Co., Iver.—163-165 Washington St., Boston, Mass. Mfrs. gasoline funnels, tire chains, anti-skid devices.

Johnson, Walter B.—Essex Junction, Vt. (Buick.)

Johnson, Warren C.—Independence, Kan. (Jewel.)

Johnson, Mrs. W. C.—Pres. Chicago Women's Motor Club, Chicago, Ill.

Johnson, Wilbur C.—Asst. Mgr. Pope Motor Car Co., 139 S. E. St., Indianapolis, Ind.

Johnson, W. L.—Pres., Gen. Mgr. Johnson Service Co., cor. Mich. and Jefferson Sts., Milwaukee, Wis.

Johnson, W. L.—Vice-Pres. and Sec. Borbein Auto Co., 2109-11 N. 9th St., St. Louis, Mo.

Johnson's Garage.—Atlantic and Ohio Aves., Atlantic City, N. J. (Winton.)

Johnston, Chas. M.—232 5th Ave., Pittsburg, Pa. (American Mors.)

Johnston, F. P.—Vice-Pres. and Mgr. Detroit Screw Works, Riopelle and Franklin Sts., Detroit, Mich.

Johnston, Geo. H.—Sparrows Point, Md. Mfr. steel castings.

Johnston Machine Co.—86 High St., Woodbury, N. J. Mfrs. carbureters.

Johnston, R.—12 N. Main St., Wilkesbarre, Pa. (Reo, Rambler, Maxwell, Knox.)

Johnston, Robert Bell.—Automobile writer. B. Detroit, Mich., Aug. 5, 1873. Ed. public schools of Detroit. Res., Hotel Earle, 103 Waverly Pl. Office, 29 W. 42d St., New York City. Writer on cycling affairs since 1893 and on automobile since 1901.

Johnston, Richard Harry.—Adv. Mgr. The White Co. B. Brooklyn, N. Y., Feb. 23, 1880. Ed. Brooklyn High school, Cornell University, Columbia University. Editor of "White Bulletin" and compiler of "White Route Book." Mem. N. Y. Motor, Quaker City Motor, Harrisburg Motor. Crescent Athletic, Ameri-

can Chemical Society, American Inst. of Elec Engrs., Engineers' Club. Res. 972

Park Pl., Brooklyn, N. Y. Office, 1402 Broadway, New York City. In automobile trade since 1903. Participant in Pittsburg Endurance Run, '03; St. Louis Tour, '04; St. Paul Tour, '05, and Glidden Tour of '05, '06 and '07. Also official in principal

endurance runs of clubs in New York, Philadelphia and Harrisburg in '07. Mem. Touring Board of A. A. A. and of Legislative Committee of N. Y. State Ass'n

Johnston, Ltd., W. & A. K.—Edinburgh, Scotland. Pubs. maps.

Johnston, W. R.—Vice-Pres. and Gen. Supt. The Barndt-Johnston Auto Supply Co., 426 Donaldson St., Columbus, O.

Johnston, W. S.—806 White Bldg., Buffalo, N. Y. Mfr. sheet and bar iron and steel.

Johnstown Auto Co.—235 Bedford St., Johnstown, Pa. (Peerless, Wayne, Rambler, Queen.)

Joint, Ball.—See Ball-and-Socket Joint.

Joint, Ball-and-Socket.—A joint in which one member consists of a ball-like head fitting a corresponding recess in the other. It allows play in all directions except along the axis of the two members.

Joint, Bayonet.—An arrangement for connecting two pieces of mechanism end to end. It consists, as a general thing, of a sleeve, B, operatively connected with A, and capable of turning upon it until the end of the slot with which it is provided comes into contact with the snug, E, connected with the piece A.

Joint, Butt.—A joint in which two pieces come square against each other endwise. A term used in contradistinction to "lap-joint."

Joint, Cardan.—A universal joint used on automobiles, so-called from the name of its inventor, Cardan. See Universal Joint.

Joint, Carvel.—A term used of a vessel's timbers in contradistinction to "clinker."

Joint, Compensating.—See Joint, Slip, and Joint Expansion.

Joint, Cup.—Same as ball-and-socket joint.

Joint, Dovetail.—The junction of two pieces by means of flaring tenons and corresponding mortises of the respective parts.

Joint, Expanded.—A steam-tight joint between the end of a tube and the shell of a boiler. The tube is inserted into a hole in the shell and its end then expanded into intimate connection with the latter by means of an appropriate tool.

Joint, Expansion.—See Slip-joint.

Joint, Fantail.—Same as dovetail joint

Joint, Flange.—A pipe-joint in which each pipe is provided with a large flat plate, the plates being bolted together to form the joint. A gasket or washer is usually inserted between the flanges to make the joint tight.

Joint, Flush.—The same as Butt-joint, q. v.

Joint, Globe.—A form of universal joint which permits a shaft to have a certain play or to transmit power in a direction other than

that of the primary shaft.

Joint, Hooke's.—The same as Cardan Joint.

Jump-joint.—The same as Butt-joint, q. v.

Joint, Knuckle.—A hinged joint between two rods, one of which is provided with an eye fitting into a yoke, C (see figure) on the other. A pin, A, passing through the eye forms an axis about which the two members can turn. (2) A universal joint.

Joint, Lap.—A joint between two plates, one of which lies over the other for a short distance.

Joint-pin.—A kind of bolt so placed as to be in shear.

Joint, Reducing.—A coupling for connecting pipes of different diameters.

Joint, Rivet.—Used in boilers, girders, etc. It is suitable for joints which have to stand a tangential or shearing force, that is to say, where the rivets have to resist forces that tend to move the plates past each other.

Joint, Rust.—A caulking for joints, consisting of 13 ounces sal-ammoniac, 16 to 18 ounces of cast-iron borings, and sufficient water to wet the mixture thoroughly. Sometimes half an ounce of sulphur is added. This cement is caulked into the joints with a caulking-iron three-quarters of an inch wide and one-quarter of an inch thick. A rusting follows and seals the joint.

Another formula is: Fifty to 100 parts of iron borings, pounded and sifted and

mixed with 1 part of sal-ammoniac and sufficient water to give the mixture a pasty consistency.

Joint, Screw.—A socket-joint in which the parts to be joined are tightly screwed together.

Joint, Shackle.—A joint formed by a clevis and bolt. See Clevis.

Joint, Side.—One of the S-shaped iron or steel-hinged levers that support the hood of a carriage and permits of its being raised or lowered.

Joint, Sleeve.—A joint between sections of pipe, each of which is inserted in a sleeve.

Joint, Slip.—A joint allowing of limited longitudinal motion to compensate for any difference in distance between the driving and driven members; usually applied to a universal joint. Hence also the name "compensating joint," q. v.

Joint, Socket.—A joint in which two pipes are connected by fitting one within the enlarged end of the other.

Joint, Swivel.—A joint having a swivel permitting of twisting.

Joint, T.—A joint for connecting two pipes, two of which are at right angles to the third, by means of a fitting called a "T."

Joint, Thimble.—An expansion sleeve joint in a line of pipes.

Joint, Toggle.—A combination of levers by means of which great pressure can be applied. Two rods are hinged together (see figure) so as to make an obtuse angle with each other, one of the rods being attached to a fixed support or pivot and the other to the mechanism to which the pressure is to be applied. Force is applied at the junction of the two rods in such a manner as to tend to straighten the combination. As the rods are brought gradually into line with each other a great and increasing pressure is exerted at the ends.

Joint, Union.—See Union.

Joint, Universal.—A joint for transmitting power from one shaft to another when they are not in line, or if there is a slight variation in position during working. The ends of the shafts adjacent to each other are provided with a

fork or yoke, each of which is set at right angles to the other. Cross-bolts

connect these forks in such a way that each fork is free to swivel on a bolt which acts as a pivot. See Universal Joint.

Jointless Rim Co., Ltd.—Long Acre, Birmingham, England. Mfrs. metallic rims.

Joliet Auto & Garage Co.—100 Cass St., Joliet, Ill. (Winton.)

Joly, A.—123 bvd. Pereire, Paris, France. Mfrs. automatic starters, jacks.

Joly, M.—Pres. and Treas. Automobile Road Map Co., 428 Lafayette St., New York City.

Jonas, Aug. A.—Partner Jonas Automobile Co., 726 National Ave., Milwaukee, Wis.

Jonas Automobile Co.—726 National Ave., Milwaukee, Wis. (Peerless, Cadillac.) Est. 1900. Cap., \$25,000. Aug. A. Jonas, Wm. Jonas and Gustave Jonas, partners. Garage, 75 cars; repairing.

Jonas, Gustave.—Partner Jonas Automobile Co., 726 National Ave., Milwaukee, Wis.

Jonas, Wm.—Partner Jonas Automobile Co., 726 National Ave., Milwaukee, Wis.

Jones & Brandes.—109 Burlington Ave., Hastings, Neb. (Premier, Reo.)

Jones & Co., Howard T.—602 E St., N. W., Washington, D. C. Vulcanizing and tire repairing.

Jones & Co., Phineas.—305 Market St., Newark, N. J. Mfrs. wood rims and wheels.

Jones & Hopkins.—Mankato, Minn. (Rambler.)

Jones & Laborde.—Oshkosh, Wis. Mfrs. motor boats.

Jones & Laughlin Steel Co.—1019 White Bldg., Buffalo, N. Y. and Pittsburgh, Pa. Mfrs. sheet and bar iron and steel.

Jones & Shumacher.—Wilmington, Del. Repair shop.

Jones, A. R.—Pres. Danbury Hardware Co., 249-51 Main St., Danbury, Conn.

Jones, B. G.—Pres. and Gen. Mgr. E. J. Jones Co., Inc., Arlington Heights, Mass.

Jones, C.—Beatrice, Neb. (Oldsmobile.)

Jones Co., Inc., E. J.—Arlington Heights, Mass. Mfrs. steel, brass, bronze and bellmetal balls, small forgings. Cap., \$500,000. Est. 1887. B. G. Jones, Pres. and Gen. Mgr.; B. G. Morgan, Vice-Pres.; H. G. Storm, Treas.

Jones Cycle & Automobile Co.—132 E. Main St., Portland, Ind. Garage.

Jones, David C.—Sec. The Lunkenheimer Co., Cincinnati, O.

Jones, Edw. H.—Pres. Sheldon Axle Co., Wilkesbarre, Pa.

Jones, E. E.—11 Tremont St., Tona-wanda, N. Y. Garage.

Jones, Ernest La Rue.—Editor American Magazine of Aeronautics. B. Haverstraw, N. Y., Aug. 14, 1882. Ed. Haverstraw Academy. entered Eastman's Business College and later studied art at Yale. Asst. Sec. Aero Club of America, Sec. Jamestown Aeronautic Congress, Chairman Providence Aeronautical Committee, 1907. Half owner American Magazine of Aeronautics. Mem. Aero C. A. Recreations, automobiling, aeronautics, boating, racing. Res., 142 W. 65th St., New York City.

Jones, E. M.—Los Angeles, Cal. (Motor Racycle.)

Jones, Frank S.—629 Filbert St., Philadelphia, Pa. Machine work to order.

Jones, Geo. L.—910 S. Walnut St., Muncie, Ind. Vulcanizing.

Jones, Henry P.—31 Waeman Ave., Newark, N. J. Garage.

Jones, H. M.—1329 Michigan Ave., Chicago, Ill. (American Mercedes.)

Jones, J. H.—Designer, Knox Automobile Co., Springfield, Mass.

Jones, John E.—173 South St., Utica, N. Y. Mfr. wood wheels.

Jones, Joseph W.—Mfr. speed indicating devices. B. Saratoga Springs, N. Y., June 27, 1876. Mem. A. C. A. Res., 225 Riverside Drive. Office, 76th St. and Broadway, New York City. In the trade since 1897.

Jones, Mark C.—Converse, Ind. (Walham.) Est. 1906. Garage, 6 cars.

Jones Motor Co., Geo. H.—6th St., Camden, N. J. Machine work to order.

Jones Speedometer Co.—Broadway and 76th St., New York City. Mfrs. speedometers, odometers, automobile clocks, automobile annunciators. Mem. M. & A. M.

Jones, W. H.—134 Waverly Ave., Newton, Mass. Mfrs. speedometers, tire pumps.

Jones, Wm. S.—112 N. Broad St., Philadelphia, Pa. Sales Agt. Lea speedometers, Lea speedistimeters, Phelps vehicle recorder, Boss filter. Est. 1904. Branches: Boston, 12 Columbus Ave.; Chicago, 1303 Michigan Ave.; New York, 101 W. 66th St.

Jones, W. T.—Supt. factory, Edmunds & Jones Mfg. Co., 315 Riopelle St., Detroit, Mich.

Joo, Raymond S.—79 Orange St., Newark, N. J. (Frayer-Miller.)

Joos Söhne und Co.—Schwanthalerstrasse 51, Munich, Germany. Mfrs. automobile motors, motorcycles.

Joplin Auto Co.—618-620 Wall St., Joplin, Mo. (Holsman.)

Jordan Automobile Co.—217 4th St., S., Minneapolis, Minn. (Locomobile, Franklin, Corbin.) Est. Jan., 1905. Cap., \$20,000. Theo. C. Jordan, Pres.; F. L. Moffett, Sec. and Treas. Garage, 75 cars. Repairing.

Jordan, E. B., Jr.—873 Union St., Brooklyn, N. Y. Mfr. tool boxes.

Jordan, F.—Sec. and Treas. Magnolia Metal Co., 113-15 Bank St., New York City.

Jordan, R. C.—Columbus, Ga. (Mitchell.)

Jordan, Theo. C.—Pres. Jordan Automobile Co., 217 4th St. S., Minneapolis, Minn.

Jordan, R. H.—110 Sheridan St., Allegheny, Pa. Mfr. piston rings.

Jorgensen, Chris.—Holdredge, Neb. Garage.

Josephs, J. S.—Treas. and Gen. Mgr. Automobile Import Co., 1786 Broadway, New York City.

Joslyn Automobile Co.—Rockford, Ill. (Rambler.)

Joule.—A unit of work equal to ten million ergs. It is sometimes used in electrical calculations, but the unit of power, which is one joule per second, is more frequently employed. This unit is termed a "watt," q. v.

Jourdanet et Cie, Baron.—29 cours Lafayette, Lyon-Villeurbanne, France. Mfrs. carbureters.

Journal.—The part of a revolving shaft or spindle that runs inside the bearing.

Journal, Axle.—See Axle.

Journal of Electricity, Power and Gas. Rialto Bldg., San Francisco, Cal. Technical Pub. Co.; weekly.

Joy Auto Co., C. P.—368 Minnesota Ave., St. Paul, Minn. (Packard, Pope-Hartford, Pope-Waverley.)

Joy Bros.—187 E. 6th St., Minneapolis, Minn. Garage.

Joy, Henry B.—Gen. Mgr. Packard Motor Car Co., Detroit, Mich.

Joyce Auto Co., F. G.—705 Chestnut St., Chattanooga, Tenn. (Buick, Thomas Flyer.)

Joyce, James.—Mgr. American Locomotive Automobile Co. B. Ireland, Feb. 15, 1868. Ed. common and grammar school. Mem. Engineers', Republican Clubs (N. Y.), R. I. A. C. Res., 310 Norwood Ave., Providence, R. I. Office, 1886 Broadway, New York City. In the trade since Sept., 1894. Used first car 1896.

Joyce, Ralph.—1531 Broadway, New York City. Automobile pawnbroker and dealer in second-hand cars.

Jubisch, Carl.—12 Weststrasse, Schoenefeld, Leipzig, Germany. Mfr. motorcycles.

Judd & Leland Mfg. Co.—Hibbard Ave., Clifton Springs, N. Y. Mfrs. circulating pumps, gauges, tire pumps, axles, nipples. Mem. M. & A. M. Cap., \$75,000. Est. 1907. W. A. Judd, Pres., Gen. Mgr. and Buyer; Z. H. Haney, Sec. and Treas.

Judkins & Sons Co., J. B.—Merrimac, Mass. Mfrs. wood and metallic bodies.

Judson, J.—Sec., Treas. and Gen. Mgr. Cape Ann Tool Co., Granite St., Pigeon Cove, Mass.

Judson, R. W.—Vice-Pres. Continental Motor Mfg. Co., Muskegon, Mich.

Juengling, J. W.—Vice-Pres. Globe Machine & Stamping Co., 3868 Hamilton Ave., N. E., Cleveland, O.

Julien, J.—110 rue St. Maur, Paris, France. Mfr. clutches.

Julien-Pinçon et Cie.—54 bvd. Magenta, Paris, France. Mfrs. detachable rims.

Jump-spark.—See Ignition.

Jumping Up.—Thickening the end of an iron rod by hammering it in the direction of its length; an operation called also "upsetting."

June Bros.—Garrison St., Freemont, O. Garage.

Jungclass Auto Co.—Reading Road, Avondale, Cincinnati, O. (Mitchell, Dragon, Dolson.)

Jungmann, Felix.—Friedrichsgracht 42, Berlin, Germany. Mfr. oil lamps, horns.

Junior, Fabbrica Torinese Automobili.—56 corso M. d'Azeglio, Turin, Italy. Mfrs. gasoline automobiles. (Junior cars.)

K

K.—A symbol for the "specific inductive capacity" of a dielectric.

K.—A symbol for the "magnetic susceptibility" of iron and steel.

K.-W. Ignition Co., The.—Whitney Bldg., Cleveland, O. Mfrs. magnetos and spark plugs. Cap., \$200,000. Est. May, 1906. J. A. Williams, Pres.; Wm. Kaple, Vice-Pres.; A. F. Williams, Sec. and Treas.

Kachline, J. C.—S. Bethlehem, Pa. (Cameron.)

Kaestner, Carl.—69 Berlinerstrasse, Leipzig, Germany. Mfr. tire pumps.

Kaffel, Ch.—212 bis Blvd. Pereire, Paris, France. Mfrs. acetylene lamps.

Kahlenberg Bros.—Two Rivers, Wis. Mfrs. gasoline automobile motors.

Kalamazoo Carburetter Co.—1301 Grand Ave., Kalamazoo, Mich. Mfrs. multiple-jet carburetters.

Kalamazoo Spring & Axle Co.—Kalamazoo, Mich. Mfrs. automobile, carriage, wagon and seat springs. Est. 1870. Jas. L. Houghteling, Pres.; Chas. H. Eaton, Vice-Pres. and Mgr.; F. V. Wicks, Sec. and Treas.

Kalb & Berger Mfg. Co., Inc.—1565 Broadway, New York City. Mfrs. wood and metallic bodies, transmission gears.

Kalbfleisch Co., Franklin H.—Broadway and 16th St., New York City. Mfrs. sulphuric acid, electrolyte, distilled water, battery fluids, non-freezing compounds. Cap. \$1,000,000. Franklin H. Kalbfleisch, Pres.; A. S. Malcomson, Vice-Pres.; Philip S. Tilden, Sec.; Herbert Foster, Asst. Treas.; A. B. Savage, Asst. Sec.

Kalbfleisch, Franklin H.—Pres. Franklin H. Kalbfleisch Co., Broadway and 16th St., New York City.

Kalbfleisch, G. C.—Tiffin, O. (Maxwell.)

Kalisch Air Brake Co.—1317 Chestnut St., St. Louis, Mo. Mfrs. brakes, air compressors.

Kaltenbach, Fred.—12 N. Jefferson St., Chicago, Ill. Mfr. storage tanks.

Kampen & Range.—Monmouth, Ill. (Holsman.)

Kane-Champlin Co.—Ellicott and Tupper Sts., Buffalo, N. Y. (Premier, Reo.)

Kane, Francis M.—Seattle, Wash. (Wayne.)

Kanies & O'Connors.—Troop St., Woodstock, Ill. Repairing.

Kankakee Automobile Club.—C. H. Cobb, Sec., Kankakee, Ill.

Kansas City Motor Car Co.—Sheffield, Mo. Makers of the Phoenix truck. First marketed in 1907. One model made since. Cap. \$150,000. F. E. Wear, Pres.; L. M. Dieterich, Gen. Mgr. and Designer; W. T. Norton, Supt.

Kanter Co., R. J.—647 Water St., New York City. Mfrs. oils.

Kappelman, J. A.—Linn, Kan. (Holsman.)

Karbach Automobile & Vehicle Co.—13th and Howard Sts., Omaha, Neb. Mfrs. wood and metallic bodies, auto tops, automobiles, gasoline commercial. (Jewel.)

Karlstrom & Co.—Frithi, Sweden. (Waltham.)

Karr Portable House Co.—605 Bellplaine Ave., Chicago, Ill. Mfrs. portable houses.

Kasner, A. H.—152 Church St., New York City. Supply house.

Kathode.—See Cathode.

Kation.—See Cation.

Katonah Garage.—Railroad Ave. and Allen Court, Katonah, N. Y. (Premier, Maxwell.)

Katz & Co., Frank.—Birmingham, Ala. (Haynes.)

Kaufman, Carl.—Officer Royal Battery Co., 108-10 Duane St., New York City.

Kaufmann, Chas.—75 S. Main St., Oshkosh, Wis. Mfr. carburetters, gasoline strainers.

Kellemen, J. F.—Vice-Pres. Utica Drop Forge & Tool Co., 75 Genesee St., Utica, N. Y.

Kelley & Co., E.—509 Main St., Worcester, Mass. Mfrs. seat springs.

Keller-Dorian, A.—89 bis, rue Dauphiné, Lyons, France. Mfrs. K. D. motorcycles.

Keller, J. M.—Nappanee, Ind. Garage.

Kelley Maus & Co.—1-5 W. Lake St., Chicago, Ill. Mfrs. metal trimmings.

Kelley, W. S.—Chief Engineer Holtzer-Cabot Electric Co., Brookline, Mass.

Kellner et ses fils.—125 Ave. Malakoff, Paris, France. Mfrs. bodies.

Kellock, S. K.—Sec. C. A. Duerr & Co., Inc.—2182-6 Broadway, New York City.

Kellog, Geo. S.—Builders' Exchange, Buffalo, N. Y. Mfr. steel.

Kellogg & Co., E. H.—243-244 South St., New York City. Mfrs. anti-corrosive

gas engine cylinder oil, Excelsior gear case compounds, automobile and motor boat oils and greases. Est. 1858.

Kellogg Garage Co.—Kellogg, Ia. Garage.

Kellogg, G. W.—9 Belmont St., Rochester, N. Y. Mfr. pump connections, (tire valve).

Kellom & Co., Chas. F.—128 Arch St., Philadelphia, Pa. Mfrs. automobile oils, lubricating compounds and semi-fluid compounds. Business est. by C. F. Kellom in 1881.

Kells, Amos M.—Gen. Mgr. Adrian Steel Casting Co., Beecher St., Adrian, Mich.

Kells Mfg. Co., W. J.—62 Van Winkle St., Jersey City, N. J. Mfrs. dashes and fenders, hoods, mufflers, radiators.

Kelly, Chas. F. U.—Continental Rubber Works, Erie, Pa. (Haynes.)

Kelly Handle Bar Co.—Cleveland, O. Mfrs. lamp brackets.

Kelly, J. B.—212 2d St., Portland, Ore. (White.)

Kelly, J. H.—Natchez, Miss. Garage.

Kelly, William.—Consulting Engineer and Director Wayne Automobile Co., Piquette and Brush Sts., Detroit, Mich.

Kelsey & Kelsey.—25 Hamilton St., Albany, N. Y. Vulcanizing.

Kelsey Co.—42 Niagara St., Buffalo, N. Y. Garage.

Kelsey Motor Car Co.—204 N. Broad St., Philadelphia, Pa. (Maxwell, Mors, Mora.)

Kelsey, R. F.—Editorial Dept., The Automobile, Flatiron Bldg., New York City.

Kelsey, R. G.—Sec., Treas., Gen. Mgr. and Director Dragon Motor Co., 31st and Chestnut Sts., Philadelphia, Pa.

Kemp, D. W.—129 W. 15th St., Minneapolis, Minn. (Earl.)

Kemp, E. A.—Greenville, Mich. (Jackson.)

Kemp Machine Works, J. N.—887 Main St., Albany, N. Y. Garage.

Kemp, W. S.—Treas. Holtzer-Cabot Electric Co., Brookline, Mass.

Kempsmith Mfg. Co.—Linus St. and Woodward Ave., Milwaukee, Wis. Mfrs. milling machines, plain milling machines, universal milling machines, milling cutters, attachments for milling machines.

Kenen, L. C.—Designer Dragon Motor Co., 31st and Chestnut Sts., Philadelphia, Pa.

Kendlen, Frank.—Pres. McCook Auto Co., 308 W. Dennison St., McCook, Neb.

Kendrick & Davis.—Lebanon, N. H. Mfrs. magnetos and ignition dynamos, electric motors.

Kennedy, Harold H.—Designer Pope Motor Car Co., 139 S. East St., Indianapolis, Ind.

Kennedy Paint Co.—Montgomery, Ala. (Reo.)

Kensington Garage.—712-14 Coney Island Ave., near Ave. D., Brooklyn, N. Y. Garage; renting; repairing; supplies.

Kensington Motor Boat Co., Ltd.—64 Avonmore Road, London, W., England. Mfrs. marine motors.

Kent, E. R.—1754 Welton St., Denver, Colo. Repairing.

Kent, M. H.—Kenosha, Wis. (Waltham.)

Kent, Morgan B.—998 Boylston St., Boston, Mass. (Hotchkiss, Stearns.)

Kent Spark Plug Co.—1279 Bedford Ave., Brooklyn, N. Y. 621 Broadway, New York City. Mfrs. spark plugs.

Kentucky Automobile Co.—1051 3d Ave., Louisville, Ky. (Cadillac, Peerless, Knox, Buick, Pope-Waverley. Est. 1901 (under another name). Inc. 1904. Cap., \$25,000. A. Levy, Pres.; Hubert Levy, Treas. and head of Sales Dept.; Ira S. Barnett, Sec. and head of Repairs and Sundries Dept. Garage, 20 cars. Complete repair shop.

Kenworthy, T.—Winchester, Ind. (Auburn.)

Kerbaugh, H. S.—Pres. Commercial Truck Co. of America, 1222 Arcade, Philadelphia, Pa.

Kerberg & Protexter.—Sandborn, Ia. Garage.

Kerf.—The cut or incision made by a saw.

Kermath Motor Car Co.—Detroit, Mich. Mfrs. gasoline automobiles.

Kern & Son.—Portland, N. D. Garage.

Kero-Steam Co. (Waite & Son Co.)—102 Fulton St., New York City. Factory, East Orange, N. J. Mfrs. gerosene burners, flash steam generators, Packingless throttle, starting torch (kerosene) for burners, blow torches, flash steam system accessories. Est. 1902. Henry Randall Waite, Pres. and Treas.; Winthrop Waite, Sec.

Kerosene.—That fraction of petroleum which boils between 300° and 500° F., and consists of paraffine hydrocarbons containing from 10 to 16 atoms of carbon. It is usually purified by shaking in succession with sulphuric acid and caustic soda, distilling it, and, for burning purposes, collecting the fraction coming over between the above temperatures. The flashing points at which an ignitable vapor is given off by heating will range from 115° F. to 125° F. The oil will itself ignite and burn when heated to between 130° and 140° F. This is called its "burning-point." (See Carburetter, and Motor.) Kerosene injected into a motor-cylinder through the priming-cup and allowed to remain therein a few hours will remove all deposit from the piston-head. It is also used for removing the gummy residue left on the piston and the cylinder-wall by the lubricating

oil, and likewise facilitates the starting of the motor in cold weather or after it has been standing idle for some time.

Kerosene Carburetter.—See Carburetter, Kerosene.

Kerosene Lamp.—See Lamp, Kerosene.

Kerosene Motor.—See Motor, Kerosene.

Kerr, I. N.—Main and Asbury Aves., Asbury Park, N. J. Garage.

Kerr, M. W.—571 S. Clinton St., Syracuse, N. Y. (Buick.)

Kerr, Robt.—Mgr. Torch Dept., The Turner Brass Works, Sycamore and Illinois Sts., Chicago, Ill.

Kerrigan, C.—Chief demonstrator Martini Import Co., 239 W. 50th St., New York City.

Kerrison, John Charles.—Newspaper writer. B. England, May 22, 1869. Ed. public school. Mem. Bay State, Director 1st Cavalry Ass'n., R. I. A. C., Mass. State A. A., Pres. Chronograph Club. Mem. Masonic bodies, Officer State Militia, A. A. A. Touring Board and Technical Committee. Res., Beachmont, Boston, Mass. Office, Summer St., Boston, Mass. Used first car in 1901.

Kessler, Alfred.—Treas. Daimler Mfg. Co., 939 Steinway Ave., Long Island City, N. Y.

Kessler Machine & Supply Co.—San Diego, Cal. (Maxwell.)

Kessler, Walter.—Pres. Indianapolis Drop Forging Co., Indianapolis, Ind.

Ketchum & Co.—Bank and Sparks Sts., Ottawa, Ont., Canada. (Oldsmobile, Ford, Rolls-Royce.) Est. 1896. H. G. Ketchum, Mgr.; P. F. Shaver, Sales. Mgr.; W. H. Newington, Garage Mgr. Garage, 20 cars; repairing.

Ketchum, H. G.—Mgr. Ketchum & Co., Bank and Sparks Sts., Ottawa, Canada.

Ketchum, J. P.—60 Putnam St., Saratoga, N. Y. (Packard, Cadillac.) Garage.

Keveney, J. J.—Supt. of Foundry Hercules Float Works, 200 Franklin St., Springfield, Mass.

Key.—A rectangular piece of metal, C (see figure) fitted into slots, A, N, N, in a shaft and gear or wheel to hold them firmly in place. (2) A switch adapted for making and breaking an electric contact. (3) A tool used in turning a nut or other loose part of a machine.

(3) A tool used in turning a nut or other loose part of a machine.

Key.—The handle of a cock. See Cock.

Key-bed.—See Key-way.

Key-drift.—A steel punch, called also "key-driver," used for driving keys out of the key-seat.

Key-plug.—See Plug, Key.

Key-seat.—The same as Key-way, q. v.

Key, Screw.—The same as spanner, q. v. See Spanner.

Key-way.—A groove, C. C (see figure), called a "key-seat" and "key-bed," formed in a shaft or the hub of a wheel for the insertion of a key or tapered pin.

Keyes, John M.—8 Walden St., Concord, Mass. (Pope-Toledo, Stanley.) Est. 1895. Garage, 6 cars; repairing.

Kilgore Mfg. Co.—101 Main St., Old Town, Me. Mfrs. pneumatic shock eliminators for automobiles. Mem. M. & A. M. Cap. paid in, \$40,000. Est. Feb., 1907. Herbert Gray, Pres.; Geo. H. Richardson, Treas.; Fred'k O. Kilgore, Supt.

Killam, Henry.—Chestnut and Wooster Sts., New Haven, Conn. Mfr. wood and metallic bodies.

Killed Spirits.—A solution of zinc chloride used in soldering.

Killian's Garage.—Tompkinsville, Staten Island, N. Y. Garage.

Killian, J. D.—Mgr. Killian's Garage, Tompkinsville, Staten Island, N. Y.

Killip, Oscar.—150 S. State St., Elgin, Ill. (Jackson.)

Killum, Walter.—Supt. Chase Motor Truck Co., Syracuse, N. Y.

Kilo.—A prefix indicating that the word that it precedes is multiplied by 1,000, as one kilometre = 1000 metres. The word is commonly but incorrectly used as a synonym of "kilogramme."

Kilogramme.—(Abbrev. kg.) A weight of 1000 grammes. The "international kilogramme" is a certain platino-iridium bar termed the "kilogramme des archives." A kilogramme equals 2.67 troy pounds, or 2.2 pounds avoirdupois.

Kilogramme-metre.—(Abbrev. kgm.) Unit of work. It represents the work necessary to raise a kilogramme to the

height of one metre, regardless of the time. It is equal to 7.25 foot-pounds.

Kilowatt.—Unit of power used in electrotechnics. The power of all electric machines is estimated in kilowatts, just as that of mechanical machines is estimated in horse-power. 1 kilowatt = 1.36 horse-power (French).

One kilowatt = 1000 watts; an engine giving 500 amperes at 50 volts is an engine of 25 kilowatts.

Kilpatrick, A. J.—Lebanon, Pa. (Maxwell.)

Kimball & Co., C. P.—315-318 Michigan Ave., Chicago, Ill. Mfrs. limousine, phaeton, landaulet, touring and runabout bodies for automobiles. Dealers in electric carriages. (Rauch & Lang.) Repairing. Kitson, T. J.—Treas. Stone Automobile Co., Inc., 1006 Main St., Stroudsburg, Pa.

Kitts Mfg. Co.—111-115 Water St., Oswego, N. Y. Mfrs. water alarms and columns.

Klaas und Sachtleben.—Magdeburg, Germany. Mfrs. coils.

Klaiss, H. P.—123 E. Market St., Tiffin, O. Repairing.

Klärner, Arthur.—12 Elisenstrasse, Leipsig, Germany. Mfr. tire pumps.

Klauder, Chas. L.—B. St. and Allegheny Ave., Philadelphia, Pa. Mfr. leathers.

Klauder, Francis.—Philadelphia, Pa. (C. G. V.)

Klein, F. A.—Vice-Pres. and Sec. M. E. Blasier Mfg. Co., 65 Columbia St., Utica, N. Y.

Klenzene Co.—1710 Market St., Philadelphia, Pa. Mfrs. automobile body soaps and polishes.

Klepp, W.—54 Blvd. Richard-Lenoir, Paris, France. Mfr. gauges.

Kley, Edouard.—18 rue Defacqz, Brussels, Belgium. Mfr. pneumatic tires.

Klickier, Frank.—Bath, N. Y. Garage.

Kline, Chas.—Designer Forest City Motor Car Co., 101-149 Walnut St., Massillon, O.

Kline Co.—1610 Michigan Ave., Chicago, Ill. (English and American Napier.)

Kline, J. A.—Treas., Gen. Mgr. and Designer York Motor Car Co., 240 N. George St., York, Pa.

Klinger, A.—Coldwater, Mich. (Winton.)

Klink Motor Car Mfg. Co.—Dansville, N. Y. Mfrs. gasoline automobiles.

Kloppel, C. O.—Leigh, Neb. (Waltham.)

Knaf, W. M.—Coshocton, O. Garage.

Knapp, E. J.—Pres., Treas. and Gen. Mgr. Northwestern Storage Battery Co., 448 Milwaukee St., Milwaukee, Wis.

Knapp et Cie, Georgia.—90 rue de Preize, Troyes, France. Mfrs. motorcycles.

Knapp, J. H.—Vice-Pres. Northwestern Storage Battery Co., 448 Milwaukee St., Milwaukee, Wis.

Knapp Mfg. Co.—2529 Polk St., N. E., Minneapolis, Minn. Mfrs. body irons.

Knauth, Wm.—Treas. Continental Caoutchouc Co., 43 Warren St., 2100 Broadway, New York City.

Kneale & Kneale.—Brookston, Ind. (Waltham.) Est. 1905. J. H. Kneale, Gen. Mgr.

Kneale, J. H.—Gen. Mgr. Kneale & Kneale, Brookston, Ind.

Knease, Henry.—Iowa City, Ia. (Rambler.)

Knee.—An elbow-joint or toggle-joint. See Joint, Toggle.

Knepper, H. H.—Mgr. Frayer-Miller Co., 62d St. and Broadway, Motor Mart, New York City.

Knickerbocker Auto Co.—253 W. 64th St., New York City. Garage.

Knickerbocker Garage.—Hot Springs, N. Y. Cap. \$60,000. Incorporators, H. V. Palmer, A. P. Palmer and C. A. Singer. Garage.

Knife.—In the old Panhard and Bollé carriages a "hit-or-miss" regulating device, one of the extremities of which was shaped like a knife-blade. This "knife," as it was called, opened or closed the exhaust-valve according as to whether it was or was not struck by a "hammer," the intermittent action of which was regulated by centrifugal force.

Knife-jack.—See Jack.

Knife-switch.—See Switch, Knife.

Knight & Kilbourne.—1240 Michigan

Ave., Chicago, Ill. Mfrs. gasoline automobiles. (Silent Knight cars.)

Knight & Co., D. C.—1725 Michigan Ave., Chicago, Ill. Mfrs. folding glass fronts.

Knight, H. A.—1911 Page St., San Francisco, Cal. (Austin.)

Knight, Harry A.—Sec. and Treas. Standard Auto Supply & Mfg. Co., 20 Broad St., New York City.

Knight, Jacob.—Garwin, Ia. (Wal-tham.)

Knight, J. W.—Treas. Columbia Lubri-cants Co. of New York, 78 Broad St., New York City.

Knight, Octavius.—Pres. Standard Auto Supply & Mfg. Co., 20 Broad St., New York City.

Knight's Central Station.—261 George St., New Haven, Conn. (Ford.)

Knoblock-Heideman Mfg. Co.—South Bend, Ind. Mfrs and jobbers igniting dynamos and magnetos, spark coils, bat-tery switches, spark plugs, ammeters, mufflers, carburettors, wire battery con-nectors. Cap., \$20,000. Est. 1898. Otto M. Knoblock, Pres.; Wm. H. Miller, Vice-Pres.; George H. Heideman, Sec., Treas. and Mgr.

Knoblock, Otto M.—Pres. Knoblock-Heideman Mfg. Co., South Bend, Ind.

Knocking.—A sharp sound heard in an engine, due to a loose part and occur-ring almost always at the beginning of the compression stroke and again at the beginning of the exhaust stroke. See Pounding.

Knohaert.—Frelinghien, Nord, France. Mfrs. shock absorbers.

Knot.—A division of the "log-line" equalling one nautical mile, or 6,080 feet. The regulation "log-glass" runs 28 sec-onds. Then as 3,600 seconds: 28 seconds:: 6,080 feet: 47 feet 3 inches, the "knot" is 47 feet 3 inches on the log-line, and every knot paid out corresponds to one nau-tical mile per hour made by the boat. Thus, for example, six knots paid out in 28 seconds is equal to a speed of six miles an hour.

The "knot" is a unit of speed and not of length. It is the speed of a nautical mile per hour. The expression "knots per hour" is therefore incorrect.

The log-line should always be wet be-fore remeasuring. The following marks are used: One knot at every half knot; a piece of leather at the first knot; two knots at two knots; three knots at three knots, etc. The log should always be hove to leeward, and so that it shall strike the water perpendicularly.

To find the speed of a boat traveling over a measured course in a measured

time: If the course is a feet, and the time b seconds, then

$$\frac{3600 \times a}{b \times 5280} = \text{statute miles per hour; or}$$

$$\frac{3600 \times a}{b \times 6080} = \text{knots, or nautical miles per hour.}$$

Knowalsky, J.—Verona, Pa.; Pittsburg, Pa. (Gale.) Garage.

Knowles, C. S.—7 Arch St., Boston, Mass. Mfr. collapsible buckets.

Knowles, W. H.—Fulton and Jackson Sts., Ottawa, Ill. (Locomobile.)

Knowlson & M'Conihe.—65 River St., Troy, N. Y. Mfrs. water line gauges.

Knowlton, E. C.—Sacketts Harbor, N. Y. (Waltham.)

Knox Auto Co. of Ill.—1208 Michigan Ave., Chicago, Ill. (Knox.) Est. 1906 under present title. Cap., \$5,000. G. W. Bennett, Pres.; E. L. Harpham, Sec. and Treas. Repairing.

Knox Automobile Agency.—31 Mc-Graw Bldg., Detroit, Mich. (Knox.)

Knox Automobile Co.—1595 Broadway, New York City. (Knox.)

Knox Automobile Co.—53 Wilberham St., Springfield, Mass. (Knox.)

Knox Automobile Co.—53 Wilbraham Rd., Springfield, Mass. Makers of the Knox car; first marketed October, 1900. Ten models made since. Cap. \$363,000. E. H. Cutler, Pres.; W. E. Wright, Vice-Pres. and Sales Mgr.; A. E. Smith, Treas.; H. G. Farr, Sec. and Supt.; J. H. Jones, Designer; J. M. Collins, Purch. Agt.; H. M. Davis, Mgr. New York branch. Agents and dealers: Asheville Cycle & Auto Co., Asheville, N. C. Au-tomobile & Supply Co., Toronto, Can. Billings, Frank, Worcester, Mass. Bing-hampton Motor Car Co., Binghampton, N. Y. Ladies Quaker City Motor Club.—Philadelphia, Pa.

"La Durandal."—11 bvd. de Strasbourg, Paris, France. Mfr. non-skids.

Lafitte, J.—Biarritz, Basses-Pyrennees, France. Mfrs. horns.

Laforez.—155 ave. de Neuilly, Neuilly-sur-Seine, France. Mfr. motorcycles. (H. L. motorcycles.)

La France Automobile.—Pub. at 68 ave. de la Grande Armée, Paris, France.

La France Auto Repair & Supply Co.—Florence St., Marlboro, Mass. (Maxwell.)

La France Motor Car Co.—451 E. Market St., Elmira, N. Y. (Corbin.)

La France Motor Co.—753 5th Ave., New York City. (Cottin & Desgouttes.) Cap., \$70,000. Arthur L. Ruland, Pres.; H. M. Kirkland, Vice-Pres. and Treas. Repairing.

Lag-bolt.—See Screw, Lag.

Lag, Magnetic.—The tendency of the induced magnetism in iron, etc., to lag

behind the magnetizing force to which it is due.

Lagging.—Any non-conducting material, such as asbestos, used for covering a boiler, cylinder, etc., in order to prevent loss of heat.

Lagonda Motor Co., Ltd.—Thorpe Rd., Staines, London, England. Mfrs. automobile motors.

Lagonda Motor Mfg. Co.—Coventry, England. Mfrs. tricars. (Lagonda tricars.)

La Grange, J. W.—Franklin, Ind. (National.)

La Grange Machine Works.—La Grange, Ind. Garage.

Laidlaw, Jr., Wm. R.—244 W. 49th St., New York City. Mfr. automobile robes, cloth and paper trimmings.

Laing Machine, Automobile & Repair Co.—416 Sycamore St., Plainfield, N. J. (Cadillac, Haynes, Waltham.)

Laisant, F. R.—Treas. New Jersey Automobile Co.—855-7 Springfield Ave., Newark, N. J.

Lakdel Automobile Co.—5143 Delmar Blvd., St. Louis, Mo. (Wayne, De Luxe.) Est. August, 1906. Cap. \$15,000. J. A. Prescott, Pres. and Gen. Mgr.; Frank Meyer, Sec. and Treas.; W. Smythe, Supt. of Shop; A. C. Coleman, Foreman in Garage. Garage to house 35 cars.

Lake & Elliot.—Albion Works, Braintree, England. Mfrs. jacks.

Lake Forest Automobile & Machine Co.—Lake Forest, Ill. Garage.

Lake Shore Auto Station.—520 Dearborn Ave., Chicago, Ill. Garage.

Lake Shore Engine Works.—Marquette, Mich. Mfrs. motorboats.

Lakeport Mfg. Co.—Lakeport, N. Y. Mfrs. steam engines.

Lakeside Inn Track Association.—E. C. Hickman, Sec., San Diego, Cal.

Lake View Auto Station.—55 Evanston Ave., Chicago, Ill. Garage.

Lakewood Auto Garage.—106-118 Main St., Lakewood, N. J. (American Mercedes, Locomobile, Pope-Waverley, Columbia.) Est. March, 1900. Cap., \$50,000. Not inc. Jos. B. Hoff, Prop. Machine shop, blacksmith shop and brazing facilities, electric charging, garage, 150 cars.

La Locomotion Automobile.—Pub. at 15 rue Bouchut, Paris, France.

La Locomotrice, Société Anonyme.—35 rue de Vennes, Liège, Belgium. Mfrs. gasoline automobiles, gasoline commercial automobiles. (La Locomotrice.)

Lamb & Co.—Kent and Lyons Sts., Grand Rapids, Mich. Mfrs. electric controllers, electric motors.

Lamb Auto Co.—207-209 6th Ave., Clinton, Ia. (American Mercedes, Peerless, Cadillac, Baker, Pope-Waverley.) Est. since 1904. Cap., \$10,000. J. D.

Lamb, Pres.; V. A. Bonney, Vice-Pres. and Treas.; F. B. King, Sec. Garage to house 15 cars; repairing.

Lamb Boat & Engine Co.—Clinton, Ia. Mfrs. gasoline automobile motors, motorboats.

Lamb, G. B.—Sec. Post & Lester Co., Sergeant St., Hartford, Conn.

Lamb Electric Co.—31 Canal St., Grand Rapids, Mich. Mfrs. electric generators, special automobile machinery, electric motors.

Lamb, E. P.—Supt. Camden Anchor-Rockland Machine Co., Camden, Me.

Lambert & Von Tacky.—16 N. Franklin St., Titusville, Pa. (Pierce Arrow, Stevens-Duryea, Buick.) Est. 1904. Garage 25 cars; repairing.

Lambert Agency, Pacific Garage.—1227 W. Washington St., Los Angeles, Cal. (Lambert.)

Lambert, A. R.—Pur. Agt. Buckeye Mfg. Co., Anderson, Ind.

Lambert Auto Co.—343 Golden Gate Ave., San Francisco, Cal. (Lambert.)

Lambert, B. F.—Pres. and Supt. Buckeye Mfg. Co., Anderson, Ind.

Lambert, J. W.—Sec., Treas., Gen. Mgr. and Designer, Buckeye Mfg. Co., Anderson, Ind.

Lambert, S. W.—Vice-Pres. Buckeye Mfg. Co., Anderson, Ind.

Lambert, W. S.—724 W. 8th St., Anderson, Ind. Garage.

Lamberty, Geo.—Sec. Leon Rubay, 1697 Broadway, New York City.

Laminated Spring.—Same as plate spring. See Spring.

Laminated Tube Co.—Columbus, O. Mfrs. steel tubing.

Lamination.—Building up with flat strips or plates. Cores of transformers and many other iron parts of electrical machinery are laminated in order to prevent the production of induced or Foucault currents in the metal.

Lamp.—A device for illuminating or heating. The lamps employed on motorcars are of three types, viz., acetylene, kerosene and electric; and of four varieties: head, side, tail and search. See Head-light, Side-light, Tail-light and Search-light.

Lamp, Acetylene.—A lamp specially constructed to burn acetylene and consisting of a generator, burner, reflector and lens. There is another type of the lamp with a separate generator and which includes a rubber bag to regulate the pressure. Cylinders of compressed gas are also used which obviate the necessity of carrying a generator.

Lamp, Dome.—An electric lamp provided with a holoplane glass globe and designed for closed cars and motor-boat cabins.

Lamp, Electric.—Since the introduction of the dynamo, lightning by small

incandescent lamps of low voltage has become very popular. For lighting tail-lamps a voltage of from 4 to 6 volts is sufficient, and for side or head-lights from 8 to 20 volts are necessary.

Lamp, Gauge.—A small electric lamp used for illuminating gauges, speedometers, oilers and clocks on motor-cars.

Lamp Ignition.—See Ignition.

Lamp, Pilot.—An incandescent lamp used to indicate roughly when the voltage of a dynamo, storage-battery, etc., has its proper value.

Lamp, Soldering.—A lamp, called also a "blow-torch," used instead of a soldering-iron to make a soldered joint.

Lamping, Geo. B.—Sec. and Treas. Pacific Coast Auto Co., 1414-16 Broadway, Seattle, Wash.

Lamplugh et Cie.—8 rue Ernest-Cognacq, Levallois-Perret, Seine, France. Mfrs. bodies.

Lamson & Sessions Co.—412-453 Scranton Ave., Cleveland, O. Mfrs. bolts and nuts, wrenches.

Lamy jeune et fils.—Morez, Jura, France. Mfrs. goggles.

Lamy, Nap.—Three Rivers, Quebec, Canada. (Maxwell.)

Lancashire Steam Motor Co.—Leyland, England. Mfrs. steam commercial automobiles. (Leyland trucks.)

Lancaster Automobile Club.—Jacob D. Rider, Sec., 20 N. Queen St., Lancaster, Pa.

Lancaster Automobile Co.—215 N. Prince St., Lancaster, Pa. (Buick, Pope-Toledo, Pope-Waverley, Winton.)

Lancia, Vincenzo.—B. in Fonbello, Italy. Aug. 24, 1881. A noted racing driver connected with the

Fiat Automobile Co. (Fabbrica Italiana Automobili Torino) Turin, Italy. Was first in the Mont Cenis hill-climbing contest in 1902 and won the Brescia race in 1904. He competed in the second Vanderbilt cup race, finish-

ing fourth, and also in the third race; his position in the latter was second.

Land.—The elevated part between two grooves, as on a reamer, drill, etc. The "land" does the cutting or work, usually on one of its edges.

Land, H. L.—Suffolk, Va. Garage.

Landau.—A closed carriage entered from the sides, and having a front seat and two rear seats placed face to face. It can be converted into an open vehicle by folding down the heads, or the rear

head only, if the front has a wood and glass top.

Landau, Henry W.—117 Green St., Newark, N. J. Mfr. fire extinguishers.

Landaulet-Limousine.—A closed carriage for four persons inside with side entrance and additional swinging or rigid seats just forward of the rear seat to accommodate the four persons. This type is modeled after the limousine and is the most popular of closed bodies.

Landemard, Aubert et Cie.—10 rue de Rambouillet, Paris, France. Mfrs. detachable rims.

Landen, J. C.—Jackson, Miss. (Cadillac.)

Landers Bros. Co.—445 10th St., Toledo, O. Mfrs. celluloid sheets, automobile covers, rubber cloth, cloth and carpet trimmings.

Landis, Eberhardt.—Tiffin, O. Garage.

Landis, Samuel K.—122 E. Chestnut St., Lancaster, Pa. (Logan, Reo, Jackson, Premier.)

Landis Tool Co.—Waynesboro, Pa. Mfrs. special automobile machinery.

Lane, Geo.—Pres. Lane Motor Vehicle Co., Poughkeepsie, N. Y.

Lane, Louis L.—Broadway, near Pine St., Seattle, Wash. Garage.

Lane Motor Vehicle Co.—Prospect St., Poughkeepsie, N. Y. Makers of the Lane steam car, first marketed in 1900, and automobile jacks. Sixteen different models made since. Geo. Lane, Pres.; J. M. Janes, Treas.; Silas Lane, Sec. Lane Sales Co., Gen. Sales Agents, 514 W. 145th St., New York City.

Lane, O. W.—117 Grand St., Lansing, Mich. (Ford.)

Lane Sales Co.—514 W. 145th St., New York City. Gen. Sales Agts. for the Lane Motor Vehicle Co., Poughkeepsie, N. Y.

Lane, Silas.—Sec. Lane Motor Vehicle Co., Poughkeepsie, N. Y.

Lane, T. W.—Amesbury, Mass. Mfr. wood and metallic bodies.

Lang, Chas. E.—Sec., Treas., Gen. Mgr. and Purch. Agt. The Rauch & Lang Carriage Co., W. 25th St., Cleveland, O.

Lang, Geo. H.—Mgr. Supply Dept. H. R. Olmstead & Son, 413 S. Clinton St., Syracuse, N. Y.

Lang, V. B.—Vice-Pres. and Gen. Mgr. Hartford Rubber Works Co., 691 Park St., Hartford, Conn.

Lang, Walter.—Pur. Agt. Sayers & Scovill Co., 2247-2261 Colerain Ave., Cincinnati, O.

Langdon Motor Co., Ltd.—101 Southwark St., London, S. E., England. Mfrs. transmission and differential gears.

Langhorne Transportation Co.—Langhorne, Pa. (Reo, Knox, Elmore.)

Langsenkamp-Wheeler Co.—Indianapolis, Ind. Mfrs. brass, bronze, aluminum and copper castings.

Langstaff Machine Works.—65 Maple St., Chicago, Ill. Garage.

Lanhan, Geo. W.—Greenburg, Ind. (Ford, Maxwell.)

Lanich, Arthur S.—Baraboo, Wis. (Gale.)

Lanoline.—A yellowish-white substance, viscous, neutral, odorless, of fatty appearance, prepared from the "suint" of grease or wool. It consists of a mixture of fatty bodies and cholesterine, dissolved in benzine and gasolene. It is used for making fabrics impermeable.

Lansden Co., The.—54-56 Lackawanna Ave., Newark, N. J. Makers of the Lansden electric cars and trucks; first marketed in 1904. Cap. \$30,000. J. M. Lansden, Jr., Gen. Mgr. and Designer; F. A. Whitten, Supt.; C. F. Schutter, Purch. Agt.

Lansden, J. M., Jr.—Gen. Mgr. and Designer Lansden Co., 54-6 Lackawanna Ave., Newark, N. J.

Lanza Donato & L.—La Paz, Bolivia. (Wayne.)

Lap.—A piece of soft metal or wood, coated with fine emery, and used in "lapping" or finishing off polished surfaces of hard metal. (2) The extent to which the slide-valve of a steam-engine travels beyond the ports which it opens and closes. (3) The distance to which the plates in a "lap-joint" lie over each other.

Lapeer City Garage.—Lapeer Mich. (Ford.)

Lap-joint.—See Joint, Lap.

Lapped Valve.—A slide-valve with a lap.

Lap-strake, Clinker-built.—See Clinker.

Lap-welding.—See Welding, Lap.

Lapointe Machine Tool Co.—Boston, Mass. Mfrs. special automobile machinery.

Laporte Carriage Co.—Laporte, Ind. Mfrs. wood and metallic bodies.

La Porte, V. E.—1729 19th St., Bakersfield, Cal. (Jewel.)

Lappe, A. A.—Treas. Standard Leather Co., 296 Spring Garden Ave., Allegheny, Pa.

Lappe, Chas. H.—Vice-Pres. Standard Leather Co., 296 Spring Garden Ave., Allegheny, Pa.

Lappe, Geo. J.—Pres. and Gen. Mgr. Standard Leather Co., 296 Spring Garden Ave., Allegheny, Pa.

Lappe, J. H.—Sabina, O. (Jewel.)

Laramie Cycle & Garage Co.—314 2d St., Laramie, Wyo. (Maxwell.) Est. 1903. Cap. \$30,000. Gus Johnson, Pres. Garage, 14 cars; repairing.

Larava, Henry.—Master Mechanic Bay State Stamping Co., 380 Chandler St., Worcester, Mass.

Larboard.—See Port (2).

Larimer, W. G.—5069 Centre Ave., Pittsburg, Pa. Garage.

Larkenhead, J.—Mgr. Howe Motor Car Co., 11 Park Ave., Patterson, N. J.

Larkins, Geo.—Foreman Garage Dept. Citizens' Motor Car Co., N. E. cor. 7th and Main Sts., Cincinnati, O.

Larrimore Buggy Top Co.—Baltimore, Md. Mfrs. cushions, automobile tops.

Larsen, J. M.—Omaha, Neb. (Acme.)

Larsen, F. T.—Adv. Mgr. C. H. Blomstrom Motor Co., De Luxe Motor Car Co., Clark and Jefferson Aves., Detroit, Mich.

Larzelere, H. B.—Pres. Larzelere Machine Co., 225 Maynard St., Williamsport, Pa.

Larzelere, H. B.—Sales and Adv. Mgr. Chadwick Engineering Works, 3207 Spring Garden St., Philadelphia, Pa.

Larzelere, L. J.—Sec. and Treas. Larzelere Machine Co., 225 Maynard St., Williamsport, Pa.

Larzelere Machine Co.—225 Maynard St., Williamsport, Pa. (Lambert.) Est. 1890. Cap. \$35,000. H. B. Larzelere, Pres.; L. J. Larzelere, Sec. and Treas. Garage, 3 cars.

Lasky & Levy.—20-22 Waverley Pl., New York City. Mfrs. wearing apparel, caps.

Lassen, C. T.—Cedar Lake, Ind. Garage.

Latham.—Schenectady, N. Y. (Ford, Corbin.)

Latham, C. H.—Norwich, N. Y. (Buick.)

Lathrop, J. W.—Mystic, Conn. Mfrs. gasolene marine motors.

Latil Société Française de Mécanique et d'Autos.—Colombes and St. Owen, France. Mfrs. gasolene commercial automobiles. (Latil forecarriages.)

Latta, L. M.—Akron, O. (Jewel.)

Lau, A. F.—Designer Royal Equipment Co., 165 Housatonic Ave., Bridgeport, Conn.

Lauff, F. D.—Sec. Hiland Automobile Co., 5811-17 Center Ave., Pittsburg, Pa.

Laugenour, Henry.—625 Ashbury St., San Francisco, Cal. (Dolson.)

Laughlin, James, 3d.—Vice-President Cleveland Motor Car Co., Cleveland, O.

Launch, Naphtha.—A name first applied, in 1885, to the smaller series of yacht tenders using the "naphtha-engine" as a power-plant; and, later on, to boats up to 70 feet in length, driven by the same engine—the precursor of the Daimler gasolene-motor introduced in 1889.

Laural, F. A.—Cashier Continental Caoutchouc Co., 43 Warren St., 2100 Broadway, New York City.

Laurence, W. A.—Vice-Pres. Sturgeon Bay Boat Mfg. Co., Sturgeon Bay, Wis.

Laurin et Klement, Slavia Fahrradwerke.—Jungbunzlau, Bohemia, Austria. Mfrs. tricars (Laurin-Klement tricars), gasolene automobiles (Laurin-Klement cars), motorcycles.

Lauth & Co., J.—528 Elston Ave., Chicago, Ill. Mfrs. transmission gears.

Lava.—A term often applied to a form of talc much employed as an insulating material in spark-plugs; properly, melted and solidified volcanic rock.

Lavalette & Co.—112-114 W. 42d St., New York City, and 111 bis, Bvd. de Menilmontant, Paris, France. Mfrs. Eisemann Lavalette magnetos. U. S. selling agents for R. B. F. ball and ball thrust bearings, Lemoine axles, springs and automobile parts. Est. 1902 in France, 1906 in New York City. Henri de Lavalette, Prop.; F. Ducasse, Gen. Mgr., New York; C. F. Elliott, Sales Mgr.; E. Gassman, Chief Engineer.

La Valette, Henri de.—Proprietor La Valette & Co., 112-114 W. 42d St., New York City, and 111 bis, Bvd. de Menilmontant, Paris, France. Governor Automobile Club of France. Address, 6 Place de la Madeleine, Paris, France.

La Vaulx, Henry de, Count.—120 Avenue des Champs-Élysées, Paris, France. B. at Bierville, Normandy, April 2, 1870.

Chevalier of the Legion of Honor and officer of the Academy. He is a celebrated aeronaut and made his first ascension July 18, 1898, with Count de Castillon under the direction of M. Mallet, vice-president of the Aeronautic Club of France, of which he was one of the

first promoters. He has made more than two hundred ascensions, certain ones of which placed him at the head of the aeronauts of the entire world. See Balloon Records.

Lavigne Mfg. Co.—Detroit, Mich. Mfrs. lubricators, oil cups, oil pumps.

Law, Walter William.—Retired. B. Kidderminster, England, Nov. 13, 1837. Ed. public school. Honorary degree from Yale University of M. A. Director W. & J. Sloane, Nairn Linoleum Co., Briarcliff Lodge Assn., Briarcliff Realty Co. Mem. Century, Briarcliff Golf clubs. Res. and office, Briarcliff Manor, Westchester Co., N. Y. Donor of Briarcliff Trophy to be contested for the first time April, 1908.

Lawler, R. B.—Clarksdale, Miss. (Winton.)

Lawley & Son Corp., Geo.—696 E. 1st St., Boston, Mass. Mfrs. motorboats. Cap. \$100,000. G. F. Lawley, Pres., Gen. Mgr.

Lawley, E. A.—Clerk, Pur. Agt. Geo. Lawley & Son Corp., 696 E. 1st St., Boston, Mass.

Lawley, Fred D.—Designer Geo. Lawley & Son Corp., 696 E. 1st St., Boston, Mass.

Lawley, G. F.—Pres., Gen. Mgr. and Supt. Lawley & Son Corp., 696 E. 1st St., Boston, Mass.

Lawley, Thos.—60 Kenyon St., Birmingham, England. Mfr. chains.

Lawrence & Co.—Cheapside, London, E. C., England. Mfrs. radiators.

Lawrence & Co., L.—Newark, N. J. Mfrs. wood and metallic bodies.

Lawrence Street Motor Car Co., Inc.—13, 15, 17 W. Warren St., Lawrence, Kan. (Ford.) Est. Nov. 15, 1903. Inc. Nov. 15, 1906. Cap., \$20,000. H. B. Pearis, Pres.; W. E. Spalding, Sec. and Treas.; Carl Graeber, Vice-Pres.; J. W. Chadwick, Mgr.; W. E. Baumgartner and W. R. Stubbs, stockholders. Garage, 12 cars; repairing.

Lawrence, W. A.—Vice-Pres. Sturgeon Bay Boat Mfg Co., Sturgeon Bay, Wis.

Lawson's Garage.—810, 812, 814, 816 South St., Peekskill, N. Y. (Cadillac, Pope-Hartford, Pope-Toledo.) Supplies; garage; repairs.

Lawton, B. L.—Vice-Pres. and Treas. Connecticut Telephone & Electric Co., Inc., 70 Britannia St., Meriden, Conn.

Lawton & Co., J. A.—24 Orchard St., Oxford St., London, W., England. Mfrs. bodies.

Lay-shaft.—See Shaft, Lay.

Layton, C. G.—Danville, Ill., and Pottomac, Ill. (Northern, Rambler, Lambert.)

Layton, W. C.—Spartanburg, S. C. (Waltham)

Lazarnick, Nathan.—Press photographer. B. Russia, Sept. 7, 1879. Ed. public and high schools. Res. 145 W. 118th St. Office, 29 W. 42d St., New York City. In trade since 1899. Owned first car 1906. Was first photographer to specialize automobile work, and has the largest

collection of automobile photographs in the United States.

Lazaro, Albert E.—Hartford, Conn. (Compound)

Leach, A. R.—580 Lake Ave., Rochester, N. Y. (Queen, De Luxe.)

Leach, Ed. E.—Franklin, Pa. (Holman.)

Leach, E. W.—Franklin Falls, N. H. (Pope-Hartford.)

Lead.—A metal which is silvery white when pure, but which, in moist air, becomes coated with a film of gray matter,

thought to be suboxide. Its atomic weight is 206.9 and its melting point 600° F. (315.5° C.) It is very soft and can be made, by pressure, into wire or piping. It is used for making the plates of storage-batteries, and enters into the composition of some important alloys.

Lead.—The amount by which the steam-port is open at the beginning of the stroke of the piston. See Lap. (2) A term to denote the position of the piston in a gasoline motor before firing. See Lead, Ignition.

Lead.—The wire by which the current flows from the generator to its work. That by which it flows back is called the "return." "Lead" is also a name for a small tube conveying a lubricant.

Lead, Black.—A synonym for graphite, q. v.

Lead, Ignition.—The "lead of the ignition" or "lead of the spark" signifies ignition before the piston has completed its upward stroke. When the igniter fires the mixture at the dead center it is said to have no lead. After the piston has started on its downward stroke it is said to have a negative lead. See Spark Advance.

Lead, Red.—A brilliant red and very heavy powder, called also "minium." Chemically it is triplumbic tetroxide, and is prepared by exposing the monoxide (litharge) for a long time to the air at a faint red heat. It is used in automobilism for making a cement for joints and for making "pasted" plates for storage batteries.

Lead, White.—A carbonate of lead sometimes used for forming joints.

Leader.—Of two wheels in mesh, the "driver." See Gearing.

Leading Edge.—That edge of a propeller blade which cuts water first.

Leader & Sons, C. C.—9th and Independent Sts., Shamokin, Pa. (Maxwell.)

Leader Automobile Co., The.—2442 Lisbon Ave., Milwaukee, Wis. Mfrs. motorcycles.

Leader Mfg. Co.—1808 Chestnut St., St. Louis, Mo. Mfrs. automobile body polishes, metal polishes.

Lea, E. S.—Pres. Motor Car Specialty Co., 112 N. Broad St., Philadelphia, Pa.

Leaf.—One of the several steel plates of which a vehicle spring is composed. (2) One of the several teeth of a pinion.

Leaf-spring.—Same as plate-spring. See Spring.

Leaf-valve.—See Valve, Leaf.

Leaf-chain.—See Chain, Leaf.

League Cycle Store.—325 Southwest Temple St., Salt Lake City, Utah. (Indian.)

Lear Automobile Co., Oscar.—Motor Mart, Broadway and 62d St., New York City. (Frayer-Miller.)

Lear Auto Co., Oscar.—4th and Gay Sts., Springfield, O. Makers of the Frayer-Miller car; first marketed in 1904. Five models made since. Cap. \$250,000. Oscar Lear, Pres. and Gen. Mgr.; W. J. Miller, Vice-Pres. and Supt.; Julius F. Stone, Sec. and Treas.; H. H. Hawkins, Arch. Agt.; H. H. Knepper, Mgr. Motor Mart, New York City.

Lear, Oscar.—Pres. and Mgr. Oscar Lear Automobile Co., Springfield, O.

Leas, J. & J.—West Manchester, O. (Premier.)

Leather.—Leather of various kinds is largely used in automobilism for the manufacture of noiseless gear-wheels, for facing clutches, for making twisted, round and flat belts, for the piston-packing of pumps, for washers, for motor-boat and motor-car upholstery, motor-boat fenders, etc.

It is employed also in tire making, in which its principal use is in covers for ordinary rubber tires. An all-leather tire, however, will not rot, heats very little, and is proof against blow-outs, sand-boils, etc., and not only pneumatic, but solid tires are now being made of it.

Leather, Artificial.—A product obtained by combining rubber and shredded leather, and used as treadstrips on many rubber tires. By this method artificial leather can be made of leather which has been used for other purposes, much as rubber scrap is now utilized.

Leather, Burned.—Burned leather is almost universally employed, in England especially, in the case-hardening of steel.

Leather, Chrome.—A leather tanned by impregnating the skin (after a preliminary liming, unhairing and fleshing) with a solution of chrome salt. When properly manufactured chrome leather possesses the following qualities: It resists the action of boiling water without undergoing any appreciable alteration; it absorbs water with difficulty and does not harden on drying. Its tensile strength is three or four times greater than that of tanned leather, and it possesses a remarkable elasticity which once earned for it the title of "rubber leather." It is largely used for belting and in the manufacture of tires and tire-treads.

Leather, Rock.—See Cork, Rock.

Leatherette.—An imitation leather used extensively in the upholstery of motor-boats, particularly for cushion covers.

Leather & Brass Mfg. Co.—24, 26 E. Genessee St., Auburn, N. Y. Mfrs. power driven air compressors, tire pumps, lifting jacks. Cap., \$10,000. Est. 1898. F. E. Ten Eyck, Pres.; C. C. McKinney, Treas. Garage.

Leather Tire Goods Co.—1325 Boylston St., Newton Upper Falls, Mass. Mfrs. Woodworth tire protector, Kant-Skid tire grip, emergency repair strap. Mem. M. & A. M. Not inc. Est. 1905. Chas. B. Woodworth, D. Woodworth and A. P. Marshall, partners. Branches: 1662 Broadway, New York City. Fred Blumenfeld, Mgr.

Leavitt & Co., C. W.—St. Paul Bldg., New York City. Mfrs. and jobbers, ores, metals and alloys.

Leavitt & Co., J. W.—441 Golden Gate Ave., San Francisco, Cal., and Oakland, Cal. (Cleveland. Reo, Stoddard-Dayton.)

Leavitt, B. F.—Sec. and Treas. Uncas Specialty Co., 21 Shipping St., Norwich, Conn.

Leavitt, Gilbert.—11 India St., Boston, Mass. Mfr. metal polishes.

Leavitt, Wm. C.—Norway, Me. (Canada.)

Leavy, J. J.—Vice-Pres. Rochester Gas Engine Co., Rochester. N. Y.

Lebanon Motor Works.—12th and Walnut Sts., Lebanon, Pa. Mfrs. gasoline automobiles. (Upton cars.)

Leber, G. J.—Chief Engineer and Pur-
Agt. Long Arm System Co., Lakeside Ave. and E. 38th St., Cleveland, O.

Le Blon, Hubert.—B. in Paris, France, March 21, 1874. An inventor and noted driver of racing cars, having taken part in all the principal French contests since 1900. In 1901 and 1902 he won the hill-climbing contest at Nice. He competed in the third Vanderbilt cup race,

driving one of the three Thomas cars.

Leblond et Commun.—Guignes-Rabutin, France. Mfrs. primary batteries.

Le Bron, A. W.—Montgomery, Ala. (Maxwell.)

Le Brun, C. et H. Lecomte.—14 rue Victor Hugo, Puteaux, France. Mfrs. radiators.

Lebrun et Cormerais.—10 rue Lamoricière, Nantes, France. Mfrs. radiators.

Le Caoutchouc, Société Anonyme.—39 ave. Marceau, Courbevoie, France. Mfrs. pneumatic rubber tires.

Le Centaur, Société Anonyme.—208 cours Gambetta, Lyons, France. Mfrs. non-skids.

Lecerf.—17 Faubourg de Paris. Peronne, Somme, France. Mfrs. non-skids.

L'Echo des Sports.—Pub. at 13 rue du Faubourg Montmartre, Paris, France.

Leckner, H. B.—1162 St. Albans Ave., Detroit, Mich. Repairing.

Leclanché et Cie.—158 rue Cardinet, Paris, France. Mfrs. primary batteries.

L'Electricien.—Pub. at Paris, France.

Lederer, Simeon.—4711 Forestville Ave., Chicago, Ill. Garage.

Ledin, F.—30 quai de la Charité, Lyons, France. Mfr. jacks.

Ledvina, D.—201 2d St., S. E., Washington, D. C. Garage.

Lee.—The part toward which the wind blows.

Lee & Porter Mfg. Co.—Buchanan, Mich. Mfrs. axles.

Lee, Arthur S.—52 Richmond St., Providence, R. I. (Royal.)

Lee Injector Co.—Port Huron, Mich. Mfrs. lubricators.

Lee, John R.—Pres. John R. Keim Mills, Inc., Kensington Ave. and Erie Tracks, Buffalo, N. Y.

Lee Mfg. Co., The.—Conners St., Port Huron, Mich. Mfrs. transmissions, steering gears, brass castings, iron and steel machine work, injectors, globe and check valves. Cap., \$50,000. Est. 1903. E. D. Van Ness, Pres.; W. L. Jenks, Treas.; E. L. Moak, Sec.

Lee Motor Car Co.—1218 S. Main St., Los Angeles, Cal. (Cadillac.)

Lee, Thomas.—Outlet Rock, New Brunswick, N. J. Garage.

Lee, Walter Richard.—Sec. and Gen. Mgr. New York Automobile Trade Association and Gen. Mgr. Importers Auto Salon. B. Albany, N. Y., Sept. 10, 1883. Ed. public school. Mem. New York Athletic Club. Res. 405 8th St., Brooklyn, N. Y. Office. 47 W. 42d St., New York City. Connected with automobile trade for three years. Recreations, skating, swimming, rowing, motoring.

Lee's Patent Spiral Thread Co.—3 Pall Mall, Manchester, England. Mfrs. non-skids.

Leedom Bros.—San Bernardino, Cal. Garage.

Leek, S. L.—9th Ave. and Mulberry St., McKeesport, Pa. Garage.

Leeward.—The side or direction toward which the wind blows; opposed to "windward."

Lefebvre, fils, Albert.—5 rue Delteaal, Pré St. Gervais, Paris, France. Mfrs. circulating pumps, lubricators.

Lefebvre Arms Co.—Syracuse, N. Y. Mfrs. chains.

Left-hand Screw.—See Screw.

Legare, J. L.—Ogdensburg, N. Y. Mfr. motorboats.

Legendre, A. C.—Reims, France. Mfr. electric horns.

Leger et Lailault.—15 rue de Corneille, Levallois, Seine, France. Mfrs. detachable rims.

Legros & Knowles.—Cumberland

Park, Willesden Junction, London, England. Mfrs. automobile motors.

Léguas, René.—16 rue de l'Inondation, Fécamp, France. Mfrs. automobile motors.

Lehan, James.—Stoughton, Mass. (Pope-Hartford.)

Lehigh Valley Auto Co.—46 Broad St., Bethlehem, Pa. (Lambert.)

Lehman Bros.—10 Bond St., New York City. Mfr. automobile heaters.

Lehman, I.—61 Middle St., Cleveland, O. Mfr. steel tubing.

Lehr Agricultural Co.—Fremont, O. Mfrs. gasoline automobiles.

Lehr, G. N., Dr.—Vice-Pres. The Maxwell & Fitch Co., 218 S. Washington St., Rome, N. Y.

Leiding, H. T.—115 State St. W., Savannah, Ga. Repairing.

Leighton, H. J.—901 Fayette St., Syracuse, N. Y. Mfrs. gasoline marine motors, motorboats.

Leitch Mfg. Co.—Amesbury, Mass. Mfrs. wood and metallic bodies.

Lejeal Cycle & Mobile Works.—17 Sassafras St., Erie, Pa. (Indian.)

Lejeune, Marcel.—93 rue d'Angoulême, Paris, France. Mfr. clutches.

Leland, Henry M.—Mgr. Cadillac Motor Car Co. B. Danville, near St. Johnsbury, Vermont, February 16, 1843. Educated public schools of Worcester Co., Mass. Director Cadillac Motor Car Co. Mem. A. C. of Detroit, Michigan State Automobile Assn., National Metal Trades Assn., National Founders' Assn., National Mfg. Assn. Res., 69 Watson St. Office, Cadillac Motor Car Co., Detroit, Mich. Connected with automobile trade since 1900. Organized the Leland & Faulconet Mfg. Co., Detroit, in 1890, the Cadillac Automobile Co. in 1902. Consolidated with the Cadillac Motor Car Co. in 1905.

Leland, Louis F.—Vice-Pres. and Treas. Manhattan Screw & Stamping Works, W. End Ave. and 67th St., New York City.

Leland, W. C.—Sec. Cadillac Motor Car Co., 1343 Cass Ave., Detroit, Mich.

Leland & Co., W. H.—Southbridge St. and Hope Ave., Worcester, Mass. Mfrs. crank shafts, special automobile machinery.

Le Métais & Co., Louis.—22 rue du Bois, Levallois, France. Mfrs. gasoline automobiles. (Le Métais cars.)

Lemoigue & O'Beirne.—1735 Grand Ave., Kansas City, Mo. (Panhart.)

Lemoine.—Ivry-Port, Paris, France. Mfr. pressed steel frames, springs, wood wheels.

Lemoine, J.—39 Blvd. Baudoin, Brussels, Belgium. Mfr. acetylene and oil lamps.

Lemont, B. A.—Bretton Woods, N. H. Garage.

Lemont Motor Car Co.—6 Tirrell St., Worcester, Mass. (Buick.)

Leng, Chas. W.—Pres. John S. Leng's Son & Co., 33 Murray St., New York City.

Leng's Son & Co., John S.—33 Murray St., New York City. Mfrs. Agts. weldless cold drawn steel tubes. Jobbers of tires, tubes, chains, grips, lamps, bells, carbide, wrenches, pumps, odometers, horns, spark plugs, batteries, goggles, jacks. Cap., \$100,000. Est. Feb. 1, 1888. Charles W. Leng, Pres.; James B. Pratt, Sec. and Treas.

Length Over All.—The distance from one extreme end of a car to the other extreme end. In motor-boat measurements abbreviated to l. o. a.

Lenham, N. L.—Sec. and Treas. Commercial Battery Co., 204-6 Michigan St., Chicago, Ill.

Lennox Chemical Co.—Cleveland, O. Mfrs. tire inflating tanks.

Lenox Auto Co.—60 W. 116th St., New York City. Garage.

Lentz, A. R.—Asst. Supt. Heindel Mfg. Co., Hanover, Pa.

Lenz Land & Loan Co.—Jamestown, N. D. (Buick.)

Leonard, H. M.—625 Broad St., Elyria, O. (Jackson.) Est. since 1904. H. M. Leonard, Mgr.; Fred Fridenstine, Supt. Repair Dept. Garage, 50 cars; repairing.

Leonard Motor Car Co.—Cleveland, O. (Jackson.)

Leonard, O. A.—Sec. National Spring & Wire Co., Albion, Mich.

Leonard, S. J.—Motor Sales Co., 1771 Broadway, New York City.

Lephbridge Motor Car Co.—Lephbridge, Ala., Canada. Mfrs. gasoline automobiles.

Le Phénix, Pneumatiques.—107 rue de Paris, Petit-Ivry, Seine, France. Mfrs. pneumatic rubber tires.

Lerch, A. L.—Sales Mgr. American Motor Truck Co., Caledonia St., Lockport, N. Y.

Lérede, R.—29 rue Brunel, Paris, France. Mfr. spark plugs.

Le Repperton.—37 rue des Abondances, Boulogne-sur-Seine, France. Mfr. tire filling.

Le Roy Transfer & Storage Co.—Le Roy, N. Y. (Holsman.)

Les fils de Peugeot Frères.—Valentigney, Doubs, France. Mfrs. shock-absorbers.

Lesser, Julius.—St. Louis, Mo. (Ranier.)

Less-More Valveless Engine Co.—N. Tonawanda, N. Y. Mfrs. motorboats.

Lester Co., E. F.—Fayetteville, N. Y. Mfrs. aluminum solder.

Lester, H. W.—Treas., Post & Lester Co., Sergeant St., and Sec. Veeder Mfg.

Co., cor. Garden and Sargeant Sts., Hartford, Conn.

Letcher Auto Co.—1st and St. James St., San Jose, Cal. Garage.

Letting-down.—The softening of hardened steel by heating it up to a definite temperature.

Levan, H. B.—Treas. Detroit White Lead Works, 532-60 E. Milwaukee Ave., Detroit, Mich.

Levenhager Auto & Garage Co.—Warsaw, Wis. (Rambler.)

Lever.—A rigid rod or bar turning about a fixed point called a "fulcrum." On automobiles, levers are used for operating gears, brakes, etc.

Lever, Change-speed.—A lever, usually hand-operated, by which the different speeds are controlled.

Lever, Control.—A small metal lever, provided with a wooden handle and placed on top or below the steering-wheel of an automobile, and which serves to regulate and control, at the will of the driver, the carburetter, spark-advance, admission, etc.

Such levers revolve on an axis and work over a plain or notched quadrant, and are held in place by a small triangular piece of steel, which engages the notches of the quadrant, or by a tongue bearing on the plain quadrant.

Lever, Driving.—The same as controller-lever.

Lever, Controller.—A lever used for operating the controller of an electromobile.

Lever, Hand.—See Lever, Control. on the steering-wheel and employed for operating the throttle, ignition, etc.

Lever, Ignition.—A lever for advancing and retarding the point of ignition.

Lever, Quality.—In surface and some other types of carburetters, a lever for controlling the proportions of air and fuel in the mixture.

Lever, Quantity.—In surface and other carburetters, a lever for controlling the amount of mixture allowed to pass from them.

Lever, Side.—A steering-lever situated at the side of the driver's seat.

Lever, Spark.—The same as ignition-lever, q. v.

Lever, Starting.—A long lever used for starting the motor.

Lever, Steering.—See Steering-lever.

Lever, Timing.—The same as ignition-lever, q. v.

Lever, Tire.—A lever of special shape, called also a "dismounting lever," for easily mounting or dismounting tires. Tire levers are of various shapes, are made of wood or metal, and require but little strength for their manipulation.

Lever, Toggle.—One of the levers actuating the float in some carburetters.

Leverenz, E. B.—930 3d St., Milwaukee, Wis. (Aerocar, Cameron.)

Levy, A.—Pres. Kentucky Automobile Co., 1051 3d Ave., Louisville, Ky.

Levy & Fanning Co.—390 Wabash Ave., Chicago, Ill. (Autocar, Lozier.)

Levy, Geo. B.—Sec. C. A. Coey & Co., 1424 Michigan Ave., Chicago, Ill.

Levy, Herbert.—Treas and Sales Mgr. Kentucky Auto Co., 1051 3d Ave., Louisville, Ky.

Levy, Manassch.—182 Broadway, New York City. Mfr. automobile clocks.

Lewis & Son, J. A.—Mankato, Minn. (Cadillac.)

Lewis Auto Co.—Lewis Ave. & Hancock St., Brooklyn, N. Y. Garage.

Lewis, Chas. E.—Pres. Jackson Automobile Co., Jackson, Mich.

Lewis, Chas.—Pres. Lewis Spring & Axle Co., Jackson, Mich.

Lewis, E. W.—Asst. Sec. and Sales Mgr. Timken Roller Bearing Axle Co., Canton, O.

Lewis, Fred H.—Sec., Treas. and head of Axle Dept. Lewis Spring & Axle Co., Jackson, Mich.

Lewis, Fred R.—Pomona, Cal. Garage.

Lewis, H. H.—Fort Worth, Tex. (Rainier.)

Lewis, I. M.—Conneaut, Pa. Garage.

Lewis, John C.—3033 Monroe St., Toledo, O. (Indian.)

Lewis, John G.—Buffalo, N. Y. (American.)

Lewis, L. D.—Seattle, Wash. (Frayer-Miller.)

Lewis, S. H.—Binghamton, N. Y. (Maxwell.)

Lewis Spring & Axle Co.—Jackson, Mich. Mfrs. automobile springs. Cap., \$21,000. Est. 1892. Charles Lewis, Pres.; Fred J. Keiser, Vice-Pres. and Supt. Spring Dept.; Fred H. Lewis, Sec., Treas. and Supt. Axle Dept.

Lewis, Theo. G.—Pres. Buffalo Dental Mfg. Co., 587-9 Main St., Buffalo, N. Y.

Lewiston Auto Exchange.—Lewiston, Me. Garage.

Lewistown Motor Car Co.—Lewistown, Pa. (Pullman.)

Lewis, T. S.—509 Chestnut St., St. Louis, Mo. (Logan.)

Lewis, William Mitchell.—Mgr. Mitchell Motor Car Company. Born Racine, Wisconsin, February 25, 1869. Ed. McMynn Academy, Wayland Academy, Racine College, Yale, 1891. Director Mitchell Motor Car Co., Mitchell & Lewis Co., Yucca Cyanide Mining & Milling Co. Mem. Milwaukee Athletic, N. Y. Athletic, Chicago A. C., Calumet Club, Chicago; Yale Alumni Assn. Res., 1500 Main St., Racine, Wis. Office, Mitchell Motor Car Co., Racine Junction, Wis. In automobile trade since 1903. Used first car 1902. Recreations, baseball, football, tennis.

Lewis, W. T.—Pres. Mitchell Motor Car Co., Racine, Wis.

Lexington Garage.—135 E. 40th St., New York City. Garage.

Leyford Bros.—625 E. Washington Ave., Bridgeport, Conn. (Oldsmobile.)

Leyman, H. S.—Sales Mgr. C. H. Blomstrom Motor Co., Clark and Jefferson Ave., Detroit, Mich.

Leyman, H. S.—Sales Mgr. De Luxe Motor Car Co., Clark and Jefferson Ave., Detroit, Mich.

L'Huillier et Duquesne.—62 rue de Villiers, Levallois, France. Mfrs. radiators.

Libby, DOWILLE S.—Designer Knox Motor Truck Co., Springfield, Mass.

Libbey, Frank P.—Salt Lake City. Utah. (Lozier.)

Libby, F. W.—Sales Mgr. Michelin Tire Co., Milltown, N. J.

Liberty Association.—12 State St., Chicago, Ill. Mfrs. fire extinguishers, linseed oil soap, metal polish. Cap., \$500,000. Est. 1897. Josiah T. Hair, Pres.; Burchard R. Hair, Sec., Treas. and Mgr.

Liberty Auto Co.—138 Beatty St., E. E., Pittsburg, Pa. (Wayne, National, Mitchell, Mora.)

Liberty Bell Co.—Bristol, Conn. Mfrs. bells.

Liberty Brass Foundry.—1095 Niagara St., Buffalo, N. Y. Mfrs. brass castings.

Lichtie Auto Co.—818 Jefferson Ave., Toledo, O. (Cadillac.)

Liebling, Wm. G.—Treas. and Sec. A. R. Mosler & Co., 163 W. 29th St., New York City.

Life.—The period during which an object may be kept in actual use.

Lift.—The upper parts of a foundry mould.

Lift, Valve.—See Valve, Lift.

Lifter, Valve.—See Valve-lifter.

Lifting-jack.—See Jack.

Light Mfg. & Foundry Co.—509 Queen St., Pottstown, Pa. Mfrs. aluminum, brass and bronze castings. Member M. & A. M. Cap., \$150,000. Est. 1890. Jonas S. Wagner, Pres.; Frank S. Brant, Vice-Pres.; E. S. Fretz, Sec., Treas. and Gen. Mgr.; W. I. Grubb, Supt.

Light Motors, Ltd.—180 Gray's Inn Road, London, W. C. England. Mfrs. motorcycle motors, motorcycles. (Fairy.)

Light, Oliver.—280 St. Nicholas Ave., New York City. Garage.

Lights.—The government requires a sailing yacht to show the same lights at night as are required of any sailing craft, the regulation red and green side-lights, when under sail, and the white riding light when at anchor. Small power-boats, when using combination lights should have a white light showing between the red and green. When showing separate side-lights they should display a white mast-head light. The federal regulations governing lights on

all craft are the same, no matter whether the vessel is used for pleasure or business purposes, and are in force from sunset to sunrise. For rules concerning motor vehicle lights. See Section II.

Lights, Tell-tale.—On a motor-boat, red and green lights which cannot burn unless the side-lights are lighted, and which indicate at once in the engine-room the going out of a side-light.

Lilley & Co., M. C.—Columbus, O. Mfrs. wearing apparel, caps, gloves, gauntlets, leggings, miscellaneous.

Lilly Varnish Co.—670 Rose St., Indianapolis, Ind. Mfrs. varnishes.

Lima Automobile Club.—Lima, O. F. T. Cuthbert, Sec.

Lima Automobile Co.—Lima, O. (Jackson.)

Limbach, H.—Purch. Agt. Ford Motor Co., Detroit, Mich.

Limit, Elastic.—The point to which a body may be strained or deformed and still retain the power of completely recovering its original shape after the stress has been removed. When such limit is exceeded the body does not recover its shape, but retains a permanent form, or "set."

Limousine.—A closed carriage, of which the front seats are partially open, while the rear seats are ordinarily completely inclosed. The window separating the front seats from the rear can be lowered into a casing or swung on hinges to the roof. The roof ordinarily carries a baggage rack.

Limousine & Carriage Mfg. Co.—35th St. and Michigan Ave., Chicago, Ill. Mfrs. wood and metallic bodies, bow sockets, automobile tops, glass wind shields. Edward C. Voltz, Pres.; Walter N. Beecher, Sec. and Mgr.; Daniel W. Voltz, Treas.

Lincoln Carriage Auto Co.—216 W. 50th St., New York City. Garage.

Lincoln Electric Co.—1-3 Union Square, New York City. Mfrs. primary batteries, electric generators.

Lincoln Electric Co.—Cleveland, O. Mfrs. controllers (electric), motors (electric).

Lincoln Park Auto Station.—1071 N. Clark St., rear, Chicago, Ill. Garage.

Lind, H. H.—Sec. The Ohio Blower Co., 330 Prospect Ave., N. W., Cleveland, O.

Lindberg, V.—Supt. for Repair Dept., Metropolitan Automobile Co., 57 61 Stanhope St., Boston, Mass.

Lindineier, P. F.—1164 W. Lake St., Chicago, Ill. (Glide.)

Lindow, August.—Supt. Michigan Bolt & Nut Works, foot Mildrum Ave., Detroit, Mich.

Lindsay, A. M., Jr.—523 Granite Bldg., Rochester, N. Y. Mfr. timers.

Lindsay Motor Mfg. Co., Ltd., The.—Woodbridge, England. Mfrs. gasoline automobiles. (Lindsay.)

Lindsey, W. G.—Pur. Agt., H. H. Franklin Mfg. Co., 302 S. Geddes St., Syracuse, N. Y.

Line.—That which is conceived to have length without any other dimension. (2) A unit of length (now rarely used) equal to 1-12 of an inch. (3) The adjustment of a machine or its parts in working order.

Linear Speed.—See Speed.

Line of Action.—The Mathematical line along which a force is exerted.

Lines of Force.—See Force, Lines of.

Liner.—A thin piece of metal interposed between parts of a mechanism in order to adjust them. See Shim.

Lineberger, Paul N.—Vice-Pres. and Gen. Mgr. Rainier Motor Car Co., Broadway and 56th St., New York City.

Linhardt, Frank.—Foreman Nickel Plating Dept. Eclipse Machine Co., Elmira, N. Y.

Link.—A connecting bar with a bearing at each end for connecting it to a similar link or links, or to other elements of a machine. (2) One of the elements of a chain.

Link, Drag.—A rod, A (see figure), connecting the two steering arms of a motor vehicle; sometimes called "tie-bar," "drag-bar," "cross-bar," "cross-link" and "distance rod."

(2) The levers, etc., used in the link motion of a steam engine.

Link-motion.—A reversing device used for working the slide-valve in steam-engines. The valve rod, I, one end of which is attached to the slide-valve, terminates at its other end in a block which slides in a slotted link, O. To the ends of this link are attached the rods, E and

F, to the ends of which are fixed the eccentrics, A and B. The link, O, can be raised or lowered by a system of levers so that either the upper eccentric rod, E, or the lower one, F, is in line with the valve-rod, I. Either eccentric can thus be made to drive the valve-rod, and if the two are so fixed that they drive the valve in opposite directions, then the engine can be reversed by raising or lowering the link so that either E or F is in line with the rod I.

Link, Reversing.—The slotted link used in link-motion.

Link, Steering.—The same as Drag-link. q. v.

Link Belt Co.—Chicago, Ill. Mfrs. chains, turntables.

Link Belt Engineering Co.—Nictown, Pa. Mfrs. chains.

Linkroum-Smelser Automobile Co.—17 Bank St., Newark, N. J. (Lozier.)

Linole Mfg. Co.—Santa Clara, Cal. Mfrs. tire fluid.

Linoleum.—A material imitating leather and sometimes used as a covering for the floor of automobiles. Linoleum is made of a very siccative oil (linseed oil), to which is added powdered cork. The mixture is variously colored, as desired, by the addition of other vermilion, ultramarine, etc. The paste is poured over a fabric of varying thickness, forming a support, upon which it is spread under strong pressure.

Linon, L.—Ensival-lez-Verviers, Belgium. Mfr. motorcycles, automobile motors.

Linscott Motor Co.—163 Columbus Ave., Boston, Mass. (Wayne, National, Reo.)

Lins Pneumatik Co.—Krausenstrasse 36, Berlin, Germany. Mfrs. pneumatic rubber tires.

Lins Pneumatik Co.—Schönebeck-am-Elbe, Germany. Mfrs. non-skids.

Linton, C. M.—173 N. Bend St., Pawtucket, R. I. (Jackson.)

Lintol, H. C.—45 Main St., Nashua, N. H. (Reo.)

L'Inviolable.—53 rue Laugier, Paris, France. Mfr. speed indicators.

Linz, F. J.—Partner Linz-Sanborn Automobile Co., 505 Golden Gate Ave., San Francisco, Cal.

Linz-Sanborn Automobile Co.—505 Golden Gate Ave., San Francisco, Cal. (Maxwell.) Est. Nov., 1906. Not inc. Partnership, L. H. Sanborn, F. J. Linz.

Liotard Frères.—22 rue de Lorraine, Paris, France. Mfr. lubricators.

Lipe, Willard C.—Mechanical Engineer. B. Fort Plain, N. Y., Dec. 21, 1861. Ed. common school and Clinton Liberal Institute. Director Brown-Lipe Gear Co., H. H. Franklin Mfg. Co., Lipe & Walrath Co., Globe Malleable Iron Co., Syracuse Aluminum & Bronze Co., Engleberg Huller Co. Mem. clubs: Syracuse Yacht, Citizens', Syracuse Boys', Syracuse Chamber of Commerce. Res., 116 Holland St., Syracuse. Office, 208 S. Geddes St., Syracuse, N. Y. In the trade since 1899. Used first car 1903.

Lipman, C. E. L.—Pres. Lipman Mfg. Co., 300 Pleasant St., Beloit, Wis.

Lipman Mfg. Co.—300 Pleasant St., Beloit, Wis. Mfrs. electric speed indicators, rotary pumps. Mem. M. & A. M. Cap. \$60,000. Est. 1906. C. E. L. Lip-

man, Pres.; A. B. Melville, Vice-Pres.; L. H. Parker, Sec. and Treas.

Lippincott Steam Specialty & Supply Co.—Newark, N. J. Mfrs. machine work to order, screw machine products, power driven tire inflators, flexible tubing.

Lippincott, Z.—Long Branch, N. J. (Waltham.)

Lipsey & Co., H. H.—3843 Grand Bvd., Chicago, Ill. Garage.

Lip Valve.—The same as mushroom-valve.

Liquid.—A fluid which is distinguished from a gas by the fact that it occupies a definite volume, whatever be the size of the containing vessel, and always possesses a definite surface, which is horizontal when at rest.

Liquid Fuel Engineering Co.—Bridgeport, Conn. Mfrs. gasoline and kerosene burners.

Liquid Fuel Engineering Co.—Cowes, Isle of Wight, England. Mfrs. steam commercial automobiles, steam automobiles. (Lifu cars.)

Liska, Vincent.—Supt. Neustadt Auto & Supply Co., 3948-50 Olive St., St. Louis, Mo.

Lisk & Petry.—405-407 Diamond St., Hudson, N. Y. (Stevens-Duryea, Cadillac, Thomas.) Est. 1903. Edward H. Lisk, head office; Wm. Petry, head Mechanical Dept. Garage, 30 cars; repairing.

Lisk, Edw. H.—Head of office Lisk & Petry, 405-7 Diamond St., Hudson, N. Y.

List.—The tilting or careening of a vessel to one side.

Litchfield, B. A.—Treas. Hess-Pontiac Spring & Axle Co., Pontiac, Mich.

Litchfield, P. W.—Supt. Goodyear Tire & Rubber Co., Akron, O.

Litharge.—The fused yellow protoxide of lead; a product of a yellow color, used as an ingredient in the active material of storage-battery plates.

Litmus-paper.—Paper dipped into a solution of litmus and used for ascertaining the polarity of battery terminals. See Pole Paper.

Litre.—The unit of capacity for liquids in the metric system, and equal to about one quart, English measure.

Little End.—The piston end of the connecting rod of a gasoline motor. See Big End.

Little, George B.—Vice-Pres. Walworth Mfg. Co., 128-136 Federal St., Boston, Mass.

Little Grant Mfg. Co.—88 Wall St., New York City. Mfrs. fire extinguishers.

Little Rock Auto Co.—Little Rock, Ark. (Buick, Dolson.)

Little, W. H.—Factory Mgr. Buick Motor Co., Flint, Mich.

Littlefield Mfg. Co., W. S.—134 Eliot St., Boston, Mass. Mfrs. speed indicators. Cap., \$20,000. Est. October, 1906.

Samuel C. Hopkins, Pres.; W. S. Littlefield, Treas. and Mgr.; E. F. Mahady, Director.

Littlefield, W. S.—Treas. and Mgr. W. S. Littlefield Mfg. Co., 134 Eliot St., Boston, Mass.

Live.—Operative or effective, as distinguished from dead or idle.

Live Axle.—See Axle, Live.

Live Force.—See Force, Live.

Live Power.—See Power, Live.

Live Steam.—See Steam, Live.

Liverpool Rubber Co., Ltd.—292 Vauxhall Rd., Liverpool, England. Mfrs. pneumatic tires.

Livesey-Pionnie Motor Car Co.—136 S. 11th St., Newark, N. J. (Dolson.)

Livingston, C. V.—Rondout, N. Y. Repairing.

Livingston Radiator Co.—10 E. 31st St., New York City. Mfrs. radiators.

Lloyd & Co., A. J.—323 Washington St., Boston, Mass. Mfrs. eye shields.

Lloyd, Dr. O. H.—Hereford, Tex. (Holsman.)

Lloyd, Herbert.—Pres. Electric Storage Battery Co., Allegheny Ave. and 19th St., Philadelphia, Pa.

Lloyd Motor & Engineering Co.—132 Monument Rd., Birmingham, England. Mfrs. L. M. C. motorcycles.

Load.—The resistance to a motor of the machinery which it drives, apart from its own friction. (2) The output, in watts, required from a dynamo or other electrical plant or machinery, that is, the electrical power which the plant is required to furnish to the circuit which it supplies. (3) The weight supported by a structure.

Lobee, Bart.—Gen. Supt. Lobee Pump & Machinery Co., cor. Terrace and Erie Sts., Buffalo, N. Y.

Lobee, B. F.—Pres. and Gen. Mgr. Lobee Pump & Machinery Co., cor. Terrace and Erie Sts., Buffalo, N. Y.

Lobee Pump & Machinery Co.—Cor. Terrace and Erie Sts., Buffalo, N. Y. Mfrs. rotary circulating and gear pumps. Cap. \$80,000. Est. 1899. B. F. Lobee, Pres. and Gen. Mgr.; Walter Voss, Sec. and Treas.; Bart. Lobee, Gen. Supt.

Locher & Robb.—315 S. Burdick St., Kalamazoo, Mich. (Franklin.)

Locher, J. A.—Supt. C. H. Blomstrom Motor Co., Clark and Jefferson Aves., Detroit, Mich.

Locher, J. A.—Supt. De Luxe Motor Car Co., Clark and Jefferson Aves., Detroit, Mich.

Lock.—The oblique position of the steering wheels of a motor-car with respect to the axle when swerving; sometimes called the "steering lock."

Lock, Air.—See Air-bound, and Pocket, Air.

Lock-nut.—See Nut, Lock.

Lock-steering.—See Steering-gear.

Lock Auto Co.—3d and Adams Sts., Evansville, Ind. Garage.

Locke & Co.—218 W. 84th St., New York City. Mfrs. wood and metallic bodies, dashes and fenders.

Locke, Albert N.—Treas. Locke Regulator Co., 76 North St., Salem, Mass.

Locke, N. C.—Pres. Locke Regulator Co., 76 North St., Salem, Mass.

Locke Regulator Co.—76 North St., Salem, Mass. Mfrs. side levers, automatic pressure regulating valves. Cap., \$250,000. Est. 1871. N. C. Locke, Pres.; Albert N. Locke, Treas.; Chas. A. Archer, Sec.; Clarence H. Vitty, Auditor.

Lockhart Iron & Steel Co.—McKee's Rocks, Pa. Mfrs. angle, channel and tee iron and steel, bar iron and steel.

Lock Haven Auto Co.—Lock Haven, Pa. (Pope-Toledo, Franklin.)

Lockwood & Co., F. E.—39 Wall St., Norwalk, Conn. (Locomobile, Waltham, Autocar, Elmore, White.) Garage; supplies; repairing.

Lockwood & Co.—Norfolk, Conn. Garage; supplies; repairing.

Lockwood-Ash Motor Co.—Jackson, Mich. Mfrs. gasolene marine motors.

Lockwood Bros.—103-109 W. Pearl St., Jackson, Mich. (Pope-Toledo, Jackson.) Garage; supplies.

Lockwood, Carl J.—Washington, D. C. (Stanley.)

Lockwood Co.—34 Mechanic St., Newark, N. J. Mfrs. lamps.

Lockwood, E.—104 2d St., Laramie, Wyo. (Mora, Cartercar, Smith.)

Locomobile Co.—400 Newbury St., Boston, Mass. (Locomobile.) Est. 1899. S. T. Davis, Jr., Pres.; Thos. H. Thomas, Treas.; K. M. Blake, Supt.

Locomobile Co. of America.—Seaside Park, Bridgeport, Conn. (Locomobile.)

Locomobile Co. of America.—1354 Michigan Ave., Chicago, Ill. (Locomobile.) A. J. Banta, Supt.

Locomobile Co. of America.—Broadway and 76th St., New York City. (Locomobile.) J. F. Plummer, Mgr.

Locomobile Co. of America.—249 N. Broad St., Philadelphia, Pa. (Locomobile.) I. J. Morse, Supt.

Locomobile Co. of America.—Foot Main St., Bridgeport, Conn. Makers of the Locomobile car; first marketed July, 1899. Twenty-one models made since. S. T. Davis, Jr., Gen. Mgr.; A. L. Riker, Designer; A. C. Schulz, Asst. Designer; E. F. Russell, Supt.; W. Perry, Asst. Supt.; J. T. Roche, Jr., Pur. Agent; A. W. Robinson, Sales Mgr.; J. A. Kingman, Advt. Mgr.; J. F. Plummer, Mgr. Branch at 76th St. and Broadway, New York City; K. M. Blake, Supt. Branch at 400 Newbury St., Boston, Mass.; I. J. Morse, Supt. Branch at 245 N. Broad St., Philadelphia, Pa.; A. J. Banta, Supt. Branch at 1354 Michigan Ave., Chicago,

Ill. Agents and dealers: Allen Asten Co., Greenwich, Conn. Automobile & Supply Corp., New Haven, Conn. Automobile Co. of Washington, Washington, D. C. Automobile Co., New Orleans. Beebe, O. N., Essex, Conn. Billings, Frank, Marlborough, Mass. Buck Auto & Implement Co., Davenport, Ia. Callahan, Atkinson & Co., D., Baltimore, Md. Capen Motor Car Co., St. Louis, Mo. Carlow Auto Co., Taunton, Mass. Colburn Automobile Co., Denver, Colo. Compania Vehiculos Elec., Mexico City, Mexico. Covey, H. M., Portland, Ore. Davis Automobile Co., Providence, R. I. Fort Pitt Automobile Co., Pittsburg, Pa. General Motor Car Co., San Francisco, Cal. Hanauer Automobile Co., Cincinnati, O. Jordan Automobile Co., Minneapolis, Minn. Lockwood & Co., F. E., Norwalk, Conn. Lopez, Herman, Havana, Cuba. Lowe Supply Co., S. C., New Bedford, Mass. Lubeck Auto Co., Grand Rapids, Mich. Marble, W. H., Brockton, Mass. Miami Motor Car Co., Dayton, O. Parks, A. S., Wichita, Kan. Pope Automobile Co. of Washington, Washington, D. C. Pratt, C. B., Elkhart, Ind. Remson Mfg. Co., J. S., Brooklyn, N. Y. Russel, T. M., Middletown, Conn. Sessions, J. B., Bristol, Conn. Seattle Automobile Co., Seattle, Wash. Sterling Mfg. Co., Fall River, Mass. Stevens, B. A., Charles City, Ia. Springfield Automobile Co., Springfield, Mass. Success Automobile Co., Los Angeles, Cal. Taylor Automobile Co., Albany, N. Y. Towle & Co., E. H., Waterbury, Conn. U. S. Motor Car Co., Rochester, N. Y. Welch Motor Car Co., Milwaukee, Wis. Wheth Automobile Co., St. Joseph, Mo. Wyoming Valley Motor Car Co., Wilkes-Barre, Pa. Yonkers Auto Station, Yonkers, N. Y.

Loeb, M. A.—Sec. and Treas. Rock Island Battery Co., 9th and Sycamore Sts., Cincinnati, O.

Loew, Oscar A.—Supt. Globe Machine & Stamping Co., 3868 Hamilton Ave., N. E., Cleveland, O.

Log.—A device usually a triangular board, called also "log-chip" or "log-ship," for showing the speed of a vessel. See Knot.

Log-line.—See Knot.

Logan Construction Co.—Cor. 2nd and Canal Sts., Chillicothe, O. Makers of the Logan pleasure and commercial cars. First marketed in September, 1901. Eleven different models made since. Cap. \$250,000. Jos. L. Schilder, Pres.; B. A. Gramm, Vice-Pres., Gen. Mgr., Designer and Purch. Agt.; C. F. Smith, Treas.; F. Biszantz, Supt.; B. E. Stevenson, Sales and Advt. Mgr.; H. T. Hermann, Asst. Advt. Mgr.

Logan Cycle Co.—320 Main St., Salinas, Cal. Garage.

Logan, Ernest C.—White Plains, N. Y. (Maxwell.)

Logan Iron & Steel Co.—Burnham, Pa. Mfrs. bar iron and steel.

Logan Mfg. Co.—Phoenixville, Pa. Mfrs. steel castings.

Logansport Auto Co.—Broadway, near 6th St., Logansport, Ind. (Haynes.)

Lohlein, Jos.—Laramie, Wyo. Garage.

Lohner und Co., Jacob.—2 Porzellangasse, Vienna, Austria. Mfrs. bodies.

Lomas, A.—Storage Mgr. Bryant Garage. 50-56 W. 43d St., New York City.

Lomason, H. A.—Sec. and Treas. Douglass & Lomason Co., 302-310 Grand River Ave., Detroit, Mich.

Lombardi Motor Co., The.—Derby, Conn. Mfrs. flexible tubing, speedometers.

Lombardi Motor Co.—71 Minerva St., Derby, Conn. (Oldsmobile.)

Lombard Iron Works & Supply Co.—Augusta, Ga. (Waltham.)

Lombard Tube Co.—Birmingham, England. Mfrs. metallic rims.

Lomer, Louis L.—Care U. S. Legation, Buenos Ayres, A. R. (Columbia.)

Londe, Alfred M.—Mechanical Director Standard Auto Works, 110 5th Ave., Clinton, Ia.

London Auto Co.—Clapham Rd., London, S. W., England. Mfrs. motorcycles.

London Auto Supply Co., The.—1229-1231 Michigan Ave., Chicago, Ill. Mfrs. automobile tops, glass fronts. Cap., \$20,000. Est. Jan., 1904. Jas. C. Simm, Jr., Pres., Treas. and Gen. Mgr.; Fred P. Rugee, Vice-Pres.; Arthur M. Simm, Sec.; Frank J. McAvoy, Supt.

London Scottish Rubber Co.—162 Clerkenwell Rd., London, E., England. Mfrs. non-skids, acetylene lamps.

Lonerger & Co., J. E.—211-13-15 Race St., Philadelphia, Pa. Mfrs. lubricating devices, pop safety and relief valves, steam gauges, pressure reducing valves. Not inc. Est. 1875. John E. Lonergan, Sole Owner; L. G. Skillhorn, Supt.; H. O. Evans, M. E., Head Draughtsman; J. F. Lonergan, Wm. Tobin, Samuel Barrett, Michael Collaton, Henry Born, Alex. Fogel, Wm. Devine, J. T. Bowes, Richard Shillingsburg, Foremen.

Lonergan, John E.—Sole Owner J. E. Lonergan & Co., 211-215 Race St., Philadelphia, Pa.

Lonergan, J. F.—Foreman J. E. Lonergan & Co., 211-215 Race St., Philadelphia, Pa.

Longacre Automobile Depot.—507 W. 44th St., New York City. Garage.

Long, Adam A.—Vice-Pres. Long & Mann Co., Beehive Bldg., Graves St., Rochester, N. Y.

Longaker, V. A.—Pres. American Motor Car Co., Indianapolis, Ind.

Long & Mann Co.—Beehive Bldg., Graves St., Rochester, N. Y. Mfrs. au-

tomobile tire tools, detachable rims. Cap., \$50,000. Est. since May 1, 1906. A. S. Mann, Pres.; Adam A. Long, Vice-Pres.; A. J. Mann, Sec. and Treas.; Abram J. Mann, Mgr. New York office, 2 W. 125th St.

Long Arm System Co.—Lakeside Ave. and E. 38th St., Cleveland, O. Mfrs. front and rear axles, change gears, clutches, propeller shafts, hand levers, strut rods, buffers, steering reaches. Cap. \$400,000. Est. 1897. S. H. Chisholm, Pres.; W. B. Cowles, Vice-Pres. and Treas.; H. M. Fletcher, Sec.; R. A. Wilson, Supt.; G. J. Leber, Chief Engineer and Purch. Agt.; R. B. Weaver, Asst. Supt.; Hayden Eames, Gen. Sales Agt.

Long Beach Auto Co.—142 Pacific St., Long Beach, Cal. (Pope-Waverley, Tourist, Maxwell, Columbus.) Est. 1903. W. M. Varney, Prop. and Mgr.; F. L. Varney, Foreman of Repair Shop and Stock Clerk. Garage to house 150 cars; repairing.

Long Beach Country Club.—Raymond F. Ayers, Sec. Temple Court Bldg., New York City.

Long Branch Auto Co.—Long Branch, N. J. (Matheson.)

Longdin-Brugger Co.—Fond-du-Lac, Wis. Mfrs. automobile tops.

Longest Bros.—821 3d Ave., Louisville, Ky. (Ford, Stoddard-Dayton, White, Maxwell.)

Longhurst, James S., Jr.—Walnut St., Lynbrook, L. I., N. Y. Mfr. tire balm, aluminum lacquer, peacock blue, lubricants, acid cure, agatite, a substance for mending leaks in all kinds of metals. Est. ten years.

Long Island Automobile Club.—360 Cumberland St., Brooklyn, N. Y. Russell A. Field, Sec., care Brooklyn Eagle.

Long Island City Auto Garage Co.—E Ave., cor. 8th St., Long Island City, N. Y. Garage.

Long Island Garage Co.—159 Reid Ave., Brooklyn, N. Y. Garage.

Long Island Garage Co.—Glen Cove, L. I. Cap. \$25,000. Incorporators, Walter J. Balir, Arthur J. Farrell and Chas. A. Vostock. Garage.

Long Island Motor Parkway, Inc.—527 5th Ave., New York City. Branch Office, Denton Block, Mineola, L. I. Organized December, 1906. W. K. Vanderbilt, Jr., Pres.; Harry Payne Whitney, 1st Vice-Pres.; Jefferson De Mont Thompson, Treas.; A. R. Pardington, 2d Vice-Pres. Directors: W. K. Vanderbilt, Jr.; August Belmont, Colgate Hoyt, C. T. Barney, Frederick G. Bourne, Anton G. Hodenpyl, H. B. Hollins, J. Adolph Mollenhauer, Ralph Peters, A. R. Pardington, Mortimer L. Schiff, Jefferson De Mont Thompson, Levi C. Weir, Harry Payne Whitney, Col. John Jacob Astor, H. K. Burrass, John Far-

son, Clarence H. Mackey, W. G. McAdoo, Dave Hennen Morris, Dean Alvord, S. T. Davis, Jr.; Henry Ford, August Heckscher, E. R. Hollander, E. R. Thomas, H. B. Anderson. Chairmen of Committees: Charles T. Barney, Finance; W. K. Vanderbilt, Jr., Plan and Scope.

Long, L. Y.—524 Madison Ave., Albany, N. Y. Garage.

Long Mfg. Co.—1430-34 Michigan Ave., Chicago, Ill. Mfrs. dashes and fenders, hoods, radiators, brass and copper tubings.

Longmead Iron Co.—Conshohocken, Pa. Mfrs. wrought iron and steel pipe.

Longmont Automobile Club.—H. L. Large, Sec., Longmont, Colo.

Long-Turney Mfg. Co.—Rome, N. Y. Mfrs. condensers, hoods, radiators.

Long Wrench Co., J. R., The.—Akron, O. Mfrs. wrenches.

Longuemare, Fernand.—12 Rue de Buisson, St. Louis, Paris. Born at Bolbec in 1860. Co-partner in the firm of Longuemare Frères. Mem. A. C. F., A. E. C. F., A. G. A., T. C. F., M. C. F. and the Racing Committee of the A. C. F.

Longuemare Frères.—12 rue du Buisson, St. Louis, Paris, France. Mfrs. carburetters, radiators.

Longuemare, Georges.—12 Rue du

Buisson, St. Louis, Paris. Born at Bolbec in 1866. Co-partner in the firm of Longuemare Frères. Mem. of the Society of Civil Engineers (1905), A. C. F. (1896), A. E. C., A. G. A., T. C. F. Vice-Pres. of the Auto-Cycle Club of France. Sec. of the Aid

Committee of A. C. F. Mem. of the Technical Committee and Touring Committee of A. C. F.

Lonk & Compton.—1808 Farnan St., Omaha, Neb. (Maxwell.)

Lonk, Chas. F.—Jefferson. Ia., and Council Bluffs, Ia. (Maxwell.)

Look Electric Co.—1545 Michigan Ave., Chicago, Ill. Mfrs. storage batteries.

Loomis, A. C.—Gen. Mgr. The Frantz

Body Co., cor. Stanton Ave. and Gety St., Akron, O.

Loomis Autocar Co.—Westfield, Mass. Mfrs. carburetters, mufflers.

Loomis, F. L.—Sales and Advt. Mgr. Reliance Motor Car Co., 89 Fort St., E. Detroit, Mich.

Loomis, G. J.—Designer Modern Tool Co., 4th and State Sts., Erie, Pa.

Loose Pulley.—See Pulley.

Lootens, A. D.—Head of Experimental Dept. Puritan Machine Co., 12-16 Gratiot Ave., Detroit, Mich.

Lopez, German.—Havana, Cuba. (Locomobile.)

Lorain Automobile Co.—Lorain, O. (Elmore.)

Lord, Dr. L. W.—West Ossipee, N. H. (Maxwell.)

Lord, Harry A.—Sec. Lord Motor Car Co., 1044 S. Main St., Los Angeles, Cal.

Lord, H. I.—Mgr. Sales Dept. Detroit Lubricator Co., Trumbull Ave., Lincoln Ave. and G. T. Ry.

Lord Motor Car Co.—1044 S. Main St., Los Angeles, Cal. (Cleveland, Kisselkar, Mason, Woods.) Est. 1906. Cap. \$25,000, \$15,000 paid. P. A. Lord, Pres. and Treas.; Harry A. Lord, Sec.

Lord, P. A.—Pres. and Treas. Lord Motor Car Co., 1044 S. Main St., Los Angeles, Cal.

Lord Polish Co., F. T.—Cambridge, Mass. Mfrs. metal polishes.

Lorge & Welch.—Minot, N. Dak. (Caddillac.)

Loring Auto Appliance Co.—Broadway and 63d St., New York City. Factory Somerville, Mass. Mfrs. speed indicators.

Loring, Elmer.—638 N. Main St., Brockton, Mass. (Maxwell.)

Loring, E. J.—Treas. and Gen. Mgr. Loring Speed Gauge Co., 91 Marshall St., Somerville, Mass.

Loring, George F.—Pres. Loring Speed Gauge Co., 91 Marshall St., Somerville, Mass.

Loring Motor Car Co.—Geo. J. Donahue, Brockton, Mass. (Maxwell.)

Loring Speed Gauge Co.—91 Marshall St., Somerville, Mass. Mfrs. speedometers, speed indicators. Cap \$40,000, \$21,000 paid in. Est. 1905. Inc. 1907. Geo. F. Loring, Pres.; E. J. Loring Treas. and Gen. Mgr.; C. W. Keefe, Sec.; W. M. Inge, Sales Mgr.

Lorraine Automobile Mfg. Co.—1812 22d St., Chicago, Ill. Mfrs. gasoline automobiles.

Lorry.—A large heavy commercial vehicle with a platform body and low wheels.

Lorthioy, E.—8 rue de la Voute, Paris, France. Mfr. radiators.

Los Angeles Automobile Club.—Chas. F. Gates, Sec., Los Angeles, Cal.

Lothrop Davis Co.—105 Main St., Tonopah, Nev. Est. 1904. Cap. \$200,000. T. L. Oddie, Pres.; R. B. Davis, Vice-Pres.; F. Y. Williams, Mgr.; J. W. Stewart, Sec. Garage; repairing.

Lotteau Frères.—16 rue du Pont, Choisy-le-Roi, Paris, France. Mfrs. Perfection motorcycles, automobile motors.

Loubier.—9 cours Lieutaud, Marseilles, France. Mfrs. motorcycles. (Regence motorcycles.)

Louck & Boehme—Kalona, Ia. (Moline.)

Louderback, G. B.—Sales and Advt. Mgr. Buckeye Mfg. Co., Anderson, Ind.

Loud, Fred A.—Merrimac, Mass. Mfrs. automobile tops; repairing.

Louis, O.—19 S. Water St. Ogdensburg, N. Y. Garage.

Louisville Automobile Club.—Charles Chreste, Sec., Louisville, Ky.

Louvre, Grands Magazins du.—164 rue de Rivoli, Paris, France. Mfrs. wearing apparel; coats.

Lovatt, J. N.—Bethlehem, Pa. (Haynes.)

Love, Jno. R.—Sec. Premier Motor Mfg. Co., Indianapolis, Ind.

Lovejoy, A. L.—Treas. and Gen. Mgr. Becker Brainard Milling Machine Co., 110 Business St., Hyde Park, Mass.

Lovejoy, Elmer.—Sec., Treas. and Business Mgr. Lovejoy Novelty Works, Laramie, Wyo.

Lovejoy Novelty Works.—Laramie, Wyo. Est. 1892. Cap. \$50,000. Chas. W. Brandis, Pres. and Advt. Mgr.; N. Lovejoy, Vice-Pres.; Elmer Lovejoy, Sec., Treas. and Business Mgr. Garage to house 30 cars; repairing.

Lovejoy, N.—Vice-Pres. Lovejoy Novelty Works, Laramie, Wyo.

Lovell, C. D. S.—Lynn, Mass. (Holsman.)

Low, F. E.—Steubenville, O. Garage.

Low Garage, S. C.—22 4th St., New Bedford, Mass. (Locomobile, Oldsmobile, Franklin.) Garage; repairing.

Low Pressure.—See Pressure, Low.

Low-water Alarm.—See Alarm, Low-water.

Lowe Co., Geo. H.—509 Tremont St., Boston, Mass. (Aerocar, American Mors.) Est. Dec., 1906. Cap. \$15,000. Geo. H. Lowe, Pres.; Fred L. Townsend, Treas. Garage to house 30 cars; repairing.

Lowe, Geo. H.—Pres. Geo. H. Lowe Co., 509 Tremont St., Boston, Mass.

Lowell Automobile Co.—Appleton St. and Post Office Ave., Lowell, Mass. (Stevens-Duryea, Cadillac, Pope-Hartford, Stanley). Supplies; garage and repairing.

Lowe, Philip A.—Pittsfield, Mass. (Stoddard-Dayton.)

Lowe's Auto Garage.—Pine and Morris Sts., Morristown, N. J. Garage.

Loyal, A.—204 rue St. Maur, Paris, France. Mfr. radiators.

Loze, J. M.—11 ave. du Bel-Air, Bois-Colombes, Seine, France. Mfr. solid tires.

Lozier Automobile Agency.—132 Valencia St., San Francisco, Cal. (Lozier.)

Lozier Motor Co.—1731 Broadway, New York City. Factories: Plattsburg, N. Y., and Stamford, Conn. Makers of the Lozier car, motor boats and marine motors. Cap. \$1,000,000. H. A. Lozier, Pres.; Sam. Regar, Treas.; Jno. G. Perrin, Supt.; C. A. Emise, W. S. Mead, F. C. Chander, Sales Dept. Repairing Lozier cars only.

Lubeck Automobile Co.—148 N. Ionia St., Grand Rapids, Mich. (Locomobile, Oldsmobile.)

Lubbock Motor Car Co., F. E.—Lubbock, Tex. (Jackson.)

Lubrication.—The interposition between two surfaces which rub together of a substance which has a smaller coefficient of friction with both the surface concerned than they have one with another. The operation of lubrication in motor vehicles is performed in accordance with several systems, viz: "Gravity-feed," "splash," "pressure" or "forced-feed," "ring," etc.

Lubrication, Chain.—Lubrication by means of small chains that dip into an oil-well, and as they are carried along by a shaft bring the lubricant up with them.

Lubrication, Forced-feed.—In forced-feed lubrication both mechanical and physical systems are employed. The former system is used by some of the leading makers. Channels are bored centrally through the crank-shaft, cranks, crank-pins, connecting-rods and wrist-pins, and the oil is driven by centrifugal force through all these to their bearings. In the latter system means are employed to utilize the pressure from the exhaust or water system. Under this action special means are employed to force the oil along the branch pipes leading from the lubricator. In pressure-feed the reservoir may be placed in any position, and below the level of the parts to be oiled. In such a case either the oil is forced through the pipes by an automatic force-feed pump driven by the motor, or part of the exhaust gas is diverted through a check-valve into the reservoir, maintaining a pressure on the oil of from 2 to 4 pounds as may be required. The pressure of the circulating water is sometimes used for the same purpose.

Lubrication, Gravity-feed.—Pure gravity-feed consists in the use of a sight-feed cup of toughened glass with a metal cap, in which there is a small shuttered air-hole, the closing of which regulates the supply through the tube beneath the

cup to the part to be lubricated. This is the simplest form of gravity-feed.

Lubrication, Grease.—Grease lubrication has many advantages for such parts as do not need very close and careful attention. A special lubricator is designed for use with grease.

Lubrication, Ring.—In this system, which is commonly used for the main motor-bearings, a ring is suspended from the journal in a recess provided in the brass and dipping into a small reservoir of oil below the bearing. The motion of the journal causes the ring to revolve, and thus a continual supply of oil is brought up to the bearing from the reservoir below.

Lubrication, Sight-feed.—A system, called also "drip lubrication," in which oil is brought up from a tank and distributed to the various bearings, the supply to the pipes being delivered through glass "sight-feed" tubes arranged with an adjustable valve, through which the oil passes, drop by drop, the number of drops per minute being regulated by a milled-headed screw.

Lubrication, Splash.—Splash lubrication is very universal for all bearings inside the motor, such as those for the crank-shaft, cam-shaft, and cams, inclosed gears, and the lower ends of the connecting-rods. It consists simply of a bath of oil inside the crank-case, the cranks dashing the oil over all the working parts. It is an uncleanly but thoroughly effective system, and is used also for the differential gear and the change-speed gearing.

Lubricator, Sight-feed.—An apparatus, called also a "mechanical oiler" and "drop oiler," whereby oil is fed drop by drop by dripping in a glass tube, so that the driver is able at all times to see the amount supplied to a bearing. See figure.

Lucan & Christensen.—556 Euclid Ave., Cleveland, O. Garage. (Mitchell.)

Lucas & Christenson.—2002 Euclid Ave., Cleveland, O. (Mitchell.)

Lucas & Co., John.—Philadelphia, Pa. Mfrs. paints, automobile body polishes and varnishes.

Lucas, C. O.—Front St., Greenville, O. Repairing.

Lucas, Ltd., Jos.—Great King St., Bir-

mingham, England. Mfrs. horns, jacks, tire pumps, acetylene lamps, oil lamps.

Lucas Co., W. P.—255 Elm St., Oil City, Pa. (Thomas Flyer, Haynes, Pope-Hartford.)

Luce & Banks Co.—87 Division St., Grand Rapids, Mich. (Maxwell.)

Lucey Motor Car Co.—231-233 River St., Troy, N. Y. (Aerocar, Stoddard-Dayton.) Garage.

Lucia Cycle Co.—113 Main St., Oconto, Wis. (Pope-Hartford, Pope-Toledo, Waltham.)

Lucia Cycle Co.—Green Bay, Wis. (Pope-Toledo, Pope-Hartford, Waltham.)

Lucke, Hermann.—Karlsruhe, Germany. Mfr. horns.

Luders, A. E.—Designer The Electric Launch Co., Ave. A and North St., Bayonne, N. J.

Ludington, G. A.—Head of Factory, The Fisk Rubber Co., Oak St., Chicopee Falls, Mass.

Ludlow, James B.—Mgr. Promotion Dept., Glidden Varnish Co., Rockefeller Bldg., Cleveland, O.

Lug.—A projecting stud or ear by which an object is grasped or supported, or which affords a bearing a support.

Lukens Steel Co.—Coatsville, Pa. Mfrs. steel.

Lumen Bearing Co.—Sycamore St. and Belt Line, Buffalo, N. Y. Mfrs. brass, bronze, aluminum and copper castings, babbitt metals, bronze metals, solder, aluminum solder.

Lumund, Joseph.—11 Union Ave., Rutherford, N. J. Garage.

Lundy Fulton Auto Co.—Bottineau, N. D. (Ford, Mitchell, Cameron.)

Lundy, C. A.—Reno, Nev. (Pope-Toledo, Franklin, Dorris.)

Lunette.—A small window furnished with glass or mica, placed in rear panel of a closed carriage.

Lunkenheimer, C. F.—Vice-Pres. The Lunkenheimer Co., Cincinnati, O.

Lunkenheimer, E. H.—Pres. The Lunkenheimer Co., Cincinnati, O.

Lunkenheimer Co., The.—Cincinnati, O. Mfrs. mechanical pressure and gravity lubricators, exhaust pressure regulators, oil pumps, cocks for oil, air and gasoline; crank cases, generator valves, needle valves. Mem. M. & A. M. Cap. \$2,000,000. Est. since 1862. E. H. Lunkenheimer, Pres.; C. F. Lunkenheimer and S. L. Moyer, Vice-Pres.; Wm. H. Muench, Treas.; David C. Jones, Sec.; Henry Ritter, Supt.

Lunken Valve Co.—35 Great Dover St., London, S. E., England. Mfrs. carburetters.

Lurie, John.—Proprietor The Auto Supply Co., 1733-37 Broadway, New York City.

Luries Automobile Depot.—287 Morris Ave., New York City. Garage.

Lusk, Rollin W.—Vice-Pres. The Auto Shop Co., 731 Vincent Ave., N. E., Cleveland, O.

Lustre Chemical Co.—1303 Michigan Ave., Chicago, Ill. Mfrs. carburetters. Wm. L. Paul, Pres., Sheridan, Ore.; G. W. Merwin, Vice-Pres., Sheridan, Ore.; W. P. Powers, Sec. and Treas., Chicago, Ill.

Luthy, G. G.—Sec., Purch. Agt., The Bartholomew Co., Peoria, Ill.

Lutia, L. I.—239 Jefferson Ave., Detroit, Mich. (Merkel.)

Luttrell Co., The.—1711-14th St., N. W., Washington, D. C. (Buick.) Inc. \$10,000. Incorporators: S. Alwin Muehlisen, Samuel A. Luttrell, E. Catesby Rowzee.

Lutz Co., Wm. F.—219-221 E. 4th St., Santa Ana, Cal. (Buick.) Est. 1892. Cap. \$50,000. Wm. F. Lutz, Pres.; A. J. Visel, Sec. Repairing.

Lutz, Wm. F.—Pres. Wm. F. Lutz Co., 219-221 E. 4th St., Santa Ana, Cal.

Luverne Automobile Co.—Luverne, Minn. Mfrs. gasoline automobiles, wood wheels. Garage.

Lux, Fabbrica di Automobili e Cicli.—2 corso Valentino, Turin, Italy. Mfrs. gasoline automobiles. (Lux cars and motorcycles.)

Lydon, A. S.—Ann Arbor, Mich. (Dragon.)

Lyell & Co., J. M.—Farnham, Va. (Holsman.)

Lyford Bros.—625 E. Washington Ave., Bridgeport, Conn. (Oldsmobile.)

Lynch Auto Co., A. S.—Independence, Ia. (Waltham.)

Lynch Co., Frank.—Fargo, N. D. (Cadillac, Pope-Waverley.)

Lynn Auto Co.—274 Broad St., Lynn, Mass. Mfrs. gasoline and kerosene burners. (Queen.)

Lyon, Geo. L.—Main and Chapel Hill St., Durham, N. C. (Reo, Premier.)

Lyon Rubber Co.—Akron, O. Mfrs. tire cement.

Lyons & Co.—Grand Forks, N. D. (Indian, Cadillac, Franklin.)

Lyons, John P.—Bellefonte, Pa. (Cadillac.)

Lytle, F. E.—Purch. Agt. The Garford Co., Elyria, O.

Lyttle, Herbert H.—An American racing driver who has participated in many contests in this country and in the Bennett Cup Race in 1905, driving a Pope-Toledo car. He participated in the second Vanderbilt race and finished in the elimination trials in the third Vanderbilt race, but was disqualified for being towed.

M

M.—Symbol for "magnetic moment."
m.—A symbol for the strength of a pole of a magneto.

Mn.—Symbol for "manganese."

m. e. p.—An abbreviation of "mean effective pressure."

mm.—An abbreviation of "millimetre."

m. m. f.—An abbreviation of "magneto motive force."

m. o. v.—An abbreviation of "mechanically operated valve."

m. p. h.—An abbreviation of "miles per hour."

μ.—A symbol for "permeability" and for "micron."

μμ.—A symbol for the millionth part of a millimetre.

Mabbet, F. A.—191 Main St., Rochester, N. Y. (Cadillac, Oldsmobile.)

Macadam.—A roadway made of small broken stone laid on either a soft or hard substratum. See Telford.

Macbeth-Evans Glass Co.—Pittsburg, Pa. Mfrs. lamp reflectors.

MacFarland-Powell Auto Co.—1618 Glenarm St., Denver, Colo. (Pope-Hartford.) Cap. \$25,000. F. L. MacFarland, Pres.; Fred M. Powell, Vice-Pres. and Mgr.; J. P. Evans, Sec.; E. N. MacFarland, Treas.

Machine.—An assemblage of inter-related movable parts, forming an appliance for transmitting and modifying forces and the motion produced by them. A force employed to move a machine is a "motor." The moving force in a machine is called the "power." The place of its appliance is the "point of application;" the line in which such point tends to move is the "direction of the power;" the resistance to be overcome, the weight;" and that part of the machine immediately applied to the resistance, the "working point."

Machine-element.—A single part of a machine. See Member.

Machine, Flying.—An apparatus differing from the balloon in the fact that it is not only propelled, but supported by its own actively exerted energy. The attempts of inventors to imitate this method of self-support and flight by human power have been numerous.

Machine-screw.—See Screw, Machine.

Machine Electric Supply Co.—117 N.

Mulberry St., Muncie, Ind. (Mitchell, Maxwell, National.)

Machinery Forging Co.—Hamilton and Marquette Sts., Cleveland, O. Mfrs. drop forgings, machine work to order, screw machine products.

Machine Rijwiel en Automobielenfabrick Simplex.—Overtoom 85, Amsterdam, Holland. Mfrs. Simplex motorcycles.

Machinery.—Pub. at 49 Lafayette St., New York City.

Machining.—A general term for processes carried out by machine-tools, such as planing, shaping and milling in metal work.

Mackeller, Henry.—Overbrook, Pa. Garage.

MacIlroy, Wm. H.—Sec. De Barres Automobile Co., 1968 Broadway, New York City.

MacInnis, D. A. & J. C.—120 Michigan St., Toledo, O. Repairing.

Mackay, D. C.—Pur. Agt., Matheson Motor Car Co., Wilkes-barre, Pa.

Mackay, Heinen & Co.—San Antonio, Tex. (Holsman.)

Mack Bros. Motor Car Co.—949 Broadway, New York City. Garage.

Mack Bros. Motor Car Co.—Allentown, Pa. Makers of the Manhattan truck and passenger car; first marketed July, 1902. Cap. \$300,000. Thos. Rush, Pres.; J. M. Mack, Vice-Pres.; J. S. Mack, Treas.; Leo. Schimpff, Sec.; J. M. Mack, Gen. Mgr., Designer. Supt., Pur. Agent; W. S. Stevenson, Sales and Advt. Mgr. Agents and dealers: Chelsea Auto Storage Co. 520 W. 37th St., New York City. The Hackett Motor Car Co., 218 Paterson St., Paterson, N. J. D. W. Hughes, 1001 Chestnut St., Philadelphia, Pa. Mack Bros. Mfg. Co., 540 Atlantic Ave., Brooklyn, N. Y.

Mack, H. A.—206 E. Market St., Lima, O. (Buick, Cadillac, Franklin.)

Mack Mfg. Co., Thos. A.—401-407 St. Paul Ave., Jersey City, N. J. Mfrs. screw machine products, stampings.

Mackey, G. A.—Mgr. factory, National Auto Top Co. Main office, 1904 Broadway; factory, 244-50 W. 49th St., New York City.

Mackin, M.—Director Neer Air Cooled Engine Co., Plain City, O.

Mackintosh, Hemphill & Co.—Pittsburg, Pa. Mfrs. steel castings.

MacLean-Brandon Oil & Supply Co.—65 Long Wharf, Boston, Mass. Mfrs. oils.

MacLean, H.—Sec. Michigan Bolt & Nut Works, foot Mildrum Ave., Detroit, Mich.

MacMahon, W. A.—Partner in firm Crane & MacMahon, 8 Bridge St., New York City.

MacNamara, Lewis Petrie.—Importer B. Waverly, N. Y., June 23, 1875. Ed. college. Mem. Bayside Yacht Club. Res., Bayside, L. I. Office, 1591 Broadway, New York City. In the trade since 1899. One of the original incorporators and stockholders of Smith & Mabley, and Gen. Mgr. to Sept., 1905. Paris Mgr. to Oct., 1906, when he left to take over Renault Agency.

MacNamara, Lewis P.—1591 Broadway, New York City. (Renault.) U. S. agent for Audineau & Cie, body builders, Paris, France. Est. 1899.

MacNaughtan Company, James.—29 W. 42nd St., New York City. Makers of the Hercules electric commercial cars; first marketed November, 1905. Cap. \$100,000. James MacNaughtan, Pres., and Treas.; F. J. Wells, Engineer.

MacNish Auto Co.—3667 Olive St., St. Louis, Mo. (Queen, Ford, Rambler, National.)

Macomber, Frank Grant.—Automobile editor Hartford Globe, Hartford, Conn. B. North Manchester, Ind., Oct. 20, 1873. Ed. public and high schools. Two years Union College.

Macon Automobile Club.—H. L. Lamar, Jr., Sec., Macon, Ga.

Macourek, F. S.—Pur. Agt. Peerless Motor Car Co., 93d and Quincy Ave., Cleveland, O.

Macquart et fils et Cie.—Route de Corbeil, Montgeron, Seine-et-Oise, France. Mfrs. motorcycles.

Macrae, Hector.—316 St. Paul St., Baltimore, Md. Mfr. storage batteries.

Macular-Parker Co.—Boston, Mass. Mfrs. miscellaneous wearing apparel.

MacWilliam, George McIntosh.—Pres. and Gen. Mgr. Darracq Motor Car Co. B. Aberdeenshire, Scotland, Oct. 3, 1872. Ed. public schools, Calais, Me.; Eastman Business College, Poughkeepsie, N. Y. Special courses, evening in New York City. Director Darracq Motor Car Co., Michelin Tire, American Agency, Inc. Mem. A. C. A., N. Y. Motor. St. Andrew's Society, Maine Society. Res., 65 Prospect St., East Orange, N. J. Office, 1989 Broadway, New York City. In the trade since 1902. Used first car 1903. Organized and headed Michelin Tire American Agency, Inc., 1905. Recreation, automobiling.

Madden, H. S.—Sec., Treas. and Mgr.

Noye Mfg. Co., 50 Lakeview Ave., Buffalo, N. Y.

Madigin, J. Wilford.—Officer Crofton Storage Battery Co., 423-25 W. Queen St., Toronto, Canada.

Madison Automobile Garage.—116 S. Pinckney St., Madison, Wis. (Ford, Reo.) Est. 1901. L. F. Schoelkopf, Prop. Garage, 20 cars; repairing; battery charging.

Madison-Kipp Mfg. Co.—Madison, Wis. Mfrs. oil pumps.

Madison Square Garage.—231 E. 33d St., New York City. Garage.

Magee, G. M.—Huron, S. Dak. (Buick.)

Magie Bros.—9-11 N. Canal St., Chicago, Ill. Mfrs. grease, oils, automobile body polishes.

Magliola e figli.—10 via Mazzani, Biella, Italy. Mfrs. bodies.

Magna Garage.—Holyoke, Mass. (Buick, Stevens-Duryea.)

Magnard et Cie.—Fourchambault, Nièvre, France. Mfrs. steam commercial automobiles.

Magne, Auguste.—Moulins, Allier, France. Mfrs. wearing apparel, fur coats.

Magnet.—A piece of metal capable of exerting and being acted upon by magnetic force. A magnet is either "natural" when, like the lodestone, it is found naturally, or "artificial," when magnetism has been given to it by placing it in the field of another magnet or in that caused by an electric current.

Magneta Actiengesellschaft.—Zürich, Switzerland. Mfrs. high tension magnets.

Magnet Cement & Dressing Co.—878 N. 48th St., Philadelphia, Pa. Mfrs. tire cement.

Magnetic Clutch.—See Clutch, Magnetic.

Magnetic Cycle.—See Cycle, Magnetic.

Magnetic Field.—A space through which magnetic lines of force run, and in which, therefore, a force is exerted on any magnetic pole which may be placed there.

Magnetic Induction.—See Induction, Magnetic.

Magnetic Lag.—See Lag, Magnetic.

Magnetic Plug.—A make-and-break spark-plug in which the separation of the terminals is effected by the action of a magnet contained in the plug.

Magnetic Saturation.—See Saturation, Magnetic.

Magnetic Valve.—See Valve, Magnetic.

Magnetism.—The science which deals with the properties of magnets and magnetic fields. (2) The state or condition giving rise to the properties of a magnet.

Magnetization.—An operation which consists in communicating a certain quantity of magnetism to a bar of steel

in order to convert it into an artificial magnet. All such processes of magnetization are by "induction," i. e., the development of a certain magnetic field in the bar to be magnetized.

Magnetization, Intensity of.—Called also "field intensity." A measure of magnetic strength based upon the idea of magnetic poles and action at a distance. It is numerically equal to magnetic moment divided by volume. See Moment, Magnetic.

Magnetizing Force.—See Force, Magnetizing.

Magneto.—A mechanical generator of electricity based upon the electro-magnetic induction produced in the field of

on the armature, and no coil is employed. The break in the current at the spark-plug occurs just as the intensity of the current reaches its maximum.

In the other low-tension system a commutator is employed in connection with the magneto, and the current can be broken at any time desired, and not necessarily at the time when the height of the electric wave is reached.

The first of the high-tension systems uses an armature having two windings instead of one, a primary of coarse wire, and a secondary of fine wire, which is wound around the primary. The magneto is provided with a mechanical or magnetic "breaker," which is used for

Fig. 1

a magnet. A magneto consists of two essential parts—of an armature and an inductor

The inductor of a magneto consists of permanent magnets that generate a magnetic field even in a state of absolute rest. This is the essential difference between a magneto and a dynamo, in which the inductor is an electro-magnet. The armature may be defined as a coil of conducting wire rotating in the magnetic field created by the inductor. The armature of both types of generators consists of a piece of soft iron provided with lengthwise grooves in which the wire is wound, the winding being contrary to that of the thread on a spool. The current produced by the magneto is of an alternating nature, but is converted into a direct or continuous current by means of a commutator on the armature shaft.

In automobilism magnetos are employed for firing the gaseous mixture. There have been two forms of magneto-electro ignition in use, low-tension or make-and-break, representing the older, and the high-tension magneto system, which has been developed within five years. These two forms are again divided into two systems.

In the first system, of the low-tension form, there is only a primary winding

obtaining the inductive effect in the secondary winding. For the operation of this device no coil is necessary. Some of the magnetos that employ this system are the Simms-Bosch, Splitdorf and Gianoli. The second high tension makes use of a low-tension magneto that supplies a current to an induction coil provided with a mechanical contact-breaker, which breaker in the primary produces the inductive effect in the secondary winding of the coil. On this general principle is modeled the Eisemann-Lavalette ignition system. The essential parts of this system and their relation to each other is shown in Fig. 1. The lines of magnetic force are produced by permanent steel magnets which are clamped to the cast iron pole-pieces between which the armature rotates. At the time of the greatest potential in the armature the current is broken by contact-breaker, which is actuated by cam, and a current of high potential or voltage is induced in the secondary winding of the transformer coil.

It will be noted that the points of the contact-breaker are in contact except for the brief instant when separated by the action of the point of the cam on the lever. It is obvious that the armature winding is short-circuited upon itself except at the time when the points are so

separated. The armature of the winding being thus short-circuited, there will be no generation of current. When the points are separated, there is a sudden flow of current through the primary winding of the transformer coil, which induces a secondary current of high potential in the other winding. This secondary current is conducted to the distributor-arm of the distributor which is then in contact with one of the four segments of the distributor-plate and which are in turn connected with the various spark-plugs. There may be any number of these segments on the distributor, the only change being necessary is that the break take place more rapidly between the contact breaker points, which may

thus be closed at any time when the external circuit has too strong a resistance. In this way the coil becomes protected.

The actual construction of the Eismann-Lavalette magneto is shown in Fig. 2, which gives a longitudinal cross section and view of the mechanism. The parts as indicated by the lettering are as follows: A, armature; a, armature windings; B, permanent magnets; C, copper bolt; D, carbon brush for primary current; E, spring for carbon brush D; F, terminal for primary current; G, small distributor driving-pinion; H, distributor driving-gear; I, distributor-shaft; K, grease-cup for distributor-shaft; L, distributor-plate or base, composed of an insulating material; M, high-tension dis-

Fig. 2

be accomplished in various ways. The condenser shown (Fig. 3) is coupled in multiple with the primary wires, so as to absorb the spark which would otherwise occur between the contact-breaker points, and be liable to burn and pit them, which would seriously affect the operation of the magneto.

If, owing to imprudence, too great a continuity of secondary current has been produced (for instance, if the conducting wire of the plug which it has to feed, and which should keep sparking with the rest of the cylinders, has become loosened, or if a secondary circuit becomes accidentally broken), the secondary circuit will have no path open to it and will endeavor to pass on a way with less resistance and sometimes get across the insulating-paper of the coil and render it useless. In order to prevent such accidents, there is placed on the coils a fitting called a "safety spark gap," which consists of two pointed brass fingers, fixed on the terminals of the coil and directed toward, but separated 7 or 8 mm. from, each other. The secondary current will pass over these 7 to 8 mm. and

tributer-arm; N, carbon brush for distributor-arm and spring; O, steel brush for distributor-arm with spring; P, terminal for high-tension current from secondary winding of transformer coil; Q, cover for high-tension distributor; R, contact-breaker; S, platinum contact points; T, safety contact-spring; U, pole-pieces; V, steel cam; W, advance lever; X, main bearings; Y, wicks for lubricating main shafts; Z, cover for make-and-break mechanism.

The functions of the various parts are as follows: The shuttle-shaped soft iron armature, A, revolves in a magnetic field which exists between the pole-pieces U, which are attached to the permanent steel magnet B. This armature is provided with a number of silk insulated copper wire windings (a) one end of which is fastened to the armature core, the other end being attached to the copper bolt C, which passes through the armature-shaft, and is electrically insulated therefrom. The carbon brush D is in electrical contact with the head of this bolt. When the armature A revolves, an alternating current is gener-

ated in the copper windings (a), alternating at each 180 degrees of a revolution and attaining its maximum twice during a revolution. This alternating current is alternately opened and closed at the contacts S by the contact lever B. This contact-lever is operated by the steel cam V. When the platinum contact-points, S, are opened an impulse passes through the primary winding of the transformer coil, and generates by induction a high-tension current in the secondary winding of the same. This current is conveyed to the high-tension distributor, L M, which is mounted on the magneto and is thus distributed among the various cylinders, in which the high-tension current flashes at predetermined instants at the respective spark-plugs, in the form of a hot, fat spark. A condenser, which forms part of the transformer coil, and is well insulated, receives the extra current generated at the interruption of the platinum contact-points, and intensifies the ignition spark.

In Fig. 3 is illustrated the latest model of the Eisemann-Lavalette magneto, which is adapted not only for motor car, but also motor-boat use, and has likewise proved very serviceable for motor-cycle ignition. See Dynamo.

Magneto-ignition.—See Ignition and Magneto.

Magnolia Metal Co.—113-115 Bank St., New York City. Mfrs. various brands of anti-friction and babbitt metals. Cap. \$300,000. Est. 1886. E. C. Miller, Vice-Pres. and Gen. Mgr.; F. Jordan, Sec. and Treas.; E. C. Robson, Asst. Sec.; L. D. Allen, Western Mgr.; Fisher Bldg., Chicago, Ill.; J. H. Hutchins, Mgr., 31 St. Nicholas, Montreal, Can.; Dwight Hixcox, Pacific Coast Rep., Mchts. Exchange, Bldg., San Francisco, Cal.

Make - and - Break, Magnetic.—See Spark-plug, Magnetic.

Malcolm, Thomas.—Pres. Riverside Steel Casting Co., 451-473 Riverside Ave., Newark, N. J.

Malcomson, A. S.—Vice-Pres. Franklin H. Kalbfleisch Co., Broadway and 16th St., New York City.

Malcomson, A. Y.—Pres. and Treas. Aerocar Motor Co., Mack and Beaufait Aves., Detroit, Mich.

Malden Automobile Club.—H. K. Frost, Sec., Malden, Mass.

Malden Automobile Co.—121 Madison St., Malden, Mass. Garage.

Malicet et Blin, Etablissements.—103 Ave. de la République, Aubervilliers, France. Mfrs. ball bearings, steering, differential and transmission gears.

Maljournal et Bourron.—11 Croix-Jordan, Lyons, France. Mfrs. primary batteries.

Malleability.—Capability of being wrought under the hammer, a property belonging to many of the metals in an eminent degree and upon which largely depends their utility. The most malleable, in order of softness, are lead, tin, gold, zinc, silver, copper, platinum and iron. But gold may be beaten thinner than any other metal. It can be hammered so thin that the thickness of a million leaves will be less than an inch.

Malleable Iron Fittings Co.—Branford, Conn. Mfrs. malleable iron castings, steel castings.

Mallet, E.—10 rue Denis-Papin, Tours, France. Mfrs. Auto-fauteuil tricarcs.

Mammoth Garage Co.—Mamaroneck Ave. and Post Road, White Plains, N. Y. Garage. (Ford.)

Manchester Auto Co.—Main St., Manchester, Ia. (Jackson, Enick, Northern, Cadillac, Pope-Waverley, Reo, Columbia, Franklin.) Est. since 1906. Garage, 25 cars; repairing.

Manchester Auto Garage.—61 N. Main St., Manchester, Conn. (Lambert.)

Manchester Auto Garage.—50 Granite St., Manchester, N. H. (Buick, Columbia, Oldsmobile.)

Manchester Auto Machine Co., Ltd.—1516 Locust St., Allegheny, Pa. Garage.

Manchester, P. E.—Vice-Pres. National Motor Vehicle Co., E. 22d St., Indianapolis, Ind.

Manchester Tire Co.—Oxford Road, Manchester, England. Mfrs. pneumatic tires.

Mandery, Jos. J.—Prop. Rochester Automobile Co., 158 South Ave., Rochester, N. Y.

M. & A. Basket Co.—239 E. 27th St., New York City. Mfrs. hampers.

M. & M. Mfg. Co.—Akron, O. Mfrs. tire cement, patches and treads.

Man, F. J.—Mgr. Automobile Accessories Dept., Republic Belting & Supply Co., 1616 W. 3d St., Cleveland, O.

Mandrel.—A general term for a cylindrical piece on which work can be mounted for operation in a lathe. (2) The spindle or headstock of a lathe.

Manecke, H. R.—Decatur, Ill. Garage.

Manganese.—A lustrous reddish-gray metal of the atomic weight 55. It is stable in contact with the air only when pure, and decomposes water at 212° F. (100° C.)

Manganese, Binoxide.—Binoxide of manganese exists in a natural state (pyrolusite) crystallized in prisms, having the luster of silver. Its powder, called "black oxide of manganese," is black. Mixed with plumbago it is used in automobilism as a depolarizer, in the formation of dry batteries.

Manganese Bronze.—See Bronze.

Manganese, Ferro.—See Ferro-Manganese.

Mangham, John W.—Care Spalding Cotton Mills, Griffin, Ga. (Maxwell.)

Manhasset Shipbuilding & Repair Co.—Port Washington, L. I. Mfrs. motor boats.

Manhattan Auto Storage & Garage.—541 W. 52d St., New York City. Garage. automobile covers and tops, glass wind shields.

Manhattan Auto Top & Body Co.—249 W. 64th St., New York City. Mfrs. automobile covers and tops, glass wind shields.

Manhattan Brass Co.—332 E. 28th St., New York City. Mfrs. brass parts and fittings, moulding, etc., automobile lamps, horns. Est. 1865. Gilbert M. Smith, Pres. and Treas.; Jonathan H. Crane, Vice-Pres.; Frank A. Seibert, Sec.

Manhattan Electrical Supply Co.—17 Park Pl., New York City. Mfrs. dry batteries, bells, spark coils.

Manhattan Lamp Works.—530 W. 28th St., New York City. Mfrs. acetylene generators, lamps.

Manhattan Motor Car Co.—1329 Michigan Ave., Chicago, Ill. (Acme.)

Manhattan Rubber Co.—18 Vesey St., New York City. Mfrs. rubber mats.

Manhattan Screw & Stamping Works.—West End Ave. and 67th St., New York City. Mfrs. automobile lamps and generators, exhaust horns, adjustable tire brackets, oil guns, pumps, flexible tubing, screens. Cap. \$200,000. Est. 1902. Samuel Wilner, Pres.; Louis F. Leland, Vice-Pres. and Treas.; Elias R. Wilner, Sec. and Gen. Mgr.

Manhattan Storage Co.—1611 Broadway, New York City. Mfrs. and jobbers automobile supplies, tools, wearing apparel, tires, tire brackets, lamp brackets, robe rails, foot rests, trunk racks. Est. 1890. D. Grinberg and A. Morris, Props.; Chas. Gomprecht, Mgr. branch, 53 Nassau St., New York City.

Manifatture Martiny.—90 Corso Umberto Primiero, Rome, Italy. Mfrs. pneumatic tires.

Manifold.—A tube, usually of cast metal, with one or more flanges or screw-threaded outlets for pipe-connections, used in cases where it is desired to convey steam, water, air or

gas from a large pipe into several smaller ones. (a) One of the inlet and exhaust pipes of an internal combustion motor. See Bus-pipe.

Mankato Automobile Club.—Chas. M. Masters, Sec. Mankato, Minn.

Manley Bros.—Rear Brooks House, Brattleboro, Vt. (Ford, Rambler, Jackson.)

Manley Bros.—Harvard, Ill. (Queen, National.)

Manley, D. V. R.—Pres. and Gen. Mgr. National Cement & Rubber Mfg. Co., 3053-5-7-9 Monroe St., Toledo, O.

Manlove Gate Co.—272 E. Huron St., Chicago, Ill. Mfrs. automatic driveway gates. Not Inc. Est. 1900. G. B. Manlove, Prop. and Mgr.

Manlove, G. B.—Owner and Mgr. Manlove Gate Co., 272 E. Huron St., Chicago, Ill.

Mann, A. J.—Pres., Sec., Treas. and Gen. Mgr. Long & Mann Co., Beehive Bldg., Graves St., Rochester, N. Y.

Mann, A. S.—Pres. Long & Mann Co., Beehive Bldg., Graves St., Rochester, N. Y.

Mann Co., Leon.—699 Broadway, New York City. Mfrs. wearing apparel, coats.

Mann, W. F.—Yonkers, N. Y. (Waltham.)

Manning, A. C.—Interlaken, N. Y. (Holsman)

Manning, E. H.—Gen. Mgr., The E. H. Manning Transmission Co., 307-308 Monger Bldg., Elkhart, Ind.

Manning, E. J.—Monroe, Wis. (Holsman.)

Manning Forge Tool Co.—Mannington, W. Va. Repairing.

Manning Mfg. Co.—Holyoke, Mass. Mfrs. tire shoes.

Manning Transmission Co., The E. H.—307-308 Monger Bldg., Elkhart, Ind. Mfrs. double and single friction transmissions. Cap. \$100,000. Est. Dec., 1906. E. H. Manning, Gen. Mgr.

Manograph.—An apparatus for taking indicator diagrams of a gas-motor. There are several types of the instrument in the market, one of which, the Schultze manograph, is shown in the accompanying figure. The diagram is traced by a beam of light reflected upon a ground glass by a mirror, which oscillates at the same time on both a vertical and horizontal axis. A small Nernst lamp supplies the light to the manograph, and as this type of lamp requires an alternating current, the latter is generated by means

of a magneto driven by a small direct-current dynamo and connected in circuit with the lamp, through a rheostat. The movement of the mirror upon its vertical axis, which traces the horizontal line, is obtained from the 2-to-1 cam-shaft, by means of bevel-gear driven rods, which make the same number of revolutions per minute as does the crank-shaft, and causes the mirror to oscillate by means of a suitable cam. The oscillation of the mirror upon its horizontal axis is obtained by means of the impulses of the gases upon a diaphragm in the box. The impulses given the diaphragm cause the mirror to reflect the beam of light in a vertical direction, thus indicating the pressure obtained in the cylinder at any given part of the stroke. The instrument makes it possible to see indicated the variations in pressure from any cause whatever, and is a most valuable appurtenance for the proper testing of any type of internal combustion engine.

Manometer.—An instrument for measuring the elastic force of gases or vapors. Depending on the manner of balancing the pressure, there are "open-air manometers," those which balance the weight of a column of liquid (water or mercury) in an open tube; "compressed-air manometers," where the pressure is balanced by that of the air confined in a closed tube; and "metall'c manometers," which use the elastic deformation of a closed tube or a diaphragm of thin metal. See Pressure Gauge.

Manross, A. N.—Designer Corbin Motor Vehicle Corp., New Britain, Conn.

Mansfield & Son, W. H.—Koleen, Ind., and Bloomfield, Ind. (Maxwell, National.)

Mansfield Auto & Supply Co.—64 N. Walnut St., Mansfield, O., and Ashland, O. (Buick, Cadillac.)

Mansfield Mfg. Co.—Pittsburg, Pa. Mfrs. brass pipe fittings.

Mantovani, Carlo.—88 via Saluzzo, Turin, Italy. Mfr. motorcycles.

Manuel Bros.—Richford, Vt. (Elmore, Cadillac.)

Manuel, G. M.—Edmonton, Alberta Can. (Buick.)

Manufacture Française d'Armes et Cycles de Saint Étienne.—St. Étienne Loire, France. Mfrs. motorcycles.

Manufacturers' Can Co.—132-36 Mulberry St., Newark, N. J. Mfrs. oil cans, tanks.

Manufacturers' Foundry Co.—Waterbury, Conn. Mfrs. gray iron castings, machine work to order, patterns.

Manufacturers' Motor Car Co.—54 W. 43d St., New York City. Garage.

Manufacturers' Selling Co.—1777 Broadway, New York City. Mfrs. rubber cloth, cloth and carpet trimmings.

Manufacture Suisse de Vélocipèdes.—Courfaivre, Switzerland. Mfrs. motorcycles. (Condor motorcycles.)

Manzel, A.—Sec. Manzel Bros. Co., 317-19 Babcock St., Buffalo, N. Y.

Manzel Bros. Co.—317-319 Babcock St., Buffalo, N. Y. Mfrs. force feed lubricators. Cap. \$30,000. Est. 1896. Inc. 1906. H. J. Manzel, Pres. and Treas.; A. Manzel, Sec.

Manzel, H. J.—Pres. and Treas. Manzel Bros. Co., 317-319 Babcock St., Buffalo, N. Y.

Maplebay Mfg. Co.—Crookston, Minn. Mfrs. gasoline automobiles; tire treads.

Maple City Mfg. Co.—Monmouth, Ill. Mfrs. oil cans.

Marble Auto Garage, W. H.—69 Main St., Brockton, Mass. (Columbia, Locomobile, Cadillac, Knox, Winton.) Garage; repairs; supplies.

Marblehead Yacht Yard.—Marblehead, Mass. Mfrs. motorboats.

Marceau, P.—10 rue Camille-Desmoulins, Levallois, Seine, France. Mfr. make-and-break plugs.

Marcel, R.—239 bvd. Pereire, Paris, France. Mfr. automobile motors.

Marcellis et fils.—10 rue de Moresnel, Liège, Belgium. Mfrs. tire pumps.

March, A. A.—904 Benton Blvd., Kansas City, Mo. (Holzman.)

Marchand-Dufaux, Fabbrica Italiana di Vettura Automobili.—Plaisance, Italy. Mfrs. motorcycles, tricars, motorcycle and automobile motors. (Marchand-Dufaux.)

Marchesi, Enrico.—Gen. Mgr. Fiat Automobile Co. (Fabbrica Italiana Automobile Torino), Turin, Italy.

Marck frères.—Rue Hoyoux, Herstal, Belgium. Mfrs. motorcycle motors.

Marconi Wireless Telegraph Co.—18 Finch Lane, London, E. C., England. Mfrs. coils.

Mar-Del Mobile Co.—Charles St. and Mt Royal Ave., Baltimore, Md. (Packard, Franklin, Cadillac, Pope-Waverley, Gallia, Northern, Elmore.)

Marine Eng. & Mach. Co.—Harrison, N. J. Mfrs. motorboats.

Marine Glue.—See Glue, Marine.

Marine Iron Works.—Beaumont, Tex. (Maxwell.)

Marine Supply Co.—San Pedro, Cal. (Reo.)

Marion Auto Co.—Marion, O. (Maxwell, Ford, Mora, Reo, Rambler.)

Marion, J. Q.—519 San Antonio St., El Paso, Tex. (Waltham, Reading Standard motorcycles.) Est. Nov., 1903. Repairing.

Marion Mfg. Co.—Franklin, Pa. Mfrs. torch heaters, oils.

Marion Motor Car Co.—W. 15th St., and Big Four Ry., Indianapolis, Ind. Mfrs. gasoline automobiles and gasoline commercial vehicles.

Mark, Davis.—Ravenna, O. (Reo.)

Mark Mfg. Co.—Evanston, Ill. Mfrs. wrought iron and steel pipe.

Marks, Arthur A.—Vice-Pres. The Diamond Rubber Co., Akron, O.

Marlborough St. Auto Exchange.—6 Marlborough St., Newport, R. I. Garage.

Marlin, J. D.—Vice-Pres. Gilbert Mfg. Co., New Haven, Conn.

Marline.—A small rope made of two strands loosely twisted together and used for winding around ropes, cables, etc.

Marline-spike.—A tapering sharp-pointed pin used in marling, separating strands of rope in splicing, etc.

Marcusse, J. B.—30 rue du Moulin, Brussels, Belgium. Mfrs. bodies.

Marr, W. L.—Designer Buick Motor Co., Flint, Mich.

Marriott, Fred H.—An American racing driver

whose greatest performance was on the Florida Beach, between Ormond and Daytona. In February, 1906, driving a steam car, he made the present mile record of 28.15 seconds and won in the heavy-weight class, kilometer record trials, in 182.5 seconds.

Marron, J. E.—Supt. Eclipse Machine Co., Elmira, N. Y.

Mars Fahrradwerke Actiengesellschaft-Doo.—Nürnberg, Germany. Mfrs. motorcycles. (Mars motorcycles.)

Marsh, Edw. W.—Sec. Spring Perch Co., 232 John St., Bridgeport, Conn.

Marshall, A. P.—Officer Leather Tire Goods Co., 1325 Boylston St., Newton Upper Falls, Mass.

Marshall Chemical Co.—80 William St., New York City. Mfrs. metal polishes.

Marshall, Edw.—1221 Baltimore Ave., Kansas City, Mo. Garage.

Marshall House.—York, Me. (Reo, Premier.)

Marshall, S. J.—Treas. Globe Malleable Iron Co., Greenway Ave., Syracuse, N. Y.

Marshall, W. H.—Pres. American Locomotive Automobile Co., Providence, R. I.

Marshall, Wm. F.—Mgr. Tarkio Electric & Water Co., Tarkio, Mo.

Martensite.—A solution of iron carbide in iron, and which occurs in the hardest steel.

Martin & Anson Co.—2226 Indiana Ave., Chicago, Ill. Mfrs. air pumps, compressed air outfits. Est. 1902.

Martin & Co., H. G.—179 Aborn St., Providence, R. I. (Rapid.)

Martin & Son, C. Y.—209-211 Main St., Santa Ana, Cal. (Maxwell, Ford, Moline.) Est. Jan., 1906. C. Y. Martin, Mgr.; Glenn L. Martin, Salesman and Demonstrator. Garage, 24 cars; repairing.

Martin Auto Co.—Hutchinson, Kan. (Northern.)

Mass.—That which remains unchanged in all the transformations which a body may undergo. Mass must not be confounded with weight, which is simply the effect produced by the attraction of gravitation on a body. This varies with the latitude, since the earth is not perfectly round. The weight of a body is not the same at the pole as at the equator.

The British unit of mass is the standard pound avoirdupois (7,000 grains). The French unit of mass is called a gramme (15.43235 grains). It is the mass of a cubic centimetre of distilled water at 4° C. Thus the unit of mass is directly connected with the unit of length. There is no similar simple relation between the units of length and mass in the English system; a cubic inch of water weighs 252.88 grains. From a practical viewpoint, "mass" is used whenever it is a question of estimating a motion, a speed, or the intensity of a force. "Weight," on the contrary, is used when it is a question of directly estimating a work or a power.

Massachusetts Auto Co.—52 Church St., Boston, Mass. Garage.

McCurdy, Dr.—Coaticoop, Quebec, Can. (Maxwell.)

McCurdy, R. P.—Sales Mgr. Banker Bros. Co., Baum and Beatty Sts., Pittsburgh, Pa.

McCutchen, Charles G.—Sole owner McCutcheon Gear & Mfg. Co., 205 W. South St., Indianapolis, Ind.

McCutchen Gear & Mfg. Co.—205 W. South St., Indianapolis, Ind. Mfrs. steering gears, steering wheels, axles, forgings and machine work to order. Est. 1906. Chas. G. McCutchen, Gen. Mgr. Selling Agents, the American Distributing Co., Cleveland, O.

McCutcheon, C. A.—Mechanical Engr. Salisbury Wheel & Mfg. Co., Jamestown, N. Y.

McCutcheon, P.—Asst. Treas. C. T. Ham Mfg. Co., 731 Oak St., Rochester, N. Y.

McDaniel, Leo.—Cairo, Ill. (Premier.)

McDaniels, S. C.—Laurens, S. C. (Waltham.)

McDiarmid, Donald.—Head Construction Dept. C. P. Kimball & Co., 315-318 Michigan Ave., Chicago, Ill.

McDonald & Morrison Mfg. Co., A. Y.—Dubuque, Ia. Mfrs. brass pipe fittings.

McDonald Auto Co.—Memphis, Tenn. (Mitchell, Holsman.)

McDonald, D. L.—Van Wert, O. (Winton, Cadillac.)

McDonald, Ed.—Taunton, Mass. (Reo.)

McDonald, Hugh.—Valley City, N. D. Garage.

McDonald, J. B.—Jacksonville, Fla. Garage.

McDonald, Titus & Co.—61 E. Spring St., Columbus, O. (Reo, Mora.)

McDougal, Natt.—Missoula, Mont. (Buick.)

McDougall Varnish Co.—1317 Elk St., Buffalo, N. Y. Varnish.

McDuffee Automobile Co.—1501 Michigan Ave., Chicago, Ill. (De Luxe, Stoddard-Dayton, Kisselkar.)

McDuffee Automobile Co.—228-238 Wisconsin St., Milwaukee, Wis. (De Luxe, Stoddard-Dayton, Kisselkar.) Cap. \$2,400.

McElroy & Co., D. W.—San Antonio, Tex. (Stoddard-Dayton, De Luxe.)

McElroy, T.—139 Walnut St., Newark, N. J. Garage.

McEwan & Dougherty.—Park River, N. Dak. Garage.

McEwen, Edwin.—Sec. and Treas. F. B. Stearns Co., Euclid and Lakeview Ave., Cleveland, O.

McFadden, Brown.—Rook Hill, S. C. (Waltham.)

McFadden & Son, V. B.—Rock Hill, S. C. (Maxwell.)

McFarland & Gumpfer.—1329 Michigan Ave., Chicago, Ill. Repairing.

McFarland, F. L.—Pres. McFarland Powell Auto Co., Denver, Colo.

McFarland, Geo.—Pres. and Gen. Mgr. Harrisburg Auto Co., 3d and Hamilton Sts., Harrisburg, Pa.

McFarlane Wagon Works.—100 W. Harrison St., Chicago, Ill. Mfrs. wood and metallic bodies.

McFieran, J. C.—1043 3d Ave., Louisville, Ky. (Pope-Toledo, Pope-Hartford.)

McGaughy, H. G.—1345 Wabash Ave., Chicago, Ill. Garage.

McGiffert, Jas.—Ashtabula, O. (Reo.)

McGovern, Thos. L.—Sec. Fort Pitt Automobile Co., Baum St. and Euclid Ave., Pittsburg, Pa.

McGowen, J. Harry.—Cincinnati, O. (Haynes.)

McGrath, W. J.—Pres. and Treas. Aetna Brass. Mfg. Co., 4800 Hamilton Ave., Cleveland, O.

McGuckin, H. M.—Prop. and owner De Kalb Auto & Garage Co., 142 W. Main St., De Kalb, Ill.

McHenry County Automobile Club.—E. C. Jewett, Sec., Woodstock, Ill.

McIntire-Willets Mfg. Co.—Monroe and Cunningham Sts., Butler, Pa. Garage.

McIntosh Auto Co., J. B., The.—199 Jefferson Ave., Detroit, Mich. Garage.

McIntosh Auto Garage.—130 W. 102d St., New York City.

McIntyre & Bros., E. L.—114 Jefferson St., Savannah, Ga. Garage.

McIntyre, F. E.—Pine Ridge, S. D. (Waltham.)

McIntyre, Geo. B.—1221 State St., Erie, Pa. (Cartercar.)

McIrwin & Walker.—Atwood, Kan. (Jewel.)

McJunkin, Paul.—Vice-Pres. York Electric & Machine Co., 30-34 N. Penn St., York, Pa.

McKay, D.—San Antonio, Tex. Garage.

McKay, E. C.—Pres. Republic Belting & Supply Co., 1616 W. 3d St., Cleveland, Ohio.

McKay, R. E.—Omaha, Neb. Garage.

McKeel Co., Geo. A.—Jackson, Mich. Mfrs. roller bearings, thrust bearings, screw machine work, pressed metal parts. Cap. \$111,000. Est. 1900. P. H. Withington, Pres.; Winthrop Withington, Vice-Pres.; Wm. Sparks, Sec. and Treas.

McKee, Sam L.—Segerin, Tex. (Waltham.)

McKeen, J. D.—Morris, Ill. (National.)

McKenzie, A.—Smith's Falls, Ontario, Canada. (Maxwell.)

McKibbin Mfg. Co.—South Norwalk, Conn. Mfrs. spark coils, electric switches.

McKinley Square Auto Co.—1369 Boston Rd., New York City. Garage.

McKinney, C. C.—Leather and brass mfg. company, 24-26 E. Genesee St., Auburn, N. Y.

McKinney, P. L.—Rep. Dept. Peerless Motor Car Co. of N. E., 178 Columbus Ave., Boston, Mass.

McKinnon Dash Co.—Buffalo, N. Y. Mfrs. license numbers.

McLachlan, A. D.—Sales Mgr. Royal Motor Car Co., Gordon Park Blvd. and Lake Shore Tracks, Cleveland, O.

McLaughlin, Chas. F.—Pres. East Liberty Automobile Co., Pittsburg, Pa.

McLaughlin, Jas. F.—Sec. and Treas. East Liberty Auto Co., Pittsburg, Pa.

McLaughlin, W. A.—Zanesville, O. (Jewel.)

McLaughlin, W. S.—Purch. Agt. Modern Tool Co., 4th and State Sts., Erie, Pa.

McLean Automobile Co.—1604 Broadway, New York City. (Lambert.)

McLeary, C. W.—Pres. T. E. McLeary Co., 51-53 Main St., Farmington, Me.

McLeary Co., F. E.—51-53 Main St., Farmington, Me. (Rambler, Ford.) Est. since 1877. Cap. \$10,000. C. W. McLeary, Pres.; F. E. McLeary, Treas. Garage. 15 cars. Repairing.

McLeary, F. E.—Treas. F. E. McLeary Co., 51-53 Main St., Farmington, Me.

McLellan, A. T.—511 Colorado St., Austin, Tex. Garage.

McLeod, A. J.—Rowland, N. C. (Cadillac.)

McLeod, F. N.—Florence, S. C. (Cadillac.)

McMaster, S. B.—Columbia, S. C. (Pope-Hartford.)

McMeikin, C. A.—Chief Draftsman Schubert Bros. Gear Co., 42-44 Cedar St., Oneida, N. Y.

McMillan, P. H.—Sec. and Treas. Packard Motor Car Co., Detroit, Mich.

McMullen, Roger B.—Head Sales Dept. Hydraulic Pressed Steel Co., E. 61st St., Cleveland, O.

McNab & Harlin Mfg. Co.—56 John St., New York City. Mfrs. brass pipe fittings.

McNail Brainard Engine Co.—390 Webster Ave., Long Island City, N. Y. Mfrs. gasoline marine motors.

McNall, Arthur.—East Ave. and S. Union St., Rochester, N. Y. (Peerless, Franklin, Rauch & Lang.)

McNary Co., J. E.—1606 Machnessey Bldg., Pittsburg, Pa. (Studebaker.)

McNaught & Co.—Worcester, England. Mfrs. bodies.

McNaughton, J. F.—1126 S. Main St., Los Angeles, Cal. (Doison, Mora.)

McNaughton, James.—Pres., Treas. James McNaughton Co., 29 W. 42d St., New York City.

McNellis, Chas.—Pres. and Treas. Imperial Brass Mfg. Co., 245-247 S. Jefferson St., Chicago, Ill.

McNellis, Frank.—Vice-Pres. Imperial Brass Mfg. Co., 245-247 S. Jefferson St., Chicago, Ill.

McNiece, T. B.—Supt. Humphreys Mfg. Co., 201 E. 5th St., Mansfield, O.

McNiell, D. T.—Sec., Vice-Pres. Reeves Pulley Co., 1225 7th St., Columbus, O.

McPherson, A. M.—Santa Monica, Cal. (Reo.)

McPherson, Chas.—Foreman Inspection Dept., Eclipse Machine Co., Elmira, N. Y.

McRae & Roberts Co.—227-235 Campbell Ave., Detroit, Mich. Mfrs. brass pipe fittings, water line gauges, oil guns.

McRae, F. W.—Atlanta, Ga. (Atlas.)

Meachem, T. G.—Vice-Pres. and Sales Mgr. New Process Raw Hide Co., 500-514 Plum St., Syracuse, N. Y.

Meachem, T. W.—Pres. New Process Raw Hide Co., 500-514 Plum St., Syracuse, N. Y.

Mead, W. L.—275 Ridgewood Ave., South Orange, N. J. Repairing.

Meadowbrook Cycle Co.—137-141 Jackson St., Hempstead, L. I., N. Y. Mfrs. motorcycles.

Meadville Auto Garage.—838 Market St., Malvern, Pa. Repairing.

Mears, Chas. W.—Advt. Mgr. Winton Motor Carriage Co., Cleveland, O.

Mears, J. W.—9 Ocean Parkway, Brooklyn, N. Y. (Acme.)

Mechaley Auto Co.—30-40 Summer St., Stamford, Conn. (Haynes, Pope-Toledo, Pope-Waverley, Oldsmobile, Cadillac, White.) Supplies; garage; repairing.

Mechanical Electrical Construction Co. Philadelphia, Pa. Mfrs. gasoline marine motors.

Mechanical Energy.—See Energy, Mechanical.

Mechanical Fabric Co.—Providence, R. I. Mfrs. cushions.

Mechanically-operated Valve. — See Valve.

Mechanical Supply Co.—Mission Point Bldg., Marinette, Wis. (Rambler, Maxwell, Rapid.)

Mechanics.—The study of motion in its relations to the forces which produce it and of forces in equilibrium. Rational mechanics comprises "cinematics" (see "Cinematics"), in which is studied motion independently of the forces which produce it, consequently from a geometric standpoint solely; "dynamics" (see "Dynamics"), in which is studied the relations of motion to the forces which produce it; and "statics" (see "Statics"), a

particular case of dynamics in which there is no motion, and in which is consequently studied the action of forces in equilibrium in a point or in a material system. Applied mechanics includes the applications of the preceding theories to practice; resistance of materials, graphic statics, hydraulics, prime movers, etc.

Meckel, F. L.—77 E. 13th St., Chicago, Ill. Mfrs. automobile tops.

Medart, Fred.—St. Louis, Mo. Mfr. motorboats.

Medina Stamping & Machine Co.—Church St., Medina, N. Y. (Winton, Cadillac, Oldsmobile, Autocar, Pope-Toledo.)

Meech, Chas. E.—Sec., Treas. and Director Wilmarth & Morman Co., 585 Canal St., Grand Rapids, Mich.

Meeker Foundry Co.—95 Clay St., Newark, N. J. Mfrs. gray iron castings, malleable iron castings.

Meeks, Dr. H. A.—88 E. Main St., Meriden, Conn. (Stevens-Duryea, Pope-Hartford.)

Meenan & Studt.—Avenida Juarez, Mexico City, Mexico. Garage.

Mega.—A prefix indicating that the term which it precedes is multiplied by a million.

Megargel, Ralph G.—913 Olive St., Scranton, Pa. (Elmore.)

Mégevet et Cie., C. J.—Geneva, Switzerland; Bellegarde, France, and Turin, Italy. Mfrs. oil and acetylene lamps, radiators.

Megohm.—A measure having a value of 1,000,000 ohms.

Meguire, Dr. T. D.—3907 Borden St., Cincinnati, O. (Cartercar.)

Mehlig, J.—113 St. Charles St., New Orleans, La. (Knox.)

Meinders, Ed. H.—211 W. High St., Piqua, O. Repairing.

Meiselbach Motor Wagon Co.—North Milwaukee, Wis. Mfrs. gasoline commercial automobiles.

Meisel Press & Mfg. Co.—944-948 Dorchester Ave., Boston, Mass. Mfrs. transmission gears, steering apparatus.

Melanowski, Leo.—Designer Aerocar Motor Co., Mack & Beaufait Aves., Detroit, Mich.

Melle, Max.—Mgr. Peerless Garage, 942-944 Bedford Ave., Brooklyn, N. Y.

Melville, A. B.—Vice-Pres. Lipman Mfg. Co., 300 Pleasant St., Beloit, Wis.

Member.—A single portion of a structure or machine. See Machine Element.

Memphis Auto Co.—Memphis, Tenn. (Thomas Flyer.)

Menasco, A. S.—Sec. and Treas. American Motor Car Co., Indianapolis, Ind.

Mendelssohn et Co., Ltd., E.—Courbevoie, Seine, France. Mfrs. gasoline automobiles. (Mendelssohn cars.)

Mendenhall, C. S.—Race St. and Opera Pl., Cincinnati, O. Pubs. road maps.

Menegaut-Basset, G.—35 Ave. Laplace Arcueil, Seine, France. Mfrs. non-skids, pneumatic tires.

Menges Motor Car Co.—Grand Rapids, Mich. Mfrs. gasoline automobiles.

Menominee River Auto Co.—418 Main St., Menominee, Mich. (Reo, Premier, Queen, Ford.)

Mentel's Auto Agency.—Springfield, O. (Jackson.)

Mercantile Motor Car Co.—368 Cumberland St., Brooklyn, N. Y. Repairing.

Mercantile Motor Co.—Jersey City, N. J. Mfrs. gasoline commercial automobiles.

Mercedes Import Co.—590 5th Ave., New York City. (Mercedes.) Selling branches in Boston, Mass.; 1449 Michigan Ave., Chicago, Ill.; 153 N. Broad St., Philadelphia, Pa.

Mercer County Automobile Club.—W. F. Sadler, Jr., Sec., Trenton, N. J.

Mercer, James R.—Sec., Treas. and Mgr. National Wheel Co., Jackson, Mich.

Mercer, W. E.—Ventura, Cal. (Maxwell.)

Merchant & Evans Co.—517 Arch St., Philadelphia, Pa. Importers and mfrs. Hele-Shaw clutches, change speed gears, metal tire cases, axles, special steel frames. Branches in New York, Chicago, Baltimore, Kansas City.

Merchant, B. D.—Alameda Garage, 2150 Central Ave., Alameda, Cal. (Pope-Hartford, Franklin, Royal, Hewitt.) Est. 1905. B. D. Merchant, Pres. Garage, 20 cars; repairing.

Mercury.—A remarkable metal, sometimes called "quicksilver," of a nearly silver-white color, and having a very high degree of luster. It is liquid at all ordinary temperatures, and solidifies only when cooled to -40° F. Its symbol is Hg, and its atomic weight 200. It is used in automobilism for amalgamating the zinc plates of ignition batteries. See Amalgamation.

Mercury Auto Co.—2119 N. Broad St., Philadelphia, Pa. Garage.

Meridian Auto & Cycle Co.—Meridian, Miss. Garage.

Meriden Auto Station.—41 W. Main St., Meriden, Conn. Garage.

Meredith, J. L.—Elburns, Ill. (Maxwell.)

Merkel, Jos. F.—Vice-Pres., Designer and Supt. Merkel Motor Co., 1090 26th Ave., Milwaukee, Wis.

Merkel Motor Co.—Milwaukee, Wis. Mfrs. Merkel motorcycles.

Merrifield, F. E.—Sales Mgr. and Advt. Mgr. Outing Boat Co., Kankakee, Ill.

Merrihew, S. Wallis.—Vice-Pres. Automobile Topics, Inc., 402 Times Bldg., New York City. Editor Automobile

Topics, International Motor Cyclopaedia, American Lawn Tennis.

Merril Spring Co., E. R.—530 W. 28th St., New York City. Mfrs. leaf springs.

Merritt & Co.—1022-30 Ridge Ave., Philadelphia, Pa. Mfrs. expanded metal lockers and universal steel shelving for garage furnishings.

Merritt & Simpson.—35 Arlington Ave., Newark, N. J. (Waltham.)

Merritt, H. R.—Treas. Oil City Oil & Grease Co., Oil City, Pa.

Mersereau, J. W.—Treas. The E. J. Kehoe Co., Inc., 1659 Broadway, New York City.

Mersereau, T. W.—Sec. The E. J. Kehoe Co., Inc., 1659 Broadway, New York City.

Mershon & Morley.—Saginaw, Mich. Mfrs. portable houses.

Mervelle, F., et G. Garnier.—57 bvd. Richard-Lenoir, Paris, France. Mfrs. tops.

Merwin, G. W.—Vice-Pres. Lustre Chemical Co., Sheridan, Ore.

Merwin, J. N.—Sales and Advt. Mgr. Forest City Motor Co., 101-149 Walnut St., Massillon, O.

Merz Frères.—139 Faubourg St. Denis, Paris, France. Mfrs. goggles.

Merz, Gebrüder.—25 Weingarten, Frankfort-Bockenheim, Germany. Mfrs. goggles.

Mesh.—To engage, as the teeth of gears or racks. "Always in mesh" is said of pinions always in gear as distinguished from the sliding-gear, the pinions of which come into engagement only at the moment of change of speed.

Mesinger, Frederick.—Partner H. & F. Mesinger Mfg. Co., 1801-07 1st Ave., New York City.

Mesinger Mfg. Co., H. & F.—1801-1807 1st Ave., New York City. Mfrs. leather pneumatic non-skid tires. Est. 1897. Partnership Henry Mesinger and Frederick Mesinger.

Mesinger, Henry.—Partner H. & F. Mesinger Mfg. Co., 1801-07 1st Ave., New York City.

Messner, Paul.—Head Repair Dept., Harrisburg Auto Co., 3d and Hamilton Sts., Harrisburg, Pa.

Mesta Machine Co.—Pittsburg, Pa. Mfrs. malleable iron castings, steel castings.

Mestre et Blatgé.—5 rue Brunel, Paris, France. Mfrs. horns.

Metal.—A term for a large proportion of the known elementary substances. (2) Crushed stone suitable for road making.

Metal, Babbitt's.—See Babbitt's Metal.

Metal, Gun.—A species of brass employed in casting cannon, and used also in the wearing parts or joints of machinery. This alloy should consist of 9 parts copper and 1 of tin, but no zinc. It is used for crank-shaft and other bearings

in motor construction. It also answers well for valves.

Metallic Packing.—See Packing, Metallic.

Metallindustrie Schönbeck, Actiengesellschaft.—Schönbeck, Germany. Mfrs. motorcycles.

Metallwerkgesellschaft Ohligs.—Ohligs, Germany. Mfrs. metallic rims.

Métallurgique, Société Anonyme La.—1 Place de Louvain, Brussels, Belgium. Mfrs. gasoline automobiles. (Métallurgique cars.)

Metal Specialties Mfg. Co.—14-24 W. Randolph St., Chicago, Ill. Mfrs. pressed steel and screw machine products, spark plugs, stampings.

Metal Stamping Co.—243 West St., New York City. Mfrs. bow sockets, curtain fasteners, radiators, top fixtures, cloth and carpet trimmings, metal trimmings, seats.

Meteor Automobile Works, The.—Beltenndorf, Ia. Mfrs. gasoline automobiles.

Methven, D. C.—Salina, Kan. (Cameron.)

Methyl.—See Alcohol, Wood.

Metre.—A measure of length, the base of all measures in the "metric system," adopted by France and all the principal nations of the world, except Great Britain, the United States and Russia, and used as a standard therein. The unit of length is the centimetre, which is the hundredth part of the length, at 0° C. of a bar of iridio-platinum, called the "International Metre" (deposited at the Pavillon de Breteuil, Sevres). The length of a metre, which was formerly defined as the "ten-millionth part of a quarter

inch. The values of these differ not only between nationalities, but between parts of the same nations. The value of the metre in the more prominent of the countries of the civilized world is as follows:

Where the foot and inch are still in use.	Value of one metre in feet.	Inches to the foot.	Centimetres to the foot.
Austria	3.163	12	31.61
Baden	3.333	10	30.00
Bavaria	3.426	12	29.19
Denmark	3.186	12	31.39
Great Britain ..	3.280	12	30.48
Hanover	3.426	12	29.19
North America.	3.280	12	30.48
Norway	3.186	12	31.39
Prussia	3.186	12	31.39
Russia	3.280	12	30.48
Saxony	3.531	12	28.32
Sweden	3.368	10	29.69
Switzerland	3.333	10	30.00
Wurtemberg ..	3.490	10	28.65

Metric Conversion Table.—The following table will be found convenient in dealing with metric weights and measures.

Millimeters $\times .03937$ = inches.
 Millimeters $\div 25.4$ = inches.
 Centimeters $\times .3937$ = inches.
 Centimeters $\div 2.54$ = inches.
 Meters $\times 39.37$ = inches. (Act of Congress.)
 Meters $\times 3.281$ = feet
 Meters $\times 1.094$ = yards.
 Kilometers $\times .621$ = miles.
 Kilometers $\div 1.6093$ = miles.
 Kilometers $\times 3280.7$ = feet.
 Square millimeters $\times .0155$ = square inches.

of the terrestrial meridian," is equal, with respect to the old French measure of length, to .513074 of a "toise." The metre is equal to 1.093 yard, or 3.28 English feet. The decimetre, 1-10 of a metre, is equal to 3.9337 inches (see figure which gives its actual length). The centimetre is equal to .39375 of an English inch. The square metre, the unit of surface, is a square each of the sides of which is one metre in length. It equals 100 square decimetres, or 10.76 square feet. The cubic metre, the unit of volume, is a cube of which each face has a surface of one square metre; it is therefore equal to 10,000 cubic decimetres, or 353 cubic feet. The various states of Germany, as well as the other countries of Europe, although having adopted the decimal system of measurement of length, still retain to a large extent their old units of measurement, the foot and

Square millimeters $\div 645.1$ = square inches.
 Square centimeters $\times .155$ = square inches.
 Square centimeters $\div 6.451$ = square inches.
 Square meters $\times 10.764$ = square feet.
 Square kilometers $\times 247.1$ = acres.
 Hectares $\times 2.471$ = acres.
 Cubic centimeters $\div 16.383$ = cubic inches.
 Cubic centimeters $\div 3.69$ = fluid drachms. (U. S. P.)
 Cubic centimeters $\div 29.57$ = fluid ounce. (U. S. P.)
 Cubic meters $\times 35.315$ = cubic feet.
 Cubic meters $\times 1.308$ = cubic yards.
 Cubic meters $\times 264.2$ = gallons (231 cu. in.).
 Liters $\times 61.022$ = cubic inches. (Act Congress.)

Liters $\times 33.84$ = fluid ounces. (U. S. Phar.)

Liters $\times .2642$ = gallons (231 cubic inches).

Liters $\div 3.78$ = gallons (231 cubic inches).

Liters $\div 28.316$ = cubic feet.

Hectoliters $\times 3.531$ = cubic feet.

Hectoliters $\times 2.84$ = bushels (2150.42 cubic inches.)

Hectoliters $\times .131$ = cubic yards.

Hectoliters $\div 26.42$ = gallons (231 cubic inches).

Grammes $\times 15.432$ = grains. (Act Congress.)

Grammes $\times 981$ = dynes.

Grammes (water) $\div 29.57$ = fluid ounces.

Grammes $\div 28.35$ = ounces avoirdupois.

Grammes per cu. cent. $\div 27.7$ = lbs. per cu. in.

Joule $\times .7373$ = foot pounds.

Kilograms $\times 2.2046$ = pounds

Kilograms $\times 35.3$ = ounces avoirdupois.

Kilograms $\div 1102.3$ = tons (2,000 lbs.).

Kilograms per sq. cent. $\times 14.223$ = lbs. per sq. in.

Kilogrammeters $\times 7.233$ = foot pounds.

Kilograms per meter $\times .672$ = pounds per square foot.

Kilograms per cubic meter $\times .062$ = pounds per cu. ft.

Kilogram per cheval vapeur $\times 2.235$ = lbs. per HP.

Kilo-watts $\times 1.34$ = horse power.

Watts $\div 746$ = horse power.

Watts $\div .7373$ = foot pounds per second.

Calorie $\times 3.968$ = B. T. U.

Cheval vapeur $\times .9863$ = horse power.

(Centigrade $\times 1.8$) $\div 32$ = degrees Fahrenheit.

Francs $\times .193$ = dollars.

Gravity, Paris = 980.94 centimeters per second.

Metric Horse-power.—See Horse-power, Metric.

Metric System.—See Metre.

Metropolitan Automobile Co.—57-61 Stanhope St., Boston, Mass. Est. 1906. Cap. \$25,000. Alvah M. Thompson, Pres.; V. A. Nielsen, Vice-Pres., Gen. Mgr. and Sales Mgr.; W. S. Thompson, Sec.; V. Lindberg, Supt. Repair Dept. Garage, 75 cars; repairing.

Libby, Sales Mgr. Branches: Boston, New York, Philadelphia, Buffalo, Cleveland, Detroit, Chicago, Minneapolis, Denver, Los Angeles, San Francisco, St. Louis.

Michelin Tire Agency.—230 Broadway, Buffalo, N. Y. Supplies.

Michigan Automobile & Supply Co.—Menominee, Mich. (Holsman.)

Michigan Automobile Co., Ltd.—Kalamazoo, Mich. Mfrs. machine work to order, gasoline automobile motors, gear blanks, gasoline automobiles.

Michigan Auto Exchange.—Michigan Ave., Detroit, Mich. Garage.

Michigan Bolt & Nut Works.—Foot Meldrum Ave., Detroit, Mich. Mfrs. drop forgings. Cap. \$300,000. Est. 1863. E. Y. Swift, Pres.; E. T. Gilbert, Treas. and Mgr.; H. MacLean, Sec.; August Lindow, Supt.

Michigan Crucible Steel Castings Co.—Guion St., Detroit, Mich. Mfrs. steel castings.

Michigan Lubricator Co.—661-671 Beaubien St., Detroit, Mich. Mfrs. lubricators, oil pumps.

Michigan State Automobile Assn.—Grand Rapids, Mich. Edwin S. George, Detroit, Mich., Pres.; D. M. Ferry, Jr., Detroit, Mich., Vice-Pres.; James R. Jackson, Grand Rapids, Mich., Treas.; Dr. D. Emmet Welch, Grand Rapids, Mich., Sec.; Membership: Automobile Club of Detroit, Grand Rapids Automobile Club.

Michigan Steel Boat Co.—1252 Jefferson Ave., Detroit, Mich. Mfrs. motor-boats.

Michigan Storage Battery Co.—24 Atwater St., E. Detroit, Mich. Mfrs. storage batteries.

Michigan Top Co.—17 Duffield St., Detroit, Mich. Mfrs. automobile tops, wind shields, bow separators. Not inc. Est. 1906. E. H. Coombs, Mgr.

Mick's Automobile Garage.—58 N. 2d St., Camden, N. J. Garage.

Micro.—A prefix indicating that the term it precedes is divided by a million; e.g., a "microhm" is a millionth part of an ohm.

Microfarad.—One millionth part of a farad, q. v.

Microhm.—See Micro.

Micrometer-caliper.—See Caliper, Micrometer.

Micrometer-gauge.—See Gauge, Micrometer.

Micron.—A measure of length equivalent to a thousandth of a millimetre.

Middleboro Auto Exchange.—Middleboro, Mass. (Autocar.)

Middle Gear.—See Link-motion.

Middlemore & Lamplugh, Ltd.—Holloway Hd., Birmingham, England. Mfrs. non-skids.

Middlesex Motor Car Co.—George St. and Carroll Pl., New Brunswick, N. J. (Indian, Pope Hartford.)

Middleton, Arthur H.—2821 N Broad St., Philadelphia, Pa. Selling Agents Hubbard patent tires.

Middleton, A. C.—447 Carteret St., Camden, N. J. (Rambler.)

Middleton Motor Car Co.—1032 S. Main St., Los Angeles, Cal. (Columbia.)

Middleton Motor Car Co.—550 Golden-gate Ave., San Francisco, Cal. (Corbin, Columbia, Autocar.)

Middletown Auto Body Co.—Middletown, Conn. Mfrs. wood and metallic bodies.

Middletown Auto Co.—10 Henry St., Middletown, N. Y. (Maxwell.)

Midgley Mfg. Co.—Columbus, O. Mfrs. steel rims, tubular steel wheels.

Midland Motor Car Co.—1116 E. 15th St., Kansas City, Mo. (Peerless.)

Midland Rubber Co., Ltd.—Ryland St.,

Birmingham, England. Mfrs. pneumatic tires.

Midvale Steel Co.—Philadelphia, Pa. Mfrs. steel, chrome-nickle steel.

Mietz, A.—138 Mott St., New York City. Mfrs. air compressors, kerosene motors, circulating pumps.

Mieusset fils, V.—17 rue du Gazometre, Lyons, France. Mfrs. gasoline automobiles. (Mieusset cars.)

Migliavacca Co.—208 2nd Ave., Seattle, Wash. (Earl, Glide.)

Miksch, M. J.—Vice-Pres. Temple Pump Co., 15th St. and 15th Pl., near Canal St., Chicago, Ill.

Mil.—The one-thousandth part of an inch, used to denote the diameter of wires, the thickness of transformer plates, etc., instead of the numbers in the wire gauge.

Mild Steel.—See Steel, Mild.

Mile, Nautical.—A measure of length, called also a "knot," and equal to 6080 feet. See Knot.

Miles, E. J.—Newton, Ia. (Holsman.)

Miles, Samuel Arthur.—Gen. Mgr. National Association of Automobile Manufacturers. B. Bristol, England, May 10, 1862. Ed. Bristol Cathedral. Mem. Clubs: Chicago A. C., N. Y. Athletic, N. Y. Motor. Office. 7 E. 42nd St., New York City. Used

first car March, 1900.

Milford Auto Coat Co.—Milford, Mass. Mfrs. miscellaneous wearing apparel.

Milford Automobile Machine Co.—17 Main St., Milford, Mass. (Maxwell.)

Milled Nut.—See Nut, Milled.

Miller & Armstrong.—N. First St., Fulton, N. Y. Garage.

Miller & Bros., Chas. E.—1105 14th St., N. W., Washington, D. C. (Ford, Columbus, Electric, Reo, Premier.)

Miller & Co., A. J.—Bellefontaine, O. Mfrs. automobile bodies and seats. A. J. Miller, Sole owner.

Miller & Van Winkle.—18 Bridge St., Brooklyn, N. Y. Mfrs. machinery springs.

Miller, A. C.—Supt. Royal Motor Car Co., Gordon Park Blvd. and Lake Shore Tracks, Cleveland, O.

Miller, A. J.—Sole Owner A. J. Miller & Co., Bellefontaine, O.

Miller, Alex.—Bookkeeper and Cashier Gen. Mfg. Co., Elkhart, Ind.

Miller Auto Co.—132 N. Cascade Ave., Colorado Springs, Colo. (Waltham.) Garage.

Miller Bros.—Amesbury, Mass. Mfrs. wood and metallic bodies.

Miller Bros. Automobile Co.—1404 Meridian St., Anderson, Ind. Garage.

Miller, B.—4036 Prairie Ave., Chicago, Ill. Garage.

Miller Bros.—7 Bay and 12 Maple Sts., Glens Falls, N. Y. (Buick.) Est. 1901. Garage, 75 cars. Repairing.

Miller, C. A.—Pres. Continental Automobile Co., St. John and Olive Sts., New Haven, Conn.

Miller Cahoon Co.—Murray, Utah. (Pope-Hartford, Knox.)

Miller, C. D., Dr.—Poughkeepsie, N. Y. (White.)

Miller, Chas. C.—Vice-Pres. and Hd. of Foundry, Pioneer Brass Works. 418-24 S. Pennsylvania St., Indianapolis, Ind.

Miller, Chas. E.—1235 S. Meridian St., Anderson, Ind. Vulcanizing.

Miller, Chas. E.—97-101 Reade St. and 924 Eighth Ave., New York City; 406 Erie St., Cleveland, O.; 318-20 N. Broad St., Philadelphia, Pa.; 227½ and 229 Jefferson Ave., Detroit, Mich.; 202-04 Columbus Ave., Boston, Mass.; 824 Main St., Buffalo, N. Y. Mfr., jobber, exporter and importer automobile supplies.

Miller, Charles Joseph Sibley.—Manufacturer and capitalist. B. Franklin, Pa., May 11, 1874. Director in numerous companies. Mem. N. Y. Athletic, N. Y. Yacht, N. Y. Press, A. A. A., A. C. A., National Geographic Society. Office and res., New York City and Franklin, Pa. Owned 28 automobiles, foreign and American, in

past two and one half years. Made a balloon ascension June 25, 1906

Miller, C. P.—Sec. Temple Pump Co., 15th St. and 15th Pl., nr. Canal St., Chicago, Ill.

Miller, E. C.—Vice-Pres. Magnolia Metal Co., 113-15 Bank St., New York City.

Miller, E. H.—Canal Dover. O. (Jewel.)

Miller, E. H.—8th St., Elkhart, Ind., and Fort Wayne, Ind. (Pope-Hartford.)

Miller, F. E.—440 Main St., Princeton, Ill. Garage.

Miller, F. J.—Lake Ave. and 3rd St., Racine, Wis. (Winton, Cadillac.)

Miller, F. P.—Pres. Utica Motor Car Co., 333 Bleeker St., Utica, N. Y.

Miller's Garage Co.—554-58 Fairfield Ave., Bridgeport, Conn. (Glide, Maxwell.) Supplies, repairing.

Miller, Geo. H.—275 S. Garey Ave., Pomona, Cal. (Ford, Tourist, Pope-Waverley.)

Miller, Geo. J.—Electro-Chemist Toledo Storage Battery Co., 102 Oliver St., Toledo, O.

Miller, H.—Pres. and Gen. Mgr. The J. Kowalsky Engine Co., Grant St. and Railroad Ave., Verona, Pa.

Miller, H. O.—101 Prospect St., Brockton, Mass. Garage.

Miller, H. R.—Vice-Pres. Excelsior Carriage Co., Main St., White River Junction, Vt.

Miller, H. W.—Sec. and Treas. Ideal Mfg. Co., Portsmouth, O.

Miller, James Acton, M. E.—Director Mechanical Engineer and Hd. Mfg. and Designing Dept. Standard Metal Work Co., Thompsonville, Conn.

Miller, John A.—Pres. T. C. and W. L. Fry Co., 201 Brighton Ave., Rochester, Pa.

Miller, L. C.—227 Broad St., Waverley, N. Y. Garage.

Miller Mfg. Co., The.—813 Central Ave., Peekskill, N. Y. Mfrs. searchlights, generators, pumps, oil guns and automobile jacks

Miller Motor Car Co.—Bridgeport, Conn. Mfrs. gasoline commercial automobiles.

Miller, R., Jr.—Vice-Pres. and Treas. The J. Kowalsky Engine Co., Grant St. and Railroad Ave., Verona, Pa.

Miller, Sol.—Newport News, Va. (Jackson.)

Miller Sons Carriage Co., Geo. C.—713 Main St., Cincinnati, O. (Stevens-Duryear, Isatta.)

Miller's Sons, Wm. P.—73-79 3rd St., Long Island City, N. Y. Mfrs. grease, oils, semi-solid oils. Garage.

Miller, S. W.—Martinsburg, Md. Garage

Miller, T. W.—Mgr. Seattle Branch Winton Motor Carriage Co., Seattle, Wash.

Miller, W. E.—1st Vice-Pres. and Gen. Mgr. Fairbanks Morse & Co., Franklin & Monroe Sts., Chicago, Ill.

Miller, Wm.—Thomasville, Ga. (Holzman.)

Miller, Wm. B.—Sec. The Diamond Rubber Co., Akron, O.

Miller, W. H.—Walnut St., Champaign, Ill. Repairing.

Miller, William H.—Cor. 7th and Wisconsin Sts., Racine, Wis. Garage.

Miller, Wm. H.—Vice-Pres. Knobblock-Heideman Mfg. Co., South Bend, Ind.

Miller, W. J.—Vice-Pres., Supt. Oscar Lear Auto Co., Springfield, O.

Miller, W. S.—Purch. Agt. Rainier Co., Saginaw, Mich.

Milli.—A prefix to the name of a unit, denoting that the unit is divided by one thousand

Milling.—See Knurling and Reeding.

Milling-machine.—A machine for rapidly shaping pieces of metal by the use of rotating cutters.

Million, René.—53 rue de Villiers, Neuilly sur-Seine, France. Mfrs. shock absorbers.

Mills & Peterson.—Akron, N. Y. (Lambert.)

Mills Auto & Bicycle Co.—Newark, O. (Cadillac.)

Mills, Chas.—21 E. Church St., Newark, O. (Jewel.)

Mills-Kennedy Co.—733 Boylston St., Boston, Mass. (Springfield, Welch.)

Mills Mfg. Co.—1368-70 Broadway, New York City. Mfrs. eye shields.

Mills, W. J.—Asst. Sales Mgr. Stackpole Battery Co., St. Mary's, Pa.

Millsbaugh, W. H.—Pres. Sandusky Foundry & Machine Co., Sandusky, O.

Millward & Cook.—208 W. 124th St., New York City. Garage.

Millwood Mfg. Co.—55th St. and S. Park Ave., Chicago, Ill. Mfrs. wind shields.

Milne, A.—Vice-Pres. Milne Auto-Start Co., 919 W. Fort St., Detroit, Mich.

Milne Auto-Start Co.—919 W. Fort St., Detroit, Mich. Mfrs. safety starting devices. Cap. \$30,000. Est. 1907. D. D. Flanner, Toledo, O., Pres.; Thos. A. Milne, Vice-Pres.; H. W. Reeves, Treas.; A. L. McBean, Sec.

Milnes-Daimler Co., Ltd.—221 Tottenham Court, London, W., England. Mfrs. gasoline commercial automobiles.

Milne, Frank.—Everett, Mass. Mfr. body irons, steering apparatus.

Milne, Frank.—43 Columbus Ave., Boston, Mass. Garage.

Milne, W. S.—Cleveland, Tenn. (Pope-Waverley.)

Milton Co., Frank.—30 W. State St., Trenton, N. J. Garage.

Milton Point Shipyard.—Rye, N. Y. Mfrs. motorboats.

Milton, T. M.—Brewertown, N. Y. Mfr. motorboats.

Milward, F. S.—Purch. Agt. Welch Motor Car Co., Pontiac, Mich.

Milwaukee Auto Engine Supply Co.—706-8 Winnebago St., Milwaukee, Wis. Mfrs. transmission gears, gasoline automobile motors, timers.

Milwaukee Automobile Club.—Milwaukee, Wis. Organized 1902, to promote "Fraternity among automobilists." Louis Fuldner, Pres.; W. H. Popkorn, Vice-Pres.; James T. Drought, Sec.; C. S. Drake, Treas.

Milwaukee Automobile Trade Ass'n.—Milwaukee, Wis. Alfred Reeke, Sec. cr. Sollday Motor Car Co.

Milwaukee Brass Mfg. Co.—Milwaukee, Wis. Mfrs. brass pipe fittings.

Milwaukee Electric Co.—Milwaukee, Wis. Mfrs. electric generators, electric motors.

Milwaukee Motor Co.—615 Clyborn Ave., Milwaukee, Wis. Mfrs. transmission gears, gasoline automobile motors, gasoline marine motors, mufflers, circulating pumps.

Milwaukee Steel Foundry Co.—Milwaukee, Wis. Mfrs. steel castings.

Minchin, C. H.—157 Greenwich Ave., Greenwich, Conn., and Port Chester, N. Y. (Waltham.)

Mindener Maschinen und Fahrradwerke.—Minden, Westphalia, Germany. Mfrs. Minden motorcycles.

Mineola Motor Car Co.—Mineola, L. I., N. Y. Garage.

Mineral Oil.—See Oil, Mineral.

Mineral Pitch.—See Asphaltum.

Mineral Wax.—The same as ozokerite, q. v.

Miner & Peck Mfg. Co.—New Haven, Conn. Mfrs. forge equipment.

Miner Co., Geo. L. S.—Clinton Ave., Cor. Court St., Rochester, N. Y. (Indian.)

Miner, F. G.—San Francisco, Cal. (Fiat.)

Miner, F. J.—Mgr., Sec. and Treas. Seidler-Miner Electric Co., 207 Jefferson Ave., Detroit, Mich.

Miner Garage Co.—Cor. High & Allyn St., Hartford, Conn. (Buick, Pierce Arrow, Knox, Pope-Waverley, Haynes.)

Minerva Motors, Ltd.—Berchem-Anvers, Belgium. Mfrs. motorcycles, gasoline automobiles. (Minerva.)

Minett Varnish Co.—129 Pearl St., New York City. Mfrs. varnishes.

Moline Malleable Iron Co.—St. Charles, Ill. Mfrs. malleable iron castings.

Moline Pump Co.—Moline, Ill. Makers of gasoline automobile and marine motors, dry batteries, pumps, tanks, etc. Cap. \$100,000. E. H. Sleight, Pres., Gen. Mgr., Purch. Agt., Sales Mgr. and Advt.; C. E. Dietz, Sec.; J. W. Barnud, Treas.; E. B. Parkhurst, Designer and Supt.

Mom, Ateliers de Constructions Mechaniques.—173 Bvd. Péreire, Paris, France. Mfrs. motorcycles, tricars, automobile motors. (Mom.)

Moment, Magnetic.—The product of the strength of one pole of a magnet by the distance between the poles.

Moment of Force.—The product of the amount of a force by its perpendicular distance from a given point. Such product is called its "turning moment" and "torque." See Torque.

Momentum.—"Momentum" is mass and motion, and may be measured by its mass or weight multiplied by its velocity, or by force multiplied by the time during which the force has been applied. It may be taken as representing the "quantity of motion" of a moving body.

Monahan Antiseptic Co.—92 Market St., Chicago, Ill. Mfrs. automobile body soaps.

Monarch Fire Appliance Co.—249 Pearl St., New York City. Mfrs. fire extinguishers.

Monarch Instrument Co.—Cleveland, O. Mfrs. ammeters and voltmeters.

Monarch Mfg. Co.—Toledo, O. Mfrs. grease, oils, metal polish.

Monarch Motor Car Co.—16th and Arnold Sts., Chicago Heights, Ill. Makers of the Monarch cars; first marketed in 1905. Four models made since. Cap. \$150,000. T. A. Quinlan, Jr., Pres. and Gen. Mgr.; J. A. Ward, Sec. and Treas.; J. J. Boucher, Supt. and Designer; Paul Symonds, Purch. Agt. Branches: Monarch Motor Car Co. of San Francisco, San Francisco, Cal.; H. Sherwood, Mgr. Dealers: Hill & Beeson, Indianapolis, Ind.; M. A. Shuey, South Bend, Ind.; Big

Four Automobile Co., Los Angeles, Cal.; Buckeye Automobile Co., Cincinnati, O.
Monarch Rubber Co.—41 N. 7th St., Philadelphia, Pa. Mfrs. rubber mats, cloth and carpet trimmings.

Monarch Vulcanizing Works.—26 Rush St., Chicago, Ill. Tire repairing.

Mondsheim, Edouard.—10 Ave. Parmentier, Paris, France. Mfr. radiators.

Mongollon Motor Road Co.—Silver City, N. Mex. (Reo.)

Monier et Martin.—63 Bvd. de la Republique, Nismes, France. Mfrs. clutches.

Monier, Seitert et Pommeret.—14 rue St. Mour, Paris, France. Mfrs. metallic rims.

Monin, Felix.—32 rue Croix-Jordan, Lyons, France. Mfr. acetylene lamps.

Monitor Speed Recorder Co.—274 Pearl St., Cambridge, Mass. Mfrs. timers, speedometers.

Monjardet.—21 rue Richelieu, Paris France. Mfr. wearing apparel, coats hats and caps.

Monk, Frank.—Supt. American Oak Leather Co., Kenner St. and Dalton Ave., Cincinnati, O.

Monkey-wrench.—See Wrench, Monkey.

Monmouth Automobile Club.—Geo. W. Pittenger, Sec., Asbury Park, N. J.

Monmouth Garage.—Heck St. and Lake Ave., Asbury Park, N. J. Garage. (Columbia and Ford.)

Monnich, Bernard.—Dodge County Bank Bldg., Hooper, Neb. (Holsman.) Est. 1902.

Monning, G.—Warschauerstrasse 5, Berlin, Germany. Mfr. elastic wheels.

Monnot & Sacher.—Salesroom and garage, 305 S. Market St., Canton, O. Garage; repairing.

Monogram, Crest & Sign Co.—125 E. 86th St., New York City. Mfrs. license numbers, monograms, name plates, steel stamps and stencils.

Monoplane.—A type of aeroplane constructed by M. Pelterie, consisting of a long central body and a single transverse plane which is somewhat curved from front to rear edge. At the rear of the body is a flat plane which is used as a rudder, while the motor and propeller are placed at the front of the main body. The machine is provided with a 25—30 h.p. motor of seven cylinders, staggered and arranged in a circle.

Monroe Garage.—202 Monroe St., Brooklyn, N. Y. Garage.

Monroe Garage Co.—Stroudsburg, Pa. Garage.

Monroe, John B.—Powelton, Ill. (Waltham.) Est. 1898.

Monson Auto Co.—1466 Michigan Ave., Chicago, Ill. Garage.

Montague Automobile Co.—Chanute, Kan. Garage.

Montana Garage Co.—Butte, Mont. (Glide.)

Montandon-Robert.—2 Place de la Fusterie, Geneva, Switzerland. Mfr. speed indicators.

Montanus, Edw. J.—Sec. The Springfield Machine Tool Co., Southern Ave., Springfield, O.

Montanus, Paul A.—Vice-Pres. and Gen. Supt. The Springfield Machine Tool Co., Southern Ave., Springfield, O.

Montanus, P. E.—Pres. The Springfield Machine Tool Co., Southern Ave., Springfield, O.

Montauban-Marchandier, Société Anonyme des Établissements.—33 Ave. Fairherbe, St. Quentin, France. Mfrs. automobile motors. (Vautour motors.)

Montclair Auto Station.—Bloomfield Ave. and Valley Rd., Montclair, N. J. Garage.

Monte Cristo Garage.—New London, Conn. (Pullman.)

Montgomery Auto Co.—Montgomery, Ala. (Cadillac.)

Montgomery Auto Transfer.—207 Monred St., Montgomery, Ala. Rental service.

Montgomery, H. C.—Shelbyville, Ind. (Haynes.)

Monumental Garage, The.—1002 Morton St. C. Price Schuler, Mgr. (Pungs-Finch, Maxwell-Briscoe.) Garage and repairing.

Moody, C. F.—Devil's Lake, N. Dak. (Buick.)

Moody, V. H.—Treas. Worcester Steel Foundry Co., Milbury, Mass.

Mooers, Louis P.—Designer and a racing man, formerly with the Peerless Motor Car Co. and now with the Moon Motor Car Co. Participated in the Bennett Cup race in 1903 and designed the Peerless Green Dragon, which was driven so successfully on the track by

Barney Oldfield. Designer of the Moon and of the new Hol-Tan car. Address care Moon Motor Car Co., St. Louis, Mo.

Moon Apex Brake Co., The.—3d and Porter Sts., Detroit, Mich. Mfrs. brakes.

Moon, C. D.—Eau Claire, Wis. (Franklin.)

Moon Motor Car Co.—Main and Cornelia Sts., St. Louis, Mo. Makers of the Moon car, and of the Hol-Tan car for the Hol-Tan Co., New York City. Agents and dealers for the Moon car: Ennis, Geo. H., 215 Currier Bldg., Los Angeles,

Motor.—See Machine.

Motor-boat.—See Boat, Motor.

Motor-couple.—See Couple, Motor.

Motor Cycle.—See Cycle, Motor.

Motor-cycle.—A two-wheeled or sometimes three or four wheeled cycle driven by a motor and usually furnished with pedals. The motor drives the wheel by belt, chain or propeller-shaft, or even directly by spur-wheels, and is usually started by the pedals or by a crank. There is usually but one speed, but sometimes two or three. Motor-cycles carry but one person, the driver, although some makers produce arrangements for carrying another on an auxiliary framing, or on a forward seat converting the motor-cycle into a tricycle. When furnished with four wheels it becomes a quadricycle or "quad."

The motor-cycle is furnished with a motor of 1, 2 or 4 cylinders, varying from 1 to 15 h.p., the latter for speeding.

Motor, Double-opposed.—A motor in which the cylinders are horizontal, with

their open ends toward each other, and the crank-shaft, which is two-throw, 180°, lying between them. The pis-

tons thus slide in opposite directions, and the weight of one being balanced by the other, the vibration is thereby reduced

The horizontal double-opposed type is considered the most satisfactory for low powers.

Motor, Electric.—Electric motors are divided into continuous and alternating current motors. The first are merely dynamos to which is furnished a current for collecting the mechanical energy. In fact, dynamos are, as is well known, reversible.

Since the efficiency of a dynamo as a motor is sensibly equal to its efficiency as a generator, the mechanical power that can be collected on the shaft equals 0.80 to 0.95 of the electric power furnished at the terminals. The winding of the motors varies according to their applications. Independent excitation may be employed with advantage in the motors of automobiles. It permits of recuperating in descents or of braking by the motor without reversing the connections.

The series excitation is employed when there is no need of great regularity and it is necessary to exert a great stress in starting (tramways, hoisting apparatus, etc.) The direction of revolution of a series machine is the reverse of that in which it revolves as a generator. In order to make it revolve in the same direction the connections of the inductor must be reversed. Shunt excitation is employed for constant speed motors supplied at a constant potential. The couple is nil at starting, and this is an inconvenience. The machine revolves in the same direction as a motor or a generator, and, for recuperation, possesses the same properties as independent excitation.

Compound excitation participates in the properties of the two preceding, in cases in which the windings are concordant. The velocity is absolutely constant with the differential winding, in which the shunt spirals are preponderant, and the starting automatic, if the resistant stress is not too great. Special precautions are necessary for the starting by reason of the fact that the series winding is alone excited, and this may cause the machine to revolve in the wrong direction and sometimes to oscillate.

Motor, Gas.—See Gas, Motor.

Motor, Gasolene.—An internal combustion motor in which is utilized the energy contained in air charged in a cold state with the vapor of gasolene (dens. = 0.680 to 0.710). The usual gasolene motors are almost all four-cycle ones and are applied to automobiles.

Nearly all these motors are provided with mechanically operated inlet-valves, which are in most cases placed symmetrically with the exhaust-valves and operated by a special cam-shaft that actu-

ates also the ignition mechanism. The control of the inlet permits of a more exact operation of the motor by producing the opening and closing of the valve exactly at the point desired, while the automatic valve often sticks on its seat and is noisy and unreliable in its operation. The mechanically operated valve, moreover, increases the density of the cylinder volume, and hence the power of the motor. It is well adapted for low speeds and especially improves the operation at high speeds. Finally, it rids the motor of the disagreeable sniffing sound made by the inlet-valves when the motor is slowed down. See Motors, Internal Combustion.

Motor, Hanger-bolts.—See Hanger-bolts, Motor.

Motor, Hydrocarbon.—The same as Gas-motor.

Motor, Kerosene.—An internal combustion motor in which is utilized the calorific energy contained in air charged with the vapor of kerosene (dens. = 0.800). From a mechanical point of view the kerosene-motor differs little from its gas or gasolene congeners and is, so to speak, a four-cycle engine. Since kerosene has, at the ordinary temperature, hardly any vapor tension, it must, in order to mix it with air, be vaporized. It is therefore injected by a pump into a vaporizer heated by a burner at the outset, and in operation by the exhaust, or else is atomized in an injector or traversed by hot air. Certain modern carburetters are designed with a view to permit of the operation of a motor with any kind of liquid hydrocarburet. They almost always possess the drawback of reducing the value of the cylinder-volume by the excessive heating of the air or the strong depression sometimes designedly utilized for effecting the evaporation of the liquid at a low temperature.

Motor, Naphthalene.—An internal combustion motor in which the starting is effected by means of gasolene, and which is afterwards supplied by naphthalene vapor produced in a vessel heated by the exhaust and into which small portions of this substance drop regularly.

Motor-power.—See Power, Motor.

Motor-pressure.—See Pressure, Motor.

Motor, Revolving-cylinder.—An arrangement employed on the Adams-Farwell car. (see figure), the three or five

cylinders of which are equally spaced around a vertical axis and revolve around a stationary crank-shaft, and power is transmitted by bevel-gear from

the revolving crank-case. The weight of the cylinders dispenses with the need of a fly-wheel and their motion gives an efficient air cooling without fans or other mechanism.

Motor-shaft.—The main shaft of an engine.

Motor, Six-cylinder.—A motor which has crank-shafts of a construction similar to those of a three-cylinder motor (i. e., with cranks set at 120°), and which produces six power-strokes during two revolutions, with the best balance that can possibly be obtained without an excessive number of cylinders. A power-stroke occurs at every 120° that the crank-shaft revolves, and, since each power-stroke lasts for half a revolution, or 180° , one stroke begins when the previous one is only two-thirds complete. This results in a very steady application of power, since the crank-shaft is at all times operated by the driving effect of the combustion-strokes, and the motor can be run smoothly at greatly varying speeds through a control of the position at which the spark jumps in the combustion-space, and the admission of a greater or less quantity of the mixture during the inlet-stroke.

Some of the advantages claimed for the six-cylinder motor are: that it runs slower on high gear; that it picks up speed faster and easier on the throttle; that it has less vibration; that it runs with a silence unknown to the four-cylinders; that it makes gear-shifting almost unnecessary; and that it is much better adapted for hill-climbing. In Europe the superiority of the six-cylinder is generally admitted. In this country a number of leading makers have been experimenting with it for some time, but, as yet, have found great difficulty in coping with American road conditions.

Motor, Starting a.—Before starting a gasoline motor, the following precautions should be taken. It should be seen that the clutch-lever is in the proper position, that the brakes are set, and that the spark-lever is fully retarded. The starting-crank should never be grasped with both hands, but with one hand only. The body should be kept clear of the crank. Lastly, to avoid accidents, never push down on the starting-crank, but always up to start the motor. What is called starting "on spark" is effected as follows: When a four-cylinder motor comes to rest the cranks stand at an angle of from 60° to 90° with respect to the vertical, and, since the timer has been making contact on or before center while in operation, the commutator pauses between the contact-points as it comes to rest. Retarding the spark-lever rotates the timer, which follows the pis-

ton, and, making contact, fires the charge retained in the cylinder. The spark-lever is then advanced to neutral and the next cylinder fires on center. Neutral position of the spark-lever ignites the charge on center on all four-cylinder cars that start "on spark." See Starters. Automatic.

Motor, Steam.—See Steam-car.

Motor, V-shaped.—A type of two-cylinder motor first employed by Daimler and Panhard and Levassor, and in which vertically at an angle of 30° to each other, giving them the aspect of a large V, whence their name.

were placed name of "V-shaped motors." The figure represents a V-shaped motor of the Marmon car.

Motor & Accessory Manufacturers.—Room 414, Union Bldg., Newark, N. J. Organized March 2, 1904. To promote in all lawful ways the interests of makers of motors, motor parts and accessories; to aid in the protection of the members of said corporation and secure the advantages to be obtained by mutual co-operation. Motor Boat Club of America.—Station

"A," 108th St. and Hudson River, New York City. Station "B," Jamaica Bay, N. Y. Organized October, 1905. "To arrange for pleasure runs and to encourage contests of all kinds among owners of motor boats and between motor boats of this and foreign clubs; to advance, foster and support the sport of motor boating." Edward J. Schroeder, Commodore; Joseph H. Hoadley, Vice-Commodore; Seymour Oppenheimer, M. D., Rear Commodore; Hugh S. Gambel, Sec., 314 Madison Ave., New York City; Charles Francis, Treas.; Dr. J. Lewengood, Fleet Surgeon; Alfred E. Luders, Official Measurer. Chairmen of Committees: John D. Roach, Board of Governors; Charles P. Tower, Regatta Committee; Dr. Louis Neumann, Membership Committee; Franz A. Wittig, House Committee; Thomas Fleming Day, Library Committee; Hugh S. Gambel, Entertainment Committee; John D. Roach, Ways and Means Committee. Former Commodore, A. D. Proctor Smith. Contests or races promoted, dates and results: National Motor Boat Carnival, Sept., 1906; American championship events, Jamestown Exposition Motor Boat Carnival, Sept. 4 to 11, 1907; National Motor Boat Carnival Race Week, Sept. 23-28, 1907, for international and national championships. For the first time in the history of the motor boat sport in this country this club sent the "Dixie" to England, where she won the British International Trophy (Harmsworth Cup), being the only challenger and representing America. The Motor Boat Club of America is recognized by the representative foreign motor boat clubs as America's leading and representative club and all entries for international events are made through this club.

Motors.—Industrial motors may be classed, according to the mode of transmission of energy, as thermic, hydraulic

and electric. Of these the first in the present state of industry, are the most important of all, and comprise "internal combustion" (gasoline, benzine, etc.), "steam" and "hot-air" motors.

Motors, Internal Combustion.—These modern motors all operate with a preliminary compression of the gaseous mixture. From a theoretic point of view, they differ only by the fact that some require but two periods, that is to say, two strokes of the piston, to form a complete cycle (see Cycle), while others require four periods, that is to say, four strokes of the piston or two revolutions of the shaft.

All the "four-cycle" internal combustion motors operate conformably to the following cycle:

First Period.—The first period is that of "suction." The piston being at the upper part of the cylinder, at the end of the stroke, is brought toward the bottom by the rotary motion of the fly-wheel, or fly-wheels (in the case of some upright motors.) In its downward stroke it forms a vacuum in the interior of

the cylinder and brings about the opening of the inlet-valve (if the latter is automatic), and permits of the introduction into the cylinder of a quantity of gas sensibly equal to the cylinder capacity. In case the valve is not automatic, but mechanically operated (like the exhaust-valve), it is opened at the proper time by a cam, which lifts its stem.

Second Period.—Reaching the lower part of the cylinder, the piston (continually actuated by the motion of the fly-wheel), begins its stroke towards the upper part of the motor, the suction-valve having closed as soon as the suction ceased. In this motion the piston compresses in the cylinder the gas that can no

longer escape, and such compression tends to make the edges of the valves adhere more exactly to their seat.

This second period is that of "compression," the object of which is to condense the molecules of the gas and to raise its temperature. At the moment at which the piston reaches the end of its second stroke, an electric spark jumps in the explosion-chamber between the points of a spark-plug, and, bringing about an immediate ignition of the gas, causes a powerful expansion thereof (or "explosion" as it is commonly called).

Third Period.—Under the action of

such expansion, the piston is violently driven to the lower part on its "power-stroke," and thus effects the third movement of the cycle in the cylinder. This is the effective period—the period productive of work, the one that is to furnish the fly-wheel enough energy to suffice for the realization of the three others.

Fourth Period.—The piston has now reached the bottom of the cylinder, which remains full of burned gas. Continuing its stroke, and with so much more velocity in proportion as the expansion has been more violent, the piston actuated by the fly-wheel, which has just stored up new energy, ascends rapidly in the cylinder. At this moment a cam placed upon the half-time shaft of the motor lifts the stem of the exhaust-valve and

forces the latter to open for the entire period during which the piston is ascending and driving the burned gas before it. This is the "exhaust" or "scavenging" period, and the fourth and last movement in the cycle of operation.

In reality, the exhaust-valve begins to open, not at the beginning of the fourth period, but toward the end of the third. Experience has shown that it is not worth while to give a motor a slight advance to exhaustion in order to eliminate any compression prejudicial to the re-ascend of the piston. In a four-cycle motor as usually made the direction of rotation cannot be changed, except by changing the operation of the valves, since the exhaust-valve is opened on the down-stroke, when the direction is reversed and the burned gas would be drawn back from the muffler.

Owing to its simple construction and an impulse at every two strokes, or every revolution, the two-cycle motor has proved very attractive to a host of inventors and users, and a great number of designs have been produced. On motor-cars and motor-boats two systems of two-cycle motors are used, the two-port and the three-port. The first is provided with two ports in the cylinder and an inlet-valve in the crank-chamber or compression-chamber, through which the gas is admitted. The three-port, two-cycle motor has two ports in the cylinder above the piston, and another port in the cylinder below the piston, which is uncovered only on the upward stroke of the latter, and through which the gas enters the crank-chamber. The two-cycle motor operates as follows:

Starting with the piston at its upward position, a charge of gas is admitted to the crank-case. On the down-stroke the charge in the crank-case is compressed. When the piston nears the end of its down-stroke it uncovers a port in the cylinder-wall admitting the compressed charge from the crank-case through a passageway into the cylinder. The inlet-port is closed by the upward movement of the piston, and the charge is compressed thereby. Upon reaching the upward position the charge is fired and the expansion of the gas thus produced drives the piston out. Just previous to the uncovering of the inlet-port again, a port on the opposite side of the cylinder, called the exhaust-port, is uncovered, and the gas makes its escape through its own expansion. Thus each down-stroke of the piston compresses in the crank-case a charge that has been aspirated by the previous upward movement of the piston. Each cylinder of a two-cycle motor receives one power-impulse to every revolution of the crank-shaft.

A two-cycle motor will run in either direction, for the reason that the actions of admitting and exhausting the gases are relative in either direction. It may be reversed by switching off the spark until the speed of the motor decreases, and then advancing the spark and switching on the current again.

Muench, Wm. H.—Treas. The Lunkenheimer Co., Cincinnati, O.

Muffat, Albert.—35 rue du Stand, Geneva, Switzerland. Mfrs. pneumatic tires, leather tires.

Muffler.—A device, called also a "silencer" and "exhaust box," fitted to internal combustion-motors for deaden-

ing or silencing the noise made by the exhaust gases as they pass out at the end of the exhaust-stroke. It is not essential to the efficient working of the motor, and, if not properly designed, may create a back-pressure on the engine with a consequent diminution of power. A perfect muffler should deaden or silence all exhaust noises without setting

up any back-pressure whatever. This is effected by passing the exhaust-gases into a chamber or series of chambers of greater dimensions than those of the exhaust-pipe itself, and from the opposite end of which they make their exit into the atmosphere. It sometimes happens that a misfire occurs and the unburned gases pass from the cylinder into the muffler, in which case it is likely that the charge may become ignited by the heated exhaust-pipe and that an explosion will take place in the muffler. As a rule, however, no serious harm results from muffler explosions; but, if they occur within short intervals, the cause should be looked for and at once remedied. Many advocate the use of a "cut-out" on the exhaust-pipe before the muffler, so that when it is desired to see how the motor is working the exhaust can be turned directly into the atmosphere without passing through the muffler.

The accompanying figure shows a section of the Ossant muffler, which consists of a long galvanized iron cylinder containing several concentric chambers formed of cylinders that are likewise of iron-plate. In the center an inlet tube (which serves also as an outlet one) permits of the entrance of the gas into the muffler.

A vertical partition in the center divides the interior into two compartments. The arrows show the direction taken by the gas. This enters at the left through the central tube, which is connected, through a flange, with a tube starting from the exhaust and afterward passes into the first concentric chamber through an infinite number of small holes. Thence it passes into the second concentric chamber through a series of holes near the partition, and in the direction shown by the arrows, and then into the third chamber.

As the central partition of this external chamber is provided with apertures, the gas passes into the second compartment, and thence returns in the direction shown by the arrows and follows a path the reverse of the first in the central tube, which extends beyond the flanges, and finally makes its exit to the exterior.

It will be seen that the exhaust-gas has

a long trip to make before it escapes into the air, and that all the chambers that it has to traverse slacken its velocity and, at the same time, considerably reduce its temperature.

In the interior of the muffler, asbestos-paper is riveted against certain of the walls for the purpose of not only deadening the noise, but also for protecting the metal from the rapid oxidation caused by the temperature of the burned gas.

Muffler, Cooling.—One in which the gases are cooled either by an increased surface submitted to a draught of air, or by cooling with water.

Muffler, Cut-out.—See Cut-out and Muffler.

Muffler, Expanding.—A muffler in which the hot gases are allowed to expand to nearly the pressure of the atmosphere.

Muffler Explosions.—See Muffler.

Muffler, Separating.—A muffler in which the gases are broken up by flowing through a number of small apertures in tortuous passages.

Mulcahy, F. J.—Pres. The Eaton, Cole & Burnham Co., Bridgeport, Conn.

Mulford, D. L.—1801 N. 21st St., Philadelphia, Pa. Garage.

Mulhaupt, F. J.—227 N. 5th St., Lafayette, Ind. Repairing.

Mulliner, Ltd.—Northampton, England. Mfrs. bodies.

Mullins Co., W. H.—Salem, O. Mfrs. wood and metallic bodies, battery boxes, dashes and fenders, drip pans, hoods, tanks, motorboats.

Mullken, J. T.—Trappe, Md. (Cadillac.)

Mullock, H. J.—Gen. Mgr. Mullock's Belmont Garage, 13-15 South S. Carolina Ave., Atlantic City, N. J.

Mullock's Belmont Garage.—13 and 15 South S. Carolina Ave., Atlantic City, N. J. (Wayne, Rambler, Pullman.) Est.

1895. Not inc. H. J. Mulock, Gen. Mgr. Garage, 50 cars. Repairing.

Multi-cylinder Engine.—A reciprocating engine which has more than one cylinder.

Multiple, In.—If it be desired to connect storage-cells so that both the voltage and amperage shall be increased, the cells may be divided into two or more groups, with the same number of cells in each. The cells of each group are connected "in series" (see Series), and the free poles of the groups connected "in parallel" (see Paralel). This is termed connecting "in multiple." This method of connecting the cells for an ignition gives a uniform current and increases the life of the cells.

Multiplication.—In a transmission by gears or belts the ratio of the velocity of the driving to the driven shafts.

Munch, J.—18 rue Rottemburg. Paris, France. Mfr. marine motors.

Münchener Verein für Luftschiffahrt.—Muncheu, Germany. (Munich Aero Club.)

Mutual Supply Co.—2210 Farnam St., Omaha, Neb. (Monarch.)

Mutual Machine Co., The.—25 Wells St., Hartford, Conn. Mfrs. universal

joints and all kinds of gear cuttings. Cap. \$12,000. Est. 1901. Inc. 1907. H. C. Warren, Pres. and Treas.; E. R. Faxon, Sec.

Myers, A. J.—Mgr. Pneumatic L'Electric Co., 1591 Broadway, New York City.

Myers, Angelo.—Pres. Rose Mfg. Co., 910 Arch St., Philadelphia, Pa.

Myers & Co., C. F.—126 6th St., Logansport, Ind. (Garage.)

Myers, Fred, Sr.—Redfield, S. Dak. (Cadillac.)

Myers, J. B.—Supt. Maxwell-Briscoe Motor Co., Tarrytown, N. Y.

Myers, M. L.—2nd Asst. Treas. Dragon Motor Co., 31st, 32nd and Chestnut Sts., Philadelphia, Pa.

Myers, M. R.—Sec. Albaugh Bros., Dover & Co., Marshall Blvd. and 21st St., Chicago, Ill.

Myers, S. C.—513 16th St., Oakland, Cal. Garage.

Myers, T. P.—Adv. Mgr. Rapid Motor Vehicle Co., Rapid St., Pontiac, Mich.

Myers, William B.—Sec. E. J. Willis Co., 8 Park Pl., New York City.

Myronda Motor Car Co.—St. Louis, Mo. (Knox.)

N

n.—A Symbol for "frequency."
N.—Symbol for "north," or for the north-seeking pole of a magnet.

N.—Symbol for the "magnetic flux."

n. h. p.—An abbreviation of "nominal horse-power."

Ni.—Symbol for "Nickel."

Nacke, E.—Koetitz bei Coswig, Saxony, Germany. Mfr. gasolene automobiles, gasolene commercial automobiles and tricars (Nacke).

Nadig & Bros. Mfg. Co., C. H.—16-24 N. 4th St., Allentown, Pa. Mfrs. steam engines. (Waltham.)

Nading, M. M.—Pres. Flatrock Automobile Co., Flatrock, Ind.

Nado, Lewis A.—Danielson, Conn. (Rambler.)

Nagant Frères.—44 quai de Coronmeuse, Léige, Belgium. Mfrs. gasolene automobiles, gasolene commercial automobiles (Nagant), differential gears, transmission gears, automobile motors, marine motors.

Nail-puller.—A device, called also a "nail catcher," for automatically drawing nails or the like from the tire of an automobile before they have a chance to puncture the inner tube. It consists (see figure)

of a stout wire, F, chain or openwork iron plate hung at two points, B, from the fender, A, and the surface of which nearly grazes the tread, P, of the tire.

Nalle, Ewell.—601-623 E. 6th St., Austin, Tex. (Thomas, Buick.) Est. 1902. Repairing cars represented only.

Naphtha.—A term originally applied to rock oil, that is, oil issuing from the earth. As a trade term, it is employed by oil refiners to designate a series of products obtained in the manufacture of kerosene, or what is obtained in the distillation process after all the benzine is given off and kerosene is obtained. There are three grades of naphtha known to the trade, viz., "A naphtha," "B naphtha," and "C naphtha," of which the latter is the lightest. To the consumer these products are usually known as "gasolene." The first (A naphtha) of a specific gravity of .68 to .70, is the usual internal-combustion motor fuel and fuel for gasolene stoves, and the burners of steam-cars. See Gasolene.

Naphtha-engine.—A motor-boat single-acting engine provided with a coil boiler in which is used a mixture of naphtha and water, and which is heated by naphtha.

Naphtha-launch.—See Launch, Naphtha.

Naphthalene.—A hydrocarbon ($C_{10}H_8$), called also by the trade-name of "carbon," and formed in large quantities as a by-product in the preparation of coal-gas. When the last portion of the volatile oily product passes over in the distillation of coal-tar it is collected and allowed to stand, whereupon a quantity of solid crystalline matter, which is principally naphthalene, separates. By sublimation, it is obtained perfectly white, and is the common ingredient in what are commonly called "camphor balls," or "moth balls." It melts at $176^{\circ} F.$ ($80^{\circ} C.$) and boils at $414^{\circ} F.$ ($212^{\circ} C.$), and, when vaporized, may be used as a fuel in internal combustion-motors. See Motor, Naphthalene.

Naphthalene Motor.—See Motor, Naphthalene.

Napier., Geo. R.—Macon, Ga. (Maxwell.)

Napier Motor Car Co. of America.—Jamaica Plain, Mass. Mfrs. gasolene automobiles. (Napier cars.)

Napier Motor Co.—Acton Vale, London, England. Mfrs. gasolene automobiles (Napier cars), marine motors.

Naris-Chiorda.—Via Umberto primo, Albino, Italy. Mfrs. motorcycles.

Nash & Bartlett.—Flatiron Bldg., New York City. U. S. Distributors for Commonwealth Rubber Co., except New England, Pennsylvania, Indiana and Michigan.

Nash & Co., Geo.—224 Pearl St., New York City. Mfrs. steel.

Nash, J. H.—Orono, Me. (Ford.)

Nash, W. B.—Machais, Me. (Waltham.)

Nashville Motor Car Co.—Cor. Church St. and Ninth Ave., Nashville, Tenn. (Dorris, Stanley.) Est. May 1, 1903, under name of Duncan R. Dorris, as Nashville Motor Car Co., June 15, 1905. Inc. Jan. 1, 1907. Cap. \$10,000. Dr. Chas. Brower, Pres.; M. S. Pilcher, Vice-Pres.; D. R. Dorris, Sec.; Treas. and Sales Mgr.; R. L. Fletcher, Garage Mgr. Garage, 50 cars. Repairing.

Nathan Novelty Mfg. Co.—88 Reade St., New York City. Mfrs. storm curtains and aprons, lamp covers, tire cases, auto covers, rubber aprons, tool cases and inner tube cases.

National Acme Mfg. Co., The.—Cor, Stanton Ave. S. E. and E. 75th St., Cleveland, O. Mfrs. automatic screw machines, cap and set screws and special milled goods. Cap. \$1,250,000. Est. 1902. W. B. D. Alexander, Pres.; E. C. Henn, Vice-Pres. and Supt.; A. W. Henn, Sec.; O. S. Wernitz, Treas.

National Association of Automobile Manufacturers, Inc.—7 E. 42nd St., New York City. The N. A. A. M., Inc., is the successor to the National Association of Automobile Manufacturers, organized in 1901, of which S. T. Davis, Jr., was the first president and M. J. Budlong second president. The present N. A. A. M. was incorporated April 5, 1904, the object being the "general improvement of trade conditions and protection of trade interests." Its charter members were (active) Apperson Bros. Auto Co., Autocar Co., Baker Motor Vehicle Co., Berg Automobile Co., Cadillac Automobile Co., Consolidated Motor Co., Duryea Power Co., Electric Vehicle Co., Elmore Mfg. Co., Ford Motor Co., H. H. Franklin Mfg. Co., Grout Bros. Auto Co., Holley Motor Co., Thos. B. Jeffery & Co., Kirk Mfg. Co., Knox Auto Co., Locomobile Co. of America, Matheson Motor Car Co., Ltd., Mobile Co. of America, National Motor Vehicle Co., National Sewing Machine Co., Olds Motor Works, Packard Motor Car Co., Peerless Motor Car Co., Geo. N. Pierce Co., Pope Mfg. Co., Royal Motor Car Co., Smith & Mabley Mfg. Co., Standard Motor Construction Co., F. B. Stearns Co., Stearns Steam Carriage Co., St. Louis Motor Carriage Co., J. Stevens Arms & Tool Co., Studebaker Bros. Mfg. Co., E. R. Thomas Motor Co., Vehicle Equipment Co., Waltham Mfg. Co., White Sewing Machine Co., Winton Motor Carriage Co., Woods Motor Vehicle Co.; (associate) American Automobile Storage Co., American Coil Co., The Automobile, The Auto Supply Co., Badger Brass Mfg. Co., Baldwin Chain & Mfg. Co., Brown-Lipe Gear Co., Columbia Lubricants Co. of New York, Cycle & Automobile Trade Journal, Dayton Electrical Mfr. Co., R. E. Dietz Co., Dow Portable Electric Co., The Electric Storage Battery Co., Federal Mfg. Co., Fisk Rubber Co., Peter Forg, A. H. Funke, Gleason-Peters Air Pump Co., The Garvin Machine Co., Gray & Davis, Good-year Tire & Rubber Co., G. & J. Tire Co., Hartford Rubber Works Co., Hyatt Roller Bearing Co., Phineas Jones & Co., Locke Regulator Co., McCanna Dash Co., Mason Regulator Co., Midgley Mfg. Co., Motsinger Device Mfg. Co., National

Carbon Co., Newport Engineering Works, New Process Rawhide Co., N. Y. Edison Co., K. Franklin Peterson, Sartus Ball Bearing Co., Steam Carriage Boiler Co., Ralph Temple & Austrian Co., Veeder Mfg. Co., Weston Electrical Instrument Co., The Whitlock Coil Pipe Co., Whitney Mfg. Co.,

The present active membership consists of the following: American Locomotive Auto Co., Apperson Bros. Auto Co., Autocar Co., Babcock Electric Carriage Co., Baker Motor Vehicle Co., Beverley Mfg. Co., The Bartholomew Co., Buick Motor Car Co., Cadillac Motor Car Co., Commercial Motor Co., Corbin Motor Vehicle Corp., Daimler Mfg. Co., Dayton Motor Car Co., Electric Vehicle Co., Elmore Mfg. Co., Ford Motor Co., H. H. Franklin Mfg. Co., The Garford Co., Grout Bros. Auto Co., Haynes Automobile Co., Hewitt Motor Co., Thos. B. Jeffery & Co., Knox Automobile Co., Locomobile Co. of America, Matheson Motor Car Co., Maxwell-Briscoe Motor Co., Mitchell Motor Co., Lozier Motor Co., National Motor Vehicle Co., Northern Motor Mfg. Co., Olds Motor Works, Packard Motor Car Co., Peerless Motor Car Co., Geo. N. Pierce Co., Pope Mfg. Co., Pope Motor Car Co., Premier Motor Mfg. Co., Royal Motor Car Co., Reliance Motor Car Co., F. B. Stearns Co., St. Louis Motor Carriage Co., Stevens-Duryea Co., Studebaker Bros. Mfg. Co., E. R. Thomas Motor Co., Reo Motor Car Co., Waltham Mfg. Co., Wayne Auto Co., The White Co., Winton Motor Carriage Co., Woods Motor Vehicle Co.

Present officers: A. L. Pope, Pres.; S. D. Waldon, Vice-Pres.; Thos. Henderson, 2nd Vice-Pres.; Wm. E. Metzger, 3rd Vice-Pres.; L. H. Kittridge, Sec.; W. R. Innis, Treas.; Samuel A. Miles, Gen. Mgr.; Chas. Thaddeus Terry, Counsel. The Executive Committee consists of S. T. Davis, Jr., Windsor T. White, Charles Clifton, Thomas Henderson, Wm. E. Metzger, S. D. Waldon, Wm. R. Innis, C. C. Hildebrand, M. J. Budlong, E. H. Cutler, Albert L. Pope, Benj. Briscoe, L. H. Kittridge, Ezra E. Kirk, Wm. Mitchell Lewis. The chairmen of committees are S. D. Waldon (Contest and Good Roads), Thomas Henderson (Legislative), S. T. Davis, Jr. (Membership), M. J. Budlong (Show), W. T. White (Transportation), C. C. Hildebrand (Auditing).

National Association of Engine and Boat Manufacturers.—314 Madison Ave., New York City. John J. Amory, Pres.; James Craig, Treas.; Hugh S. Gambel, Sec.; H. R. Sutphen, 1st Vice-Pres.; W. J. Reynolds, 2nd Vice-Pres.; J. M. Truscott, 3rd Vice-Pres.

National Auto & Supply Co.—Cor.

Duke and Vail Sts., Lancaster, Pa. (Rambler, Crawford, Marmon.)

National Auto Co.—New Orleans, La. (Monarch.)

National Auto Co.—1711 14th St., Washington, D. C. (Oldsmobile, Studebaker.)

National Auto Co., Inc.—957 S. Main St., Los Angeles, Cal. (National, Triumph, F. N. Motorcycles.) Est. 1901. Cap. \$25,000, paid up. Llewellyn H. Johnson, Pres.; Wm. E. Ramsay, Treas.; Frederick H. Taft, Sec.; Geo. S. Maslen, Head of Sales Department; A. E. Brown, Head of Mechanics Department; P. H. Rice, Jr., Head of Demonstration.

National Automobile Top Co.—Main Office, 1904 Broadway. Factory, 244-50 W. 49th St., New York City. Mfrs., jobbers and dealers. Mfrs. automobile tops, glass fronts, folding wind shields, slip covers, dust hoods, automobile top repairing. Est. Jan. 1, 1907. John J. Bush and Andrew Herman, Partners. G. A. Mackey, Factory Mgr.; G. L. Wilson, Asst. Factory Mgr.; T. F. Kelly, Traveling Salesman. General Eastern agents for the Sprague Umbrella Co. and the Blasler Mfg. Co.

National Battery Co.—368-382 Massachusetts Ave., Buffalo, N. Y. Mfrs. ignition and electric vehicle storage batteries. Mem. M. & A. M. Cap. \$1,000,000. Est. 1900. J. R. Richmond, Pres.; R. L. Coleman, Chairman of Board; Ralph Kimberly, Sec. and Treas.

National Brake & Clutch Co.—16 State St., Boston, Mass. Owners and Licensors of Patents covering the use of "Cork Inserts" or segments in brakes, clutches, pulleys and frictional devices. William W. Whitcomb, Pres.; Lawrence Whitcomb, Secv., Treas. and Gen. Mgr. Agents: Standard Brake Co., 101 W. 66th St., New York.

National Brake & Electric Co.—Milwaukee, Wis. Mfrs. clutches.

National Capital Automobile Club.—E. W. Sutherland, Sec., 819 14th St., N. W., Washington, D. C.

National Carbon Co.—Lock Drawer L., Cleveland, O. Mfrs. dry cells, ignition batteries of all kinds and testing instruments. Cap. \$10,000,000. Mem. M. & A. M.

National Casket Co.—New York City, Boston, Philadelphia, Baltimore, Pittsburgh, Nashville, Louisville, Indianapolis, Rochester, Buffalo, Albany and Chicago. Mfrs. lap robes, rain coats and auto heaters. C. Will Chappell, Pres., Oneida, N. Y.; Leo Stein, Vice-Pres., Hoboken, N. J.; J. T. Richards, Vice-Pres., Chicago, Ill.

National Cement and Rubber Mfg. Co. 3053-59 Monroe St., Toledo, O. Mfrs. rubber cement, friction tape, automobile graphites and greases, metal polish, auto-

mobile repair kits, brazing forges. Cap. \$50,000. Est. 1897. D. V. R. Manley, Pres. and Gen. Mgr.; W. F. Gifford, Sec. and Treas.

National Coil Co.—Lansing, Mich. Mfrs. spark coils, electric switches.

National Construction Co.—604 Morgan Bldg., Buffalo, N. Y. Mfrs. portable houses.

National Corundum Wheel Co.—455 Ellicott St., Buffalo, N. Y. Mfrs. emery wheels.

National Cutlery Co.—Detroit, Mich. Mfrs. machinery springs.

National Cycle Mfg. Co.—Bay City, Mich. Mfrs. ball cups, machine work to order, oil pumps, screw machine products and screws.

National Elastic Nut Co.—Milwaukee, Wis. Mfrs. lock nuts and washers.

National Equipment Co.—Holland Bldg., St. Louis, Mo. Mfrs. gasolene and kerosene burners.

National Garage.—Cor. 7th and Main Sts., Los Angeles, Cal. Garage.

National India Rubber Co.—Bristol, R. I. Mfrs. storm aprons and curtains, collapsible buckets, inner tire tubes, tire tools, tire tape, cloth and carpet trimmings, insulated wire.

National Lock Washer Co.—65-89 Johnson St., Newark, N. J. Mfrs. lock nuts and washers, washers.

National Motor Car Co.—Oakland, Cal. (Chadwick, Jackson, National and Queen.)

National Motor Vehicle Co.—Cleveland, O. Garage.

National Motor Vehicle Co.—E. 22nd St. and Monon R. R., Indianapolis, Ind. Makers of the National car; first marketed in 1900. Fifteen different models made since: eight electric and seven gasoline. Cap. \$250,000. Chas. E. Test, Pres.; P. E. Manchester, Vice-Pres.; A. C. Newby, Sec., Treas. and Gen. Mgr.; W. G. Wall, Designer; Harry Moore, Supt.; Geo. H. Matheson, Purch. Agt.; Geo. M. Dickson, Sales and Advt. Mgr.; William F. Striebe, Ass't. Supt.

National Oil & Supply Co.—Newark, N. J. Mfrs. grease, transmission gear compound and oil.

National Oil Burner & Equipment Co.—Holland Bldg., St. Louis, Mo. Mfrs. condensers.

National Oil Pump & Tank Co.—Dayton, O., and 120 Liberty St., New York City. Mfrs. oil pumps, tanks and storage tanks.

National Pipe Bending Co.—River and Lloyd Sts., New Haven Conn. Mfrs. coils and bends of iron, and brass and copper pipes.

National Porcelain Co.—Trenton, N. J. Mfrs. porcelain.

National Professional Chauffeurs' Club, No. 1.—1947 Broadway, Rooms 305-6,

Arcade Bldg., and 23 Park Row, Rooms 55-56, New York City. Organized January, 1905, by Frank Gorman. Daniel Honeker, Pres.; P. J. O'Haire, Vice-Pres.; Betram Hope, Fin. Sec.; A. J. Taranto, Rec. and Cor. Sec.; Chas. Durbin and David Watkins, Trustees; A. Bilander, Treas. Charter members: Jas. O'Connell, Geo. Taylor, Frank Gorman, Betram Hope, Fred Brown, A. J. Taranto, D. J. Martyn, Chas. Durbin, F. W. Schaffner, Sidney Richman, Harry Humphries, Chas. Jager, Chas. Wannemacker, Daniel Honeker, Jos. Price, Wm. Kerrigan, P. J. O'Haire, Herbert Walsh, Albert Kupcsik, E. Nassoy, C. Coon, L. Stockhammer, Wm. Meyers, J. B. Wilson, B. Ericson, Gus. Lechleitner, H. Clayton, T. Donovan, Thos. Hyland, Chas. Doughty, E. Heynemann, Wm. Kurts. Present Chairmen of Committees: Gus Lechleitner, Wm. Kurts, Chas. Durbin, D. J. Martyn, Frank Gorman, P. J. O'Haire, Fred Brown, Thos. Hyland and Chas. Doughty. Former Presidents: Geo. Taylor and Alden Markham. National Headquarters, McGill Building, Washington, D. C., Rooms 402-7. National President, Jas. O'Connell.

National Sales Corporation.—296 Broadway, New York City. Importers and distributors, supplies.

National Screw & Tack Co.—Cleveland, O. Mfrs. bolts, nuts and screws.

National Sewing Machine Co.—Belvidere, Ill. Mfrs. bolts, nuts, lubricators, screws and washers.

National Spring & Wire Co.—Albion, Mich. Mfrs. spring edge cushions, frames and cushion springs for automobiles and carriages. Cap. \$10,000. Est. October, 1902. A. J. Abbott, Pres.; S. M. Raferty, Vice-Pres. and Traveling Salesman; Elmer Jacobs, Gen. Mgr. and Treas.; O. A. Leonard, Sec.; F. B. King, Supt.

National Supply Co.—Philadelphia, Pa. (Waltham.)

National Surety Co.—346 Broadway, New York City. Issue powers of attorney, acceptable as bail, when arrested for violation of automobile laws in the following States: California, Connecticut, District of Columbia, Illinois, Indiana, Maine, Maryland, Massachusetts, Minnesota, Missouri, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Vermont and Wisconsin.

National Tube Co.—McKeesport, Pa. Mfrs. steel tubing.

National Wheel Co.—Jackson, Mich. Mfrs. artillery wheels. Cap. \$50,000. Est. 1890. Henry H. Smith, Pres.; Thos. E. Barkeworth, Vice-Pres.; James R. Mercer, Sec., Treas. and Mgr.

Natural Magnet.—See Magnet

Naugatuck Malleable Iron Co.—Naugatuck, Conn. Mfrs. carburetter ball floats and malleable iron castings.

Nautical Mile.—See Mile. Nautical.

Nave.—The central part of a wheel, called also "hub" and "boss."

Navigation Aérienne Société Française, de.—10 rue de la Pépinière, Paris, France

Neal, Clark & Neal Co.—643 Main St., Buffalo, N. Y. (Indian, Reliance.)

Nazarro, Felice.—Born Dec. 4, 1881, in Turin, Italy.

Worked as mechanic in 1897 for Ceirano, the Turin automobile dealer. Joined the Fiat Co. in 1900 as tester. Chauffeur of Vincenzo Florio in 1905. Piloted Florio's 75-hp. Panhard, Paris-Madrid (1903). Joined the Fiat

racing team in 1905, and this same year was second in the Bennett Cup race, first in Mount Cenis hill climb, sixth in Brescia and sixth in the Vanderbilt race. In 1907 won the Targa Florio (Italy), the Kaiser's Prize (Germany), the Grand Priz (France). Finished every race in which he drove.

Neal, Thomas.—Sec. and Gen. Mgr. Acme White Lead & Color Works, Detroit, Mich.

Neare, C. J.—Sec. and Treas. Sid Black Automobile Co., 630 Walnut St., Cincinnati, O.

Neck.—A general name for a narrow portion of some object, particularly the journal of a shaft.

Neckarsulmer Fahrradwerke Actiengesellschaft.—Neckarsulm, Würtemberg, Germany. Mfrs. N. S. U. motorcycles and U. S. U. tricar, automobile and motorcycle motors.

Needle.—A straight wire balanced and pivoted, as in a compass; the magnetic needle.

Needle-valve.—See Valve, Needle.

Neelémans, A., et Tardieu.—25 rue d'Edinbourg, Brussels, Belgium. Mfrs. elastic wheels.

Neely, Edward.—244 Wells St., Chicago, Ill. Mfr. lubricators.

Neely, N. A.—Christ Church, New Zealand. (Wayne.)

Neer Air Cooled Engine Co.—plain City, O. Mfrs. motors. Cap. \$25,000. Est. Jan. 1907. E. Beach, Pres.; H. Neer, Vice-Pres.; J. W. Price, Sec. and Treas. Directors: Beach, Neer, Price, M. Mackin and E. Fiedler.

Neer, H.—Vice-Pres. and Director Neer Air Cooled Engine Co., Plain City, O.

Negative.—A term used in expressing the direction in which the electric current is supposed to flow; the opposite of the positive.

Negative Stress.—A tension or tensile stress.

Negley, Charles.—Farmington, Ill. (Buick.)

Nehrbas, Frederick Philip.—B. Winchester, Erie, Co., N. Y., Dec. 22, 1876. Ed. Public school and private mechanical school conducted by Wm. Davy, M. E., then M. E. of Snow Steam Pump Co. Res. 362 Bird Ave., Buffalo, N. Y. In the trade since July 16, 1898. Used first car (Thomas) 1901.

With E. R. Thomas Co., Designing Dept., for four years. Asst. Gen. Supt. until 1908. Recreations, touring, hunting.

Neider Co., Inc., The F. A.—Augusta, Ky. Mfrs. curtain fasteners, knobs and clinch buttons and general line of metal top trimmings. Cap. \$100,000. Est. 1881. A. Freschl, Pres.; F. A. Neider, Vice-Pres.; Isaac Reynolds, Sec., Treas. and Mgr.

Neider, F. A.—Vice-Pres. The F. A. Neider Co., Inc., Augusta, Ky.

Neiderrheinischer Verein für Luftschiffahrt.—(Barmen Aero Club), Barmen, Germany.

Neiheisel Bros.—Boulder, Colo. (White, Smith, Autocar, Franklin, Jackson, Ford)

Neil, Perry L.—Pres. Quaker City Automobile Co., 138-46 N. Broad St., Philadelphia, Pa.

Neilsen Motor Car Co.—Detroit, Mich. Mfrs. gasoline automobiles and commercial vehicles.

Nelms, Robert.—42 W. Adams St., Jacksonville, Fla. (Queen)

Nelson & Co., J. A.—Round Rock, Tex. (Mitchell.)

Nelson Automobile Co.—216 Main St., Springfield, Mass. (Buick.)

Nelson, Axel.—8th St., bet. Orange and Lemon Sts., Riverside, Cal. Garage.

Nelson, E. R.—Ishpeming, Mich. (Franklin.)

Nelson House Garage.—34 Market St., Poughkeepsie, N. Y. (Maxwell.)

Nelson, H. P.—Sec. Pittman & Nelson Automobile Co., 2036 Addison St., Berkeley, Cal.

Nelson, Palen.—Vice-Pres. N. Y. Sporting Goods Co., 17 Warren St., and

Pres. Sports, Ltd., 2049 Broadway, New York City.

Nelson, S.—12 Park St., Jersey City, N. J. (Compound.)

Nelson W. H.—Smith Center, Kan. (Waltham.)

Neracher, Carl A.—Chief Engineer The Garford Co. B. Cleveland, O., Jan. 6, 1882. Res. 199 Meirose St., Cleveland, O. Office The Garford Co., Elyria, O.

Néron (Société de l'Antiderapant).—38 ter rue de Paris, Elbeuf, France. Mfrs. non-skids.

Ness, T. W.—Gen. Mgr. Holtzer-Cabot Electric Co., Brookline, Mass.

Nesseldorfer Wagenbau Fabrics Gesellschaft Semmering.—Vienna, Austria. Mfrs. gasoline commercial and gasoline automobiles. (Omnibus.)

Nest-gear.—See Gear, Nest.

Nestle, Otto G.—Sec. Daimler Mfg. Co., 939 Steinway Ave., Long Island City, N. Y.

Net, Balloon.—A network of cordage which incloses the gas-bag and supports the car through the intermedium of the suspension hoop. The size of the meshes varies with the cubage, and continues increasing from the upper pole to the equatorial region. Below it gives rise to cordage in which the ramifications increase in size but diminish in number and end in isolated suspension ropes furnished with loops. The net covers the entire upper hemisphere of the balloon. It relieves the bag in great part of the effort exerted upon it by internal pressure.

Nettleton & Co., V. L.—49 Chicago St. Garage, 21 Hanchett St., Coldwater, Mich. (Rambler, Maxwell.) Est. in auto line, 1903. Original hardware business was started by D. Nettleton in 1866. Garage, 12 cars; repairing.

Nettleton, R. B.—Head of Sales Dept. of Bird-Sykes Co., 1470 Michigan Ave., Chicago, Ill.

Neubauer, A. C.—Part owner and proprietor Palais de l'Automobile, 1778 Broadway, New York City.

Neubauer, H.—Part owner and proprietor Palais de l'Automobile, 1778 Broadway, New York City.

Neubling, John G.—8843 Penn Ave., Reading, Pa. (Indian.)

Neue Automobile Gesellschaft.—31 Luisenstrasse, Berlin, Germany. Mfrs. gasoline and gasoline commercial automobiles. (N. A. G. cars.)

Neue Gas Industrie.—Ulm, Germany. Mfrs. radiators

Neue Industriewerke.—Ulm-am-Don, Germany. Mfrs. horns.

Neue-Vergassergesellschaft.—63 Urbanstrasse, Berlin, Germany. Mfrs. carbureters.

Neuman & Co., Wm. F. V.—736 Woodward Ave., Detroit, Mich. (Wayne-

Pope-Waverley, Welch, White, Soules, Baker, Stoddard-Dayton.)

Neuman, J. E.—1841 Market St., San Francisco, Cal. (Rapid.)

Neumeister, Fred P.—Rockford, Ill. Mfr. automobile tops.

Neustadt Automobile & Supply Co.—3948-3950 Olive St., St. Louis, Mo. Mfrs. dealer and jobber of axles, wheels, bodies, woods, radiators and supplies. Cap. \$35,000. Est. 1901. J. H. Neustadt, Pres., Treas. and Executive; L. J. Neustadt, Sec.; Chas. Neustadt, Vice-Pres.; Eugene De Prez, Mgr.; Chas. Zimmermann, gasoline Engineer, and Vincent Liska, Supt.

Neustadt, Chas.—Vice-Pres. Neustadt Automobile & Supply Co., 3948-50 Olive St., St. Louis, Mo.

Neustadt, J. H.—Pres., Treas. and Executive Neustadt Automobile & Supply Co., 3948-50 Olive St., St. Louis, Mo.

Neustadt, L. J.—Sec. Neustadt Automobile & Supply Co., 3948-50 Olive St., St. Louis, Mo.

Neutral Equilibrium.—See Equilibrium.

Nevada Automobile & Supply Co.—Office and store, 115 Ramsey St., shops and garage N. Main St., Goldfield, Nev. (Pope-Toledo, Northern.) Est. 2 years. Not inc. N. H. Bertram, owner and Mgr.; Walter Hamilton, Asst. Mgr.; Frank H. Morse, Purch. Agt.; G. W. Dugan, Shop Supt. Garage, 40 cars; repairing.

Nevermiss Fire Extinguisher Co.—Middletown, N. Y. Mfrs. fire extinguishers.

Nevermiss Spark Plug Co.—321-323 Michigan Ave., E., Lansing, Mich. Mfrs. spark plugs, battery connections, wire terminals, ammeters, combustion and voltmeters, chain tools and coils. Est. June 1, 1904. Mem. M. & A. M. W. L. Azh, owner and proprietor.

Neveu et Cie., J.—169 Ave. du Roule. Neuilly-sur-Seine, France. Mfrs. wooden wheels, tops, and wooden rims.

Neville & Co.—Oshkosh, Wis. (Pope-Toledo.)

Nevin, E. D.—Sec. and Treas. The Belden Motor Car Co.; 720 Bessemer Bldg., Pittsburg, Pa.

Nevin, Ernest D.—507 Wood Ave., Pittsburg, Pa. (Darracq.)

New American Elevator Co.—Curtis and Jefferson Ave., Columbus, O. Mfrs. elevators for garages.

New Amsterdam Motor Car Co.—Brooklyn, N. Y. (Crawford.)

New Amsterdam Motor Co.—152 W. 56th St., New York City. (Crawford.) Est. 1905. Cap. \$75,000. Chas. Morgan, Pres.; F. M. Tench, Vice-Pres.; E. B. Percy, Treas.; Joseph Troxell, Sec. and Mgr. and head of the Automobile Renting Dept.; Charles Morgan, head of the

Selling Car Dept.; H. T. Kline, Carbide Dept. Repairing; rental service.

Newark Iron & Steel Co.—Newark, O. Mfrs. steel castings.

Newark Motor Car Co.—126-128 S. 14th St., Newark, N. J. (Wayne, Reo, Premier.)

Newark Repair & Garage Co.—213 Clinton Ave., Newark, N. J. Garage.

New Bedford Automobile Club.—New Bedford, Mass. Eli Watson, Sec.

Newbern Co., S. C.—430 Walnut St., Philadelphia, Pa. Mfrs. automobile body polishes and metal polishes.

New Britain Brass Co.—New Britain Conn. Mfrs. pipe and brass fittings.

Newburg Auto Shop.—299 Grand St., Newburg, N. Y. (Winton.) Garage; repairs.

Newburn, J. R.—Union City, Ind. (Northern.)

Newby, A. C.—Sec. Treas. and Gen. Mgr. National Motor Vehicle Co., E. 22d St., Indianapolis, Ind.

Newby's Automobile Inn.—1122 W. Broad St., New Castle, Ind. (Maxwell, Premier, National, Rambler.)

New Castle Automobile Co.—27 Cockran St., New Castle, Pa. (Pope-Toledo.)

New Columbia Machine Works.—239 Pearl St., Fort Wayne, Ind. (Kiblinger.)

Newcomb, A. H.—815 W. 21st St., Chicago, Ill. Mfrs. spark trimming devices.

Newcomb Automobile Co.—Wildwood, N. J. (Cadillac.)

Newcomb Carburetter Co.—1900 Broadway, New York City. Mfrs. carburetters.

Newcomb, F. S.—Post Hill, New London, Conn. (Maxwell.)

Newcombe Motor Co.—378 Jackson Ave., Long Island City, N. Y. Mfrs. steam automobiles and steam commercial automobiles.

New Departure Mfg. Co.—Bristol, Conn. Mfrs. bells and annular ball bearings.

Newell, O. H.—Coldwater, Mich. (Waltham.)

Newell, Dr. F. H.—Director Austin Automobile Club, Austin, Ill.

Newell, Jas. R.—819 Hay St., Wilkesburg, Pa. (Elmore.)

New Engine Co.—Acton, London, W., England. Mfrs. marine motors, automobile motors and gasoline automobiles. (N. E. C. cars.)

New England Automobile Co.—55 Berkeley St., Boston, Mass. Dealers in second-hand automobiles and parts. Jno. M. Barry, Gen. Mgr., Purch. Agt. and Advt. Mgr. J. F. Lane, Supt. Clarence E. Clifford, Sales Mgr.

New England Automobile Journal.—400 Westminster St., Providence, R. I.

Pub. second and fourth Saturdays of each month by the New England Automobile Journal Pub. Co. Wm. H. Black, Treas.; David O. Black, Jr., Sec.

New England Automobile Mfg. Co.—27 State St., Boston, Mass. Mfrs. gasoline automobiles.

New England Automobile Top Co.—229 W. 54th St., cor. Broadway, New York City. Mfrs. wind shields, automobile tops and slip covers. Cap. \$12,000. Est. Oct. 1, 1907. G. A. Mackey, Pres. and Treas.; Geo. L. Wilson, Vice-Pres.; B. Eisenstein, Sec.

New England Engine & Boat Assn.—5 Park Sq., Boston, Mass. C. A. Sanders, Pres.; J. S. Poyen, Vice-Pres.; J. M. Schoonmaker, Treas.; Chester I. Campbell, Sec. Board of Directors: C. A. Sanders, Harry Wright, J. S. Poyen, A. W. Toppan, Chester I. Campbell, Geo. F. Lawley and W. J. Young.

New England Forge Co.—9 Plymouth St., Worcester, Mass. Mfrs. crank shafts and gear blanks.

New England Motor Co.—82-88 Fletcher St., Lowell, Mass. Mfrs. storage igniters. Cap. \$25,000. Est. 1897. Geo. W. Fifield, Pres.; A. R. Bliss, Sec., Treas. and Gen. Mgr. Mem. M. & A. M.

New England Steel Castings Co.—Hyde Park, Mass. Mfrs. steel castings.

New Era Co.—56 Galen St., Watertown, Mass. (Glide.)

New Era Gas Engine Co.—9 Doyle Ave., Dayton, O. Mfrs. air compressors.

New Era Mfg. Co.—Kalamazoo, Mich. Mfrs. babbitt metal and bronze metals.

Newhall, B. R.—Head of Automobile Dept., Syracuse Rubber Co., 212-14 S. Clinton St., Syracuse, N. Y.

New Hampshire Automobile Club.—Exeter, N. H. Chas. G. Sheldon, Sec.

New Haven Automobile Corporation.—53 Broadway, New Haven, Conn. (Pope-Hartford, Pope-Toledo. Pope-Waverley.)

New Haven Button Co.—New Haven, Conn. Mfrs. all kinds of cloth and leather covered buttons and nails, including clinch buttons. Cap. \$20,000. Est. 1889. A. Freschl, Pres.; H. W. Asher, Vice-Pres.; H. T. Beers, Treas.; Peter Colgan, Sec.

New Haven Carriage Co.—New Haven, Conn. Mfrs. wooden and metallic bodies and wood wheels.

New Haven Copper Co.—New Haven, Conn. Mfrs. sheet and rod brass and copper and brass and copper metals.

Newington, W. H.—Garage Mgr. Ketchum & Co., Bank and Sparks Sts., Ottawa, Canada.

New Jersey Aluminum Co.—19th and Springfield Aves., Newark, N. J. Mfrs. aluminum, brass, bronze, aluminum and copper castings, license numbers, tire holders and tire irons.

New Jersey Asbestos Co.—Camden, N. J. Mfrs. asbestos gaskets and packing.

New Jersey Automobile Car Co.—239 Halsey St., Newark, N. J. Garage.

New Jersey Automobile and Motor Club.—1034 Broad St., Newark, N. J. H. A. Bonnell, Sec.

New Jersey Automobile Co.—855-857 Springfield Ave., Newark, N. J. (Moline, Aerocar.) Est. 1904. Cap. \$125,000. A. N. Brunner, Pres.; A. B. Ward, Vice-Pres.; W. F. Indergrund, Sec.; F. R. Laisant, Treas. Garage, 25 cars; repairing; renting; supplies.

New Jersey Car Spring & Rubber Co.—Wayne and Brunswick Sts., Jersey City, N. J. Mfrs. hose couplings, gaskets, rubber mats, packing, rubber tubing and washers.

New Jersey Motor Co.—49-51 Bank St., Newark, N. J. (Ford.)

New Jersey Steel Co.—Rahway, N. J. Mfrs. steel castings.

New Jersey Tube Co.—Newark, N. J. Mfrs. exhaust horns and brass and copper tubing.

New Jersey Vulcanizing Co.—83 Halsey St., Newark, N. J. Garage.

Newlin, W. G.—128 Pipestone St., Benton Harbor, Mich. (Rambler.)

New London Motors, Ltd.—Aspley, Nottingham, England. Mfrs. gasoline automobiles. (Leader.)

New London Automobile Station.—94 Main St., New London, Conn. (Thomas Flyer, Thomas-Detroit, Haynes.) Est. 1904. Partnership C. K. Smith and Arthur Brookes. Garage, 15 cars; repairing.

New London Motor Co.—New London, Conn. Mfrs. gasoline motors.

Newman, A. V.—Purch. Agt. Humphrey's Mfg. Co., 201 E. 5th St., Mansfield, O.

Newman Bros.—134 Main St., Hackensack, N. J. Garage.

Newman Clock Co.—Masonic Temple, Chicago, Ill. Mfrs. automobile clocks.

Newman Investment Co.—El Paso, Tex. (Buick.)

Newman, O. H.—Belmar, N. J. (Maxwell.)

Newmarch, L. A.—Sidney, New South Wales. (Lambert.)

Newmastic Tire Co.—151 W. 68th St., New York City.; 302 Michigan Ave., Chicago, Ill.; 4148 Olive St., St. Louis, Mo. Mfrs. tire fluid.

New Orleans Motor Co., Ltd.—Twickenham, England. Mfrs. gasoline automobiles. (Orleans.)

Newport Engineering Works.—359-365 Thames St., Newport, R. I. Dealers and sub-agents in automobiles and accessories, tires, foreign and American; oils, greases, etc. Fireproof garage, repair plant. Cap. \$20,000. Est. 1902. A. L. Mason, Pres., Treas. and Gen. Mgr.;

Earl P. Mason, Sec., Supt. and Mechanical Engineer; E. L. Mason, Vice-Pres.

Newport Mfg. Co.—18 S. Baptist St., Newport, R. I. Garage.

New Process Raw Hide Co., The.—500-514 Plum St., Syracuse, N. Y. Mfrs. rawhide gears, hardened steel gears, and fibre gears. Est. 1888. Mem. M. & A. M. T. W. Meachem, Pres.; T. G. Meachem, Vice-Pres. and Sales Mgr.; A. C. Vosburgh, Sec. and Treas.; W. H. Diefendorf, Chief Engineer.

New Process Steel Co., The.—Marshall, Mich. Mfrs. steel castings and chrome nickel steel.

Newton & Son, W. H.—127 Elm St., Cortland, N. Y. Mfrs. cushions.

Newton Centre Automobile Repair Station & Garage.—Beacon St., Newton Centre, Mass. Garage and repairing.

Newton Garage.—24 Brook St., Newton, Mass. Garage.

Newton, J. E.—Bedford and Troy Sts., Fall River, Mass. (Stevens-Duryea.)

Newton, Richard T.—Pres. Atlantic Motor Car Co., 1776 Broadway, New York City.

Newton & Son, W. H.—127 Elm St., Cortland, N. Y. Mfrs. automobile tops. Est. 1882.

New York & Brooklyn Automobile Supply Co.—1717 Broadway, New York City. Est. 1906. Partnership John F. Boh and D. E. Hydecker. Auto Supplies.

N. Y. & N. J. Lubricant Co.—14 and 16 Church St., New York City. Mfrs. non-fluid oils, oils. Est. 1896. Mem. M. & A. M. T. A. Matthews, Pres. and Treas.; W. F. Kimball, Vice-Pres.; J. H. Bennis, Sec.; F. J. Barnes, Asst. Treas.

New York Anti-Puncture Tire Co.—132W. 49th St., New York City. Mfrs. tire fluid.

N. Y. Asbestos Mfg. Co.—123 Cortland St., New York City. Mfrs. asbestos and gaskets.

New York Automobile College.—45 W. 44th St., New York City. Garage.

New York Automobile Co.—126-130 Lafayette, cor. State St., Utica, N. Y. (Reo, Ford, Aerocar.) Est. 1906. Garage. 20 cars. Repairing.

New York Automobile Garage.—306-8 W. 65th St., New York City. Garage.

New York Automobile Lamp Co.—585 Washington St., New York City. Mfrs. automobile lamps.

New York Auto Repository.—Ocean House Stables, Newport, R. I. Garage.

New York Automobile Club, The.—306 W. 109th St., New York City. Dr. E. T. Weed, Pres.; Andrew J. Cobe, Vice-Pres.; James Stuart Blackton, Treas.; I. E. Roskam, Sec. Directors: Dr. E. T. Weed, Andrew J. Cobe, James Stuart Blackton, I. E. Roskam, Edwin Churchman, Commander W. J. Sears, U. S. N.;

Bert G. Falhaber, Samuel C. Meyer, C. Sedgwick Levy, David C. Goodman, Conrad Hubert, Eldridge G. Snow, W. Woods, David J. Power and Samuel Steinfield.

New York Automobile Trade Association.—1876 Broadway, New York City. Organized April 16, 1903. "To afford mutual protection to its members and to the public." Charter members: Babcock & Linn, American Darracq Automobile Co., Mobile Storage & Repair Co., Pardee & Co., Locomobile Co. of America, Winton Motor Carriage Co., Barry & Hay Co., U. S. Long Distance Automobile Co., A. G. Spalding & Bros., International Motor Car Co., Studebaker Bros., John Wanamaker, Cadillac Co., Electric Vehicle Co., Homan & Schultz, Buffalo Electric Co. Officers: Percy Owen (Percy Owen, Inc.), Pres.; Frank Eveland (A. G. Spalding & Bros.), 1st Vice-Pres.; E. S. Partridge (Wyckoff, Church & Partridge), 2d Vice-Pres.; W. P. Kennedy, Treas.; Walter R. Lee, Gen. Mgr. and Sec. Chairmen of committees: Percy Owen, Carlton R. Mabley, W. M. Haradon, Carl H. Page and C. Andrade, Jr. Former presidents: Percy Owen and Carlton R. Mabley. Members: Automobile Ex. & Storage Co., Atlantic Motor Car Co., Automobile Import Co., American Locomotive Automobile Co., Bouton Motor Co., Broadway Automobile Exchange, Bowman Automobile Co., S. B.; Corbin Motor Vehicle Corp., Cadillac Co., Duerr & Co., C. A.; Darracq Motor Car Co., Diezman Shock Absorber Co., Duane & Co., W. J. Electric Vehicle Co., Ford Motor Co., Frayer-Miller Motor Car Co., Fogarty, Peter; Goodman, Frederick; Hol-Tan Co., Harrolds Motor Car Co., Homan & Schultz, Harlem Automobile Co., Hartford Suspension Co., Haynes Automobile Co., Kennedy, W. P.; Kull Automobile Co., A. L.; Locomobile Co. of America, Lozier Motor Co., Mabley, C. R.; Maxwell-Briscoe Co., Martini Import Co., Nichols & Co., D. P.; New York Motor Car Co., New York Transportation Co., Oldsmobile Co., Owen, Inc., Percy; Owen & Co., R. M.; Palmer & Singer Mfg. Co., Peerless Motor Car Co., Packard Motor Car Co., Parkway Garage Co., Peckham, R. T.; Ranney Co., A. Elliott; Rainier Motor Car Co., Renault Frères, Spalding & Bros., A. G.; Southworth & Co., A. G.; Scott Motor Co., Geo. J.; Studebaker Bros., St. Louis Car Co., St. Nicholas Automobile Co., Schultz, Theo. E.; Tuxedo Garage Co., Victor Automobile Co., Wyckoff, Church & Partridge, Waltham Mfg. Co., White Co., Winton Motor Carriage Co., West End Automobile Co. Promoted open air carnival and race meet at the Empire City track, May 24, 25, 26, 1902.

New York Belting & Packing Co., Ltd.—600 Prudential Bldg., Buffalo, N. Y. Mfrs. belting.

New York Belting & Packing Co.—25 Park Pl., New York City. Mfrs. solid tires.

New York Car & Truck Co.—(Auto Dept.), Kingston, N. Y. Makers of the Allen-Kingston car; first marketed, 1907. F. E. Moskovics, Gen. Mgr.; F. E. Moscovics and D. F. Graham, Designers; Geo. O. Hodge, Supt.; Ralph G. Lewis, Purch. Agt. Sole Sale Agents, The Allen-Kingston Motor Car Co., 3 W. 44th St., New York City.

New York Carriage Top Co.—509 W. 30th St., New York City. Mfrs. automobile tops.

New York City Garage.—10 W. 60th St., New York City. Garage.

New York Coach & Auto Lamp Co.—794-798 10th Ave., New York City. Mfrs. foot rests, acetylene generators, exhaust horns, adjustable lamp brackets, lamps and robe rails.

New York Coil Co.—338-340 Pearl St., New York City. Mfrs. spark coils.

New York Dash & Fender Co.—516-520 W. 36th St., New York City. Mfrs. dashes and fenders.

New York Gear Works.—56 Greenpoint Ave., Brooklyn, N. Y. Mfrs. transmission gears and circulating pumps.

New York Insulated Wire Co.—114 Liberty St., New York City. Mfrs. insulated wire.

New York Kerosene Oil Motor Co.—31 Burling Slip, New York City. Mfrs. kerosene motors and motor boats.

New York Leather Coat Co.—207 Green St., New York City. Mfrs. miscellaneous wearing apparel.

New York Motor Car Co.—231 W. 40th St., New York City. (Atlas trucks.)

New York Motor Fabric Co.—32 Union Sq., New York City. Mfrs. tire cases and lamp covers.

New York School of Automobile Engineers, Inc.—146 W. 56th St., New York City. Practical instruction in the care and operation of automobiles. Cap. \$25,000. Robert E. Fulton, Pres.; Percy Owen, Vice-Pres.; M. S. Gilmer, Treas. and Business Mgr.; Roger B. Whitman, Sec. and Technical Director. Faculty: Engine Dept., Julius C. Liebhardt, M. E. Ignition Dept., Philip K. Stern, E. E., M. E. Transmission Dept., Rudolf Grissman, M. E. Construction and Shop, Albert Capetillo. Special instructors for owners, Albert Trica, B. S.; G. Rudolph Ruckert, M. E. Road instructors, Matthew Farrell and Fred Kowsky. Designers' Course, E. Favary, M. E., E. E.

New York Sporting Goods Co.—17 Warren St., New York City. Est. 1897. Automobile, motorcycle, motorboat and bicycle sundries, general sporting goods

and novelties. P. R. Robinson, Pres.; Palen Nelson, Vice-Pres.; Jas. E. Murray, Sec. and Treas.; M. A. Dewey, Jr., head of Automobile Dept.; Fred Dewitt, head of Bicycle and Motorcycle Dept.

New York State Automobile Association.—Albany, N. Y. Oliver A. Quayle, Albany, N. Y., Pres.; H. S. Woodworth, Rochester, N. Y., Vice-Pres.; N. M. Pierce, Buffalo, N. Y., Treas.; C. D. Hakes, 84 S. Pearl St., Albany, N. Y., Sec. Membership: Adirondack Automobile Club, Albany Automobile Club, Automobile Club of America, Automobile Club of Auburn, Automobile Club of Buffalo, Automobile Club of Newburg, Automobile Club of Syracuse, Automobile Club of Schenectady, Automobile Club of Troy, Automobile Club of Utica, Automobile Club of Columbia County, Binghamton Automobile Club, Bronxville Automobile Club, Cattaraugus County Automobile Club, Chenango County Automobile Club, Cohoes Automobile Club, Elmira Automobile Club, Geneva Automobile Club, Hudson Valley Automobile Club, of Poughkeepsie; Long Beach Country Club, Long Island Automobile Club, Metropolitan Automobile Association, New York Motor Club, New York Automobile Club, Oneida Automobile Club, Oswego Automobile Club, Richmond County Automobile Club, Rochester Automobile Club, Wassertown Automobile Club, and Westchester Automobile Club.

New York State Steel Co.—475 Abbott Rd. and 1000 White Bldg., Buffalo, N. Y. Mfrs. steel.

New York Steam Rubber Tire Repair Works.—306 W. 52d St., New York City. Vulcanizing.

New York Stencil Works.—100 Nassau St., New York City. Mfrs. name plates, steel stamps and stencils.

New York Taxicab Co.—546 5th Ave., New York City. Rental service.

New York Timers' Club.—P. O. Box 1453. New York City. Devoted to the interests of all sports for securing and keeping accurate time results. Organized fall of 1905. Chas. J. Dieges, Pres.; H. P. Burchell, Vice-Pres.; C. C. Hughes, Vice-Pres.; A. G. Harvey, Sec.; W. L. Jones, Treas. Former president, S. M. Butler. Honorary members: S. M. Butler and Jas. E. Sullivan. Members: P. A. Sayles, Geo. McGraham, Prosper Clust. J. J. McHugh, S. A. Cramer, S. D. Sec. John J. O'Brien, J. J. Dolan.

New York Transfer Co.—Garage, 524 W. 36th St., New York City. Garage.

New York Transfer Co.—344 W. 50th St., New York City. Garage.

New York Transportation Co.—49th St. and 8th Ave., 66th St. and 3d Ave., 27th St. and 9th Ave., Bayard St. and Bowery, New York City; 19 Downing St.,

Newport, R. I. Agents Exide batteries. Columbia cars. Principal business is automobile livery service. Cap. \$5,000,000. Est. 1899. Richard W. Meade, Pres.; Wm. H. Palmer, Jr., Sec. and Treas.; L. K. Clark, Gen. Supt.; A. C. Tully, Pur. Agt. Garages.

New York Wire & Spring Co.—Hoboken, N. J. Mfrs. seat springs.

New York Yacht, Launch & Engine Co.—Morris Heights, N. Y. Mfrs. motorboats.

Ney, G.—128 rue St. Maur, Paris, France. Mfr. roller bearings.

Niagara Falls Automobile Transit Co.—103 Main St., Niagara Falls, N. Y. (Cadillac, Winton.) Supplies; garage; repairing.

Niagara Falls Brass Works, Inc.—146 Virginia St., Buffalo, N. Y. Mfrs. aluminum, brass, bronze castings. Theo. Hoffeller, Pres.; Julius Hoffeller, Treas.

Niagara Iron, Steel & Metal Co.—835 Ashland St., Niagara Falls, N. Y. Mfrs. sheet and bar iron and steel.

Niagara Motor Boat Co.—N. Tonawanda, N. Y. Mfrs. motorboats.

Niagara Surface Coating Co.—Erie and 9th Sts., Niagara Falls, N. Y. Mfrs. varnish.

Niagara Tachometer & Instrument Co.—26th and Adams Sts., Niagara Falls, N. Y. Supplies.

Nice Automobile.—Pub. at 4 Ave. Malmaison, Nice, France.

Nice, Eugene E.—272-274 S. 2d St., Philadelphia, Pa. Mfr. varnishes.

Nichols & Co., D. P.—220 Eliot St., Boston, Mass. (Frayer-Miller.)

Nichols & Son, D. P.—116-122 W. Brookline St., Boston, Mass. Mfrs. wooden and metallic bodies and automobile tops.

Nichols, E. L.—Adv. Mgr. Holtzer-Cabot Electric Co., Brookline, Mass.

Nichols, J. Hervey.—1636 Broadway, Denver, Colo. (Winton.)

Nichols, J. T.—Director and Designer, Chadwick Engineering Works, 3207 Spring Garden St., Philadelphia, Pa.

Nichols, Scott D.—Federal and Front Sts., Troy, N. Y. (Ford, Premier, Maxwell, Rambler.)

Nichols, T. W.—Mgr. West Garage, cor. Milton Ave. and Front St., Ballston Spa, N. Y.

Nichols, W. L.—244 W. 49th St., New York City. Garage.

Nicholls, Wm. S.—253 Broadway, New York City. Mfrs. portable cranes and hoists.

Nicholson, E. W.—Sales and Adv. Mgr. Moline Auto Co., East Moline, Ill.

Nicholson, John J.—Gen. Sales Mgr. Murphy Varnish Co., Newark, N. J.

Nicholson Mfg. Co., H.—68 Dey St., New York City. Mfrs. washing apparatus.

Nick, W. H. F.—Sec. and Treas. Erie Stamping & Mfg. Co., 646 W. 12th St., Erie, Pa.

Nickel.—A metal discovered in 1751 by Cronstedt. It is extracted from arsenious ores (in Germany), or magnesium and siliceous ores or "garnierite" (in New Caledonia and the United States). It is grayish-white, of fibrous fracture, and the hardest of ordinary metals after manganese and chrome. In this country, where most nickel is extracted, an electrolytic process is employed, the ore being first submitted to a preliminary treatment like that for what is called the Mond process. The metal is slightly less fusible than iron, and is magnetic and scarcely oxidizable. It is used as an adjuvant, alloyed or not with chrome, in the metallurgy of steel (nickel-steel). It enters into the composition of "German silver." q. v. It is utilized in a pure or carburized form in the operations of nickel-plating. It is used also, in the form of oxide, in the alkaline accumulators of Jungner and Edison.

Nickel, Ferro.—See Ferro-nickel.

Nickel-plating.—A metallurgical operation designed to protect ordinary metals, such as cast-iron, iron, copper, etc., with an adherent layer of pure nickel of a brilliant aspect, durable and but slightly alterable by moisture. The nickel-plating of cast or wrought iron is frequently preceded by an intermediate deposit of copper designed to increase the adhesion of the nickel. Nickel-plating is effected by means of aqueous solutions of nickel salts, preferably sulphate of nickel or double sulphate or nickel and ammonia. This solution constitutes the nickel-plating bath. The piece to be plated having been freed from grease and cleaned with great care, is connected to the pole (cathode) of an electric source (battery, dynamo, or accumulator) of a few (2 to 4) volts. The current is formed in the bath by a plate of nickel connected to the positive pole and operating as a soluble anode, that is to say, gradually dissolving in the bath and restoring to it the nickel deposited upon the piece to be plated. After a few hours of action the deposit of nickel is sufficiently thick. The object is then removed from the bath, thoroughly washed with water and finally polished.

Nickel-steel.—See Steel, Nickel.

Nickerson Co., F. A.—642 Congress St., Portland, Me. (Pierce Arrow.)

Nickerson, Ed.—Bourne, Mass. (Walham.)

Nickerson, H. B.—Sec. American Steam Gauge & Valve Co., 220 Camden St., Boston, Mass.

Nicol, Frank V.—Sec., Treas., Sales Mgr. and Gen. Mgr. American Machine

Mfg. Co., cor. Champlain and Beaubien Sts., Detroit, Mich.

Nicoll & Co., Ltd., H. J.—22 Cornhill, London, E. C. England. Mfr. wearing appare.; coats.

Nielson, V. A.—Vice-Pres. & Mgr. Metropolitan Auto Co., Wangedahl, 1157 Berkeley, Boston, Mass.

Nieuport.—9 rue de Seine, Suresnes, France. Mfrs. high tension magnetos and spark plugs.

Niles-Bement-Pond Co.—111 Broadway, New York City. Mfrs. special automobile machinery, portable cranes and hoists, screw machine products and tube expanders.

Nilmelior Société d'Electricite.—47 rue Lacordaire, Paris, France. Mfrs. low tension magnetos, high tension magnetos and coils.

Nipp, Chas. F.—Minneola, Ia. (Wal-tham.)

Nippers.—Pliers, either for holding or for cutting metal, etc.

Nipple.—A piece of pipe with a male thread cut the greater part or whole of the length, or at each end (see figure).

Nipple, Spray.—The same as "spray-nozzle." See Nozzel, Spray.

Nisbet, Theo. B.—Treas. Victor Shock Absorber Co., 1937 Broadway, New York City.

Nitrogen.—A colorless, odorless, tasteless gas, of the atomic weight 14 and density 96.

Nitrogen forms about four-fifths, by volume, of the atmosphere, and is, in combination, a necessary constituent of all plants and animals. It is called also "azote." In the mixture of air and gasoline vapor which "explodes" in motors its presence is inimical since it consumes, without useful effect, considerable space which ought to be occupied by active molecules.

Niven, W. R.—Treas. Bellefontaine Automobile Co., Bellefontaine, O.

Nixon, Lewis.—Pres. Standard Motor Construction Co., 180 White St., Jersey City, N. J.

Noah, Andrew H.—Tres. The Diamond Rubber Co., Akron, O.

Noakes Bros.—Corpus Christi, Tex. (Buick, Cadillac.)

Noank Motor Works.—Noank, Conn. Mfrs. gasoline marine motors.

Noble, Warren.—Mech. Eng. and Designer. Palmer & Singer Mfg. Co., 1220-24 Broadway, New York City.

Nock Auto Co., L.—141 Dyer St., Providence, R. I. (Stoddard-Dayton.)

Nock Co., Inc., Geo. W.—126 N. 4th St., Philadelphia, Pa. Est. 1830. Automobile and bicycle supplies, locks and locksmiths' supplies, electrical goods,

etc. Geo. W. Nock, Pres. and Gen. Mgr.; Isaac Ecret, Vice-Pres. and Pur-Agt.; Geo. W. Malpass, Sec. and Treas.

Nock, F. S.—Water St., East Greenwich, R. I. Naval architect and engineer. autoboot and power craft of all descriptions.

Nock, Geo. W.—Pres. and Gen. Mgr. Geo. W. Nock Co., Inc., 126 N. 4th St., Philadelphia, Pa.

Noel, E. Percy.—Automobile Editor, N. Y. Commercial. B. St. Louis, Mo., Aug. 4, 1882. Ed. Smith Academy, St. Louis; King's School, Stamford, Conn., Dartmouth College. American correspondent, The Car, London, and general contributor to motor publications. Mem. Phi Delta Theta Fraternity, Dartmouth Club of N. Y., Phi Delta of N. Y., N. Y. Motor. Used first car 1898, cross-country trip with Peerless, 1905. St. Louis correspondent for Automobile, Motor Age, Motor Way, and various French and English papers from 1902 until Aug., 1906.

Noera Manufacturing Co.—Waterbury, Conn. Mfrs. lubricators, oil cans, oil guns, oil pumps and tire pumps.

Nolan, Wm.—541 Tremont St., Boston, Mass. Mfrs. automobile trunks, trunk racks, automobile tops, glass wind shields.

Nolte Brass Co.—Springfield, O. Mfrs. brass, bronze, aluminum and copper castings, and throttle valves.

No-Match Electric Mfg. Co.—141 Milk St., Boston, Mass. Mfrs. gas lamp burners.

Nominal Horse-power.—See Power, Horse, Nominal.

Non-Corrosive Metal Co., Inc.—Wartertown, Conn. Mfrs. brass, bronze, aluminum and copper castings and metal trimmings.

Non-Explosive Safety Naphtha Container Co.—1133 Broadway, New York City. Mfrs. tanks.

Non-return Valve.—See Valve, Check.

Non-Skids.—Devices for preventing skidding or side-slip. Many hundreds of patents have been taken out for devices to prevent side-slipping. One class embraces all tires of which the anti-skid feature consists of indentations or protuberance moulded upon the tire. A second class comprises all non-skids made by vulcanizing studs or spikes into the rubber shoe. A third class includes all devices employing metal rivets, studs, spikes, or plates in combination with leather, either detachable or baked upon the tire. And a fourth includes all other devices, such as chain and bar grips, wire loops, toothed rim plates, and all-metal devices, as well as separate non-skid straps fastened on at intervals. This group embraces both fast and detachable types. The several chain

grips are the best known of the latter class. The separate non-skid straps do very effective service as creepers and are very convenient. Those of the wire loop or drag chain devices are very ingenious and do their work well. Many non-skids are also puncture-proof. The treads of such tires, usually of leather, offer great resistance to punctures, while generally carrying hob-nails to prevent skidding, and, at the same time, relieving the tire from road wear.

Noonan Tool & Machine Works.—Rome, N. Y. Mfrs. brass, bronze, aluminum and copper castings, license numbers, brass and nickel plating, tools, trunk racks, valve lifters, muffler cut-out valves and wire terminals. (Rambler.)

Norbeck & Nicholson.—Redfield, N. D. (Maxwell.)

Norburg, R.—Supt. Willard Storage Battery Co., 1279-81 Bank St., Cleveland, O.

Norcross Auto Co.—43 Foster St., Worcester, Mass. (Buick.)

Norcross Cameron Co.—57 Bridge St., Springfield, Mass. (Corbin, Ford, Rambler.) Garage and supplies.

Nordgren & Holderman.—Paxton, Ill. Garage.

Nordyke & Marmon Co.—Indianapolis, Ind. Makers of the Marmon car; first marketed in 1904. Agents and dealers: Big Four Automobile Co., 110 E. 9th St., Los Angeles, Cal.; Brazier Auto Works, 38th and Market Sts., Philadelphia, Pa.; Heller-Spawm Motor Car Co., Binghamton, N. Y.; Pennsylvania Auto Co., cor. Hay St. and Kelly Ave., Wilkinsburg, Pa.; Rickey Machine Co., 92 Eaton Pl., East Orange, N. J.; Snodeal Auto Co., 2552 Madison Ave., Baltimore, Md.; John Use, Jr., 172 12th St., Milwaukee, Ws.; Van Automobile Co., 4706 Washington Ave., St. Louis, Mo.; Waterloo Automobile Co., Waterloo, N. Y.; Wing, F. E., Motor Car Co., 12 Columbus Ave., Boston, Mass.

Norfolk Horse Carriage & Auto Co., Inc.—Norfolk, Va. Garage.

Normal.—Perpendicular; specifically, a perpendicular to a curve or curved surface. (2) A usual or accepted rule of process.

Norris Automobile Co.—Genesee Ave., Saginaw, Mich. (Peerless, Buick, Cadillac, Oldsmobile, and Woods.) Mfrs. tire protectors.

Norris City Garage.—Main and Chain Sts., Norristown, Pa. Garage.

Norris Manufacturing Co.—27 Western Ave., Cambridge, Mass. Mfrs. feed water heaters.

Norris, W. L.—Mgr. Pittman & Nelson Automobile Co., 2036 Addison St., Berkeley, Cal.

North, A. G.—Pres. Rapid Motor Vehicle Co., Rapid St., Pontiac, Mich.

North, S. H.—Sec'y Treas. and Head of Office, Chase, Roberts & Co., West Ave. and Fifth St., Long Island City, N. Y.

North & Pfeiffer Mfg. Co.—72 Chestnut St., New Britain, Conn. Mfrs. spark plugs.

North British Rubber Co., Ltd.—Castle Mills, Edinburgh, Scotland. Mfrs. pneumatic tires.

North Division Automobile Co.—385 E. Superior St., Chicago, Ill. Garage.

North Carolina Mica Co.—95 Blackstone St., Boston, Mass. Mfrs. eye shields, and mica.

North Chicago Machine Co.—North Chicago, Ill. Mfrs. carbureters, clutches, gasolene automobile motors and gasolene marine motors.

North End Garage Co.—Sawyer St., New Bedford, Mass. Garage.

North End Motor Car Co.—292 N. Park St., East Orange, N. J. Garage.

North Jersey Automobile & Eng. Co., Inc.—Hackensack, N. J. (Mercedes and Winton.)

North Jersey Automobile Club.—Patterson, N. J. Rob't. Beattie, Jr., Secretary.

North Jersey Motor Car Co.—25 Washington Place, East Orange, N. J. Garage.

North Penn. Iron Co., The.—3rd and Venango Sts., Philadelphia, Pa. Mfrs. turntables. Cap. \$27,000. Est. 1892. Philip S. Maloney, Pres.; Philip M. Maloney, Sec. and Treas.; W. H. Barrows, Chief Engineer. R. L. Colfax, Purchasing Agent.

North Philadelphia Automobile Station.—3425 N. Broad St., Philadelphia, Pa. Repairing.

North Shore Automobile Garage.—2520 Harrison St., North Evanston, Ill. (Buick.)

North Side Automobile Station.—446 North Clark St., Chicago, Ill. Garage.

Northampton Auto School & Garage Co.—Northampton, Mass. Garage.

Northampton Garage Co.—Northampton, Mass. Garage. (Atlas.)

Northern Automobile Co.—1447 Michigan Ave., Chicago, Ill. (Peerless.)

Northern Automobile Co.—402 Golden Gate, San Francisco, Cal. (Northern.)

Northern Garage.—3315 13th St., Philadelphia, Pa. Garage.

Northern Garage.—97 Virginia Pl., Buffalo, N. Y. Garage.

Northern Motor Car Co.—Champlain and Canton Sts., Detroit, Mich.; branch factory at Port Huron, Mich. Makers of the Northern car; first marketed March 1, 1903. Two models made since. Cap. \$500,000. W. T. Barbour, Pres.; G. B. Gunderson, Vice-Pres.; V. M. Gun-

derson, Sec., Treas., Gen. Mgr. and Sales Mgr. Agents and dealers: Atland, M. J., Alpena, Mich.; Auburn Automobile Co., Auburn, N. Y.; Bagnell Automobile Co., 4152 Olive St., St. Louis, Mo.; Barker & Hitch, Ltd., Girard, Kas.; Barron & Co., A. H., Gardner, Mass.; Carolina Garage Co., 1216 Plain St., Columbia, S. C.; Cia Pan Americana de Vehiculos, S. A., Mexico City, Mex.; Consolidated Wagon & Machine Co., Salt Lake City, Utah; Cooley, B., Galena, Kas.; Crossett Mercantile Co., Crossett, Ark.; Crescent City Automobile Co., 217 S. Rampart St., New Orleans, La.; Curtin-Hebert Co., Gloversville, N. Y.; Dale, Chas., Jr., Plattsburg, N. Y.; DeCant, L. G., 3 Lansing Block, Watertown, N. Y.; Diamond Motor Car Co., 959 S. Main St., Los Angeles, Cal.; Edgewood Automobile Co., 376 Smith St., Edgewood, R. I.; Eikenberry, A. L., 126 W. 4th St., Greenville, O.; Gorham, B. W., Mt. Kisco, N. Y.; Gorham, B. W., Mt. Kisco, N. Y.; Grooves, H. B., Sioux City, Ia.; Guerra & Co., Merida, Yucatan, Mex.; Huron Auto & Electrical Co., Port Huron, Mich.; Kilpatrick, J. A., Lebanon, O.; Mar-Del Mobile Co., Charles St., Baltimore, Md.; Martin Auto Co., Hutchinson, Kas.; Martin, C. F., Bellefontaine, O.; Mason's Carriage Works, Davenport, Ia.; Mills, James, Newark, O.; Morrow-Thomas Hardware Co., Amarillo, Tex.; Motor Car Co. of N. J., 291 Halsey St., Newark, N. J.; Nevada Automobile Supply Co., Goldfield, Nev.; Newburn, J. R., Union City, Ind.; Northern Auto Co., 402 Golden Gate Ave., San Francisco, Cal.; Quirk, W. F., Big Rapids, Mich.; Sanford, M. C., Clyde, O.; Schwerin, J. A., Sumter, S. C.; Scott, A. J., Rugby, N. D.; Shugert, Dr. Guy S., Rochester, Pa.; Starr & Son, J. G., Decatur, Ill.; Tragardh & Co., John, Gotenberg, Sweden; Trimble, G. T., Ellsworth, Kan.; Uhquhart, A. S., Calgary, Can.; Wilson, A. H., Canton, O.; Chicago Vulcanizing Co., Chicago, Ill.; Wilson Auto Co., Wichita, Kan.; A. H. Grisinger, Santa Cruz, Cal.; C. G. Layton, Danville, Ill.; Humphreys, Schloot & Co., Linton, Ind.; Copeland & Taylor, Pontiac, Ill.; C. W. Evans, Dixon, Ill.

Northrop, H. L.—Pres., Treas. and Mgr. Syracuse & Eldridge Glove Co., 924 S. Salina St., Syracuse, N. Y.

Northrop Lubricating Oil Co.—308 N. Commercial St., St. Louis, Mo. Mfrs. grease and oils.

Northway Motor & Mfg. Co.—Grand Ave., Detroit, Mich. Mfrs. axles, clutches, brake and clutch cork inserts, transmission gears, gasoline automobile motors.

Northway, Thomas J.—92 Exchange St., Rochester, N. Y. (Rainier, Rambler,

Ford, White, Reo.) Mfr. adjustable lamp brackets.

Northwest Motor Co.—2nd Ave., Spokane, Wash. Garage.

Northwest Motor Co.—Broadway and Union St., Seattle, Wash. (White, Columbus.)

Northwestern Cadillac Co.—316-322 4th Ave., Minneapolis, Minn. (Cadillac, Pope-Waverley.)

Northwestern Motor Car Co.—1928-30 N. 20th St., Philadelphia, Pa. (Moline.) Est. Dec., 1906. Cap. \$15,000. Robert A. Balfour, Pres.; A. Brehman, Sec.; Alois S. Datz, Treas.; John A. Burns, Gen. Mgr. Garage, 75 cars. Repairing.

Northwestern Motor Vehicle Co.—112 S. 6th St., Minneapolis, Minn. Garage.

Northwestern Storage Battery Co.—448 Milwaukee St., Milwaukee, Wis. Mfrs. storage batteries, electric searchlights, side lamps and rear lamps. Cap. \$200,000. Est. Jan., 1902. E. J. Knapp, Pres., Treas. and Gen. Mgr.; J. H. Knapp, Vice-Pres.; F. E. Scudder, Sec'y.

Nortmann-Duffke Foundry Co.—26th and Layton Ave., Milwaukee, Wis. Mfrs. pressed steel tanks, deep stamping, crucible steel and grey iron castings. Cap. \$50,000. Est. 1892. Partnership: Valentine Nortman & Louis Duffke. Daniel Homer, Head of the Pressed Steel Tank Dept. Louis Duffke, Head of the Steel Castings Dept., and Valentine Nortmann, Head of the Grey Iron Casting Dept.

Nortmann, Valentine.—Officer and Head of Grey Iron Castings Dept. Nortmann-Duffke Foundry Co., 26th St. and Layton Ave., Milwaukee, Wis.

Norton & Jones Machine & Tool Works.—East Main St., Plainville, Conn. Mfrs. tools.

Norton Auto Co., S. E.—14 E. 1st St., La Junta, Colo. (Waltham.)

Norton, C. E.—Water St., Guilford, Conn. Garage.

Norton Electrical Instrument Co.—Manchester, Conn. Mfrs. ammeters and voltmeters.

Norton Emery Wheel Co.—Buffalo Ave., Niagara Falls, N. Y. Mfrs. emery wheels.

Norton Grinding Co.—Worcester, Mass. Mfrs. crank shafts, special automobile machinery.

Norton, H. D.—Treas. and Gen. Mgr. Gies Gear Co., 345-347 Bellevue Ave., Detroit, Mich.

Norton Mfg. Co.—Deritend Bridge, Floodgate St., Birmingham, Eng. Mfrs. Norton motorcycles.

Norton, R. C.—Treas. Baker Motor Vehicle Co., 80th St., N. W. Cleveland, O.

Norton, R. D.—Hightstown, N. J. Garage. (Maxwell.)

Norton, W. T.—Supt. Kansas City Motor Car Co., Sheffield, Mo.

Norton, W. W.—Supt. The Auto Car Co., Ardmore, Pa.

Norwalk, A. B.—Pres., Treas. and Gen. Mgr. 35 Per Cent. Auto Supply Co., 83 Chambers St., New York City.

Norwalk Brass Co.—Norwalk, Conn. Mfrs. brass, bronze, aluminum and copper castings.

Norwalk Launch Co.—Norwalk, Conn. Mfrs. motorboats.

Norway Iron & Steel Co.—York, Pa. Mfrs. malleable iron and steel castings.

Norwich Motor & Machine Co.—30 Lackawanna Ave., Norwich, N. Y. Garage.

Norwood Automobile Co.—Norwood, O. Garage.

Norwood Garage.—121 Norwood Ave., Buffalo, N. Y. Cap. \$100,000. Incorporators: E. E. Denniston, Nelson P. Baker and George J. Day.

Norwood, J. E.—Pres. and Treas. Automobile Supply and Storage Co., 1416 Madison Ave., Baltimore, Md.

Nose.—The projection on a cam. See Cam. (2) The bow or beak of a vessel.

Notched Quadrant.—See Quadrant, Notched.

Notting & Son.—Prospect, O. Mfrs. gasoline marine motors.

Nourse, F. R.—Louiston, Idaho. (Holzman.)

Novelty & Repair Shop.—Milford, O. Mfrs. tube expanders.

Novelty Manufacturing Co.—Jackson, Mich. Mfrs. automobile heaters.

Novelty Tufting Machine Co.—1200 Michigan Ave., Chicago, Ill. Mfrs. tufting and upholstering machines.

Noxal Polish Mfg. Co.—1238 Belmont Ave., Philadelphia, Pa. Mfrs. metal polishes.

Noxon, C. Per Lee.—500 E. Water St., Syracuse, N. Y. Mfr. spark coils.

Noye Mfg. Co.—56 Lake View Ave., Buffalo, N. Y. Mfrs. radiators, hoods, dashes and tool boxes. Est. 1907. R. K. Noye, Pres.; Wm. H. Qlenny, Vice-Pres.; H. S. Madden, Sec., Treas. and Mgr. John A. Wilson, Jr., Sup't. of Automobile Dept.

Noye, R. K.—Pres. Noye Mfg. Co., 56 Lakeview Ave., Buffalo, N. Y.

Noyes, C. B.—Head of Automobile Dept., Roehm & Davison, Ltd., 91-95 West Woodbridge St., Detroit, Mich.

Noyes, H. G.—Gorham, N. H. (Jackson.)

Noyes, William S.—Sec. Imperial Brass Mfg. Co., 245-247 S. Jefferson St., Chicago, Ill.

Nozzle, Spraying.—A nozzle, called also an "atomizing nozzle," with a very small

aperture designed to reduce the liquid passing through it into exceedingly fine atoms. The form and number of the nozzles is variable according to the make of

the carburetter. In the Brasier carburetter (see figure) there are two nozzles, a and b, for which is claimed the advantage of producing a better mixture, or rather, a scattering of the spray throughout the whole incoming stream of air. In some other makes of carburetter the number of nozzles is six. See Carburetter.

Nuckols H. W.—Treas. and Sec. Electric Vehicle Co., 1 Laurel St., Hartford, Conn.

Nungesser Electric Battery Co.—3519 King Ave., N. E., Cleveland, O. Mfrs. dry batteries. Cap. \$100,000. Est. 1896. A. B. Foster, Pres.; J. W. Vanderwerf, Vice-Pres.; M. M. Hobart, Sec.; H. G. Robins, Treas.; P. P. Nungesser, Gen. Supt. Mem. M. & A. M.

Nungesser, P. P.—Gen. Supt. Nungesser Electric Battery Co., 3519 King Ave., N. E. Cleveland, O.

Nürnberg Herkules Werke, Actiengesellschaft.—Nürnberg, Germany. Mfrs. motorcycles.

Nut.—A block of metal with a cylindrical hole through the center which is tapped with a thread so that it can be fitted to the end of a screw or bolt of the same pitch, and the object of which is to hold two pieces of mechanism firmly in place. Nuts are screwed up with wrenches, the size and strength of which should be proportioned to the diameter of the bolt. The majority of nuts used in mechanics have six facets or sides called "panes." (See figure.) The intersection of the panes is called the "angle," and the internal threading is called "female"

in contradistinction to that of the bolt which is called "male." Nuts may be round, square, hexagonal, castellated, winged, etc. The trembling motion of a car has the effect of loosening nuts, and if there is a single one that is not provided with a locking-device, it should be occasionally examined and tightened. There are five ways of keeping nuts on—that is, of tightening them, viz.: (1) A set-pin or set-screw; (2) a lock-nut; (3) spring washers; (4) a split-pin, and (5), a locking-piece.

The most important nuts to lock, and

those which must be locked on all motor-cars, are all those in the steering-gear, all at each end of the connecting-rod, and all that keep the wheel on.

Nut, Acorn.—An internally threaded cap, so called because of its shape.

Nut, Back.—The same as lock-nut.

Nut, Box.—A nut with a cover which protects the end of the bolt from injury, rusting, etc., in exposed situations, thus preventing jamming of the nut on the end of the bolt.

Nut, Butterfly.—Same as finger-nut.

Nut, Castellated.—A nut with its head notched, like the turret of a castle.

After it has been screwed up tight and the bolt drilled through in a line with one of the slots, and a split-pin inserted, it forms one of

the best of locking devices.

Nut, Check.—The same as lock-nut.

Nut, Finger.—A nut provided with wing-like projections, so that it can

be turned with the fingers.

Nut Fly.—See Nut, Finger.

Nut, Helicoid.—An internally threaded helical spring, which when screwed home maintains a constant pressure against the under side of the thread so that it cannot work loose.

Nut, Jam.—The same as lock-nut.

Nut, Knurled.—The same as milled nut.

prevents it from unscrewing.

Nut-lock.—A piece of metal of one form or another fixed near a nut and which, embracing four or six of its sides,

Nut, Lock.—A thin auxiliary nut, C (see figure), screwed on the top of an ordinary nut, E, and secured by a pin, G, to prevent the nut from becoming loose on its bolt, B.

Nut, Milled.—A nut having a circular edge provided with striations in order to afford a firm hold for the fingers in screwing or unscrewing it.

Nut, Pinch.—The same as jam-nut. See Nut, Jam.

Nut, Safety.—The same as lock-nut, q. v.

Nut, Set.—A nut set against another to hold it in place.

Nut, Sleeve.—A long nut provided with a right-hand thread at one end and a left-hand thread at the other; used for coupling and drawing together two pipes or two rods.

Nut, Spigot.—A nut used to connect two pieces of tubing end to end; commonly called a union-nut.

Nut, Steering.—See Steering-gear.

Nut, Stuffing.—A nut which squeezes packing tightly around a pipe to prevent leakage.

Nut, Thumb.—The same as "finger nut."

Nut, Union.—The same as spigot-nut.

Nut, Wing.—The same as finger-nut.

Nute & Keena.—Seattle, Wash. (Packard.)

Nuttall Co., R. D.—Fayette St. and Garrison Way, Pittsburg, Pa. Mfrs. differential gears, transmission gears, and rawhide gear wheels.

Nutting Machine Co.—Dayton, O. Mfrs. carburetters, gasoline automobile motors.

Nutzel Fred.—1108 S. 5th St., La Crosse, Wis. (Rambler.)

Nyack Auto Garage.—68 Burd St., Nyack, N. Y. (Maxwell.)

Nyberg Automobile Works.—30th St. and Michigan Ave., Chicago, Ill. Repairing and garage.

Nyberg, P. J.—Yonktown, S. D. (Cadillac.)

Nye, John.—Salt Lake City, Utah. (Waltham.)

Nye, Wm. F.—New Bedford, Mass. Mfr. oils.

O

Ω.—A symbol for "ohm."
O.—A symbol for "oxygen."
Os.—A symbol for "osmium."
O. K. Connector Co.—51 Waldo St., Worcester, Mass. Mfrs. wire terminals.
O. K. Machine Co.—887 Main St., Buffalo, N. Y. Garage, repairing and supplies.
O. K. Machine Works.—887 Main St., Buffalo, N. Y. Supplies, repairing and garage.
Oakes & Dow Co.—15 Chardon St., Boston, Mass. Mfrs. spark plugs.
Oakland Auto Garage.—12th St. and 8th Ave., Oakland, Cal. Garage.
Oakland Motor Car Co.—Pontiac, Mich. Mfrs. gasoline automobiles.
Oaks, R. A.—Supt. Ideal Mfg. Co., Portsmouth, O.
Oakum.—Tarred hemp used for caulking the seams of a boat.
Oathout Chas. W.—160 Broad St., Newark, N. J. (Jackson.)
O'Beirne & Co., F.—1737 Grand St., Kansas City, Mo. Garage.
Oberdorfer Brass Co., M. L.—804 E. Water St., Syracuse, N. Y. Mfrs. aluminum, brass, bronze and copper castings, circulating pumps.
Obermayer Co., S.—641 Evans St., Cincinnati, O. Mfrs. crucibles, graphite.
Oberrheinischer Verein für Luftschiffahrt.—(Strassburg Aero Club), Strassburg, I. E., Germany.
Obrecht, Jos.—Gen. Supt. Hess-Pontiac Spring & Axle Co., Pontiac, Mich.
O'Brien & Co., W. H.—115 Dearborn St., Chicago, Ill. Mfrs. carburetters.
O'Brien, Falconer.—Pres. Detroit Wire Spring Co., 295-305 Congress St., W., Detroit, Mich.
O'Brien, J. H.—Supt. and Purch. Agt. Dragon Motor Co., 31st, 32nd, and Chestnut Sts., Philadelphia, Pa.
O'Brien, M. R.—22 Wood Ave., Providence, R. I. (Dolson.)
Occident Motor Car Co.—2731 W. Pico St., Los Angeles, Cal. (Cartercar.)
O'Connor, M.—201 W. 46th St., New York City. Vulcanizing.
O'Connor, Mark C.—Purch. Agt. Forest City Motor Car Co., 109-149 Walnut St., Massillon, O.
O'Connor, Thos. C.—Vice-Pres. York Motor Car Co., 240 N. George St., York, Pa.

O'Connor, W. F.—Clap and Church Sts., Woodstock, Ill. Garage.
Oddie, T. L.—Pres. Lothrop Davis Co., 105 Main St., Tonopah, Nev.
Odell Electric Co.—Odell, Ill. Garage.
Odell, R. L.—156 W. 39th St., New York City. Garage.
Oden Auto Co., J. P.—26 W. Philadelphia St., York, Pa. (Mitchell.)
Odometer.—An apparatus for counting the revolutions of a wheel, and, thereby, the distance traveled.
Odor Akkumulatoren und Elementefabrik.—Schkenditz 2, bei Leipzig, Germany. Mfrs. storage batteries.
Odontograph.—An instrument used in drawing the form of gear-wheels.
Oelschlager Bros.—42 E. 23rd St., New York City. Mfrs. eye shields.
Oesterreicher Daimler Motoren Gesellschaft.—Wiener, Neustadt, Austria. Mfrs. gasoline automobiles. (Daimler cars.)
Oesterreichisch-Amerikanische Gummi-fabric Breitensee.—Hütteldorfer strasse 74, Vienna, Austria. Mfrs. pneumatic tires.
Oesterreichische Maschinen Actiengesellschaft.—Vienna, Austria. Mfrs. automobile motors.
Oestmann, Jacob L.—Treas., J. S. Kirk & Co., 360 N. Water St., Chicago, Ill.
Oettinger, M. O.—Vice-Pres., Rock Island Battery Co., 9th and Sycamore Sts., Cincinnati, O.
O'Farrell, C. T., Jr.—Dillon, S. C. Garage.
Off & Co., Christian.—Indianapolis, Ind. Mfrs. dashes and fenders, hoods, tanks and glass wind shields.
Ofeldt & Sons, August.—123 Liberty St., New York City. Mfrs. body irons, gasoline and kerosene burners, and boiler pumps.
Ofeldt & Sons, F. W.—Nyack on the Hudson, N. Y. Mfrs. steam automobile specialties, safety water tube boilers, kerosene blue flame burners, automatic field regulators, automatic water regulators, feed water heaters, compound steam engines, and automatic fuel feed. Garage.
Offenbacher, A. B.—525 Third St., Marietta, O. (Pope-Waverley.)
Official A. A. A. Blue Book Station.—Concord, N. H. Supplies, garage and repairing.

Official Automobile Blue Book.—Flat-iron Bldg., New York City. Pubs. road maps.

Official Auto Repair Co.—11 Eldridge Court, Chicago, Ill. Repairing.

Officina Archimede.—57 Via Flaminia, Rome, Italy. Mfrs. gasoline automobiles (Archimede cars).

Officina San Giorgio.—Via Valperga Caluso, Turin, Italy. Mfrs. lubricators.

Officine Canavesio, Carello, Societa Anonima.—15 Corso Brescia, Turin, Italy. Mfrs. horns, acetylene lamps.

Officine di Sesto San Giovanni, Camona e Cie.—5 via Spontini, Milan, Italy. Mfrs. electric automobiles.

Officine Türckheimer.—4, via Lambro, Milan, Italy. Mfrs. spark plugs, and radiators.

Offset.—A term applied to the cylinders of a motor which are slightly out of line with the crank-centers. The effect of such an arrangement is to diminish the pressure exerted by the piston upon the walls of the cylinders at the time of the expansion (or so-called "explosion"). (2) A subsidiary wire or cable leading from a main point to a point where current is required.

Offset Glass.—A glass lubricator-cup flattened on one side for closer application.

Offset Handle Wrench Co.—123 La Salle St., Chicago, Ill. Mfrs. wrenches.

Ogden & Co., E. C.—Alexander House, 56a Ludgate Hill, London, E. C., England. Mfrs. spark plugs.

Ogden Automobile Co.—24th St., Ogden, Utah. Garage.

Ogden, D.—332 Fifth St., Columbus, Ind. (Reo, Jackson, Wayne, Haynes). Est. 1898. Garage, 40 cars; repairing; vulcanizing.

Ogden, Henry D.—Treas. J. M. Quinby & Co., 21-39 Division St., Newark, N. J.

Ogden, W. W.—Pres. and Gen. Mgr. J. M. Quinby & Co., 21-39 Division St., Newark, N. J.

Oger et Guérin.—36 rue Godefroy-Cavaignac, Paris, France. Mfrs. lubricators.

Ohenemus, R., & Acrey, C. M.—Carlsbad, New Mexico. (Holsman.)

Ohio Automobile Club.—Akron, O. Fred Work, Sec.

Ohio Blower Co., The.—330 Prospect Ave., N. W., Cleveland, O. Mfrs. hoods, bonnets, drip pans, fenders, tanks, guards, seats, bodies, brazed and bent tubing, and sheet metal parts. Est. 1902. D. K. Swartwout, Pres. and Treas.; J. D. Swartwout, Vice-Pres.; Edward Covey, Mgr., and H. H. Lind, Sec.

Ohio Brass Co.—Mansfield, O. Mfrs. brass, bronze, aluminum and copper castings, gasoline tank gauges, adjustable lamp brackets, lubricators, oil pumps, and steering apparatus.

Ohio Carriage Body Co.—Bellefontaine, O. Mfrs. wood and metallic bodies.

Ohio Electric Works.—6304 Ellen Ave., N. W., Cleveland, O. Mfrs. igniting dynamos, coils, electric flash lights and lanterns, etc. Est. 1876. A. C. Fletcher, owner and manager. J. J. Finsterwald, Foreman.

Ohio Motor Car Co.—2142 E. 9th St. S. E., Cleveland, O. (Buick, Columbia, Waltham, and Haynes.)

Ohio Pail Co.—Middlefield, O. (Monarch.)

Ohio Scroll & Lumber Co.—Covington, Ky. Mfrs. wood and metallic bodies, and wood panels.

Ohio State Automobile Association.—Cleveland, O. F. T. Sholes, 528 Garfield Bldg., Cleveland, O., Pres.; C. Gordon Neff, Cincinnati, O., 1st Vice-Pres.; G. E. Mentel, Springfield, O., 2nd Vice-Pres.; A. L. Garford, Elyria, O., 3rd Vice-Pres.; Walter C. Baker, Cleveland, O., 4th Vice-Pres.; Henry H. Hower, 3500 Euclid Ave., Cleveland, O., Sec.; L. S. Colter, Cincinnati, O., Treas. Membership: Akron Club, Automobile Club of Cincinnati, Cleveland Automobile Club, Elyria Automobile Club, Lima Automobile Club, Springfield Automobile Club, and Youngstown Automobile Club.

Ohio Valley Automobile Club.—R. H. Mahlke, Sec. Wheeling, W. Va.

Ohio Valley Auto Co.—3 Main St., Greenup, Ky. (Rambler.) Est. 1903. Elwood Kinner, Gen. Mgr. Proprietors: Elwood Kinner and John D. Kinner. Repairing.

Ohler, J. O.—Lima, O. (Mitchell.)

Ohm.—In electricity, the "ohm" is the unit of resistance. It is the resistance which is offered at 32° F. or 0°C. by a column of mercury 106.3 mm. long and 1545 grammes in weight, or practically by a copper wire 1 mm. in diameter and 50 metres long.

Ohm-cm.—An abbreviation of "ohm centimetre."

Ohmic.—Due to, or relating to, resistance (q. v.). Thus, "ohmic loss" is the energy lost in a circuit through the resistance of the conductors.

Ohm, Law of.—The intensity, *I*, of the electric current in a conductor is proportional to the difference of potential, *U*, at its extremities and inversely proportional to the resistance, *R*, of the conductor.

$$I = \frac{U}{R}$$

If the difference is given in volts, and the resistance in ohms, the intensity is given in amperes.

Ohmacht, L. W.—Cresco, Ia. (Holsman.)

Ohmmeter.—An instrument for the commercial measurement of resistance.

Ohnhaus Automobile Co.—219 Pearl St., Fort Wayne, Ind. (Buick, Oldsmobile, Jackson.)

Ohnsted, E. B.—Sec. and Sales Mgr. Autocar Equipment Co., 77-79 Edward St., Buffalo, N. Y.

Oil, Castor.—An oil obtained from the seeds of *Ricinus communis*. It is used in the manufacture of lubricants and for dressing leather. It is employed on automobiles as an application to the leather facings of clutches that are too "fierce."

Oil, Cotton-seed.—An oil expressed from the seeds of various species of cotton. It is used, among other purposes, for quenching steel. See Quench.

Oil-cup.—A cup-like lubricating device (see figure) mounted on or connected with a

bearing for feeding lubricant to it.

Oil-gas.—See Gas, Oil.

Oil-grooves.—Cruciform grooves formed in the interior of a bearing and designed to distribute oil around a shaft rubbing in a bearing. Such grooves are indispensable to a proper oiling and should be kept in a perfect state of cleanliness

Oil-gun.—See Gun, Oil.

Oil-hardening.—See Hardening, Oil.

Oil, Linseed.—An oil expressed from the seed of the flax plant, *Linum usitatissimum*. It is used commercially, both in a raw and boiled state, in the manufacture of paints. In motor-car work, boiled linseed-oil is employed for making joints between metal surfaces which need to be gas or water-tight. Thus, heavy paper, cardboard or asbestos paper saturated with it will form a perfectly tight or air-joint.

Oil, Lubricating.—Any non-drying oil, animal, vegetable or mineral, which is suitable for oiling machinery.

Oil, Mineral.—An oil, usually a distillate of petroleum, used for lubricating, heating and illuminating purposes or for the production of a gaseous mixture for internal combustion-motors. See Petroleum, Naphtha, Kerosene, Paraffine, Petrol, Gasolene.

Oil of Vitriol.—A common name for sulphuric acid.

Oil-pump.—See Pump, Oil.

Oil-ring.—See Lubrication.

Oil-stone.—A stone of fine grain employed for setting or finishing the cutting-edge of tools. The best known varieties are the Turkey, Arkansas and Washita.

Oil-tank.—See Tank, Oil.

Oiler, Chain.—See Lubrication.

Oiler, Drop.—See Lubricator, sight-feed.

Oiler, Ratchet-feed.—A mechanical lubricator in which the piston-cams are operated by means of a pawl and ratchet-wheel, through a connecting-rod attached to some reciprocating part of the motor or to a crank on the end of a cam-shaft. Such oilers are not suitable for motor-speeds of over 600 r. p. m.

Oiler, Sight-feed.—See Lubricator, Sight-feed.

Oilers.—See Lubricators.

Oil City Oil and Grease Co.—Oil City, Pa. Jobbers in lubricating oils and greases, gasolenes, naphthas, illuminating oils. Est. March, 1906. S. N. Moyar, Pres.; H. R. Merriitt, Treas.; C. P. Grunden, Mgr.

Oil Tempering Spring Co.—Chicopee Falls, Mass. Mfrs. shock absorbers.

O'Kane, Co., J.—528 Golden Gate Ave., San Francisco, Cal. Supplies.

Okey Motor Car Co.—Succeeding Okey Auto Co., W. Broad and Kimball sts., Columbus, O. Makers of the Okey car; first marketed in 1902. Nine different models made since. Cap. \$25,000. C. M. Crittenden, Pres.; H. T. Stewart, Vice-Pres.; F. R. Shinn, Treas.; H. E. Walton, Sec. and Gen. Mgr.; Perry Okey, Designer and Supt.

Okey, Perry.—Designer and Supt. Okey Motor Car Co., W. Broad and Kimball Sts., Columbus, O.

Oklahoma Automobile Co.—806 Broadway, Enid, Okla. (Cadillac, American.)

Oklahoma Motor Car Co.—515 W. Main St., Oklahoma City, Okla. (Rambler, Ford, Pope-Waverley, Reliance, Mason and American.)

Okonite Co.—253 Broadway, New York City. Mfrs. insulated wires.

Olcott, Ralph Thrall.—Automobile Editor Post Express. B. Chicago, Ill., Nov. 13, 1861. Ed. Union Academy, East Aurora, New York; University of Rochester, 1887. Address, care Post Express, Rochester, N. Y.

Old Colony Light Co.—Motor Mart, Boston, Mass. Mfrs. acetylene tanks.

Oldfield, Barney.—First and most famous of American track racing drivers. Came into prominence at the Detroit race meet in 1902, where he drove the "999," the car without a differential, designed and built by Henry Ford. Afterward drove a Winton and Peerless cars, making many records during 1903, 1904 and 1905.

Oldfield, J. & R.—Warwick St., Birmingham, England. Mfrs. electric lamps.

Oldham Coupling.—See Coupling, Oldham.

Olds, Arthur L.—Charles City, Ia (Jackson).

Olds, H. B.—315 Columbia St., Fort Wayne, Ind. (Stearns).

Oldsmobile Co.—1010 Prospect Ave., Cleveland, O.; 1328 Michigan Ave., Chicago, Ill.; 1653 Broadway, N. Y. (Oldsmobile.)

Olds Motor Works.—Lansing, Mich. Makers of the Oldsmobile; first marketed in 1901. Twenty models, including commercial cars, made since. Cap. \$2,000,000. Henry Russell, Pres.; Frederick L. Smith, Vice-Pres. and Gen. Mgr.; Angus Smith, Sec. and Treas.; George W. Dunham, Designer; G. B. Burwell, Supt.; R. B. Jackson, Purch. Agt. and Factory Mgr.; W. E. Stokes, Sales Mgr. Branch, Packard Electric Co., St. Catharines, Ont.

Olds, Ransom E.—Pres. and Mgr. Reo Motor Car Co. Born Geneva, O., June 3, 1864. Educated

Cleveland and Lansing. Director Atlas Drop Forge Co., Mich. Screw Co., National Coil Co., Inter Ocean Mining Co., Bancroft Co., Pres. Capital National Bank, Grand Sedge Clay Products Co. Mem. A. C. of Detroit, A. C. Buffalo

Res. 720 Washington Ave., Lansing, Mich. Office, Reo Motor Car Co., Lansing, Mich. In trade since 1896. Used first car in 1886

Olds, W. H.—Sec. and Treas. Fort Wayne Gear Co., North American Bldg., Ft. Wayne, Ind.

Olean Garage Co.—481 Union St., Olean, N. Y. Garage.

O'Leary, J. W.—Sec. and Treas. U. S. Jack Co., 128-30 W. Lake St., Chicago, Ill.

Olewine, B. J.—Newcastle, Brunswick, Ga. (Pope-Hartford.)

Olive Auto Co.—3970 Olive St., St. Louis, Mo. Garage

Oliver, A. J.—Pres. U. S. Jack Co., 128-30 W. Lake St., Chicago, Ill.

Oliver Electric Vehicle Co.—1737 12th St., Cleveland, O. Garage.

Oliver Instrument Co.—Cor. Hennepin and 7th Sts., Minneapolis, Minn. Mfrs. speedometers.

Oliver Manufacturing Co.—248-250 S. Desplaines St., Chicago, Ill. Mfrs. jacks and screw jacks. Est. 1891. Inc. 1898. Mem. M. & A. M.

Oliver, S. C.—29 W. Forsythe St., Jacksonville, Fla. (Ford.)

Olmstead & Co., H. B.—663 Manhattan Ave., Brooklyn, N. Y. Mfrs. patterns.

Olmsted & Son, H. R.—413 S. Clinton St., Syracuse, N. Y. Mfrs., dealers and jobbers automobile tires and supplies. Est. 1854. Geo. L. De Lany, Mgr. Garage. (Indian.)

O'Loughlin, Colman S.—Secy. Treas. and Direc. The Breeze Carbureter Co., 276 Halsey St., Newark, N. J.

O'Loughlin, M. R.—Direc. The Breeze Carbureter Co., 27 Halsey St., Newark, N. J.

O'Loughlin, R. S.—Direc. The Breeze Carbureter Co., 276 Halsey St., Newark, N. J.

Olsen, Oscar L.—Lincoln, Neb. (Waltham)

Omaha Auto Tire Co.—2210 Farnam St., Omaha, Neb. Garage.

Omnia.—Pub. at 20 rue Duret, Paris, France

Omnibus.—A closed carriage, having a seat in front, and, in the interior, a seating capacity for a considerable number, access being gained by a rear door. The number of seats and windows is variable. The two seats inside are arranged so as to face each other, and are parallel with the major axis of the car. An omnibus is a closed "break"

Omnibus-bar.—See Bus-bar.

Oneida Automobile Club.—Oneida, N. Y. L. C. Stone, Sec.

Oneida Rubber Tire Works.—Oneida, N. Y. Mfrs. solid tires

O'Neill's Automobile Station.—574 Common St., Lawrence, Mass. (Premier, Ford.) Est. 1902. John E. O'Neill Pres. and Treas. Garage, 40 cars. Repairing.

O'Neill & Bros., A. A.—City Hall Ave. and Randolph St., Norfolk, Va. (Ramblers)

O'Neill, I.—Vice-Pres. Mica Mfg. Co., 307 W. Broadway, New York City.

O'Neill, John A.—Pres. Mica Mfg. Co., 307 Broadway, New York City.

O'Neill, John E.—Pres. and Treas. O'Neill's Automobile Garage Co., 574 Common St., Lawrence, Mass.

One Lever Control.—A system of control by which all such operations as steering, braking and varying the speed are controlled by a single lever.

Oneonta Automobile Garage.—23 Dietz St., Oneonta, N. Y. (Haynes, Waltham, Oldsmobile.)

Onland Vander Kasteels.—Utrecht, Holland. Mfrs. make and break plugs and coil.

Onondago Garage.—54 S. Clinton St., Syracuse, N. Y. (Pope-Hartford.) Incorporators, Grove E. Warner and William H. Bex.

Ontario Garage Co.—103 W. 2nd St., Oswego, N. Y. Garage.

Opel, Adam.—Russelsheim-am-Main, Germany. Mfrs. gasoline automobiles and motorcycles (Opel).

Open Circuit.—An interrupted or broken circuit.

Open-hearth Process.—A process for the production of steel from pig iron in a reverberatory furnace, as distinguished from the cementation or Bessemer process, q. v. See Steel.

Opp Hardware Co.—Otterbein, Ind. (Lambert.)

Ophthalmoscope Co.—Toledo, O. Mfrs. eye shields.

Orange Auto Garage.—Essex Ave. and R. R. Pl., Orange, N. J. (Franklin, Pope-Hartford, Pope-Toledo.)

Orange County Garage.—W. Center St., Anaheim, Cal. Garage.

Orange Valley Garage.—948 Main St. Riverside, Cal. (Reo, Jackson, Royal.)

Orey Janssen Automobile Co.—310 Main St., Davenport, Ia. (Mitchell.)

Orford Copper Co.—43 Exchange Pl., Reading, Pa. Mfrs. chrome-nickel steel.

Orient Buckboard Supply Co.—110 Park St., Albion, Mich. (Waltham.)

Orient Mfg. Co.—537 Albany St., Boston, Mass. Mfrs. "Waltham Spray" and washing apparatus. Cap. \$500,000. Est. 1901. Irving L. Drake, Pres.; Wilton E. Drake, Treas. and Sec.

Oriental Rubber Co.—1140 Bedford Ave., Brooklyn, N. Y. Vulcanizing.

Oriental Varnish Co.—72 Midwood St., Brooklyn, N. Y. Mfrs. varnishes.

Orlando-Kessler Automobile Co.—36 W. Capitol St., Columbus, O. (Lozier.)

Ormond Automobile Co.—2 Jefferson Ave., Brooklyn, N. Y. (Columbia.) Est. 1903. Garage, 60 cars. Repairing.

Ormond Beach Garage.—Ormond, Fla. (Cadillac.)

Oswell Ignition Co.—102 Pearl St., Boston, Mass. Mfrs. spark plugs.

Orthopter.—See Aviation.

Osborne, C. H.—405 S. Superior St., Albion, Mich. (Rambler, Waltham, Queen.)

Osborne, C. H.—Head of Machine Dept. The Chandler Co., 31 Taylor St., Springfield, Mass.

Osborne Pole & Shaft Co.—Anderson, Ind. Mfrs. jacks.

Osbun, A.—Mgr. Osbun Iron Works, 113-119 W. Central Ave., Redlands, Cal.

Osbun Iron Works.—113-119 W. Central Ave., Redlands, Cal. (Tourist.) Est. 1904. Cap. \$20,000. A. Osbun, Mgr. Garage, 25 cars. Repairing.

Osburn's Sons, J. F.—Clarksburg, W. Va. (Cadillac.)

Oscillation.—A general term for a to-and-fro motion, however produced.

Osen, Geo. H.—Pres. Osen Hunter

Automobile Co., 407 Golden Gate Ave., San Francisco, Cal.

Osen Hunter Automobile Co.—407 Golden Gate Ave., San Francisco, Cal., and 50 W. St. John St., San Jose, Cal. (Mitchell.) Cap. \$50,000. Geo. H. Osen, Pres. and Mgr. San Jose; A. E. Hunter, Vice-Pres. and Mgr. San Francisco; A. D. Curtner, Sec. Repairing.

Osgood, E. M.—Asst. Supt. Babcock Electric Carriage Co., 226-242 W. Utica St., Buffalo, N. Y.

O'Shea, Thos. H.—Treas. T. Aiton Bemus Co., Inc., 358 Atlantic Ave., Boston, Mass.

Oshkosh Automobile Club.—Oshkosh, Wis. F. E. Waite, Sec.

Oshkosh Boat Works.—Oshkosh, Wis. Mfrs. motor boats.

Oshkosh Malleable Iron Co.—Oshkosh, Wis. Mfrs. malleable iron castings, and spark coils.

Osmiridium.—An alloy consisting chiefly of iridium and osmium with small amounts of the other platinum metals and iron or copper.

Osmium.—A bluish-white metal of the platinum group; infusible in anything but the electric arc. Its specific gravity is 22.5—that is to say, it is the heaviest metal known. It enters into the composition of the platinum alloy for catalytic ignition, and is used for forming filaments for the "osmium lamp."

Ostdeutscher Verein für Luftschiffahrt (Graudenz Aero Club.)—Graudenz, Germany.

Osterloh, A. F.—Treas. Chicago Tire Club, Chicago, Ill.

Ostlund's Garage & Machine Shop.—1320 4th Ave., Moline, Ill. (Maxwell.)

Oswald Motor Co.—Goshen, Ind. Mfrs. gasoline automobile motors, and gasoline marine motors.

Oswego Automobile Club.—Oswego, N. Y. N. L. Bates, Sec.

Otis, E. J.—Vice-Pres. Utica Motor Car Co., 333 Bleeker St., Utica, N. Y.

Otis Elevator Co.—Railway Exchange, Chicago, Ill. Mfrs. elevators for garages.

Otis Steel Co.—Cleveland, O. Mfrs. steel castings.

Ott, Andrew.—Vice-Pres. C. A. Coey & Co., 1424 Michigan Ave., Chicago, Ill.

Ottawa Garage & Cycle Co.—Ottawa, Ill. Garage.

Otting, Geo.—Pres. The John Steptoe Shaper Co., 2961 Colerain Ave., Cincinnati, O.

Otto Cycle.—See Cycle, Otto.

Otto Gas Engine Works.—33rd and Walnut Sts., Philadelphia, Pa. Mfrs. gasoline automobile motors, and gasoline marine motors.

Our Own Mfg. Co.—568-74 Broadway, New York City. Mfrs. miscellaneous wearing apparel.

Outboard.—Situated on the outside of a boat. See Inboard.

Outcalt Mfg. Co.—Spotswood, N. J. (Dragon.)

Outer Casing.—Of a pneumatic tire, the external part, or "shoe," as distinguished from the inner tube. See Tube, Inner.

Outer-gap.—The same as "spark-gap" or "spark intensifier," q. v.

Outing Automobile Co.—Flatbush and Ocean Aves., Brooklyn, N. Y. Garage.

Outing Boat Co.—Marquette Bldg., Chicago, Ill. Mfrs. motor boats.

Outing Boat Co.—Kankakee, Ill. J. C. Burrell, Gen. Mgr. and Designer, and F. E. Merrifield, Sales and Advt. Mgr.

Outlook Motor Co.—102 W. 107th St., New York City. Garage.

O-U-T-O-Co.—19 Camfield St., Newark, N. J. Mfrs. Oils.

Output.—The energy developed in a given time by any prime mover or source of energy.

Outside Caliper.—See Caliper.

Overflow-pipe.—See Pipe, Overflow.

Overhang.—An overhanging portion of a structure. (2) The amount or degree of projection.

Overhead Camshaft.—See Camshaft, Overhead.

Overheating.—The overheating of a motor, a trouble which occasionally occurs, may be due to one of three causes: (1) Too rich a mixture and the consequent production of a gas that burns both during the power and exhaust stroke; (2) an inadequate supply of lubricating oil, and the cylinder for that reason becoming heated through excessive friction; and (3) poor circulation and a consequent accumulation of mineral matter in the water-jacket and radiator.

Overland Automobile Co.—Standard Ave. and Division St., Indianapolis, Ind. Mfrs. gasoline automobiles.

Overland Motor Car Co.—1333 Broadway, Denver, Col. (Cartercar.)

Over-lap.—The amount by which two plates cross each other, at a riveted joint, etc.

Overman, Albert H.—Pres. Manly Drive Co. B. Illinois, March 21, 1850. Ed. Illinois State Normal University. Director Manly Drive Co. Mem. A. C. A. Res., 391 West End Ave., New York City. Office, Whitehall Bldg., New York City. Interested in power transmission. Recreations: Shooting, swimming, horse-back riding. Used first car 1897.

Overman, W. C.—Sec. Greene Motor Car Co., 88-90 Washington St., Newark, N. J.

Overa, C. E.—2nd St., Ashland, O. (Ford, Mitchell.)

Overton, L. W.—Traveler St., Southold, N. Y. (Waltham.)

Ovington, Earle L.—Gen. Mgr. Ovington Mfg. Co., 2208 Broadway, New York City.

Ovington Mfg. Co.—2208 Broadway, New York City. (F. N. Four-cylinder Motorcycles.) Est. November, 1905. Cap. \$10,000. Earle L. Ovington, Pres., Gen. Mgr. and Purch. Agt.; M. A. Power, Treas.; G. A. Neuman, Vice-Pres.; A. J. F. Piel, Sales Mgr.

Owen & Co., R. M.—1344 Michigan Ave., Chicago, Ill., 1759 Broadway, New York City, and Lansing, Mich. (Reo, Premier.)

Owen, H. F.—Delaware, O. (Cameron.)

Owen, Percy, Inc.—1876 Broadway, New York City. (Bianchi.) Est. 1907. Cap. \$50,000. Percy Owen, Pres. and Mgr. Repairing. Bianchi cars only.

Owen, Percy.—Importer Bianchi car. B. Oswego, New York, Jan. 19, 1875. Ed. public and high schools. Director

Percy Owen, Inc., New York School Auto Engineers, Sports, Ltd., Importers Automobile Salon. Pres. N. Y. Automobile Trade Ass'n. Mem. A. C. A. Res., 21 Fort Washington Ave. Office, Broadway and 62nd St., New

York City. In the trade since 1899 (Winton Motor Carriage Co.), first gasoline car salesroom in New York City. Mgr. Winton Motor Carriage Co. six years.

Owen, R. M.—Sales Mgr. Reo Motor Car Co., Lansing, Mich.

Owen, Thos. G.—379 Thomas St., Newport, R. I. (Rambler.)

Owens & Co., A. N.—1307 Morton St., Baltimore, Md. Garage.

Owensboro Automobile Co., Inc.—Frederica and 4th Sts., Owensboro, Ky. (Columbia, Ford.)

Oxford Automobile Co.—North Canal St., Oxford, N. Y. Garage.

Oxford Auto Station.—Lynn, Mass. (Winton.)

Oxnard Garage & Machine Shop.—5th St., Oxnard, Cal. Garage.

Oxygen.—A faintly blue odorless gas. Symbol O, and atomic weight 16. It is universally diffused through nature, in a free state; in combination with nitrogen and constituting the atmospheric air; and in combination with hydrogen forming water (H₂O), or with metals or metalloids constituting the earth's crust. It is the active agent in all industrial combustions.

Ozokerite.—See Ceresine.

P

π .—Symbol used for the ratio of the circumference to the diameter of a circle; the number 3.1416.

P.—Symbol for "power."

p.—Symbol for "pressure."

p. d.—Symbol for "potential difference."

Pb.—Symbol for "lead."

Pt.—Symbol for "platinum."

Pacaud et G. Hamon.—66 rue du Bois, Levallois, Seine, France. Mfrs. leather tires, non-skids.

Pacific Automobile Co.—1028 S. Main St., Los Angeles, Cal. (De Luxe, Queech, Overland.)

Pacific Coast Automobile Co.—1414-1416 Broadway, Seattle, Wash. (Pope-Toledo, Pope-Hartford, Pope-Waverley, Thomas Flyer, Thomas Detroit, Buick, Oldsmobile.) Est. Sept., 1906. Cap. \$25,000. E. P. Gaffney, Pres.; Geo. B. Lamping, Sec. and Treas.; E. W. Swanbrough, Gen. Mgr. Garage, 150 cars. Repairing.

Pacific Commerical Car Co.—Seattle, Wash., and 8th and Pacific Ave., Tacoma, Wash. (Cartercar.) Cap. \$25,000. Incorporators: E. R. Wheeler, L. E. Younie, Albert Armstrong. L. E. Younie, Mgr. Tacoma branch.

Pacific Iron Works, Inc.—Bridgeport, Conn. Mfrs. gray iron castings, malleable iron castings, machine work to order.

Pacific Motor Car Co.—376 Golden Gate Ave., San Francisco, Cal., 1416 Broadway, Oakland, Cal. (Stevens-Dur-yea, Woods.)

Pacific Motoring.—835 S. Spring St., Los Angeles, Cal. Pub. weekly by Chas. Fuller Gates.

Pacific Tucking & Mfg. Co.—471-73 18th St., Brooklyn, N. Y. Mfrs. P. T. C. power tire pumps. Supplies. Est. '1883.

Packard Auto Renting Co.—1499 Broadway, New York City. Garage.

Packard, Chas. A.—Townsend, Mass. Repairing.

Packard Electric Co.—399 North Ave., Warren, O. Mfrs. insulated wire.

Packard Garage.—162½ W. 46th St., New York City. Garage.

Packard, J. E.—Augusta, Me. (Cadillac.)

Packard, J. W.—Pres. Packard Motor Car Co., Detroit, Mich.

Packard Motor Car Co.—1861 Broadway, New York City. (Packard.) W. A. Brush, Mgr. Garage, 300 cars.

Packard Motor Car Co.—Detroit, Mich. Makers of the Packard car; nine models marketed to date. Cap. \$1,000,000. J. W. Packard, Pres.; R. A. Alger, Vice-Pres.; P. H. McMillan, Sec. and Treas.; Henry B. Joy, Gen. Mgr.; Russell Huff, Designer; W. I. Gleason, Supt.; F. R. Humpage, Purch. Agt.; S. D. Waldron, Sales Mgr.; L. W. Conkling, Assistant Sales Mgr.. Branch: 61st St. and Broadway, New York City. Agents and dealers: Abbott Cycle Co., 702 Baronne St., New Orleans, La.; Avery, F. E., 1199 Franklin St., Columbus, O.; Bilz, Chas., 1432 Court Pl., Denver, Colo.; Bousfield, C. J., Bay City, Mich.; Broadway Auto Co., Broadway and Madison St., Seattle, Wash.; Brown, Thompson & Co., Hartford, Conn.; Cia Pan Americana de Vehiculos, S. A., Box 966, Mexico City, Mex.; Chicago Motor Car., 1615-17 Michigan Ave., Chicago, Ill.; Childs & Co., C. H., 12-18 Lafayette St., Utica, N. Y.; Cuyler, Lee, 453 Golden Gate Ave., San Francisco, Cal.; Dominion Automobile Co., Toronto, Ont., Can.; Flint Motor Car Co., 212 Union St., Providence, R. I.; Fuller, Alvan T., Motor Mart, Park Sq., Boston, Mass.; Halsey Auto Co., 3914 Olive St., St. Louis, Mo.; Imperial Motor Co., 887 Main St., Buffalo, N. Y.; Joy, C. P., Auto Co., 368 Minnesota Ave., St. Paul, Minn.; Ketchum, J. A. P., Saratoga Springs, N. Y.; Keystone Motor Car Co., 238 N. Broad St., Philadelphia, Pa.; Mar-Del Mobile Co., Charles St. and Mt. Royal Ave., Baltimore, Md.; Moriarity & Co., E. P., 1612 Grand Ave., Kansas City, Mo.; Nute & Keena, Seattle, Wash.; Pacific Motor Car Co., 376 Golden Gate Ave., San Francisco, Cal.; Packard Motor Car Co. of New York, 1540 Broadway, New York City; Pence Auto Co., 717 Hennepin Ave., Minneapolis, Minn.; Rochester Auto Co., 150 South Ave., Rochester, N. Y.; Standard Auto Co., 5917 Baum St., Pittsburg, Pa.; Standard Auto Co., 1206 Huron Rd., S. E. Cleveland, O.; Standard Auto Co., Woodward Ave. and Alexandrine St., Detroit, Mich.; Terre Haute Automobile Co., Terre Haute, Ind.; Welch Bros. Motor Car Co., Grand Ave. and 7th St., Milwaukee, Wis.; Western Motor Car Co.,

Los Angeles, Cal.; Willard Co., H. J., 18 Forest Ave., Portland, Me.

Packing.—Any material employed for making a tight joint, such as asbestos, fiber, hemp, brown paper soaked in boiled oil, red lead, white lead, etc.

Packing, Asbestos-wick.—See Asbestos.

Packing, Fiber.—Long shreds of fiber wound round the plunger of a pump or piston of a steam-engine to form a water-tight joint.

Packing, Hemp.—A packing composed of hemp impregnated with tallow or thick lubricating grease, and used for filling stuffing-boxes.

Packing, Metallic.—Metal blocks held tight against a revolving or reciprocating part by means of springs. The piston-rings of a motor are a form of metallic packing.

Packing, Paper.—A packing consisting of brown paper soaked in boiled linseed oil.

Packing-ring.—The same as Piston-ring, q. v. (2) A copper asbestos washer for a spark-plug.

Packing, Rubber.—A packing consisting of asbestos impregnated with India rubber, and employed for forming water-joints.

Packing House Equipment Co.—Euclid Ave., Upland, Cal. Garage.

Paddock, W. H.—Holdredge, Neb. (Maxwell.)

Padgett, J. M.—Topeka, Kan. (Pope-Waverley.)

Pad, Spring.—See Spring-seat.

Page & Co., Carl.—Newark, N. J. and Bridgeport, Conn. (Peerless.) Harry Unwin, Mgr., Bridgeport Salesrooms.

Page & Co., W. A.—220 Elliot St., Boston, Mass. (Simplicity.)

Page, Carl Henry.—Automobile dealer. B. Worcester, Mass., Jan. 16, 1880. Ed. public and high school. Pres. and Director Henry D. Temple Electric Co., Carl Page & Co., Director Pyramid Motor

Co., The Why Dairy Lunch Co. Mem. A. C. A., L. I. A. C., N. Y. Athletic, The Lambs, Worcester A. C., N. Y. Motor, Crescent Athletic, Aero. Res. 250 W. 93rd St., New York City. In the trade since Nov., 1900.

Used first car

in 1902. Made first long distance automobile trip in America, New York through Pennsylvania and return, 850 miles, in 1900. First automobilist to take a car

around world in 1903. Recreations: Fishing, camping and out-of-door sports.

Page Engineering Co.—Baltimore, Md. Mfrs. gasoline marine motors.

Page Gas Engine Co.—Adrian, Mich. Mfrs. gasoline automobiles.

Page, I. H.—Pres. and Treas. Stevens-Duryea Co., Chicopee Falls, Mass.

Page, Sewell, Jr.—Waverley, Ia. Garage.

Pagel, Dr. C. M.—St. Paul, Ind. (Holsman.)

Paige Electric Co.—238 Main St., Worcester, Mass. Garage.

Paige, E. W.—46 Washington Ave., Batavia, N. Y. (Ford.)

Paige, Fred O.—Pres. Reliance Motor Car Co., 89 Fort St. E., Detroit, Mich.

Paige, M. M.—302 Highland Drive, Seattle, Wash. (Lambert.)

Paige-Storms Drop Forge Co.—Chicopee Falls, Mass. Mfrs. drop forgings.

Paige, Walter M.—131 Cass St., Traverse City, Mich. (Maxwell.)

Paine, Geo. H.—Sec., Treas. and Mgr. Hydraulic Oil Storage Co., 820 Penobscot Bldg., Detroit, Mich.

Painter, G. W.—Winston, N. C. (Buick.)

Palace Auto Co.—1408-10 Walnut St., Kansas City, Mo. (Pierce Arrow, Oldsmobile, Columbia.) Est. Sept., 1906. Cap. \$75,000. J. P. Batchelor, Pres. and Treas.; Jas. C. Williams, Sec.; Carl J. Simons, Gen. Mgr. Garage, 25 dead storage, 15 live storage. Repairing.

Palace Automobile Station.—32 Hermon St., Worcester, Mass. (Hambler.) Est. 1905. Garage, 25 cars; repairing.

Palace Auto Station Co.—348 Trumbull St., Hartford, Conn. (Thomas, Autocar, Oldsmobile.)

Palace Garage.—540 Washington St., Camden, N. J. (Cadillac, Autocar.)

Palace Garage Co.—214 W. 80th St., New York City. Garage

Palais de L'Automobile.—1778 Broadway, New York City. (Lelaunay Belleville, Renault, Panhard.) Est. 1903. Repairing.

Pales, D. W.—Box 117, Guayama, Porto Rico. (Wayne.) Garage.

Palisade Auto Co.—Palisade Ave. and Hackensack Plank Road, Weehawken, N. J. (Pope-Waverley, Cadillac, Peerless, Pope-Hartford.)

Palis, F. W.—Spring St., Shreveport, La. (Stoddard-Dayton, Buick, Jewel.)

Palmer & De Mooy Foundry Co.—Cleveland, O. Mfrs. gray iron castings.

Palmer & Peck.—Oakland, Ill. (Auburn.)

Palmer & Singer Mfg. Co.—1620-24 Broadway, New York City. (Simplex, P. & S.) Est. January, 1906. Cap. \$100,000. C. A. Singer, Pres.; H. U. Palmer, Vice-Pres. and Treas.; C. A. Singer, Jr., Sec.; A. P. Palmer, Asst. Treas.; Warren

Noble, Mechanical Engineer and Designer; W. H. Botto, Gen. Sales Mgr.; H. C. Spratley, Asst. Gen. Mgr. and head Equipment Dept.; J. F. Gforer, Auditor; J. Mallon, Shop Foreman; B. A. Dreves, Office Mgr.; J. R. Eustis, Advt. Mgr.; Paul Picard, Mgr. Chicago Branch, 1321 Michigan Ave. Garage, 150 cars; repairing.

Palmer & Singer Mfg. Co. of N. Y.—1321 Michigan Ave., Chicago, Ill. (Simplex, P. & S.) Brance est. since November, 1906. Paul Picard, Mgr. Garage, 9 cars; repairing cars represented.

Palmer, A. P.—Asst. Treas. Palmer Singer Mfg. Co., 1620-24 Broadway, New York City.

Palmer Auto Garage.—Palmer, Mass. (Oldsmobile.)

Palmer Bros.—Coc Cob, Conn. Mfrs. gasoline marine motors, motorboats.

Palmer, Frank.—40-56 Jefferson Ave., N., Battle Creek, Mich. (Reo.) Repairing; supplies; garage.

Palmer, Fremont D.—Treas and Gen. Mgr. Martini Import Co. B. New London, Conn., Feb. 17, 1866. Ed. grammar school and academy at Norwich, Conn. Director Martini Import Co. Res., 8 W. 64th St.; office, 239 W. 50th St., New York City. In trade since May 1, 1906. Used first car May

1, 1906. Formerly engineer, commercial business. Recreations, automobiling, fishing.

Palmer, Henry U.—Treas and Vice-Pres. of Palmer & Singer Mfg. Co., Vice-Pres. and Director Brooklyn Elevator & Milling Co., Trustee Williamsburg Savings Bank, Director N. J. & N. Y. Realty & Improvement Co., North Side Park of Brooklyn, Palmer Waterfront Land & Improvement Co., Telluride Reduction Co. Address, 195 N. 9th St., Brooklyn, N. Y., and 1620-24 Broadway, New York City.

Palmer, Henry W.—Sec. and Treas. Jackson Motor Car Co., 103 Court St., Brooklyn, N. Y.

Palmer-Moore Co.—Syracuse, N. Y. Mfrs. gasoline automobile motors.

Palmer, O. F.—Sec. Adrian Steel Casting Co., Beecher St., Adrian, Mich.

Palmer, T. R.—Pres. and Gen. Mgr. Continental Rubber Works, 19th and Liberty Sts., Erie, Pa.

Palmer Tyre Co., Ltd.—119 Shaftesbury Ave., London, W. C., England. Mfrs. pneumatic tires.

Palmer, W. J.—220 W. 10th St., Wilmington, Del. Garage.

Palmetto Metal Co.—586 W. Lake St., Chicago, Ill. Mfrs. babbitt metals.

Palms, Chas. L.—Sec. Treas. and Chairman Board of Directors, Wayne Automobile Co., Piquette and Brush Sts., Detroit, Mich.

Palo Alto Hardware & Improvement Co.—Emmetsburg, Ia. (Waltham.)

Palomo, Domingo.—Calle 64, No. 411, Merida, Yucatan, Mexico. Garage.

Palous und Beuse.—Zimmerstrasse 30, Berlin, Germany. Mfrs. lubricators, differential and steering gears, circulating pumps.

Pan.—A sheet of metal attached to the frame of a motor-car and extending beneath the power-plant and serving to protect it. (2) See Bonnet.

Pan, Dust.—A fabric or metal pan for protecting the motor from mud and dust. See Apron.

Pane.—One of the sides of a nut or bolt-head. (2) The pointed or edged end of a hammer-head, spelled also "pean," "pein," "peen," "pene," "pin," etc

Panhard & Levassor.—1381 Broadway, New York City; 222 Eliot St., Boston, Mass. (Panhard.) Est. 1902. Not inc. A. Massenat, Gen. Mgr.; A. de Magnin, Asst. Mgr. Repairing.

Panhard et Levassor, Société Anonyme des Anciens Établissements.—19 Ave. d'Ivry, Paris, France. Mfrs. gasoline commercial automobiles. (Panhard trucks.) Gasoline automobiles. (Panhard cars.) Marine and automobile motors, shock absorbers.

Panne.—A French term for the spontaneous stoppage of a motor-car without any apparent cause, and, by extension, for the failure of the motor, clutch, transmission, etc., to operate or to operate properly, or for the exhaustion of the fuel-supply. A word, like several other automobile terms, borrowed from maritime language, in which it expresses the situation of a vessel of which the sails and rudder have assumed such a position that she can neither advance nor recede, but simply drifts.

Pantasote.—An artificial leather much employed in automobiles for cushion covering and vehicle tops.

Pantasote Co., The.—11 Broadway, New York City. Mfrs. artificial leathers, cloth and carpet trimmings.

Panther Fahrradwerke, Oscar Vormbaum.—Magdeburg, Germany. Mfrs. motorcycles. (Panther.)

Pantz, Ch.—Pont-a Mousson, France. Mfrs. gasoline commercial automobiles. (Pantz.)

Paper, Emery.—See Emery-paper.

Paper, Garnet.—See Garnet-paper.

Paper, Glass.—A paper similar to em-

ery-paper, but in the manufacture of which finely crushed glass is used instead of emery.

Paper, Litmus.—See Litmus-paper.

Paper-Pole.—A paper showing the positive or negative poles of a battery or accumulator, or the polarity of a conducting wire traversed by a current. This paper is based on the electrolytic reactions of salts and the movements of bases or metals toward the pole. See Paper, Litmus.

Paper, Sand.—See Sand-paper.

Parabolic Reflector.—See Reflector, Parabolic.

Paraffin.—A mixture of solid hydrocarbons or what are called "saturated" hydrocarbons belonging to the fatty series. Paraffin offers a considerable resistance to the most active reagents, such as sulphuric acid, chlorine, etc. It is a remarkable insulator or dielectric. As an insulator it is used in the making of induction-coils. Paraffin which is solid at ordinary temperatures, melts at 122° F., or 50° C.

Paragon Refining Co., The.—Toledo, O. Mfrs. grease, oils, semi-solid oils.

Parallel, In.—In connecting storage-cells to form a battery, when the voltage of one cell is sufficient, and it is desired to increase the volume, or amperage, of the current, the cells are connected "in parallel." This is done by connecting together all of the negative poles by one wire (which is the same as connection "in multiple") and all of the positive poles by another wire, the two wires leading to the circuit. This increases the amperage as many times as there are cells.

together all of the negative poles by one wire (which is the same as connection "in multiple") and all of the positive poles by another wire, the two wires leading to the circuit. This increases the amperage as many times as there are cells.

Parant Frères.—59 rue Chauveau, Neuilly, Seine, France. Mfrs. transmission and steering gears, clutches.

Parcher, L. Herbert.—Gardner, Mass. (Maxwell.)

Pardee & Canary, Inc.—1218 Michigan Ave., Chicago, Ill. (American Mors, Renault, Mora, American.)

St., New York City.

Pardee, K. C.—A New York automobile tradesman, Sec. and Gen. Mgr. of the firm of Maxwell-Briscoe, Inc. He formerly handled the Packard line, but for several years has sold the Maxwell car in New York and vicinity. Address, 317 West 59th

Pardee Works, The C.—Perth Amboy, N. J. Mfrs. steel.

Pardington, Arthur R.—2nd Vice-Pres. and Gen. Mgr. L. I. Motor Parkway, Inc. B. Saginaw, Mich., July 30, 1865. Ed. public and high-schools of Detroit and technical and professional training in New York. Director L. I. Motor Parkway, Inc.; Flagler Co., Inc.; Home Trust Co.; Miller-Yale Co. Mem. L. I. A. C., A. C. A., N. Y. Motor, Crescent Athletic, Tavern, Belle Terre, N. Y. State Auto Association, A. A. A. Charter member of 2nd Naval Battalion, organized 1896. Commissioned as Lieut. and

Paymaster in 1897. Held commission ever since. Held Commission as Asst. Paymaster in U. S. N. in 1898, and served in the Coast Defence District from Block Island to Barnegat. Served in First Regiment C. N. G. 1885-1887. Served on

Staff of 14th Regiment N. Y. N. G. 1889-90. For ten years was director in the Brooklyn Academy of Photography. Is now on the Ex. Committee of the Brooklyn Transit Reform League and Citizens' Central Committee. Chairman of the Vanderbilt Cup Commission 1904 and a member in 1907. Acting Chairman summer of 1907. Recreations: all branches of sports.

Paris Auto Top Co.—236 W. 41st St., New York City. Mfrs. automobile covers, automobile tops.

Paris Fdy. & Machine Works.—Paris, Ill. (Buick, Waltham.)

Parish & Bingham Co.—Cleveland, O. Mfrs. pressed steel products, sprockets.

Parish Mfg. Co.—7th and Chestnut Sts., Reading, Pa. Mfrs. pressed steel frames, stampings, chrome-nickel steel.

Park Auto Co.—893 E. 51st St., Chicago, Ill. Garage.

Park Automobile Co.—2359 Madison Ave., Baltimore, Md. (Frayer-Miller.)

Park Automobile Co.—4432 Olive St., St. Louis, Mo. (Thomas Flyer, Baker, Autocar.)

Park Brew Co.—1100 Elmwood Ave., Providence, R. I. Garage.

Park Circle Garage.—4-8 Ocean Parkway, Brooklyn, N. Y. Garage.

Park City Brass Co.—Springfield, Mass. Mfrs. tire valve and pump connections, nipples.

Park Garage.—Brooklyn, N. Y. (Walter.)

Park Garage.—425 Main St., Chico, Cal. (Ford, Rambler.)

Park Garage Co.—2212-14 Spring Garden St., Philadelphia, Pa. Garage.

Park Garage Co.—210 W. Ohio St., Allegheny, Pa. (Walter, Corbin.)

Park Garage Co. of Pittsburgh, The.—Pittsburg, Pa. Mayor Charles F. Kirschler, Pres.; John Sauers, Vice-Pres.; R. M. Kopp, Treas.; Morris Einstein, Sec.; F. H. Walley, Mgr. Cap. \$25,000. Garage.

Park Hardware Co.—Warren, O. (Jewel.)

Park, J. W.—Fruitland, Fla. (Carter-car.)

Park Sq. Auto Station.—43 Columbus Ave., Boston, Mass. (Stoddard-Dayton, Berliet.) Est. 1903. C. F. Whitney, Treas. and Mgr.; W. B. Buxton, Hd. Garage; W. M. Ferris, Sales Dept.; B. W. Shaw, Repairs. Garage, 150 cars; repairing.

Parker, Albert.—Office Mgr. West Garage, cor. Milton Ave. and Front Sts., Ballston Spa, N. Y.

Parker & Co. Auto Station, D. L.—18 Market St., New Bedford, Mass. (Pope-Toledo, Pope-Hartford.) Supplies, garage, repairs.

Parker & Co., David L.—18 Market St., New Bedford, Mass. (Pope Toledo, Pope Hartford.) Est. Oct., 1904. Harry E. Borden, Mgr.; John W. Cary, Supt. Garage, 35 cars; repairing.

Parker & Co., F. R.—Concord, N. H. (Cadillac.)

Parker & Co., F. R.—288 Columbus Ave., Boston, Mass. (Elmore.)

Parker & Co., W. H.—148 Broadway, Long Branch, N. J. Garage.

Parker, Burton.—Former Adv. Mgr. Fisk Rubber Co. B. Hartford, Conn., June 8, 1869. Ed. Hartford high-school, Trinity College, Post-graduate course Yale University. Mem. Hartford, St. Anthony's, University clubs. Res. 23 Florentine Gardens, Springfield, Mass. In trade since 1897.

Parker Co., J. P.—48 S. 2nd St., Memphis, Tenn. (Stoddard-Dayton.)

Parker Co., J. J.—506 Erie St., Fulton, N. Y. Mfrs. gasoline marine motors.

Parker, E. J.—428 Broad St., Providence, R. I. Garage.

Parker, E. N.—Springfield, Mass. Mfr. nipples.

Parker, F. H.—Gardner, Mass. (Maxwell.)

Parker, L. H.—Sec. and Treas. Lipman Mfg. Co., 300 Pleasant St., Beloit, Wis.

Parker Mfg. Co.—6 Clifton St., Boston, Mass. Mfrs. speedometers.

Parker, N. G.—Treas. Berkshire Cycle & Automobile Co., 95 Main St., North Adams, Mass.

Parker, Robt.—Pres. Western Motor Co., Logansport, Ind.

Parker, Robt.—Remington, Ind. (Waltham.)

Parker, Stearns & Co.—228-29 South St., New York City. Mfrs. tire patches, inner tire tubes.

Parker, Surry.—Pine Town, N. C. Mfr. gasoline engines, steam boilers, gears, iron and brass castings, forgings. Repairing.

Parker, Wm. A.—La Independencia 12, Mexico City, Mexico. (Elmore.)

Parkersburg Auto Co.—607 Julian St., Parkersburg, W. Va. (White, Pope-Waverley.)

Parker's Trinity Square Garage.—428 Broad St., Providence, R. I. Garage.

Parke, E. T.—Fidelity Bldg., Buffalo, N. Y. (Autocar.)

Parkhurst, E. B.—Designer and Supt. Moline Pump Co., Moline, Ill.

Parkhurst, Edwin H.—Vice-Pres. Peerless Motor Car Co. B. Barnard, Vt., April 10, 1872. Ed. Woodstock high school. Director Peerless Motor Car Co. Member clubs: Euclid, Cleveland A. C. (Cleveland), Crescent Athletic (Brooklyn). Res. Hollenden Hotel, Cleveland, O.

Connected with automobile trade since November, 1903.

Parkhurst Mfg. Co.—Peru, Ind. Mfrs. gray iron castings, elevators.

Parkins, Wm.—Chief of Eng. Dept. Rapid Motor Vehicle Co., Pontiac, Mich.

Parkin & Sons.—2417 N. Broad St., Philadelphia, Pa. Garage.

Parks, A. S.—Wichita, Kan. (Locomotive.)

Parkway Garage Co.—110th St. and Central Park W., New York City. Est. since Jan. 1, 1907. Cap. \$4,000. C. Herbert Covell, Pres.; Leslie L. Sanders, Vice-Pres.; Richard H. Fenker, Sec. and Treas.; William G. Feick, Garage Mgr.; Charles W. Sinclair, Hd. Mechanic; Joseph H. Covell, Mgr. Rental Dept. Garage, 125 cars. Repairing, supplies.

Parrish, Lee N.—Pres. Hamilton Motor Car Co., 26 N. 2nd St., Hamilton, O.

Parrot Varnish Co.—Bridgeport, Conn. Mfrs. varnishes.

Parry & Co., A. N.—Amesbury, Mass.

Mfrs. curtain fasteners, top fixtures.

Parsell & Weed.—129-131 W. 31st St., New York City. Mfrs. electric motors, pattern makers.

Parsons Buggy Top Co.—Chicago, Ill. Mfrs. automobile robes, tops, glass wind shields.

Parsons Electric Motor Carriage Co.—Cleveland, O. Mfrs. electric automobiles.

Parsons, F. C.—500 Main St., Stamford, Conn. (Waltham.)

Parsons, Henry B.—Pine St., Stockbridge, Mass. Est. 1906. Garage, 30 cars, repairing.

Parsons, J. C.—410 N. Main St., Rushville, Ind. (Cameron.)

Parsons Non-Skid Co., Ltd.—210 Shaftesbury Ave., London, W. C., England. Mfrs. non-skids.

Parsons, W. G.—Treas. American Metal Polish Co., 89 Winslow Ave., West Somerville, Mass.

Partenheimer, F. A.—Advt. Mgr. Mora Motor Car Co., Newark, N. Y.

Partinium.—An alloy of aluminum, magnesium and tungsten, which, with the lightness of aluminum, combines a resistance varying with the proportions of the alloyed metals.

Melted in sand, its density is 2.89. Its tensile strength is from 17,000 to 24,000 pounds to the square inch, and its elongation is from 12 to 6 per cent., according to the proportions of the magnesium and tungsten employed. When rolled, its density is 3.09, its tensile strength from 46,000 to 53,000 pounds to the square inch, and its elongation from 6 to 8 per cent. Partinium is employed in the automobile industry for making gear castings and sometimes motor-car panels, and has been used to some extent for racing-car bodies.

Partridge, Ernest Samuel.—Vice-Pres. Wyckoff, Church & Partridge. B. Birmingham, England, Apr. 14, 1868. Ed. Birmingham Grammar School. Director Wyckoff, Church & Partridge. Mem. A. C. A. Office, 1743 Broadway, New York. In the trade since 1884. Used first car 1902.

Pasadena Automobile Co.—57 W. Union St., Pasadena, Cal. Garage.

Pasadena Automobile Club.—Robert H. Gaylord, Sec. Pasadena, Cal.

Pasquet.—Ave. Michelet, Salon, Bouc-du-Rhone. France. Mfrs. motor cycles. (Pasquet.)

Pass & Seymour, Inc.—52 Boyd Ave., Solvay, N. Y. Mfrs. electrical specialties, porcelain insulators, porcelain tubes, switches. B. E. Salisbury, Gen. Mgr.; J. W. Brooks, Sales Dept.; L. J. Bergman, Credit Dept.

Passaic Motor Car Co.—147 Main Ave., Passaic, N. J. (Pope-Waverley.)

Passaic Steel Co.—Paterson, N. J.

Mfrs. angle, channel and tee iron and steel.

Paste.—The active material (lead oxide) applied to the surface of plates or grids in a storage-battery. See Cell, Secondary.

Pasted.—A term applied to the electrodes of storage-cells which are built up mechanically instead of being "formed" electrolytically. See Formed, and Cell, Secondary.

Pastre Ellis Automobile Garage.—Ocean Parkway, Brooklyn, N. Y. (National, Rambler.) Cap. \$35,000. Incorporators: A. E. Pastre, S. H. Ellis, W. L. Holt.

Patch.—A leather or rubber piece for repairing the inner tube of a tire. It may be used for temporarily stopping a puncture or a cut. The dimensions of patches vary, and they are usually secured by means of rubber solution.

Patent Leather Co. of America, The.—Newark, N. J. Mfrs. leather.

Paterson Auto Exchange.—10 Crosby Place, Paterson, N. J. (Cadillac, Haynes, Franklin.)

Paterson Auto Tire Repairing Co.—198 Ellison St., Paterson, N. J. Vulcanizing.

Paterson, Enoch.—Vice-Pres. and Sec. Wm. D. Gibson Co., Huron and Kingsbury Sts., Chicago, Ill.

Paterson, Geo. S.—254 Euclid Ave., Cleveland, O. (Reo, Premier.)

Paterson, Jas.—Red Cloud, Neb. (Mitchell.)

Paterson Vehicle Co.—257 Market St., Paterson, N. J. (Jackson.)

Patina.—See Copper.

Patnot, A. F.—Hanford, Cal. (Pope-Hartford, Pope-Toledo, Pope-Waverley.)

Patow, Henry W.—Vice-Pres. Detroit Carriage Co., Detroit, Mich.

Patten, W. N.—Honolulu, Hawaiian Islands. (Waltham.)

Patterson, F. H.—Fredonia, Kan. (Waltham.)

Patterson, Geo.—Foreman Machine Dept. Eclipse Machine Co., Elmira, N. Y.

Patterson, George L.—Pres. and Treas. Stanley and Patterson, 23 Murray, 27 Warren St., and 329 Fourth Ave., New York City.

Patterson, Gottfried & Hunter, Ltd.—140-150 Centre St., New York City. Mfrs. jacks, tools, tool bags, brass and copper tubing, wrenches, supplies, hardware, machine work to order.

Patterson-Sargent Paint Co.—Cleveland, O. Mfrs. enamel, paints, varnishes.

Patterson, Wm. T.—Bellefontaine, O. Garage.

Pattinson, D.—Mgr. Machine Shop, Pattinson Mfg. Co., rear 48 Stanhope St., Boston, Mass.

Pattinson Mfg. Co.—48 Stanhope St. Rear, Boston, Mass. Est. 1892. D. Pattinson, Hd. Machine Shop; H. M. Giffin, Car Dept. Repairing.

Patton, Jas. F.—Supt. F. B. Stearns Co., Euclid and Lakeview Ave., Cleveland, O.

Paul & Heming—Jerome Ave. and 162nd St., New York City. Garage.

Paul & Co., J. C.—59 Dearborn St., Chicago, Ill. Mfrs. metal polishes.

Paul, Wm. L.—Pres. Lustre Chemical Co., Sheridan, Ore.

Pauliac fils, F.—usine de Pont-St.-Jean, Bergerac, Dordogne, France. Mfrs. wood wheels.

Paulman & Co., H.—1430 Michigan Ave., Chicago, Ill. (Pierce Arrow.)

Paulus et fils, J.—Marchiennes-au-Pont, Belgium. Mfrs. bodies.

Pawl—A pivot bar so arranged as to drop into the teeth of a ratchet-wheel, as it revolves in one direction, to prevent a back motion when the moving power is withdrawn. The pawl or detent may act by gravity or a spring. See Click.

Pawler, P.—Calumet, Mich. (Wayne.)

Payne, George Hardy.—Pres. Hackett Motor Car Co., 218 Paterson St., Paterson, N. J.

Payne, J. A.—Vice-Pres. The Auto-Motor Car Co., 804-808 Sycamore St., Cincinnati, O.

Payne Co., Inc., John R.—Albany, N. Y. (Stearns.)

Payne, R. S.—Pres. and Treas. The Auto-Motor Car Co., 804-808 Sycamore St., Cincinnati, O.

Payson Varnish Co.—141st St. and Walnut Ave., New York City. Mfrs. varnishes.

Peake, E. E.—Sec., Gen. Mgr. The Hildreth Mfg. Co., Lansing, Mich.

Pearis, H. B.—Pres. Lawrence Motor Car Co., 13-17 W. Warren St., Lawrence, Kan.

Pearl Auto Repair Garage.—161 Main Ave., Passaic, N. J. (Reno, Premier.)

Pearson.—Abbot Rd., Poplar, London, E., England. Mfr. storage batteries.

Pearson, C. W.—625 Landis Ave., Vineland, N. J. Garage.

Pearson, Warren.—Troy, O. (Waltham.)

Pearson, W.—Whitman, Mass. Garage.

Pearson, W. B.—Pres. Detroit Screw Works, Riopelle and Franklin Sts., Detroit, Mich.

Pease, A. H.—Pres. Hart & Hegeman Mfg. Co., Hartford, Conn.

Pease & Sons, S. C.—Merrimac, Mass. Mfrs. wood and metallic bodies, automobile tops. Garage.

Pease, Walter S.—Vice-Pres. and

Purch. Agt. Atlas Motor Car Co., Springfield, Mass.

Peck & Anderson.—Greenburg, Ind. (Cadillac.)

Peck & White.—Anawan St., Fall River, Mass., and Weir St., Taunton, Mass. (Pope-Hartford, Pope-Toledo, Pope-Waverley.)

Peck, E. E.—Treas. and Mgr. Scovill & Peck, 15 Wooster St., New Haven, Conn.

Peck, F. L.—Designer Babcock Electric Carriage Co., 226-242 W. Utica St., Buffalo, N. Y.

Peck, Geo.—Vice-Pres. Detroit White Lead Works, 532-60 E. Milwaukee Ave., Detroit, Mich.

Peck, J. D.—Peckville, Pa. Garage.

Peck, O. S.—Shelbyville, Ind. (Cadillac.)

Peckham Carriage Co.—19 S. Kenton St., Dayton, O. (Buick, Cadillac, White.)

Peckham Motor Syndicate, F. W.—40 Sackville St., Picadilly, London, England. (Maxwell.)

Pecos Auto Co.—Peco, Tex. (Acme.)

Pedal.—A foot-lever used on motor vehicles for controlling brakes, clutches, speed, power, etc.

Pedal, Accelerator.—A pedal which, acting through a series of flexible wire rods, prevents the governor from closing the throttle-valve, and allows the motor to attain its full velocity. See Accelerator.

Pedal, Brake.—A pedal used for applying brakes, and usually connected with the clutch, so as to withdraw the latter when the brake is applied.

Pedal, Clutch.—A pedal for actuating the clutch.

Pedal, Push.—A pedal designed to be pushed forward instead of being depressed.

Pedal, Regulator.—A pedal for regulating the velocity and power of the motor by acting either on the throttle or on the valves.

Peddinghaus, Carl-Daniel.—Altenvörde, Germany. Mfrs. jacks.

Pedersen Mfg. Co.—400-412 E. 37th St., New York City. Mfrs. gasoline and kerosene burners, brass couplings, lubricators, wrenches.

Pedestal-frame.—See Frame, Pedestal.

Pedigo, R. E.—Lucas, Ia. (Waltham.)

Pedraglio Fratelli.—28 via Milano, Como, Italy. Mfrs. motorcycles.

Peer, E. F.—Sec., Treas. Reo Motor Car Co., Treas. The Hildreth Mfg. Co., Lansing, Mich.

Peerless Belting Co.—78 Main St., Buffalo, N. Y. Belting.

Peerless Equipment Co.—170 S. Clinton St., Chicago, Ill. Mfrs. carbureters, spark plugs, spark timing devices.

Peerless Garage.—942-44 Bedford Ave., Brooklyn, N. Y. (Peerless.) Est. 1906.

Max Melle, Mgr. Garage, 50 cars, repairing.

Peerless Garage Co.—Room 321 Union Bldg., Newark, N. J. (Peerless.)

Peerless Igniter Mfg. Co.—947 Marcy Ave., at Fulton St., Brooklyn, N. Y. Mfrs. storage batteries.

Peerless Motor Car Co.—220 W. 41st St., New York City. (Peerless.) Garage; repairing. C. G. Wridgway, Mgr.

Peerless Motor Car Co. of N. E.—178 Columbus Ave., Boston, Mass. (Peerless.) Est. Aug. 31, 1906. Cap. \$60,000. L. H. Kittredge, Pres.; John L. Snow, Vice-Pres. and Treas.; R. R. Ross, Selling Dept.; P. L. McKinney, Repair Dept. Garage, 25 cars, repairing.

Peerless Motor Car Co., The.—93rd St. and Quincy Ave., Cleveland, O. Makers of the Peerless car; first marketed in 1901. Ten different models made since. Cap. \$600,000. L. H. Kittredge, Pres. and Gen. Mgr.; E. H. Parkhurst, Vice-Pres.; G. B. Siddall, Sec.; Chas. Schmidt, Designer; W. H. Staring, Supt.; F. S. Macourek, Purch. Agt.; W. H. Kirkpatrick, Sales Mgr.; H. L. Foote, Advt. Mgr. Branches, New York City and Boston, Mass. Agents and dealers: Adams & Hart, 47 N. Division St., Grand Rapids, Mich. Albany Garage Co., 28 Howard St., Albany, N. Y. Perry, O. H.—Treas. Columbus Buggy Co., Dublin Ave. W., Columbus, O.

Perry, Sidney R.—Sec. and Treas. Dow Tire Co., 104 W. 42nd St., New York City.

Persiani, Chas. C.—Factory Supt. Clark Bros. Bolt Co., Milldale, Conn.

Peshak & Co., E. H.—Sun Prairie, Wis. Garage.

Pestell, William.—Pres. and Gen. Mgr. Worcester Steel Foundry Co., Millbury, Mass.

Pet-cock.—See Cock, Pet.

Petern Bros.—Millard, Neb. (Rambler.)

Peters & Herron Dash Co., The.—Columbus, O. Mfrs. dashes and fenders.

Peters & Kittell.—Cass and Union Sts., Hornell, N. Y. (Rambler.)

Peters & Mulavey.—Detroit, Mich. Garage.

Peters Bros.—Main St., Algonquin, Ill. Repairing.

Peterson, A. W.—320 W. 3rd St., Davenport, Ia. (Monarch.)

Peterson, Dr. W. A.—Elgin, Neb. (Holsman.)

Peterson, J. P.—Fort Dodge, Ia. (Holsman.)

Peterson Mfg. Co., O. W.—1254 Michigan Ave., Chicago, Ill. Mfrs. acetylene generators.

Peterson, Julius.—Tarrytown, N. Y. Mfr. motorboats.

Peterson, N. E.—1520 Belmont Ave., Seattle, Wash. (Stearns.)

Peterson, O. P.—Box 207, Fort Dodge, Ia. Garage.

Peterson, P. C.—308 Main St., Davenport, Ia. Garage.

Petites Annales Judiciaires du Cycle et de L'Automobile.—Pub. at 35 rue Berge, Paris, France.

Peto & Radford, Ltd.—Ashted, Surrey, and 100 Hatton Garden, London E. C., England. Mfrs. coils, spark plugs, electric lamps, storage batteries.

Petrie, John.—New Haven, Conn. Mfrs. brass pipe fittings.

Petrol.—A name in England for "gasoline."

Petroleum.—An oily hydrocarbon, called also "mineral oil" or "rock oil," found in the earth in many parts of the world, and affording, upon distillation, many important and useful products, such as kerosene, gasolene, benzine, paraffine, lubricating oils, vaseline, etc. See Benzine, Gasolene, Kerosene, Naphtha, Paraffine and Vaseline.

Petroleum Jelly.—Same as Vaseline.

Petry, Wm.—Mechanical Dept. Lisk & Petry, 405-7 Diamond St., Hudson, N. Y.

Pettee, H. F.—Sec. and Treas. Hydraulic Pressed Steel Co., E. 61st St., Cleveland, O.

Petticoat.—In some carburetters, a tube or cone surrounding the spray-nozzle and designed to increase the velocity of the air to be carburetted, and all of which is obliged to pass through it.

Pettis & Bolton.—427 S. Saginaw St., Flint, Mich. (Ford.)

Petzelt & Keyser.—24th and Locust Sts., Philadelphia, Pa. Mfrs. wood and metallic bodies, automobile tops.

Peugeot, A., Tony Huber et Cie.—56 rue du Vieux-Pont-de-Sevres, Billancourt, France. Mfrs. marine motors, motorcycle motors, automobile motors.

Peugeot Frères.—296 Broadway, New York City. United States Branch and selling agents Pergeot Frères, Doubs, France.

Peugeot Frères, les fils de.—Valentigney, Doubs, France. Mfrs. metallic rims, tricarcs, chains, motorcycles (Peugeot).

Peugeot Frères, Société Anonyme des Automobiles.—Audincourt, Seine, France. Mfrs. gasolene automobiles (Peugeot).

Peugeot, Société Anonyme des Automobiles.—83 bvd. Gouvion, St. Cyr, Paris, France. Mfrs. gasolene commercial automobiles (Peugeot).

Peulecke, Fred.—9120-22 Erie Ave., South Chicago, Ill. Garage.

Pfalzische Nachmaschinen & Fahr-raeder Fabrik.—Kaiserslautern, Germany. Mfrs. gasolene automobiles.

Pfanstiehl Electrical Laboratory.—North Chicago, Ill. Mfrs. spark coils.

Pfieber, T. S.—York, Pa. (Jewel.)
Pfizenmayer, C. A.—Duncan Hall, New Haven, Conn. (Winton.)

Pfleger, J.—1602 Bushwick Ave., Brooklyn, N. Y. Garage.

Pflume, Joseph.—Supt. The Cincinnati Electric Tool Co., 650-52 Evans St., Cincinnati, O.

Pfoutz, D. G.—N. 2nd St., Chambersburg, Pa. (Franklin, Cadillac, Pope-Toledo, Pope-Waverley, Pope-Hartford.)

Phaeton.—An open carriage, frequently provided with a top and a single seat (for two) for the owner, and, generally, a servant's seat fixed at the rear and entered from both sides.

Phänomen Fahrradwerke, Gustav Hiller.—Zittau, Germany. Mfrs. motorcycles, tricars (Phänomen).

Phelon & Moore.—Cleckheaton, England. Mfrs. motorcycles (Phelon & Moore).

Phelps, Chas. W.—Sec. Connecticut Steel & Wire Co., 308 Pearl St., Hartford, Conn.

Phelps, G. H.—Co-partner the Harrington Garage, Worcester, Mass.

Phelph, H. J.—Sidney, N. Y. Garage.

Phenix Mfg. Co.—Milwaukee, Wis. Mfrs. portable houses.

Philadelphia Auto Co.—338 N. Broad St., Philadelphia, Pa. (Apperson.)

Philadelphia Auto Exchange.—832 Arch St., Philadelphia, Pa. Supplies.

Philadelphia Auto Repair Shop.—230 N. 22nd St., Philadelphia, Pa. Repairing.

Philadelphia Auto Sales Co.—332 Broad St., Philadelphia, Pa. (Jewel, Reliance, Dolson.)

Philadelphia Grease Mfg. Co.—The Bourse, Philadelphia, Pa. Mfrs. grease, oils.

Philadelphia Motor Car Co.—236 N. Broad St., Philadelphia, Pa. (Frayer-Miller.)

Phil-Penn Motor Co.—206 Drexel Bldg., Philadelphia, Pa. (Frayer-Miller.)

Philadelphia Steel & Wire Co.—525 Commerce St., Philadelphia, Pa. Mfrs. belting.

Philadelphia Storage Battery Co.—Emerald and Tioga Sts., Philadelphia, Pa. Mfrs. primary batteries.

Philadelphia Stove & Iron Foundry Co.—1631 N. 5th St., Philadelphia, Pa. Mfrs. gray iron castings, automobile and motorboat cylinders, pistons, exhaust manifolds, crank cases. Cap. \$55,000. Est. 1863. Robt. W. Trump, Gen. Mgr.

Philip & Son, George.—32 Fleet St., London, England. Pubs. maps.

Phillips & Hamilton.—Bradford, Pa. Mfrs. motorcycles.

Phillips & Wrinch, Ltd.—76 Bay St., Toronto, Canada. (Mitchell.)

Phillips, C. T.—Sec. Direct Drive Axle Co., 575 N. 4th St., Columbus, O.

Phillips, F. A.—Treas. and Sec. W. J.

Duane & Co., 304 W. 54th St., New York City.

Phillips, F. F.—Sales Mgr. General Vehicle Co., Broadway and 62nd St., New York City.

Phillips Motor Works, W. L.—405 Tacoma Bldg., La Salle and Madison Sts., Chicago, Ill. Mfrs. gasoline automobile and marine motors.

Phillips, R. B.—Treas. and Gen. Mgr. American Steam Gauge & Valve Co., 220 Camden St., Boston, Mass.

Phillips, S. M.—Sacramento, Cal. (Autocar, Columbia.)

Phinny, H. B.—Treas. C. A. Duerr & Co., Inc., 2182-6 Broadway, New York City.

Phoenix Appliance Co.—15 W. 28th St., New York City. Mfrs. fire extinguishers.

Phoenix Automobile Exchange.—4495 San Pablo Ave., Oakland, Cal. Garage.

Phoenix Garage.—526-28 Main St., Chico, Cal. Garage.

Phoenix Iron Co.—Phoenixville, Pa. Mfrs. bar iron and steel.

Phoenix Light & Fuel Co.—Phoenix, Ariz. (Cadillac.)

Phoenix Motors, Ltd.—Blundell St., Caledonian Road, London N., England. Mfrs. tricars, motorcycles, gasoline automobiles (Phoenix).

Phosphor-bronze.—A bronze containing from 2 to 5 per cent. of phosphorus. It is very hard and durable, and suitable for parts of machinery exposed to shocks.

Phosphor Bronze Smelting Co.—2200 Washington Ave., Philadelphia, Pa. Mfrs. brass, bronze, aluminum and copper castings, Babbitt and bronze metals.

Picard, Alfred Joseph.—With Wyckoff, Church & Partridge. B. New York City, Jan. 24, 1871. Ed. public schools in New York. De La Salle College. Mem. N. Y. Athletic, A. C. A., Masonic Club. Res., 6 W. 103d St. Address, 1743 Broadway, New York City. In the trade since 1899. Used first car (3 hp. De Dion) 1902. Recreation, automobiling.

Picard, Paul.—Mgr. Chicago Branch Palmer & Singer Mfg. Co. of New York. 1321 Michigan Ave., Chicago, Ill.

Piccoli Fratelli e Ca.—Via Capellari, Milan, Italy. Mfrs. lubricators.

Pickard, C. A.—Pres. Salisbury Wheel & Mfg. Co., Jamestown, N. Y.

Pickard, C. A.—Director Dragon Motor Co., 31st, 32nd and Chestnut Sts., Philadelphia, Pa.

Pickel, J. S.—Sec. Globe Malleable Iron Co., Greenway Ave., Syracuse, N. Y.

Pickering Hardware Co.—Cincinnati, O. (Indian.)

Picker, Moccand et Cie, Société Anonyme des Anciens Établissements.—78 Chene-Bougeries, Geneva, Switzerland. Mfrs. automobile motors, gasoline automobiles (Lucia).

Pickett, Maj. Geo. E.—4th Vice-Pres.

Carter Motor Car Corp., 409-10 Munsey Bldg., Washington, D. C.

Pickling.—The removal of the hard skin in metal castings by immersion in a "pickle" of dilute sulphuric or nitric acid; also a general term for processes in which an acid or other liquid is allowed to act on metals for the purpose of cleaning, etc.

Picklum, Chas. E.—Mgr. and Hd. of Repair Dept. McCook Auto Co., 308 W. Dennison St., McCook, Neb.

Picric Acid.—See Acid, Picric.

Picrome Hide Co.—1417 N. Salina St., Syracuse, N. Y. Mfrs. rawhide gear wheels, leather washers.

Piedboeuf, Ateliers A. G.—63 rue de Fragnér, Liege, Belgium. Mfrs. gasoline automobiles, automobile motors (Piedboeuf Imperia cars.)

Piedmont Motor Car Co.—88 N. Pryor St., Atlanta, Ga. (Pope-Waverley, Marmon.)

Pierce, A. J.—Pres., Treas. and Gen. Mgr. Pierce Engine Co., 2200 Clark St., Racine, Wis.

Pierce, A. L.—Wallingford, Conn. (Waltham.)

Pierce & Hobson.—Trescott, Kan. (Waltham.)

Pierce & Isbell.—1413 Michigan Ave., Chicago, Ill. (Baker.)

Pierce Auto Co.—109 S. State St., Syracuse, N. Y. (Oldsmobile.)

Pierce Engine Co.—1421 Michigan Ave., Chicago, Ill. (Pierce-Racine.)

Pierce Engine Co.—Racine Junction, Wis. Mfrs. gasoline automobile motors, motorboats.

Pierce Engine Co.—2200 Clark St., Racine, Wis. Makers of the Pierce-Racine car; first marketed in 1899. Four models made since. Cap. \$21,000; surplus, \$200,000. A. J. Pierce, Pres., Treas., Gen. Mgr. and Purch. Agt.; J. Schroeder, Sec.; Chris. Carpenter, Vice-Pres.; Wm. Reid, Supt. Agents and dealers: British Columbia Auto Co., Vancouver, B. C.; Butler Motor Car Co., The, 998 Boylston St., Providence, R. I.; Pierce Engine Co., 1421 Michigan Ave., Chicago, Ill.; Pierce-Racine Agency, 1048 S. Main St., Los Angeles, Cal.

Pierce, Frank L.—Sec. and Treas. Gaeth Auto Works, 2553 W. 25th St., Cleveland, O.

Pierce Co., The Geo. N.—Salesroom and General Office, 754 Main St., Buffalo, N. Y. (Pierce-Arrow.)

Pierce Co., The George N.—1651 Elmwood Ave., Buffalo, N. Y. Makers of the Pierce Great Arrow car; first marketed in 1901. Fourteen models made since. Cap. \$315,000. G. K. Birge, Pres.; Henry May, Vice-Pres., Gen. Mgr. and Purch. Agt.; Laurence H. Gardner, Sec.; Charles Clifton, Treas. and Sales Mgr.; Daniel Fergusson, Designer; George

Cook, Supt. Agents and dealers: Auto & Supply Co., Ltd., 24 Temperance St., Toronto, Ont., Can. Banker Bros. Co., Baum & Beatty Sts., Pittsburg, Pa. Binghamton Motor Car Co., 172 State St., Binghamton, N. Y. Blenner, B. A., 1602 W. Broad St., Richmond, Va. Botterill, Thos., 1643 California St., Denver, Colo., and 62 W. 3d, S., Salt Lake City, Utah. Broadway Auto Co., Inc., Madison St. and Broadway, Seattle, Wash. Bush, Wm. E., 953 S. Main St., Los Angeles, Cal. Central Automobile Station Co., 55 West St., Pittsfield, Mass. Clark Auto Co., E. R., 461 Worthington St., Springfield, Mass. Covey & Wallace Motor Co., 16th and Addler Sts., Portland Ore. Ellis Motor Car Co., 222 Halsey St., Newark, N. J. Foss-Hughes Motor Car Co., 201 N. Broad St., Philadelphia, Pa., and 512 Industrial Trust Bldg., Providence, R. I. Frederickson, H. E., 2046-2048 Farnham St., Omaha, Neb. Harolds Motor Car Co., 233 W. 54th St., New York, N. Y. Hibbard Auto Co., 187 Wisconsin St., Milwaukee, Wis. Houston Motor Car Co., Prairie Ave. and San Jacinto Sts., Houston, Tex. Lambert & Von Tacky, 16 N. Franklin Sts., Titusville, Pa. Maguire Co., J. W., 745 Boylston St., Boston, Mass. Metropolitan Motor Car Co., Enclid Ave. and E. 19th St., Cleveland, O. Miner Garage Co., High and Allyn Sts., Hartford, Conn. Mobile Carriage Co., Golden Gate Ave. and Gough St., San Francisco, Cal. Mohler & De Gress, La Independencia 12, Mexico City, Mex. Nickerson Co., F. A., 642 Congress St., Portland, Me. Palace Auto Co., 1408 Walnut St., Kansas City, Mo. Paulman & Co., H., 1430 Michigan Ave., Chicago, Ill. Pence Automobile Co., 717 Hennepin Ave., Minneapolis, Minn. Geo. N. Pierce Co., The, 762 Golden Gate Ave., San Francisco, Cal. Geo. N. Pierce Co., The, 752 Main St., Buffalo, N. Y. Schneider, J. P., 187 Jefferson Ave., Detroit, Mich. Southern Automobile Co., 1200 Mt. Royal Ave., Baltimore, Md. Southern Automobile Co., 105 S. Conception St., Mobile, Ala.; Standard Motor Car Co., Scranton, Pa. Straus, John Mason, 3d and Chestnut Sts., Louisville, Ky. Troy Automobile Exchange, 22 4th St., Troy, N. Y. Utica Motor Car Co., Utica, N. Y. U. S. Auto Co., 21 Plymouth Ave., Rochester, N. Y. Western Auto Co., 4701 Washington Blvd., St. Louis, Mo. Wilson Automobile Co., 117 Craig St., W., Montreal, Can. Wilson & Co., 142 Bank St., Ottawa, Can.

Pierce Hardware Co., The.—Taunton, Mass. (Waltham.)

Pierce, J. O.—Sec. and Treas. Brooks Boat Mfg. Co., Saginaw, Mich.

Pierce, S. K.—Gardner, Mass. Garage.

Pierce, Wallace L.—Pres. Walworth

Mfg. Co., 128-136 Federal St., Boston, Mass.

Pierce, Walter P.—Sec. Davis Automobile Co., 7 Dorrance St., Providence, R. I.

Pierre, Bremond.—107 E. 6th St., Austin, Tex. (Haynes.)

Pierser & Wood.—3838 Vernon Ave., Chicago, Ill. Mfrs. glass wind shields.

Pierson Boat Construction Co.—Duluth, Minn. Mfrs. motor boats.

Pierson, Jesse D.—Washington and Olive Sts., Chester, Pa. Garage.

Pierson Motor Supply Co.—1175 Bedford Ave., Brooklyn, N. Y. Mfrs. and jobbers, lamps, horns and accessories. Est. 1903. Benj. D. Underhill, Gen. Mgr.; H. H. Whitehouse, Sales Mgr.

Pierson, Roy.—Janesville, Wis. (Maxwell.)

Piggins Bros.—Racine, Wis. Mfrs. gasoline marine motors.

Piggott Ltd., John.—117 Cheapside, London, E. C., England. Mfrs. wearing apparel, coats.

Pig Iron.—See Iron, Pig.

Pignolet, Louis M.—78 Cortlandt St., New York City. Mfr. voltmeters, ammeters and volt-ammeters. Est. 1897.

Pigot, Sayre & Co.—135 William St., New York City. Mfrs. grease, oils, oil-cans.

Pilain, Société des Automobiles.—17 Chemin Grange-rouge, Lyons, France. Mfrs. gasoline automobiles (Pilain).

Pilcher, M. S.—Vice-Pres. Nashville Motor Car Co., cor. Church St. and 9th Ave., Nashville, Tenn.

Pile Bloc Co.—253 Broadway, New York City. Mfrs. storage batteries.

Pillar, Steering.—See Steering-pillar.

Pilling, A. J.—Locust St. and Beach Rd., Winthrop, Mass. (Waltham.)

Pillow.—The anti-friction lining (bush) of a casting which forms the bearing of a shaft.

Pillow-block.—A casting, called also a "plummer-block" (see figure), which carries the "brasses forming

the bearing of a shaft.

Pilot Garage & Supply Co.—185 Commercial St., Worcester, Mass. (Pope-Hartford, Pope-Toledo.) Cap. \$10,000. Incorporators: Fred S. Taylor, Pres.; Frederick W. White, Treas.; N. Earle Taylor, Clerk.

Pilot-lamp.—See Lamp, Pilot.

Pilz, Constantin.—Sec. and Treas. The Buehne Steel Wool Co., 93 Nassau St., New York City.

Pin.—A particle of metal which becomes so firmly lodged in the furrows of a file that it has to be picked out with a pointed steel wire. Such particles thus lodged are said "to pin" the

file. (2) A short cylindrical length of metal used for fastening parts of machinery together. (3) The axis of a sheave. (4) Same as "pane." See Pane (2).

Pin, Belaying.—A movable pin to which the slack of running-gear may be made fast.

Pin, Cotter.—See Cotter.

Pin, Crank.—That portion of the crank shaft on which the "big end" of the connecting-rod works.

Pin, Cross-head.—The pin that connects the cross-head to the connecting-rod in a steam-engine.

Pin, Detent.—A pin for limiting the motion of a part in any direction.

Pin-drill.—See Drill, Pin.

Pin, Gudgeon.—The same as wrist-pin, q. v.

Pin, Joint.—See Joint-pin.

Pin, Piston.—A straight, cylindrical piece of hardened steel which is generally made hollow in order to lighten it, which passes through the piston, and on which the upper end of the connecting-rod turns. See Piston.

Pin, Split.—A length of wire bent round until the flat sides are in contact, and a small loop is formed at the bent end. The split end is passed through a hole in a rod or shaft and the ends separated. The loop and separated ends thus serve to retain some object in place.

Pin-switch.—See Switch, Pin.

Pin, Taper.—The same as cotter, q. v.

Pin, Wrist.—The pin which fastens the piston to the connecting-rod in a gas or gasoline motor; sometimes called a "gudgeon-pin."

Pincers.—A tool for extracting nails.

Pinch-nut.—The same as jam-nut. See Nut-jam.

Pinching.—An accident that often occurs to the inner tube of pneumatic tires at the moment of putting in place the second bead. It is a serious trouble which almost always involves the bursting of the inner tube for a considerable length. There are three kinds of "pinching." (1) The first and most frequent, oc-

Fig. 1.

Fig. 2.

Fig. 3.

curs between the beads of the cover and the rim (Fig. 1). (2) The second is due to the introduction of the inner tube under the head of the safety-bolt (Fig. 2). (3) The third, which is much more rare, consists in a fold that the inner tube forms very near the valve and which is held by the valve itself (Fig. 3). In order to prevent pinching, talc must be freely

used and the inner tube be slightly inflated before putting the second bead in place. After the mounting of the latter, it should be made sure that no pinching has occurred, by pushing the cover back by means of a tire-lever and looking into the interior of the rim in order to ascertain whether the inside tube is visible.

Pindar, W. J.—Middleburgh, N. Y. (Mitchell.)

Pine, Dr. Milton B.—127 S. Lafayette St., South Bend, Ind. Garage.

Pingrey, C. H.—Eddy Bldg., Bloomington, Ill. (Reo.)

Pinion.—A small toothed wheel in a pair or train of gears. The pinion has been defined as the diminutive of "toothed wheel." Its teeth are sometimes called "leaves."

Pinion, Bevel.—See Gear, Bevel.

Pinion, Differential.—One of the smaller wheels of a differential train, whether it be of the bevel or straight type.

Pinion, Spur.—See Gear, Spur.

Pinkas, Benj.—Officer, Croftan Storage Battery Co., 423-25 W. Queen St., Toronto, Canada.

Pinkerton, W. A.—Aberdeen, S. Dak. (Cartercar.)

Pinkus, Frederick B.—103 Franklin St., New York City. Mfr. acetylene generators, lamp lighters.

Pinn, W. T.—Michigan City, Ind. (Waltham)

Pintle.—A pin upon which anything pivots. (2) One of the hooks upon which a rudder turns.

Pioneer Auto Co.—Tucson, Ariz. (Buick.)

Pioneer Auto Co.—Long Beach, Cal. (Rambler.)

Pioneer Auto Co.—901-925 Golden Gate Ave., San Francisco, Cal. (Thomas. Oldsmobile, Winton.) 7st. 1900. Cap. \$50,000. E. P. Brinegar, Pres.; Calvin C. Eibs, Vice-Pres.; J. H. Durst, Sec.; W. J. Cornell. Treas.

Pioneer Auto Livery.—1446 Indiana Ave., Chicago, Ill. Garage.

Pioneer Automobile Co.—520-534 20th St., Oakland, Cal. (Winton, Thomas, Oldsmobile.) Est. 1898. E. P. Brinegar, Pres.; Calvin C. Eib, Vice-Pres.; A. C. Wheelock, Mgr. Branch of the Pioneer Auto Co., of San Francisco. Garage, 250 cars. Repairing.

Pioneer Automobile Co.—Benton Harbor, Mich. (Franklin.)

Pioneer Brass Works.—418-424 S. Pennsylvania St., Indianapolis, Ind. Mfrs. brass, phosphor bronze, manganese bronze, aluminum and copper castings, carburetters, timers, spark plugs. Cap. \$10,000. Est. April, 1874. J. H. Brinkmeyer, Pres., and Hd. Machine Shop; Chas. C. Miller, Vice-Pres. and Hd. Foundry. F. A. W. Davis, Sec.

Pioneer Garage.—420 Fourth St., Eureka, Cal. (Ford, Mitchell.)

Pioneer Motorcycle Co.—290 Grove St., Jersey City, N. J. Mfrs. motorcycles.

Pioneer Woolen Mills.—1120 Beaufait St., Detroit, Mich. Mfrs. automobile robes, miscellaneous wearing apparel.

Pipe, Admission.—See Inlet-pipe.

Pipe, Blow-off.—See Blow-off Pipe.

Pipe, Exhaust.—The pipe which conducts the exhaust gases from the cylinder.

Pipe, Feed.—The pipe which carries the liquid from which the power of the motor is generated.

Pipe, Inlet.—The pipe, called also "intake" and "admission pipe," that leads the mixture from the carburetter to the inlet-valve chamber.

Pipe-nipple.—See Nipple.

Pipe, Stand.—A pipe, usually the continuation of the drain-cock, projecting inside the crank-case in order to maintain a certain height of oil therein. (2) The pipe terminating in the spray-nozzle of a carburetter. See Nozzle, Spraying.

Pipe, Steam.—A pipe that leads steam from the boiler to the cylinder of an engine.

Pipe, Water.—A pipe through which water for cooling the cylinder of a motor circulates.

Pipe-wrench.—See Wrench, Pipe.

Piper, L. W.—310 Main St., Stroudsburg, Pa. (Dragon.)

Piquera, J.—108 quai Jemappes, Paris, France. Mfr. metallic rims

Pirelli e Ca.—21 Ponte Seveso, Milan, Italy. Mfrs. pneumatic tires.

Pishon, J. S.—Treas. Eco Mfg. Co., 53 State St., Boston, Mass.

Piston.—In an internal combustion motor, a tubular casting closed at the upper end, and of a slightly smaller diameter than the cylinder in which it slides. The play between it and the cylinder is taken up by a number (generally 3 or 4)

of piston-rings which fit into grooves in the piston and slide with it. These rings have sufficient spring to cause their periphery to engage perfectly with the walls of the cylinder and thus to make an air-tight joint; otherwise the gas would escape around the piston, with a consequent loss of power. The piston is attached to a connecting-rod by a wrist-pin. The figure illustrates a typical piston, alongside of which are shown the piston-rings and wrist-pin. See Piston, Trunk. (2) In a

steam-engine, a disk of slightly smaller diameter than the bore of the cylinder in which it slides, and firmly attached to the piston-rod, the upper end of which is fixed to a crosshead.

Piston, Disk.—A piston which is short in proportion to its diameter so that a cross-head is necessary to keep it from turning crosswise in the piston. See Piston, Trunk, and Piston.

Piston Displacement.—The volume swept out by the piston. It is equal to the area of the cylinder multiplied by the stroke of the piston.

Piston-lead.—See Lead (2).

Piston-pin.—The same as wrist-pin, q. v.

Piston-ring.—One of several expansible rings fitted to the piston in order to make a gas-tight joint between the cylinder wall and piston, so as to hold both the compression and the high pressure of the "explosion."

Piston-rod.—A cylindrical rod which connects the piston to the crosshead in a steam-engine.

Piston-spring.—A piston-ring, or, in some cases, a steel spring placed in the groove round the piston to press the ring outward against the cylinder.

Piston-stroke.—The length of travel of the piston between the two extreme points of its motion. The stroke of the piston is always equal to double the distance between the axis of the crank-pin and the axis of the motor-shaft. It is necessary to know the stroke of the piston and the bore of the cylinder to determine the cylinder-capacity.

Piston, Trunk.—A large hollow, single-acting piston somewhat shorter than its stroke and, in length, usually about one-third more than its diameter, and having the swinging connecting-rod pivoted within. In internal combustion-motors, the piston is universally of this type. See Piston.

Piston-valve.—See Valve, Piston.

Pit, Inspection.—See Inspection Pit.

Pitch.—The distance between the centers of a number of holes, bolts, rivets, etc. (2) The distance that a screw-thread advances in a single turn, measured along a line parallel to the axis. (3) The distance between the centers of gear-teeth, measured on the "pitch-line." (3) Of a saw, the rake or inclination of the face of a tooth. (4) Of a propeller, the length, measured along the axis of a complete turn. (5) Of a chain, the distance between the centers of two successive pins.

Pitch-chain.—See Chain, Pitch.

Pitch-circle.—The primary object aimed at in the construction of gear-wheels is the uniform transmission of the power, supposing that to be constant and equal. This implies that the one

wheel ought to drive the other as if they simply touched in the plane passing through both their centers. This plane is denoted by the line D C E in the accompanying figure. When such line, called the "line of centers," is divided into two parts proportional to the number of teeth formed upon the circumferences of the pinion and wheel, these two parts are proportional or primitive radii of the pair; and a circle, A B, being de-

scribed from each center passing through the common points, limits what is called a "pitch-line" or "pitch-circle;" that is to say, a circle described from the center and another from the center through the same point, are called, the first, the "pitch-circle" or "pitch-line" of the pinion, and the other of the wheel. If the pitch-circle be divided into as many equal parts as there are teeth to be given to the wheel the length of one of these parts is termed the "pitch of the teeth." One of these arcs comprises a complete tooth and space—space meaning the hollow opening between two contiguous teeth.

By the "pitch-lines" of a pair of gears is therefore to be understood the proportional circles in which they would revolve upon each other were they simply cylinders without teeth; and the pitch of the teeth is the length of arc of the pitch-circles measured from the center of one tooth to the center of the contiguous one. The portion of a tooth within the pitch-circle is called the "root," and the portion outside is called the "point," or "addendum." Any right lines drawn from the center of the wheels till they meet the pitch-circles or lines are termed proportional radii, because they determine the relations of their angular velocities; any similar radial lines continued to the extremities of the teeth are called true radii of the wheel and pinion. In bevel and conical wheels the pitch-circle is the base of the frustrum.

Pitch, Gear-wheel.—To find the pitch of the teeth of gear-wheel, the diameter and number of teeth being given, divide the diameter (in inches) by the number of teeth and multiply the quotient by 3.1416. The product will be the pitch in inches or part of an inch.

Pitch-line.—See Pitch-circle.

Pitch, Mineral.—See Bitumen.

Pitless Turntable Co.—Kansas City, Mo. Mfrs. turntables.

Pitman.—A connecting-rod.

Pitman & Nelson Auto Co.—491 Golden Gate Ave., San Francisco, and 2036 Addison St., Berkeley, Cal. (Page Adrian.) Est. Nov. 5th, 1906. Cap. \$100,000. F. H. Pitman, Pres.; H. P. Nelson, Sec.; W. L. Norris, Mgr. Garage, 40 cars. Repairing.

Pitman, F. H.—Pres. Pitman & Nelson Auto Co., 491 Golden Gate Ave., San Francisco, and 2036 Addison St., Berkeley, Cal.

Pittevil, A.—rue de la Chancellerie, Brussels, Belgium. Mfrs. acetylene lamps.

Pitting.—The erosion of the faces and seats of valves in the form of small hollows or "pock-marks," due to the action of the hot gases in a gasoline-motor. Pitting occurs in places where the metal is of soft texture, and is corrected and removed by grinding the valve on its seat.

Pitts & Wiseley.—Roswell, N. Mex. (Lambert.) Garage.

Pittsburg Auto Co.—2213 Farmers Bank Bldg., Pittsburg, Pa. (Thomas.)

Pittsburgh Automatic Vise & Tool Co.—Wabash Bldg., Pittsburg, Pa. Mfrs. automobile and motorboat vises, wood workers, cabinet makers, plumbers, steam-fitters, machinists and railroad vises. Cap. \$25,000. Est. June 27, 1906. G. P. Blackiston, Pres. and Gen. Mgr.; A. H. Blackiston, Vice-Pres.; T. H. Kehen, Sec. and Treas.

Pittsburgh Automobile Co.—Pittsburgh, Kan. (Pungs-Finch.)

Pittsburg Auto Tire Repair Co.—Baum and Whitfield Sts., Pittsburg, Pa. Vulcanizing and tire repairing.

Pittsburg Brass Mfg. Co.—3153 Penn Ave., Pittsburg, Pa. Mfrs. brass, bronze, aluminum and copper castings, machine work to order.

Pittsburg Gauge & Supply Co.—309 Water St., Pittsburg, Pa. Mfrs. pressure gauges, stampings, safety valves, water alarms and columns.

Pittsburg Machine & Tool Co.—Larcok and Darrah Sts., Allegheny, Pa. Mfrs. steam commercial automobiles.

Pittsburg Machine Co., The.—New Brighton, Pa. Mfrs. hose couplings, automobile motors.

Pittsburg Machine Tool Co.—Allegheny, Pa. Mfrs. steam automobiles.

Pittsburg Motor Vehicle Co.—Pittsburg, Pa. Mfrs. electric commercial automobiles.

Pittsburg Rubber Co.—913 Liberty St., Pittsburg, Pa. (Morgan and Wright tires.)

Pittsburg Seamless Tube Co.—Beaver Falls, Pa. Mfrs. steel tubing.

Pittsburg Valve & Fittings Co.—Pittsburg, Pa. Mfrs. brass pipe fittings.

Pittsburg White Metal Co.—3116-18 Penn Ave., Pittsburg, Pa. Mfrs. babbitt metals.

Pittsfield Auto Garage Co.—228 N St., Pittsfield, Mass. (Rapid, Maxwell.) Supplies, garage and repairing.

Pittsfield Spark Coil Co.—Dalton, Mass. Mfrs. magnetos and ignition dynamos, spark plugs, timers, electric and electric lock switches, wire terminals, spark coils. Michael Casey, Pres.; Chas. A. Byram, Sec.; Wm. P. Wood, Treas. and Mgr.

Pivot.—A pin or short shaft upon which a member turns, rotates or oscillates.

Pivot, Steering.—The jointed end of the front axle of a motor-car. See Axle.

Pixley, O. C.—Des Moines Clay Mfg. Co., Des Moines, Ia. (Jewel.)

Placek, F. A.—Milligan, Neb. (Waltham.)

Plack, Louis, Jr.—Altoona Motor Car Co., 718 Green Ave., Altoona, Pa.

Plagaven et Cie., Ch.—St. Antonin. Tarn et Garonne, France. Mfrs. non-skids.

Plain Bearing.—See Bearing, plain.

Plainfield Motor Car Co.—214 Park Ave., Plainfield, N. J. (Mitchell.)

Planche, E.—Designer Walter Auto Co., 59-61 W. 66th St., New York City.

Planer.—A machine for forming flat surfaces on a metal or object.

Planet-wheel.—The exterior revolving wheel in a planetary-gear.

Planetary Gear.—See Gear, Planetary.

Planimeter.—An instrument which permits of the measurement of the area of any figure by merely drawing a tracing point attached to a system of levers round the perimeter of the figure. It is much employed for finding the areas of indicator-diagrams.

Planishing.—Finishing off bright metal-work by hammering the surface with a smooth hammer.

Plank, A. E.—Quincy, Ill. (Dolson.)

Plank-sheer.—A timber carried around a vessel's hull, covering and fastening the timber-heads; the gunwale.

Plate, Baffle.—See Baffle-plate.

Plate-clutch.—See Clutch, Disk.

Plate, Deck.—See Deck-plate.

Plate-gauge.—See Gauge, Plate.

Plate, Inspection.—See Inspection-plate.

Plate, Iron.—See Iron-plate.

Plate, Screw.—A steel plate provided with threaded holes and employed for cutting threads on a cylindrical piece of metal.

Platform-spring.—See Spring, Platform.

Plating, Nickel.—See Nickel-plating.

Platinoid.—An alloy resembling German silver, q. v.

Platinum.—A metal a little whiter than iron; exceedingly malleable and ductile; and very infusible. It is the heaviest substance known, its specific gravity being 21.5. Platinum is not attacked by air, moisture, or ordinary acids in the slightest degree at any temperature. It is extensively used for chemical vessels, such as stills and crucibles and also for making electric connections through glass. It is also used for making the contact-points of the vibrator of induction-coils, and either alone or alloyed with iridium for the points of spark-plugs.

Platinum, Spongy.—A gray, loosely coherent form of finely divided platinum which readily absorbs certain gases, and is employed in catalytic reactions. It possesses the property of causing the ignition of mixtures of oxygen or air with hydrogen, the gaseous hydrocarbons, carbonic oxide, etc. What is called the "catalytic" ignition of internal combustion motors is based upon such property of spongy platinum. See Catalysis and Ignition.

Platinum Tube.—A tube formerly used for ignition in gasoline motors. It was made of platinum somewhat in the form of a finger, and heated by burners. See Ignition.

Platinum Wire.—See Wire.

Platt, Frederick R.—Editor, The Auto Bulletin, 821 Prudential Bldg., Newark, N. J.

Play.—A limited amount of movement, regular or irregular, allowed on certain parts of a machine, etc. Also room for slight to-and-fro motion. Various devices for "taking up" wear and preventing too much play are used. See Backlash.

Plaza Automobile Co.—918 Union St., Brooklyn, N. Y. (Reo, Premier.)

Plaza Garage.—152 E. 55th St., New York City. Garage.

Pletcher, M. H.—Harrisburg, Pa. (Monarch.)

Plenkarp, I. H.—Chief Engineer Direct Drive Axle Co., 575 N. Fourth St., Columbus, O.

Pliers.—A small pair of pincers for holding, shaping, and cutting wire and small articles.

Plimley Automobile Co.—Victoria, B. C., Canada. (Humber, Rover, Russell, Clement Tolbot.) Est. 1906. Cap. \$100,000. F. Moore, Pres.; T. Plimley, Mgr.; J. H. Gillespie, Sec. and Treas. Garage, 40 cars. Repairing.

Plimley, T.—Mgr. Plimley Automobile Co., Victoria, B. C., Canada.

Ploof, F. H.—Pres. Boston Steam Specialty Co., 170 Congress St., Boston, Mass.

Plow, Henry.—Treas. Hartford Rub-

ber Works Co., 691 Park St., Hartford, Conn.

Plug.—The rotary valve of a cock.
(2) A piece of iron with a male thread for stopping the end of a gas or water pipe. (3) A sparking-plug.

Plug, Connecting.—A piece of metal provided with a handle and employed for joining two parts of an electric circuit.

Plug, Contact.—Same as Cut-off plug.

Plug, Cut-off.—See Cut-off Plug.

Plug, Drain.—A screw plug placed at the bottom of the crank-case of an automobile, and serving to drain it and clean it of all oil or other liquid which it contains.

Plug, Fusible.—See Plug, Safety.

Plug-gauge.—A cylindrical piece of metal accurately turned to a given size and used as a standard in measurement.

Plug Ignition.—See Ignition, Plug.

Plug-key.—A tapered plug for inserting between metal plates and making an electrical connection.

Plug, Magnetic.—See Magnetic Plug.

Plug, Safety.—A plug of fusible metal inserted in the crown-sheet of a boiler, and which melts and allows the steam to escape when the temperature rises above a certain point.

Plug-spanner.—See Spanner, Plug.

Plug, Spark.—See Spark-plug.

Plug, Spark, Magnetic.—See Magnetic Plug.

Plug-switch.—See Switch Plug.

Plumb.—Standing perpendicular, according to a "plumb-line."

Plumbago.—See Graphite.

Plume & Atwood Mfg. Co.—Waterbury, Conn. Mfrs. sheet and rod brass and copper.

Plummer-block.—The same as Pillow-block, q. v.

Plummer, Dr. Jas.—Farmington, Ill. (Jackson.)

Plummer, John Franklin.—N. Y. Mgr. Locomobile Co. of America. B. Brooklyn, New York, Oct. 21, 1872. Ed. Berkeley School, Yale College, 1891. Mem. clubs: University, Ardsley. Res. Irvington-on-Hudson, New York. Office, 2156 Broadway, New York City. In the trade since Jan. 1, 1901. Used first car Jan., 1901.

Plunger.—The piston of a force-pump, or any similar rod that has a plunging motion, such as the "tickler" of a carburetter.

Plunger Pump.—See Pump, Plunger.

Pneu - Héroult.—120 Blvd. Magenta, Paris, France. Mfrs. non-skids.

Pneu Jouvence.—18 rue Traversière, Asnières, France. Mfrs. pneumatic rubber tires.

Pneumatic Comptoir.—50 route de la Révolte, Levallois, Seine, France. Mfrs. pneumatic and solid tires.

Pneumatic-Cuir Samson.—10 rue François-Prémier, Paris, France. Mfrs. leather tires.

Pneumatic Cushion.—See Cushion, Pneumatic.

Pneu L'Electric Co.—1610 Broadway, New York City. Agts. tires for automobiles, wire and carburetters, Esperanto cars. Cap. \$2,000. Est. 2 years. A. J. Myers, Gen. Mgr.

Pneumatic Mfg. Co.—3 South St., New York City. Mfrs. cushions.

Pneumatic Tire.—See Tire.

Pneumatics.—The science dealing with the mechanics of gases.

Pneumatic Tire Protector Co.—14-16 S. St. Clair St., Dayton, O. Mfrs. tire sleeves.

Pneumatic Tire Shield Co.—Cedar Rapids, Ia., Mfrs. tire cases.

Pneumatiques Hutchison.—1 place Louise, Brussels, Belgium. Mfrs. pneumatic tires.

Pocket.—A general term for a recess or cavity in any structure.

Pocket, Air.—See Air-bound.

Pocket Meter Co.—Bluffton, O. Mfrs. ammeters and voltmeters.

Pohle, Oskar.—Dresden, N. Germany. Mfr. bodies.

Pohl und Helbig.—Friedrichstrasse 225, Berlin, Germany. Mfrs. electric lamps.

Poids Lourd, Le.—Pub. at 1 rue Tardieu, Paris, France.

Pointer.—See Index.

Poisat et Cie.—6 rue de la Linierie, Brussels, Belgium. Mfrs. non-skids.

Polack, B.—Waltershausen-im-Thüringen, Germany. Mfr. pneumatic rubber tires, solid tires.

Polarity Indicator.—An electro-chemical instrument used for ascertaining the polarity of an electric current. On connecting the wires of the circuit with the binding-posts of the indicator, and then turning on the switch for an instant, the solution will turn red at one end of the tube. This is the negative pole of the circuit.

Polarization.—A phenomenon produced in the interior of batteries by the passage, to the positive electrode, of disengaged hydrogen, giving rise to an intense counter-current. This phenomenon is prevented from occurring by putting near the positive electrode a depolarizing material which disengages oxygen to form water with the liberated hydrogen.

Poldi, Acieries.—56 ave Parmentier, Paris, France. Mfrs. springs.

Pole Armature.—See Armature.

Pole-finder.—See Pole-paper and Polarity Indicator.

Pole-paper.—For ascertaining the polarity of the terminals of a storage-battery or a light circuit, a piece of litmus-paper may be used. If the paper be moistened and the ends of the wire be placed on the opposite ends of it, a red spot will appear around the end of the negative wire.

Poles, Battery.—Metallic pieces terminating the electrodes of a battery, and to which are fixed the conducting wires. One of these poles is called the "positive," and is always indicated by the sign + or is painted red; and the other is called the "negative," and is indicated by the sign —.

Poles, Magnetic.—In general language, the ends of a magnet or magnetized bar; the parts of the magnet at which the magnetic properties appear to be chiefly concentrated.

Pohhl, John H.—Fitzgerald, Ga. (Pope-Hartford.)

Polkey.—Finsbury Pavement House, London E., England. Mfrs. oil lamps.

Pollard Auto Station.—230 Main St., Nashua, N. H. (Stevens-Duryea, Pope-Hartford, Pope-Waverley, Cadillac.) Est. since 1893. Garage. Repairing.

Polson, W. F.—22 W. Utica St., Buffalo, N. Y. Mfrs. foot rests, robe rails, tire holders, tire tools, valve lifters, glass wind shields.

Poly-Phase Ignition System Co.—52 Broadway, New York City. Mfrs. magnetos and ignition dynamos.

Pomeroy, H. B.—Supt. Dolson Automobile Co., Charlotte, Mich.

Pomeroy, S. G.—West Lebanon, Ind. (Waltham.)

Pomona Garage Co.—Pomona, Cal. (Reo.)

Pon & Whatley.—Columbus, Ga. (Cadillac, Buick.)

Pond Machine & Foundry Co., L. W.—186 Main St., Worcester, Mass. (Premier, Reo, Maxwell, Ford, Pope-Waverley, Mercedes.)

Pontiac Body Co.—Pontiac, Mich. Mfrs. wood and metal bodies.

Pontiac Knitting Co., Pontiac, Mich.—Mfrs. wearing apparel, caps, gloves and gauntlets.

Pontiac Motor Car Co.—Pontiac, Mich. Mfrs. gasoline commercial automobiles.

Pontiac Spring & Wagon Works.—Pontiac, Mich. Mfrs. automobiles, gasoline. (Pontiac, 12 h.p.)

Poole, C. W.—1423 10th Ave., Seattle, Wash. (Cleveland.)

Poole, W. J.—370 12th St., Oakland, Cal. Garage.

Pope, Albert Augustus.—Manufacturer bicycles and automobiles. B. Boston, May 20, 1843. Ed. public schools, Brookline, Mass. Because of family reverses,

left school; was clerk in shoe findings store in Boston at \$4 a week. Captain

in Home Guards, 1861-1862; August, 1862, enlisted 35th Mass. Infantry; served until end of war, becoming lieutenant colonel; brevetted for gallant conduct in battles of Fredericksburg, Knoxville, Poplar Springs Church, and Petersburg. In wholesale shoe findings business,

1865-1876; established 1876, the Pope Mfg Co. to manufacture and sell small patented articles; same year began selling imported bicycles; in 1878 introduced the bicycle manufacturing industry in the United States. Since then a leading manufacturer. Founded "The Wheelman" (now absorbed in "Outing") in the interests of cycling; leader in good roads movement; has large interests in banks and other corporations; member Loyal Legion, Society of the Cincinnati, and other societies, etc.; has served as visitor Wellesley College, and Lawrence Scientific School, Harvard. Res. Cohasset, Mass. Address, Hartford, Conn.

Pope, Albert Linder.—Receiver Pope

Mfg Co. and Pope Motor Car Co. B. Newton, Mass., July 14, 1872. Ed. Phillips Exeter Academy, Exeter, N. H. Director Pope Mfg. Co., Pope Motor Car Co., Federal Mfg Co., Columbia Steel Co. Pres. and mem. Executive Committee National Ass'n

Auto Mfrs. Mem. Hartford, Engineers' Club of Hartford and New York. Res., 135 Oxford St., Hartford, Conn. Office, Pope Mfg. Co., Capitol Ave., Hartford, Conn. In trade since 1895.

Pope Auto Co.—Cedar and Halsey St., Newark, N. J. (Pope-Hartford.)

Pope Automobile Co.—Washington, Pa. Garage.

Pope Automobile Co. of Washington.—817-19 14th St., Washington, D. C. (Pope-Toledo, Pope-Hartford, Pope-Waverley, Locomobile, Autocar). Est. Nov., 1906, taking over the Pope Mfg. Co.'s business. Cap. \$25,000. Chas. M. Campbell, Pres.; C. E. Wood, Vice-Pres.; R. G. Donaldson, Sec.; Geo. W. White, Treas.; C. Royce Hough, Gen. Mgr.; E.

P. Hough, Salesman; Edward Ash, Foreman. Garage. 30 cars. Repairing.

Pope Boat Co., The.—Fond-Du-Lac, Wis. Mfrs. motorboats.

Pope, George.—Treas. Pope Mfg. Co., Pope Motor Car Co. and Columbia Steel

Co. B. Boston, Mass., Jan. 9, 1844. Ed. public school of Brookline, Mass., 3 yrs. high-school. Director Pope Mfg Co., Pope Motor Car Co., Columbia Steel Co., Federal Mfg. Co. Mem. Hartford, Engineers' Club of N. Y., Army & Navy Club of N.

Y. Res., Hartford, Conn. Office, Pope Mfg. Co., Capitol Ave., Hartford, Conn. In the trade since 1897. Used first car (electric) 1897. (gasoline) 1904. Recreations: Bicycling, photography, shooting and fishing.

Pope, Harold L.—Asst. Mgr. Pope Motor Car Co., Toledo, O. B. Newton, Mass., Nov. 5, 1879. Ed. Knapp's School, Plymouth, Mass., Concord Home School, Concord, Mass.; Hale & Noble's School, Boston, Mass.; Peekskill Military Academy, Peekskill, N. Y.; Mass. Institute of Technology, Boston, Mass. Mem. Engineers' Club of N. Y., American Society of M. E. Office, Pope Motor Car Co., Toledo, O. In the trade since June, 1899. Used first car 1899.

Pope Manufacturing Co.—Hartford, Conn. Makers of the Pope-Hartford car; first marketed in 1902. Six models made since. Cap. \$22,500,000. Albert A. Pope, Pres.; Albert L. Pope, Vice-Pres.; Chas. E. Walker, 2nd Vice-Pres.; George Pope, Treas.; Wilbur C. Walker, Sec.

Pope Manufacturing Co.—Hartford, Conn. Mfrs. and jobbers tire cement, horns, hydrometers, jacks, eye shields, automobile body soaps, hand soap, all automobile and bicycle sundries Est. Feb. 27, 1903.

Pope Manufacturing Co.—707 Rector Bldg., Chicago, Ill. Mfrs. motorcycles.

Pope Motor Car Co.—139 S. East St., Indianapolis, Ind. Makers of the Pope-Waverley electric car; first car marketed in 1898. Sixty-seven models made since. Albert A. Pope, Pres.; Albert L. Pope, Vice-Pres.; George Pope, Sec. and Treas.; Herbert H. Rice, Mgr.; Wilbur C. Johnson, Asst. Mgr.; Harold H. Kennedy, Designer; Emil C. Hardegen, Supt.; William H. Brown, Purch. Agt.; Oscar B. Henderson, Sales Mgr.; J. Burgess Brown, Jr., Advt. Mgr.

Pope Motor Car Co.—Casino Terrace,

Newport, R. I. Supplies, garage, and repairing.

Pope Motor Car Co.—Toledo, O. Makers of the Pope-Toledo car; first marketed in 1901. Twenty-four different models made since. Cap. \$2,500,000. Albert A. Pope, Pres.; Albert L. Pope, Vice-Pres. and Asst. Gen. Mgr.; George Pope, Treas.; H. L. Pope, Gen. Mgr.; J. E. Talty, Purch. Agt.; F. C. Gilbert, Sales Mgr.; W. B. Hankins, Advt. Mgr.; D. B. Beckwith, Supt.; H. L. Sheppler, 2d Asst. Supt.

Pope-Toledo Motor Car Co.—425 Delaware St., Kansas City, Mo. (Pope-Toledo, Pope-Hartford, Pope-Waverley.)

Poppenberg Automobile Co.—674-676 Main St., Buffalo, N. Y. (Rambler, Reo, Premier, Reliance.)

Popping.—"Snapping" or "popping" in the carburetter is invariably caused by a lack of gasoline, so that the mixture fed to the motor is not rich enough and burns so slowly that one of the admission-valves may be opened before the charge is completely burned, and part of it is forced back through the pipe leading from the carburetter to the combustion-chamber.

Popping in the carburetter may also be caused by a leaky joint in the piping and connections between the carburetter and the combustion-chamber.

Porcelain.—A white and opaque pottery made by heating, at a high temperature, a mixture of pure clay (kaolin), white sand, and feldspar, the latter acting as a flux and rendering the mass translucent. The material, in the form of tubes, is used for the insulation of the center rod of spark-plugs.

Porrier, A.—Franklin St., Garden City, Long Island, N. Y. (Maxwell.) Garage; repairing.

Port.—An opening by which steam or gas enters or leaves the cylinder of a steam or gasoline motor. (2) The left or "larboard" side of a boat looking from stern to bow.

Port, Air.—A scuttle in the bow of a boat for the admission of air when the ports are down.

Port Huron Engine & Thresher Co.—Port Huron, Mich. Mfrs. malleable iron castings.

Portable Construction Co.—16 S. William St., New York City. Mfrs. portable garages and houses.

Portage Boat & Engine Co.—Portage, Wis. Mfrs. motorboats.

Porter, Joseph D.—Sales Mgr. Wayne Automobile Co., Detroit, Mich.

Porter, F. R.—East Stroudsburg, Pa. (Rambler.)

Porter, Walter R.—Keene, N. H. (Elmore.)

Porthos, Société Generale des Automobiles.—12 rue du Dôme, Billancourt, Seine, France. Mfrs. gasoline automobiles. (Porthos cars.)

Portland Co., The.—Portland, Me. (Knox.)

Portland Garage Co.—51 Cross St., Portland, Me. Mfrs. body irons, brakes. Repairing.

Portsmouth Garage, The.—Fleet St., Portsmouth, N. H. (Stevens-Duryea.)

Posener Verein für Luftschiffahrt.—(Aero Club of Posen.)—Posen, Germany.

Positive.—A term used for motion which is definitely produced by some mechanism as distinguished from motion which occurs through lack of some restraining device. (2) Of polarity, the opposite of negative.

Positive Lock Washer Co.—Newark, N. J. Mfrs. lock nuts and washers, washers.

Post & Lester Co.—Sargeant St., Hartford, Conn. Est. 1893. Supply house and jobbers, handling all kinds automobile supplies, specialties, horns, lamps, goggles, clocks, etc. D. J. Post, Pres.; C. H. Veeder, Vice-Pres.; H. W. Lester, Treas.; C. B. Lamb, Sec. Branch, 821 Boylston St., Boston, Mass.

Post, Amos.—Catskill, N. Y. (Franklin.)

Post, Aubries.—Pres. Welch Motor Car Co., Pontiac, Mich.

Post, David Judson.—Pres. Post & Lester Co., Treas. Veeder Mfg. Co. B. Vienna, Warren Co., N. J. Jan. 28, 1861. Ed. public school Vienna, Blair Academy, Blairstown, N. J. Director Post & Lester Co., Veeder Mfg. Co. Mem. clubs: Hartford, Country, Hartford A. C., Hartford Yacht. Res., 23 Washington St.; address, Cor. Garden and Sargeant Sts., Hartford, Conn. Used first car 1901, motor-boat 1900.

Post, E. L.—Cold Spring, N. Y. (Walham.)

Postal Auto & Engine Co.—Bedford, Ind. Mfrs. gasoline automobiles.

Postma, J. Titus.—177 Bvd. Peréire, Paris, France. Mfr. electric horns.

Potash Bichromate.—A red crystalline solid used in solution as a depolarizer in the "bichromate cell."

Potassium Cyanide.—A white crystalline solid, very poisonous, sometimes used for the tempering of metals.

Potassium Ferrocyanide.—A salt of potassium having the chemical formula $K_4Fe(CN)_6$, and commonly called "yellow prussiate of potash." It is sometimes used in the case-hardening of iron. The iron of which the surface is to be hardened is heated to a dull red and the salt either sprinkled upon it or rubbed on it

in the lump, or the iron rolled in the powdered salt, and then returned to the fire for a few minutes, and finally immersed in water. By this means a sufficient coating of steel may be given to parts not exposed to wear.

Potchernick.—E. Houston St., San Antonio, Tex. (Maxwell.)

Potential, Difference of.—See Force, Electromotive.

Potential, Electrical.—The work which must be done (against electrical forces) on a unit positive charge, in order to bring it up to a given point from an infinite distance, is termed the electrical potential at that point. The potential V , due to a charge Q , at a distance r

from the charge is $V = -\frac{Q}{r}$

Potential Energy.—See Energy, Kinetic.

Potential, Magnetic.—The work which must be done (against magnetic forces) in order to bring a unit positive pole up to a given point from an infinite distance is termed the magnetic potential at that point.

Pottron, Em.—29 rue Riquet, Paris, France. Mfr. springs.

Potstone.—The same as talc., q. v.

Pottelet et Preudhomme.—33 rue Jules Van Praet, Brussels, Belgium. Mfrs. motorcycles.

Potter & Johnston Machine Co.—Pawtucket, R. I. Mfrs. special automobile machinery, vises.

Potter, H. R.—Treas. Crescent Auto & Machine Co., Cor. E. 2nd and Marr Sts., Fond du Lac, Wis.

Potter Mfg. Co.—New Brunswick, N. J. Mfrs. gasoline marine motors.

Potter, S. E.—Bet. Elm and Walnut Sts., Pierce City, Mo. (Ford.) Est. 1904. Garage, 12 cars. Repairing.

Potter & Sons, W. N.—Newfield, Mass. (Atlas.)

Potts, H. L.—Sec. Chadwick Engineering Works, 3207 Spring Garden St., Philadelphia, Pa.

Pot-valve.—The same as pop-valve. See Valve-pop.

Pound, Avoirdupois.—The English unit of weight. It is equal to 453.59 grammes, and contains 7,000 grains.

Pound-degree.—The unit of heat commonly used by English engineers. It is the amount of heat necessary to raise one pound of water 1° F.

Pound, Foot.—The English unit of work; the amount of work required to be expended in order to raise one pound through a vertical height of one foot.

Pound, Inch.—A unit of work; the work done when one pound is raised one inch.

Poundal.—The unit of force in the English system. It is the force which, if it act on a mass of one pound, will produce therein an acceleration of one foot per second per second.

Powell & Young.—52 W. 43rd St., New York City. Mfrs. clutches.

Powell Automobile Co.—Omaha, Neb. (Baker, Cadillac, Franklin, White.)

Powell Co., The William.—2525-31 Spring Grove Ave., Cincinnati, O. Mfrs. brass pipe fittings, grease cups, lubricators, throttle valves.

Powell, Fred M.—Vice-Pres. and Mgr. MacFarland Powell Co., Denver, Colo.

Powell Muffler & Timer Co.—42 La Fayette St., Utica, N. Y. Mfrs. mufflers, muffler cutout valves, timers.

Powell's Cove Boat & Engine Co.—College Point, L. I. Mfrs. motorboats.

Powell's Garage.—1404 Ridge Ave., Philadelphia, Pa. (Frayer-Miller.)

Powelson, W. V. N.—Gen. Mgr. Union Light & Power Co., 3920 Morgan St., St. Louis, Mo.

Power.—505 Pearl St., New York City. Pub. monthly by the Hill Pub. Co.

Power.—The amount of work done in a unit of time. The less the time required to do a given amount of work the greater the power. In popular language, "power," "force" and "work" are not clearly distinguished, and force is often confused with power or work. See Force and Work.

Power-boat.—See Boat. Power.

Power Boating.—Browning Bldg., Cleveland, O. Pub. monthly, by the Penton Pub. Co.

Power, Candle.—See Candle-power.

Power, Horse.—A unit of work based upon the strength of a horse, which is supposed to draw a load at the rate of three miles an hour (that is to say, at the rate of 264 feet a minute), and to exert a force or pressure against the collar, in a forward direction, of 125 pounds. $264 \times 125 = 33,000$, so that a "horse-power" is work done at the rate of 33,000 foot-pounds per minute, or 550 foot-pounds per second, or 746 watts (volts \times amps.)

Power, Horse, Actual.—The amount of horse-power actually applied at a given point, as to the driving-wheel of a motor-car.

Power, Horse, Brake.—The power developed by an engine or motor, and which is absorbed by a brake dynamometer; distinguished from the indicated horse-power (q. v.) as being the amount of power which an engine can put out for useful work. See Dynamometer.

Power, Horse, Calculated.—The horse-power of a motor as figured from its dimensions and specified conditions of operation.

Power, Horse, Delivered.—The actual amount of power that an engine delivers for work.

Power, Horse, Effective.—See Power, Horse, of Motors.

Power, Horse, Electric.—The rate at which electric energy is supplied or developed. It is proportional to the strength of the current and also to the e. m. f. The unit in which electrical power is measured is the work done in one second by a current of one ampere supplied at a potential difference of 1 volt, and is termed a "watt." One watt=10⁷ ergs per second, and 746 watts=1 horse-power.

Power, Horse, French (Cheval-vapeur).—The "Cheval-vapeur" is the unit of power still employed in France in concurrence with the "poncelet" (981W). It corresponds to a work of 75 kilogram meters effected during one second, and is equivalent to 0.9863 English h.p.; or 1 English h.p.=1.0139 French h.p. One French h.p. also equals 736 watts.

Power, Horse, German (Pferde-Stärke).—One German horse-power (P. S.) equals 735 watts or 0.986 English horse-power, and 1 English h.p.=1.12 German P.S. (approximately).

Power, Horse, Hour.—One horse-power developed for an hour.

Power, Horse, Indicated.—The actual work performed by the steam or gas in the cylinder, as calculated from the indicator-diagram. The difference between the i.h.p. and the b.h.p. gives the engine efficiency.

Power, Horse, Motor.—The power of a motor is the work which it effects per second, and is expressed by foot-pounds per second, or, practically, by "horse-power" (550 foot-pounds per second). The "indicated" power of a motor is that resulting from the work of the gas or steam in the cylinder. The "effective" power is that which is received upon the shaft. The first is measured by means of diagrams taken with an indicator for slow motors or with a manograph for fast ones, and the second by means of a dynamometer, or dynamometric brake (such as the Prony brake, Renard moulinet, etc.). The ratio of the effective power to the indicated power gives the mechanical or organic efficiency of the motor.

To estimate the power of an automobile motor accurately is unfortunately a very delicate matter. Witz, in his standard treatise on gas and gasoline motors, gives the following general formula based upon the mean pressure of the "explosive" mixture:

$$P = Kp \frac{\pi D^2 L \omega}{4 \times 60 \times 75}$$

where P is the maximum power, ex-

pressed in horse-power for each cylinder; K, the organic efficiency of the motor (which it is not prudent to estimate above 0.75; p, the mean pressure; D L, the cylinder-bore and piston-stroke in millimetres; and ω , the angular velocity of the motor in revolutions per minute.

But the determination of the mean pressure, p, is very difficult, and yet indispensable for the application of the above formula to a given motor, since the amount of such pressure varies greatly according to the motor, and sometimes even in the same motor. The figures noted at the laboratory of the Technical Committee of the Automobile Club of France and those collected by M. Lumet leave no doubt in regard to this. The difficulties of such determination render the current use of the formula impossible.

As a substitute for it, different authors have proposed simpler formulas, which M. L. Perisse has recalled in the Official Bulletin of the Technical Committee of the A. C. F. This committee, in order to fix the regulation of the tests of endurance, having needed a convenient formula for giving the power of a motor according to its dimensions, finally decided upon the following:

$$P = 0.0028 D^4,$$

where P represents the maximum power that the motor is capable of developing, expressed in h.p., and D the bore in millimetres in a four-cylinder motor. Such power must, therefore be divided by 4.2 or 4.3 if the motor has but 1, 2 or 3 cylinders. It is, moreover, applicable only to motors of less than 50 h.p.

M. R. Arnoux, Vice-President of the Technical Committee, who, as long ago as 1903, criticized the square of the bore formula, at that time proposed by M. E. Mors for the classification of automobiles, recommends that of the cube of the bore. It is his opinion that, if the power of motors (mean pressure and piston displacement being equal) is proportioned to the volume generated by the piston, to use a square of the bore formula is to commit the same error as to measure the volume of a capacity in square metres, and that the formula, in order to be rational, should be of the form:

$$P = KD^3$$

By calculating the co-efficient, K, according to the data and experimental measurements furnished by 33 four-cylinder motors, of which the effective horse-powers are comprised between 14 and 135, and by taking the square root of the mean of the squares of these 33 values of K, M. Arnoux has reached the formula:

$$P = 0.0000025 D^3,$$

which he considers applicable to all the

motors now constructed, including those of the most powerful racing-cars.

British Formula.—The formula for calculating the horse-power given by one cylinder, and in which the power shown must, for a multi-cylinder motor be multiplied by the number of cylinders, is

$$H. P. = \frac{PLAN}{33,000}$$

in which P is the mean effective pressure of 90 pounds per square inch, L the stroke of the motor in feet, A the area of the piston, and N the revolutions per minute.

German Formula.—A memorial, subscribed by a large number of motor-car builders and addressed to the Imperial Treasury Department of the German Government, acknowledges their unanimity on the point of accepting the following formula for determining the horse-power of motor-cars, viz:

$$N = 0.3 ID^2S,$$

in which N signifies the horse-power to be ascertained, D the bore of the cylinder, I the number of cylinders, and S the stroke. The formula is based on an allowance of 3.8 kgs. to the sq. cm. (54 lbs. per sq. in.) as the mean pressure of the piston and 900 revolutions per minute, and has been pronounced satisfactory by the Technical Department of the Imperial Treasury. The Automobile Association of Central Europe has agreed also to accept this formula, which, according to the Imperial Treasury, will be recognized by the administrators of taxes in the Federal States until the respective supplementary clause has been added to the provisions of the Imperial Stamp Law. The proposed formula is applicable, however, only to gauging the horse-power of motor-cars fed with gasoline or alcohol, in which connection it is left with the builder of or dealer in such cars to supply the buyer with an authenticated certificate from the factory, showing the horse-power of each car, arrived at by means of the formula in question.

American Formula.—The horse-power formula adopted by the Mechanical Branch of the Association of Licensed Automobile Manufacturers, May 9, 1907, is:

$$H. P. = \frac{D^2 \times N}{2.5}$$

in which D is the bore of the cylinder in inches, and N the number of cylinders.

The following table gives the horse-power developed by 2, 4 and 6-cylinder motors of different bores, calculated according to the last-named formula:

BORE		HORSE POWER			
Ins.	Mill.	1 Cyl.	2 Cyl.	4 Cyl.	6 Cyl.
2 1-2	64	2 1-2	5	10	15
2 5-8	68	2 3-4	5 1-2	11	16 1-2
2 3-4	70	3	6	12 1-10	18 1-5
2 7-8	73	3 5-16	6 5-8	13 1-4	19 7-8
3	76	3 3-5	7 1-5	14 2-5	21 3-5

6	152	14 2-5	28 4-5	57 3-5	86 2-5

Power, Horse, Motor-boat.—See Boat, Racing.

Power, Horse, Nominal.—Horse-power calculated approximately, without taking into account all factors, such as fractional losses, etc. A term used by Boulton and Watt, but not applicable to modern engines.

Power, Live.—See Force. Live.

Power-plant.—In a motor-vehicle the motor and transmission.

Power-transmission.—The mechanism used in motor-cars for transmitting power are: (1) The differential gear, which transmits the power from the speed-change gear to the rear axle or wheels; (2), the friction-clutch, which forms the connecting and disconnecting medium between the motor and speed-change gear; and (3), the speed-change gear, which transmits the power of the motor to the differential at varying speeds, wholly independent of the motor-speed.

Power Co., J. J.—653 E. Main St., Madison, Wis. Mfrs. carburetters.

Powers, A. H.—San Francisco, Cal. (Waltham.)

Powers, Harry J.—Vice-Pres. Chicago A. C. and Chairman Good Roads Com. Prop. Powers' Theatre. Director Illinois Theatre, Auditorium Theatre, Colonial Theatre. Mem. clubs: Chicago Athletic, Chicago A. C., South Shore Country. Res., 4843 Grand Blvd., Chicago, Ill. Office, Powers' Theatre, Chicago, Ill.

Power Vehicle Service Co.—North and Madison Aves., Baltimore, Md. (Welch.)

Power Wagon, The.—American Bldg., Cleveland, O. Pub. monthly.

Powhattan Brass & Iron Works.—Charleston, W. Va. Mfrs. brass pipe fittings.

Powow Foundry.—Amesbury, Mass.

Mfrs. brass, bronze, aluminum and copper castings.

Poyer, D. F.—518 Main St., Menominee, Mich. (Buick, Cadillac.)

Practical Engineer.—Pub. in London, England.

Prade, Georges, Edouard.—80 Boulevard Flandrin, Paris, France. Born at Paris, Oct. 14, 1875. Editor-in-Chief of Les Sports. Licentiate of Letters.

Prasch, P. S.—Buck St., Paulsboro, N. J. (Waltham.)

Pratique Automobile Vulgarisée, La.—Pub. at 101 Ave. Henri-Martin, Paris, France.

Pratt & Lambert.—79 Tonawanda St., Buffalo, N. Y. Mfrs. varnish.

Pratt & Whitney Co., The.—Hartford, Conn. Mfrs. special automobile machinery.

Pratt, A. J.—Coldwater, Mich. (Buick.)

Pratt, C. B.—105 Grand St., East Weymouth, Mass. Garage.

Pratt, F. Alcott.—Treas. Concord Motor Car Co., 64 Huntington Ave., Boston, Mass.

Pratt, Geo. B.—Elkhart, Ind. (Locomotive.)

Pratt, James B.—Sec. and Treas. John S. Leng's Son & Co., 33 Murray St., New York City.

Pre-admission.—The admission of fresh steam to a cylinder shortly before the end of the stroke.

Precision Appliance Co.—832 Austin Ave., Chicago, Ill. Mfrs. carbureters, lubricators, oil cups, oil pumps, circulating pumps, timers, universal joints.

Premier Cycle Co.—Nüruberg, Germany. Mfrs. motorcycles.

Premier Motor Mfg. Co.—Georgia and Shelby Sts., Indianapolis, Ind. Makers of the Premier car; first marketed in 1903. Cap. \$150,000. Harold O. Smith, Pres.; Jno. R. Love, Sec.; G. A. Wiedely, Treas. and Supt.; H. B. Hewitt, Purch. Agt.; R. I. Eads, Sales Mgr.

Prentiss Motor Car & Supply Co.—15 Berkeley St., Boston, Mass. (Studebaker.)

Prentiss Tool & Supply Co.—115 Liberty St., New York City. Mfrs. special automobile machinery.

Prescott, B. M., Jr.—Main St., Franklin Falls, N. H. Garage.

Prescott, J. A.—Pres. and Mgr. Lak-

del Automobile Co., 5143 Delmar Bldg., St. Louis, Mo.

Press, John E.—131-133 N. Boulevard, Oak Park, Ill. Garage.

Pressed Steel.—See Steel, Pressed.

Pressed Steel Mfg. Co.—454 The Bourse, Philadelphia, Pa. Mfrs. steel balls, ball bearings.

Pressed Steel Tank Co.—Milwaukee, Wis. Mfrs. steel boiler shells, tanks.

Pressure.—See Electromotive Force.

Pressure, Back.—See Back-pressure.

Pressure, Electric.—See Electric Pressure.

Pressure-feed Lubricator.—See Lubricator.

Pressure-gauge.—See Gauge, Pressure.

Pressure, High.—See High Pressure.

Pressure, Initial.—The pressure at which steam first enters a steam-engine cylinder, or the pressure of the gas in a gasoline-motor cylinder at the instant after the explosion has occurred.

Pressure, Low.—A term applied especially to a steam-engine in which a vacuum is created on the exhaust side of the piston by the action of the condenser.

Pressure, Mean.—The average pressure in a cylinder during the stroke.

Pressure-regulator.—A device for regulating pressure, such as a valve which reduces a high to a definite low pressure.

Pressure, Terminal.—In a steam-engine, the pressure in the cylinder at the end of a piston-stroke. See Pressure, Initial.

Pressure-valve.—See Valve, Pressure.

Prested Miners' Gas Indicating Electric Lamp Co., Ltd.—Elthorne Rd., Holloway, London N., England. Mfrs. electric lamps, spark plugs, coils, storage batteries.

Presto Detachable Rim.—Lincoln Trust Bldg., room 403, Jersey City, N. J. Mfrs. detachable rims.

Preston Auto Co.—Waitsburg, Wash. (Oldsmobile.)

Prest-O-Ite Co.—20 S. East St., Indianapolis, Ind. Mfrs. Prest-O-Lite, gas tanks and tire inflating tanks. Mem. M. & A. M. Est. 1903. Carl G. Fisher, Pres.; Frank E. Sweet, Vice-Pres.; James A. Allison, Sec. and Treas.

Prestowerke, Gunther und Co.—Zwickaustrasse, Chemnitz, Germany. Mfrs. motorcycles. (Presto.)

Prestwich, John A.—1 Landsdowne Rd., Tottenham, London N., England. Mfrs. motorcycles, tricar. (J. A. P.) Motorcycle motors.

Price Bros.—Huron St., Cleveland, O. (Baker.)

Price, C. W.—Greenfield, O. (Cadillac.)

Price, J. W.—Sec., Treas. and Direc-

tor Neer Air Cooled Engine Co., Plain City, O.

Price, Lawrence.—Pres. The Hildreth Mfg. Co., Lansing, Mich.

Price, P. M.—Johnstown, Pa. (Stearns.)

Prichard, Percy.—Utica, N. Y. (Maxwell.)

Prichard, R. S.—39-41 Gallia Ave., Portsmouth, O. (Winton, Buick, Pope-Waverley.) Est. 189. Garage, 30 cars; repairing.

Priebe Carriage Co., C.—205 S. 4th St., St. Joseph, Mo. (National.)

Primary Battery.—See Battery, Primary.

Primary Cell.—See Cell, Primary.

Primary Generators.—Generators of currents of electricity may be either chemical or mechanical. The former produce a current at the expense of a metal (generally zinc), while mechanical ones produce a current at the expense of the power that drives it. See Cell, Primary and Secondary, and Dynamo and Magneto.

Prime.—To pour a liquid into a pump, carburetter, etc., in order to induce suction.

Priming.—The entrainment of water along with the steam into the cylinder of a steam-engine.

Priming-cup.—A small cup for ejecting a small quantity of kerosene into the cylinder of a gas-motor to facilitate starting.

Priming-valve.—A valve fitted to the cylinder of a steam-engine to afford a vent for water entrained by priming.

Prince, C. E.—Sec. and Treas. The M. Seward & Son Co., New Haven, Conn.

Princeton Garage Co.—Nassau St., Princeton, N. J. (Maxwell.)

Prindle, B. A.—Barre, Vt. (Elmore.)

Prigent, Jules-Marie.—Tours, France. Mfr. jacks.

Prinz & Schneider.—Springville, N. Y. Repairing.

Printz, D. T.—Pres. Reading Standard Co., Water St., Reading, Pa.

Phitchard, R. S.—Portsmouth, O. (Winton.)

Prichett, H. E.—Jacksonville, Fla. (Franklin.)

Privett & Arbuckle.—Greenburg, Ind. Garage.

Probey Carriage Works.—32d and M Sts., Washington, D. C. Repairing.

Procasky, Chas.—411 Main St., Belleville, Ill. (Dorris, Rambler.)

Proctor, E. O.—W. Main St., Ayer, Mass. (Jackson, Logan.)

Proctor-Raymond Mfg. Co.—Detroit, Mich. Mfrs. bells.

Proctor Supply Co., G. H.—31 Stanhope St., Boston, Mass. (Stanley.)

Producer.—A form of furnace for making producer-gas.

Producer-gas.—See Gas-producer.

Professional Chauffeurs' Club of America.—1775 Broadway, New York City.

Progress Cycle Co., Ltd.—Bishopsgate Green, Coventry, England. Mfrs. motorcycles. (Progress.)

Progress Motoren und Apparatenbau Gesellschaft.—39 Wilmersdorferstrasse, Charlottenberg, Germany. Mfrs. motorcycles. (Progress.)

Progressive Mfg. Co.—41 Norwood St., Torrington, Conn. Mfrs. spark plugs. Cap. \$100,000. Est. 1893. J. F. Alvord, Pres.; G. E. Hamman, Sec. and Treas.

Progressive Mfg. Co.—12 S. Poplar St., Pana, Ill. Mfrs. heaters. Est. 1898. E. M. Hybarger, Prop. and Mgr.

Projector, Searchlight.—See Searchlight.

Prony Brake.—See Dynamometer.

Propeller.—Often termed a "screw," or "screw propeller." It consists of a hub or boss mounted on the screw shaft, and to which are screwed two or more blades. The propeller is usually made of manganese bronze.

Propeller-pump.—See Pump, Propeller.

Propeller, Reversible.—A screw propeller, the pitch of which can, by a special arrangement, be rapidly modified not only in its length, but in its direction. Such a screw gives a boat variable forward speeds, and a stoppage and variable reverse speeds.

Propeller-shaft.—The steel shaft which communicates the motions of the motor to the propeller or screw of a boat. The longitudinal force of the shaft is balanced by a "thrust-block." (2) In a shaft-driven motor-car, a universally jointed shaft connecting the motor and the driving-bevel.

Prospect Garage.—3-5 Prospect Park W., Brooklyn, N. Y. Garage.

Prospect Motor Mfg. Co.—7-9 Park Pl., Brooklyn, N. Y. Mfrs. motorcycles.

Prospect Park South Garage.—Coney Island and Church Aves., Brooklyn, N. Y. (Crawford.)

Prosser & Son, Thos.—15 Gold St., New York City; 185 Summer St., Boston, Mass.; Old Colony Bldg., Chicago, Ill. Mfrs. Krupp steel and chrome-nickel steel products.

Prout & Sons, A. H.—Sandusky, O. (Frayer-Miller.)

Prouty, Geo. H.—Barre, Vt. Garage.

Providence Auto Garage.—Broad St., and Potter Ave., Providence, R. I. Garage.

Providence Brass Foundry & Machine Co.—Providence, R. I. Mfrs. brass, aluminum and copper castings, bronze metals.

Providence Motor Car Co.—48 Custom House St., Providence, R. I. Garage.

Providence Steel Castings Co.—164 Allens Ave., Providence, R. I. Mfrs. steel castings.

Provines, Harris G.—Seneca, Mo. (Waltham.)

Prudden & Co., W. K.—Lansing, Mich. Mfrs. wire and wood wheels.

Prunel Frères, Dumas et Cie.—10 Rue de Paris, Puteaux, France. Mfrs. gasoline commercial automobiles, gasoline automobiles. (Prunel.)

Puddling.—The process of converting brittle pig iron into malleable iron by decarbonizing the former and removing the silicon, phosphorus, sulphur, etc., by atmospheric oxidation.

Pueblo Automobile Co.—Cor. Court and 4th Sts., Pueblo, Colo. (Pope-Waverley, Dragon, Ford.)

Pueblo Electric Co.—117 W. 4th St., Pueblo, Colo. (Frayer-Miller, Cameron.)

Pueblo Novelty Works.—310 N. Main St., Pueblo, Colo. (Rambler.)

Puget Sound Auto Co.—1405-7 Broadway, Seattle, Wash. (National, Rambler, Commerce trucks.) Est. 1905. Cap. \$50,000. Fred T. Evans, Pres.; T. F. Ryan, Vice-Pres.; A. U. Heinzerling, Sec., Treas. and Gen. Mgr. Garage, 20 cars; repairing.

Pugh Bros.—15 Snow St., Providence, R. I. (Corbin, Elmore)

Pulicu, A. J.—Supt. Detroit Steel Products Co., 91 E. Fort St., Detroit, Mich.

Pullen & Co., F. A.—7 St. Martin's Lane, Cannon St., London, England. Mfrs. circulating pumps.

Pulley.—A hoisting device consisting of a small hardwood or metal wheel called a "sheave" with a groove called a "gorge" on its periphery in which runs a cord, rope or chain, and turning on a "pin" or "pin-tle" between two "cheeks" of wood or metal forming a "shell" or "block." A combination of two or more blocks, one of which is attached to the load to be raised, is called a "tackle" The rope passed

through the "swallow" or "channel" (or space between the pulley and through the block), is said to be "roven," and that part of it to which the power is applied is termed the "fall." A pulley hoist is necessary for the proper handling of power-boats, machinery and all

heavy weights. It enables one person to handle an object that would ordinarily require many. (2) A general term for a small wheel. (3) A wheel on a shaft driven by a belt, or the like. Sometimes called a "belt-pulley."

Pulley, Cone.—See Pulley, Stepped.

Pulley, Expanding.—A form of pulley devised by M. Foullaron for progressively varying the speed of a motor-vehicle, and the arrangement of which is shown in the accompanying figure. These pulleys are connected by a leather belt of special construction and are formed of two conical wheels, A and B, the spokes of which fit into each other like the interlocking fingers of two hands, thereby forming a pulley of tri-

angular section. One of the halves, A, is movable. By sliding it back and forth the diameter of the pulley may be varied at will. The same lever shifts both pulleys, increasing the size of one and decreasing that of the other, thus maintaining the belt-length constant. In this way the speed of the car may be easily varied without the friction-loss of ordinary gearing. Instead of the three or four speeds which are obtained in the usual transmission, the speed may be varied gradually and without shock within the speed limits.

Pulley, Fast.—A pulley keyed to a shaft and always rotating with it, as distinguished from a "loose" or "idle pulley," which revolves freely on the shaft. Fast and loose pulleys are used side by side, so that a belt can be shifted from one to the other to stop or start a machine.

Pulley, Jockey.

—A small pulley for exerting a pressure against the idle or slack side of a belt or chain in order to keep it taut.

Pulley, Loose.—See "fast pulley."

Pulley, Speed.—See Pulley, Stepped.

Pulley, Stepped.—A pulley in the form of a stepped cone, so that the velocity can be varied by shifting a belt from a larger to a smaller circumference. "Stepped pulleys," called also "cone pulleys," and "speed pulleys," are not much used on automobiles on account of the liability of the belts to slide and the space they require. Among the rare cases in which stepped pulley shafts

have been employed for the transmission and change of speed in a motor-car may be mentioned the Darracq-Bollée car, which is widely used in France. In this case, the belt is shifted on oppositely tapered pulley cones by means of an ordinary shifter, and by this means five speeds forward can readily be obtained, without the jar and friction experienced with some other types of speed-gear.

Pullman Auto Agency.—7 Motor Mart, Park Sq., Boston, Mass. (Pennsylvania, Pullman, Northern.) N. L. Rush, Mgr. Repairing.

Pullman, C. R.—Little Rock, Ark. (Logan.)

Pullman Motor & Vehicle Co.—Fisher Bldg., Chicago, Ill. (Model.)

Pullman Motor Car Co.—W. S. Duvall, Pres., Loan & Trust Bldg., Washington, D. C. (Pullman Flyer.)

Pullman Motor Car Co.—Portland, Oreg. (Jackson.)

Pullman Motor Car Co.—1140 S. Main St., Los Angeles, Cal. (Pullman Flyer.)

Pullman Motor Car Co.—131-33 La Salle St., Chicago, Ill. Mfrs. gasoline automobiles. (Pullman Flyer.)

Pullman, Ltd., R. & J.—Westbrook Mills, Godalming, Surrey, England. Mfrs. non-skids, leather tires.

Pullwin Wheel Co., The.—37 Colony St., Meriden, Conn. Mfrs. wood wheels.

Pumice Stone.—Volcanic scoria, spongy or cellular from bubbles of steam or gas which it contained during the liquid state. Powdered pumice is used for rubbing down varnished surfaces in order to obtain a perfectly smooth ground for subsequent coats of varnish, and as an abrasive for grinding valves, etc.

Pump.—An apparatus for raising, circulating, exhausting or compressing a fluid. The pumps used in automobilism are usually one of four varieties: Centrifugal, gear, plunger or vane.

Pump, Air.—A small pump driven from the cam-shaft to create pressure whereby oil is raised from the main oil tank to the mechanical lubricator, and gasoline

from the main gasoline tank to the auxiliary tank.

Pump, Bilge.—A pump for drawing off bilge-water.

Pump, Centrifugal.—The centrifugal pumps employed in automobilism effect the circulation of the water in the conduit by communicating to it in the interior of the pump, a velocity converted into pressure in the collecting volute. The moving portion consists of a number of curved blades

mounted on an axle by which they are set in rapid rotation. This part is contained in a circular casing provided with inlets at the center and a wide outlet at the circumference running in a tangential direction. The water fills the casing and is set in rotation by the blades. Centrifugal force drives it outward, and it flows through the discharge-pipe in a steady stream, while fresh water is continually drawn in through the inlet-pipe.

Pump, Eccentric.—A pump composed of a circular casing or drum having a

smaller drum within journaled out of the center of the casing, one side of which it nearly touches. Within the smaller drum there are four vanes or paddles which spring out and make contact

with the sides of the casing as the drum revolves. Water entering the side of the casing most remote from the drum fills the opening between the paddles, and as the drum revolves, is forced into the smaller space containing the outlet.

Pump, Feed.—A pump for feeding water or oil; especially the pump that supplies water to a steam boiler.

Pump, Force.—The same as Plunger Pump.

Pump, Gear.—The same as Rotary Pump, q. v.

Pump-governor.—See Governor, Pump.

Pump, Grease.—An injector for forcing grease into a bearing.

Pump, Lever.—A pump, single or compound, worked by a hand-lever, and used for inflating tires.

Pump, Plunger.—A reciprocating pump provided with a solid cylindrical plunger having a reciprocating piston or plunger working with a cylinder.

Pump, Propeller.—A type of pump in which the vanes are so arranged that

they not only throw the water out by centrifugal action, but act also as a kind of screw, in the same manner as a propeller screw, and drive the water from the inlet to the outlet pipe.

Pump, Rotary.—A pump, usually called a "gear-pump," which consists of two

rotating members gearing with each other after the manner of two pinions. These revolve in a casing which exactly fits their contours, so as to af-

ford no space for the passage of water around them. When the pump is rotated at high speed, the water is forcibly discharged by centrifugal action.

Pump, Steam.—A type of pump used on steam-cars for feeding water to the boiler and for maintaining a constant pressure of air in the gasoline tank of such cars

Pump, Suction.—See Pump, Piston.

Pump, Tire.—A pump for inflating pneumatic tires. The figure represents a very simple form of air-pump provided with a force-valve. In the pump chamber, A, moves a piston, B, having a certain amount of play. A leather ring, C, performs the functions of piston-packing and suction valve. At D is a check-valve to prevent a return of the expelled air.

Pump, Vane.—The same as eccentric-pump. See Pump, Eccentric.

Punch.—A steel tool used for forming holes in thin metal, and having a strong and well-tempered point. Apart from this, it is used for a variety of purposes, among others, for marking pieces to be dismounted. In this case it is called a "prick-punch."

Punch, Center.—A small type of punch for marking centers.

Punctureproof Tire Co.—Guardian Bldg., 322 Euclid Ave., Cleveland, O. Mfrs. cushion tires for commercial wagons and pleasure cars. Cap. \$100,000. Est. Sept. 1, 1906. Chas. O. Evants, Pres.; Chas. P. Salen, Vice-Pres.; Frank F. Gentach, Sec. Treas. and Gen. Mgr. Chicago Branch, 1461 Michigan Ave.

Pungs-Finch Auto & Gas Engine Co.—1524 Jefferson Ave., Detroit, Mich. Makers of the Pungs-Finch car; first marketed in 1902. Six models made since. Cap. \$150,000. W. A. Pungs, Pres.; Gen. Mgr.; Designer, Sales and Advt. Mgr.; D. C. Rexford, Vice-Pres.; E. B. Finch, Sec. and Treas.; Fred Henning, Supt. and Purch. Agt.; Gus. Eckert, A. st. Supt. Agents and dealers: Colon-

ial Auto Co., Pittsburg, Pa.; Euclid Garage, Cleveland, O.

Pupki Garage.—488 Hancock St., Brooklyn, N. Y. Garage.

Purge-cock.—See Cock, Purge.

Puritan Machine Co.—12-16 Gratiot Ave., Detroit, Mich. Mfrs. engines, steering gears, transmissions, pumps, special work to order, special automobile machinery. Cap. \$30,000. Est. since 1900. Alfred O. Dunk, Treas., Designer and Gen. Mgr.; Thomas H. Dunk, Sec.; Jacob Schiemer, Gen. Supt.; A. D. Lootens, Experimental Dept.; J. L. Schoonfeldt, Machine Shop.

Puritan Motor Co.—43 Columbus Ave., Boston, Mass. (Dolson, Mason.)

Puritan Soap Co.—500-504 Exchange St., Rochester, N. Y. Mfrs. automobile soaps, metal polish. Cap. \$100,000. Est. May, 1903. John C. Bertrand, Vice-Pres. and Gen. Mgr.; Harry C. Green, Sec. and Treas.

Purington, A. B.—126 Exchange St., Bangor, Me. (Columbia.) Supplies; garage; repairing.

Purrey, V.—1-31 Bvd. J. J. Bosc, Bordeaux, France. Mfr. steam commercial automobiles. (Purrey trucks and omnibus.)

Push.—A contact-maker actuated by a stud which is pushed in by the finger, and, when released, is forced out again by a spring and breaks the circuit.

Push-button.—See Button, Push.

Push-pedal.—See Pedal, Push.

Push-rod.—A small hardened steel rod, which, on being lifted by a rotating cam, comes into contact with the stem of an inlet or exhaust-valve and causes the latter to open.

Putnam, C. M.—Moriah, N. Y. (Waltham.)

Putnam Garage Co.—Putnam, Conn (Jackson.)

Putnam, H. E.—Pres. Gies Gear Co., 345-347 Bellevue Ave., Detroit, Mich.

Putnam, H. F.—Treas. Putnam Motor Mfg. Co., 57 Lebanon St., Springfield, Mass.

Putnam Motor Mfg. Co.—57 Lebanon St., Springfield, Mass. Mfrs. motor cycle motors, automobile and marine motors, carburetters, kerosene carburetters. Inc. Est. 1907. R. H. Putnam, Pres.; H. F. Putnam, Treas.; E. J. Dickey, Clerk.

Putnam, R. H.—Pres. Putnam Motor Mfg. Co., 57 Lebanon St., Springfield, Mass.

Putney Motor Co., Ltd.—17 Grand Parade, Upper Richmond Rd., London, S. W., England Mfrs. automobile motors.

Putts.—76 Washington St., Salem, Mass. Garage.

Putzel, Morris.—Macon, Ga. (Ford.)

Pyle Mfg. Co.—2211 Park Ave., Indianapolis, Ind. Mfrs. acetylene generators, adjustable lamp brackets, lamps.

Pyott, A. M.—Belmar, N. J. Garage.

Pyralin.—A transparent flexible material designed to be sewn into the curtains of a boat or automobile in order to give light, and also to serve as a lookout.

Pyramid Garage Co.—36-38 W. 62d St., New York City. Garage.

Pyramid Motor Car Co.—31 New St., Danbury, Conn. (White, Pope-Toledo, Pope-Waverley, Pope-Hartford, Cadillac.)

Pyrolusite.—See Manganese, Binoxide.

Pyrometer.—A form of thermometer especially designed for the measurement of very high temperatures that the ordinary instrument would not withstand.

Q

Q q.—Symbol for "quantity" especially quantity of electricity.

Quackenbush Co., W. H.—Westfield, N. J. (Reo, Premier, Mitchell, Ford, Maxwell.)

Quackenbush, James N.—Sec. Twentieth Century Mfg. Co., 19 Warren St., New York City.

Quackenbush, W. F.—1287 Madison Ave., New York City. Repairing.

Quad.—A light, low-priced, four-wheel motor vehicle; an abbreviation of "quadricycle."

Quad-coil.—See Coil, Quad.

Quad Mfg. Co., The.—35-37 S. Scioto St., Columbus, O. Mfrs. timers. Est. November, 1905. Officers: M. H. Budd, Jr., W. E. Ranny and W. A. Vause.

Quadrant, Gate.—A change-speed lever-quadrant, which, in place of notches, is provided with longitudinal slots, called "gates," into one or the other of which the change-speed lever moves to engage the different speeds and reverse. Ordinarily, the car is left

with the shift-lever in the neutral position (see figure, which illustrates a four-speed quadrant). In order to obtain the first speed, the lever is pushed forward as far as it will go, and, to obtain the second, is pulled back as far as possible in the same gate. The third and fourth speeds are obtained by drawing the lever into the inner gate; the third speed being secured by pushing it forward as far as it will go and the fourth by reversing the operation.

Quadrant, Gridiron.—See Quadrant, Gate.

Quadrant, H.—See Quadrant, Gate.

Quadrant, Notched.—A quadrant provided with notches by which to lock in position the lever (change-speed and emergency-brake levers, e. g.) that work over it.

Quaker City Automobile Co.—138-146 N. Broad St., Philadelphia, Pa. Branch at Atlantic City, N. J. (Pope-Toledo, Pope-Hartford, Pope-Waverley. Peerless, Franklin.) Est. 1903. Cap. \$25,-

000. Percy L. Neef, Pres.; James R. Shock, Sec.; Henry R. Shock, Treas.; R. J. Skilton, Mgr. Garage, 250 cars. Repairing.

Quaker City Motor Club.—Philadelphia, Pa. H. C. Harback, Sec.

Quality Lever.—See Lever, Quality.

Quantity Lever.—See Lever, Quantity.

Quartz-fibers.—Fine fibers produced by rapidly drawing out a piece of quartz when fused in the oxyhydrogen flame. Such fibers, on account of their strength and elasticity, are used in very sensitive galvanometers, electrometers, and other instruments containing moving parts which require delicate suspension.

Quebec Automobile & Launch Co.—Cor. St. Augustin and St. Patrick, Quebec, Canada. (Russell, Reo, Ford, Pope-Toledo, Pope-Hartford, Pope-Waverley.

Queen & Co., Inc.—8th and Arch Sts., Philadelphia, Pa. Mfrs. ammeters and voltmeters, spark coils, sparking points.

Queen City Automobile Co.—538 W. McMicken Ave., Cincinnati, O. (Knox, Waltham.)

Queen City Automobile Repair Works.—2201-3 Second Ave., Seattle, Wash. (Reliance.)

Queen City Brass & Iron Works.—Cincinnati, O. Mfrs. brass-pipe fittings.

Queen City Garage.—2203 72nd Ave., Seattle, Wash. (Apperson).

Quenching.—The sudden cooling of steel by plunging it, while red hot, into water, whereby it becomes extremely hard.

Quicksilver.—See Mercury.

Quill.—A short pipe which receives the ends of two other pipes; a sleeve-coupling or sleeve-nut.

Quinby & Co., J. M.—21-39 Division St., Newark, N. J. Mfrs. and automobile dealers in aluminum bodies, tops, and storm covers, wooden and metallic bodies. (Panhard and Renault.) Est. 1834. W. W. Ogden, Pres.; Emerson Brooks, Vice-Pres.; Henry D. Ogden, Treas., and H. W. Suffern, Sec.; W. W. Ogden, Gen. Mgr., and Geo. S. Jephson, Asst. Gen. Mgr.

Quincy Automobile Co.—Quincy, Ill. (White.)

Quincy Manchester Sargent Co.—84 Van Buren St., Chicago, Ill. Mfrs. au-

tomobile wrenches and automobile treads.

Quinlan, T. A., Jr.—Pres. and Gen. Mgr. Monarch Motor Car Co., Chicago Heights, Ill.

Quinn & Co., T. H.—Straight, Pa. (White.)

Quinn, James A.—300½ W. 54th St., New York City. Garage.

Quinn, Peter J.—Officer, Delta Mfg. Co., Bloomfield, N. J.

Quinsler & Co.—26-30 Cambria St., Boston, Mass. Mfrs. wooden and metallic bodies. Garage.

Quint & Sons, S. H.—15 S. 4th St., Philadelphia, Pa. Mfrs. name plates, steel stamps and stencils.

Quirk, Wm. T.—Big Rapids, Mich. (Northern.)

Quogue Automobile & Bicycle Co.—Jessop Ave., Quogue, L. I., N. Y. Garage, repairing and supplies.

R

R.—Symbol for "reluctance."

R.—Symbol for "resistance."

r. p. m.—An abbreviation for "revolutions per minute."

Raban-Johnston.—34 Broad St., Port Chester, N. Y. (Reo, Premier.)

Rabbet.—An angular incision cut longitudinally in a piece of timber in vessels to receive the ends of a number of planks to be fastened therein. Written also "rebate."

Rabeneau, Edwin.—Iowa City, Ia. Garage.

Rabenold, W. F.—Home address, 28 N. 11th St. Office, 1207 Hamilton St. Garage, 12th and Court Sts., Allentown, Pa. (American Berliet, Dolson, Dragon.) Est. 1906. Garage, 70 cars. Repairing.

Race.—The path of the balls or rollers in anti-friction bearings. See Ball-race.

Racer.—See Boat, Racing. (2) A term sometimes applied to certain parts of machines which move with very great speed.

Racine Boat Co.—16th and Racine Sts., Racine, Wis. Cap. \$15,000. P. M. Godske, Pres., Gen. Mgr. and Designer; F. W. Hermans, Vice-Pres.; G. G. Roberts, Sec., Treas., Pur. Agt., Sales and Advt. Mgr. Mfrs. motor boats.

Racine Boat Mfg. Co.—Muskegon, Mich. Makers of "Racine" power boats. First marketed 1882. New models made every year. Cap. \$250,000. Walter J. Reynolds, Pres., Treas., Gen. Mgr. and Sales Mgr.; Paul B. McCracken, Vice-Pres.; William W. Butterfield, Sec.; William E. Collier, Designer and Supt.; John J. DeVine, Purch. Agt.; T. Raymond Stahl, Adv. Mgr.

Racine Brass & Iron Co.—Racine, Wis. Mfrs. brass, bronze, aluminum and copper castings, and gray iron castings.

Racine Engine & Machinery Co.—Racine, Wis. Mfrs. steam engines.

Racine Malleable & Wrought Iron Co.—Racine, Wis. Mfrs. malleable iron castings.

Racine Novelty Mfg. Co.—600 6th St., Racine, Wis. Mfrs. storm aprons and curtains, wooden and metallic bodies, battery boxes, spark coil boxes, tool boxes, dashes and fenders, and automobile tops.

Racing.—Uncontrolled increase in the

speed of a motor when the governor fails to act properly. In marine engines, racing occurs if the screw-propeller is lifted out of the water by the motion of the vessel in rough weather.

Racing Boat.—See Boat, Racing.

Rack.—A bar, either straight or slightly curved, with gear-teeth cut in it. See Rack and Pinion.

Rack and Pinion.—A device for converting the rotary motion of a shaft into linear motion by means of a pinion keyed upon the shaft and meshing with a rack. See Gear, Rack.

Rack, Circular.—A rack attached to the inner face of the rear wheel of a motor-vehicle and engaging with pinions actuated by the motor.

Rack, Segment.—A rack operating with a segment-gear.

Racouard-Rocher.—26 rue, National, chateau-du-Loire, Sarthe, France. Mfrs. La Castellorienne motorcycles.

Radax Pneumatic Tyre Co., Ltd.—51 Fountain St., Manchester, England. Mfrs. pneumatic tires.

Radel Leather Mfg. Co.—Hamburg Place Road, Newark, N. J. Mfrs. leather.

Radia.—12 rue Barbès, Levallois, Paris, France. Mfrs. gasoline automobiles. (Radia.)

Radial Bearing.—See Bearing, Radial.

Radial Bearing Co.—508 Broad St., Bank Bldg., Trenton, N. J. Mfrs. radial bearings.

Radian.—The unit employed in the measurement of angles. A "radian" is an angle that embraces an arc of circumference equal to the length of the radius of such circumference.

Radiation.—The direct transmission of heat through any medium whatever, without the conductivity of such medium intervening. Heat (solar heat, for example) is transmitted in space by radiation. In principle, the heat transmitted by radiation is always greater than that transmitted by conductivity. When exceptions to this rule are found, as in the case of heating by a hot-air stove or radiator, it is because they are due to "convection" or active circulation of the surrounding air by escapement.

Radiator.—An apparatus designed to

produce an exchange of temperature between two fluids by means of a radiating metallic surface. On automobiles it serves to cool the water that prevents the motor from reaching too high a temperature.

Radiators are of two general types, tubular and honeycomb. Both of these are provided with tubes, but in the former the water passes through the tubes, which are formed into a coil (Fig. 1), while in

the latter the tubes are traversed by air. In the first-named type the tubes, which are of brass or copper, are usually cylindrical and provided with circular or square sheet copper (or sometimes tin or iron) "gills" or "fins" (Fig.

Fig. 2.

2), which are simply let over the tube and soldered to it; or with one continuous fin of thin corrugated copper ribbon wound spirally around it and sweated on

Fig. 3.

at the base (Fig. 3); or are surrounded with coils of helical wire. Since heat is dissipated from a point, edge or projection, more readily than from a smooth surface, the fins are made with perforations or projections, or both, and they, as well as the tubes, are coated with lamp-black, which is highly convective

In high-powered cars, the tubes are often flattened, a form which, although more expensive, is more efficient for the same length of tubing. In flat-tube radiators (Fig. 4), the water most generally passes through each entire bank of tubes at the same time, and the tubes are provided with fins which are continuous from front to back over each entire bank. The value of the continuous fin from front to rear is that it furnishes a continuous medium for the heat from the rear, or hottest part, to travel to the

Fig. 4.

front, or coldest part. Radiators are also made with vertical tubes (Fig. 5) running from a top to a bottom tank. Any form of tubing can be set in such a position, but this arrangement is scarcely desirable where a pump is used. In all tubular radiators the water circulation is of the greatest importance. A tank is necessary to act as a sort of stand-pipe to take up evaporation, and a pump also, except in some vertical tube arrangements.

The second type of radiator, the honeycomb (Fig. 6), consists essentially of a tank $3\frac{1}{2}$ to $4\frac{1}{2}$ inches deep, of which the plane walls are connected by a large number of thin brass tubes of square or circular section, and traversed by air, which is drawn through them by a fan or by the motion of the vehicle. This space between the tubes contains the water to be cooled.

Fig. 5.

The characteristic of the honeycomb is that it has a perfectly free lateral as well as vertical circulation, so that the water can move in thermal currents from any part of the apparatus to any other part irrespective of the action of the pump.

Fig. 6.

Radiator, Cellular.—See Radiator.
Radiator, Honeycomb.—See Radiator.
Radiator, Spiral Fin.—See Radiator.
Radiator, Tubular.—See Radiator.

Radiguet, G.—97 Ave d'Italie, Paris, France. Mfr. motorcycles.
Radius-rod.—A rod, called also a "distance rod," used to keep the rise and fall of the driving axle of a motor-vehicle from slackening or tightening the chain or other driving arrangement. It consists of a strut pivoted at the center, so that its other extremity moves along an arc described from the center, thus keeping the parts to which the strut is attached at a fixed distance apart.

Radkey, S. B.—Cor W. 5th and Colorado Sts., Austin, Tex. (Holsman).
Rae, O. & J. M.—106 Falls St., Niagara Falls, N. Y. (Ford.)
Rafer fils Frères.—St. Chamond, Loire, France. Mfrs. chains.
Rafferty, S. W.—Vice-Pres. and Traveling Salesman, National Spring & Wire Co., Albion, Mich.

Rag-bolt.—See Bolt, Rag.
Rahe, A. C.—Sec. Tray Plate Battery Co., 5 Frederick St., Binghamton, N. Y.
Rahmann & Co., Geo.—6 Ferry St., New York City. Mfrs. belting.

Rahway Appliance Mfg. Co.—12 Plain St., Albany, N. Y. Garage.

Rail.—One of the two longitudinal members, of a motor-vehicle frame. See Side-member, Reach, Sill and Girder.

Raimes & Co.—50 Ferry St., New York City. Mfrs. metal polishes.

Rainier Agency.—559 7th Ave., Pittsburgh, Pa. (Rainier.)

Rainier, John T.—Pres. and Treas. Rainier Co., Broadway and 56th St., New York City.

Rainier Motor Car Co., The.—Broadway, cor. 56th St., New York City. Factory, Saginaw, Mich. Makers of the Rainier car. First marketed in 1905. Three models made since. Cap. \$1,000,000. John T. Rainier, Pres. and Treas.; Paul N. Lineberger, Vice-Pres., Gen. Mgr., Sales and Advt. Mgr.; Jas. G. Haerlet, Designer; J. L. Davison, Supt.; W. S. Miller, Purch. Agt.; Ezra E. Kirk, Western Mgr. of Sales. Chicago Branch, 1725 Michigan Ave. Garage in connection with New York offices to house 100 cars; repairing. Agents and dealers: Auto Motor Car Co., 804 Sycamore St., Cincinnati, O.; Braschi, H. J., Mexico City, Mex.; Morrison & Price Co., 169 Huntington Ave., Boston, Mass.; Coburn & Belden, 577 Central Ave., Newark, N. J.; Rainier Agency, 559 7th Ave., Pittsburgh, Pa.; Hayes, A. H., 428 Golden Gate Ave., San Francisco, Cal.; Northway, Thos. J., 92 Exchange St., Rochester, N. Y.; Smith Bros., Los Angeles, Cal.; Julius Lesser, St. Louis, Mo.

Rainier Motor Car Co.—1725 Michigan Ave., Chicago, Ill. (Rainier.)

Rainis Automobile Co.—W. Adams St., Jacksonville, Fla. Garage.

Rajah Auto Supply Co.—147 Washington St., New York City. Mfrs. spark plugs and wire terminals.

Rake.—In a boat, the inward slope of bow or stern from rail to keel; (2) in a motor vehicle, an incline from the perpendicular, as the "rake" of a steering-post, or of a hood, etc.

Raleigh Cycle Co., Ltd.—Nottingham, England. Mfrs. motorcycles. (Raleigh.)

Ralph, W. I.—Advt. Dept., The Automobile. Flatiron Bldg., New York City.

Ralston, J. C.—Sec. The Beckley-Ralston Co., 80-84 Michigan Ave., Chicago, Ill.

Ramaley, F. W.—650 Grand Ave., St. Paul, Minn. (Stoddard-Dayton, Rauch and Lang.)

Rambler Auto Agency.—707 Pacific Ave., Tacoma, Wash. (Rambler.)

Rambler Auto Co.—101 Fulton St., Syracuse, N. Y. (Rambler.)

Rambler Automobile Co.—1506 Capitol Ave., Omaha, Neb. (Rambler.)

Rambler Automobile Co.—2044 Farman St., Omaha, Neb. (Mitchell.)

Rambler Garage.—1218 Sheridan Rd., Chicago, Ill. Garage.

Rambler Motor Car Co.—Halsey and Crawford Sts., Newark, N. J. Repairing.

Ramer, Geo. F.—Asst. Purch. Agt. Aperson Bros. Automobile Co., Kokomo, Ind.

Ramier et Mauberqué.—109 rue de Paris, Puteaux, France. Mfrs. radiators.

Ramsay, B. S.—Plattsburg, N. Y. (Waltham.)

Ramsey-Hutchins Co.—1048 S. Main St., Los Angeles, Cal. (Pierce-Racine.)

Ramsey Mfg. Co.—472 Bullitt Bldg., 4th and Walnut Sts., Philadelphia, Pa. Mfrs. engines.

Ramsey, Robert.—Sec. Citizen's Motor Car Co., N. E. cor. Seventh and Main Sts., Cincinnati, O.

Ramsey, Wm. E.—Treas. National Auto Co., 957 Main St., Los Angeles, Cal.

Rand & Harvey.—Elizabeth St., Lewistown, Me. (Stanley.)

Rand Auto Co., The F. L.—112 Ashland St., North Adams, Mass. Garage.

Randall, A. G.—109 N. 11th St., Boise, Idaho. (Buick, Waltham.) Est. Nov. 1906. Garage. 10 cars. Repairing.

Randall, A. W.—Jones St., Port Jefferson, N. Y. Garage.

Randall Co., Frederick E.—245 Columbus Ave., Boston, Mass. (Pullman, Stevens-Duryea.)

Randall-Faichney Co.—Boston, Mass. Mfrs. oil guns.

Randall, G. N.—1094 French St., Meadville, Pa. Mfrs. steam engines.

Randall Motor Car Co.—216 Berry St., Ft. Wayne, Ind. (Stoddard-Dayton, Mitchell, Ford, Rambler, Model.)

Randal, W. C.—Clerical Dept., Harrisburg Auto Co., 3d and Hamilton Sts., Harrisburg, Pa.

Randliff Motor Car Co.—893 Boylston St., Boston, Mass. (Panhard.)

Randolph, Asa F.—Sec. and Treas. Spicer Universal Joint Mfg. Co., Third St. and Madison Ave., Plainfield, N. J.

Randolph-Clowes Co.—Waterbury, Conn. Mfrs. sheet and rod brass and copper, brass and copper metals, rods, tubing, copper boiler shells.

Randolph, S. F., Jr.—Pres. Ventilated Cushion & Spring Co., Jackson, Mich.

Randolph, T.—Nyack, N. Y. (Holzman.)

Rands Mfg. Co.—51-55 Macomb St., Detroit, Mich. Mfrs. wood and metallic bodies, body irons, bow separators, bow sockets, foot rests, adjustable lamp brackets, robe rails, fire holders, automobile tops, metal trimmings, trunk racks, glass wind shields.

Rankin, D.—Partner, Tarkio Electric & Water Co., Tarkio, Mo.

Rankin, W. F.—Partner, Tarkio Electric & Water Co., Tarkio, Mo.

Ranlet Automobile Co.—76 Eastern Ave., St. Johnsbury, Vt. Mfrs. feed-water heaters. (Stanley.)

Ranney, A. Elliott.—Partner, A. Elliott Ranney & Co., 1851 Broadway, New York City.

Ranney & Co., A. Elliott.—1851 Broadway, New York City, 237 Halsey St., Newark, N. J. (Elmore.) Est. 1899. Cap. \$50,000. Partners: A. Elliott Ranney and A. M. Day. Repairing, garage.

Ranney, E. C.—Purch. Agt. Winton Motor Carriage Co., Cleveland, O.

Ranney, W. E.—Officer, The Quad Mfg. Co., 37 S. Scioto St., Columbus, O.

Ransomes, Sims & Jeffries, Ltd.—Ipswich, England. Mfrs. agriculture implements, lawn mowers.

Rapid Akkumulatoren und Motorenwerke.—Hauptstrasse 140, Berlin, Schöneberg, Germany. Mfrs. storage batteries and coils.

Rapid Motor Vehicle Co.—Rapid St., Pontiac, Mich. Makers of the Rapid delivery wagons, trucks, busses, sight-seeing cars, ambulances, and every type of vehicle in the commercial vehicle line. First marketed in 1899. Three models of chassis made since. Cap. \$250,000. A. G. North, Pres.; Max Grabowsky, Vice-Pres. and Designer; H. G. Hamilton, Treas. and Gen. Mgr.; Morris Grabowsky, Sec. and Purch. Agt.; D. J. Moreland, Supt.; T. P. Myers, Advt. Mgr.; Wm. Parkins, Chief of Eng. Dept. Agents and dealers: Allegheny Auto Co., 713 Jackson St., Allegheny, Pa. Walter G. Benz, 246 3d Ave., Minneapolis, Minn. Brockton Auto Exchange, 51 Ward St., Brockton, Mass. Butler Motor Car Co., Copley St. Garage, Harcourt St. Side, Boston, Mass. A. A. Chapin, 1st and M Sts., N. E., Washington, D. C. Duff & Gregg, Nebraska City, Neb. D. O. Eaton, 236 N. Broad St., Philadelphia, Pa. Fellwock Auto & Mfg. Co., 210 E. Pa. St., Evansville, Ind. Galveston Motor Car Co., Galveston, Tex. Henderson Auto Co., Cedar Rapids, Ia. Idaho Automobile & Electric Trans. Co., room 306, Bank and Ins. Bldg., Dubuque, Ia. Indianapolis Motor Car Co., 111 Kentucky Ave., Indianapolis, Ind. P. A. Johnson, East Side Prospect Sq., Cambridge, Ill. Keystone Motor Car Co., 109 Market St., Harrisburg, Pa. W. J. Massey Auto & Bicycle Co., Vancouver, B. C. Jos. Maw & Co., Winnipeg, Canada. Meade McClatchey, 71 E. Side Square, Canton, Ill. Mohler & De Gress, La Independencia 12, Mexico City, Mex. J. E. Neumann, 1841 Market St., San Francisco, Cal. Pittsfield Auto Garage Co., 228 N St., Pittsfield, Mass. J. R. Richardson, 11th and West Sts., Wilmington, Del. Rodgers & Co., 710 Gay St., Knoxville, Tenn. C. M. Rodgers, 437 Pearl St., Buffalo, N. Y. Schaffer Mfg. Co., 308 N. Calvert St.,

Baltimore, Md. W. Cary Smith & Co., 98 W. Lincoln Ave., Mt. Vernon, N. Y. J. L. Swartz & Co., Bridgeton, N. J. care of W. Howard Garrison, 53½ E. Commerce St., Bridgeton, N. J. H. W. Thornhill & Co., 290 Elm St., Dallas, Tex. Tyrone Motor Car Co., Tyrone, Pa. Wilson Auto Co., 117 Craig St., Montreal, Canada. Wm. Smith, Jersey City, N. J. H. G. W. Spurling, Hamilton, Bermuda. Goodyear Rubber & Tire Co., Akron, O. W. B. Brouse, Massena, N. Y. Ralph Temple Auto Co., 1219 Michigan Ave., Chicago, Ill. Auto Motor Car Co., 804 Sycamore Ave., Cincinnati, O. Temple Auto Co., Temple Tex.

Rapid Societa Torinese Automobili.—Barriers di Nazza, Turin, Italy. Mfrs. gasoline commercial automobiles and gasoline automobiles. (Rapid.)

Rapiditas.—Pub. at 2 via Catania, Palermo, Italy.

Rarig Auto & Garage Co.—466 20th St., Oakland, Cal., and 538 Golden Gate Ave., San Francisco. (Queen, National, Jackson.)

Raritan Automobile & Motor Co.—Perth Amboy, N. J. Garage.

Raritan Woolen Mills.—14 White St., New York City. Mfrs. cloth and carpet trimmings.

Raser, H. F.—609 French St., Erie, Pa. Garage.

Raser Tanning Co.—Ashtabula, O. Mfrs. leather.

Rasp.—See File.

Rast, J. H.—Pres. Treas. and Mgr. Army Cycle Mfg. Co., 130-132 Meeting St., Charleston, S. C.

Rastetter & Son, Louis.—Fort Wayne, Ind. Mfrs. wood rims, steering wheels and wire wheels.

Ratchet.—A mechanism consisting of a ratchet-wheel and pawl. (2) The pawl in such a mechanism. (3) The toothed wheel used in such a mechanism. (4) A ratchet-brace or ratchet-drill.

Ratchet, Safety.—A device fitted in the hubs of the rear wheels of a motor vehicle by which they can be locked so as to prevent a backing down hill. See Sprag.

Ratchet-sprag.—See Sprag.

Ratchet-wheel.—A toothed wheel of which the teeth all point in one direction and with which engages a pawl that permits it to revolve in one direction, or prevents it from turning. It is in this last form that the ratchet-wheel is employed as a "sprag" in certain types of automobiles. See Click.

Rath Mfg. Co.—Hancock, Laurel and Second Sts., Philadelphia, Pa. Mfrs. metal polishes.

Rathbun House Garage.—Exchange St., Elmira, N. Y. Garage.

Rathbun-Lacy Co.—Toledo, O. Mfrs. gasoline marine motors.

Rating, Motor-boat.—See Boat, Racing.

Ratio, Driving-gear.—On chain-driven cars, the driving sprockets are smaller than those driven, and the "driving ratio," as it is termed, varies from $1\frac{1}{2}$ to $3\frac{1}{4}$, or, in other words, the wheels revolve once while the driving-shaft or sprocket makes from $1\frac{1}{2}$ to $3\frac{1}{4}$ revolutions. Other things equal, a higher driving-gear gives the car lower speed, but greater ability in hill-climbing and traversing heavy roads.

Rattliff, J. H.—Gen. Mgr. and Sec. The Auto Motor Car Co., 804-808 Sycamore St., Cincinnati, O.

Rattan Mfg. Co.—522 State St., New Haven, Conn. Mfrs. hampers.

Raub, Herman.—Pres. Empire State Motor Car Co., 2148 Broadway, New York City.

Rauch & Lang Carriage Co., The.—W. 25th St., Cleveland, O. Makers of the Rauch & Lang electric car; first marketed in 1904. Seven models made since. Cap. \$250,000. Chas. Rauch, Pres.; Chas. L. F. Wieber, Vice-Pres.; Chas. E. J. Lang, Sec., Treas., Gen. Mgr. and Purch. Agt.; H. N. Ravinscroft, Sales and Advt. Mgr. Agents and dealers: Colburn Auto Co., Denver, Colo.; Kimball & Co., C. P., Chicago, Ill.; McNall, Arthur, Rochester, N. Y.; Murphy, Alfred H., Erie, Pa.; Ramaley, F. W., St. Paul, Minn.; Rice's Garage, Baltimore, Md.; Teegarden & Pull, Goshen, Ind.; Union Electric Light & Power Co., St. Louis, Mo.; Wellman, J. A., Manchester, N. H.; Wm. F. V. Neumann & Co., Detroit, Mich.

Rauch, Chas.—Pres. The Rauch & Lang Carriage Co., W. 25th St., Cleveland, O.

Rauh, Isidor.—Gen. Mgr. The Cincinnati Electric Tool Co., 650-652 Evans St., Cincinnati, O.

Ravel et Homeyer.—114 rue d'Annoy, St. Etienne, France. Mfrs. steering and transmission gears.

Ravenscroft, H. N.—Sales Mgr. The Rauch & Lang Carriage Co., W. 25th St., Cleveland, O.

Raves, Ewald.—Gen. Supt. Willyoung Appliance Co., Ludlow Station, Yonkers, N. Y.

Raw-hide.—Leather which has not been tanned. It is used for making driving belts, noiseless gears, etc.

Rawle, H.—Director and Asst. Gen. Mgr. Dragon Motor Co., 31st, 32nd and Chestnut Sts., Philadelphia, Pa.

Ray, D. A.—Fosston, Minn. (Buick.)

Ray, Fred.—Pres. Smith-Haines, 1673 Broadway, New York City.

Ray-Wortham Automobile Co.—609 Throckmorton St., Ft. Worth, Tex. (Stoddard-Dayton.)

Rayfield & Rayfield.—6523 Wentworth Ave., Chicago, Ill. Repairing.

Raymond Mfg. Co.—Corry, Pa. Mfrs. machinery springs.

Razoux, Chas. L.—446 Tremont St., Boston, Mass. Mfrs. motorcycles.

Rea Bros. & Co.—202 Nicollet Ave., Minneapolis, Minn. Mfrs. tire cement.

Reach.—One of the two longitudinal members of a motor-vehicle frame. See Side-member, Sill, and Girder.

Reach-spring.—See Spring, Reach.

Reactance.—That part of the impedance of a circuit which is due to its self-induction and capacity.

Reaction.—In mechanics, a general term for a force which is acting in opposition to another force or system of forces.

Read Bicycle Co.—Ave. D., bet. 12th and 13th Sts., Miami, Fla. (Indian.)

Read, F. B.—Head of Automobile Top Dept., Springfield Metal Body Co., Birney Ave., Springfield, Mass.

Read Corporation, Fred.—Newtonville, Mass. Garage.

Read Underhill Co.—222 Columbus Ave., Boston, Mass. (Knox.)

Read, W. K.—Texarkana, Ark. Garage.

Reading Auto Garage.—Reading, Mass. (Maxwell.)

Reading Automobile Co.—26 S. Fifth St., Reading, Pa. (Peerless, Franklin, Buick, Oldsmobile, Pope-Waverley.) Est. 1899. Cap. \$20,000. James Rick, Pres.; Hunter Eckert, Vice-Pres.; H. O. Koller, Sec., Treas. and Gen. Mgr. Garage, 40 cars. Repairing.

Reading Iron Co.—Reading, Pa. Mfrs. wrought iron and steel pipe.

Reading Metal Body Co.—Reading and Fleetwood, Pa. Mfrs. bodies. Cap. \$25,000. Est. 1905. James C. Reber, Pres.; Harry C. Uric, Treas.; Geo. B. Schaeffer, Sec.

Reading Standard Cycle Mfg. Co.—Reading, Pa. Mfrs. motorcycles. (R. S.)

Reagans, John T.—S. Baptist St., Newport, R. I. Garage.

Real Aero Club de Espana (Spanish Aero Club).—Alcala 70, Madrid, Spain (Member F. A. I.)

Ream Bros., Automobile Agency.—606-8 Broadway, Greenville, O. (Knox, Waltham, White, Packard, Buick, Cadillac, Franklin.)

Reamer.—A tool with longitudinal cutting ridges for enlarging or truing a hole already formed.

Reason & Son, Geo. W.—Pinckney, Mich. (Maxwell, Reo, Cartecar.)

Reason Automatic Air Pump Co.—Pontiac, Mich. Mfrs. air pumps.

Rebate.—A synonym for rabbet, q. v.

Reber, C. D.—Allentown, Pa. (Atlas.)

Reber, James C.—Pres. Reading Metal Body Co., Reading and Fleetwood, Pa.

Reber, J. D.—Vice-Pres. and Sec. Ber-

win Automobile Co., 128-132 N. 8th St., Allentown, Pa.

Rébour, J.—3, rue ampere, Puteaux, France. Mfrs. gasoline commercial automobiles (Rébour), and automobile motors.

Recalescence.—If a piece of iron wire which has been raised to a red heat be allowed to cool in a dark room, it loses its glaring appearance as it cools, and then suddenly glows out again, after its temperature has fallen to a certain value. This phenomenon is termed "recalescence," and the temperature at which it occurs the "temperature of recalescence."

Rech & Sons, Jacob.—8th St. and Girard Aves., Philadelphia, Pa. Mfrs. wood and metal bodies.

Reciprocating.—A term applied to a mechanism of which the parts move backward and forward alternately, as in the case of ordinary steam-engines and pumps.

Reciprocating Pump.—See Pump, Reciprocating.

Reckitt, C. C.—Pres. The Turner Brass Works, Sycamore and Illinois Sts., Chicago, Ill.

Record Motor Co.—585 Stoneystanton Road, Coventry, England. Mfrs. automobile motors.

Rectifier.—An apparatus for converting an alternating current into a direct or continuous one, and permit of its use in recharging storage-batteries. A rectifier may be (1) a mechanical device in the nature of a "commutator" (q. v.); a "rotary converter" (q. v.); (3) a "chemical" or "electrolytic rectifier," in which a pair of aluminum plates, for example, dipping into a suitable solution (say ammonium phosphate) are connected to the alternating current supply, whereupon the current will be found to pass through the cell in one direction only; or (4), a "mercury arc rectifier," consisting of an exhausted bulb containing two graphite electrodes (anodes) and two electrodes (cathodes).

The upper (graphite) electrodes are provided with leads and terminals, and each lower (mercury) electrode is covered with a metal cap to which a lead is attached. The two upper electrodes are called the positive electrodes and the central lower one is called the negative electrode; while the other lower one is an auxiliary used only for starting the

rectifier into operation. The bulb is mounted in such a manner that it can be oscillated on starting so that the mercury of the negative electrode and that of the auxiliary electrode come into contact for a mo-

ment, when the current passes and some of the mercury is volatilized. As the positive electrodes will pass current only in one direction when once started, and oppose all current-flow in the opposite direction, the current flows through the two positive electrodes alternately and through the mercury vapor to the negative electrode always in the same direction. In this way a true continuous current is produced with small pulsations and with very small loss in transformation. The accompanying figure illustrates a Cooper-Hewitt mercury arc rectifier.

Red Devil Racing Association.—Edward Edwards, Sec. St. Louis, Mo.

Reddew, G. H.—Mgr. and Vice-Pres. Helios Mfg. Co., Bridesburg, Philadelphia, Pa.

Reddew, G. W.—Head of Sales Dept. Helios Mfg. Co., Bridesburg, Philadelphia, Pa.

Redford, O. P.—Sec. and Gen. Supt. Richmond Forgings Corporation. Belle Isle, Richmond, Va.

Red Heat.—The temperature at which a body emits a red glow.

Read Lead.—See Lead, Red.

Red Short.—A term applied to iron or steel which cannot be readily forged or rolled at or above red heat.

Red Wing Boat Mfg. Co.—Red Wing, Minn. Mfrs. gasoline marine motors and motor boats.

Redington & Co., F. B.—107-109 S. Sangamon St., Chicago, Ill. Mfrs. transmission gears, lubricators.

Redlands Auto Co.—9-11 W. Citrus Ave., Redlands, Cal. Garage.

Redman, H. E.—Vice-Pres. Mitchell Motor Car Co., Racine, Wis.

Redmond, A. J.—Council, Austin Automobile Club, Austin, Ill.

Redmond, Andrew.—N. 3rd and Boyd Sts., Harrisburg, Pa. (Columbus.)

Redon, E.—Cazoules, Dordogne, France. Mfrs. primary batteries.

Reducer.—A coupling for connecting pipes of different diameters; called also a "reducing pipe," "reducing joint," or "reducing socket."

Reducing-joint.—See Reducer.

Reducing-valve.—See Valve, Reducing.

Reed.—A thin elastic plate of metal fastened by one end over an opening in the base of a horn or other wind-instrument and serving to produce a musical note through its vibration as the air is forced past it. See Horn.

Reed & Co., S. L.—25 Westfield Ave., Elizabeth, N.J. Garage.

Reed & Johnson.—109 W. Chicago St., Concord, Mich. (Reo.)

Reed, A. B.—Treas. and Gen. Mgr. Belden Machine Co., Whalby Ave. and Tryon St., New Haven, Conn.

Reed Bros.—715 19th St., N. W. Washington, D. C. Garage.

Reed Co., Francis.—43 Hammond St., Worcester, Mass. Mfrs. special automobile machinery.

Reed Mfg. Co.—Kalamazoo, Mich. Mfrs. steel castings.

Reed Underhill Co.—222 Columbus Ave., Boston, Mass. (Knox.)

Reeding.—The same as milling or knurling, q. v.

Reese, E. Shriver.—230 Euclid Ave., Cleveland, O. (Columbus, Royal)

Reese Machinery & Tool Works, S.—Plymouth, Pa. (Lambert.)

Rees, F. H.—Steel Memorial Bldg., Elmira, N. Y. Mfr. license numbers, monograms and name plates.

Rees, H. O.—242 W. Commerce St., San Antonio, Tex. (Lambert.)

Reeve.—To pass a line through a block or ring. See Pulley.

Reeves, Alfred Pierrepont.—Gen. Mgr. American Motor Car Manufacturers' Association.

Born Brooklyn, N. Y., Sept. 16, 1875. Ed. Brooklyn High School. Mem. N. Y. Motor Club. Res. 201 W. 132d St. Office, 29 W. 42d St., New York City. In trade since 1899. Early writer on automobile topics in Evening Mail.

N. Y. American, N. Y. Globe. Mgr. race meets Empire track, Brighton Beach, Morris Park. Recreations, automobiling and motor boating

Reeves & Son, Paul S.—1415 Catherine St., Philadelphia, Pa. Mfrs. brass, bronze, aluminum and copper castings, babbitt and bronze metals

Reeves Auto Station.—7th and Market Sts., Camden, N. J. Garage

Reeves, Burton.—Freeport, Ill. (Jewel.)

Reeves, G. L.—Sec. and Treas. Reeves Pulley Co., 1225 Seventh St., Columbus, Ind.

Reeves, H. W.—Treas. Milne Auto-Start Co., 919 W. Fort St., Detroit, Mich.

Reeves, M. O.—1st Vice-Pres. Reeves Pulley Co., 1225 Seventh St., Columbus, Ind.

Reeves, M. T.—Pres. Reeves Pulley Co., 1225 Seventh St., Columbus, Ind.

Reeves Pulley Co.—1225 Seventh St., Columbus, Ind. Mfrs. automobile engines, clutches, and complete power equipments for motor buggys. Cap. \$90,000. Est. 1888. M. T. Reeves, Pres.; M. O. Reeves, 1st Vice-Pres.; D. T. McNiel, 2nd Vice-Pres.; G. L. Reeves, Sec. and Treas. Mem. M. & A. M.

Refined Iron.—See Iron, Refined.

Reflector.—A concave mirror used in a lamp for reflecting the light of the latter in a desired direction.

Reflector, Parabolic.—A reflector of parabolic cross-section for projecting the light from a lamp in a straight, powerful beam.

Refractory.—A term applied to infusible substances, such as fine clay, lime, etc., which are used as crucibles and furnace linings.

Regal Gasolene Engine Co.—Coldwater, Mich. Mfrs. gasolene marine motors.

Regatta.—A sailing match between boats.

Regent Garage.—4618 Regent St., Philadelphia, Pa. Garage.

Register's Sons & Co., J.—Holliday and Saratoga Sts., Baltimore, Md. Mfrs. special brass work.

Register.—A mark made upon a piece of mechanism in order to show its exact position with respect to other parts. Before disassembling the pieces forming parts of a mechanism they should be "registered" (if they have not been by the manufacturer) by cutting letters, numbers or other figures on the corresponding parts by means of a punch or other tool.

Regulator.—In steam-cars, the lever that controls the quantity of steam admitted to the cylinder, and thus regulates the speed of the car. It is sometimes called the "throttle." (2) A term sometimes used for the accelerator on gasolene cars.

Regulator, Air.—See Air-regulator.

Regulator-pedal.—See Pedal. Regulator.

Regulator, Pressure.—See Pressure-regulator.

Regulator-valve.—The same as throttle-valve. See Valve, Throttle.

Reheating.—The process of heating steel ingots in a furnace before rolling.

Reich, Robert A.—Broadway, Kansas City, Mo. (Merkel.)

Reichenbach, Karl-Wilhelm.—Elsterwerde-Biehla, Saxony, Germany. Mfr. motorcycles.

Reichert Automobile Co.—34-44 Temple St., New Haven, Conn. (Haynes, Waltham.) Supplies; garage; repairing.

Reid, F. A.—Mgr. Name Plate Dept., The Turner Brass Works, Sycamore and Illinois Sts., Chicago, Ill.

Reid, R. T.—Midland, Tex. (Mitchell.)

Reid, S. D.—Euclid Garage, Cleveland, O. (Dolson.)

Reid, W. J.—52 S. La Salle St., Aurora, Ill. Garage.

Reid, Wm.—Supt. Pierce Engine Co., 2200 Clark St., Racine, Wis.

Reidenbach, R. P.—Ashtabula, O. (Jackson.)

Reiff, Frank H.—16 N. Beaver St., York, Pa. Garage.

Reighard, D. P.—Ellsworth and College Aves., Pittsburg, Pa. Garage.

Reilly & Son Co., P.—Passaic Ave., Newark, N. J. Mfrs. leather.

Reilly, C. J.—Syracuse, Ind. (Waltham.)

Reilly, S. C.—Supt. The M. Seward & Son Co., New Haven, Conn.

Reinfried, C. J.—Manitowac, Wis. (Cameron.)

Reinhold Giese.—113 Ritterstrasse, Berlin, S., Germany. Mfrs. radiators.

Rejna, Zanardini e Co.—39 Bastioni Magenta, Milan, Italy. Mfrs. acetylene lamps.

Relay Motor Car Co.—1712 N. 10th St., Reading, Pa. (Relay.)

Release.—The opening of the exhaust-port of an engine cylinder to permit the escape of the steam or gas at the end of the stroke.

Reliable Automobile Co.—1000 Bolivar Rd., Cleveland, O. Garage.

Reliable Automobile Co.—7th and Pacific Aves., Tacoma, Wash. W. O. Williams, Mgr. (Baker, Buick, Oldsmobile, Pope-Hartford, Pope-Toledo, Thomas.) Garage.

Reliable Auto Station.—49 E. Utica St., Buffalo, N. Y. Garage.

Reliable Dayton Motor Car Co.—375 W. Lake St., Chicago, Ill. Mfrs. gasoline automobiles.

Reliable Repair Co.—1607 Michigan Ave., Chicago, Ill. Garage.

Reliable Water Gauge Co.—1616 Pine St., St. Louis, Mo. Mfrs. water gauges and columns. Est. 1900.

Reliance Automobile Co.—547-557 Fulton St., San Francisco, Cal. Est. April 1, 1906. Cap. \$25,000. Samuel M. Crim, Pres.; Geo. E. Erlin, Vice-Pres.; C. S. Richardson, Sec. and Mgr.; John Frolicher, Supt. Garage, 50 cars; repairing.

Reliance Electrical Works.—Astoria, Ore. (Waltham.)

Reliance Gauge Column Co., The.—45 E. Prospect St., Cleveland, O. Mfrs. water alarms and columns.

Reliance Machine Co.—40 S. Park Ave., Warren, O. (Maxwell, R. S. motorcycles.)

Reliance Motor Car Co.—89 Fort St. E., Detroit, Mich. Makers of the Reliance truck; first marketed in 1906. One model. Cap. \$400,000. Fred O. Paige, Pres.; J. B. Corliss, Sec.; E. W. Gans, Treas. and Gen. Mgr.; J. M. Mulkey, Vice-Pres.; Howard A. Wilcox, Designer and Supt.; W. K. Ackennan, Purch. Agt.; F. L. Loomis, Sales and Advt. Mgr.

Reliance Motor Car Co.—216 E. 3d St., Cincinnati, O. (Maxwell.)

Reliance Motor Cycle Co.—Addison, N. Y. Mfrs. motorcycles.

Reliance Oil & Grease Co., The.—1501-1502 Columbus Rd., Cleveland, O. Mfrs. lubricants, grease and oils. Est. 1888. J. M. Bachert, Mgr.

Relief-cock.—See Cock, Relief.

Relief-valve.—See Valve, Relief.

Reluctance.—"Reluctance" is the magnetic resistance opposed to the passage of the flux of force in a magnetic circuit. By the analogy to electric resistance the magnetic resistance is directly proportional to the length of the circuit, and to the reluctivity which depends on the nature of the material and is inversely proportional to the section.

Remanence.—The small quantity of magnetism that remains in a soft iron inductor after a dynamo has stopped and the exciting current has ceased.

Remkin, G. S.—Chief Accountant, Willard Storage Battery Co., 1279-81 Bank St., Cleveland, O.

Remppis, W. F.—Treas. Reading Standard Co., Water St., Reading, Pa.

Remsen Mfg. Co., I. S.—754 Bedford Ave., Brooklyn, N. Y. (Locomotive.)

Remy, B. P.—Pres. Remy Electric Co., Anderson, Ind.

Remy Electric Co.—Anderson, Ind. Mfrs. magnetos for all kinds of explosive engines, spark coils and ignition cables. B. P. Remy, Pres.; Frank Remy, Sec. and Treas. Mem. M. & A. M.

Remy, Frank.—Sec. and Treas. Remy Electric Co., Anderson, Ind.

Renard, Colonel Charles.—Born at Dambloin (Vosges), Nov. 23, 1847; died at Chalais-Meudon, April 13, 1905. After graduating from the Polytechnique he engaged in engineering, and in 1877 became head of the Chalais-Meudon establishment, and there began the work in military ballooning which made him famous. It is to him and his collaborator, Lieutenant, afterward Commander Krebs, that is due the honor of having demonstrated the possibility of steering balloons. His dirigible balloon "La France," actuated by an electric motor, returned, during the course of some brilliant experiments in 1884-85, five times out of seven to its starting-point, after trips of which the longest was nine and a half miles.

Renard, Commander Paul.—1 Avenue de l'Observatoire, Paris. After graduating from the Polytechnique, he engaged in engineering, became a collaborator of his brother, Colonel Charles Renard, and took an important part in the creation of and experiments with the famous dirigible balloon, "La France." He has published numerous memoirs, and among them, an important one on the "Conditions of Safety of Motor-Aerostats," and a learned study on "Races and Record Tests of Motor-Aerostats."

Renard Société Française des Trains.—

11 Rue Lafayette, Paris, France. Mfrs. gasoline commercial automobiles. (Renard.)

Renaudin, H.—36 Rue Urbain IV., Troyes, Aube, France. Mgr. non-skids.

Renault, Fernand.—7 Rue de Pen-
thierre, Paris. Born at Paris. Nov. 28,
1864. Co-partner in the Renault Frères

automobile works. Vice-President of the Automobile Section of the Syndical Chamber of the A. C. F.

Renault Frères.—139 Rue du Point du Jour, Billancourt, Seine, France. Mfrs. automatic starters, gasoline commercial automobiles (Renault delivery

wagons), and gasoline automobiles (Renault.)

Renault Frères Selling Branch.—Broadway and 57th St., New York City. (Renault.) Est. 1906. Paul Lacroix, Gen. Mgr. Repairing.

Renault, Louis.—4 Rue Puvis de Cha-

vannes, Paris. B. at Paris, Feb. 12, 1877. Chevalier of the Legion of Honor, officer of the Mérite Agricole. Chevalier of the Order Francis Joseph, partner in the Renault Frères automobile wks. Member of the Committee of the

A. C. F. and of the Sporting Committee. He is one of the best known figures in the automobile world.

Renault, Marcel.—Born in 1872. One

of the founders of the Renault Frères automobile works. Took part in the first voiturette races (Paris-Trouville Paris-Ostende, and Paris-Rambouillet), in which, with his brother Louis, he won first places. In the Paris-Madrid race he acci-

dentally fell and died two days afterward.

Rendon y Hermano, J.—Calle 63, No. 501, Merida, Yucatan, Mexico. (Franklin, Monarch, Cameron.)

Renfrew, S. S.—Harvey, N. D. (Buick.)

Renfro's Garage & Supply House.—Tonopah, Nev. (American.)

Reno Garage.—Cor. Lake and 2d Sts., Reno, Nev. (Pope-Toledo, Franklin.)

Renson, F. G.—Gen. Mgr. Koehler Sporting Goods Co., 845 Broad St., Newark, N. J.

Renat & Renst.—Junction City, Kan. (Ford.)

Renstrom Co., Frank O.—424-26 Stanyan St., San Francisco, Cal. (Pullman.) Est. March 1, 1905. Inc. Dec. 20, 1906. Cap. \$160,000. Frank O. Renstrom, Pres., Treas. and Gen. Mgr.; Gus L. Renstrom, Vice-Pres.; Geo. R. Kibbe, Sec. Garage, 40 cars. Repairing. Branch at Oakland, 40 cars. Repairing. Supplies. Branch at Oakland, Cal.

Renstrom, Frank O.—Pres., Treas. and Gen. Mgr. Frank O. Renstrom Co., 424-46 Stanyan St., San Francisco, Cal., and Oakland, Cal.

Renstrom, Gus L.—Vice-Pres. Frank O. Renstrom Co., 424-46 Stanyan St., San Francisco, Cal., and Oakland, Cal.

Renton & Williams Motor Car.—1032 S. Main St., Los Angeles, Cal. (Atlas, Smith)

Reo Auto Co.—1634 Broadway, Denver, Colo. (Reo, Gale, Premier.)

Reo Automobile Co.—Main St., Wolcott, N. Y. (Reo, Premier)

Reo Automobile Co.—283 Halsey St., Newark, N. J. Garage.

Reo Motor Agency.—100 York Sq., New Haven, Conn. (Reo.)

Reo Motor Car Co.—Lansing, Mich. Makers of the Reo car. Cap. \$1,000,000. R. E. Olds, Pres.; Reuben Shettler, Vice-Pres.; E. F. Peer, Sec and Treas.; R. H. Scott, Gen. Mgr.; H. T. Thomas, Designer; J. P. Fillinghane, Supt.; George E. Smith, Purch. Agt.; R. M. Owen, Sales Mgr.

Reo Motor Car Co.—1032 Euclid Ave., Cleveland, O. (Reo, Premier.)

Reo Motor Car Co.—289 Jefferson Ave., Detroit, Mich. (Reo)

Reo Motor Car Co. of Philadelphia.—242 N. Broad St., Philadelphia, Pa. (Reo, Premier.) Est. 1906. Repairing.

Reo Motors, Ltd.—Little George St., London, England. (Reo.)

Reopell, A. V.—Mgr. The Woodward Reopell Co., 18-20 Fort St., Springfield, Mass.

Republic Belting & Supply Co.—1616 W. 3d St., Cleveland, O. Mfrs. clutch and break band leathers, V-shaped and flat fan belts, tool kits. Cap. \$300,000. Est. 1888. E. C. McKay, Pres.; S. C. Cutler, Vice-Pres.; S. H. Moore, Sec. and Treas.; F. J. Man, Mgr. Automobile Accessories Dept.; E. P. Thomas, Mgr.

Belting Dept., and S. C. Cutler, Mgr. Machinery Dept.

Republic Iron & Steel Co.—Stock Exchange Bldg., Chicago, Ill. Mfrs. bolts and nuts, angle, channel and tee iron and steel, bar iron and steel.

Republic Rubber Co., The.—Youngstown, O. Mfrs. tire cement, removable rims, pneumatic tires, solid tires. Branches: 47 Warren St., New York City; 116 Lake St., Chicago, Ill.; 1215 N. Broadway, St. Louis, Mo.; 106 Market St., Pittsburg, Pa.; 103 Beale St., San Francisco, Cal.; 1616 W. 3d St., Cleveland, O.; 139 Congress St., Boston, Mass.; 1562 14th St., Denver, Colo.; 237 Jefferson Ave., Detroit, Mich.

Republic Rubber Tire & Shoe Co., The.—449 W. 53d St., New York City. Mfrs. anti-skid devices and tire treads.

Resilience.—The quantity of work given back by a body that is compressed to a certain limit and then allowed freely to recover itself. The act or power of springing back to a former position; elasticity.

Resiliometer.—A device invented by Mr. C. E. Duryea and employed for testing the comparative resilience of different tires.

Resin.—A dark-brown transparent gum obtained from pine trees. It is used as a flux for soldering, and is sometimes employed on leather faced clutches to increase their adhesion.

Resistance Coil.—See Coil, Resistance.

Resistance, Electric.—The opposition offered to the molecules of a body to the passage through them of an electric current. It varies with the nature, the size, and the length of the wire connecting the two terminals. The resistance is measured in "ohms."

Restelli.—15a via Disciplini, Milan, Italy. Mfrs. motorcycles.

Restivity.—"Restivity," or specific resistance, is a property inherent to the matter constituting the bodies that are conductors of electricity. It depends upon the chemical composition of the body, upon its physical state, and upon its temperature, pressure, etc. It is a factor, the value of which is obtained by multiplying the electric resistance of the conducting body by its straight section, and dividing the product thus obtained by the length of the conductor.

Retainer.—A device in a ball or roller bearing for holding the balls or rollers in place.

Retardation.—The checking or decrease of any movement. See Acceleration.

Rettig, F. J.—Canal St., Wabash, Ind. (Lambert, Ford.)

Return Elbow.—See Elbow.

Revere Drop Forge Co.—Revere, Mass. Mfrs. drop forgings.

Reversible Steering.—See Steering, Reversible.

Reversing Cam.—See Cam, Reversing.

Reversing-engine.—An engine that can be reversed, usually by link-motion, q. v. Gas engines and steam turbines cannot, as a rule, be reversed by any form of valve or other gear.

Reversing-gear.—See Gear, Reversing.

Reversing-lever.—See Lever, Reversing.

Reversing-link.—See Link, Reversing.

Reversing-shaft.—See Shaft, Reversing.

Revillon Frères.—79 Rue de Rivoli, Paris, France. Mfrs. wearing apparel; coats.

Revillon Frères, Inc.—19 W. 34th St., New York City. Mfrs. caps, gloves, gauntlets and miscellaneous wearing apparel.

Revolution.—Motion of a body in a circular path entirely around a center on which it does not necessarily rotate.

Revolutions Counter.—A small apparatus which is placed at the end of a shaft in motion, or in proximity to a part of a machine in motion, in order to measure the number of revolutions made in a certain time. The mechanism of such apparatus varies to infinity.

Revue Commercial Automobile.—Pub. at 16 Rue d'Argenteuil, Paris, France.

Revue de L'Association Générale Automobile.—Pub. at 8 Place de la Concorde, Paris, France.

Revue de Mécanique.—Pub. at Paris, France.

Revue des Publications Automobiles.—Pub. at 27 Rue Ballu, Paris, France.

Revue des Transports Automobiles.—Pub. at 29 quai des Grand-Augustins, Paris, France.

Revue du Touring Club de France.—Pub. at 65 ave. de la Grande Armée, Paris, France.

Revue du Tourisme et des Sports.—Pub. at 20 rue de la Pompe, Paris, France.

Revue Française de Constructions Automobiles.—Pub. at 34 rue de Charonne, Paris, France.

Rex Fire Extinguisher Co.—74 Cortland St., New York City. Mfrs. fire extinguishers.

Rex Imperial Leather Co.—16 Chappel St., Newark, N. J. Mfrs. leather.

Rex Motor Co.—69 Woodward Ave., Detroit, Mich. Mfrs. gasoline marine motors, spark plugs.

Rex Motor Mfg. Co., Ltd.—Coventry, England. Mfrs. Rexette and Littette tricycles and Rex motorcycles.

Rexfords, D. C.—Vice-Pres. Pungs-Finch Automobile & Gas Engine Co., 1524 Jefferson Ave., Detroit, Mich.

Reyburn Motor Car Co.—4601 Olive St., St. Louis, Mo. (Royal, Stearns.)

Reynolds & Archer.—169th St. and Jerome Ave., New York City. Garage.

Reynolds, H. F.—Sec. Coppock Motor Car Co., Decatur, Ind.

Reynolds, Isaac.—Sec., Treas. and Mgr. The F. A. Neider Co., Inc., Augusta, Ky.

Reynolds Motor Works.—3149 Wabash Ave., Chicago, Ill. Garage.

Reynolds, Walter J.—Pres., Treas., Gen. Mgr. and Sales Mgr. Racine Boat Mfg. Co., Riverside, Muskegon, Mich.

Reynolds, Wilbur F.—Partner Rittenhouse Garage, 214-220 S. 23d St., Philadelphia, Pa.

Rheometer.—An apparatus for measuring electric currents.

Rheophores.—The conducting wires attached to each terminal of a battery.

Rheostat.—An apparatus designed to increase or diminish the resistance of an electric circuit, and consisting of a number of coils of wire, which are successively connected into the circuit by the progressive movements of a switch. In certain cases use is made of liquid rheostats, in which the resistance is regulated by the immersion of a metal or carbon plate to a greater or less depth in a conducting bath of a metallic salt.

Rhode, Claire.—Pine Village, Ind. (Haynes.)

Rhode Island Automobile Club.—Providence, R. I. William Penn Mather, Pres.; Charles O. Reade, Vice-Pres.; Charles A. Russell, Treas.; Frank M. Barber, 16 Garnet St., Providence, R. I., Sec.

Rhode Island Machine Co., The.—Providence, R. I. Mfrs. machine work to order.

Rhode Island Malleable Iron Works.—Hills Grove, R. I. Mfrs. malleable iron castings.

Rhode Island Motor Car Co.—69 Broad St., Providence, R. I. (Pope-Hartford, Franklin.)

Rhode Island Second-hand Automobile Reg.—7 Dorrance St., Providence, R. I. Garage.

Rhodes, A.—Cooperstown, Griggs Co., N. D. (Mitchell.)

Rhodes, Benj.—Asst. Supt. Dayton Motor Car Co., Dayton, O.

Rhodes, H. C.—E. Main St., Bay Shore, L. I., N. Y. Garage; supplies.

Rhodes, John F.—109 Church St., Elmira, N. Y. (Waltham, Jackson.)

Rhodes, Lewis F.—Phoenixville, Pa. (Simplicity.)

Rhodes Mfg. Co.—Grand Rapids, Mich. Mfrs. tire tools.

Rialto Automobile Co.—Fresno, Cal. (Winton.)

Rialto Automobile Exchange.—307 W. 44th St., New York City. Garage.

Rib.—A piece of timber that forms one of the sides of a boat. (2) Of a shaft, a longitudinal piece screwed to the periphery; called also a "feather." (3) A

heat radiating device, called also a "gill," "fin," or "flange."

Ribband.—A temporary lengthwise strip following a vessel's curves and bolted to its ribs in order to hold them in place until the planking is secured to them.

Ribbon-brake.—See Brake, Band.

Ribetti e Colonbatto.—Via Bava, Turin, Italy. Mfrs. automobile motors.

Rice & Co., John V., Jr.—Bordentown, N. J. Mfrs. gasoline marine motors.

Rice, Chas.—Waverley, Kan. Garage.

Rice, C. B.—941 8th Ave., Cleveland, O. Garage.

Rice, Herbert H.—Mgr. Pope Motor Car Co., 139 S. East St., Indianapolis, Ind.

Rice, J. J.—Kramer, Ind. (Rambler.)

Rice, Louis E.—Cedar Rapids, Ia. Garage.

Rice, L. H.—Sec., Treas. and Gen. Mgr. The Spalding Engine Co., St. Joseph, Mich.

Rice, M. A.—Baltimore, Md. (Rauch & Lang.)

Rice, P. H., Jr.—Demonstration Dept. National Automobile Co., 957 Main St., Los Angeles, Cal.

Rich, H. M.—Morrisville, Vt. (Pope, Toledo, Pope-Hartford, Pope-Waverley, Cadillac, Jackson.) Est. 1905.

Richard, G.—108 rue St. Maur, Paris, France. Mfr. automobile motors.

Richard, Georges, Société des Automobiles.—1 quai National, Puteaux, Paris, France. Mfrs. gasoline automobiles. (Unic.)

Richard, J. E.—Sec. and Mgr. Charleston Motor Car Co., 161 Meeting St., Charleston, S. C.

Richards & Co., Jos.—Spring Hill, Birmingham, England. Mfrs. springs.

Richards & Simonds.—Main and Elm Sts., Southbridge, Mass. Garage.

Richards Auto Garage.—321 E. State St., Trenton, N. J. (Franklin, Pope-Hartford, Pope-Toledo.)

Richards, J. B.—Second St., Ashland, O. (Ford, Jackson.)

Richards, J. L.—Oakwood Rd., Newton, Mass. Garage.

Richards, J. T.—Vice-Pres. National Casket Co., Chicago, Ill.

Richards, W. E.—Weatherford, Tex. (Cadillac.)

Richardson, C. S.—Sec. and Mgr. Reliance Automobile Co., 547-57 Fulton St., San Francisco, Cal.

Richardson Electric Co.—210 W. 1st St., Duluth, Minn. (Pope-Waverley, Buick, Cadillac, Maxwell, Reo, White.)

Richardson Engineering Co.—Hartford, Conn. Mfrs. charging apparatus, electric motors and spark plugs.

Richardson, Geo. H.—Treas. Kilgore Mfg. Co., 101 Main St., Old Town, Me.

Richardson, J. M.—Pres. Citizens' Mo-

tor Car Co., N. E. cor. 7th and Main Sts., Cincinnati, O.

Richardson, J. R.—11th and West Sts., Wilmington, Del. (Rapid.)

Richardson, Lee.—Redlands, Cal. (Earl)

Richardson Lubricating Co.—Quincy, Ill. Mfrs. oils.

Richardson, M. T.—Pres. and Treas. The Motor Vehicle Pub Co., 24 Murray St., New York City.

Richardson Paper Co.—Lockland, O. (American Mercedes.)

Richardson, R. C.—Asst. Mgr. The E. J. Kehoe Co., Inc., 1659 Broadway, New York City.

Richardson, W. G.—Pres. Lane Sales Co., 514 W. 145th St., New York City. Gen. Sales Agt. for the Lane Motor Vehicle Co., Poughkeepsie, N. Y.

Richford & Co.—52a High Holborn, London, England. Mfrs. storage batteries.

Richley, J. W.—29 S. Beaver St., York, Pa. (Cadillac, Franklin, Winton.)

Richmond Auto & Storage Co.—27 Chenango St., Buffalo, N. Y. Garage.

Richmond County Automobile Club.—New Brighton, S. I., N. Y. J. J. Worrell, Sec.

Richmond Forgings Corp.—Belle Isle, Richmond, Va. Mfrs. drop forgings, crank shafts, connecting rods, hubs and steering knuckles. Cap. \$200,000. Est. Sept., 1905. Jonathan Bryan, Pres.; W. R. Williams, Vice-Pres. and Treas.; O. P. Redford, Sec. and Gen. Supt.; E. D. Whitmayer, Supt.; D. B. Jacobs, Foreman Hammer Dept

Richmond-Jarvis Co.—13 Park St., Grand Rapids, Mich. (Jewel, Rambler, National.)

Richmond, J. A.—Sec. and Treas. Willard Storage Battery Co., 1279-81 Bank St., Cleveland, O.

Richmond, J. R. H.—Pres. National Battery Co., Buffalo, N. Y.

Richter Bros.—2406 Grand Ave., Kansas City, Mo. Repairing. (Moon.)

Richter, Robt. H.—1421 Michigan Ave., Chicago, Ill. (Hotchkiss.)

Richwine, W. A.—Mgr. Hiland Automobile Co., 5811-17 Center Ave., Pittsburgh, Pa.

Rick, James.—Pres. Reading Automobile Co., 26 S. 5th St., Reading, Pa.

Rickey Machine Co.—92 Eaton Pl., E. Orange, N. J. (Marmon.)

Riddell Automobile Co.—720 Locust St., Des Moines, Ia. (Buick, Cadillac, Franklin, Winton.)

Ridgely, William Barrett.—Pres. Witherbee Igniter Co., 541 W. 43d St., New York City.

Ridgway Automobile Co.—Ridgway, Pa. Garage.

Riding.—A driving-chain is said to "ride" when it mounts on the teeth of the

sprocket and rests upon them, and two gear-wheels are said to ride when they become displaced so that the tips of the teeth come into contact.

Riding, Driving & Automobile Club.—Montclair, N. J.

Riding & Driving Club.—Baltimore, Md.

Riding & Driving Club.—Prospect Park Plaza, Brooklyn, N. Y. Garage.

Rieman, Herman.—Chemnitz-Gablenz, Germany. Mfrs. acetylene and oil lamps.

Riesner, Josef.—VI. Schmalzhofg. Vienna, Austria. Mfr. motorcycles.

Rietveld, H.—Pella, Ia. (Waltham.)

Riffier.—A file of which the axis or center line is curved.

Rigaud, A.—251 rue du Faubourg de Roubaix, Lille, France. Mfr. automobile motors.

Riggs, J. Dudley.—1118 Cathedral St., Baltimore, Md. (Simplex.)

Riggs Land Co.—Redfield, S. D. (Lambert.)

Riggs, T. D.—10 Clinton St., Hartford, Conn. (Isotta, Simplex.)

Right-hand Screw.—See Screw.

R'jwielenfabriek Gruno.—Winschoten Holland. Mfrs. motorcycles. (Gruno.)

Riker, Andrew Lawrence.—Vice Pres. and Chief Engr. The Locomobile Co. of America. B. New York City, Oct. 22, 1868. Ed. private

schools, Columbia College Law School. Director Locomobile Co. of America, Mem. A. C. A., N. Y. Motor. A. C. of Bridgeport, Republican, Engineers', Transportation, Baltusrol Golf. Res. 1416 Fairfield Ave., Bridgeport, Conn.

Office, Locomobile Co. of America. Bridgeport, Conn. In the trade since 1896. Built self-propelled vehicle in 1884. Recreations, automobiling, yachting.

Riley & Son, Wm. B.—324-326 Market St., Philadelphia, Pa. Mfrs. automobile robes.

Riley Cycle Co., Ltd.—City Works, Coventry, England. Mfrs. tricar and gasoline automobiles. (Riley.)

Riley Engine Co.—Castle Works, Coventry, England. Mfrs. transmission gears.

Riley-Klotz Mfg. Co.—17 Mulberry St., Newark, N. J. Mfrs. horns.

Riley, N. J.—Vice-Pres. Studebaker Automobile Co., South Bend, Ind.

Rim.—The exterior circle of a wheel between the spokes and tire. For pneumatic tires the rim is formed of a circle

of steel, the sides of which are curved inward so as to form "clinchers," and which is placed upon the wooden felly to which are attached the spokes of the wheel. The "bead" of the tire hooks under the clinchers, which holds it fast to the rim. The rims now most used correspond to tires of the external diameters of 65, 75, 85, 90, 105, 120, 135, 150 mm. In designating them, the section of the tire that is to be placed on them is preceded by the external diameter of the inflated tire. Thus, one tire will be designated 650x65, another 810x90, and so on. In England and America, $2\frac{1}{4}$, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, 4, $4\frac{1}{2}$, 5, $5\frac{1}{2}$ inch tires are used.

Rim-clutch.—See Clutch, Rim.

Rim, Detachable.—A rim designed to permit of a quick detachment of the tire. Many different forms of such a rim have been devised and consist chiefly of two rings which slip over a rim on the wheel provided with suitable channels or grooves to receive them, and are secured therein by various methods, one of which consists in the use of a turnbuckle to draw the ends of the ring together, thus causing it to grip the rim in the channel.

Other styles of rim are entirely detachable and do not require the removal of the tire therefrom when punctured on the road, since a spare rim having on it a tire already inflated can be attached, and the punctured one repaired at leisure. In the Christie system, shown in the figure, the rims are mounted on specially built wheels having twelve hollow brass spokes for both front and rear wheels. The rims are attached to lugs on the rims by bolts through the ends of each spoke, and a rim can be taken off and another put on in less than a minute.

Rim, Efficiency at.—See Efficiency at the Rim.

Rinehard, A. B.—Akron, O. (White.)

Ring-armature.—See Armature.

Ring-bolt.—See Bolt, Ring.

Ring, Deck.—See Deck-ring.

Ring Lubrication.—See Lubrication.

Ring, M. B.—19 Chestnut St., Norwich, Conn. (Maxwell.)

Ring, Packing.—See Packing-ring.

Ring, Piston.—See Piston-ring.

Riordan & Riggs.—Watertown, N. Y. (Cadillac.)

Riotti, C. C.—Vice-Pres. Standard Motor Construction Co., 180 Whiton St., Jersey City, N. J.

Riotti, E. A.—Sec. Standard Motor Construction Co., 180 Whiton St., Jersey City, N. J.

Ripon Knitting Works.—Ripon, Wis. Mfrs. wearing apparel; gloves and gauntlets.

Rippel Steel Foundry Co., E. G.—31-39 Indiana St., Buffalo, N. Y. Mfr. steel castings.

Rippien, Paul P.—Gen. Mgr. The Autolight & Motor Supply Co., Inc., 506-8 N. Broad St., Philadelphia, Pa.

Ripping-cord.—A cord, which, when pulled by the aeronaut, slits open a panel at the top of the envelope of a balloon and deflates it.

Ripping-panel.—A fabric panel which covers a slit of a certain length in the upper part of the envelope of a balloon, and which the aeronaut, by pulling on what is called a "ripping-cord," detaches in order to deflate the balloon. The ripping-panel is employed in landing, either for instantly deflating the balloon, and thus eliminating dragging, or, after landing, as a normal and rapid method of deflation in conjunction with the valve.

Risden, C. W.—223 W. 8th St., Los Angeles, Cal. (Indian.)

Rising.—A narrow strake immediately below the thwarts in a boat.

Rising & Co., C. E.—Park St., Portland, Me. Repairing.

Risley, W. H.—Venice, Cal. Garage.

Rissman, Carl.—Hanover, Germany. (Monarch.)

Ritchie, G. M.—Supt. Continental Motor Mfg. Co., Muskegon, Mich.

Ritchie, O. N.—Gen. Mgr. and Sole Prop. Advance Mfg. Co., B St., 2 blocks north of Main St., Hamilton, O.

Rittenhouse Garage.—214 to 220 S. 23d St., Philadelphia, Pa. (American Mercedes, Wayne.) Est. 1900. Partnership Charles Fraser and Wilbur F. Reynolds. Garage, 125 cars. Repairing.

Ritter, Henry.—Supt. The Lunkenheimer Co., Cincinnati, O.

Ritter Mfg. Co.—242 Jefferson Ave., Detroit, Mich. Mfrs. wood and metallic bodies, automobile tops, glass wind shields.

Ritter, Wm. J. F.—123 N. Philips St. Youngstown, O. (Peerless, Packard.) Est. 1904. Cap. \$50,000. Repairing.

Rivers-Jacoby Auto Co.—2651 Monroe St., Toledo, O. (Aerocar, Rambler.)

Riverside Auto Transfer Co.—Riverside, Cal. Garage.

Riverside Body Factory.—Buffalo, N. Y. Mfrs. bodies.

Riverside Garage.—10th St., near Market, Riverside, Cal. (Maxwell.)

Riverside Steel Casting Co.—451-473 Riverside Ave., Newark, N. J. Mfrs. crucible steel castings. Cap. \$125,000. Est. 1905. Thomas Malcolm, Pres.; P. S. Kimel, Vice-Pres.; J. S. Kimel, Sec. and Treas.

Rivet.—A short cylindrical fastener of metal with a strong head at one end.

used for forming a joint between overlapping plates, etc. (Fig. 1). The rivet is

Fig. 1. Fig. 2.

inserted in a hole which has previously been drilled or punched through the plates and is then "closed," that is, a second head is formed by hammering in the cold or while the rivet is still hot from the rivet-forging (Fig. 2). Whether a rivet is inserted hot or cold depends upon its size. Small iron and steel and copper rivets are inserted cold. The rivet is "upset" by means of a "riveter" and hammer. The "riveter" or "set" is a sort of punch, one end of which is hollowed according to the form of the rivet head.

Rivet-joint.—See Joint, Reducing.

Rivet-set.—A tool called also a "cup-set" and "snap," for forming second heads in rivets.

Road.—See Cambered, Corduroy and Macadam Road.

Road-metal.—See Metal.

Road, Rules of the.—See Section 4.

Road-wheel.—See Wheel, Road.

Roanoke Auto Co.—107 Church St., Roanoke, Va. (Rambler.)

Robben, H. J.—Treas. The Victor Rubber Co., Springfield, O.

Roberts, R. M.—140 Indiana Ave., Anderson, Ind. Mfr. gasoline automobile motors.

Robbins, A. L.—Mech. Engineer Sandusky Foundry & Machine Co., Sandusky, O.

Robbins & Co., Irwin.—32 E. Georgia St., Indianapolis, Ind. Mfrs. wood and metallic bodies, automobile tops.

Robbins, G. D.—Cor. Crockett and Loyola Sts., San Antonio, Tex. (Mitchell.)

Robbins, H. G.—Treas. Nungesser Electric Battery Co., 2519 King Ave. N. E., Cleveland, O.

Robbins Mfg. Co., John.—58 Kneeland St., Boston, Mass. Mfrs. license numbers, name plates, steel stamps and stencils.

Roborage, J. A.—Meriden, Conn. (Knox, Winton, Cadillac, Haynes)

Robert et Boisseau.—44 Rue du Bois, Levallois, Seine, France. Mfrs. non-skids.

Robert Instrument Co., The.—56 Shelby St., Detroit, Mich. Mfrs. pocket battery meters for testing batteries, timers, spark plugs, spark coils and battery switches. Est. 1903. H. A. Abrahamson, Pres., Sec., Treas. and Proprietor.

Robert, M.—15 rue de Sclessin, Liège, Belgium. Mfr. wood wheels.

Roberts & Co., O. G.—152 N. Main St., Columbus, O. (Stoddard-Dayton, Glide, Jackson.)

Roberts, David.—Talcott Ave., Rockville, Conn. (Pope-Toledo, Pope-Hartford, Pope-Waverley.)

Roberts, E. M.—Pres. and head of Selling Dept. Chase Roberts & Co., West Ave. and 5th St., Long Island City, N. Y.

Roberts, G. G.—Sec., Treas., Pur. Agt., Sales and Adv. Mgr. Racine Boat Co., 16th and Racine Sts., Racine, Wis.

Roberts, Montague.—A New York racing driver, with the E. R. Thomas Motor Co., Buffalo, N. Y., who has figured in nearly all the important contests on road and tracks in the New York district during recent years. He participated in the Vanderbilt Elimination Trials, 1905 and 1906, Atlantic City beach races,

etc. Won the 24-hour Brighton Track race in 1907.

Roberts Non-Skid Motor Tire Co.—Gripwell Works, St. Mary's Row, Birmingham, England. Mfrs. non-skids, leather tires, gauges.

Robertson & Bennett.—Keene, N. H. (Stanley, Rambler.)

Robertson & Doi.—Denver, Colo. Mfrs. automobile tops.

Robertson & Son, J.—Fleetwood, England. Mfrs. steam commercial automobiles.

Robertson, E. B.—204 Washington St., South Norwalk, Conn. Garage.

Robertson, J. W.—Taunton, Mass. (Elmore, Cadillac.)

Roberty, A.—115 rue de Rome, Marseilles, France. Mfr. exhaust horns.

Robin, Joseph G.—Pres. Morris Park Motordrome Club, Times Bldg., 42d St. and Broadway, New York City.

Robinson & Adams Co.—522 Spruce St., Scranton, Pa. (Maxwell.)

Robinson & Cleaver, Ltd.—Regent St., W., London, England. Mfrs. wearing apparel; coats

Robinson Auto Station.—Pleasant St., Worcester, Mass. (Cadillac.) Garage.

Robinson, A. W.—Sales Mgr. Locomobile Co. of America, Main St., Bridgeport, Conn.

Robinson, B. J.—Vicksburg, Miss. (Cadillac.)

Robinson, D. N.—Hattiesburg, Miss. (Waltham.)

Robinson, J. E.—Oil City, Pa. (Elmore)

Robinson, P. R.—Pres. New York Sporting Goods Co., 17 Warren St., New York City.

Robinson, Son & Co., Wm. C.—Baltimore, Md. Mfrs. grease, oils and semi-solid oils.

Robinson, T. F.—352 Market St., St. Paul, Minn. (Reliance.) Agent for Morgan & Wright tires.

Robinson, W. A.—56 Prospect St., Woonsocket, R. I. Garage.

Robinson, W. Herbert.—Pres. Penn Spring Works, Baldwinsville, N. Y.

Robinson, W. W.—Adv. Mgr. Witherbee Igniter Co., 541 W. 43d St., New York City

Robling, Edward.—Scranton, Pa. (Indian)

Robson, E. C.—Asst. Sec. Magnolia Metal Co., 113-115 Bank St., New York City.

Robson Smelting Co.—Broadway and Lathrop, Buffalo, N. Y. Mfrs. babbitt metal.

Roby Co., Sidney B.—208 South Ave., Rochester, N. Y. Est. 1897. Agts. and dealers iron, steel, heavy hardware, carriage woodwork and trimmings, motorcycle and automobile supplies. Sidney B. Roby, Pres.; W. S. Roby, Sec. and Treas.

Roby, Sidney B.—Pres. Sidney B. Roby Co., 208 South Ave., Rochester, N. Y. Garage

Roby, W. S.—Sec. and Treas. Sidney B. Roby Co., 208 South Ave., Rochester, N. Y.

Roche, Frank W.—Secretary Motor World Publishing Co., publishers of Motor World and Bicycling World. Traveling business representative of these papers, covering the western trade chiefly. Has been connected with the bicycle and automobile trades since the early '90s, always with the papers

mentioned. Address, 154 Nassau St., New York City.

Roche, J. T., Jr.—Purch. Agt. Loconobile Co. of America, Main St., Bridgeport, Conn.

Roche, William.—40 W. Broadway, New York City. Mfrs. primary batteries, spark coils.

Rochelle Motor Co.—Main St., New Rochelle, N. Y. Garage.

Rochester Automobile Club.—26 Plymouth Ave. S., Rochester, N. Y. Object: To help promote the interests of automobilists. Org. 1898 by Joseph J. Mandery. H. S. Woodworth, Pres.; H. G. Strong, Vice-Pres.; Bert Van Tuyle, Sec. and Treas.; Hon. John A. Barhite, Attorney; A. J. Rockwood, Consulting Engineer. Directors: Wm. C. Barry, Rudolph Schmidt, F. H. Bettys, Lee Richmond, Griff D. Palmer, F. E. Mason, J. S.

Bingeman, A. F. Crittenden and A. J. Rockwood. Promoted Oct. 13, 1906, hill climbing contest at the Dugway; gymkhana, July 13, 1907, and Orphans Day, Aug. 6, 1907, at Ontario Beach; 200 cars participated.

Rochester Automobile Co.—158 South Ave., Rochester, N. Y. (Lansden, Matheson, Packard, Winton, Columbia, Baker.) Est. 1899. Jos. J. Mandery, Prop.

Rochester Garage.—Rochester, N. H. Repairing.

Rochester Gas Engine Co.—Rochester, N. Y. Cap. \$50,000. J. S. Graham, Pres.; J. J. Leary, Vice-Pres.; W. J. Graham, Sec. and Treas.

Rochester Gas Engine Co.—705 Driving Park Ave., Rochester, N. Y. Mfrs. gasolene marine motors.

Rochester Machine Tool Works, Ltd.—Rochester, N. Y. Mfrs. body irons, steam engines.

Rochester Rubber Co.—55 Main St. E., Rochester, N. Y. Agents Morgan & Wright tires.

Rochet et Schneider, Ltd.—57 Chemin Feuillat, Lyons, France. Mfrs. gasolene automobiles. (Rochet-Schneider.)

Rock-cork.—See Cork, Rock.

Rock Creek Auto & Wagon Works.—2613 Pennsylvania Ave. N. W., Washington, D. C. Garage.

Rocking-frame.—A frame carrying the brush-holders of a dynamo and which permits the point of contact of the brushes with the commutator to be varied at will.

Rock Island Battery Co.—9th and Sycamore Sts., Cincinnati, O. Mfrs. dry cells. Cap. \$150,000. Est. 1903. M. S. Rosenthal, Pres.; M. O. Oettinger, Vice-Pres.; M. A. Loeb, Sec. and Treas.

Rock-leather.—See Cork, Rock.

Rock-oil.—See Petroleum

Rockcr.—The support of a brush in a dynamo or electric motor, by means of which the exact position of the brush can be adjusted. (2) On a gasolene-motor a device carrying the brush or brushes resting on the contact-maker, or commutator and enabling them to be rocked forward or backward so as to secure the advance and retard of the spark.

Rockcr-arm.—A lever, called also a "walking beam," forming part of the valve-actuating mechanism, placed on top of the cylinder and transferring the upward motion of the push-rod into the downward motion of the valve-stem. See Beam, Walking. (2) An arm on a rockshaft, as in the valve-mechanism of a steam engine

Rockermeyer, V.—Würzburg, Germany. Mfr. jacks.

Rockford Automobile & Engine Co.—Rockford, Ill. Mfrs. Federal gasolene automobiles, axles, automobile motors, mufflers and wood wheels.

Rockford Automobile Club.—Rockford, Ill. H. W. Dickerson, Sec.

Rockford Engineering Co.—Rockford, Ill. (Babcock.)

Rockford Kalamazoo Fire Extinguisher Co.—277 W. State St., Rockford, Ill. Cap. \$6,000. Est. 1887. A. E. Bartlett, Pres.; E. E. Bartlett, Vice-Pres.; P. F. Schuster, Sec. and Mgr.

Rockingham Automobile Garage.—13 Vaugham St., Portsmouth, N. H. Garage.

Rockland Garage & Auto Co.—12-20 Winter St., Rockland, Me. Garage.

Rockland Machine & Foundry Co.—42 Morris St., Jersey City, N. J. Garage.

Rod, Connecting.—See Connecting-rod.

Rod, Distance.—See Rod, Radius.

Rod, Piston.—See Piston-rod.

Rod, Push.—See Push-rod.

Rod, Radius.—See Radius-rod.

Rod, Tappet.—See Tappet-rod.

Rcd, Valve.—See Valve-stem.

Roddy.—2 Bvd. des Italiens, Paris, France. Mfrs. wearing apparel; hats, caps and coats.

Rodefild Mfg. Co.—96 W. Main St., Richmond, Ind. Garage.

Rodgers & Co.—710 Gay St., Knoxville, Tenn. (Reo. Rambler, Oldsmobile, Pope-Waverley, Rapid.) Est. 1899.

Rodgers, C. M.—Buffalo, N. Y. (Rapid.)

Rodgers, Ernest.—Plainview, Tex. (Waltham.)

Roe & Sons, Justus.—52 E. Main St., Patchogue, L. I., N. Y. Garage.

Roebing, W.—Sec. Walter Auto Co., Trenton, N. J., and 59-61 W. 66th St., New York City.

Roehm, Albert H.—Sec., Treas. and Gen. Mgr. Detroit Carriage Co., cor Clay and St. Aubin Aves., Detroit, Mich.

Roehm & Davison, Ltd.—91-95 W. Woodbridge St., Detroit, Mich. Mfrs. and jobbers top fabrics, curtain fasteners, celluloid, buttons and tacks, leather, carpet, bows, hair, webbing, etc. Cap. \$200,000. Est. 1867. Herman Roehm, Pres.; C. A. Davison, Vice-Pres. and Treas.; C. M. Roehm, Gen. Mgr.; J. A. Goodwillie, Sec.; C. B. Noyes, Head of Automobile Dept.

Roehm, C. M.—Gen. Mgr. Roehm & Davison Ltd., 91-93-95 W. Woodbridge St., Detroit, Mich.

Roehm, Herman.—Pres. Detroit Carriage Co., cor. Clay and St. Aubin Aves., and Pres. Roehm & Davison Ltd., 91-95 W. Woodbridge St., Detroit, Mich.

Roemer, Emil.—29-31 School St., Webster, Mass. (Maxwell.)

Roessler und Jauernig.—Aussig-sur-Elbe, Austria. Mfrs. motorcycles.

Roger de Montais.—Beauvoir, par-St.-Jean Froidmental, France. Mfr. transmission gears.

Roger-Durand.—99 Bvd. Beaumarchais, Paris, France. Mfrs. non-skids, chains, radiators.

Rogers & Co., Ralph.—316 N. Main St., Burlington, Ia. (Reo, Rambler.)

Rogers, B. C.—Sec. Connecticut Telephone & Electric Co. Inc., 70 Britannia St., Meriden, Conn.

Rogers, C. E.—34 Beach St., Boston, Mass. Mfr. name plates.

Rogers, Clarence M.—1114 Main St., Buffalo, N. Y. (Rapid.)

Rogers, F. O.—Concord, N. C. (Maxwell.)

Rogers, Ford H.—Pres. Detroit White Lead Works, 532-60 E. Milwaukee Ave., Detroit, Mich.

Rogers, G. V.—Sec. Mitchell Motor Car Co., Racine, Wis.

Rogers, Peet & Co.—258, 842, 1260 Broadway, New York City. Mfrs. wearing apparel, goggles, robes, etc.

Rohr, Frank E.—Winchester, Ind. (Logan.)

Rohrer, R. A.—Altoona Motor Car Co., 718 Green Ave., Altoona, Pa.

Roler, J. S.—171-181 3rd Ave., N. Nashville, Tenn. (Rambler.)

Rolfe-Fox Co.—402 N. Livingston Bldg., Rochester, N. Y. Mfrs. lamp lighting devices.

Rolinson, George H. E.—Mgr. (at New York), The Wells Light Mfg. Co., 44-46 Washington St., New York City.

Roller.—A small steel wheel, called also a "cam-roller," mounted at the end of a valve push-rod and which receives the thrust of the nose of the cam, and has the effect of lifting the rod. See Cam-roller. (2) A cylindrical or conical piece of metal used in roller bearings, roller chains, etc.

Roller Bearing.—See Bearing, Roller.

Roller Bevel Drive.—A system used on the Haynes cars, and in which a large sprocket having specially shaped teeth is used instead of the usual large bevel-gear on the differential, while for the bevel-pinion is substituted one having hardened and ground steel rollers set at an angle to match the teeth on the large ring. This form of drive eliminates the side-thrust and is claimed to be very efficient.

Roller, Cam.—See Cam-roller.

Roller-chain.—See Chain.

Roller-contact.—See Timer.

Roller, Friction.—A disk of which the periphery is faced with leather, or which is entirely of leather, and is rotated by simple friction by means of a wheel or plate.

Roller-gear.—See Gear, Roller.

Rollet et Cie.—67 ave. Parmentier, Paris, France. Mfrs. tire pumps and lubricators.

Rolling Friction.—See Friction.

Rollins, Fred M.—Treas. and Mgr.,

The Hoeffcker Co., Motor Mart, Park Square, Boston, Mass.

Rolls Royce Import Co.—1875 Broadway, New York City. (Rolls-Royce.) Est. 1907. Cap. \$50,000. Walter C. Martin, Mgr. Repairing.

Rolls-Royce, Ltd.—14 Conduit St., London, W., England. Mfrs. gasoline automobiles (Rolls-Royce).

Romaine, D. W.—Mercer and Brunswick Sts., Jersey City, N. J. (Marion.)

Roman Automobile Co.—1907 Market St., Philadelphia, Pa. Garage.

Roman Rim Co.—Coventry, England. Mfrs. metallic rims.

Rome Brass & Copper Co.—Rome, N. Y. Mfrs. sheet and rod brass and copper, brass and copper tubing.

Rome Soap Mfg. Co.—Rome, N. Y. Mfrs. hand soaps.

Ronell, A. L.—Fort Dodge, Ia. (Deere.)

Roos Bros.—Van Ness at Bush St., San Francisco, Cal. Supplies.

Roose, J.—46 rue de Bavière, Brussels, Belgium. Mfr. acetylene lamps.

Roosevelt Auto Co., Inc.—Carteret, N. J. (Knox.)

Root, Charles P.—Editor Motor Age. till 1908. B. Chicago, Ill., Jan. 21, 1863. Ed. public school. Mem. Chicago Motor Club, American Motor League. Res. 663 Kimbark Ave., Chicago, Ill. In the trade, motor cars 1902, motor boats 1895. Used first car 1902, motor boat 1895. Recreations: hunting, automobil- ing, boating.

Roots Oil Motor & Motor Car Co., Ltd.—Chichelly St., York Road, Lambeth, London, S. E., England. Mfrs. automobile motors.

Rope-brake.—See Dynamometer.

Rope-drive.—A system of friction-drive employed on the Holsman cars, and in which steel wire and manila rope cables are employed for transmitting the power from the chain-driven counter- shaft to the rear wheels. The ropes are tightened and power is thereby trans- mitted to the rear wheels by a throwing forward of the counter-shaft through the pulling of a long lever at the right of the driver. A differential is unnecessary, since the ropes can slide without dam- age.

Ropiquet, Cl.—214 rue Jules-Barni, Amiens, France. Mfr. coils.

Roscoe, Benjamin.—Winsted, Conn. (Maxwell.)

Rose.—A perforated plate or cap at the end of a pipe to act as a strainer.

Rose Automobile Co.—1st and Walnut Sts., Spokane, Wash. (Aerocar, National, Mitchel, American Mors.) Cap. \$50,000.

Rose, Chas. B.—Designer and Purch. Agt. American Machine Mfg. Co., Cham- plain and Beaubien Sts., Detroit, Mich.

Rose, Clarence H.—1905 Park Row

Bldg., New York City. Mfr. pipe and brass fittings.

Rose, E. B.—537 Mercer St., Jersey City, N. J. (Maxwell.)

Rose, Edw. I.—Fillmore St., Tonawan- da, N. Y. Mfr. motor boats.

Rose Mfg. Co.—910 Arch St., Philadel- phia, Pa. Mfrs. lamps and gas producers for lighting motor cars and boats. Cap. \$50,000. Angelo Myers, Pres.; H. C. Rosenbiuth, Sec. and Treas. Mem. M. & A. M.

Rosena Bros.—Bucyrus, O. (Reo.)

Rosenblatt, J. M.—Greensboro, N. C. (Jackson.)

Rosenbluth & Co., A. J.—106 Park St., New Haven, Conn. Mfrs. enamel.

Rosenbluth, H. C.—Sec. and Treas. Rose Mfg. Co., 910 Arch St., Philadel- phia, Pa.

Rosenebeck, H.—242 Halsey St., New- ark, N. J. Vulcanizing.

Rosensteel, John E.—High St., Ebens- burg, Pa. (Mitchell.)

Rosenthal, Arthur M.—North and De- troit Sts., Kenton, O. (Reo, Premier, Winton.)

Rosenthal, M. S.—Pres. Rock Island Battery Co., 9th and Sycamore Sts., Cin- cinnati, O.

Rosenthal, Maurice J.—Pres. Fort Wayne Gear Co., North American Bldg., Fort Wayne, Ind.

Rosenzweig, Ben., Jr.—Purch. Agent Buick Motor Co., Flint, Mich.

Roseville Motor Car Co.—620 Orange St., Newark, N. J. (Dragon, Pope- Waverley, Compound.)

Ross, A. H.—Flatiron Bldg., Main St., Akron, O. (Reo.)

Ross & Kramer.—5607 S. Halsted St., Chicago, Ill. Repairing.

Ross, Chas. A.—Sales Mgr. British Columbia Automobile Co., 924 Granville St., Vancouver, B. C.

Ross, Courtney & Co., Ltd.—25 Ash- brook Road, London, N., England. Mfrs. tire pumps and lubricators.

Ross, C. W.—E. mira, N. Y. (Haynes.)

Ross Engineering Co.—19 S. Jefferson St., Chicago, Ill. Mfrs. fluid level indi- cators, chimes, horns and electric speed- ometers.

Ross Gear & Tool Co.—849 Main St., Lafayette, Ind. Mfrs. transmission gears and universal joints.

Ross, H. S.—5607 S. Halsted St., Chi- cago, Ill. Mfr. circulating pumps, gaso- line marine motors, mufflers, tire irons, and glass wind shields.

Ross, Louis S.—Newtonville, Mass. Mfr. steam automobiles.

Ross Motor Car Co., C. A.—40 W. Main St., Little Falls, N. Y. Supplies, garage and repairs.

Ross, R. L.—12th St. and 3rd Ave., Columbus, Ga. Garage.

Ross, R. R.—Head of Selling Dept.,

Peerless Motor Car Co. of N. E., 178 Columbus Ave., Boston, Mass.

Rousseau.—5 rue Greffulhe, Levallois, Seine, France. Mfrs. tops.

Rosse Frères.—Breteuil-sur-Iton, Eure, France. Mfrs. tops.

Rossel et Cie.—Sochaux, pres Montbéliard, Doubs, France. Mfrs. gasoline automobiles (Rossel).

Rosselli.—29 via Nizza, Turin, Italy. Mfrs. motorcycle motors and automobile motors.

Rossendale-Reddeway Belting & Hose Co.—Newark, N. J. Mfrs. brake bands.

Rost, J. P.—Kokomo, Ind. Garage.

Roswell Auto Co.—Roswell, N. Mex. (Buick, Pope-Toledo.)

Roswell Hardware Co.—Roswell, N. M. (Maxwell.)

Rotary Converter.—See Converter, Rotary.

Rotary Pump.—See Pump, Rotary.

Rotary Triplex Pump Co.—126-128 S. Jefferson St., Chicago, Ill. Mfrs. power-driven tire inflators.

Rotary Valve.—See Valve, Rotary.

Rotation.—The movement of a body all of the points of which describe circumferences. The common center of such circumference is the center of rotation. The angular speed defines the rotary motion if the trajectory be known, that is to say, the radius of the circumference described.

Rotation, Couple of.—See Couple, of Rotation.

Rotax Motor & Cycle Co., Ltd.—60 Curtain Road, London, E., England. Mfrs. acetylene lamps.

Roth Bros. & Co.—27-29 S. Clinton St., Chicago, Ill. Mfrs. charging apparatus, electric generators, electric motors.

Roth, F. E.—Supt. Witherbee Igniter Co., 541 W. 43rd St., New York City.

Roth Jack & Tool Co.—68 William St., New York City. Mfrs. jacks.

Roth, Jacob.—1117 State St., Erie, Pa. (White, Cadillac, Peerless.)

Roth, Robert.—1423 North Ave., Bridgeport, Conn. Garage.

Rothbucher, Geo. E. R.—102 Hinsdale St., Brooklyn, N. Y. Mfr. wrenches and tools.

Rother, Chas. O.—Sec. Buffalo Dental Mfg. Co., 587-589 Main St., Buffalo, N. Y.

Rotherham & Sons.—27 Spon St., Coventry, England. Mfrs. tire pumps and lubricators.

Rothschild.—131 ave Malakoff, Paris, France. Mfrs. bodies.

Rothschild, Albert.—Wilmington, N. C. (Maxwell.)

Rottenstone.—Finely divided silica left as a powder after siliceous limestones have been acted on by water containing carbonic acid. It is used for polishing articles of metal.

Roue Élastique L. G.—53 bis, rue de

Chateaudun, Paris, France. Mfrs. elastic wheels.

Rou Soleil, La.—3 square Moncey, Paris, France. Mfrs. elastic wheels.

Rounds, Geo. E.—Park Ave., opp. R. R. Station, Plymouth, Mass. Garage, repairing.

Roussey Tire Co., A. J.—621 Harrison St., Fort Wayne, Ind. Garage.

Rover Co., Ltd., The.—Coventry, England. Mfrs. gasoline automobiles (Rover cars).

Rover Cycle Co., Ltd.—Coventry, England. Mfrs. motorcycles (Rover).

Rowe, H. M.—Mgr. White Garage, 1010 Morton St., Baltimore, Md.

Rowland Motor Co.—Chapel and Wallace Sts., New Haven, Conn. Repairing.

Rowlands, Wm. & Harvey.—Frankford, Philadelphia, Pa. Mfrs. leaf springs.

Rowley, H.—Billings, Mont. Garage.

Roy & Co., James.—Watervliet, N. Y.

Mfrs. cloth and carpet trimmings.

Royal Automobile Club, The.—119 Piccadilly, London, W., England. Patron: His Majesty the King; Vice-Patron, H.R.H. The Prince of Wales; Pres., the Duke of Sutherland, K.G.; Vice-Presidents, the Earl of Dudley, P.C., the Earl of Onslow, P.C., G.C.M.G., Lord Stanley, P.C., C.B., Lord Montagu of Beaulieu, Sir David L. Salomons, Bart., Lt.-Col. Mark Mayhew; Chairman, C. D. Rose, M.P.

Royal Automobile Club Journal.—Pub. at 119 Piccadilly, W., London, England.

Royal Battery Co.—108-110 Duane St., New York City. Mfrs. storage batteries, "Royal Multiplex," lamps and attachment. Cap. \$5,000. Est. 1905. Officers: Emil Grossman, Julius Silvermann, Carl Kaufman, and Hugo Gerusback. Gen. Mgr., Hugo Gensback; Foreman, Frank Schalow.

Royal Changement de vitesse.—15 bvd. de Strassbourg, Boulogne-sur-Seine, France. Mfrs. transmission gears.

Royal Equipment Co.—165 Housatonic Ave., Bridgeport, Conn. Mfrs. marine motors, brakes. Est. 1904. A. F. Law, Designer. F. P. Scribner, Supt.; C. M. Hall, Adv. Mgr.

Royal Lubricating Oil Co.—116 Broad St., New York City. Mfrs. oil, automobile body polishes, metal polishes and automobile body soaps.

Royal Metal Steel Co., Inc.—24 State St., New York City. Mfrs. steel and chrome-nickel steel.

Royal Motor.—15 bvd. de Strassbourg, Boulogne-sur-Seine, France. Mfrs. automobile motors.

Royal Motor Car Co.—Gordon Park Blvd. and Lake Shore Tracks, Cleveland, O. Makers of the Royal Tourist car; first marketed in 1901. Eight models made since. Cap. \$1,000,000. E. D. Shurmer, Pres. and Gen. Mgr.; Daniel

Shurmer, Vice-Pres.; A. D. Hatfield, Sec. and Treas.; Robert Jardine, Designer; A. C. Miller, Supt.; B. G. Gilmore, Purch. Agt.; A. D. McLachlan, Sales Mgr.

Royal Motor Works.—30 Russell St., Worcester, Mass. Mfrs. motorcycles.

Royal, P. P.—Drummond, Mont. (Waltham.)

Royal Polish Co.—301-303 W. 63rd St., Chicago, Ill. Mfrs. automobile body polishes.

Royal Tourist Car Co.—1108 E. 15th St., Kansas City, Mo. Garage.

Roydale Engineering Co.—Trafalgar Works, Huddersfield, England. Mfrs. gasoline automobiles (Roydale).

Rubay, Leon.—1697 Broadway, New York City. Est. 1900. Supply dealer and importer Lacoste ignition coils, commutators, magnetos, batteries, wire terminals, plugs, Bleriot lamps, Malicet and Blin ball bearings. Leon Rubay, Pres. and Treas.; Paul Lacroix, Vice-Pres.; Geo. Lamberty, Sec.

Rubber.—The coagulated latex or milk of several plants, mostly of the order Euphorbiaceae, growing in tropical countries. The valley of the Amazons produces annually about thirty thousand tons of rubber, which, from the port of shipment, is known as "Para." This rubber is derived from *Hevea Brasiliensis*. South America produces also other sorts of rubber, from the *Castilloa elastica* which is known as "Centrals," and from the Atlantic states of Brazil are obtained grades of rubber known as "Ceara," "Pernambuco" and "Mangabeira." Africa ranks next to Brazil as a rubber-producing country, and the bulk of the product is from the Landolphia, a vine or creeper. Rubber is an elastic, gummy, tenacious substance, and was originally employed for erasing pencil-marks, whence the popular name of "rubber." Natural rubber consists chemically of hydrocarurets of the family of "terpenes." It is more or less soluble in sulphide of carbon, benzene and its homologues, toluene and xylene, turpentine, petroleum spirits, chloroform, etc. Heated above 250° F., it softens and does not again become hard. This and other properties restricted the industrial applications of rubber till the discovery, by Charles Goodyear, of a process of "vulcanizing" by which it is rendered indifferent even to extreme heat or cold. Vulcanization consists in the mechanical mixture of dry rubber with sulphur, and the exposure of the compound to heat. The effect of the process is to change the rubber from a plastic mass, which becomes sticky on heating and brittle by cold, into a substance which is elastic, but not plastic, unaltered by moderate temperatures and much less liable to deterioration by age. The "cold cure" is

another method of vulcanization which is applied to thin articles, and consists in mixing chloride of sulphur with bisulphide of carbon and dipping the rubber into the mixture. In the electrical industry rubber is widely applied as an insulating material. It is used either in the form of a thin plastic mass which surrounds the wire, and is then vulcanized, or in the form of tape for direct insulation or for making joints. In the form of "vulcanite" or "ebonite" it is of even greater service. One of the most important of the rubber industries is that of the rubber tire—solid tires for cabs, carriages, motor-trucks, etc., and pneumatic tires for cycles and motor-cars.

Rubber.—See File.

Rubber Cement.—A solution of pure rubber in sulphide of carbon used for the repair of rubber and leather articles.

Rubber, Hard.—The same as ebonite, q. v.

Rubber Packing.—See Packing, Rubber.

Rubber Paint Co.—154-156 W. Van Buren St., Chicago, Ill. Mfrs. enamel and varnishes.

Rubber Solution.—Pure rubber dissolved in naphtha. It is manufactured in large quantities and used in repairing tires and other rubber objects.

Rubber Tire Co., The.—1215 Arch St., Philadelphia, Pa. Mfrs. cellular tires.

Rubber Tire Repair Co.—85 E. Gay St., Columbus, O. Vulcanizing.

Rubery & Co.—Darlaston, England. Mfrs. pressed steel frames.

Rubeaky, R. J.—Supt. H. E. Wilcox Motor Car Co., 1030 N. E. Marshall St., Minneapolis, Minn.

Rubidoux-Riverside Auto Co.—Riverside, Cal. Garage.

Rubright, A.—2nd and Market Sts., Canton, O. (Reo, Premier.)

Ruckert Compound Shock Absorber.—66 Leonard St., New York City. Mfrs. shock absorbers.

Rudder, The.—9 Murray St., New York City. Pub. monthly by The Rudder Publishing Co.

Rudder.—A flat frame hooked by pintles to eye-bolts on the stern-post, and providing a means of steering.

Rudder-gudgeon.—A metal brace provided with eyes and bolted to the stern-post of a boat for the pintles of the rudder to work in.

Rudder-head.—The upper end of the rudder-stock.

Rudge - Whitworth, Ltd.—Coventry, England. Mfrs. metallic wheels.

Rudolph, Wm. F.—N. E. cor. Broad and Wallace Sts., Philadelphia, Pa. Est. 1898. Repairing.

Rudy, W. E.—125 E. Market St., Lima, O. (Ford, Premier.)

Rue Mfg. Co.—215 Race St., Philadelphia, Pa. Mfrs. collapsible buckets, drop forgings and ejectors.

Ruede, F. S.—Akron, O. (Dolson.)

Ruegg Frères.—Riedickon-Uster, Switzerland. Mfrs. motorcycles. (Schwalbe.)

Rugee, Fred P.—Vice-Pres. The London Auto Supply Co., 1229-1231 Michigan Ave., Chicago, Ill.

Rugee, Jno. C.—Pres. and Gen. Mgr. Merkle Motor Co., 1099 26th Ave., Milwaukee, Wis.

Ruggles, F. A.—Ware, Mass. Garage.

Ruhl & Johnston.—Decatur, Ill. (Pope-Waverley.)

Ruhrkorff Coil.—See Coil, Induction.

Ruhrkorff, H. D.—A German Scientist who died in Paris in 1877. He invented many electric apparatus, among which is the coil that bears his name.

Ruland, Arthur L.—Pres. La France Motor Co., 753 5th Ave., New York City.

Rumble, John T.—Sales Mgr. Dorris Motor Car Co., 22-38 S. Sarah St., St. Louis, Mo.

Rumsey, Howard C.—Sec. A. & J. Mfg. Co., 26 W. Randolph St., Chicago, Ill.

Rumney, John G.—Treas. and Gen. Mgr. Detroit Steel Products Co., 91 E. Fort St., Detroit, Mich.

Rumpp & Sons, C. F.—Philadelphia, Pa. Mfrs. hampers and watch holders.

Rumsey & Co.—Seneca Falls, N. Y. Mfrs. fuel and air pumps.

Run.—The aft part of a boat's bottom where it fines off from the floor timbers to the stern-post.

Runabout.—A light vehicle of a weight not exceeding 1,000 pounds and with a seating capacity for two persons.

Rundle-Spence Mfg. Co.—Milwaukee, Wis. Mfrs. pipe and brass fittings.

Runek Geo. H.—Mgr. More-Power Co., Lowell, Mass.

Runkle, Jerry.—Gainesville, Fla. (Waltham.)

Runmele, E. H.—807 N. 8th St., Sheboygan, Wis. (Winton.)

Runner.—The channel by which fluid metal enters a mould.

Running-board.—A long board, called also a "foot-board," placed between the mud-guards, at the sides of the car, for facilitating entrance thereinto.

Running-brake.—See Brake, Foot.

Running-gear.—See Gear, Running.

Running Hot.—The same as overheating. See Overheating.

Rusakool Metal Co.—1095 Niagara St. Buffalo, N. Y. Mfrs. babbitt metal.

Ruppe, A. und Sohn.—Apolda, Germany. Mfrs. gasoline automobiles (Piccolo).

Ruprecht Electrical Co.—769 Cedar Ave., Cleveland, O. Mfrs. storage batteries, magnetos and ignitum dynamos, spark coils.

Ruprecht, Louis.—Treas. and Gen. Mgr. Flatbush Motor Car Co., 44-48 Snyder Ave., Brooklyn, N. Y.

Rush, C. W.—2036 Euclid Ave., Cleveland, O. Garage.

Rush, Gardner & Bartlett Co.—Marlin, Tex. (Pope-Hartford.)

Rush, J. K.—Bel Air, Md. (Waltham.)

Rush, N. L.—7 Motor Mart, Park Sq., Boston, Mass. (Northern Pullman, Pennsylvania.)

Rushmore Dynamo Works.—Plainfield, N. J. Mfrs. searchlights, acetylene generators and sirens. Est. 1892.

Russ, F. A.—Motor Sales Co., 1771 Broadway, New York City.

Russel & Hoague.—425 E. Main St., Kalamazoo, Mich. Garage, repairs and supplies.

Russel, Burdett & Ward Bolt & Nut Co.—Port Chester, N. Y. Mfrs. nuts in all sizes, A. L. A. M. or any other standard.

Russel, H. J.—32 Exchange St., Worcester, Mass. Mfrs. automobile tops.

Russell, D. W.—Sec. Treas. and Dir. Hercules Automobile Specialty Mfg. Co., 115 Dearborn St., Chicago, Ill., and 936 Denver Ave., Los Angeles, Cal.

Russell, Eugene Frederick.—Supt. Locomobile Co. of America. B. Ilion, New York. Sept. 30, 1865. Ed. high-school

and self-taught technical, learned machinist trade, afterwards draughtsman and later master mechanic. Mem. clubs: Algonquin of Bridgeport, Quinnipiac of New Haven. Res. 826 Park Ave., Bridgeport, Conn.; Office, 2 Main St., Bridge-

port, Conn. In the trade since March 20, 1898. Used first car March, 1898. In trade first as Asst. Supt. of Pope Mfg. Co., motor vehicle department. Recreations: automobiling, fishing.

Russell, Henry.—Pres. Olds Motor Works., Lansing, Mich.

Russell, J. S.—Prop. Glide Motor Car Co., 327 Baronne St., New Orleans, La.

Russell, L. B., Jr.—Commanche, Tex. (Waltham.)

Russell, T. M.—Middletown, Conn. (Locomobile.)

Russell, W. C.—666 State St., New Haven, Conn. Garage.

Russel, Walter S.—Pres. Detroit Steel Products Co., 91 E. Fort St., Detroit, Mich.

Rust.—See Iron Rust.

Rust, Geo. E.—2201 Second Ave., Seattle, Wash. (Aerocar, Reliance.)

Russits Fur Co., John.—73-77 Mercer St., New York City. Mfrs. wearing apparel.

Rutan Co., P. C.—46 Front St., Port Jervis, N. Y. (Pope-Hartford.) Garage, repairing.

Rutenber Co.—Chicago, Ill. Mfrs. gasoline tank gauges.

Rutile.—A dioxide of titanium containing 98 per cent. of titanitic acid and 2 per cent. of iron. Its specific gravity is 4.2. It cannot be scratched with a knife, but can be marked with a quartz crystal. It is now used in the construction of aeroplanes. The advent of flying-machines actuated by gasoline motors which run at very high speed has proved that bearings and axles of ordinary metals submitted to speeds of 2,500 to 3,000 wear so rapidly and heat so quickly that the necessity has arisen for some metal to stand the strain and velocity without wearing or heating, and this has been found in the metal titanium of which rutile is the purest ore. See Titanium.

Rutland Automobile Club.—Rutland, Vt. Chas. A. Matthews, Sec.

Rutland Machine & Auto Co.—55-61 Wales St., Rutland, Vt. (Buick, Winton, Franklin.) Garage; repairing.

Rutland Motor Co.—76 West St., Rutland, Vt. (Maxwell, Waltham.)

Rutledge Garage.—100 Rutledge St., Brooklyn, N. Y. Garage.

Rutter, C. L.—Henry and New Hampshire Sts., Lawrence, Kan. (Pope-Waverley, Maxwell.)

Rutz, W. A.—Mgr. Continental Caoutchouc Co., Buffalo, N. Y.

Ryan & Co., J. J.—68-74 W. Monroe St., Chicago, Ill. Mfrs. brass, bronze, copper and aluminum castings.

Ryan & Long.—584 Oneida St., Appleton, Wis. Mfrs. vehicle washing apparatus.

Ryan, Garret T.—Phoenix, Ariz. (National.)

Ryan, Harris J.—Stanford University, Cal. (Waltham.)

Ryan, Joseph Edmond Ginnane.—Newspaper editor with Chicago Inter-Ocean. B. The Hermitage, County

Photo by Spencer & Wells

Clare, Ireland, July 14, 1870. Ed. Sacred Heart College, Limerick, Ireland, and Blackrock University, Dublin. Treas. Vaudette Theater Co., Pres. Wonderland Co. and International Pure Food Exposition Co. Mem. Chicago Athletic Ass'n., Exmoor Country, Elmhurst Golf, Columbia Yacht, Chicago Press, Ellerslie Cross Country. Res., 263 Dearborn Ave., Chicago, Ill. Office, 108 E. Monroe St., Chicago, Ill.

Ryan, J. F.—Vice-Pres. Byrne Kingston & Co. and Kokomo Electric Co., 339-51 Smith St., Kokomo, Ind.

Ryan, J. L.—Vicksburg, Miss. Garage.

Ryan, M.—Head of Plating Dept. Jos. N. Smith & Co., 4th and Porter Sts., Detroit, Mich.

Ryan, P. S.—9-10 Central Arcade, Schenectady, N. Y. Garage.

Ryan, T. F.—Vice-Pres. Puget Sound Auto Co., 1405-7 Broadway, Seattle, Wash.

Ryde Motors, Ltd.—Grosvenor Road, West Ealing, London, W., England. Mfrs. automobile motors.

Ryhmman, R. L.—Supt. Continental Automobile Co., St. John and Olive Sts., New Haven, Conn.

Rykert & Gould.—122 California St., Sycamore, Ill. (Cartercar.)

Ryley, J. A.—23½ Martineau St., Birmingham, England. Mfr. spark plugs.

Ryman Co., K. L.—164 Market St., Newark, N. J. Mfrs. drop forgings.

S

S.—Symbol for "sulphur."

S.—Symbol for "surface."

s.—An abbreviation of "second."

Sb.—Symbol for "antimony."

Sn.—Symbol for "tin."

Sp. gr.—An abbreviation of "specific gravity."

S. C. Fabric Tire Tread Co.—1900 Broadway, New York City. Mfrs. anti-skid devices, tire treads.

S. E. I. Co.—Syracuse, N. Y. Mfrs. ammeters and voltmeters.

S-wrench.—See Wrench, S.

Sabella Motor Car Co.—Camden Town N. W., England. Mfrs. gasoline automobiles (Sabella cars).

Sabin, C. H.—3 Congress St., St. Albans, Vt. Garage.

Sabine Supply Co.—Orange, Tex. (Cadillac.)

Sack, F. W.—Vice-Pres. Bassett-Pressley Co., Western Reserve Bldg. Cleveland, O.

Sackett, H. I.—256 Pearl St., Buffalo, N. Y. Garage.

Sanborn, E. S.—Ormond, Fla. (Waltham.)

Sanborn, Frank W.—176 N. Main St., Concord, N. H. (Rambler.)

Sanborn, L. W.—Partner Linz-Sanborn Automobile Co., 505 Golden Gate Ave., San Francisco, Cal.

Sanchez-Jaurez & Co.—P. O. Box 1225, Mexico City, Mex. (Peerless.) Garage.

Sand.—Fine sand, after being perfectly dried in a stove, is frequently employed in mechanics for filling the insides of copper and iron tubes which are to be curved when heated.

In case of fire, sand and earth are the best extinguishers, where there is no great quantity of water at hand; and sand is undoubtedly the best medium for the rapid extinction of burning gasoline or oils, the material acting by absorption.

The principal element in moulding sand, now clayey, now mixed with grit, more or less siliceous, must be sufficiently plastic to take a sharp imprint of the object to be moulded. Its plastic qualities are increased by braying and sifting, and mixing it with pulverulent materials, the nature and proportions of which vary according to the metal to be cast or the character of the pieces to be moulded.

Sand-blast.—When mechanical pieces after brazing and forging are hard to work because of the "skin" and vitreous glaze which are formed on their surfaces, they are submitted to the action of a "sandblast."

This means the projection, on the piece, of a jet of fine sand, driven at great velocity by means of steam or compressed air. Each particular grain of sand acts as an abrasive, which penetrates all the interstices of the piece, and cleans and scrapes it very quickly.

Sand-boils.—Protuberances, called also "blisters," on one side of a tire caused either by sand working in through a cut and collecting in one or more places, or by the separation and granulation of the rubber between each layer of fabric.

Sand-paper.—See Paper, Sand.

Sandborn, F. E.—Supt. Albert Champion Co., 541 Tremont St., Boston, Mass.

Sander & Co., J. M.—Akron, O. (Cartecar.)

Sanders, L. B.—Gen. Mgr. Motor Car Dept., Fiss, Doerr & Carroll Co., 153 E. 24th St., New York City.

Sandford, F. L.—Co-partner the Harrington Garage, Worcester, Mass.

Sandford, M. C.—Clyde, O. (North ern.)

San Francisco Automobile Trade Association.—San Francisco, Cal.

San Francisco Motor Co.—Berkeley, Cal. (Dolson.)

Sangamo Auto Garage Co.—Springfield, Ill. (Queen.)

Sanger, E. F.—Milwaukee, Wis. (Maxwell.)

Sanger, Geo. T.—206 W. Main St., Orange, Franklin Co., Mass. (Waltham, Reo, Yale motorcycles.) Est. 1904. O. D. Hapgood, Repair Dept.; G. T. Sanger, Sale Dept. Garage, six cars. Repairing.

Sanger, G. T.—Sales Dept., Geo. T. Sanger, 206 W. Main St., Orange, Franklin Co., Mass.

San Giorgio, Societa Italiana per Costruzioni di Automobili.—Sestri Ponente, Italy. Mfrs. gasoline automobiles (San Giorgio cars).

San Luis Auto & Machine Co.—San Luis Obispo, Cal. (Maxwell.)

Sanroma, Alfonso.—238 calle Aragon, Barcelona, Spain. Mfr. motorcycles.

Sans, J. B.—10 rue de l'Oasis, Puteaux, France. Mfr. shock absorbers.

Santa Ana Machine & Foundry Co.—Santa Ana, Cal. Mfrs. steam engines.

Santa Maria Garage.—Santa Maria, Cal. Garage.

Santa Monica Garage.—Santa Monica, Cal. (Maxwell.)

Santa Rosa Garage.—5th St., Santa Rosa, Cal. (Winton.)

Santos-Dumont, Alberto.—150 Avenue des ChampsElysees, Paris, France. Born at Sao-Paulo, Brazil, July 20, 1873, of parents of French origin. Chevalier of the Legion of Honor. He went to France when very young, and, as long ago as 1898, made himself well known as an automobilist and aeronaut. Conceiving

the idea of installing an internal combustion motor on a dirigible balloon, he constructed and navigated several successive models of the "Santos-Dumont," with which he obtained a success that attracted the attention of the public to the dirigibility of balloons.

The Aero-Club instituted a prize to which 100,000 francs was generously added by M. Henry Deutsch for a dirigible balloon which, starting from the park of the Aero-Club, should return thither in 30 minutes after doubling the Eiffel tower.

The prize was won by Santos on "Santos-Dumont VI." He afterwards constructed some new types of dirigibles, of which No. X figured at the review of July 14, 1903, at Longchamp. The celebrated aeronaut is still pursuing his experiments with the same ardor and the same courage that has rendered him so popular.

Saratoga Auto Top Co.—107 W. 46th St., New York City. Automobile repairing.

Saris, J. H.—Beloit, Wis. Mfr. carburetters.

Sarolea, Maison.—269 rue St. Lambert, Herstal, Belgium. Mfrs. motorcycles, tricars (Sarolea), motorcycle motors.

Sartus Ball Bearing Co.—155 Spring St., New York City. Mfrs. ball retainers, separators. Not inc. Est. 1896. G. E. Strauss, Gen. Mgr.

Sarver, Herman.—Muncie, Ind. (Waltham.)

Saturation.—A term applied to the condition of a vapor when it is at the maximum density and pressure which correspond to its temperature. "Saturated steam" is steam in the condition of saturated vapor.

Saturation, Magnetic.—A term used with regard to a magnet when it has been magnetized as strongly as possible.

Sauerbier, Franz.—5 Forsterstrasse, Berlin, S., Germany. Mfr. radiators.

Saule e Pusterla.—41 via Lecco, Como, Italy. Mfrs. motorcycles.

Saulpaugh, C. H.—Mankato, Minn. Garage.

Saurer, Adolph.—Arbon, Switzerland. Mfr. gasoline commercial automobiles (Saurer trucks), automatic starters.

Sauser Jacggi und Co.—Soleure, Switzerland. Mfrs. spark plugs.

Savage, A. B.—Asst. Sec. Franklin H. Kalbfleisch Co., Broadway and 16th St., New York City.

Savannah Auto Brokers.—12 Bull St., Savannah, Ga. Garage.

Save'll, J. E.—Vice-Pres. and Gen. Mgr. Concord Motor Car Co., 64 Huntington Ave., Boston, Mass.

Save'll, J. E.—204 35th St., Chicago, Ill. Garage.

Saw.—An instrument consisting of a serrated thin blade of steel, the teeth of which cut wood or metal by a rasping action. The groove made by a saw is technically called a "kerf." Of the forms of the instrument that will prove useful in a garage, may be mentioned the "hand-saw," for cutting wood; the "hack-saw," for cutting metal, and the "keyhole saw," for cutting along a curve or in a very narrow space.

Sawyer & Co.—Banister Road, Kensal

Rise. London, W., England. Mfrs. non-skids.

Sawyer Carriage Co.—Lowell, Mass. (Autocar, Corbin.)

Sawyer, E. C.—Prop. and Mgr. Asheville Cycle & Auto Co., 15-17 Lexington Ave., and 18-20 Church St., Asheville, N. C.

Sawyer, Floyd.—Brighton, Mich. (Waltham)

Sawyer, J. W.—Fairfield, Me. Garage. age.

Saxon, H.—Sec. 35 Per Cent. Auto Supply Co., 83 Chambers St., New York City.

Saxon Lamp Co.—526-32 W. 28th St., New York City. Mfrs. lamps, annunciators, generators.

Saxonia Akkumulatorenwerke. — 30 Kreuzbergerstrasse, Berlin, Germany. Mfrs. storage batteries.

Sayers & Co.—Vauxhall, London, England. Mfrs. bodies.

Sayers & Scovill.—2247-2261 Colerain Ave., Cincinnati, O. Makers of the Sayers & Scovill truck; first marketed July 1, 1906. One model. 1½ tons capacity. Partnership concern, above members. Walter Lang, Purch. Agt.; C. A. Eisenhardt, Sales and Advt. Mgr. Agents and dealers: Cycle & Auto Co., Davenport, Ia.; W. S. Bulett, S. W. cor. 53rd and Webster Sts., W. Philadelphia, Pa.

Sayle, W. F.—Co-partner. Collister & Sayle, 224 Superior Ave. N. W., Cleveland, O.

Sayre Machine & Auto Co.—104 Cross St., Sayre, Pa. (Cadillac.)

Scachi, Sig.—Supt. Fiat Automobile Co. (Fabbrica Italiana Automobili Torino), Turin, Italy.

Scale.—An incrustation of lime that forms in the water-jackets of gasoline motors and in the tubes of water-tube boilers and those of honey-comb radiators. See Fur. (2) A rod or bar of metal, wood, or glass bearing graduations for use in measurement.

Scandinavian Fur & Leather Co.—16 W. 33rd St., New York City. Mfrs. automobile robes, caps, gloves and gauntlets, miscellaneous wearing apparel.

Scarf.—A lapped joint made by beveling off the ends of two pieces of wood and bolting or strapping them together so as to form one continuous piece. (2) A piece of metal beveled for a scarf-weld

Scarf-weld.—See Weld, Scarf.

Scarfotti, Adv.—Pres. Fiat Automobile Co. (Fabbrica Italiana Automobili Torino), Turin, Italy.

Scarritt, Winthrop E.—Broker. B. Dorchester, Ill., June 17, 1857. Ed. Bunker Hill Academy and Westfield Col-

lege, Ill.; De Pauw University, A. B. A. M.; in 1882 be-

Photo by Spencer & Wells

came professor of belles lettres, State University of Colorado, Boulder, Colo.: 1885, banker, Watertown, S. Dak.; 1893, broker, N. Y. City; member of first Constitutional Convention of S. Dak.; Pres. Commonwealth Trust Co., 1901-1903; Pres. Automobile Club of America, 1904; member of Phi Kappa Psi fraternity; author of "Three Men in a Motor Car." Recreations: automobiling, tennis, boxing. Address, 24 Broad St., New York City.

Scatt, J. H.—Supt. Bryant Motor Co., 110 W. 41st St., New York City, and 1675 Broadway, New York City.

Scavenging.—A term used of the fourth and last motor stroke in which the piston expels the spent gases from the cylinder.

Schaaf Garage.—Fulton and Cumberland Sts., Brooklyn, New York. Garage.

Schaal, W. R.—27 N. Jefferson St., Chicago, Ill. Mfr. timers.

Schacht, G. A.—Pres., Mgr., Designer and Supt. Schacht Mfg. Co., 2727-31 Spring Grove Ave., Cincinnati, O.

Schacht Mfg. Co.—2727-31 Spring Grove Ave., Cincinnati, O. Makers of the Schacht runabout (buggy type); first marketed in 1902. Three models made since. Cap. \$100,000. G. A. Schacht, Pres., Gen. Mgr., Designer and Supt.; Louis J. Day, Pur. Agent; Walter Ilg, Sales and Advt. Mgr. New London, Conn.

Schade, Henry.—323 Central Ave., Albany, N. Y. Garage.

Schaeffer & Budenburg Mfg. Co.—Foxboro, Mass. Mfrs. pressure gauges for water circulation, feed pressure, air, gasoline, etc., for motor cars, patent anti-vibration pressure gauges, glycerine filled tachometers for power boats, indicators for gas engines. Cap. \$100,000. Est. 1878. Officers, R. E. Frommeyer, E. Bultmann, C. E. Georgi.

Schaefer & Co.—11 E. 2nd St., Dayton, O. (Indian)

Schaeffer et Budenburg, Société Anonyme.—105 bvd. Richard-Lenoir, Paris, France. Mfrs. gauges.

Schaeffer and Budenburg.—Buckau, Magdeburg, Germany. Mfrs. gauges.

Schaeffer und Co.—Schweinfürth, Germany. Mfrs. ball bearings.

Schaeffer and Oehlmann.—Chaussee-strasse 46, Berlin, Germany. Mfrs. circulating pumps, lubricators.

Schaeffer, Geo. B.—Sec. Reading Metal

Body Co., Reading and Fleetwood, Pa.

Schafer, R.—Albany, N. Y. Garage.

Schaffer Machine Mfg. Co., The.—211 N. Calvert St., Baltimore, Md. Mfrs. body irons.

Schaffer Mfg. Co.—308 N. Calvert St., Baltimore, Md. (Rapid, Jackson, Pullman.)

Schalow, Frank.—Foreman Royal Battery Co., 108-10 Duane St., New York City.

Scharlach, Otto.—Nürnberg, Germany. Mfr. acetylene lamps, oil lamps.

Scheele, Heinrich.—Lindentahl, Köln, Germany. Mfr. electric automobiles.

Scheidig & Co., John.—50 Maiden Lane, New York City. Mfrs. eye shields, hydrometers, lamp reflectors.

Scheffentrager, E. J.—Cleveland, O., and 41 Leader Bldg., Pittsburg, Pa. (Matheson.)

Schemmel, Geo. C.—Wapakoneta, O. (Maxwell.)

Schenck, M.—Supt. Miami Cycle & Mfg. Co., Grand Ave., Middletown, O.

Schenectady Automobile Exchange & Supply Co.—Schenectady, N. Y. (Maxwell.)

Schenley Automobile Co.—3994 Forbes St., Pittsburg, Pa. (Knox.)

Scherer & Co., H.—Detroit, Mich. Mfrs. bow sockets, top fixtures, metal trimmings.

Scherer, Williams Co.—30 Lewis Wharf, Boston, Mass. Mfrs. hampers.

Schiemer, Jacob.—Gen. Supt. Puritan Machine Co., 12-16 Gratiot Ave., Detroit, Mich.

Schild et Cie., B.—Bienne-Madretsch, Switzerland. Mfrs. motorcycles (Cosmos).

Schilder, Jos. L.—Pres. Logan Construction Co., 2nd and Carroll St., Chillicothe, O.

Schifge, E.—20 rue Ste-Croix-de-la-Bretonnerie, Paris, France. Mfr. horns.

Schilling, —.—Santa Rosa, Cal. (Maxwell.)

Schirck, E.—22 Spring St., Rochester, N. Y. Garage.

Schlegel, C. G.—Kennesaw, Neb. (Waltham.)

Schley, Grant B.—1st Vice-Pres. Electric Storage Battery Co., Allegheny Ave., and 19th St., Philadelphia, Pa.

Schlig & Moore Auto Wks.—Evans-town, Ill. Garage.

Schlosser Mfg. Co.—151 E. 126th St., New York City. Mfrs. gasoline automobile motors, gasoline marine motors.

Schlosser, R. J.—25 E. Pennsylvania Ave., Warren, Pa. (Cadillac, Winton.)

Schmelz, C.—40 ave. Parmentier, Paris, France. Mfr. transmission and differential gears.

Schmid-Roost, J.—Oerlikon, Switzerland. Mfrs. high-tension magnetos, ball bearings.

Schmid, Wm.—Gen. Foreman Muncie Auto Parts Co., Elliott St., and L. E. and W. Yards, Muncie, Ind.

Schmidt, A. G.—1404 Michigan Ave., Chicago, Ill. (Clement-Bayard.)

Schmidt Auto Co.—327 S. Gilbert St., Iowa City, Ia. (Mitchell.) Garage, 6 cars. Repairing.

Schmidt Motor Car Agencies, C. E.—445 Golden Gate Ave., San Francisco, Cal. (Moon.)

Schmidt, Charles.—Chief engineer and designer Peerless Motor Car Co. since

1905. B. France, 1869. Ed. graduate the Ecole des Arts and Metiers, Angers, France (school of Arts and Crafts). Came to America in 1901. Joined the Packard Motor Car Co. in April, 1902. Designed and built the first 4-cylinder

Packard Patented the first bevel gear drive in France in 1898.

Schmidt, Ed.—Mineola, L. I., N. Y. (National, Rambler.)

Schmidt, Société Anonyme des Accumulateurs.—10 rue Fournier, Clichy, Seine, France. Mfrs. storage batteries.

Schmitt Bros.—Dowagiac, Mich. (Jackson.)

Schmitt, Louis H.—Vice-Pres. and Sec. H. D. Smith & Co., Plantsville, Conn.

Schmitz und Co., J.—Höchst-am-Main, Germany. Mfrs. carbureters, circulating pumps.

Schnaufferl, Daa.—Pub. at Armullstrasse, Munich, Germany.

Schneer, Jos. J.—1009 N. J. St., Sacramento, Cal. Garage.

Schneider et Cie.—16 rue de la Chaussée d'Antin, Paris, France. Mfrs. wearing apparel, coats.

Schneider, F.—Supt. The Van Dorn & Dutton Co., 2714 E. 79th St., Cleveland, O.

Schneider, Jac.—Hd. of Tool Room, Globe Machine & Stamping Co., 3868 Hamilton Ave. N. E., Cleveland, O.

Schneider, P. J.—187 Jefferson Ave., Detroit, Mich. (Columbia, Pierce-Arrow, Pope-Toledo, Franklin, Stevens-Duryea.)

Schnitzler, Paul C.—Vice-Pres. The Buene Steel Wool Co., 93 Nassau St., New York City.

Schoeffel Auto & Livery Co.—26 Plymouth Ave. Rochester, N. Y. (Royal.)

Schoelkopf Mfg. Co.—Madison, Wis. Mfrs. lubricators.

Schoening, M. E.—369 Broadway, New York City. Importers, horns, exhaust horns.

Schofield, Mason & Co.—Fairhill, Reese and Cumberland Sts., Philadelphia, Pa. Mfrs. carriage carpets, wool and jute. Est. 1837. Howard S. Anderson, Mgr. of above dept.

Schönlein, P.—32 Frankfurterstrasse, Wiesbaden, Germany. Mfrs. automobile motors.

Schoonfeldt, J. L.—Hd. of Machine Shop, Puritan Machine Co., 12-16 Gratiot Ave., Detroit, Mich.

Schoonmaker, A. O.—221 Fulton St., New York City. Mfrs. mica, washers.

Schopflochen, Ludwig.—Fürth, Germany. Mfr. goggles.

Schrack & Co., C.—152 N. 4th St., Philadelphia, Pa. Mfrs. packing, varnishes.

Schrader's Sons, A.—32 Rose St., New York City. Mfrs. pressed steel products.

Schraeder, George.—Sec. J. S. Kirk & Co., 360 N. Water St., Chicago, Ill.

Schram, J. C.—Marietta, O. (Jackson.)

Schreiber, W.—132 W. 49th St., New York City. Garage; repairing.

Schröder und Co., H.—Berlin, N. W., Germany. Mfrs. motorcycles. (Nikor.)

Schroeder, A. F.—Sec., Treas. and Gen. Mgr. Globe Machine & Stamping Co., 3868 Hamilton Ave., N. E., Cleveland, O.

Schroeder, G. H.—Stroudsburg, Pa. Garage.

Schroeder, H.—229-231 W. Market St., York, Pa.; Railroad, York Co.; Shrewsbury, Pa. (Premier, Reo, Pullman.) Est. 1903. H. Schroeder, Prop. Garage, 20 cars. Repairing.

Schroeder, J.—Sec. Pierce Engine Co., 2200 Clark St., Racine, Wis.

Schubert Bros. Gear Co.—42-44 Cedar St., Oneida, N. Y. Mfrs. automobile bodies, trunk racks, tire holders, extra seats, tops, slip covers, fenders. Cap. \$75,000. Est. 1888. Geo. Schubert, Pres. Mgr. and Hd. coach and carriage dept.; A. A. Woodruff, Mgr. automobile dept.; C. A. McMeikin, Chief Draftsman; A. Bristol, Treas.; C. A. Halliday, Sec.

Schubert, Geo.—Pres., Mgr. and head coach and carriage dept., Schubert Bros. Gear Co., 42-44 Cedar St., Oneida, N. Y.

Schubert, Max.—Chemnitz, Germany. Mfr. gauges.

Schuett & Schaaf.—Woodstock, Ill. (International.)

Schug Bros.—Berne, Ind. (Mitchell.)

Schug Electric Co., The.—326 Jefferson Ave., Detroit, Mich. Mfrs. storage batteries, electric controllers, spark coils, spark plugs, electric switches.

Schuh & Co.—Kentland, Ind. (Waltham.)

Schulte, B. W.—2 Lyceum Ave., Scranton, Pa. (Rambler.)

Schulte, G. W.—Wyoming and W. Market Sts., Wilkesbarre, Pa. Garage.

Schultz, Chas. C.—New Orleans, La. (Waltham.)

Schultz, J. H.—Blacksburg, Va. (Ford, Rambler, Logan.)

Schultz, Paul.—Ogersheim, Germany. Mfr. electric commercial automobiles. (Trucks).

Schultz und Hesse.—Rummelsburg-Berlin, Germany. Mfrs. springs.

Schuman Carriage Co.—Honolulu, Hawaiian Is. (Ford.)

Schurmeier Wagon Co.—29 Western Ave., Minneapolis, Minn. Mfrs. wood and metallic bodies.

Schusser, Franz.—Fürth, Germany. Mfr. goggles.

Schuster, P. F.—Sec. and Mgr. Rockford-Kalamazoo Fire Extinguisher Co., 277 W. State St., Rockford, Ill.

Schutter, C. F.—Purch. Agt. Lansden Co., 54-56 Lackawanna Ave., Newark, N. J.

Schwalbach, Alex.—Show press agent, publicity promoter Darracq Co. Born Brooklyn, N. Y., Sept. 10, 1855. Ed. public schools, private tutor. Mechanical text writer, music show, motor boat, sportsman's show, mining show. Editor Automobile Topics March 15, 1904, to Feb. 1, 1905, staff contributor 1903. Editor Motor June, 1905, to April, 1906. Staff N. Y. American May 1 to Oct. 15, 1906. Editor "Man in the Auto," Leslie's Weekly, 1905 to July 1, 1907. Address 2168 85th St., Bensonhurst, Brooklyn, N. Y.

Schwartz, Harry D.—Crown Point, Ind. (Waltham.)

Schwartz, J. I.—Bridgeton, N. J. (Rapid.)

Schwarz e Cia.—Genoa, Italy. Mfrs. jacks.

Schwarz Wheel Co.—Glenwood Ave. and 20th St., Philadelphia, Pa. Mfrs. wood wheels.

Schwarzkopf, Emile E.—Publisher International Motor Cyclopaedia, Automobile Topics since 1900. B. Austria, Dec. 17, 1852. Came to America in early eighties. Managing editor Automobile Magazine 1899-1900. Built in 1897 and patented in 1898 a four-cyl. motor, pat. No. 280,431. Office, Times Bldg., Times Sq., New York City.

Schwender Bros.—Mankato, Minn. (Pierce Racine.)

Schwerin, J. A.—Sumter, S. C. (Northern.)

Scientific American.—361 Broadway, New York City. Pub. weekly by Munn & Co.

Scientific Shop, The.—1230 Monon Bldg., Chicago, Ill. Mfrs. hydrometers.

Sclaverand, E. (Morin, Successor).—48 rue d' l'Aqueduc, Paris, France. Mfr. tire pumps, lubricators.

Scofield, A. E.—Hd. of Launch Dept. D. M. Tuttle Co., Canastota, N. Y.

Scofield, H. C.—Sec. and Treas. Sturgeon Bay Boat Mfg. Co., Sturgeon Bay, Wis.

Scott, A. D.—3916 Washington Ave., St. Louis, Mo. (Mitchell.)

Scott, A. J.—Rugby, N. D. (Northern.)

Scott, Chas. B.—119 Franklin Ave., Scranton, Pa. Garage.

Scott, D. C.—Anaconda, Mont. (Pope-Hartford.)

Scott, Geo. J.—Sec. and Treas. Geo. J. Scott Motor Co., 1720-22 Broadway, New York City.

Scott, G. N.—Vice-Pres. and Director Hercules Auto Specialty Mfg. Co., 115 Dearborn St., Chicago, Ill., and 936 Denver Ave., Los Angeles, Cal.

Scott, J. Arthur.—Pres., Director and Pacific Coast Rep. Hercules Auto Specialty Mfg. Co., 115 Dearborn St., Chicago, Ill., and 936 Denver Ave., Los Angeles, Cal.

Scott Motor Co., Geo. J.—1720-22 Broadway, New York City. (Glide, Jackson.) Est. 1901. Cap. \$25,000. J. Michaels, Pres.; Geo. J. Scott, Sec. and Treas. Garage, 30 cars. Repairing.

Scott Mfg. Co.—Adele, Ia. (Holsman.)

Scott Muffler Co., The.—71 Gallia St., Portsmouth, O. Mfrs. wearing apparel; mufflers.

Scott, R. H.—Vice-Pres. The Hildreth Mfg. Co. and Gen. Mgr. Reo Motor Car Co., Lansing, Mich.

Scott, Robert Pittis.—Mfr. canning machinery and automobiles. B. Lisbon, O., Oct. 1, 1851. Ed. public schools,

John's Hopkins University. Director Sinclair-Scott Co., Baltimore, Md.; W. R. Roach & Co., Hart, Mich.; Chisholm - Scott Co., Cadiz, O.; Harrison National Bank, Cadiz, O. Mem. A. C. A., A. C. Maryland. Res. Cadiz, O., and Baltimore, Md. Office Cadiz, O. In the

trade since 1895. Experimented 1892 with airship. Experimented off and on for 15 years on aerial locomotion; since 1896 on automobiles. Recreations, automobiling, hunting.

Scott, George Isham.—Broker. B. New York, Dec. 27, 1871. Ed. St. Paul's (Concord), Columbia University. Mem. clubs: A. C. A., Union, Racquet, Tuxedo, Rock-away Hunt, N. Y. Yacht. Res. 28 W. 57th St.; office, 24 Broad St., New York City. Used first car, 1½ hp. De Dion tricycle. 1897.

Scottdale Automobile Co.—Scottdale, Pa. (Stearns, Franklin.)

Scotte Société des Chaudières et Voit-

ures a Vapeur.—56 rue de Provence, Paris, France. Mfrs. steam commercial automobiles (Scotte trains, omnibus, trucks).

Scouring.—The operation of cleaning the surface of metals in order to free them from the oxides, sulphides, carbonates, etc., which foul them. The operation is performed by means of chemical products, such as acids or reagents, more or less diluted with water, and the nature of which varies with the metal to be scoured.

Scovill & Peck.—15 Wooster St., New Haven, Conn. Mfrs. electric, oil and gas automobile lamps, gas generators. Est. 1893. H. J. Gartland, Pres.; E. E. Peck, Treas. and Mgr.

Scoville Mfg. Co.—Waterbury, Conn. Mfrs. sheet and rod brass and copper, oil cans, tire valves.

Scranton Forging Co.—Scranton, Pa. Mfrs. drop forgings.

Scranton Garage & Motor Co.—Merchants' & Mechanics' Bank, 419 Spruce St., Scranton, Pa. (Buick, Cadillac, Franklin, Pope-Toledo, Pope-Hartford, Matheson.)

Scraper.—A tool used in scraping and surfacing metal. There are many forms of it, the shape of the blade depending on where it is to be used, curved scrapers being employed for curved surfaces, and triangular for broad, flat surfaces. An old file ground to a sharp edge may be used as a substitute.

Scratch-brush.—See Brush (2).

Screen, Magnetic.—A massive iron cylinder, placed in the interior of a magnetic field for absorbing its lines of force and for protecting the apparatus that contains it from the influence of such field. Magnetic screens are used for protecting the magnetized needles of galvanometers against the disturbances due to surrounding magnetic masses.

Screen, Wind.—See Wind-screen.

Screw.—A cylinder, usually of metal or wood, on which is cut a helical groove, by means of a stock and die or a lathe. The portion of the original material which remains between the parts cut away is termed the "thread." The distance between the consecutive turns of the thread is termed the "pitch," which may be either "coarse" or "fine." The "depth of the thread" is the depth of the groove. The top of the screw, which may be flat, round, hexagonal, etc., is called the "head" and may be provided with a slit, nick, or square; the cylindrical portion is termed the "barrel" or "stem," and the lower extremity the "point." According to the direction of its thread, the screw is called a "right-hand" or "left-hand" screw.

The screw should not be confounded with the "bolt," which is a screw ending

with a nut. The screw is never provided with a nut. See Nut. A screw may be square-threaded or V-threaded. Square-threaded screws, the groove of which is rectangular in form, are used especially for the production of great stresses, as in presses and testing-machines.

Screws are classified by the forms of their thread, as (1) V-thread; (2) English standard; (3) U. S. standard; (4) bastard; (5) ratchet; (6) square; and (7) wood.

The V-threaded screw has rather the form of a trapezium, the top of the thread being flat in some systems and round in others. If two or more grooves be cut round the same cylinder, parallel with each other, a "two-threaded," or "multiple-threaded," screw is produced.

Screws with a round head and a slit are sometimes difficult to loosen. It is especially important not to manipulate them with too small a screw-driver, which can have no other effect than to make the edges of the slit jagged and to gradually widen the slit itself to such an extent as to render it impossible for the blade of the tool to obtain a purchase.

If the screw has a projecting and cylindrical head it may, if the screw-driver fails to move it, be started by a pipe-wrench, but with merely one turn of the latter, so as not to injure it. If the head of the screw does not project, the blade of a screw-driver as wide as the slit should be inserted in the latter and held as upright as possible while it is being turned; and, if the screw is a strong one, the blade of the tool should be fitted to a hand brace in order to obtain greater power, while a little kerosene should be applied to the parts surrounding the screw. If the slit has become worn it may be renovated by means of a hammer and a fine chisel.

Screw, Adjusting.—A fine-threaded screw for regulating the position or taking up wear of some part of a machine or piece of apparatus.

Screw-band.—A clip or band for binding together the leaves of an elliptic spring.

Screw-barrel.—See Screw.

Screw, Binding.—A screw called also a "terminal," provided with a knurled-headed nut to which a wire inside an electrical apparatus is brought for the purpose of enabling the outside wires to be easily connected.

Screw-blade.—One of the blades of a screw propeller.

Screw-bolt.—An ordinary bolt. See Bolt.

Screw, Cap.—A screw-bolt with a cubic head used in screwing the ends of a steam cylinder.

Screw-clamp.—See Clamp, Screw.

Screw-contact.—A screw for making

adjustments in a contact-breaker. Its extremity is provided with a small piece of platinum, a metal that withstands the oxidation produced by the extra-current spark better than any other. See Trembler.

Screw-die.—See Die.

Screw-driver.—A tool for inserting and withdrawing screws. A very short screw-driver, as well as one about ten inches in length, will prove useful to the automobilist; the smaller one for use with the screws on the carburetter, coil, etc., and the longer one for various purposes aside from that for which the tool is designed, such as grinding in a valve, pressing an exhaust-spring out of the way, while a cotter-pin is being introduced, etc.

Screw, Finger.—The same as Set-screw.

Screw-gear.—A gearing in which the teeth are parts of a screw-thread of long pitch. See Worm-gear.

Screw, Grub.—A small headless set screw is so called when flush with the surface.

Screw, Interrupted.—A screw in which sections of the threads are cut away by longitudinal grooves, and which may be inserted in a hole with corresponding grooves and screwed accurately into place.

Screw-joint.—See Joint, Screw.

Screw, Lag.—A heavy round-shanked screw having usually a square head. Called also a "lag-bolt."

Screw-machine.—A machine usually resembling a lathe in form, and by means of which a succession of screw-threads can be rapidly cut on the ends of bolts, rods, etc. The rod may pass through a hollow mandrel, and the dies be fixed; or the dies may rotate in jaws fixed on the mandrel and be held in a slide-rest. Various tools for cutting and finishing the screw, as well as the screw dies, are fixed in a turret, and can be made to act on the work in succession.

Screw, Machine.—A screw for insertion in a threaded hole in metals, into which it does not force its own way as do wood-screws.

Screw-pitch.—See Pitch.

Screw-plate.—A hard steel plate forming a number of dies for cutting small screws.

Screw-propeller.—See Propeller.

Screw, Set.—A screw used for adjusting some part of a mechanism, or for holding it in place after adjustment.

Screw-sleeve.—A screw cut on the surface of a hollow shaft or sleeve.

Screw, Spindle.—The same as Grub-screw, q. v.

Screw, Sunk.—Same as Countersunk Screw.

Screw-tap.—See Tap.

Screw-thread.—See Screw.

Screw, Thumb.—A screw provided with a milled or winged or flat head, by means of which it can be turned with the fingers.

Screw, Twin.—A vessel fitted with two screw propellers normally turning in opposite directions.

Screw, Typhonoid.—A type of propeller screw invented by Mr. H. Gambin, and consisting of a number of blades symmetrically arranged around an axis and terminating in a cylinder tube. The screw is placed at the bow instead of at the stern of the boat.

Screw, Wood.—A screw having a V-thread of coarse pitch and a point by which it is enabled to penetrate wood.

Scriber.—A sharp-pointed tool used for marking lines on metal or wood.

Scribner, F. P.—Supt. Royal Equipment Co., 165 Housatonic Ave., Bridgeport, Conn.

Scriven's New Garage, C. L.—13 Spring St., Ashtabula, O. (Buick, Cadillac.) Est. 1892. Garage, 20 cars. Repairing.

Scroll-spring.—See Spring, Scroll.

Scudder, F. E.—Sec Northwestern Storage Battery Co., 448 Milwaukee St., Milwaukee, Wis.

Scull, John L.—Partner Scull-Morris Motor Co., 258 N. Broad St., Philadelphia, Pa.

Scull-Morris Motor Co.—258 N. Broad St., Philadelphia, Pa. (Aerocar.) Est. Feb., 1907. John L. Scull and Francis B. Morris, Partners. Repairing.

Scupper.—One of the holes in a vessel's side, at the level of the deck, to let water run off the latter.

Seabrook & Smith Carriage Co.—126 Park St., New Haven, Conn. Mfrs. wood and metallic bodies.

Seabrook Automobile Club.—Seabrook, Tex. Col. C. W. Rutgers, Pres.

Seabury Co., Chas. L.—Morris Heights, New York City. Mfrs. body irons.

Sea Cock.—See Cock, Sea.

Sea-skunk.—A type of small motorboat, 20 feet in length, and of 18 inches draught, designed for cruising and racing.

Seadale, A. H.—1932 Washington Ave., New York City. Garage.

Seagate Automobile Equipment Co.—1218 Bedford Ave., Brooklyn, N. Y. Supplies.

Sea Gate Garage.—Sea Gate, Coney Island, N. Y. Garage.

Seager, Geo. B. M.—Pres. Adrian Steel Casting Co., Beecher St., Adrian, Mich.

Seaman & Merkel.—Fleetwood, Pa. (Rambler, Reo.)

Seaman, Sam'l J., Jr.—Glen St., Glen Falls, N. Y. (Ford.)

Seaman, Wm. A.—Branchport, N. J. Mfr. motorboats.

Seaman's Auto Water Heaters.—448 Niagara St., Buffalo, N. Y. Supplies.

Seamless Tube Co. of America.—Frick Bldg., Pittsburgh, Pa. Mfrs. steel tubing.

Search-light.—A powerful lamp, usually lighted with acetylene or electricity, and the rays of which are concentrated into one beam and projected to a distance by a reflector.

Sears & Burgess.—1229 Michigan Ave., Chicago, Ill. (Pullman Flyer.)

Sears Bros. Co.—750-2 Massachusetts Ave., Indianapolis, Ind. Garage.

Sears-Nattinger Co.—Des Moines, Ia. (Stoddard-Dayton, Ford, Reo, Columbus.)

Seat.—The surface against which a valve rests. (2) The plate upon which a motor-vehicle spring rests.

Seattle Automobile Co.—1423 10th Ave., Seattle, Wash. (Columbia, Locomobile, Franklin.)

Seattle Automobile Association.—Seattle, Wash. M. Mason, Sec.

Seavey Bros.—50 Emerson St., Haverhill, Mass. (Lambert.)

Seavy, Wm. G.—616 Blue Hill Ave., Boston, Mass. Garage.

Sector.—Part of a circle bounded by two radii, and the arc subtended by them.

Sector, Grid.—The same as gridiron-quadrant. See Quadrant.

Sedalia Automobile Club.—M. T. Slane, Sec., 303 Ohio St., St. Louis, Mo.

Segment.—That part of a circle included between an arc and its chord. (2) A gear-wheel, cam, or other machine element the outline of which is the segment of a circle.

Segment-valve.—See Valve, Segment.

Seheu, Ch.—1 Blvd. d'Alsace-Lorraine Le Perreux, Seine, France. Mfr. oil and acetylene lamps.

Schrack, E.—22 Spring St., Rochester, N. Y. Garage.

Seiberling, A. G.—Asst. Gen. Mgr. and Purch. Agt. Apperson Bros. Automobile Co., Kokomo, Ind.

Seiberling, C. W.—Treas. Goodyear Tire & Rubber Co., Akron, O.

Seiberling, Frank A.—Pres. and Gen. Mgr. Goodyear Tire & Rubber Co., Akron, O.

Seibert, Frank A.—Sec. Manhattan Brass Co., 332 E. 28th St., New York City.

Seidemann und Co.—Ritterstrasse 9, Berlin, Germany. Mfrs. storage batteries.

Seidler, B. F.—Pres. Seidler-Miner Electric Co., 207 Jefferson Ave., Detroit, Mich.

Seidler-Miner Auto Co.—244 Jefferson Ave., Detroit, Mich. (Jackson.)

Seidler-Miner Electric Co.—207 Jefferson Ave., Detroit, Mich. Mfrs. spark plugs, battery switches, full line of electrical and ignition supplies. Cap. \$30,000. Est. 1891, Inc. 1903. F. J. Miner, Sec., Treas. and Mgr.; B. F. Seidler, Pres.

Seifert & Co., E. W.—Shelbyville, Ind. (Maxwell, National.)

Seiler Co., The.—Jamestown, N. D. (Cadillac.)

Seitz, C.—207 E. 35th St., New York City. Mfr. tire cases.

Seitz Co., F. A.—141 Frelinghuysen Ave., Newark, N. J. Mfrs. gasoline marine motors, motorboats.

Seizing.—The gripping or binding of a bearing, of the faces of a clutch, or of the piston in the cylinder, owing to heat or insufficient lubrication

Self-contained.—Complete within itself; containing its own actuating mechanism, or all in one frame or on one base.

Self-ignition.—See Ignition, Self.

Self-induction.—See Induction, Self.

Seldon, George B.—Inventor. Born Rochester, N. Y. Ed. Yale. Practiced

law as patent solicitor in Rochester. Patentee of the Seldon gasoline automobile, upon which the Seldon patent was applied for in 1879 and granted in 1895. Is now at the head of the Seldon Motor Vehicle Co. of Rochester, N.

Y., which is marketing a 4-cylinder gasoline car. Res., Rochester, N. Y.

Selden Motor Vehicle Co.—Rochester, N. Y. Makers of the Seldon car. First marketed in July, 1907. Two models. 50 hp., 28 hp. Cap. \$500,000. George B. Selden, Pres.; J. H. Stedman, Treas.; R. H. Salmons, Sec. and Gen. Mgr.; E. T. Birdsall, M. E., Designer.

Selective.—A term applied to a type of sliding-gear-transmission in which the sliding member or members do not pass through the gears in which they are engaged. Thus a change may be made from high to low gear or opposite without passing through the intermediate gears.

Seligman, A. F.—Troy, Ill. (Jewel.)

Seligman, Jefferson.—Banker. B. Nov. 26, 1858. Ed. Columbia Grammar school; Columbia 1878; studied medicine in Germany. Became a member of the banking

firm of J. & W. Seligman & Co. One of the earliest users of automobiles in America. Res., 11 East 69th St., address, 21 Broad St., New York City.

Selleck, John L.—South St. and Union Ave., Peekskill, N. Y. (Rambler, Marion.)

Selma Gun & Key Co.—917 Water St. Selma, Ala. (Wayne, Pope-Hartford, Waltham, Mitchell.) Est. Sept. 1, 1901. W. D. Batton, Gen. Mgr. Garage. 25 cars. Repairing.

Selwynite.—An Australian mineral affording one of the sources of chromium.

Semi-Dry Battery Co., The.—5th and Essex Sts., Harrison, N. J. Mfrs. semi-dry cells and batteries. Cap. \$125,000. Est. 3 years. Jay E. Dunn, Pres. and Mfg. Mgr.; Arthur F. Jackson, Vice-Pres., Gen. Mgr. and Treas.; L. B. Jackson, Sec.

Semmler, C.—58 rue de Paradis, Paris, France. Mfr. radiators.

Sendelbach Wheel Co.—E. St. Louis, Ill. Mfrs. wood wheels.

Seneca Auto Supply Co.—13 Plymouth St., Chicago, Ill. Supplies.

Seneca Iron & Steel Co.—53 Erie Co. Bank Bldg., Buffalo, N. Y. Mfrs. sheet and bar iron and steel.

Senn, E.—31 rue des Tanneurs, Bale, Switzerland. Mfr. speed indicators.

Series, In.—Battery-cells are said to be connected "in series" when the positive and negative poles are alternately

connected; the positive wire running to one side of the switch. Another set of cells similarly wired is attached to the other side of the switch.

The negative poles of both sets are grounded. A series connection is shown in Fig. 1, where each carbon (center) post is connected to the zinc (outside) post of the next cell, leaving the carbon post of one end cell and the zinc post of the other end cell for terminals of the battery.

This results in multiplying the pressure to the aggregate voltage of the cells in the battery but not changing the current strength from that of a single cell. A "multiple-series" connection (Fig. 2), is a combination connection of both series and multiple (see Multiple). It results in increasing the pressure to the voltage of the series-unit and the current to the amperage of the number of units in parallel.

Serize et Cie., E.—6 rue Abel, Paris, France. Mfrs. leather tires.

Serpollet, Leon Emmanuel.—Born at Culoz, Oct. 4th, 1858. Chevalier of the

Legion of Honor. Serpollet was one of

the first partisans of mechanical locomotion upon common roads. From the outset he showed a preference for steam and always remained faithful to it. Establishing himself first at 27 Rue des Cloys in 1899, he took as his associate M. Gardner, and, with him, brought out the well-known

Gardner-Serpollet car. In 1906 he became a partner of M. Darracq in the firm of Darracq & Serpollet, manufacturers of heavy weights.

Service Co., Ltd.—292 High Holborn, London, W. C. England. Mfrs. motorcycles. (Service.)

Service, W. E.—Bridgeton, N. J. Garage.

Sessions Foundry Co.—Bristol, Conn. Mfrs. gray iron castings.

Sessions, J. B.—Bristol, Conn. (Locomotive.)

Set.—A deformation or deflection of an object due to stresses. See Elastic Limit. (2) The inclination of the teeth of a saw at the angle known to be the best to facilitate the exit of the sawdust. (3) A tool for setting saw-teeth. (4) A rivet-set. (5) A form of chisel used in cutting iron bars.

Set-bolt.—See Bolt, Set.

Set, Cup.—See Set, Rivet.

Set-nut.—See Nut, Set.

Set-off.—Same as Offset, q. v.

Set, Rivet.—A punch called also a "snap," with a hollow face for forming second heads on rivets.

Set, Saw.—See Set (3).

Set-screw.—See Screw, Set.

Setzer Co., Chas.—561-63 Pelham Ave., New York City. Garage.

Severson, Geo. W.—Hd. of Sales Dept. Bowen Mfg. Co., Canal St., Auburn, N. Y.

Seward & Son Co., The M.—New Haven, Conn. Mfrs. carriage hardware, spring clips for automobiles and general drop forgings. Cap. \$100,000. Est. 1844. Frank Seward, Pres.; C. E. Prince, Sec. and Treas.; S. C. Reilly, Supt.

Seward, Frank.—Pres. The M. Seward & Son Co., New Haven, Conn.

Sexton, C. A.—Perth Amboy, N. J. (Maxwell.)

Seyler, Wm.—Goodland, Kan. Garage.

Seymour-Benn Co.—104 Jefferson Ave., Brooklyn, N. Y. Garage.

Seymour Mfg. Co.—Seymour, Conn. Mfrs. sheet and rod brass and copper.

Seymour, Walter F.—536 Atwells Ave., Providence, R. I. Garage.

Shackle.—A form of link which connects one end of a spring to the hanger or dumb-iron. See Spring.

Shackle-joint.—See Joint, Shackle.

Shackelford & Lefford Co.—Westboro, Mo. (Jackson.)

Shafer, G. F.—Supt. Modern Tool Co., 4th and State Sts., Erie, Pa.

Shafer, Henry.—436 Lion St., Dunkirk, N. Y. Garage.

Shaffer Carriage Co.—938 N. Illinois St., Indianapolis, Ind. Mfrs. automobile tops, glass wind shields.

Shaffer Machine & Mfg. Co., The.—211 N. Calvert St., Baltimore, Md. Mfrs. fuel and air pumps.

Shaffer, R. G.—203 Bridge St., Phoenixville, Pa. Garage.

Shaft.—An axle, arbor, or other long and usually cylindrical bar arranged for rotating with or carrying a wheel, etc. Shafts are named from some feature of mechanism or the part to which they are attached, or from the function which they perform.

Shaft-block.—A block placed in the stern of a motor-boat and bored for the reception of the propeller-shaft.

Shaft, Cam.—See Cam-shaft.

Shaft, Cardan.—A shaft provided with universal joints at each end.

Shaft, Counter.—See Jack-shaft.

Shaft, Crank.—See Crank-shaft.

Shaft, Cross.—Same as Jack-shaft.

Shaft, Drive.—The same as propeller-shaft, q. v.

Shaft, Flexible.—See Coupling, Flexible.

Shaft, Gear.—A shaft carrying gear-wheels or pinions that mesh with gear or pinion-wheels on another shaft.

Shaft, Half-speed.—The same as Cam-shaft.

Shaft, Half-time.—The same as Cam-shaft.

Shaft, Intermediate.—Any shaft that transmits power from one shaft to another by means of either gears or belts.

Shaft, Jack.—An intermediate shaft, called also a "countershaft" and "cross-shaft," taking power from one shaft and transmitting it to another by means of chains, gearing or belts. In automobile work, it is the shaft which crosses the car and carries sprockets on its outer ends, and is driven by a bevel-gear from the gear-box. This shaft is usually made in two parts, the inner ends being in the differential-gear. It actuates the rear wheels through chains running over sprockets at its outer ends. See Differential gear.

Shaft, Lay.—The shaft used in gas-motors to transmit motion from the main shaft to the valve-gear.

Shaft-log.—A log in the stern of a motor-boat through which the propeller-shaft runs.

Shaft, Motor.—See Crank-shaft.

Shaft, Primary.—The shaft in the gear-case which, receiving power from the motor, transmits it to the secondary shaft.

Shaft, Propeller.—A shaft bearing the propeller or screw in a marine motor. (2) On a motor-car, the shaft that transmits power from the gear-box to the back live axle.

Shaft, Reversing.—A small shaft in the gear-case which carries the reversing gear-wheel.

Shaft, Secondary.—The shaft in the gear-case that transmits power from the primary shaft to either the propeller or jack-shaft, or back to the primary shaft.

Shaft, Square.—In a sliding gear, a shaft of square section, A, on which one or more gear-wheels, R, having the same rotary speed as the shaft may be slidden by a fork so as to bring them into engagement with one or another gear-wheel on a parallel shaft, and thus produce changes of speed. See Gear, Sliding.

Shaft, Torsion.—The shaft that runs through a center of a live axle transmitting the drive from the differential to the road-wheels.

Shaft, Transverse.—A shaft, such as the jack-shaft, set at an angle with another shaft.

Shaft, Two-to-One.—The same as Cam-shaft.

Shailer, F. S.—Chester, Conn. Garage.

Shain, Chas. D.—70 Murray St., New York City Est. 1901. Supply house handling everything in automobile and motorboat supplies. Mfrs. terminals, battery connectors, spark plugs, cables, carburettors, inspection lamps.

Shaler Co., C. A.—Waupun, Wis. (Elmore.) Mfrs. portable vulcanizers, vulcanizing materials. Est. July, 1906. Partnership. Cap. \$150,000.

Shambaugh, Chas.—South Raub, Ind. (Pope-Toledo, Buick, White.)

Shamlaugh Auto Inn, Chas.—Lafayette, Ind. (Cadillac, Pope-Toledo, White.)

Shamokin Novelty Co.—Shamokin, Pa. Garage.

Shanklin, W. J.—Marion, Kan. (Waltham.)

Shanks, Charles Bernard.—Gen. Sales

and Adv. Mgr. Winton Motor Carriage

Co. B. Pennsylvania, March 19, 1873. Director Lake Shore Navigation Co., Eastland Steamship Co. Mem. Century, Clifton, Lakewood Yacht, Dover Bay, Cleveland A. C. Res. Lakewood, O. Office, Berea Road, N. W., Cleveland, O. In

the trade since May 24, 1899. Recreations: Fishing, golf, lawn tennis, etc.

Shannahan & Wriggins Hardware Co.—N. Washington St., Easton, Md. (Rambler.)

Shannon, T. K.—Mgr. Behen-Faught Motor Car Equipment Co., 3961 Olive St., St. Louis, Mo.

Sharman Automobile Co.—109-111 W. S. Temple St., Salt Lake City, Utah. (American Mors, Reo, Moline, National, Woods, Mitchell.)

Sharp, I. H.—Main St., Bernardsville, N. J. Garage.

Sharp, W. H. B.—Indian Head, Sask., Canada. (Holsman.)

Sharp's Garage.—Bakersfield, Cal. (Maxwell.)

Shattuck, Albert Richardson.—Director. B. Cincinnati, O., Jan. 31, 1853. Ed. College of the City of New York. Director British & American Mortgage Co. Ltd., Realty Co. Mem. clubs: Metropolitan, Lotos, Lawyers, Union League, Ardsley, N. Y. Yacht, A. C. A. Res. 19 N.

Washington Sq., Office 11 Broadway, New York City. User of car for about ten years.

Shattuck Co., W. P.—2125 Grand Ave., S. Minneapolis, Minn. Mfrs. transmission gears

Shaver, P. F.—Sales Mgr. Ketchum & Co., Bank and Sparks Sts., Ottawa, Can.

Shaw-Brown Motor Co.—897 Main St., Buffalo, N. Y. Garage.

Shaw, B. W.—Rep. Dept. Park Sq. Auto Station, 43 Columbus Ave., Boston, Mass

Shaw Co., Walden W.—1532-1534 Michigan Ave., Chicago, Ill. (Berliet.) Est. 1906. Walden W. Shaw, Pres.; Bronson C. Buxton, Sec. and Treas. Garage, 20 cars. Repairing.

Shaw Engineering & Mfg. Co.—216 High St., Newark, N. J. Mfrs. jacks.

Shaw, Frank.—260 N. Broad St., Philadelphia, Pa. Vulcanizing.

Shaw, L. B.—Riddlesburg, Pa. (Cadillac.)

Shaw, Louis E.—Chief Engineer Willoughby Appliance Co., Ludlow Station, Yonkers, N. Y.

Shaw Motor Tyre Tread Co.—135 Steelhouse Lane, Birmingham, England. Mfrs. non-skids.

Shaw, Ora D.—109 Kingston St., Boston, Mass. Mfr. wearing apparel, caps.

Shaw, Walden Willard.—Automobile dealer. B. Chicago, Ill., Jan. 12, 1879. Ed. Andover. Director and Pres. Walden W. Shaw Co. Mem. South Shore Country, Calmut, Chicago A. C., A. C. de Nice, Touring Club de France. Res. 174 E. 51st St., Hyde Park, Chicago, Ill.; Office N. E. cor. 21st and Michigan Ave., Chicago, Ill. In the trade since 1906. Used first car (Hanriot) 1901.

Shawmut Motor Co.—1091 Boylston St., Stoneham, Mass. Garage. Mfrs. gasoline automobiles.

Shawmut Tire Co.—97 Bedford St., Bedford, Mass. Mfrs. pneumatic tires.

Shawver Co.—Springfield, O. Mfrs. jacks, tire-pumps, tire tools.

Shean Auto Co.—640 Main St., Springfield, Mass. (Oldsmobile, American Mercedes.)

Shear, T. F.—Vice-Pres. The Spaulding Engine Co., St. Joseph, Mich.

Shear Steel.—See Steel, Shear.

Shearer Auto Co., S. C.—1650 Glenarm St., op. Denver Club, Denver, Colo. (Haynes.)

Shearing.—A transient or continuous stress, through which a piece of mechanism has a chisel-like action upon another piece. Thus, in a motor-car, when two iron plates are secured to each other by rivets, which have a slight play in the holes in which they are inserted, the plates will continually slide upon each other after the manner of the blades of a pair of shears, and eventually cut or "shear" the rivets.

Shearing Stress, or Strain.—A stress resulting from or of a character to produce a strain.

Shears.—A tool for cutting sheet metal, etc., and having an action resembling that of scissors.

Sheave.—A small wheel with a groove on its periphery in which a rope or belt may be run. Specifically, the grooved wheel of a pulley block. See Pulley.

Sheehan's Garage.—12 Stockbridge St., Springfield, Mass. Garage.

Sheer.—The upward curvature of the lines of a vessel toward bow and stern. (2) The position of a boat riding at single anchor with the anchor ahead.

Sheer-line.—The line of the deck at the side of a vessel.

Sheering.—The act of deviating from the line of course, so as to form a crooked or triangular path through the water.

Sheerman, E. D.—Treas. Salisbury Wheel & Mfg. Co., Jamestown, N. Y.

Sheet-metal.—Metal made into sheets by rolling, as sheet brass, sheet iron, etc.

Sheets & Knoble.—De Kalb, Ill. (Pope-Waverley.)

Sheffield Car Co.—Three Rivers, Mich. Mfrs. gasoline commercial automobiles.

Shelby Steel Tube Co.—Pittsburg, Pa. Mfrs. axles, steel tubing.

Sheldon Axle Co.—Wilkesbarre, Pa. Mfrs. springs and axles. Est. 1870. Edw. H. Jones, Pres.; Thos. H. Ather-ton, Vice-Pres.; Chas. H. Guilain, Sec. and Treas.; William H. Son, Supt. spring dept.; J. B. Decker, supt. axle dept.

Sheldon, J. H.—Sales Mgr. Continental Caoutchouc Co., 43 Warren St., 2100 Broadway, New York City.

Shell.—The outer part of various objects, e. g., of a boiler considered apart from its fittings, or of a vessel, apart from the internal work, etc.; a pulley-block case.

Shellac.—A brittle, resinous substance in plates, made from "stick lac," which consists of twigs incrustated with a reddish mammalated resin produced by the puncture of an insect upon the branches of several plants. Shellac treated by chlorine gives "bleached shellac." Shellac is largely used in the manufacture of wood polishes and varnishes. In combination with powdered mica it forms "micanite," q. v. Dissolved in alcohol and with the addition of silver bronze powder it gives the silver paint employed for painting motors.

Shelingsburg, Richard.—Foreman J. E. Lonergan & Co., 211-15 Race St., Philadelphia, Pa.

Shenandoah Auto Garage.—1610 Briar Place, Chicago, Ill. Garage.

Shenango Valley Auto Co.—Sharon, Pa. (Mitchell, Maxwell.)

Shelter Top Co.—1240 N. 1st St., St. Louis, Mo. Mfrs. automobile tops.

Shepard & Sons.—New Haven, Conn. Mfrs. bent seat panels, body stock, frames and bows.

Shepard Co.—Providence, R. I. (Columbia.)

Shepard, Perry.—Purch. Agt. Cassady Fairbank Mfg. Co., 6106-30 LaSalle St., Chicago, Ill.

Shepard, Walter L.—364 Franklin St., Melrose Highlands, Mass. (Winton. Stanley.)

Sheppard, W. S.—22 Lawrence St., Newark, N. J. Mfr. grease, oil, semi-solid oils, automobile body polishes, metal polishes.

Sheppier, H. L.—2nd Asst. Supt. Pope Motor Car Co., Toledo, O.

Sherburne & Co., A. H.—70 Middle St., Lowell, Mass. Garage.

Sheridan Auto Station.—3210 N. Clark St., Chicago, Ill. Garage.

Sherill & Morgan, Drs.—Camp Crook, S. D. (Cadillac, Waltham.)

Sherman-Lemke Coil & Supply Co.—106 Wisconsin St., Milwaukee, Wis. Mfrs. spark plugs, spark coils.

Sherrer, F. A., Dr.—Easton, Pa. (Mitchell.)

Sherwin-Williams Co., The.—601 Canal Road, N. W., Cleveland, O. Mfrs. paints, varnishes, stains and finishing materials for every purpose. Est. 1866. W. J. Sohlinger, Mgr. Carriage and Mfg. Trades Sales Dept. Factories: Chicago, Newark, Montreal, London, England. Sales offices and warehouses in 23 cities.

Sherwood Brass Works.—1167 Jefferson Ave., Detroit, Mich. Mfrs. brass, bronze, aluminum and copper castings.

Sherwood, H.—Mgr. San Francisco, Cal. Branch of Monarch Motor Car Co., 16th and Arnold Sts., Chicago Heights, Ill.

Sherwood Mfg. Co.—Elmwood Ave. and Belt Line, Buffalo, N. Y. Mfrs. carburettors, brass, bronze, aluminum and copper castings, ejectors, grease cups, lubricators, oil cups, oil pumps.

Shetter, A. B.—Middletown, O. (Cadillac.)

Shettler, L. T.—633 S. Grand St., Los Angeles, Cal. (Reo.)

Shettler, Reuben.—Vice-Pres. Reo Motor Car Co., Lansing, Mich.

Shields Carriage Co., The.—Amesbury, Mass. Mfrs. wood and metallic bodies, body irons, automobile tops.

Shiland, H. E.—Sales Mgr. Buick Motor Co., Flint, Mich.

Shillinglaw, H. L.—20 N. 4th St., Grand Forks, N. D. (Mitchell.)

Shim.—A piece of sheet metal of varying thickness, called also a "shim liner" or "distance-washer," designed for filling the space between loose or separated parts, such as a divided bushing, joint, etc.

Shinolser & Co., J. W.—217 3rd St., Macon, Ga. (Franklin, Cadillac.)

Shinn, F. R.—Treas. Okey Motor Car Co., W. Broad and Kimball Sts., Columbus, O.

Shipman, Ralph.—Sunbury, Pa. (Maxwell.)

Shippey Bros.—Cheapside, 13-14 King St., London, England. Garage.

Shippey, Geo. E.—Pittsfield, Mass. Mfr. shock absorbers.

Shiveley, Geo. W.—Sec. Pennsylvania Rubber Co., Jeannette, Pa.

Shoch, Henry R.—Treas. Quaker City Auto Co., 138-146 N. Broad St., Philadelphia, Pa.

Shoch, James R.—Sec. Quaker City Auto Co., 138-146 N. Broad St., Philadelphia, Pa.

Shock.—A sudden stress, whether produced by a blow or otherwise.

Shock-absorbers.—Devices known also as "shock-eliminators," "shock-brakes," "dampers," "anti-bouncers," etc., designed to check the excessive rebound of car-springs after they have been compressed in passing over a road obstruction, and to stop the disagreeable vibration of the vehicle-body and prevent the breakage of the springs. The first and most successful device of this kind was applied to racing cars in France half a dozen years ago. Since then many devices for a similar purpose have been invented and are now in the market. These are of various types and may be divided into the following categories: (1) Friction checks (friction between metal plates and washers); (2), hydraulic checks (glycerine, oil or other liquid contained in a "dash-pot"); (3), pneumatic checks (cylinder in which air is compressed by a piston); (4), and supplementary springs. All are constructed so as to be attached at one end to the spring or rear axle near the middle of the spring, and at the other end to the side of the frame above the axle, in order that the resistance which they offer will act directly between the spring and the frame. One of the best known devices of the first, or friction, category is the Truffault-Hartford shock-absorber (Fig. 1), which, in general form, is like the stop of a trunk-lid.

Fig. 1

The end of one arm is held by a stud on a plate that is bolted to the side of the car-frame, and the small ends of a pair of other arms are attached by a bolt to a plate that is held by the spring-clamps. The other ends of the arms are enlarged into circular friction-plates, the end of the upper arm being placed between the disks of the pair of lower arms. The arms are joined together firmly by a center stud fitted with a hardened steel bushing. Under the nut of the stud on one side is a star-shaped spring-

steel washer, that maintains constant pressure on the friction-plates and compensates for wear. An absorbent friction material is interposed between the faces of the disks, increasing the friction and, at the same time, providing a receptacle for retaining lubricant, enough of which is held in the material to last indefinitely.

This form of shock-absorber is simple, strong, unobtrusive, and durable. It acts in both directions, that is, against the compression and against the rebound of the car-springs, acting as a brake to vibration. The principle and general form of the Hartford shock-absorber have been extensively copied, and a number of devices have been patented and offered for sale during the last two years that differ from it only in detail, such as the mechanical means for developing the friction.

An example of the second category is offered by the Foster shock-brake (Fig. 2). This consists of a small light chamber of cold-drawn steel, with piston or plunger, which is attached to the frame

Fig. 2

and which operates as follows: The lower portion of the cylinder contains oil. The sudden compression of the spring forces the plunger down against the oil, and the plunger head is so constructed that when it comes in contact with the oil in the lower part of the cylinder, it forces it through eight small holes in the valve-disk into the upper chamber; then when the recoil occurs, the oil acts as a cushion and the plunger retards with a slow, steady pull, which prevents the jar and shock always occasioned by a sudden bump. The oil flows back into the lower chamber, a small portion at a time and thus relieves all strain and jar from the spring as well as eliminates all possibilities of a broken spring.

Fig. 3

In Fig. 3 is shown an example of the third, or pneumatic category, the "Perfection Air-cushion." This consists simply of an air-chamber and a piston-rod with a double acting piston-head. The air-chamber can be attached to any part of the body of a vehicle or to the upper half of a full elliptic spring, and the piston-rod to any part of the axle or any fixed point below or to the lower half of the full elliptic spring.

When the car drops into a rut or gutter, in place of its going down with a sudden jolt it is eased down by the air-chamber being forced down on the piston, and when the car comes up out of the rut or gutter or on to an obstruction like a railroad track it is eased up on an air-cushion by the reverse action of the piston in the air-chamber; thus the car gets no jolts, and there is no strain on the car by either the sudden upward or downward stroke, as both movements are completely eased up by the compression in the air-chamber because air is the most elastic substance known to science.

The fourth category, supplementary springs (See Spring, Supplementary), includes all devices that tend to supplement or relieve the work of the leaf-spring in carrying the load, and are usually so placed that the initial weight of the car is carried by them wholly or in part. There are many types of such springs on the market, of which the Rueckert shock-absorber may be mentioned as an example. This is a supplementary spring placed over the car-spring. It consists, as shown in Fig. 4, of two helical springs placed side by side, and provided with common spring blocks for the upper and lower ends of the springs so that they will compress

Fig. 4

together and each take its share of the load. A rod fastened to the lower part of the car-spring carries the upper block, and two rods, each passing through one of the springs carry the bottom block. These rods cannot move separately without moving the blocks and thereby compressing the springs.

When an obstacle in the road is encountered which tends to throw the wheels up toward the bottom of the car, the middle rod moves through the upper spring block and carries with it the lower block which compresses the springs and offers a resistance to this sudden jolt. On the recoil, when there is a tendency of the car body to spring too far away

from the wheels, the outer rods passing through the helical springs slide through the upper block and carry with them the lower block, which also compresses the helical springs and offers a resistance to this rebound. It will be seen that the springs, when acting, are always under compression whether the body and axle of the car be approaching each other or whether the distance between them is becoming greater.

Shoe.—A strip fastened to the bottom of a keel as a protection thereto. (2) That part of a brake which presses against the tire of a wheel. (3) The casing which confines the inner tube of a pneumatic tire.

Shoe, Brake.—See Brake-shoe.

Shoe, Tire.—See Shoe (3).

Shoedinger, F. O.—Treas. Direct Drive Axle Co., 575 N. Fourth St., Columbus, O.

Shoemaker Automobile Co.—Freeport, Ill. Makers of the Shoemaker car; first marketed in 1906. Three models made since. Cap. \$250,000. C. C. Shoemaker, Pres., Gen. Mgr. and Pur. Agent; Dr. J. T. White, Vice-Pres.; W. Ernest Johnson, Sec.; H. C. Shoemaker, Designer; Scott Van Etten, Supt.; W. E. Clark, Sales Mgr. Branches: Cincinnati, O. C. J. Wirthlin, Mgr. Denver, Colo., E. L. Shires, Mgr. Des Moines, Ia., W. H. Long, Mgr. Fort Wayne, Ind., Kenneth Larwill, Mgr. Grand Rapids, Mich., J. H. Arbogast, Mgr. Kansas City, Mo., O. G. Sellers, Mgr. Minneapolis, Minn., C. B. Catlin, Mgr. Pittsburgh, Pa., D. B. Sober, Mgr. Saint Paul, Minn., M. L. Feckler, Mgr. Seattle, Wash., R. C. Dahlhjehn, Mgr.

Shoemaker, H. C.—Pres., Gen. Mgr. and Purch. Agt. Shoemaker Automobile Co., Freeport, Ill.

Sholes, C. B.—Sec. Holsman Automobile Co., 662 Monadnock Block, Chicago, Ill.

Shonberg, I.—363 Hudson Ave., Brooklyn, N. Y. Mfr. Babbitt and bronze metals.

Shookman & Son.—Goshen, Ind. (Waltham.)

Shop of Siebert, The.—Toledo, O. Mfrs. gasoline commercial automobiles (on contract only).

Shore & Beach.—Lincoln, Neb. (Glide, Lambert.)

Shore, Frank.—1211 New York Ave., Washington, D. C. Garage.

Short.—Brittleness in metals, especially iron and steel, due to the presence of certain impurities. (2) An abbreviation of short-circuit.

Short & Bros., John J.—2028 Sansom St., Philadelphia, Pa. Garage.

Shoulder.—The boss on the end of a rod or shaft, forming a seat for the point of application of another piece of mechanism.

Shove, John W.—Vice-Pres. American Oil Co., 170-78 S. Water St., Jackson, Mich.

Shreve, E. G.—Atlantic City, N. J. (Waltham.)

Shreveport Auto & Gas Engine Co.—319 Spring St., Shreveport, La. (Pope-Toledo.)

Shrewsbury & Chailiner Tyre Co.—Kay St., Ardwick Green, Manchester, England. Mfrs. solid tires.

Shrive, William.—64 Warburton Ave., Yonkers, N. Y. (Cadillac.)

Shroyer & Co., G. W.—Dayton, O. Garage.

Shuey, M. A.—110 W. Wayne St., South Bend, Ind. (Atlas, Monarch, Ford.)

Shugars, Frank.—Supt. Auburn Auto Co., Auburn, Ind.

Shugart, Geo. E.—Sec. Chicago Tire Club, 81 Michigan Ave., Chicago, Ill.

Shugars, George.—Auburn, Ind. (Maxwell.)

Shugert, G. S.—247 Adams St., Rochester, Pa. (Northern, Rambler, Haynes.) Garage, 8 cars. Repairing.

Shuler & Son, Davis W.—Amsterdam, N. Y. Mfrs. leaf springs.

Shuler, W. P.—1002 Morton St., Baltimore, Md. (Pungs-Finch, Maxwell.)

Shulz, A. C.—Asst. Designer Locomobile Co. of America, Main St., Bridgeport, Conn.

Shuman & Co., A.—Boston, Mass. Mfrs. miscellaneous wearing apparel.

Shunt.—A branch conductor or circuit connected in parallel with another or main circuit between two given points. The current divides itself between the two branches in proportion to their conductivity. A shunt may be used to draw off a portion of the main current for some specific purpose, as in the "shunt dynamo," or merely to reduce the current in a part of the main circuit, as in the case of a galvanometer.

Shurmer, Daniel.—Vice-Pres. Royal Motor Car Co., Gordon Park Blvd. and Lake Shore Tracks, Cleveland, O.

Shurmer, E. D.—Pres. and Gen. Mgr. Royal Motor Car Co., Gordon Park Blvd. and Lake Shore Tracks, Cleveland, O.

Shut.—The line of junction of two pieces of metal united by welding.

Shutter.—A device in some carbureters by means of which the opening through which the air is drawn may be increased or diminished.

Shuttle Armature.—See Armature.

Siamesed.—Joined together, doubled, united; as a siamesed coupling, siamesed ports, etc.

Sibley Journal of Engineering.—Pub. at Ithaca, N. Y.

Sicilia Sportiva.—Pub. at Palermo, Sicily.

Sid Black Auto Co.—630 Walnut St., Cincinnati, O. (Babcock, Lozier, Thomas, Buick, Franklin.) Garage, repairing, supplies, renting.

Siddall, G. B.—Sec. Peerless Motor Car Co., 93rd St. and Quincy Ave., Cleveland, O.

Siddard, Wm. A.—10 Bellevue Ave., Philadelphia, Pa. Mfr. motorcycles.

Side-chains.—See Chain, Side.

Side-joint.—See Joint, Side.

Side-lever.—See Lever, Side.

Side-light.—A lamp at the side of a motor-car, generally placed on each side of the dashboard and used as a reserve in the event of a failure of the headlights, and for city driving.

Side-member.—One of the two longitudinal pieces, called also a "girder," "bar," "rail," "reach-member," etc., which, along with the cross-members, forms the frame of a motor-vehicle.

Side-slip.—See Skidding.

Sider, Société Anonyme des Bandages Souples.—66 rue de la Mission-Marchand, Courbevoie, Seine, France. Mfrs. solid tires.

Sidles Automobile Co., H. E.—13th and P Sts., Lincoln, Neb. (Buick, Cadillac, Woods.)

Sidney Mfg. Co.—5300 Armour Ave., Chicago, Ill. Mfrs. stampings.

Sidow, Chas.—Aberdeen, S. D. Garage.

Siecke und Schultz.—Berlin, S. W., Germany. Mfrs. storage batteries.

Siegfried, J. B.—Cambridge, O. (Jewel.)

Siegel-Cooper Co.—Automobile Supply Dept., 6th Ave., 18th to 19th Sts., New York City. Est. 1896. Handling motorcycles and motorboats, apparel, accessories and supplies. (Griffon motorcycles and Pierce motorboats.) J. B. Greenhut, Pres.; J. C. Tanty, Hd. automobile dept.

Siegle, Feodor.—Schoenebeck am Elbe, Germany. Mfr. gasoline commercial automobiles (Waren trucks).

Siegrist, Jacob.—Supt. Foundry Dept. The Hildreth Mfg. Co., Lansing, Mich.

Siemens und Halske Actiengesellschaft.—94 Markgrafenstrasse, Berlin, Germany. Mfrs. primary batteries, coils.

Siems, Peter.—Summit Ave. and Grotto St., St. Paul, Minn. Garage.

Sier Bath Co.—143 W. 54th St., New York City. Mfrs. metal gear wheels.

Siersaack, G.—95 bvd. du Hainaut, Brussels, Belgium. Mfr. coils.

Siewerdt, Loewen.—Elberfeld, Germany. Mfr. non-skids.

Sigler & Pettenger.—Sutherland Bldg., Santa Maria, Cal. Garage.

Sigler, C. C.—Pres. American Auto Co., Cleveland, O.

Silencer.—Same as Muffler.

Silicate, Wool.—A substance called also "silicate cotton" and "slag wool," used as a lagging. See Wool, Slag.

Silicium, Ferro.—See Ferro-silicium.

Silicon.—An element, sometimes called "silicium," belonging to the same group as carbon in the periodic system. It does not occur native, but, in combination as the oxide, "silica," it is very abundant and of great importance. Common quartz, agate, chalcedony, flint, opal, amethyst, carnelian, sand, etc., are largely composed of this substance. Carborundum, largely used as an abrasive, is a silicide of carbon (CSi). Silica in iron produces effects analogous to those of carbon. If the silica exceeds a very small amount, the iron become brittle and unreliable. See Carborundum, Iron and Sand.

Sill.—One of the two side-bars of a motor-vehicle frame. See Side-member.

Sills-Eddy Mica Co.—Newark, N. J. Mfrs. mica.

Silver.—A white and lustrous metal; harder than gold and softer than copper, and melting at 1835° F. It is the best conductor of heat and electricity known, and is sometimes used for soldering. See Solder, Silver.

Silverberg, F.—Copenhagen, Denmark. Mfr. primary batteries.

Silver Lake House Garage.—Madison, N. H. Garage.

Silverman, Julius.—Officer Royal Battery Co., 108-10 Duane St., New York City.

Simm, Arthur M.—Sec. The London Auto Supply Co., 1229-31 Michigan Ave., Chicago, Ill.

Simm, Jas. C., Jr.—Pres. Treas. and Gen. Mgr. The London Auto Supply Co., 1229-1231 Michigan Ave., Chicago, Ill.

Simmons & Francis.—Flandreau, S. D. (Atlas, Moline.)

Simmons, Burt R.—310 Connolly St., Paris, Ill. (Waltham, Buick, Pope-Toledo.) Est. 1904. Garage, 10 cars; repairing.

Simmons Co., John.—104-110 Centre St., New York City. Mfrs. gasoline tank gauges, brass and copper tubing, safety valves, stampings.

Simmons, H. D.—332 Broadway, New York City. Eastern Buyer Geo. P. Moore Co., Inc.

Simms Mfg. Co., Ltd.—Welbeck Wks., Kimberley Rd., Willesden Lane, Kilburn, London W., England. Mfrs. high and low tension magnetos, automobile and motorcycle motors.

Simon, S. H.—Treas. and Gen. Mgr. The Carlyle Johnson Machine Co., Hartford, Conn.

Simonon, Foundries et Ateliers.—Herstal, Belgium. Mfrs. motorcycles.

Simons, Carl J.—Gen. Mgr. Palace Auto Co., 1408-1410 Walnut St., Kansas City, Mo.

Simons, G. O.—Shelby, O. (Winton.)

Simonson, Wm.—Mineola, L. I., N. Y. (Mitchell.)

Simplex Automobile Co.—614 E. 83d St., New York City. Makers of Simplex cars and motors. First marketed in 1904. Two different models of chassis made since. Herman and Carl Broesel, Mgrs.; Edward Franquist, Supt. and Designer; C. M. Hamilton, Advt. and Sales Mgr.; Palmer & Singer Mfg. Co., 1620-24 Broadway, New York City, Selling Agents. Dealers: Hamilton Auto, Chicago, Ill.; H. T. Kutzhaus, Tonopah, Neb.; Ransom Auto Co., Albany, N. Y.; T. D. Riggs, 10 Clinton St., Hartford, Conn.; Geo. West, Jr., Ballston Spa, N. Y.; Fuller & Thornton, 2028 Sansom St., Philadelphia, Pa.

Simplex Auto Co.—336 N. Broad St., Philadelphia, Pa. (Renault, Panhard, Isotta-Fraschini.)

Simplex Electrical Co.—110 State St., Boston, Mass. Mfrs. high and low tension ignition wires.

Simplex Motor Car Co.—Mishawaka, Ind. Mfrs. gasoline automobiles.

Simplicity Auto Co.—15th St. and Cleveland Pl., Denver, Colo. (Simplicity.)

Simpson & Price.—45 John Dalton St., Manchester, England. Mfrs. wearing apparel; fur coats.

Simpson, A.—24 W. Mound St., Columbus, O. Repairing.

Simpson, J. J.—Carbondale, Pa. Garage.

Simpson, Wm. G.—80 Broadway, Detroit, Mich. Mfr. gasoline commercial automobiles.

Sims & Co., H. W.—Inkster, N. D. (Buick.)

Sims, W. P.—Bisbee, Ariz. (Waltham.)

Sinclair, Chas. W.—Mechanic Parkway Garage Co., Central Park W. and 110th St., New York City.

Sinclair-Scott Co., The.—Baltimore, Md. Mfrs. gasoline automobiles.

Singer Automobile Co.—3939 Olive St., St. Louis, Mo. (Premier.)

Singer Automobile Co.—573 Farwell Ave., Milwaukee, Wis. (Franklin, Maxwell.)

Singer, C. A.—Pres. Palmer & Singer Mfg. Co., 1620-24 Broadway, New York City.

Singer, C. A., Jr.—Sec. Palmer & Singer Mfg. Co., 1620-24 Broadway, New York City.

Singer Co., Ltd.—Coventry, England. Mfrs. motorcycles, gasoline automobiles and tricars. (Singer.)

Single-acting Engine.—An engine, such as the gas and gasoline-motor and a number of high-speed steam-engines, in which the impulse is given to one side of the piston only.

Single-chain Drive.—A type of transmission in which the power is trans-

mitted directly from the motor to the rear axle by means of a single chain.

Single Center Buggy Co.—Evansville, Ind. Mfrs. gasoline automobiles and commercial vehicles.

Sintz, Guy L.—Fulton and Front Sts., Grand Rapids, Mich. Mfr. carburetters, transmission gears, gasoline automobile motors, timers.

Sintz-Wallin Co., The.—285 S. Front St., Grand Rapids, Mich. Mfrs. gray iron castings, gasoline marine motors.

Sioux Falls Auto & Supply Co.—112-14 N. Main Ave., Sioux Falls, S. D. (Jackson, Rambler, Ford.) Est. 1904. Cap. \$10,000. Frank Carey, Pres.; Clyde A. Gates, Sec. and Mgr. Garage, 50 cars. Repairing.

Sinson Garage Co., The.—Sinson, Cal. Directors: William T. Pierce, T. T. McGregory and Leonard E. Wood. Cap. \$10,000. Garage.

Sirdar Rubber Co., Ltd.—Shirland Rd., Paddington, London W., England. Mfrs. pneumatic tires.

Siren.—An apparatus on motor-cars and motor-boats for producing a loud sound as a warning or signal.

Sireno Co., The.—41 Cortlandt St., New York City. Mfrs. automobile and motor-boat horns, electric switches and specialties. Est. Oct. 23, 1907. John Gorden, Sr., Vice-Pres. and Prop., State Trust Co., 4th and Olive Sts., St. Louis, Mo. John Gorden, Jr., Gen. Mgr.

Sitton, Albert.—Fullerton, Cal. (Tourist.)

Sivan & Co., S.—172 Pentonville Rd., London N., England. Mfrs. radiators.

Siver Carriage Co.—52 Cedar St., Oneida, N. Y. (Maxwell, Ford.)

Sizaire et Naudin, Société des Automobiles.—79 rue de Lourme, Paris, France. Mfrs. gasoline automobiles. (Sizaire-Naudin.)

Skat Mfg. Co.—791 Park St., Hartford, Conn. Mfrs. hand soaps.

Skag.—A knee which unites and braces the stern-post and keel of a boat.

Skene & Co., W. J.—325 Water St., Augusta, Me. (Franklin, Elmore.)

Skene, J. W.—88-90 Bates St., Lewiston, Me. Est. 1900. J. W. Skene, Prop. (Rambler, Ford.) Garage, 50 cars; repairing.

Skew.—Oblique; at an angle; twisted to one side.

Skew-gear.—See Gear, Skew.

Skidding.—A movement, called also "side-slip," due to centrifugal force, and which suddenly slews a vehicle out of the desired direction when taking a curve at a speed which is out of proportion to the radius of the curve and to adhesion to the ground. The side-slip takes place so quickly that the driver hardly knows that it has begun before the car is turned

half way around, or is even headed in a direction opposite that in which it was going. In order to avoid skidding, the transition from one curve to another of different curvature should never be made too abruptly, for the attempt to do this has been the real cause of serious accidents that have been ascribed to defects in the steering-gear. The tendency of motor-cars to side-slip can be reduced by so distributing the weight of the vehicle and its contents as to make the swing-radius about the vertical through the center of gravity as small as possible, and it is also of advantage that the weight be symmetrically disposed with regard to it.

Skilhorn, L. G.—Supt. J. E. Lonergan & Co., 211-13 Race St., Philadelphia, Pa.

Skilton, R. J.—Mgr. Quaker City Auto Co., 138-146 N. Broad St., Philadelphia, Pa.

Skin.—The external planking or sheathing of a boat. (2) The hard outer layer of a casting, etc., due to the cooling of the surface more rapidly than that of the interior.

Skinner & Co.—2d St., between Main and Bush Sts., Santa Ana, Cal. (Reo.)

Skinner & Skinner.—1337 Michigan Ave., Chicago, Ill. Mfrs. tire pumps, power-driven tire inflators.

Skinner, J. M.—Pres. Toledo Storage Battery Co., 102 Oliver St., Toledo, O.

Skinner, L. H.—Colorado Springs, Colo. (Indian.)

Skinner, O. M.—Anaheim, Cal. (Reo.)

Slack.—The loose part of a belt (see Idle-side), or of a fixed rope.

Slack, Morris B.—West Chester, Pa. (Ford.)

Slade, W. W.—Sec. and Supt. Globe Optical Co., 403 Washington St., Boston, Mass.

Slag.—The masses of fused and often vitreous or glassy silicates resulting from a large number of metallurgical operations.

Slag-wool.—See Wool, Slag.

Slagle, W. F.—Bloomsburg, Pa. (Holsman.)

Slama Tire Protector Co.—Humboldt, Neb. Mfrs. anti-skid devices, tire chains, tire treads.

Slater & Co., E. J.—78 Holman St., Attleboro, Mass. (Dragon, Jackson.)

Slater & Sons, S.—47 Worth St., New York City. Mfrs. cloth and carpet trimmings.

Slater, S. S.—Vice-Pres. The Crescent Parts Co., 1743 Broadway, New York City.

Slaughter, R. L.—Midland, Tex. (Buick.)

Slavin, Wm.—Suffern, N. Y. (Maxwell.)

Slee, N. Tip.—Mgr. Auto Motor Co., Baltimore, Md.

Sleeve.—A general name for a hollow cylinder or tube into which a rod or shaft is inserted.

Sleeve-coupling.—A hollow cylinder serving to couple temporarily or permanently two shafts of a machine.

Sleeve-joint.—See Joint, Sleeve.

Sleeve-nut.—See Nut, Sleeve.

Sleeve, Screw.—See Screw-sleeve.

Sleeve, Tire.—A device called also a "gaiter," for making a temporary repair to a pneumatic tire, accidentally cut or bruised. It consists of a leather or rubber covering provided with lacings or eyelets like a shoe, and is placed over the damaged part and laced up. It is necessary to partially deflate the tire before lacing on the sleeve, and then to inflate otherwise dirt may creep in between the sleeve and the envelope and enter through the rent, perhaps injuring the inner tube.

A fair substitute for a sleeve, when none is to be had, is a wrapping of electrician's tape.

Sleight, E. H.—Pres., Gen. Mgr., Purch., Sales and Advt. Mgr. Moline Pump Co., Moline, Ill.

Slew.—To swing around out of a direct course; a term used of a motor-vehicle when it slides sideways in making a turn.

Slide.—A general term for a piece of mechanism which has a fully controlled rectilinear motion.

Slide-bars.—The bars that cause the cross-head of a steam-engine to move in a straight line.

Slide-blocks.—The blocks on the end of an engine cross-head which move along the slide-bars.

Slide-rod.—The rod which operates a slide-valve.

Slide-valve.—See Valve, Slide.

Slide-valve Ignition.—See Ignition.

Sliding-contact.—See Timer.

Sliding-feather.—See Feather, Sliding.

Sliding Friction.—See Friction.

Sliding-gear.—See Gear, Sliding.

Slip-joint.—See Joint, Slip.

Slosson, E. P.—1788 Fell St., San Francisco, Cal. (Premier, Crawford.)

Slot.—A general term for a long, narrow cavity, M (see figure), especially a rectangular one, cut to receive some corresponding part, B, in a mechanism.

Slotted Armature.—See Armature.

Slutter & Gamble.—Burlington, Ia. (Maxwell.)

Small, L. P.—Sec., Treas. and Office

Mgr. Consolidated Bicycle & Motor Co., 185 Notre Dame E., Winnipeg, Canada.

Smalley Motor Co., Ltd.—Bay City, Mich. Mfrs. gasoline marine motors.

Smart & Son, Eugene.—459 Central Ave., Dover, N. H. (Stanley.)

Smealie Bros.—10 Division St., Amsterdam, N. Y. (Franklin.)

Smelser, Leslie A.—New Windsor, Md. (Cadillac.)

Smelzer, W. M.—Rockville, Nev. (Waltham.)

Smillie & Co., Harry.—Mill and Market Aves., Rhinebeck, N. Y. Garage.

Smith, A. E.—Treas. Knox Automobile Co., Springfield, Mass.

Smith, A. E.—Sandy Hill, N. Y. (Maxwell.)

Smith, A. I.—213-219 Wisconsin St., Wauwatosa, Wis. (Cameron.)

Smith, A. J.—Gen. Sales Agt., 1228 S. Figueroa St., Los Angeles, Cal. (Elmore.)

Smith, A. L.—Elmira, N. Y. (Studebaker.)

Smith, Alex.—35 Mulberry St., Hartford, Conn. (Indian.)

Smith & Co., Albanus L.—1305 Arch St., Philadelphia, Pa. Mfrs. flexible tubing.

Smith & Co., D. B.—Utica, N. Y. Mfrs. mufflers, muffler cut-out valves.

Smith & Co., Edward.—45 Broadway, New York City. Mfrs. varnishes.

Smith & Co., H. D.—Plantsville, Conn. Mfrs. screwdrivers, hammers and drop forgings. Cap. \$200,000. Est. 1850. L. V. Walkley, Pres.; Louis H. Schmitt, Vice-Pres. and Sec.; Wm. S. Ward, Supt. Geo. R. Bond, Treas.

Smith & Co., Jos. N.—4th and Porter Sts., Detroit, Mich. Mfrs. a general line of automobile mountings, locks, hinges, handles, coat and foot rails, heel-board catches, lamp brackets, moldings, loops, tire holders, prop rests. Cap. \$100,000. Paid up \$51,500. Est. 1875. Inc. 1899. Joseph N. Smith, Pres.; C. E. Chamberlin, Vice-Pres. and Supt.; E. L. Ackerman, Sec. and Treas.; John Streberger, Machine Dept.; N. Bossineau, Polishing Dept.; M. Ryan, Plating Dept.; H. Buehler, Shipping Dept.

Smith & Co., W. Cary.—98 W. Lincoln Ave., Mt. Vernon, N. Y. (Rapid.)

Smith & Co., W. R.—306 W. 52d St., New York City. Repairing.

Smith & Giavannetti.—814 14th St. N. W., Washington, D. C. Garage.

Smith & Hemmingway.—296 Broadway, New York City. Mfrs. jacks, tools, wrenches.

Smith & Jordan.—231 Flatbush Ave., 10 Clinton St.; Charging Station, 811 Union St., Brooklyn, N. Y. (Pope-Hartford, Pope-Toledo, Pope-Waverley.)

Smith & Sander.—Akron, O. (Premier, Rambler.)

Smith & Son, Ltd., S.—9 Strand, London, England. Mfrs. speed indicators. U. S. Branch, 116 Broad St., New York City.

Smith & Zimmerman.—Raleigh and James Sts., Harrisburg, Pa. Garage.

Smith, Angus.—Sec. and Treas. Olds Motor Works, Lansing, Mich.

Smith, A. O.—Pres. A. O. Smith Co., Park and Clinton Sts., Milwaukee, Wis.

Smith, Arthur Parks.—Sec., Treas. and head of Mfg. Dept., Springfield Metal Body Co., Birney Ave., Springfield, Mass.

Smith, A. R.—809 E. Kearsley St., Flint, Mich. (Buick.)

Smith Auto Co.—61st St. and Broadway, New York City. (Smith.)

Smith Auto Co.—Topeka, Kan. Mfrs. gasoline automobiles.

Smith Auto Co.—1426 Court Pl., Denver, Colo. (Smith, Mora, American, Marvel, Logan.)

Smith Automobile Co.—Kansas City, Mo. (Smith.)

Smith, B. K.—Monticello, Ind. (Waltham.)

Smith Bros.—Los Angeles, Cal. (Rainier.)

Smith Bros.—Essex St., Melrose, Mass. Garage.

Smith, C. A.—Prop. Auto Tire Vulcanizing Co., factory, 689 Lawrence St.; office, Plain St., Lowell, Mass.

Smith Carriage Co., John M.—Atlanta, Ga. (Reo.)

Smith, C. F.—Treas. Logan Construction Co., 2d and Carrol Sts., Chillicothe, Ohio.

Smith, Charles.—Main St., Homer, Ill. Garage.

Smith, Chas. A.—Church Lane and P. & R. Ry., Germantown, Philadelphia, Pa. Mfr. interlocking automobile steering gears, baggage racks, contracting manufacturer of automobile engines, transmission and rear construction parts. Est. 1902.

Smith, Chas. Sydney.—Pres. United Wire & Supply Co., 109-119 Summer St., Providence, R. I.

Smith, Chas. U.—Vice-Pres. and Sec. Central Motor Car Co., Bloomfield, N. J.

Smith, C. K.—New London Auto Station, 94 Main St., New London, Conn.

Smith, Clawson.—420-22 Michigan Ave., Lansing, Mich. (Ford.)

Smith, Clyde H.—Skowhegan, Me. (Cadillac.)

Smith Co., A. O.—Park and Clinton Sts., Milwaukee, Wis. Mfrs. pressed steel frames, steering columns, steering wheels, transmissions, front and rear axles; wheels, control levers, pressed steel dashes, heavy pressed steel work for automobile construction. Mem. M. & A. M. Cap. \$250,000. Est. 1904. A. O. Smith, Pres.; C. G. Forster, Vice-Pres.; Chas. F. Hase, Sec. and Treas.

Smith Co., Ltd., C. H.—Sheffield, Ridgway and Warren, Pa. (Haynes.)

Smith Co., Wm. J.—New Haven, Conn. Mfrs. special automobile machinery.

Smith, C. R.—1230 Fulton St., 200 Bedford Ave., Brooklyn, N. Y. (Frayer-Miller.)

Smith, Crary & Davidge.—174 Water St., Binghamton, N. Y. Mfrs. miscellaneous wearing apparel.

Smith, D. R.—Vice-Pres. and Gen. Mgr. Smith-Haines, 1673 Broadway, New York City.

Smith, Dr. Ephraim.—103 W. Peachtree Ave., Atlanta, Ga. (Mitchell.)

Smith, E. L.—2339 S. Grand Ave., St. Louis, Mo. (Matheson.)

Smith, E. N.—Treas. Adrian Steel Casting Co., Beecher St., Adrian, Mich.

Smith, E. P.—Designer Coppock Motor Car Co., Decatur, Ind.

Smith, F. A. B.—Sec. C. P. Kimball & Co., 315-318 Michigan Ave., Chicago, Ill.

Smith, Frederick L.—Vice-Pres. and Gen. Mgr. Olds Motor Works, Lansing, Mich.

Smith, Fred L.—Treas. Davis Automobile Co., Inc., 7 Dorrance St., Providence, R. I.

Smith, Fred M.—218 2d Ave., Hibbing, Minn. (Rambler.)

Smith, F. N.—Treas. The Garford Co., Elyria, O.

Smith, Fred S.—38 Columbus Ave., Boston, Mass. (Walter, Autocar.)

Smith Garage & Repair Co., Geo.—257 N. Union St., Olean, N. Y. Supplies, garage and repairing.

Smith, G.—Head of Woodworking Dept., Fickling & Co., Inc., 154 E. 57th St., New York City.

Smith, G. Bennet.—Freeport, L. I., N. Y. (Logan.)

Smith, G. C.—Blackhawk, Ind. (Waltham.) Est. 1906. Repairing.

Smith, George E.—Purch. Agt. Reo Motor Car Co., Lansing, Mich.

Smith, G. H.—Mgr. Philadelphia Branch The White Co., 629 N. Broad St., Philadelphia, Pa.

Smith, Gilbert M.—Pres. and Treas. Manhattan Brass Co., 332 E. 28th St., New York City.

Smith, Geo. W.—Newport, R. I. (Maxwell.)

Smith, G. W.—Littleton, N. H. (Buick, Cadillac.)

Smith-Haines.—1673 Broadway, New York City. Est. Dec. 1, 1906. Supply house handling automobile accessories. Fred Ray, Pres.; F. A. Haines, Sec. and Treas.; D. R. Smith, Vice-Pres. and Gen. Mgr.

Smith, Harold O.—Pres. Premier Motor Mfg. Co., Indianapolis, Ind.

Smith, Harry.—Pine Grove, Pa. (Rambler.)

Smith, Henry E.—Treas. United Wire & Supply Co., 109-119 Summer St., Providence, R. I.

Smith, Henry H.—Pres. National Wheel Co., Jackson, Mich.

Smith, Henry T.—Gen. Mgr. United Wire & Supply Co., 109-119 Summer St., Providence, R. I.

Smith, Herbert W.—Treas. and Mgr. Solderene Co., 53 State St., Boston, Mass.

Smith, H. H.—Purch. Agt. The Turner Brass Works, Sycamore and Illinois Sts., Chicago, Ill.

Smith, Hinsdale.—Pres. and head of Design and Detail Dept., Springfield Metal Body Co., Birney Ave., Springfield, Mass.

Smith, H. S.—Supt. Crescent Auto & Machine Co., cor. E. 2d and Marr Sts., Fond-du-Lac, Wis.

Smith Improved Lock Nut Co.—Rockford, Ill. Mfrs. lock nuts and washers.

Smith, J. A.—Saratoga Springs, N. Y. (Thomas Flyer.)

Smith, John E.—Easton, Pa. (Maxwell.)

Smith, Jos. N.—Pres. Jos. N. Smith & Co., 4th and Porter Sts., Detroit, Mich.

Smith, L.—West Point, Ia. (Cartercar.)

Smith, L. H.—Gardner, Mass. Garage.

Smith, L. R.—Advt. Dept., The Automobile, Flatiron Bldg., New York City.

Smith Machine Co.—Van Rensselaer St., Cohoes, N. Y. (Maxwell.)

Smith Machine Co., H.—51 Godwin St., Paterson, N. J. Mfrs. trunk racks, turn tables.

Smith, M. F.—Pittsburg, Pa. (Walter.)

Smith Mfg. Co., The R. H.—Springfield, Mass. Mfrs. name plates, speedometers, steel stamps and stencils. R. H. Smith, Prop.

Smith, N. J. & F. C.—Ridgewood, N. J. (Maxwell.)

Smith, P.—West Plains, Mo. Garage.

Smith, Parfrey & Co., Ltd.—Rannoch St., Fulham Palace Rd., Hammersmith, London, England. Mfrs. wood wheels, springs.

Smith, S. A. & C. A.—Brattleboro, Vt. (Premier.)

Smith Steel Castings Co., Geo. H.—500 Clinton St., Milwaukee, Wis. Mfrs. steel castings.

Smith Storage Battery Co.—198 State St., Binghamton, N. Y. Mfrs. storage batteries.

Smith, T. E.—Treas. The Corbin Screw Corp., New Britain, Conn.

Smith, T. Guilford.—203 Ellicott Sq., Buffalo, N. Y. Mfr. sheet and bar iron and steel.

Smith, Vinal W.—Sec. T. Alton Be-

mus Co., Inc., 358 Atlantic Ave., Boston, Mass.

Smith, W. E.—Dalhart, Tex. (Wal-tham.)

Smith, Wm.—2395 Boulevard, Jersey City, N. J. (Logan, Reo, Premier, Ford, Wayne, Rapid.)

Smith, Wm. H.—Gen. Mgr. John R. Keim Mills, Kensington Ave. and Erie Tracks, Buffalo, N. Y.

Smith, Wm. A.—Associate Editor of Automobile Topics and member staff of International Motor Cyclopaedia.

Smith, W. U.—Vice-Pres. Bellefontaine Automobile Co., Bellefontaine, O.

Smith's Agency & Auto Garage.—Earlville, Ill. (Cadillac.)

Smith's Auto Garage.—83 Main St., Westerly, R. I. Garage.

Smith's Sons, H.—Manteno, Ill. (Cadillac.)

Smooth-on Mfg. Co.—572 Communipaw Ave., Jersey City, N. J. Mfrs. gaskets, packing, iron cement.

Smythe, F. W.—7th and H Sts., Eureka, Cal. Garage.

Smythe, Robert.—Rock Island, Ill. (Maxwell.)

Smythe, W.—Supt. of Shop Lakdel Automobile Co., 5143 Delmar Blvd., St. Louis, Mo.

Snap.—See Rivet-set.

Snap-cam.—See Cam, Snap.

Snap-spark.—See Ignition.

Snapping.—See Popping.

Snifting-valve.—See Valve, Snifting.

Snips.—Shears for cutting zinc, tinplate, etc.

Snodeal Auto Co., George R.—2552 Madison Ave., Baltimore, Md. (Marmion.)

Snow & Co., N. H.—Binghamton, N. Y. Mfrs. automobile tops.

Snow & Petreli Mfg. Co., The.—New Haven, Conn. Mfrs. reverse marine gears.

Snow Automobile Co.—86 Dorrance St., Providence, R. I. (Stevens-Duryea.) Est. 1903. Cap. \$10,000. C. D. Snow, Pres. and Mgr.; W. H. Draper, Treas.; W. A. Rayner, Sec.

Snow, B. W.—132 Bissell St., Syracuse, N. Y. Mfr. mufflers, stampings.

Snow, C. D.—Mgr. Snow Automobile Co., 86 Dorrance St., Providence, R. I.

Snow, E. L.—Brook St., Newton, Mass. Garage.

Snow Hardware Co.—36 Union St., Rockville, Conn. (Buick, Cadillac.)

Snow, John L.—Vice-Pres. and Treas. Peerless Motor Car Co. of N. E., 178 Columbus Ave., Boston, Mass.

Snow, Norlan.—Sec. and Treas. Campbell Auto Co., 612 Mulberry St., Des Moines, Ia.; 508 Central Ave., Fort Dodge, Ia.

Snowden, John W.—Peekskill, N. Y. (Winton.)

Snowden, W. T.—786 Bedford Ave., Brooklyn, N. Y. Vulvanizing.

Snug.—A projection, flange, lug, pin, or like device serving to limit the motion of a piece or as a catch for transmitting motion. The snug E of a bolt (see figure) is usually fixed in the body near the head

and enters a recess in the piece in which the head rests and thus prevents the bolt from turning.

Snug-bolt.—See Bolt, Snug.

Snutzel Frères.—9 rue de l'Activité, Brussels, Belgium. Mfrs. bodies.

Snyder & Co.—20 Railroad Pl., E. Orange, N. J., and Orange, N. J. Garage.

Snyder & Kerr.—Attica, Ind. (Jackson, Reo, Wayne, Overland.)

Snyder, A. H.—Sec. and Treas Buffalo Gasolene Motor Co., 1280-90 Niagara St., Buffalo, N. Y.

Snyder Auto Cycle Co.—York, Pa. (Pullman.)

Snyder Automobile Co.—229 W. Market St., York, Pa. (Baker, Pope-Toledo, White.)

Snyder, Clark.—Mill St., Rhinebeck, N. Y. Garage.

Snyder, C. O.—Sec. Chelsea Auto Storage Co., 516-520 W. 37th St., New York City.

Snyder, O.—57 Broad St., Bethlehem, Pa. (Chadwick, Logan, Pierce Racine.)

Snyder, Robt. J.—Bethlehem, Pa. (Holsman.)

Soapstone.—See Steatite.

Soapsuds.—Used as a lubricant for the cutting tools employed in working wrought iron and steel. A good soap mixture for this purpose is made by pouring 1 pint of oil into 5 pounds of soft soap and 12 quarts of water and thoroughly blending the whole by stirring.

Societa Aeronautica Italiana.—(Italian Aero Club), Milan, Italy. Member F. A. I.

Societa Anonima Carrozzeria Locati e Torressa.—Barriera di Nizza, Turin, Italy. Mfrs. bodies.

Societa Anonima Carrazzeria Torinese, Rossi Russolotti.—Barriera Bornigheri, Turin, Italy. Mfrs. bodies.

Societa Anonima di Automobili Serpollet.—Milan, Italy. Mfrs. steam commercial automobiles. (Serpollet trucks.)

Societa Carrozzeria Automobili.—Alesio, Turin, Italy. Mfrs. bodies.

Societa Cierano Automobili Torino.—66 via Madama Christina, Turin, Italy. Mfrs. gasolene automobiles. (S. C. A. T. cars.)

Societa Fidis.—Rome, Italy. Mfrs. gasolene automobiles. (Italian Brasier cars.)

Societa Italiana Roma.—Rome, Italy. Mfrs. gasolene commercial automobiles.

Societa Italiana Siemens.—337 Corso Umberto, Rome, Italy. Mfrs. electric automobiles. (Siemens cars.)

Societa Italo-Svizzera di Costruzioni Meccaniche.—Bologna, Italy. Mfrs. gasoline automobiles.

Societa Luigi Bellona e Ca.—1 Via Sirtori, Milan, Italy. Mfrs. bodies.

Societa Milanese Industria Meccaniche.—San Cristoforo, Milan, Italy. Mfrs. gasoline automobiles.

Société Americain des Carburateurs Volcan.—Boulogne-sur-Seine, France. Mfrs. carburetters.

Société Anonyme de la Roue a Jante Flexible Lambert.—3 Place Daumesnil, Paris, France. Mfrs. elastic wheels.

Société Anonyme de Marcinelle et Couillet.—Couillet, Belgium. Mfrs. gasoline commercial automobiles.

Société Anonyme des Ateliers de Construction, Forges et Fonderies d'Hautmont.—Hautmont, Nord, France. Mfrs. pressed steel frames.

Société Anonyme des Automobiles et d'Electricité Mors.—48 rue du Theatre, Paris, France. Mfrs. automatic starters, low tension magnetos.

Société Anonyme des Automobiles Ruhl.—Dison, Verviers, Belgium. Mfrs. gasoline automobiles. (Ruhl cars.)

Société Anonyme des Brevets et Moteurs Létombe.—59 rue d'Amsterdam, Paris, France. Mfrs. automobile motors.

Société Anonyme des Caoutchoucs de Saint Denis.—1 rue Henri-Murger, St. Denis, France. Mfrs. solid tires.

Société Anonyme des Etablissements Coudert.—Mignot, Puy-de-Dome, France. Mfrs. elastic wheels.

Société Anonyme des Radiateurs Egloff.—Zürich, Switzerland. Mfrs. radiators.

Société Anonyme des Tubes et Chassis Cloisonnés.—225 rue du Vieux Pont-de-Sevres, Billancourt, France. Mfrs. tubular frames, metallic rims.

Société Anonyme d'Inventions Automobiles.—41 rue St. Ferdinand, Paris, France. Mfrs. shock absorbers.

Société Anonyme Electromotion.—54 Ave. Montaigne, Paris, France. Mfrs. electric automobiles. (S. A. E. cars.)

Société Anonyme La Mécanique de Precision.—Charleroi, Belgium. Mfrs. high tension magnetos.

Société Anonyme L'Acétylithe.—61 bvd. du Hainaut, Brussels, Belgium. Mfrs. acetylene lamps.

Société Anonyme l'Auto-Carrosserie.—Rue de Sans-Nom, Gand, Belgium. Mfrs. bodies.

Société Anonyme Le Carbone.—12 rue de Lorraine, Levallois, France. Mfrs. primary batteries.

Société Anonyme le Centaure.—208 Cours Gambetta, Lyons, France. Mfrs.

automatic starters, pneumatic tires, leather tires.

Société Anonyme L'Électrique.—116 rue de Gravel, Levallois-Perret, France. Mfrs. electric automobiles. (Gallia cars.)

Société Anonyme Muller-Vogel et Cie.—St. Aubin, Neufchatel, Switzerland. Mfrs. automobile motors.

Société d'Automobile Designers.—15 rue de Rome, Paris, France.

Société de Construction Automobile de Reims.—Witry-lez-Reims, France. Mfrs. gasoline commercial vehicles. (S. C. A. R. cars.)

Société de Constructions Mécaniques de la Loire.—Chemin du Rez, St. Étienne, France. Mfrs. motorcycles.

Société de Fabrication de Bandages Demountables.—23 bvd. Gouvion St. Cyr, Paris, France. Mfrs. solid tires.

Société d'Antiderapant, Le Bayard.—56 rue de la Roquette, Paris, France. Mfrs. non-skids.

Société de la Pompe Vadam.—366 rue St. Honoré, Paris, France. Mfrs. tire pumps.

Société d'Electricité Nilmelior.—47 rue Lacordaire, Paris, France. Mfrs. primary batteries, spark plugs.

Société de Publications Automobile.—Pub. at 27 rue Ballu, Paris, France.

Société des Jantes Amovils, M. L.—52 Ave. Daumesnil, Paris, France. Mfrs. detachable rims.

Société des Moteurs Gnome.—Petit-Gennevilliers, Seine, France. Mfrs. automobile motors.

Société des Rous a Jante Creuse et Flexible, L. F.—50 bvd. de la Villette, Paris, France. Mfrs. elastic wheels.

Société des Usines des Ressorts du Nord.—10 rue St. Vaast, Douai, France. Mfrs. springs.

Société d'Étude et d'Exploitation pour l'Industrie Automobile.—45 bvd. Haussmann, Paris, France. Mfrs. detachable rims.

Société du Carburateur Malzieux.—61 bvd. de Strasbourg, Paris, France. Mfrs. carburetters.

Société Électrique Hydra.—60 bvd. Clichy, Paris, France. Mfrs. primary batteries.

Société Française de la Roue, E. L.—26 rue de Sablonville, Neuilly-sur-Seine, France. Mfrs. elastic wheels.

Société Française de Petit Outillage.—71 bvd. National, Clichy, Seine, France. Mfrs. ball bearings.

Société Française des Jantes Amoviles Bonhivers.—128 rue du Bois, Levallois, Seine, France. Mfrs. detachable rims.

Société Française des Roulements a Billes.—70 rue Franklin, Ivry-Port, Seine, France. Mfrs. ball bearings.

Société Française de Travaux Métal-

liques.—Hautmont, Nord, France. Mfrs. pressed steel frames.

Société Indo-Chinoise, Industrielle.—20 rue Richer, Paris, France. Mfrs. primary batteries.

Société Industrielle d'Albert.—27 Ave. de la Grande Armée, Paris, France. Mfrs. Rochet motorcycles.

Société Industrielle des Téléphones.—25 rue du Quatre-Septembre, Paris, France. Mfr. pneumatic rubber tires.

Société Internationale des Electriciens, Bulletin of.—Pub. at Paris, France.

Société la Française.—11 rue Brunel, Paris, France. Mfrs. motorcycles, chains.

Société Levitas.—128 rue du Bois, Levallois, France. Mfrs. primary batteries, electric lamps.

Société L'Oléo.—38 rue de la Folie-Regnault, Paris, France. Mfrs. spark plugs.

Société Manufacturière d'Accessoires.—94 rue d'Angoulême, Paris, France. Mfrs. horns.

Société Neuchateloise d'Automobiles.—Boudry, Prés Neuchatel, Switzerland. Mfrs. gasoline automobiles (F. Henriod-Schweitzer cars), automobile motors.

Société Parisienne.—10 Ave. de la Grande Armée, Paris, France. Mfrs. gauges.

Société Suisse de Carrosserie en Automobiles.—26 rue de la Coulouvrenière. Mfrs. bodies.

Société Westinghouse.—45 rue de l'Arcade, Paris, France. Mfrs. shock absorbers.

Society of Automobile Engineers.—42 East Ave., Rochester, N. Y. E. T. Birdsell, Sec.

Socket.—A cavity adapted for receiving and holding a correspondingly shaped piece.

Socket-joint.—See Joint, Socket.

Socket, Reducing.—A coupling for connecting pipes of different diameters.

Socket-wrench.—See Wrench, Socket.

Soedertelge - Werkstaeder.—Soedertelge, Sweden. Mfrs. gasoline automobiles.

Soft Brass.—See Brass.

Soft Iron.—See Iron, Soft.

Soft Solder.—See Solder, Soft.

Sohlinger, W. J.—Mgr. Carriage & Mfg. Trades and Sales Dept., The Sherwin-Williams Co., 601 Canal Rd. N. W. Cleveland, O.

Sohnner, J. W.—Ironton, O. (Ford.)

Solder, Aluminum.—A solder which can be used for both aluminum and aluminum, and made by melting together tin, cadmium and zinc of each 10 parts, and lead 1 part. The pieces to be united should, after being thoroughly cleaned, be immersed for about two hours in a strong solution of hydrosulphate of soda.

Solder, Brazing.—An extra-hard sol-

der for brazing is composed of 3 parts of copper and 1 part of zinc; a hard solder, of 8 parts of brass and 1 of zinc; and a soft solder, of 6 parts of brass, 1 part of tin and 1 of zinc. See Brazing.

Solder, Hard.—A solder that requires a red heat to fuse it. Hard solders are employed for joining brass, iron and the more refractory metals. A good solder for brass is composed of two parts of brass and one part of tin, with the addition, sometimes, of a little lead; but when the solder must be very strong, as for brass tubes that are to undergo drawing, two-third of a part of zinc to 2 parts of brass are employed. A common solder for iron, copper and brass consists of nearly equal parts of copper and zinc.

Solder, Silver.—Solder generally employed for very fine work. Hard silver solder is composed of 1 part of copper and 4 parts of silver; and soft silver solder of 1 part of brass and 2 parts of silver.

Solder, Soft.—A solder composed of 2 parts lead and 1 part of tin, an alloy which has a low melting point and is easily worked with a soldering-iron.

Solderene Co.—53 State St., Boston, Mass. Mfrs. soldering stick and paste, flux stick and flux paste, aluminum soldering sticks. Cap. \$50,000. Herbert W. Smith, Treas. and Mgr.

Soldering.—The operation of joining the surfaces of two metals, such as tin plate, copper, zinc, lead, and their alloys by the interposition of an alloy, which must necessarily be more fusible than the metals to be united. The efficiency of soldering depends upon the intimate union of the surface of the metal operated upon with the alloy used as a solder. To effect this, the surfaces are carefully cleaned, and in most cases a flux is used during the operation, say rosin or a solution of zinc chloride in soft soldering, or borax in hard soldering. The flux assists in removing oxide, etc., from the metal while in the heated state. A suitable quantity of solder is applied to the joint, and fused by the application of a heated soldering-iron or the flame of a blow-pipe. As the joint becomes hot, the solder melts and runs, under the action of surface tension, along the portions which have been prepared and heated to the proper temperature. "Soft solder" is easily caused to follow the track of the soldering-iron as it is drawn along the joint; but "hard solder," which always requires the heat of a blow-pipe, is more difficult to manipulate, and the surfaces to be soldered require very careful preparation.

Soldering, Autogenous.—A method of soldering metals, so called by its invent-

or, M. de Richemont, because it is done by the fusion of the two edges of the metals themselves without interposing a metallic alloy as a bond of union. This is effected by directing upon the two surfaces to be soldered or welded together a flame furnished by a hydrogen-oxygen, an acetylene-oxygen, an illuminating-gas-oxygen, or a hydrogen-atmospheric air blowpipe. The metals thus joined are much less apt to crack asunder at the point of union by difference of temperature, flexure, etc., than when ordinary soldering is employed. The process is cleanly and can be carried out without special training or experience. It is now employed on a large scale for the soldering of various metals, such as iron, copper, nickel and aluminum.

Soldering Fluxes.—Some of the fluxes used for soldering are as follows: For tin-plate, zinc chloride or resin; for copper to iron, resin; for iron or steel, borax or sal ammoniac; for iron to zinc, zinc chloride; for copper or brass, zinc chloride or sal-ammoniac; for lead, mutton suet; for galvanized iron, resin or mutton suet.

Soldering Iron.—A tool whereby solder is melted and applied in the ordinary method of soldering. The "iron," so called, really consists of a block of copper called a "copper bit," at the end of an iron rod provided with a wooden handle.

Soldering Lamp.—A blow-torch in which gasoline is used as a fuel and which is very essential to complete the outfit of an automobile, for the repair of leaks, where the soldering-iron is used.

Solenoid.—A copper wire rolled helically. Ampere's solenoid consists in the uniting of small and closed circuits placed perpendicularly on the same line. It has been discovered by experiment that solenoids possess the same properties as magnets. A solenoid is frequently called an "electrodynamic cylinder."

Solheim's Launch Works.—Great Kills, Staten Island, N. Y. Mfrs. motorboats.

Solid with.—A phrase sometimes used in the sense of "integral with," and sometimes in that of "operatively connected with."

Solliday & Co.—4th and Prairie Sts., Milwaukee, Wis. (Wayne.)

Solos Motoren Gesellschaft.—Gottleutstrasse 94, Frankfort-am-Main, Germany. Mfrs. automobile motors.

Somerville Auto Co.—Bonton Ave. and Broadway, Somerville, Mass. (Rambler, Maxwell.)

Sommer Motor Co.—152 Congress St. E., Detroit, Mich. Mfrs. gasoline automobiles.

Son, William H.—Supt. Spring Dept., Sheldon Axle Co., Wilkesbarre, Pa.

Sontag, F. A.—Houston, Tex. (Thomas.)

Soot.—A black deposit of carbon that often forms in the interior of the cylinder walls of an internal combustion motor and also fouls the spark-plugs when the mixture is too rich for complete combustion.

Sorensen, S.—208 Paterson St., Paterson, N. J. Vulcanizing.

Sorg, S. J.—Pres. Miami Cycle & Mfg. Co., Grand Ave., Middletown, O.

Sorge und Sabeck.—Mauerstrasse 86, Berlin, Germany. Mfrs. carburetters, chains, goggles.

Sotomayor.—19 bvd. Bourdon, Paris, France. Mfrs. tricarcs (La Libellule).

Soules Welch Motor Car Co.—736 Woodward Ave., Detroit, Mich. (Welch, Soules, Baker.)

South Automobile Co.—105 S. Conception St., Mobile, Ala. (Pierce-Arrow.)

South Bend Automobile Club.—Horace E. Kizer, Sec. South Bend, Ind.

South British Trading Co., Ltd.—15 Wilson St., Finsbury, London, E. C., England. Mfrs. motorcycles (Vindec.)

South Broad Automobile Co.—729 South Broad St., Philadelphia, Pa. Mfrs. automobile tops, bodies. Garage, repairing, renting, electric charging, repairing (Dorris).

South Chester Tube Co.—Chester, Pa. Mfrs. wrought iron and steel pipe.

South End Automobile Co.—7 Wright St., Newark, N. J. (Walter.)

South Haven Auto Co.—South Haven, Mich. (Franklin, Thomas, Babcock, Elmore.)

South Park Auto Station.—312-16 E. 57th St., Chicago, Ill. Garage.

South Side Auto Co.—2339 S. Grand Ave., St. Louis, Mo. (Corbin, Mathe-son.)

South Side Auto Repository.—769 44th St., Chicago, Ill. Garage.

South Side Auto Station.—323 E. 35th St., Chicago, Ill. Garage.

South Side Steel & Malleable Casting Co.—Windlake and 14th Aves., Milwaukee, Wis. Mfrs. malleable iron castings.

South Tacoma Garage Co.—South Tacoma, Wash. P. Leonard, Mgr. Garage.

Southern Auto Co.—College St., Asheville, N. C. (Rambler, Ford.)

Southern Automobile Co.—1200 Mt. Royal Ave., Baltimore, Md. (Pierce-Arrow.) Est. 1905. D. A. Clark, Mgr. Repairing.

Southern Auto Co., Ltd.—930 Common St., New Orleans, La. (Rambler, Ford, Premier, Leader.)

Southern Auto Equipment Co.—Atlanta, Ga. Garage.

Southern Automobile & Cycle Club.—

Chas. Procasky, Sec. and Treas., Belleville, Ill.

Southern Automobile Co.—Mobile, Ala. (Wayne.)

Southern Automobile Co.—168 N. College St., Nashville, Tenn. (Buick, Cadillac, Oldsmobile, Stanley, Pope-Toledo, Pope-Hartford, White.)

Southern California Glove Co., Inc.—860 S. Los Angeles St., Los Angeles, Cal. Mfrs. wearing apparel, gloves and gauntlets.

Southern California Motor Car Co.—1811 S. Main St., Los Angeles, Cal. (American, Marion)

Southern Garage Co.—35-37 W. Mound St., Columbus, O. (Buick.) Est. June 17, 1907. Partnership: S. E. Hodge, C. R. Clough. Garage, 40 cars. Repairing.

Southwestern Automobile Co.—W. Adams St., Phoenix, Ariz. (Rambler)

Southworth, A. G.—Automobile Dealer B. La Cross, Wis., Feb. 3, 1870. Ed. high school, Holley, New York, class 1887; Brockport State Normal School, class 1890. Director, Treas. and Mgr. A. G. Southworth Co., Inc. Mem. clubs: Crescent Athletic. Union League, Montauk, L. I. A. C. Res. 389 Park Place, Brooklyn, N. Y. Office. 1733 Broadway, New York City. In the trade since 1898. Used first car (Trimoto) 1898. Recreations: Trap shooting, automobilism, billiards, golf.

Southworth Co., Inc., A. G.—1733 Broadway, New York City, and 342 Flatbush Ave., Brooklyn, N. Y. (Pope-Toledo, Pope-Hartford, Pope-Waverley.) Est. Nov. 1906. Cap. \$100,000. John W. Sutton, Pres.; A. G. Southworth, Treas. and Mgr. Repairing.

Souvestre, Pierre.—1 Rue Tardieu, Paris. B. at Kervat, Finistère, June 1, 1874. Officer of the Academy; Chevalier of the Mérite Agricole; officer of the Nichamltikar; licentiate of law; and editor of "Auto," of "Armes et Sports," "Lois et Sports" and of several political journals. Author of "Histoire de l'Automobile."

Soverhill, H. A.—Vice-Pres. Moline Auto Co. East Moline, Ill

Spacke Mach. Co., The F. W.—Indianapolis, Ind. Mfrs. air compressors, connecting rods, transmission gears, piston rings, sprockets, tire pumps.

Spalding, A. G.—Pres. A. G. Spalding & Bros., 29 W. 42nd St., New York City.

Spalding & Bros., A. G.—29 W. 42nd St., New York City. Garage, 144 W 50th

St. (Stevens-Duryea) Est. 1899. A. G. Spalding, Pres.; J. W. Spalding, Vice-Pres.; W. T. Brown, Treas.; Frank Eveland, Mgr. Garage, 60 cars. Repairing. Branch, 336 N. Broad St., Philadelphia, Pa. F. Winsor Eveland, Mgr.

Spalding Bros.—Abilene, Tex. (Queen.)

Spalding, C. G.—Treas. The F. E. Bowers Co. Inc., New Haven, Conn.

Spalding Cotton Mills.—Griffin, Ga. (Maxwell.)

Spalding, E. B.—Sec. The F. E. Bowers Co., Inc., New Haven, Conn.

Spalding, J. W.—Vice-Pres. A. G. Spalding & Bros., 29 W. 42nd St., New York City.

Spalding, W. E.—Sec. and Treas. Lawrence Motor Car Co., 13-17 W. Warren St., Lawrence, Kan.

Spalin, J. C.—Lyons, Ia. (Waltham.)

Spang, Chalfant & Co.—Pittsburg, Pa. Mfrs. wrought iron and steel pipe, steel tubing.

Spanier, C.—Sec. Geen Electrical Mfg. Co., 180 Lake St., Chicago, Ill.

Spanner.—A non-adjustable wrench used for turning nuts. The nut fits into a short slot, usually formed by two jaws open at one end.

Spanner, Box.—A non-adjustable form of wrench provided with a special socket to fit corresponding nuts.

Spanner, Plug.—A tool used for removing caps, such as those that cover the inlet and exhaust valves.

Spare Motor Wheel of America, Ltd., The.—Sales Dept., 234-6 Michigan Ave., Chicago, Ill. New York Sales Office, 2148 Broadway. Mfrs. spare wheels.

Spark.—A form of disruptive discharge between two conductors. In automobile usage, it is the "spark" that fires the explosive mixture in the motor. The spark is either "a jump spark" or "make-and-break." The first jumps between two electrodes fixed on a spark-plug, and necessitates a current of high tension (up to 5,000 volts), produced in the secondary winding of an induction-coil or a magneto. The second is drawn out between the hammer and anvil of an "igniter," and is a low-tension one (say of 80 volts).

Spark Advance.—Such an advance or "lead" given to the time of firing the charge in a gas-motor as shall cause the spark to occur before the piston has completed its compression stroke. Such advance should be so much the greater in proportion as the piston is moving with greater speed, since the combustion is never instantaneous, but always requires an appreciable time for its production.

Spark-coil.—See Coil. Spark.

Spark, Fat.—A term used to describe a short and thick electric spark due to intensity of the current that produces it.

Spark-gap.—The distance between the points of the spark-plug, say about 1-32 of an inch, through which the spark jumps. After long use, corrosion due to

heat increases such distance, and the points of the plug should then be bent together. (2) A device (see

figure) introduced into the secondary circuit of a spark-coil in such a position that it may be placed on the dash in full view of the driver, and show whether or not the spark is occurring.

Spark-gap, Safety.—In a high-tension magneto, a safety gap (French, "parafoudre") placed in the circuit to prevent the machine from being subjected to too high currents, when, for any reason, the connection between it and the spark-plug is interrupted while the machine is in motion. See Magneto.

Spark Intensifier.—The same as Spark-gap, q. v

Spark-lever.—See Lever. Spark.

Spark Plug.—In an electric ignition, a plug provided with electrodes between which the spark jumps, and threaded at the end so that it can be screwed into the cylinder wall of a gas-motor with the electrodes projecting inside. It usually consists of porcelain, lava, steatite, tightly rolled mica, or of other heat-resisting materials. The gap between the electrodes is generally 1-32 inch, or slightly more.

Spark-plug, Magnetic.—A magnetic make-and-break device consisting of a circular magnet having an armature pivoted to one end, and which is raised by a spring and depressed by the current passing through the magnet-coil.

WIRING OF A NEW-DURR EXPLORER

Such depression brings the sparking-pin into contact and closes the electric circuit through the spark-coil. At the proper moment the commutator breaks the circuit through the magnet, and releases the armature, which, under the action of the spring, flies upward, knocking the pin out of contact, and produces a hot make-and-break spark at the point of the pin within the explosion-chamber.

Sparks Machine Co., C. F.—Alton, Ill. Mfrs. gasoline marine motors.

Sparks, O. W.—Vice-Pres. Galena Auto & Garage Co., cor. 9th and Main Sts., Galena, Kan.

Sparks, Wm.—Sec. and Treas. Geo. A. McKell Co., Jackson, Mich.

Spartansburg Automobile Co.—Spartansburg, S. C. Garage.

Spaulding, E. G.—Sec. John R. Keim Mills Inc., Kensington Ave. and Erie Tracks, Buffalo, N. Y.

Spaulding Engine Co., The.—St. Joseph, Mich. Mfrs. gasoline marine engines, reversible propeller wheels. Cap. \$25,000. Est. 1903. W. H. Hull, Pres.; T. F. Shear, Vice-Pres.; L. H. Rice, Sec.; Treas. and Gen. Mgr.

Spaulding, H. B.—Treas. John R. Keim Mills Inc., Kensington Ave. and Erie Tracks, Buffalo, N. Y.

Spaulding, S. S.—Vice-Pres. John R. Keim Mills Inc., Kensington Ave. and Erie Tracks, Buffalo, N. Y.

Speakman & Bousall.—105 Main St., Coatesville, Pa. Garage.

Speakman Supply & Pipe Co.—Wilmington, Del. Mfrs. brass pipe fittings.

Spear, C. A.—Oakfield, N. Y. (Walsham.) Est. 1906.

Spear, C. H.—Treas. and Gen. Mgr. Spear Martin Fur Co., 41 Church St., Burlington, Vt. Mfrs., dealers and jobbers, fur automobile coats, robes, caps, gloves, leather caps and gloves. Geo. P. Martin, Pres.; C. H. Spear, Treas. and Gen. Mgr.

Spear Martin Fur Co.—41 Church St., Burlington, Vt. Mfrs. fur automobile coats, robes, caps, gloves, leather caps and gloves. Geo. P. Martin, Pres.; C. H. Spear, Treas. and Gen. Mgr.

Speare, E. Ray.—Treas. and Gen. Mgr. The Alden Speare's Sons & Co., 369 Atlantic Ave., Boston, Mass.

Speare, Lewis R.—Pres. The Alden Speare's Sons & Co., 369 Atlantic Ave., Boston, Mass.

Speare's Sons & Co., The Alden.—369 Atlantic Ave., Boston, Mass. Mfrs. automobile oils, greases, soaps and metal polishes. Est. 1851, inc. 1898. Lewis R. Speare, Pres.; Henry I. Hall, Vice-Pres.; E. Ray Speare, Treas. and Gen. Mgr.; W. D. Stockbridge, Asst. Treas.; Clarence E. Stowe, Automobile Dept.

Special Motor Vehicle Co.—225 E. 4th St., Cincinnati, O. (Ford.)

Specialty Mfg. Co.—South Norwalk, Conn. Mfrs. electric switches.

Speed.—The space traversed by a body during a unit of time, or the ratio of the spaces traversed to the time taken to traverse them.

In the C. G. S. system the unit of speed is the centimetre per second.

When a body is impelled by a uniformly varied motion, the term "acceleration"

during a given time is applied to the ratio of the difference between the speeds at the beginning and the end, and the time considered, or, rather, the ratio between the variation of speed during the time and such time. The unit of acceleration is the centimetre per second per second. In practical units the metre per second is employed for speed, and in the traction of vehicles, kilometres per hour, whether it is a question of railway trains, street cars or automobiles.

"Commercial speed" is the ratio of the distance to be made to the time taken to make it, including in such time stoppages, slowing down, etc.

Speed is really the quotient of a length divided by a time, a definition that is extremely easy to comprehend. If there were 100 miles to be covered, and it took five hours to cover them, the speed would be 20 miles per hour. The speed here is therefore the quotient (100 divided by 5) of the length that had to be traveled (100 miles) by the time (5 hours) that it took to travel it.

It will be seen that the idea of speed must always include that of time.

Acquired speed is the speed of a movable body at the instant that the force moving it is abolished. According to the principle of inertia, the speed would afterward have to remain constant. In practice, the external resistant forces, progressively diminish it, and finally annul it by acting, after a manner, upon the movable body in such a way as to communicate a negative acceleration to it.

The term "acquired speed" is frequently used to designate the "live power" of a body in motion.

Speed, Angular.—The number of units of angular measurement through which an object turns in unit of time. Thus, if a wheel makes n revolutions per second, the angular speed is $360n$ degrees per second, or $2\pi n$ radians per second. See Radian.

Speed-indicator.—A device for indicating the speed of a vehicle or machine, actuated by gearing or other device from one of the moving parts. Those for automobiles are actuated from one of the steering wheels, and those for machines by a spindle or shaft. Different makers give different names to their product, as "speedometer," "tachometer," "tempometer," etc. Speed indicators for cars are graduated in miles or kilometres per hour, while those for machines (turbines, etc.) are graduated in revolutions per minute. See Motor-meter, Speed-indicator, Speedometer and Tachometer.

Speed, Linear.—The velocity or speed with which a body moves along a path whether straight or curved, as distinguished from angular velocity.

Speed, Piston.—The linear speed at which a piston reciprocates within a cylinder, equal to the stroke multiplied by twice the number of revolutions within a given period.

Speed-regulation.—See Governing.

Speedometer.—An apparatus to show the speed at which a motor-car is running.

Speed Changing Pulley Co.—750 E. Washington St., Indianapolis, Ind. Mfrs. carburettors, clutches, gasoline automobile motors.

Speedway Garage.—414 W. 155th St., New York City. Est. July 1, 1907. H. Ephraim and S. Silverburg, Proprietors. Garage, 50 cars. Repairing.

Speers, M. H.—Pine Bluff, Ark. (Thomas Flyer.)

Spelter.—An alloy of copper and zinc, in equal proportions for hard spelter, and of 1 part of tin, 4 parts of copper, and 3 of zinc for soft. It is used for brazing. (2) A commercial name for zinc.

Spence, E.—Sec. and Treas. Spence Mfg. Co., 279 Park St., Milwaukee, Wis.

Spence, J. H.—Pres. Spence Mfg. Co., 279 Park St., Milwaukee, Wis.

Spence Mfg. Co.—279 Park St., Milwaukee, Wis. Mfrs. oil cups, grease cups, brass water fittings, brass castings. Cap. \$25,000. Est. 1900. J. H. Spence, Pres.; E. Spence, Sec. and Treas.

Spencer & Parker.—121 E. Milwaukee St., Janesville, Wis. (Jackson.)

Spencer Bros.—Charleroi, Pa. Garage.

Spencer, C. H.—Phenix, R. I. (Waltham.) Est. 1906.

Spencer, C. W.—Special Representative R. M. Owen & Co., Lansing, Mich.

Spencer, Edwin C.—4 Mantic Ave., Providence, R. I. Garage.

Spencer, H. B.—Vice-Pres. Universal Electric Storage Battery Co., Offices 108 La Salle St., Factory, 36-38 Union Park Pl., Chicago, Ill.

Spencer, H. L.—5 N. Main St., Pawtucket, R. I. Garage.

Spencer Motor Co.—316 N. Broad St., Philadelphia, Pa. (Jackson.)

Spencer Optical Mfg. Co.—15 Maiden Lane, New York City. Mfrs. eye shields.

Spencer Regulator Co.—5-7 Front St., Salem, Mass. Supplies.

Spencer, Thos.—Hd. of Experimental and Originating depts., Helios Mfg. Co., Bridesburg, Philadelphia, Pa.

Spencer's Sons, I. S.—Guilford, Conn. Mfrs. brass, bronze, aluminum and copper castings, gray iron castings.

Sperry, Ira B.—Sec. The Auto Shop Co., 731 Vincent Ave. N. E., Cleveland, O.

Sperry, Wilbur.—Myrtle St., Leroy, N. Y. (Maxwell.) Garage.

Spewing-machine.—See Tubing-machine.

Spicer, C. W.—Pres. Spicer Universal

Joint Mfg. Co., 3rd St. and Madison Ave., Plainfield, N. J.

Spicer Universal Joint Mfg. Co.—3rd St. and Madison Ave., Plainfield, N. J. Mfrs. universal joints, high-tension magnetos. Member M. & A. M. Cap. \$100,000. Est. 1903. C. W. Spicer, Pres.; D. E. Titsworth, Vice-Pres.; Asa F. Randolph, Sec. and Treas.

Spider.—A skeleton of radiating spokes.

(2) The internal frame of a wheel, a gear-wheel or steering wheel (see figure, which shows the spider of a steering wheel), for example, on which a rim may be bolted, shrunk or cast. (3) The solid internal part of a piston to which the packing is attached and to the axis of which the piston-rod is attached. (4) A cross-shaped piece, on the ends of which are mounted wheels or bearings, as in the differential gear, for example.

Spider.—An open car, without top, provided in front with a single seat for two, and at the rear a seat reserved exclusively for a servant. This rear seat, carried by a wooden or iron frame, is usually detachable, and can be replaced by a trunk or case or a second seat similar to the first, in which event it is converted into a double-phaeton.

Spiegel.—A pig iron or white cast iron containing 3.5 to 6 per cent. of carbon and from 10 to 12 per cent. of manganese. If the manganese is much in excess of the latter amount, the name "ferro-manganese" (q. v.) is applied to the alloy. See Ferro-manganese.

Spigot-nut.—See Nut, Spigot.

Spindle.—The tapering end of a vehicle axle on which the wheels revolve. (2) A stationary shaft on which a pulley or wheel is mounted. Some spindles, such as those of magneto armatures, are revolvable. (3) The rod or stem of a valve.

Spindle-screw.—The same as Grub-screw. q. v.

Spindle-valve.—See Valve, Spindle.

Spinks, Lewis.—Treas. Standard Motor Construction Co., 180 Whiton St., Jersey City, N. J.

Spinney, H. I.—Farmington, Me. (Stanley.)

Spinning.—The formation of objects of a circular section, such as signal-horns, for example, from thin sheets of metal in a lathe. The sheet metal is placed in front of a mould attached to the mandrel and pressed by a suitable tool into the mould as it revolves.

Spinning, F. M.—1310 2nd Ave., Seattle, Wash. (Indian.)

Spiral Nut Lock Co.—432 E. 71st St., New York City. Mfrs. lock nuts and washers.

Spiral Spring.—See Spring, Spiral.

Spiral Spring & Auto Co.—1709 Broadway, New York City. Mfrs. supplementary spiral springs.

Spirits, Killed.—See Killed Spirits.

Spirits of Salts.—See Acid, Hydrochloric.

Splash-board.—Another name for fender and mud-guard, q. v.

Splash Lubrication.—See Lubrication.

Splatt, Wall & Co.—Perth, Australia. (Monarch.)

Spline.—A rectangular key fitted into a seat on a shaft, and occupying a groove in a hub, which slides longitudinally upon it, and rotates with it; a feather. (2) The slot to receive a feather. See Feather. (3) A thin strip of wood used as an aid in the drawing of curves through a number of points.

Splittorf, Chas. F.—261-5 Walton Ave., New York City. Mfr. spark coils, magnetos, commutators, spark plugs, switches. Member M. & A. M. Est. 1858. Chas. F. Splittorf, Prop. and Gen. Mgr.; John M. Splittorf, Mgr.

Splittorf, Chas. F.—Prop. and Gen. Mgr. Chas. F. Splittorf, 261-5 Walton Ave., New York City.

Splittorf, John M.—Mgr. Chas. F. Splittorf, 261-5 Walton Ave., New York City.

Spoerer's Sons.—400 S. Tremont Ave., Baltimore, Md. Vulcanizing.

Spoke.—One of the radial arms which connect the hub of a wheel with the rim. Spokes are of two kinds, tension and compression. The first are usually made of steel wire held in the hub by a shoulder and drawn tight in the rim by a nipple. The second are of wood and consist of the following parts: (1) a "foot," (2) a "tongue" or "tenon," which is inserted in the felloe; and (3) the "throat," or contracted part of the body near the hub. In motor-cars the wheels generally used are of the artillery type, in which the spokes lie in the same plane with the center of the hub; but sometimes the spokes are "staggered" (see Staggered), in order to provide against the lateral strains to which the wheel may be subjected. In suspension wheels the spokes are always staggered, since the lateral stiffness of a wire tension spoke is not adequate to maintain the wheel always in the same plane. In some cases where the wooden or compression spokes do not lie in the same plane as the periphery of the wheel, the latter is "dished" (see Dish), and in such a case the wheel is always "dipped" (see Dip), the amount of the dip being always such as to compensate for the dish. This arrangement is generally adopted for heavy vehicles,

but is little employed for motor-cars.
(2) One of the handles on the exterior of the rim of the steering-wheel of a boat.

Spoke, Compression.—See Spoke.

Spoke, Tangent.—A metal spoke which leaves the hub at a tangent to its rim instead of radially.

Spoke, Tension.—See Spoke.

Spoke, Tubular.—A hollow spoke, having externally the solid appearance of that of an artillery wheel. Wheels provided with such spokes are very light and strong and are much used for light cars and voituresses.

Sponge.—A porous sponge-like form assumed by finely divided metals, such as platinum and iron. See Platinum, Spongy. (2) A mass of iron from the puddling furnace not yet hammered into a homogeneous mass. (3) The network of elastic fibers that remains after the removal of the living matter from a ceratose sponge. Used for washing and cleaning motor cars, etc.

Sponge-cloth.—A cloth of loose texture used in place of cotton-waste for wiping oil off machinery.

Spontaneous Combustion.—See Combustion, Spontaneous.

Spool.—A socket-piece on the shaft of a cone-clutch between the transmission and universal joint.

Spooner, Frank Edward.—Photographer, Spooner & Wells, Inc. B. Batavia,

Photo by Spooner & Wells

Ill., Jan. 6, 1870. Ed. Lakeview High-school, Lakeview, Ill., finished first year. Publicity promoter Geo. N. Pierce Co., Adv. Mgr. Automobile Dept. A. W. Erickson Advt. Agency. Former automobile editor N. Y. Globe and special writer on automobile topics for different papers. Bicycle rider in 1878 and long-distance champion (amateur) in 1888; started nine times in long distance races and was never beaten. Became cycle correspondent in 1888 and represented over ninety papers, until 1901, when he entered the automobile field.

Sport Universel Illustré, Le.—Pub. at 13 rue de Londres, Paris, France.

Sports, Les Modernes.—Pub. at 24 Blvd. des Capucines, Paris, France.

Sports, Ltd.—2049 Broadway, New York City. Est. May 1st, 1907. Supply house handling automobile supplies, motorcycles and sporting goods. Palen Nel-

son, Pres.; W. B. Hughes, Sec.; John G. Bogan, Mgr. and Treas.

Sportsman, Le.—Pub. at 14 rue d'Or-Brussels, Belgium.

Sports, Les.—Pub. at 20 rue Saint-Marc, Paris, France.

Sprag.—A device, called also a "drop-brake" and "devil," generally consisting of a pointed rod fixed to the rear of a

vehicle and that penetrates the ground and prevents the vehicle from backing down a hill when the brakes fail to work.

Sprag, Block.—A ground-brake consisting of strong rods, B (see figure), to which are pivoted wedge-shaped blocks, S, and which, when released, drop and involve in their fall that of the blocks, which chock the road - wheels

when the vehicle begins to back.

Sprag, Ratchet.—A ratchet-wheel secured to a live axle, and into the teeth of which a pawl drops when the vehicle reverses its motion. An arrangement for preventing a vehicle from backing down hill. See Ratchet-wheel.

Sprague Bros.—113 5th Ave., Lorain, O. (Richmond.)

Sprague Electric Co.—527 W. 34th St., New York City. Mfrs. electric generators and motors.

Sprague Co., F. H.—Orange, Mass. Mfrs. miscellaneous wearing apparel.

Sprague, Col. Jas. H.—Pres. Sprague Umbrella Co., Norwalk, O.

Sprague Umbrella Co.—Norwalk, O. Mfrs. automobile tops and fronts. Member M. & A. M. Cap. \$40,000. Surplus, \$250,000. Est. 1879. Col. Jas. H. Sprague, Pres.; H. B. Conklin, Sec. and Treas.; A. E. Day, Supt.

Sprankle, W. Judson.—Reo Motor Car Co. of Philadelphia, 242 N. Broad St., Philadelphia, Pa. (Hotchkiss, Reo, Premier.) Est. 1906. Repairing.

Spratley, H. C.—Asst. Gen. Mgr. and Hd. Dept. of Equipments, Palmer and Singer Mfg. Co., 1620-24 Broadway, New York City.

Spray Carburetter.—See Carburetter.

Spray-deflector.—See Deflector, Spray.

Spray-hood.—See Hood, Spray.

Spring.—A piece of elastic material (tempered steel, hard brass, rubber, etc.) generally in the form of a thin rod or ribbon, employed to exert a force in a definite direction when bent or otherwise distorted.

Spring-buffer.—A cushioning device designed to prevent the bouncing action of the springs of a car when passing over inequalities of the road. See Shock-absorber.

Spring-clamp.—See Clamp, Spring.

Spring-clip.—See Jack.

Spring-clutch.—See Clutch, Spring.

Spring, Combination.—A spring in which the dumb-iron attached to the frame takes the place of the upper part of the ellipse.

Spring Commutator.—A small spring which holds together the arms of a commutator.

Spring, Conical.—A spring, called also a "cone spring," produced by winding a strip of metal on the surface of a cone, often used in buffers, etc.

Spring-cotter.—See Cotter, Spring.

Spring, Elliptic.—See Springs, Motor-car.

Spring, Equalizing.—A conical spring used to modify the action of the main spring of a motor-vehicle or to assist in carrying the load.

Spring, Grass-hopper.—A half-elliptic spring with linking plates for attachment to a shackle.

Spring-hangers.—The extreme ends (in some cases actual extensions of) a motor-car frame, usually provided with eyes to which the ends of the springs are attached.

Called also "dumb irons" and "frame hangers." Some forms of spring-hangers are of pressed steel construction, but the usual forms are hand or drop-forgings. The front, or what is generally termed the "pump-handle" form of hanger, is shown in Fig. 1, and the rear, or "fish-hook" form, in Fig. 2.

Spring, Helical.—A spring, sometimes called a "compression spring" and "ex-

tension spring," according as the spirals or open or close, made of a steel strip or wire wound into cylindrical form; often improperly called a spiral spring.

Spring-horn.—See Horn, Spring and Dumb-iron.

Spring-jack.—See Jack.

Spring, Leaf.—See Spring, Carriage.

Spring-pad.—Same as Spring-saddle.

Spring, Piston.—See Piston-spring.

Spring, Plate.—See Spring, Carriage.

Spring, Platform.—A spring consisting of two longitudinal half-elliptic springs, each shackled at one end of the body of the vehicle and at the other to the two ends of an inverted elliptic spring, placed transversely and secured at the center to the vehicle body.

Spring, Reach.—A spring connecting the front and rear axles.

Spring-ring.—The same as piston-ring.

Spring-saddle.—The "seat" upon which a spring rests.

Spring, Scroll.—A half-spring, C (see figure), that takes the place of the dumb-

iron and, shackled to a half-elliptic, forms a three-quarter elliptic spring.

Spring-seat.—A plate, called also a "pad" or "saddle," through which a spring rests upon the axle of a motor-vehicle.

Spring, Side.—A type of leaf-spring usually placed at the side of a motor-car.

Spring, Spira.—A spring coiled in one plane, like the spring of a watch. The term is also often erroneously applied to a helical spring, q. v.

Spring, Twin.—A double half-elliptic spring so shackled that only half the

spring comes into play on good roads or under light loads, while both halves come into play on bad roads, or under heavy loads.

Spring, Valve.—See Valve-spring.

Spring, Volute.—A flat metallic spring coiled in conical form and compressible in the direction of its axis; sometimes used in the running gear of heavy commercial motor vehicles.

Spring Washer.—See Washer, Spring.

Spring, X.—A plate-spring like the letter X.

Springs, Motor-Car.—The object of car-springs is to absorb the vibrations and joltings caused by the passing of the wheels over the inequalities of the road. They should be flexible and as long as

Fig. 1.

possible, since the stiffness of a spring varies inversely with its length. They are constructed of several finely tempered curved steel plates called "leaves," so shaped and combined as to strengthen each other and, at the same time, permit of each of them successively bearing its proper share of the load as the deflection of the spring increases. Springs are made in a variety of shapes, such as the "half-elliptic" (Fig. 1), "full elliptic" (Fig. 2), "three-quarter elliptic" (Fig. 3), "C," etc. Of these, the first is the type most commonly used on automobiles. While the full elliptic, which is more used on light cars and horse-drawn car-

Fig. 2

riages, has always been regarded as a serviceable spring, it does not possess the rigidity sidewise that is secured by the half-elliptic. The full elliptic necessitates the use of radius-rods to maintain the axle in position, but the half-elliptic is usually attached to the frame at one end while the other end is connected by a shackle to the spring-horn and is secured to the axle by means of clips. The three-quarter elliptic is similar to the half-elliptic, except that a scroll spring takes the place of the spring-horn.

Fig. 3

The deflection of a spring is the height, JK (Fig. 2), which separates a horizontal line extending from the two points of suspension of the spring from the upper part of the latter most distant from the

said line. The deflection ought never to exceed one-tenth of the length of the spring. That it may be elastic and, at the same time, strong, a spring should possess numerous wide and not very thick leaves, and have as slight a deflection as possible; and the top of the leaves should be of a general parabolic form. The tapering of the ends and thickness of the leaves should be calculated with the greatest care.

Spring Perch Co.—232 John St., Bridgeport, Conn. Mfrs. automobile and carriage springs (to order), curtain rollers for limousines, etc. Est. 1843. Edward Sterling, Pres.; Edw. W. Marsh, Sec.; F. B. Hawley, Treas. and Mgr.

Springer & Eastrold.—Mayville, N. Dak. (Ford.)

Springfield Auto Co.—40 Liberty St., Springfield, Mass. (Locomobile, Franklin, Stevens-Duryea.) Garage.

Springfield Auto Top & Upholstering Co.—102-6 Dwight St., Springfield, Mass. Mfrs. bow separators, cushions, automobile tops.

Springfield Automobile Club.—R. M. Baker, Sec., Springfield, Ill.

Springfield Auto Mfg. Co.—Springfield, Ill. Garage.

Springfield Automobile Club.—G. E. Mentel, Sec., Springfield, O.

Springfield Hat & Cap Co.—27-35 Taylor St., Springfield, Mass. Mfrs. wearing apparel, caps.

Springfield Machine Tool Co., The.—Southern Ave., Springfield, O. Mfrs. turret, high speed and brass working lathes, shapers, bench straightening presses. Cap. \$50,000. Surplus, \$200,000. Est. 1887. P. E. Montanus, Pres.; Paul A. Montanus, Gen. Mgr. and Vice-Pres.; Edw. I. Montanus, Sec.

Springfield Metal Body Co.—Birney Ave., Springfield, Mass. Mfrs. aluminum bodies, hoods and fenders, automobile tops. Member M. & A. M. Est. 1902. Hinsdale Smith, Pres. and Hd. Design and Detail Dept.; Arthur Parks Smith, Sec. and Treas., Hd. Mfg. Dept.; Wm. T. Helfer, Sales Mgr.; F. B. Read, Hd. Automobile Top Dept.

Springfield Portable Const. Co.—Springfield, Mass. Mfrs. portable houses and garages.

Springsteen, Edward M.—Hd. of Sales Dept. The Auto Shop Co., 731 Vincent Ave., Cleveland, O.

Sprinting.—A momentary acceleration of speed of the motor beyond the normal, causing the car to jump ahead in a race, either at the finish or in order to pass a competitor; a racing of the motor in order to make faster time.

Sprocket.—A toothed wheel that drives or is driven by a chain. In a double-

chain-drive, a small toothed-wheel attached to each end of the jack-shaft and driving the road-wheels through chains which pass over larger sprockets forming part of the hub. In a single-chain drive, a toothed wheel placed on the transmission-shaft and driving, by a chain, a larger sprocket surrounding the differential-case on the rear axles.

Sprue.—See Gate.

Spun-cotton.—See Cotton, Spun.

Spur-gear.—See Gear, Spur.

Spurling, H. G. W.—Hamilton, Bermuda. (Rapid.)

Spyker, Usines.—Trompenburg, Amsterdam, Holland. Mfrs. gasoline automobiles (Spyker cars).

Square.—A projection on top of the plug of a cock made square to fit the square recess in the key that turns it.

Square Shaft.—See Shaft, Square.

Squat.—To sink somewhat at the stern when in rapid motion; said of a vessel.

Squeak.—A distinctive noise due to a dry bearing, or other part that needs oiling. If such "squeak" comes from a bearing, the latter should receive prompt attention, otherwise it may become abnormally hot and seize.

Squier, G. C.—141 Mass. Ave., Boston, Mass. (Premier.)

Squires, E. G.—Ottawa and Pearl Sts., Grand Rapids, Mich. (Gearless, Michigan.)

Squires, F. H.—Head of Motors and Automobile Dept., Albaugh Bros., Dover & Co., Marshall Blvd. and 21st St., Chicago, Ill.

Squires, H. G.—Southampton, N. Y. Garage.

Squires, H. L.—Morgan City, La. (Waltham.)

Staacke Bros.—133 W. Commerce St., San Antonio, Tex. (Buick, Haynes, Stevens-Duryea.)

Stackpole Battery Co.—St. Mary's, Pa. Mfrs. dry cells, carbons, patent connectors, testing instruments, voltmeters, ammeters. Cap. \$100,000. Est. June, 1907. Mem. M. & A. M. J. K. P. Hall, Pres.; B. E. Wellendorf, Vice-Pres.; H. C. Stackpole, Treas.; W. J. Mills, Mgr.; G. W. Mills, Asst. Sales Mgr.

Stackpole, H. C.—Treas. Stackpole Battery Co., St. Mary's, Pa.

Stadleman, Geo. M.—Sec. and Sales Mgr. Goodyear Tire & Rubber Co., Akron, O.

Stafford Co., N.—67 Fulton St., New York City. Mfrs. license numbers, monograms, name plates.

Stagg, Stephen.—1308 W. Broad St., Richmond, Va. (Holsman, Maxwell.)

Staggered.—An arrangement of a num-

ber of objects, so that they are not exactly in a line with each other, or so that they incline alternately to the right or left.

Stahl, T. Raymond.—Advt. Mgr. Racine Boat Mfg. Co., Riverside, Muskegon, Mich.

Stale.—Said of gasoline when its density has reached such a point as to interfere with its free evaporation and render it less inflammable.

Stall & Dean Mfg. Co.—Brockton, Mass. Mfrs. automobile robes, wearing apparel, caps.

Stambaugh, John.—Pres. The Carlyle Johnson Machine Co., Youngstown, O.

Stamford Motor Co., The.—Stamford, Conn. Mfrs. gasoline automobile motors, motor-boats.

Stamp, Jacon C.—1327 Market St., Wheeling, W. Va. (Winton.)

Stamped Steel Engine Mfg. Co.—475 E. 105th St., Cleveland, O. Garage.

Stamping.—The operation of producing objects of metal by means of dies actuated by a press or stamping machine. Some metals may be used in the cold, while others require heating. The steel frames of many automobiles are now manufactured in this way.

Stanard, I. D.—9 A. Casco St., Portland, Me. Vulcanizing.

Stand-pipe.—See Pipe, Stand.

Standard.—A fixed measure, weight, value, or quality, established by law or sanctioned by usage, and which serves as a definite unit for comparison; (2), a term applied in a very wide sense to various supports forming parts of a machine, etc.

Standard Auto & Cycle Works.—41 Woodlawn Ave., Buffalo, N. Y. Garage.

Standard Auto Co.—Woodward Ave., Cor. Alexandrine, Detroit, Mich. (Packard, Oldsmobile.) Supplies; repairing.

Standard Auto Co.—640 Main St., Cincinnati, O. Garage.

Standard Auto Co.—1206 Huron Rd., Cleveland, O. (Packard, Autocar.)

Standard Auto Garage Co.—234 N. Phelps St., Youngstown, O. (Franklin, Buick, Pope-Waverley.)

Standard Auto Garage Co.—257-59 E. Market St., Akron, O. Garage.

Standard Auto Renting Co.—186 E. 73d St., New York City. Automobile renting.

Standard Auto Supply & Mfg. Co.—20 Broad St., New York City. Mfrs. lock switches, plain switches, tire pressure indicators, waterproof switches for boats. Agents for the Skinner rotary triplex tire pumps. Cap. \$10,000. Est. Nov., 1906. Octavius Knight, Pres.; Harry A. Knight, Sec. and Treas.

Standard Automobile Co.—5917 Baum St., E. E., Pittsburg, Pa. (Packard, Franklin.)

Standard Automobile Works.—110 5th Ave., Clinton, Ia. (Moline.) Est. Oct., 1906. Not inc. Charles E. White, Pres.; Milton W. Bailey, Sr., Sec. and Treas.; Alfred M. Londe, Mechanical Director. Garage, 20 cars; repairing.

Standard Automobile Lubricator Co.—361-3 Ellicott St., Buffalo, N. Y. Mfrs. lubricators.

Standard Ball Axle Co.—Lancaster, Pa. Mfrs. axles.

Standard Battery Connection Co.—27 Copeland St., Roxbury, Mass. Mfrs. wire terminals.

Standard Brake Co., The.—101 W. 66th St., New York City. Mfrs. brakes, clutches, brake and clutch cork inserts.

Standard Brazing Co.—88 Broad St., Boston, Mass. Mfrs. brazing compound.

Standard Carbonic Co.—Cincinnati, O. Mfrs. tire inflating tanks.

Standard Carbureter Co., Inc.—Sabin and Mathewson Sts., Providence, R. I. Mfrs. carbureters.

Standard China Works.—Trenton, N. J. Mfrs. porcelain.

Standard Co.—Torrington, Conn. Mfrs. nipples, spark plugs, wire terminals.

Standard Connecting Rod Co.—Beaver Falls, Pa. Mfrs. connecting rods, crank shafts, valve stems.

Standard Foundry & Mfg. Co.—Cleveland, O. Mfrs. gray iron castings.

Standard Foundry Co.—Jersey St. and Lakeview Ave., Buffalo, N. Y. Mfrs. gray iron castings.

Standard Foundry Co.—Hartford, Conn. Mfrs. brass, bronze, aluminum and copper castings.

Standard Garage Co.—1114 Main St., Buffalo, N. Y. Garage.

Standard Gauge Mfg. Co.—Industrial Bldg., Syracuse, N. Y. Mfrs. pressure gauges, water line gauges, lubricators, stampings, safety valves.

Standard Gauge Steel Co.—Beaver Falls, Pa. Mfrs. steel.

Standard Investment Co.—4 Webosset St., Providence, R. I. (Pennsylvania.)

Standard Lamp Mfg. Co.—43 S. Canal St., Chicago, Ill., and Charlotte, Mich. Mfrs. brazing compound, acetylene generators, lamps.

Standard Leather Co.—296 Spring Garden Ave., Allegheny, Pa. Mfrs. enameled top and trimming leather. Cap. \$400,000. Est. 1891. Geo. J. Lappe, Pres. and Gen. Mgr. Chas. H. Lappe, Vice-Pres.; A. A. Lappe, Treas.; J. W. Edmundson, Sec.

Standard Metalwork Co.—Thompsonville, Conn. Mfrs. brass tubing, automobile fittings, gas intakes, exhaust headers, metalwork to specifications. Est. July, 1905. James A. Colvin and James Acton Miller, M. E., parties at interest; Mark Worth Bushnell, Mgr.; James Acton Miller, Mechanical Engineer.

Standard Motor Car Co.—118 E. 9th St., Los Angeles, Cal., and 503 Golden Gate Ave., San Francisco, Cal. (Ford, Acme, Babcock, Soules.)

Standard Motor Car Co.—419 Linden St., Scranton, Pa. (Autocar, Pierce Arrow.)

Standard Motor Construction Co.—180 Whiton St., Jersey City, N. J. Mfrs. standard engines, marine motors. Est. 1895. Cap. \$1,800,000. Lewis Nixon, Pres.; C. C. Riotte, Vice-Pres.; Lewis Spinks, Treas.; E. A. Riotte, Sec.

Standard Oil Co.—26 Broadway, New York City. Mfrs. grease, oils, semi-solid oils.

Standard Pattern Works.—Detroit, Mich. Patternmakers.

Standard Roller Bearing Co.—48th St. and Girard Ave., Philadelphia, Pa. Mfrs. axles, steel balls, ball and roller bearings, hubs.

Standard Rubber Tire Co.—830 N. Broad St., Philadelphia, Pa. Vulcanizing.

Standard Sanitary Mfg. Co.—Pittsburg, Pa. Mfrs. brass pipe fittings.

Standard Stamping Co.—Marysville, O. Mfrs. automobile heaters.

Standard Tool Co.—432 Harrison St., Kalamazoo, Mich. Mfrs. jacks, tools.

Standard Underground Cable Co.—Pittsburg, Pa. Mfrs. insulated wire.

Standard Valve Co.—163 Hawthorne Ave., Brooklyn, N. Y. Mfrs. tire valves.

Standard Varnish Works.—29 Broadway, New York City. Mfrs. enamel, varnishes.

Standard Welding Co., The.—70th St. S. E., and 76th St. N. W., Cleveland, O. Mfrs. clincher, plain, crescent, drop center and flat base vehicle rims, side ring detachable rims, steel tubing and tubular products. Mem. M. & A. M. Cap. \$100,000. Est. July 1, 1899.

Stanford Garage.—112 Alma St., Palo Alto, Cal. (Ford.)

Stanhope.—A single-seated vehicle, with very high seat-panels, originally used as a horse-drawn vehicle. There is usually no back boot, but simply a single panel. A top is never applied to a stanhope.

Stanhope Forge & Machine Works.—27 Stanhope St., Boston, Mass. Repairing.

Stanley & Patterson.—23 Murray and 27 Warren Sts., and 329 4th Ave., New York City. Mfrs. and dealers electric flashlights for automobile work, charging receptacles for electric vehicles, general electrical supplies. Cap. \$269,000. Est. 1881. George L. Patterson, Pres. and Treas.

Stanley Auto & Mfg. Co.—Moreland, Ind. Mfrs. gasoline automobiles.

Stanley Elec. Mfg. Co.—Pittsfield, Mass. Mfrs. ammeters and voltmeters.

Stanley, C. F.—Montreal, Can. (Stanley.)

Stanley, F. E.—Treas. Stanley Motor Carriage Co., Newton, Mass.

Stanley, F. O.—Pres. Stanley Motor Carriage Co., Newton, Mass.

Stanley, I. N.—Kingfield, Me. (Stanley.)

Stanley, John T.—650 W. 30th St., New York City. Mfr. automobile body soap, hand soap, brass polish. Est. 1865.

Stanley Motor Carriage Co.—Newton, Mass. Makers of the Stanley steam car; first marketed in 1898. Twelve different models made since. F. O. Stanley, Pres.; F. E. Stanley, Treas.; C. F. Stanley, Supt.; E. M. Hallett, Pur. Agt.; Prescott Warren, Sales Agent.

Staples & Hanford.—Newburg, N. Y. Mfrs. seat springs.

Stapleton, John.—Foreman of Press Room, Bay State Stamping Co., 380 Chandler St., Worcester, Mass.

Star Auto Garage.—2253 Cottage Grove Ave., Chicago, Ill. Garage.

Star Ball Bearing Axle Co.—Princeton, Ill. Mfrs. ball bearings.

Star Ball Retainer Co.—Lancaster, Pa. Mfrs. ball retainers.

Star Brass Mfg. Co.—108-114 E. Dedham St., Boston, Mass. Mfrs. oil cups, oil pumps, stampings, safety valves.

Star Electrical & Garage Co.—609-13 French St., Erie, Pa. Supplies; garage; repairing.

Star Engineering Co.—Wolverhampton, England. Mfrs. gasoline automobiles. (Star. Royal Starling cars.)

Star Lubricating Co.—232 W. 28th St., New York City. Mfrs. oils.

Star Motor Car Co.—226 Halsey St., Newark, N. J. (Pullman.)

Star Porcelain Co.—Trenton, N. J. Mfrs. porcelain.

Star-wheel.—A ratchet-wheel, with large pointed teeth. It is used in various mechanisms, such as cyclometers, self-acting lathes, etc.

Starboard.—The right-hand side of a boat looking toward the bow.

Stareys, Ltd.—Nottingham, England. Mfrs. bodies.

Staring, W. H.—Supt. Peerless Motor Car Co., 23d St. and Quincy Ave., Cleveland, O.

Stark-Summit Automobile Co.—512 Arch Ave., Alliance, O. (Mitchell, Cartecar, Ford, Marvel.) Est. Jan. 1, 1905. C. L. Morgan, Pres.; Fred L. Morgan, Mgr. Garage, 22 cars; repairing.

Starr & Son, J. G.—Decatur, Ill. (Northern.)

Starr, C. H.—Sec. and Treas. Sterling Mfg. Co., 416 American Trust Bldg., Cleveland, O.

Starr, W. H.—88 Green St., New London, Conn. Garage.

Starter, Automatic.—A steam or elec-

tric car starts as soon as the motor begins to revolve, but such is not the case with a car provided with an internal combustion motor, since the latter must be set in operation first, and the car be afterward thrown into gear therewith. Before an internal combustion motor can be started, it is necessary to draw a charge of the "mixture" of gases into the cylinder, to compress it and to ignite it; in other words, the motor cannot be started until the crank-shaft is rotated, so as to bring about the several initial operations. With a heavy motor-car this is impossible, and a "starting-handle" is therefore provided in front of the motor, and which operates through gear-wheels or chain-drive on the crank-shaft. By giving this handle a few quick turns, the first charges are taken in and the motor starts. To start an internal combustion motor by cranking is a disagreeable and often dangerous operation, and so efforts have long been made to find some system that would permit of starting a motor from the driver's seat through some such simple intermedium as the depression of a pedal or the pushing of a button, etc. In well regulated four-cylinder motors ignited by a trembler-coil it generally suffices, in order to have the motor start, to close the primary circuit by means of a trembler. Such a process, however, is efficacious only when the cylinders are filled with a well-proportioned mixture, something that rarely happens in cold motors. So the processes based upon this principle (of which the Mors self-starter is the prototype) include the use of a gasoline saturator actuated at the moment of starting by means of a small hand-pump within reach of the driver. Two taps are fitted to the cylinder-head, one of which is in connection with a vapor tank, called a "dynamogene," and the other with the compression relief-cock. The cocks are opened by a rod and lever common to both. When starting the motor, after a period of rest, the lever is first pulled back and a stroke or two given to the pump in order to cause air to enter the vapor tank, wherein it becomes charged with gasoline vapor, and while still under pressure, is passed to the combustion-chamber as a mixture ready to be ignited. The cocks are then closed and the current is switched on. Of the numerous other automatic starters that have been devised may be mentioned the Winton, which consists of a cylindrical tank under the frame filled from one of the working cylinders during operations of the motor. In the gas line to this tank is a check-valve with a spring equal to the compression so that the gas is taken in only under compression. Connecting with the tank is a pipe line that

leads to a distributor, which has pipes connecting with the combustion chambers of each cylinder, and within which is a revolving timed distributor which lets the pressure into each cylinder at its firing point. Should the first cylinder into which the pressure enters fail to fire, the pressure enters the cylinder next to fire and so on until the motor is in operation. To bring the self-starter into action it is but necessary to operate a valve on the dash. In the "Monarch" self-starter, air under pressure is stored in a tank until needed, and then relieved into an air-motor which is connected directly with the crank-shaft. The air motor has three cylinders, with flanges and trunk pistons. At the top of each cylinder is a pair of valves, one of which is an inlet poppet-valve, on a stem, which carries a collar, and is held up by a spring acting against the collar. These valves being open, air is drawn into the cylinder. Each cylinder has also an outlet valve, with guide extension.

The three cranks on the crank-shaft are set 120 degrees apart, so that there cannot be a dead set. The crank-shaft has a small pinion at one end, and a sprocket wheel at the other, and it engages the crank-shaft of the automobile by a chain. The air-motor is geared two to one of the gasoline motor, thereby not diminishing to any considerable degree the power from the latter. The motor being in operation and engaging the air-motor, air is pumped and stored in a small high pressure tank, and when the desired pressure is obtained the air-motor automatically stops. The pressure tank is tested to 800 pounds hydraulic pressure, but can be filled and adjusted to any required amount of pressure for each individual motor. The pressure can be stored in the tank indefinitely.

The main motor having stopped, if it is desired to start it, the operator, by means of a lever releases air from the pressure tank, through a pipe, to the cylinders of the air-motor, and the power is communicated to the automobile motor, thereby automatically starting it.

The Hobbs pneumatic starter consists of a cylinder and piston with rack, engaging a piston which rotates the crank-shaft by means of a one-way clutch. A three-way valve, opened by hand, feeds the motor fluid, and is automatically cut off and released. A spring returns the piston to the original position. At the end of the rack a space is left without teeth, to prevent trouble in case of a reversal of the engine. The compressed air used for operating the device is obtained from a pump driven by the engine; or compressed gas from the explosion-chamber, stored in a tank, may be

used instead. With this starter 60 to 80 pounds is the maximum needed to give good working pressure and sufficient reserve. With the above pressure a 12-gallon tank will give sixteen to twenty starts.

In the Auto Improvement Company's "Ever Ready Starter" a tightly wound spring, when released, supplies the force to start the engine. The apparatus consists of a powerful spring incased in a brass-covered steel shell. This spring, when wound, is tightly held by a clutch-band, which, in turn, is connected to a pedal release-lever. The release-lever is located in a position convenient to the operator's foot. By pressing the pedal with the foot, the clutch-band is released and the full power of the spring is thrown on to the engine-shaft, which impulse of the spring will revolve from five to eight complete turns, the revolutions varying according to the compression of the engine.

As soon as started, the speed of the engine automatically rewinds the starter spring until it is tight and the spring is caught and held securely by the clutch-band. The starter is then automatically disconnected from the engine and is again ready for starting.

Starting-box.—A device for starting an electric motor. It usually consists of a rheostat, with three or four points furnished with a handle and devices for releasing on "no load." See Rheostat.

Starting-crank.—See Crank, Starting.

Starting-lever.—See Lever, Starting.

Starting on Spark.—See Motor, Starting a.

State Automobile Co.—Mignonette and Randolph Sts., Pittsburg, Pa. (Logan, Pullman.)

State Novelty Works.—324 Fuller St., Helena, Mont. (Rambler.)

State Street Garage.—468 State St., Rochester, N. Y. Garage.

States, W. M.—Head of Accounting Dept., Helios Mfg. Co., Bridesburg, Philadelphia, Pa.

Stator.—The stationary part of an asynchronous alternating current motor and, in a general way, of all electrical generators.

Statoscope.—An extra-sensitive barometer used by aeronauts, and which at once shows the least variation in altitude.

Statter & Co.—Newhall St., Birmingham, England. Mfrs. jacks.

Staub und Co.—Mannedorf, Switzerland. Mfrs. non-skids.

Staver Carriage Co., The.—76th and Wallace Sts., Chicago, Ill. Mfrs. gasoline automobiles. (Staver motor-buggy.)

Stay.—A bar used to strengthen or stiffen a structure.

Stay-bolt.—See Bolt, Stay.

Stays.—Steel cables or tubes for firmly holding, through screws or bolts, long pieces that are subject to stresses, and for preventing flexion, as the stay on the rear axle of a shaft-driven car.

Steam.—The vapor of water; a term applied to the hot vapor given off at the boiling-point (212° F. or higher). See Ebullition, and, Steam, Superheated. The "total heat" of steam is the amount of heat required to raise 1 lb. of water from the freezing-point (32° F.) to its boiling-point, and then to evaporate it under constant pressure. If it be the temperature of evaporation (or boiling-point), then H , the total heat, will be given by the equation:

$$H = 1091.7 + .305 (t - 32^{\circ}).$$

Steam-boiler.—See Boiler.

Steam Cars.—Of the many types of pleasure steam cars formerly on the American market only a few remain, the chief one being the White; the Stanley and the Lane being the only others of more than local vogue. All of these differ materially, not only in the kind of generator employed, but also in the construction and arrangement of their engine.

The "flash-generator" is a type of water-tube boiler brought out in France by Serpollet in 1889 and improved in America by White in 1898. It consists of long piping, closely coiled, and maintained at a high temperature, so that water pumped into one end issues in the form of steam from the other. It is this form of generator which has met with the greatest success, especially in America, where the White has had a widespread sale. The Lane car employs a combination of flash and water-tube

The Stanley, which was brought out in 1898, uses a vertical fire-flue shell boiler, placed beneath the seat. Boilers of this type are of small dimensions, being frequently but little more than a foot in diameter and height, with flues that are generally of copper and admit a working pressure of from 150 to 180 pounds to the square inch.

All light steam cars use liquid fuel to produce heat for the generator, that most commonly employed being gasoline vaporized by heat in a burner varying in form, but based on the principle of the Bunsen as applied to gasoline stoves. See Burner.

Although many of the early types of American steam cars still use simple engines, the typical engine is the two-cylinder, double-acting, reversible with the Stephenson link-motion. Ordinarily, such engines work simple, but several up-to-

date types of American cars, such as the Lane, are equipped with compound engines which may be run simple when extra power is required.

One of the most efficient among the American compound engines is that operating the White car, all the recent models of which are constructed on the lines of gasoline touring cars, having the motor in front under the bonnet. The engine, which is vertical, is a double-acting compound; that is to say, the steam enters the high pressure cylinder, drives the piston from both ends, and exhausts to the low pressure cylinder, which is usually of twice the diameter. The exhaust from the low pressure cylinder is carried through a large condenser in front, in which the steam is condensed into water exactly in the same way as the temperature is reduced in the radiator of a gasoline-car. The drive from the engine to the road-wheels is by means of a cardan shaft and bevel gear, connected to a rear axle of the same type as that employed in a gasoline-car. There is no change-speed gear, and the speed is practically governed by the throttle, mounted above the steering-wheel. Of the two pumps which supply water to the flash generator, which is situated under the front seat, one is sufficient for ordinary conditions. When a greater amount of steam is necessary, the closing of a hand-valve on the dash sets the second pump in operation. The method by which the supply of water to the generator is automatically shut off when the pressure exceeds a certain fixed amount is wholly independent of the method of varying the amount that can be supplied by this two-pump arrangement. The car is fitted with bevel-gear drive and disconnecting clutch, for the purpose of allowing the engine to run idle for a few moments at the start. In connection with this clutch a secondary gear is provided, by which the car can be run at half speed when the engine is making its full number of revolutions. This lower gear can be used whenever the road conditions necessitate slow traveling and increased power. No reverse-gear is necessary, the valve-motion of the engine being so arranged that the engine will reverse itself.

In the Gardner-Serpollet car, which is widely known and used in France, the generator is placed at the back of the car, and the motor is horizontal and has single-acting cylinders of the same type as those used in internal combustion motors. The drive is by countershaft with a differential and side-chains to the rear wheel, the engine crankshaft driving the countershaft direct through the intermediate of gearings.

Steam-chest.—In a steam-engine, a box containing the slide-valve and seat and the inlet and outlet steam passages.

Steam-cock.—Any tap used for controlling a supply of steam, especially a tap opening into a boiler above the water-line.

Steam, Dry.—Steam unmixed with fine particles of water, but not superheated. See Steam, Superheating.

Steam-engine.—A mechanism for obtaining mechanical energy from the heat energy stored up in steam.

Steam-engine, Compound.—A compound steam-engine is one in which the steam is used several times over in as many separate cylinders, although the term is usually applied to engines operating with two cylinders.

Steam-engine, Cycle.—See Cycle, Steam-engine.

Steam-gauge.—See Gauge, Steam.

Steam-generator.—See Boiler.

Steam-jacket.—See Jacket, Steam.

Steam-lap.—See Lap.

Steam, Live.—Steam which has not yet been expanded, as distinguished from exhaust steam.

Steam-port.—See Port.

Steam-pump.—See Pump, Steam.

Steam, Superheating.—When water is vaporized in a closed vessel such as a steam boiler, there is always some water in contact with the vapor, and the space situated above the liquid contains the maximum quantity of steam that it is possible for it to hold at the temperature of the whole. In such a case the steam is said to be "saturated." Its pressure is called the "maximum elastic force" or "maximum tension" at the temperature considered.

It cannot become greater except by an elevation of temperature to which would correspond a new tension. But the saturant steam can be heated, independently of the water which has produced it, and acquire a high temperature, without an increase of its initial pressure, and this constitutes "superheated steam." Superheated steam may contain a great quantity of heat without on that account being at an enormous pressure, and may pass through a great length of piping without condensing therein. Before there is any condensation, in fact, the temperature must descend to that of the saturant steam of the same tension. Its application to steam-engines permits of a notable increase in the efficiency, and absence of condensation, the principal cause of loss in such engines. Superheated steam behaves almost like a gas at ordinary temperatures. It is produced in boilers provided with superheaters or in special superheaters.

Steam-valve.—See Valve, Steam.

Steam, Wet.—Steam in which partial condensation has occurred, or which has been mixed with water-spray in the boiler.

Steam-whistle.—See Whistle

Steel.—The result of the combination of iron and carbon in the proportion of about .005 to .015, that is to say, in a much smaller proportion than in cast-iron. Steel melts in the vicinity of 1,400° C. (2,550° F.) and is therefore "carburetted iron" or "decarburetted cast-iron."

This carburetted iron, which was formerly much employed in the form of nearly pure "mild steel," contains a very small proportion of carbon. Since its natural hardness was not sufficient, it was increased either by tempering, or by cementation or case-hardening, which, in spite of their numerous advantages, offered the drawback of giving in most cases a crystalline structure to the long fibers that form the principal character of iron. The hardness was increased, but to the detriment of resistance.

Long researches were undertaken, and trials were successfully made to alloy steel with small proportions of such metals as chromium, nickel, tungsten, etc. Such slight additions of foreign metals permit of obtaining new steels, or rather alloys that present, along with extreme hardness, a very great resistance to elongation, crushing, or torsion, etc., and that, too, so to speak, in the proportions desirable for such a use.

Steel, like iron, is very distinctly differentiated from cast iron, since the latter contains more elements foreign to pure iron and is much less malleable. But it is difficult to decide as to what must be called "iron" and what "steel." Of steel may be given the simple definition that it is a metallic substance which, sensibly hardening through the action of tempering, is composed of pure iron and carbon, the latter in exceedingly small quantity.

Steel may be obtained: (1), by removing from cast-iron a portion only of its carbon, and (2), by adding to iron a proper quantity of carbon.

The manufacture of steel is almost as ancient as that of iron. The processes of production are very numerous, but can be reduced at present to three types, viz., cementation, q. v., the Bessemer process, q. v., and the Martin-Siemens, or open-hearth process, q. v.

Steel, Angle.—A bar of steel, the cross-section of which has the form of the letter L.

Steel, Basic.—Steel produced by the "basic process," q. v.

Steel-belt.—See Steel, Belt.

Steel, Blister.—Steel produced by the cementation process, and the appearance of which is due to the escape of carbonic acid gas.

Steel, Chrome.—Chrome, mixed with steel in proper proportion, gives steel a marked superiority. But, since this simple body is not found in a pure state, ferro-chrome or chromated cast-iron is used for mixing with the steel.

Chrome steel, while exhibiting the resistance of a hard steel, is sensibly less brittle than a steel of the same hardness simply carburetted; its limit of elasticity is almost double that of other steels, and

its resistance to fracture or shock is considerable. Non-tempered chrome steel is, as a general thing, very difficult to break with a heavy hammer, even after it has been notched with a file. It presents a very streaky fracture. The chrome steel usually employed contains 1 to 1.5 per cent. of carbon and 1 to 2.5 of chromium, and, before use, is hardened once at 800° C. (1,472° F.) in oil and then at 850° C. (1,562° F.) in water, this treatment obviating the formation of cracks that occur when water alone is used.

Steel, Chrome-Nickel.—This steel, which is very largely used, possesses all the advantages of nickel steel, together with the increased hardness imparted by the chromium, a very important quality for parts exposed to much friction, such as pinions and axles. There are in use four grades of this steel and one other grade, sold on the market under the mark NY, the composition of which is not disclosed and which is generally used for making pinions.

It has become quite common now to use for crank-shafts, axle and steering arms a nickel steel which will show on test an ultimate tensile strength of 60 tons to the square inch and of the extraordinary elastic limit of 50 tons, on test pieces of 6 inches length and 0.6 inch diameter, the same steel showing elongation of 14 to 16 per cent. and contraction of area at fracture of as much as 65 per cent. The same steel hardened will have a tensile strength of 103 tons per square inch, an elastic limit of 98 tons and elongation of 6 per cent., and contraction of area of fracture of 40 per cent.

Steel, Copper.—This is a very hard and brittle alloy, as white as bismuth, containing 12 per cent. of silicium. It is obtained by melting together three parts of fluosilicate of potassa, one part of sodium and one part of copper turnings, at a temperature that causes the molten liquid to become covered with a very liquid scoria.

Another copper-steel containing 4.8 per cent. of silicium possesses a light bronze color. It is hard and behaves exactly like iron on the lathe and under the file and does not foul the latter like ordinary bronze. Its ductility is excellent, and wire made of it has a tenacity equal that of iron.

Steel, Crucible.—Steel made by melting a mixture of irons or alloys in graphite or clay pots. The mixture is accurately weighed so as to produce the chemical composition desired in the finished product. Pots are used in size varying from 50 to 150 pounds capacity. The size of pots is limited, since they have to be manipulated by hand.

Steel, Damask.—Damask steel is merely steel in which the carbon is not uniformly distributed. Dipped into sulphuric acid, vinegar, beer, lemon-juice or aluminous sulphate of iron, the carbon of its surface is exposed and takes on the characteristic aspect to which the steel owes its name.

Steel, Manganese.—Manganese introduced into steel gives it special qualities both from an electrical and mechanical viewpoint. Small quantities increase its tensile strength, but its proportion of carbon must diminish. With more than 1 per cent. of manganese, steel becomes hard and brittle, and with 4 or 5 per cent. such property is increased. On the contrary, with 8 to 15 per cent. steel behaves very differently. A manganese steel containing 12 per cent. of this metal and 1 per cent. of carbon acquires, according to the forge and tempering processes employed, a high mechanical resistance. Its breaking load varies from 80,000 to 150,000 pounds to the square inch. The same steel with 12 per cent. of manganese has a magnetic permeability almost equal to that of air. The presence of this metal in steel increases its specific resistance, which, in the case of 12 per cent. steel, reaches .000,067 to .000,009 or .000,010 of an ohm.

Steel, Mild.—Steel which contains a low percentage of carbon. It resembles wrought-iron very closely and can be welded.

Steel, Natural.—This kind of steel dates back several centuries. It is obtained in Catalan forges, or else by a partial decarburetion of cast-iron. This process, which gives only a steel wanting in homogeneity, is gradually becoming abandoned.

Steel, Nickel.—This, when combined with chrome, is the most valuable steel at present known. It forms a true alloy which is very homogeneous and very easy to combine. It is much harder than ordinary steel and hardens still further when it is tempered. It melts easily and is but slightly subject to oxidation. It is sometimes called "meteoric iron."

Although nickel-steel may be subdivided into three categories as the proportion of nickel is low, medium or high, the best method of classifying it is as follows, showing not merely the proportion of nickel alone, but also the sum of the nickel and carbon:

1. Low in nickel (1 to 6 per cent.) and very low in carbon (0.10 to 0.25 per cent.)
2. Low in nickel (1 to 6 per cent.) with medium carbon (0.25 to 0.40 per cent.)
3. Medium nickel (10 to 18 per cent.) and medium carbon (0.20 to 0.25 per cent.)
4. High in nickel (30 to 36 per cent.)

and low in carbon (0.12 to 0.20 per cent.)

5. High in nickel (20 to 30 per cent.) and high in carbon (0.60 to 0.80 per cent.)

Experiments have shown that nickel-steel with 2 per cent. of nickel has the minimum degree of fragility, while by a single hardening at 800° C. (1,472° F.) it gives results as good as those furnished by double hardening ordinary carbon steel.

Steel with low carbon and nickel content is now generally used in motor-car work, the usual proportion being: Carbon, 0.10 to 0.15 per cent., and nickel, 1.5 to 2 per cent.; but for axles, shafts and bearing-cups, valves, etc., various other proportions are used. The micro-structure of the steel is also an important feature in the selection of the most suitable materials for the different parts, according to the friction or strains that they have to stand.

Steel, Open-hearth.—Steel made by melting pig iron and steel croppings in a regenerative furnace and oxidizing out the excess of carbon, manganese and silicon; known as the "boiling out" process. Another process sometimes employed in this method is a bath of pig iron to which iron ore is added for the purpose of oxidizing.

Steel, Shear.—Blister Steel that has been formed into fagots (see Fagot) and drawn out.

Steel, Silicon.—A steel largely used for pinions and springs. The composition varies between the limits of 0.30 and 0.70 per cent. carbon, 2.5 and .080 per cent. silicon, and 0.35 to 0.50 per cent. manganese, the proportions of carbon and silicon varying inversely. Its extensive use for pinions is due to the fact that when properly treated the outer skin is rendered hard enough to prevent the metal from spreading and because the fragility cannot be very great in the case of forgings.

Steel, Titanic.—Steel containing a small amount of titanium. It is used to some extent for cutting-tools.

Steel, Tungsten.—By mixing steel with tungsten, a very hard metal, in the proportion of 3 per cent., there is obtained a product which possesses an exceptional resistance, is very tenacious and scratches ordinary tempered steel. Tungsten-steel may be advantageously employed for the manufacture of lathe and adjusting tools, especially for the working of hard metals. It has been tried as a substitute for silicon steel in the manufacture of springs, but without any great success, the greater strength crosswise of the fiber being hardly compensated by the loss in longitudinal strength and the higher price. The average composi-

tion is: Carbon, 0.47 per cent.; manganese, 0.22 per cent.; tungsten, 0.6 per cent.

Steel, Vanadium.—Vanadium steels may be divided into three classes: First, steels containing vanadium solely; second, steels containing vanadium and nickel, and third, steels containing vanadium and chrome.

The first class is ordinarily composed of 0.10 to 0.15 carbon and 0.15 to 0.25 vanadium. The vanadium has nearly as much effect as the carbon on the steel, and the fact of its increasing the tensile strength of pure iron (iron obtained electrolytically), for example, of 540 to 600 pounds per square inch, by the addition of a few parts of vanadium is certainly very remarkable.

This steel, vanadiumized at 1 per cent., is generally employed for parts subject to vibration, since it resists traction admirably and is very elastic.

The second class of vanadium-steel is that containing vanadium and nickel, generally in the proportion of 0.2 to 0.4 per cent. of vanadium and 2 to 6 per cent. of nickel. With these steels are obtained a tensile strength of 786 to 870 pounds per square inch, elasticities of 490 to 695 pounds per square inch, and an elongation varying between 30 and 35 per cent. After tempering, the tensile strength and the elastic limit reach 2,195 and 1,955 pounds, and the elongation is reduced from 10 to 8 per cent. The nickel has a peculiar action, in that up to 8 per cent. it renders the steel hard, and from 8 to 15 per cent. it makes it so brittle that it can be broken with a hammer. From 15 to 25 per cent. the extensibility rapidly increases, and then remains nearly stationary. The adjunction of vanadium makes nickel steel more homogeneous and diminishes the tendency to fragility given to steel by the adjunction of nickel, but it is rarely employed with a greater proportion of nickel than 8 per cent. These steels, because of nickel giving a great shock-resistance, are especially adapted for piston-rods, connecting-rods and small shafts.

In the third class of vanadiumized steels are found vanadium and chrome steels, of which the best proportions are as follows: Carbon, 0.20 to 0.40 per cent.; chrome, 1.00 per cent.; vanadium, 0.20 per cent.

Chrome increases the shock-resistance as well as the tensile strength, but it has a tendency to produce a very hard metal, difficult to work hot, and the welding can be effected with success only electrically, because of the tendency of chrome to oxidize and to become converted into scor-

ia. The addition of chrome to steel renders the metal hard to cut or to work cold. These steels are particularly well adapted for the making of starting cranks, propelling shafts, axles, axle ends, etc.

Steel, Wool.—An abrasive material consisting of a mass of steel shavings, resembling curled hair, and which, while, sharp, does not scratch deeply, but cuts as smoothly as the finest sand and garnet papers.

Steel Swallow Co., The.—Jackson, Mich. Mfrs. gasoline automobiles.

Steele, L. L.—Treas. Churchill Hardware Co., 238-240 Main St., Galesburg, Ill.

Steels, C. F.—Alpena, Mich. (Cadillac.)

Steen, Chas.—Sec. Charles Wing & Co., Amesbury, Mass.

Steering-arm.—An arm formed integral with a steering-pivot and connected by a drag-link to the arm of another steering-pivot.

Steering-gear.—See Gear. Steering.

Steering-head.—See Steering-kunckle.

Steering-hub.—A steering arrangement in which the steering-pivot and lever-arm attachments are placed within a hollow hub. The construction includes a hollow cylinder, which is penetrated by the end of the axle-shaft and pivot bolted to it, so as to turn in either direction under impulse from a steering-handle fixed to its inner end and running parallel with the main axle-shaft

Steering - knuckle. — "Steering-knuckles" or "steering-pivots" are of several varieties, but those mostly used at present consist of two types, the simpler form of which is known as the "Lemoine pivot." This is an L-shaped forging welded to the extremity of the front axle, the other member of the L projecting upward or downward, and being bored for the reception of the steering-spindle. In the other form, known as the "Elliott pivot," the axle is provided with a T head, the extremities of the T being turned at right angles, so as to form lugs through which the steering-pivot pin passes. This also passes through the steering-neck fitted between the lugs.

Steering-lever.—A tiller or rearwardly projecting lever mounted on the steering-post of some cars.

Steering-pivot.—See Steering-knuckle.

Steering-post.—The post, called also a "steering-pillar," "steering-column," and "steering-shaft," on which the steering-wheel, or in some cases, a steering-lever, is mounted.

The steering-post usually consists of a tube which incloses rods communicating from the ignition-lever to the commutator, and from the governor to the carburettor-valve. This tube serves merely to inclose these rods and has no other connection with them. When, therefore, the steering-post is turned, the rods remain stationary. To the lower end of the rod is keyed the steering-gear. (See Gear, Steering.)

The manufacturers of automobiles are not agreed as to the "rake" that should be given the steering-post. The angle made by the post with respect to the dashboard in some well-known cars is shown in the accompanying figure: 1, the Bollé car; 2, the C. G. V.; 3, the Delaunay-Belleville; 4, the De Dietrich; 5, the Fiat; 6, the Mercedes; 7, the Mors; 8, the Panhard; 9, the Brasier; 10, the Renault.

Steering, Reversible or Irreversible.—A mechanism or an apparatus transforming energy is "reversible" when it is capable of transforming motion or energy in inverse that for which it was normally established. When the contrary is the case it is "irreversible." An example of irreversible mechanism is afforded by the steering of an automobile by worm and sector or worm and nut. The steering wheel is capable of turning the control-rod, but the latter cannot turn the wheel. As an example of reversible apparatus may be mentioned the dynamo, which transforms mechanical into electric energy, and vice versa.

Steering-rod.—A rod extending from the base of the steering-post to a lever on the steering-pivot through which the steering is effected.

Steering, Side.—Steering by means of a side-lever.

Steering, Wheel.—In a motor vehicle, steering by hand-wheel instead of by lever or tiller.

Steering-wheel.—The "steering-wheel"

is a lever in the form of a rim which serves to move the steering-post of a motor-car. It usually consists of a steel or aluminum wheel faced with wood and connected with the center by metallic arms

cast integral with the rim and its center. On the wheel itself or underneath it are usually placed the gas-intake, spark-advance, and carburettor control-handles. (2) A wheel for steering a motor-boat.

Steering-wheel, Dish.—See Dish.

Steele, R. C.—Sec. The Carlyle Johnson Machine Co., Youngstown, O.

Stewart Mfg. Co. of Canada, D. M.—151 King St. W., Toronto, Canada. Mfrs. gas lamp burners.

Stewart, D. W.—Traverse, Mich. Garage.

Stewart, H. T.—Vice-Pres. Okey Motor Car Co., West Broad and Kimball St., Columbus, O.

Stewart, J. W.—Sec. Lothrop Davis Co., 105 Main St., Tonopah, Nev.

Stewart-Mowhy Co.—3214 Shields Ave., Chicago, Ill. Mfrs. varnishes.

Stienhauer, F. C.—56 Edgewood Ave., Atlanta, Ga. (Rambler.)

Stier, L.—144 rue de Paris, Villiers-sur-Marne, Seine-et-Oise, France. Mfrs. wood and metallic wheels, detachable rims.

Stillman, A. J.—Asst. Treas. United Wire & Supply Co., 109-119 Summer St., Providence, R. I.

Stilson, Adelbert.—1018 Sprague Ave., Spokane, Wash. (Peerless.)

Stilson Motor Car Co.—Pittsfield, Mass. Mfrs. gasoline automobiles.

Stilwell, G. H.—Vice-Pres. H. H. Franklin Mfg. Co., 302 S. Geddes St., Syracuse, N. Y.

Stimpson & Son, E. B.—31 Spruce St., New York City. Mfrs. washers.

Stimula.—St. Chamond, Loire, France. Mfrs. automobile motors.

Stine & Parks.—Arch St., Freemont, O. (Reo.)

Stinemetz, Fred.—Port Chester, N. Y. (Maxwell.)

Stirrup.—A term for a piece of metal in the form of a loop resembling a stirrup, sometimes used in mechanism.

Stirrup-bolt.—Same as bridge and bolt, q. v.

Stitch in Time Vulcanizer Co.—Topeka, Kan. Mfrs. vulcanizers.

Stites, C. W.—Independence, Ia. (Haynes.)

Stivers, R. M.—19 W. 62nd St., New York City. Mfr. wood and metallic bodies.

Stiverson, Frank E.—Cleveland, O. (Atlas.)

St. Jock, Joseph.—St. Johnsbury, Vt. Garage.

St. John & Sons, S. H.—1420 Court Pl., Denver, Colo. Garage.

St. John Rubber Tire Co.—116 Broad St., New York City. Mfrs. cushion tires.

St. Joseph Automobile & Supply Co.—7th and Francis Sts., St. Joseph, Mo. (Oldsmobile.)

St. Louis Auto Station.—465 Colorado Ave., Chicago, Ill. Garage.

St. Louis Automobile Co.—453 N. Boyle Ave., St. Louis, Mo. (Jackson.)

St. Louis Buggy Top Co.—2117-19 N. 9th St., St. Louis, Mo. Mfrs. automobile tops, cloth and carpet trimmings.

St. Louis Car Co.—5200 N. 2d St., St. Louis, Mo. Makers of the American Mors, first marketed in 1905; four different models made since. Cap. \$3,000,000.

Geo. J. Kobusch, Pres.; W. S. McCall, Vice-Pres.; Theo. P. Bailey, Gen. Mgr., Purch. Agt., Sales and Adv. Mgr.; F. G. Kent, Supt. Branch, 1706 Broadway, New York City, L. A. Hopkins, Mgr.

St. Louis Car Co.—1706 Broadway, New York City. (American Mors.) L. A. Hopkins, Mgr.

St. Mars, J.—Mgr. Sales Dept., Consolidated Bicycle & Motor Co., 185 Notre Dame E., Winnipeg, Canada.

St. Nicholas Auto Depot.—55-69 W. 66th St., New York City. Est. 1894. Peter J. Fisher, Mgr. Garage, 65 cars; repairing.

St. Nicholas Ave. Garage.—649-51 St. Nicholas Ave., New York City. Rental service, repairing.

St. Paul Boat Co.—St. Paul, Minn. Mfrs. motorboats.

St. Paul Motor Co.—184 Western Ave., St. Paul, Minn. (Oldsmobile.)

Stock and Die.—Tools used for cutting male threads. The "stock" is a holder for the dies (See Die), commonly provided with a screw by means of which the distance apart of the two halves of the nut may be adjusted, and two straight handles by means of which it is turned to produce the thread.

Stock, Anvil.—See Anvil.

Stock, H. F.—Sec. Ladewig & Stock Co., 227 Madison St., Waukesha, Wis.

Stock Motor Co.—Saginaw, Mich. Mfrs. gasoline marine motors.

Stockbridge, W. D.—Asst. Treas. The Alden Speare's Sons & Co., 369 Atlantic Ave., Boston, Mass.

Stocker, August.—Salt Lake City, Utah. (Peerless, Autocar.)

Stocker, E. H.—Sec. Billings & Spencer Co., Russ and Lawrence Sts., Hartford, Conn.

Stöckicht, Cari.—Niederrad, bei Frankfurt, Germany. Mfr. solid tires.

Stocking.—A sleeve-shaped bag of coarse-woven material which surrounds the air intake-pipe in some carburettors and acts as a filter. See Strum.

Stoddard, A.—18 Main St., Jacksonville, Fla. Garage.

Stoddard, C. G.—Vice-Pres. and Gen. Mgr. Dayton Motor Car Co., Dayton, O.

Stoddard-Dayton Garage.—3959 Grand Blvd., Chicago, Ill. Garage.

Stoddard-Dayton Motor Car Co.—10th and Main St., Los Angeles, Cal. (Stoddard-Dayton.)

Stoddard, J. W.—Pres. Dayton Motor Car Co., Dayton, O.

Stoddard & Co., A. P.—Gloucester, Mass. (Mitchell.)

Stoewer, Gebrüder.—Stettin, Germany. Mfr. gasoline automobiles, gasoline commercial automobiles, electric automobiles. (Stoewer cars.)

Stokes, W. E.—Sales Mgr. Olds Motor Wks., Lansing, Mich.

Stolp Guaranteed Shock Absorber.—20-22 Fletcher St., New York City. Mfrs. shock absorbers.

Stoltz, C. C.—126-128 N. Prospect St., Marion, O. (Autocar, Buick.) Est. 1901. Garage, 75 cars. Repairing.

Stondall & Melaas.—309 E. Wilson St., Madison, Wis. (Rambler.)

Stone & Sons, C.—167 Ogden St., Chicago, Ill. Mfrs. wood and metallic bodies, automobile tops.

Stone Automobile Co., Inc.—1006 Main St., Stroudsburg, Pa. (Stevens-Duryea, Cadillac.) Est. 1905. Cap. \$5,000. C. Stone, Pres.; T. J. Kitson, Treas. Garage, 10 cars, repairing.

Stone, C.—Pres. Stone Automobile Co., Inc., 1006 Main St., Stroudsburg, Pa.

Stone, Geo. H. P.—Harter Block, Ilion, N. Y. (Pope Hartford.)

Stone, H. J.—Los Angeles, Cal. (Frayser-Miller.)

Stone, Julius F.—Sec. and Treas. Oscar Lear Auto Co., Springfield, O.

Stoops, James C.—Mgr. Crescent Auto Top Co., 58 W. 43rd St., New York City.

Stoops, Marie E.—Sole Owner Crescent Auto Top Co., 58 W. 43rd St., New York City.

Stop.—A general term for a device to limit or check the motion of some piece of mechanism.

Stop-cock.—See Cock, Stop.

Stoppage.—See Panne.

Storage Battery Supply Co., The.—239 E. 27th St., New York City. Mfrs. dealers and jobbers supplies, storage batteries, hydrometers, dome lamps. Cap. \$12,000. Est. 1891. T. D. Bunce, Pres. and Gen. Mgr.; A. E. Bunce, Sec. and Treas.

Storage-cell.—See Cell, Storage.

Storero, Luigi.—28 corso Massino d'Azeglio, Turin, Italy. Mfrs. motorcycles, cycles.

Storey Motor & Electric Co.—321 Sussex St., Harrison, N. J. Mfrs. electric motors.

Storm-apron.—See Apron, Storm.

Storm, H. G.—Treas. E. J. Jones Co., Inc., Arlington Heights, Mass.

Storm Mfg. Co.—Foot of Centre St., Newark, N. J. Mfrs. elevators for garages.

Storm, W. A.—Galena, Kan. (Model.)

Storms & Sherwood.—1421 Bedford Ave., Brooklyn, N. Y. (Aerocar.)

Storometer.—A gauge for determining the stage of charging of a storage battery.

Stoughtin, Folkins Co.—224 Commercial St. Portland, Me. (Maxwell.)

Stoutenborough, X.—277 Pearl St., New York City. Mfr. storage tanks.

Stover, H. L.—144 S. Main St., Chambersburg, Pa. (Reo, Rambler.)

Stover Mfg. Co.—Freeport, Ill. Mfrs. brass, bronze, aluminum and copper castings, gray iron castings.

Stover Motor Car Co.—Freeport, Ill. Mfrs. gasoline marine motors.

Stow Flexible Shaft Co.—Philadelphia, Pa. Mfrs. special automobile machinery, flexible shafting.

Stowe, Clarence G.—Hd. of Automobile Dept., The Alden Speares Sons & Co., 369 Atlantic Ave., Boston, Mass.

Stowe, Geo.—203 Commercial St., Worcester, Mass. Garage.

Stowell Mfg. & Fdry Co.—S. Milwaukee, Wis. Mfrs. gray iron and malleable iron castings.

Stowers, J. L.—Havana, Cuba. (Waltham.)

Straight-edge.—A flat rod of wood or metal, of which the edge is used for testing the accuracy of straight lines or plane surfaces.

Strain.—A change in the form or dimensions of a body, produced by the action of forces called "stresses." See Stress.

Strainer.—A filtering device consisting of a disk provided with very small apertures, or, what is better, of a piece of chamois or of very fine wire gauze. Strainers are particularly useful in automobiles for preventing particles of dirt from getting into the pump, into the atomizing tube, or under the needle-valve of the carburetter, etc.

Strait & Son, J. G.—Wainscott, N. Y. (Reo.)

Strake.—The same as "Streak," q. v.

Strake, Garboard.—See Garboard-strake.

Straker & Squire.—9 Bush Lane, London, E. C., England. Mfrs. gasoline commercial automobiles (Straker Squire trucks.)

Straker-Squire, Ltd.—75 Shaftesbury Ave., London W., England. Mfrs. gasoline, automobiles (Straker-Squire cars.)

Stranahan & Eldridge Co.—541 Tremont St., Boston, Mass. (Buick.)

Stranahan, Frank D.—Treas. Albert Champion Co., 541 Tremont St., Boston, Mass.

Stranahan, Robert.—Head Sales Dept., Albert Champion Co., 541 Tremont St., Boston, Mass.

Stranahan, Spencer.—Director Albert Champion Co., 541 Tremont St., Boston, Mass.

Strand.—A number of single threads of some material twisted together and forming one of the principal parts of a rope.

Strang, C. G.—10 N. Nevada Ave., Colorado Springs, Colo. Est. 1899. Garage, 30 cars. Repairing.

Strap.—A metal band placed around a piece of machinery.

Strap, Eccentric.—See Eccentric.

Strap-end.—The end of a steam-engine connecting-rod in which the brasses are held in place by a strap passed around them.

Strass, Lena.—Sec. Walter H. Draper Co., 120-126 S. Railroad Ave., Mount Vernon, N. Y.

Strathmann, Charles.—165 E. 120th St., New York City. Garage.

Stratta, F.—Villa Stratta Castiglione, Turin, Italy. Mfr. elastic wheels.

Stratton Carriage Body Co.—Muncie, Ind. Mfrs. folding automobile bodies. C. H. Stratton, Mgr.

Stratton Co., H. C., Inc.—173 Huntington Ave., Boston, Mass. (DeLuxe, Kisselkar, American Mercedes.)

Stratton, C. H.—Mgr. Stratton Carriage Body Co., Muncie, Ind.

Straub, Robt. M.—Treas. Fort Pitt Automobile Co., Baum and Euclid Ave., Pittsburg, Pa.

Straus Bros. & Co.—Ligonier, Ind. (Matheson.)

Strauss, John Mason.—3d and Chestnut Sts., Louisville, Ky. (Pierce Arrow, Waltham.)

Strauss & Son, J.—197 E. Genesee St., Buffalo, N. Y. Supplies.

Strauss, G. E.—Gen. Mgr. Sartus Ball Bearing Co., 155 Spring St., New York City.

Strauss, Mathew.—707 Main St., Buffalo, N. Y. Supplies.

Strauss, Sig. L.—159 La Salle St., Chicago, Ill. Automobile and general insurance agency. Fire, theft, collision, personal injury, liability of every sort.

Streak.—A strake or continuous line of planking from stem to stern of a boat.

Streak, Paint.—The strake next below the plank-shear.

Streak, Sheer.—The paint-strake of a boat's hull. See Streak, Paint.

Streator Motor Car Co.—Streator, Ill. Mfrs. gasoline automobiles.

Streberger, John.—Hd. of Machine Dept., Jos. N. Smith & Co., Fourth and Porter Sts., Detroit, Mich.

Strecker, H. W.—Treas. and Mgr. Mound City Oil and Supply Co., 204 N. Commercial St., St. Louis, Mo.

Streit Machine Co., A.—1108-10 Harrison Ave., Cincinnati, O. Mfrs. gasoline automobile motors.

Strelan, E. J.—Pres., Treas. and Mgr. Motor Equipment Co., 901 Pike St., Seattle, Wash.

Stress.—Any force or combination of forces tending to produce a strain or pressure, or a change in the size and shape of a body, upon which it acts.

Stress, Negative.—See Negative Stress.

Stress, Torsional.—A twisting stress, or that produced by the application of a couple.

Stretchers, Belt and Chain.—The name applied to these apparatus sufficiently ex-

plains their use. The figure represents a Lorraine-Dietrich chain-stretcher for a motor-car. A and B are respectively the

axis of the chain-sprocket and the rear axle. The stretcher, D, is operatively connected with the axle, and supports the action of the brake. It is jointed at C to the hanger of the chain-sprocket, so that it may follow the motions of the axle with respect to the frame; and its length is regulated by a left-hand screw, E.

Striebe, Wm. F.—Asst. Supt. National Motor Vehicle Co., E. 22nd St., Indianapolis, Ind.

Strieby & Foote Co.—301 Ogden St., Newark, N. J. Mfrs. drop forgings, steps.

Striker.—In a make-and-break system of ignition, the lever attached to the rocker arm, which, when acted upon by the interrupter-catch, breaks the contact of the electrodes in the cylinder. See Igniter.

Stringer.—The highest course of planks in a vessel's ceiling.

Stringer, Bert A.—Calgary, Alberta, Canada. (Wayne.)

Stripping.—The tearing off of the threads of a screw, or of the teeth of a gear-wheel. (2) The permitting of pump-valves to allow water to pass by them.

Strohbeen, J. H.—Walcott, Ia. (Waltham.)

Stroke, Induction.—See Induction-stroke.

Stroke, Power.—See Power, Horse, Motor.

Ström.—16 chaussee d'Antin, Paris, France. Mfrs. wearing apparel, fur coats, hats and caps, hats, caps and coats.

Strong, G.—New Castle, Ind. (Holzman.)

Strong, P. W.—Mgr. Welch Motor Car Co., 1871-73 Broadway, New York City.

Strout, Geo. H.—Sales and Advt. Mgr. Apperson Bros. Automobile Co., Kokomo, Ind.

Strum.—On a locomotive, a feed-pipe strainer consisting of a perforated plate or "rose" placed over the open end of a feed-pipe. (2) On a motor-car, the air intake-pipe of a carburetter covered with a "stocking" to serve as a strainer.

Strut.—A compression member of a framework which fixes two other members at a definite distance apart.

Stuart et Stichter.—20 rue d'Armenonville, Neuilly, France. Mfrs. tricars (Mira).

Stuart, Hamilton.—St. Johnsbury, Vt. (Reo.)

Stuart, J. H.—McIndoe Falls, Vt. (Reo, Premier.) Est. 1903. Garage, 20 cars. Repairing.

Stubbe, F. H.—528 Morris Ave., New York City. Garage.

Stubbe, John H.—Vice-Pres., Fort Pitt Auto Co., Baum St. and Euclid Ave., Pittsburgh, Pa.

Stubbs, W. R.—Stockholder Lawrence Motor Car Co., 13-17 W. Warren St., Lawrence, Kan.

Stud.—A boss or projection designed to hold an attached object in place. (2)

A screw, having no fixed head, which is screwed into a tapped hole in some larger object, the other end being passed through a hole in the metal to be bolted up. A nut on the extremity of the stud screws it up tight.

Stud-bolt.—See Bolt, Stud.

Studebaker Automobile Co.—South Bend, Ind. Makers of the Studebaker car; first marketed in April, 1902. Twenty-nine electric and gasoline pleasure and commercial models marketed since. Geo. M. Studebaker, Pres.; N. J. Riley, Vice-Pres.; C. Studebaker, Jr., Treas.; J. M. Studebaker, Jr., Sec.; Hayden Eames, Gen. Mgr.; C. A. Carlisle, Pur. Agent. (See Chassis next pages.)

Studebaker Bros. Co., of California.—Market and 10th Sts., San Francisco, Cal. (Studebaker.)

Studebaker Bros. Co. of New York.—Broadway and 48th St., New York City. (Studebaker.) Garage, 731 7th Ave.

Studebaker Bros. Co., N. W.—330 E. Morrison St., Portland, Ore. (Studebaker.)

Studebaker Bros. Co. of Utah.—157 State St., Salt Lake City, Utah. (Studebaker.)

Studebaker Bros. Mfg. Co.—378 Wabash Ave., Chicago, Ill. Mfrs. wood and metallic bodies, automobile tops. (Studebaker.)

Studebaker Bros. Mfg. Co.—Cor. 15th and Blake Sts., Denver, Colo. (Studebaker.)

Studebaker Bros. Mfg. Co.—13th and Hickory Sts., Kansas City, Mo. (Studebaker.)

Studebaker Bros., Mfg. Co.—317 Elm St., Dallas, Tex. (Studebaker.)

Stuffing-box.—The device by which a steam-tight joint is obtained where a piston-rod enters a cylinder. The rod A (see figure) passes through a hole in the cylinder-cover and which widens out into a cylindrical chamber, E, of larger diameter than the rod, and soft

packing of asbestos or other material is placed in it so as to surround the rod.

The end of the recess is filled by a short tube, A, termed a "gland," which is held in place by a nut, M, or by bolts, and compresses the packing so as to fill the cavity around the rod and make a tight joint.

Sturges, Percy.—Norwalk, Conn. (Oldsmobile, Cadillac, Pope-Hartford.)

Sturgis, E. A.—179 Summer St., Boston, Mass. Mfr. monograms.

Sturmey Motors Ltd.—231 Widdington Rd., Coventry, England. Mfrs. gasoline automobiles (Lotis cars.)

Sturtevant Mill Co.—Harrison Sq., Boston, Mass. Mfrs. brakes, clutches, transmission gears, lubricators, gasoline automobile motors, gasoline automobiles.

Stutsman & Co., C. B.—Monte Vista, Colo. (Ford, Gale, Reliable, Dayton.) Est. 1893. Not inc. Garage, 15 cars. Repairing.

Stutzman, Clyde.—1061 Vine St., Williamsport, Pa. Garage.

Stuyvesant Heights Auto Co.—449 Madison St., Brooklyn, N. Y. Garage.

Styria Farradwerke, Jos. Buch und Co.—Graz, Austria. Mfrs. motorcycles.

Suberine.—See Cork.

Suburban Auto & Garage Co.—2713-17 Woodburn Ave., Cincinnati, O. (Queen, Rauch and Lang.) Cap. \$10,000. Incorporators, Chas. Kruse, Jacob C. Flack, Chas. W. Schmidt, Carl B. Kruse, W. Witzendacher, Edgar A. Kruse.

Success Auto-Buggy Mfg. Co.—528 De Balliviere Ave., St. Louis, Mo. Mfrs. gasoline automobiles.

Success Automobile Co.—Pico and Hill Sts., Los Angeles, Cal. (Locomobile, Winton, Isotta Fraschini, Mercedes, Panhard, Renault, Simplex.)

Suction.—"Suction" or "intake" is one of the periods of a 4-cycle motor. It is preceded by the period of expansion of the burned gases, and followed by

that of compression of the new gases. At this period of suction, the piston, P, (see figure), on descending, creates in its rear a vacuum in the cylinder,

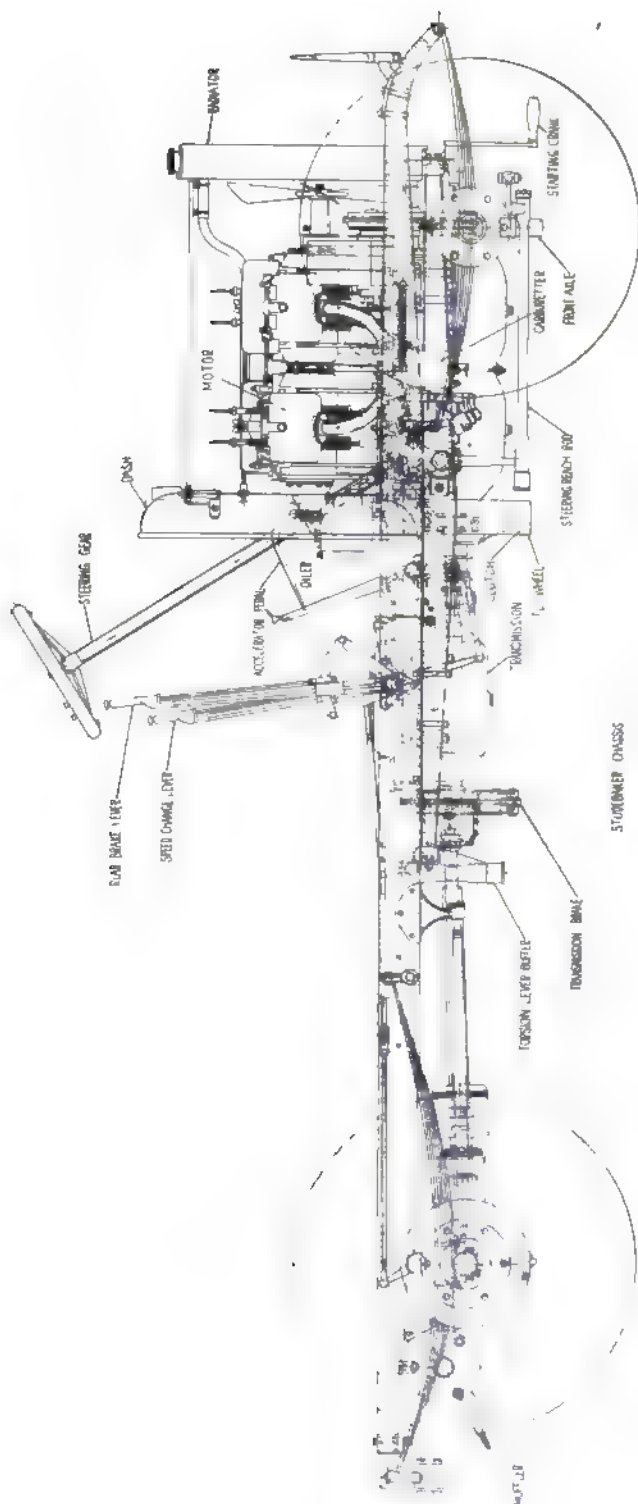

A. The inlet valve, S, is then opened automatically or mechanically. The atmospheric pressure forces the mixture of air and gasoline vapor from the carburetor, C, into the cylinder, M, in which there is a vacuum and in which it will be compressed at the next period by the ascent of the piston. The suction of water in a pump is produced by the same physical phenomenon.

STUDEBAKER CHASSIS

STUDEBAKER CHASSIS

AN ORTHODOX AMERICAN CHASSIS (STUDEBAKER)

STUDEBAKER CHASSIS

AN ORTHODOX AMERICAN CHASSIS (STUDEBAKER)

Suction, Stern.—See Cavitation.

Suddard Motor Cycle Co.—58 Warren St., Providence, R. I. Garage.

Suddard, Wm. A.—10¹/₂ Bellevue Ave., Providence, R. I. Mfr. motorcycles.

Süddeutsche Automobilfabrik Gaggenau.—Gaggenau, Germany. Mfrs. gasoline commercial automobiles. (S. A. G. trucks); tricars (S. A. G.)

Sudre Fils.—17 rue Clignancourt, Paris, France. Mfrs. horns.

Suère.—73 rue Claude Decean, Paris, France. Mfr. motorcycles, motorcycle motors, tricars.

Suffern, H. W.—Sec. J. M. Quinby & Co., 21-39 Division St., Newark, N. J.

Suison Garage Co., Inc.—Main St., Suisson, Solano Co., Cal. (Mitchell, Oldsmobile, Winton, Autocar, Maxwell, National.)

Suisse, La Sportive.—Pub. at 16 rue de Hesse, Geneva, Switzerland.

Sullage.—The dross which collects on the surface of molten metal.

Sullivan Auto Co., D. B.—27 N. Capitol Ave., Indianapolis, Ind. (Lambert.)

Sullivan, J. P.—Mgr. Monte Cristo Garage, New London, Conn.

Sullivan Oil Co.—Chicago, Ill. Mfrs. grease, oils, oil cans.

Sullivan's Auto Garage.—16-18 Myrtle St., Manchester, N. H. (Reo, Ford.)

Sulphating.—Sometimes, through want of proper attention, such as allowing a battery to stand in a discharged condition for a long period, the plates become "sulphated." This condition ("sulphating" as it is called) can be readily detected by a white color of the plates, and can be removed by a long continued charge with a small amount of current. If the sulphating has penetrated deeply into the active material a great deal of persistence will be required in this treatment. It must be understood that sulphating must be guarded against and prevented, as it will permanently injure the battery if allowed to go very far. The effect that it has on the active material is to render it non-conductive. Sulphated material occupies more space than before, and consequently has the effect of disrupting the whole plate and forcing it asunder by a bursting or expanding process. The sulphate itself may be removed, but the bursting it has caused cannot be repaired, except by a thorough overhauling by the manufacturer.

Sulphur.—A simple firm and yellow substance, a divalent metalloid. It is insoluble in water, and melts at about 230° F. or 111° C. In burning it emits the odor of sulphurous anhydride (H₂S), so well known to all who use sulphur matches. Its density is .32. It is met with in nature either in a simple state or combined with other substances (sul-

phate of iron, sulphate of soda, etc.). It is purified by volatilization in special receptacles. The principal source of sulphur is Sicily, which supplies four-fifths of all the material used.

Among the various industrial uses of sulphur is that of the vulcanization of rubber, which consists in mixing rubber with "flowers of sulphur," a process invented by Chas. Goodyear. Vulcanization has the advantage of augmenting the resistance of rubber to traction, and prevents it from becoming soft, and from its losing its elasticity above 80 per cent., or from becoming hard and brittle below 32° F. or 0° C. A small amount of sulphur renders iron "red short" or brittle when at a red heat, and also destroys its welding properties. The addition of manganese lessens the deleterious effects of the sulphur.

"Flowers of Sulphur" are obtained by mixing vapor of sulphur with cold air.

"Roll sulphur" or "brimstone" is prepared by pouring the melted substance into moulds, which are afterward cooled.

Sulphuric Acid.—See Acid, Sulphuric.

Sulson Garage Co.—Sacramento, Cal. Garage. Cap. \$10,000. Incorporators: William Pierce, T. C. Gregory and Leonard E. Wood.

Sultan Motor Co.—Springfield, Mass. Mfrs. gasoline automobiles.

Summer, S. J.—Main St., Valparaiso, Ind. Garage.

Summer, S. J.—Indianapolis, Ind. (Holsman.)

Summey, C. E.—52 Gill Pl., Buffalo, N. Y. Garage.

Summit Automobile Co.—Akron, O. (Cartercar.)

Summit Garage.—Union Pl., Summit, N. J. (Reo.)

Summit Motor Car Co.—Smithfield Ave., Summit, N. J. (Ford.)

Sun and Planet Gear.—The same as epicyclic gear, q. v.

Sunbeam Motor Car Co., Ltd.—Upper Villiers St., Wolverhampton, England. Mfrs. gasoline automobiles (Silent Sunbeam cars).

Sundberg Co., J. A.—271 W. Kenzie St., Chicago, Ill. Mfrs. drop forgings.

Sunbury Mfg. Co.—Sunbury, O. Mfrs. anti-skid devices.

Sunger, E. B.—Treas. S. L. Crosby & Co., 186 Exchange, Bangor, Me.

Sunset Automobile Co.—San Francisco, Cal. Mfrs. gasoline automobiles.

Superheater.—An apparatus for heating steam to a higher temperature than it has on leaving the boiler, and rendering it dry. See Steam, Superheated.

Superior Auto Co.—130 E. 9th St., Los Angeles, Cal. (Haynes.)

Superior Steel Co.—Carnegie, Pa. Mfrs. steel.

Supery, H.—13 rue Cuvier, Lyon, France. Mfr. elastic wheels.

Supplementary Spiral Spring Co.—4528-4530 Delmar Ave., St. Louis, Mo. Mfrs. shock absorbers.

Surface.—The surface of a body limited by plane or curved surfaces, or the surface of a plane figure is measured by its ratio to the unit of surface (square-centimetres in the C. G. S. system). It always contains the product of two dimensions and hence is of the second degree.

The term "area" (commonly employed for the word surface) is applied specially to the amount or measure of a surface, and not to the idea of a surface of any form and extent whatever limited by lines.

Surface Carburetter.—See Carburetter.

Surre, H. J.—Sec. The Corbin Screw Corp., New Britain, Conn.

Surrey.—A vehicle provided with two (sometimes three) seats arranged across the frame, and to which access is obtained from the sides. It differs from the double phaeton in having no framing from the front to the rear seat, and no side doors. "Surreys" are usually fitted with a standing or folding top.

Suspension.—In order that a car shall remain stable and be well suspended it is necessary that the springs shall be very long, shall not have too much deflection, and shall be placed as independently as possible of the car. It is indispensable also that the car shall be suspended between, and not above, the springs. Such an arrangement permits of lowering the center of gravity and remedying the inertia of the mass.

Suspension, Three-point.—A method of suspension, in which, as the name implies, the power-plant of a motor-car is hung at three points. By such an arrangement, absolute flexibility is secured, since no matter how much the car frame is racked and distorted on rough and uneven roads, the power-plant will remain unaffected, and perfect alignment of the motor and transmission bearings will be assured.

Sussfield, Lorsch & Co.—37 Maiden Lane, New York City. Mfrs. eye shields.

Sutherland, R. L.—115 W. Maryland St., Indianapolis, Ind. (Glide.)

Sutphen, H. R.—Gen. Mgr. The Electric Launch Co., Ave. A and North St., Bayonne, N. J.

Sutter & Gamble.—Burlington, Ia. (Maxwell.)

Sutton, John W.—Garages, 342-344 Glatbush Ave., 10-12 Clinton St., Brooklyn, N. Y. Electric Battery Station, 811-13 Union St. Supplies, garage, repairing.

Sutton, John W.—Pres. A. G. Southworth Co., Inc., 1733 Broadway, New York City.

Swage.—A tool, called also a "swedge," used for shaping wrought iron, sheet

metal, etc., through hammering or pressure. Swages are often in pairs, the upper tool being fitted with a handle, and the lower one with a spur or tail. The lower swage is fitted into the square hole in the face of the "swage-block" or anvil, and the piece to be worked is laid on it. The smith then places the upper swage on the work, while the helper strikes the back as directed.

Swager.—Utrecht, Holland. Mfr. motorcycles.

Swain Engine Co.—2239 State St., Chicago, Ill. Mfrs. gasoline automobile motors.

Swallow.—The channel or space between the pulley and the block in which it turns. See Pulley.

Swampscott Auto Co.—Lynn, Mass. (Pope-Hartford.) Garage.

Swan & Finch Co.—151 Maiden Lane, New York City. Mfrs. oils.

Swanbrough, E. W.—Gen. Mgr. Pacific Coast Auto Co., 1414-16 Broadway, Seattle, Wash.

Swanget, H. E.—Detroit, Kan. (Waltham.)

Swartwout, D. K.—Pres. and Treas. The Ohio Blower Co., 330 Prospect Ave. N. W., Cleveland, O.

Swartwout, J. D.—Vice-Pres. The Ohio Blower Co., 330 Prospect Ave. N. W., Cleveland, O.

Swartz & Co., J. I.—Bridgeton, N. J., care W. H. Garrison, 53½ E. Commerce St. (Rapid.)

Swartz, Chas.—Supt. York Motor Car Co., 240 N. George St., York, Pa.

Swedish Aeronautical Society.—Stockholm, Sweden. Capt. K. Amundsen, Sec.

Sweeney Sporting Goods Co.—Albany, N. Y. (Waltham.)

Sweep.—A term applied to that portion of the cylinder-length traversed by the piston from end to end of the stroke.

Sweet, Charles F.—61 Market St., Hartford, Conn. Mfr. grease, oils, automobile body polishes and soaps.

Sweet, Frank E.—Vice-Pres. Prest-o-Life Co., 20 South E St., Indianapolis, Ind.

Sweet, J. D.—Pres. American Gasolene Motor Co., Baldwinville, N. Y.

Sweet Tire and Rubber Co., The.—Batavia, N. Y. Mfrs. solid tires.

Sw eigert, Frank.—44 W. Mulberry St., Kokomo, Ind. (Ford.)

Swenson, Mrs. R. A.—185 Prairie Ave., Providence, R. I. (Indian and Merkel motorcycles.) Est. 1900. Garage, 150 motorcycles. Repairing.

Swetland, H. M.—Pres. and Bus. Mgr. The Automobile, Flatiron Bldg., New York City, and Motor Age, 1200 Michigan Ave., Chicago, Ill.

Swezy, C. L.—Middletown, N. Y. (Dragon.)

Swift, Chas. I.—Millbrook, N. Y. (Mitchell.)

Swift, E. G.—Pres. Michigan Bolt & Nut Works, Foot Mildrum Ave., Detroit, Mich.

Swift Motor Co., Ltd.—Coventry, England. Mfrs. gasoline automobiles. (Swift.)

Swinehart Clincher Tire & Rubber Co.—Akron, O. Mfrs. solid, pneumatic and cushion tires. Branches: 1843 Broadway, New York City; 1231 Michigan Ave., Chicago, Ill.; 239 Jefferson Ave., Detroit, Mich.; 893 Main St., Buffalo, N. Y.; 117-19 Long Acre, W. C., London, England.

Switch.—An electrical device for making or breaking a circuit, or transferring a current from one conductor to another.

Switch, Chopper.—A switch used in magneto ignition for cutting out the cylinders for the purpose of testing.

Switch, Knife.—A switch in the form of one or more blade-like members, which form a contact by entering between pairs of springs.

Switch, Pin.—A switch in an electric circuit in which connection is made by inserting a pin between plates.

Switch, Plug.—A switch for interrupting the ignition circuit on an automobile or motorcycle. It consists of a copper plug of small diameter furnished with a

vulcanite or wooden head. Two flat strips, the ends of which are spaced so that when the plug is in place the current passes, and, when the plug is

removed, they do not touch, are each connected to the leading wire. The removal of the plug breaks the circuit, and acts as a measure of security against theft or mischief when the car is left unattended.

In the figure, A and B are the flat strips fastened to the insulating block, E, which is held to the tube, T, by a clip, M. The switch-plug, F, is placed between the curved ends of A B C and D, thus completing the circuit A C F D B. See Cut-off Plug.

Switch, Two-way.—A switch used with two ignition batteries, and by means of either of the two may be brought into instant use or the current be switched off.

Swivel.—A coupling device between two objects which permits either to rotate independently of the other.

Swivel-joint.—See Joint, Swivel.

Swoyer, A. P.—Treas. and Sec. Helios Mfg. Co., Bridesburg, Philadelphia, Pa.

Swronsky.—Litzeiskaia, St. Petersburg, Russia. Mfrs. gasoline automobiles.

Symonds, Paul.—Purch. Agt. Monarch Motor Car Co., Chicago Heights, Ill.

Synchronising.—The regulation of two or more machines or pieces of apparatus so that their movements or the effects produced by them shall occur simultaneously.

Synchronous Current.—See Current, Alternating.

Syndicat des Brevets Viratelle.—49 rue du Surmelin Paris, France. Mfrs. Viratelle motorcycles.

Synnestvedt Machine Co.—4117 Liberty Ave., Pittsburg, Pa. Mfrs. electric commercial automobiles, electric automobiles.

Syracuse Aluminum & Bronze Co.—530 Leavenworth Ave., Syracuse, N. Y. Mfrs. aluminum, manganese bronze, aluminum bronze, phosphor bronze and bronze castings. Member M. & A. M. Cap. \$25,000. Est. 1905. Willard C. Lipe, Pres.; Alexander T. Brown, Vice-Pres.; H. Winfield Chapin, Sec.; Chas. L. Ackerson, Mgr. and Treas.

Syracuse & Eldridge Glove Co.—924 S. Salina St., Syracuse, N. Y. Mfrs. gloves. Cap. \$15,000. Est. 1885. H. L. Northrop, Pres. and Treas., Gen. Mgr.; M. E. Northrop, Sec.; L. S. Chapman, Vice-Pres.

Syracuse Automobile Club.—Forman Wilkinson, Sec., S. A. and K. Bldg., Syracuse, N. Y.

Syracuse Auto Supply Co.—118-20 S. State St., Syracuse, N. Y. (Maxwell.) Mfrs. storage batteries.

Syracuse Gear Co.—Syracuse, N. Y. Mfrs. transmission gears.

Syracuse Malleable Iron Works.—Syracuse, N. Y. Mfrs. malleable iron castings.

Syracuse Motor Car Co.—511 S. Clinton St., Syracuse, N. Y. (Winton, Cadillac.)

Syracuse Rawhide Mfg. Co.—Niagara and Shonnard Sts., Syracuse, N. Y. Mfrs. rawhide gear wheels.

Syracuse Rubber Co.—212-14 S. Clinton St., Syracuse, N. Y. Successors to Frank C. Howlett. Automobile supplies. Est. Sept. 1, 1906. Cap. \$25,000. Frank C. Howlett, Pres., Treas. and Mgr.; B. R. Newhall, automobile dept.; H. G. Glismann, dry sundries and mechanical dept.; W. H. Clasen, footwear dept. Repairing automobile tires.

Syracuse Smelting Works.—36th St. and 10th Ave., New York City. Mfrs. Babbitt metals, solder.

Szisz, François.

—28 Rue de Meudon at Billancourt-sur-Seine. Born at Szeghalom, Hungary, Sept. 20, 1873. Foreman of the works of Renault Frères, for whom he has often raced with great success and for whom he won the Grand Prix of 1906.

T

T.—Symbol for "time."

T-bolt.—See Bolt, T.

T-iron.—See Iron, T.

T-joint.—See Joint, T.

Ta.—Symbol for "tantalum."

Ti.—Symbol for "titanium."

T-square.—An instrument having the form of a T used by draughtsmen for drawing, setting out or testing right angles.

Table.—That part of a machine or machine tool on which material is laid while being operated on.

Taber, J. U.—201 E. 7th St., Los Angeles, Cal. Repairing.

Tachodometer.—An instrument for measuring speed and distance, it being a speedometer and odometer combined. The instrument, which is actuated by a flexible shaft from a front wheel of the car, operates without springs, and its accuracy is unaffected by temperature changes, vibrations and ordinary wear. The standard registration is 40 miles an hour, but the instrument is supplied also with indicator maximums of from 60 to 80 miles an hour.

Tachometer or Tachymeter.—A device for measuring the number of revolutions per minute of some rotating part of a machine. A speed indicator.

Tachometric Watch.—See Watch.

Tacking.—Directing a vessel on to another tack when beating against the wind, so that the wind comes on the bow.

Tackle.—An apparatus, or that part of an apparatus, by which an object is grasped, moved or operated.

Tacoma Automobile Co.—743 S. Tacoma Ave., Tacoma, Wash. (Franklin.)

Taddeoli, E.—25, rue de L'Arquebuse, Geneva, Switzerland. Mfrs. motorcycle motors.

Taffrail.—A transverse rail constituting the uppermost member of a vessel's stern.

Taft & Co., W. E.—150 Broadway, Providence, R. I. (Glide.)

Taft, H. Fred'k.—Sec. National Auto Co., 957 S. Main St., Los Angeles, Cal.

Taft-Pierce Co.—Woonsocket, R. I. Mfrs. machine work.

Taggart, B. B.—Watertown, N. Y. (White.)

Tail-light.—A lamp placed at the rear of a vehicle so as to be visible to the vehicles following.

Tail-valve.—See Valve, Tail.

Taking up.—Shortening or tightening fittings, moving parts, etc., which have become elongated or loosened by wear.

Talbot, Arthur Wilbour.—Automobile Editor Providence Journal, Providence, R. I. B. Cambridge, Mass., Oct. 23, 1884. Ed. Mass. Institute of Technology, class 1906.

Talbot, Dudley.—Treas. Brown-Talbot Co., 19 Oakland St., Salem, Mass.

Talbot, John.—Pres. Brown-Talbot Co., 19 Oakland St., Salem, Mass.

Talc.—A soft and unctuous silicate of magnesia, called also "soapstone." When reduced to powder, it is employed in the rubber industry as a lubricant, and for preventing the sticking of double tube pneumatic tires. It is used also in heat-resisting insulation in spark-plugs and other electrical apparatus.

Taliaferro, W. T.—258 Broadway, New York City. Mfr. gasoline funnels.

Tallmudge, J.—Sec. Treas., Gen. Mgr. Sales and Adv. Mgr. American Gasoline Motor Co., Baldwinville, N. Y.

Tallman Stables.—17 Dill St., Auburn, N. Y. (Rambler.)

Talmon Electrical Engineering Co.—38-90 Center St., New York City. Mfrs. ammeters and voltmeters.

Talty, J. E.—Pur. Agt. Pope Motor Car Co., Toledo, O.

Tamblin, Dr. J. H.—Copenhagen, N. Y. (Knox.)

Tampa Automobile & Garage Co., The.—312 Washington St., Tampa, Fla. (Mitchell.)

Tampa Cycle Co.—508 Franklin St., Tampa, Fla. (Cadillac.)

Tampa Harness & Wagon Co.—1007-1009 Franklin St., Tampa, Fla. (Pope-Toledo, Pope-Hartford, Pope-Waverley.) Est. 1890. T. N. Henderson, Mgr.

Tanberg Auto Co.—River and Gibson Sts., Eau Claire, Wis. (White, Buick, Oldsmobile, Pope-Waverley.) Est. February, 1907. Cap. \$25,000. J. C. Tanberg.

Pres.; C. A. Tanberg, Sec. and Treas.; H. N. Hastings, Vice-Pres. Garage, 20 cars. Repairing. Branch at 312 State St., La Crosse, Wis. W. J. Broyton, Mgr.

Tanberg, C. A.—Sec. and Treas. Tanberg Auto Co., cor. Gibson and River Sts., Eau Claire, Wis.

Tanberg, J. C.—Pres. Tanberg Auto Co., cor. Gibson and River Sts., Eau Claire, Wis.

Tang.—The tapering end of a tool (such as a file or chisel) which is driven into the wooden handle.

Tangent-screw.—See Screw, Tangent.

Tangent-spoke.—See Spoke.

Tangent Wheels, Ltd.—Grove Road, Balham, London, S. W., England. Mfrs. wooden wheels.

Tanite.—A trade-name for a cement of emery and some binding material used as a compound in the manufacture of emery-wheels.

Tank.—A reservoir for carrying liquid on a motor-vehicle.

Tank, Feed.—A reservoir carried on steam-cars to contain a supply of water to feed the boiler, and provided with a screw-plug for filling.

Tank, Gasolene.—A reservoir for carrying fuel supply, generally made of sheet copper and provided with a partition to prevent the splashing of the liquid. The gasolene-tank may be made either for gravity or pressure feed. In the majority of American automobiles the system employed is the gravity, in which case the tank is placed higher than the carburetter. In some cars the gasolene-tank is carried at the rear, and at a level lower than that of the carburetter, necessitating the raising of the gasolene by air-pressure from a pump connected to the engine by hand-pump pressure, or the pressure of the exhaust. The number of pounds pressure per square inch required in a tank to raise the gasolene is not more than four pounds, and, in many cases, two pounds is sufficient. If a small gasolene tank higher than the carburetter be provided, the pressure in the main tank will be sufficient before the auxiliary one is empty. Pressure-tanks may be placed in any convenient position, since the pressure keeps the supply constant, but the filling screw-plug must be kept air-tight. In order to ascertain the level of the gasolene in the tank, gauge-cocks may be fitted in the side or end.

Tank, Oil.—A reservoir for containing lubricating oil, and usually containing a sufficient quantity for long distances.

Tank, Tire.—A portable seamless, pressed steel, cylindrical reservoir, filled with compressed air, and by means of which an automobile tire can be almost instantly inflated to any desired pressure.

Tank, Water.—A reservoir, usually of galvanized iron, for holding the supply of cooling water. Many modern motor-cars are not provided with a water-tank, which has been found to be superfluous owing to the increased size and efficiency of the radiator, which, on that account, requires less water. In order to determine the quantity of water in the tank, a small gauge-glass may be fitted to the side.

Tanner & Co.—New Bedford, Mass. Garage.

Tanner, W. A.—St. John's, Kan. Garage.

Tantalum.—A rare metal, when pure resembling platinum in color. Atomic weight 183. It melts between 2,250° F. and 2,300° F. Its tensile strength is about the same as that of steel, alloyed with which it develops remarkable metallurgical properties. It is employed also for forming the filament of the tantalum lamp.

Tanty, J. C.—Head Automobile Dept. Siegel Cooper Co., Sixth Ave., 18th to 19th Sts., New York City.

Tap.—A cylinder of highly tempered steel, with a thread at one end and used for cutting internal screw-threads. "Entering" taps (Fig. 1) having a slight taper are used to start the work; a second tap

Fig. 1

Fig. 2

with less taper is then used; and the thread is finally finished with a parallel or a "plug tap" (Fig. 2). (2) A faucet or cock. See Cock. (3) A branch conductor of electricity leading from the main circuit.

Tap-bar.—A pointed bar by means of which the tap-hole of a furnace is opened.

Tap, Compression.—See Cock, Compression.

Tap-hole.—In a puddling-furnace, a hole through which to draw off slag.

Tap-plate.—A steel plate provided with a number of holes which are threaded and notched for cutting threads on blanks.

Tap-stock.—A tool called also a "tap-wrench" consisting of a steel bar provided with a rectangular slot for the reception of a tap, and employed for revolving the latter.

Tape, Insulating.—A very adhesive insulating material used for winding around joints or electric wires, and made by saturating cotton tape with a mixture consisting of 30 parts of coal tar and 40 of resin.

Tape-line.—A measuring line, called also simply "tape," made of fabric or steel and winding into a case.

Taper-bearing.—See Bearing, Ball.

Taper-pin.—See Pin, Taper.

Tappet.—An arm, or lever projecting from some movable part of a machine in such a manner that the motion of such part brings the arm into contact intermittently with some other part, to which it communicates an intermittent motion.

Tappet-rod.—A rod, called also a "push rod," for lifting the valves of an internal combustion motor.

Tapping.—Cutting a helical groove in a cylindrical hole, by means of a tap. See Tap.

Tar.—A viscid brown-black resino-oil-aginous compound obtained by distilling resinous wood in close vessels or in ovens of peculiar construction, used for spreading on roads to prevent dust.

Tarbill, J. W.—Vice-Pres., Treas. and Gen. Mgr. Citizen's Motor Car Co., N. E. cor. Seventh and Main Sts., Cincinnati, O.

Tardy, A.—17 Faubourg Saint-Jacques, Valence, Dome, France. Mfr. primary batteries.

Taride.—18 bvd. Saint-Denis, Paris, France. Publishers maps.

Tarkington, J. A.—Supt. Kissel Motor Car Co., Hartford, Wis.

Tarkio Automobile Co.—Tarkio, Mo. Garage.

Tarkio Electric & Water Co.—Tarkio, Mo. (Pope-Waverley, Waltham.) Est. 1880. Cap. \$20,000. Officers: D. Rankin, W. F. Rankin and W. F. Marshall. Repairing.

Taron et Cie.—15 rue des Martyrs, Paris, France. Publishers maps.

Tarrant Foundry Co.—Chicago, Ill. Mfrs. gray iron castings.

Tarrant, W. P.—12 Maple Ave., Saratoga, N. Y. (Dolson.)

Tarring.—A method of treating road surfaces to prevent the raising of dust, and increase the adherence of dust to the soil. It is usually accomplished by spreading hot tar under pressure over the surface by means of sprinklers or other apparatus.

Tart, Henri Leon.—Automobile dealer, 25 Rue Duret, Paris, France. Born at Orleans May 28, 1868. He was formerly a bicycle racer, but turned his attention to the automobile in 1898. He has raced on tricycles, voitures, light cars and heavy cars. He is general agent for the Berliet cars in Paris.

Tasher, B. B.—Minot, N. D. (Ford.)

Tatem & Son, J. B.—Putnam, Conn. (Knox.)

Taunton Motor Carriage Co.—Taun-

ton, Mass. Mfrs. gasoline and kerosene burners.

Taunton-New Bedford Copper Co.—Taunton, Mass. Mfrs. sheet and rod brass and copper.

Taurus Societa Anonima per Acciona.—48 bis, via San Chiara, Turin, Italy. Mfrs. bodies.

Taxameter Westendarp und Pieper.—Mauerstrasse 86, Berlin, Germany. Mfrs. speed indicators.

Taxicab.—A public hack provided with a taximeter. See Taximeter.

Taximeter.—An instrument used on taximeter motor-cabs or "taxicabs," as they are called in England, for automatically calculating and indicating, at all stages of a trip, the exact amount of fare that must be paid by the passenger, and thereby rendering it impossible for the driver to make excessive charges or to withhold a part of the receipts for himself. In Europe, several instruments of this kind, of somewhat complicated mechanism, have been constructed, two of which (one of French and the other of German make) have recently been introduced, along with a line of Delahaye and Darracq landaulet motor-cabs, which are now being operated as public hacks in the streets of New York City. Mr. J. W. Jones, of the Jones Speedometer Co., believing, from his investigations, that the foreign instruments were not sufficiently perfect to insure their success in the United States, has devised an instrument now known as the "Jones Taximeter" from which, it is claimed, all the defects found in the European apparatus have been eliminated. The instrument (see figures) is about 7 inches in diam-

eter by 4 inches in thickness. It has a silver dial face in front with figures indicating the rate or tariff, the total fare to be paid by the passenger, and a separate indication for the extras. The reverse side of the instrument has

a dial giving a total of all moneys received by the driver, the total mileage made by the cab and the trip mileage, which can be reset by the driver if so desired. Also a separate count of the number of trips with single and with double tariff. A vacant sign is also displayed on the reverse side of the instrument which, when a passenger enters the vehicle, is thrown to the right by the driver until it assumes a horizontal position, indicating on the Tariff dial

and, at the same time ringing up, an initial charge of 30 cents for the first half mile. After the first half mile has been traversed an additional charge of 10 cents for each quarter mile is added to the total. In the event of there being a trunk or other baggage for which there is an extra charge, the driver turns a knob on the reverse side of the instrument, which causes the extra charge to be indicated under the heading "Extras" on the dial, and also adds the amount of the extra charge under the head "Total Fare."

On the passenger leaving the vehicle and paying the fare indicated, the driver throws the vacant sign to the vertical position, which instantly resets the figures indicated under "Total Fare" and also those under "Extras" to zero. In the event of four or more passengers entering the vehicle, the driver throws the vacant sign to the left until it assumes a horizontal position, when the same initial charge is made, which after a third of a mile has been traversed an additional charge of 10 cents for each one-sixth of a mile.

The taximeter contains also a clock mechanism, which, when the "Vacant" sign is down and the vehicle is standing, causes a charge of 10 cents to be registered for each 6 minutes of waiting, and a like amount to be added to the total. This gives the entire amount from the passenger in a single total, also the entire amount due the cab company.

Taylor & Ascher.—408 Main St., Asbury Park, N. J. Garage.

Taylor, A. O.—Mgr. Cushman Motor Co., 2020 N Street, Lincoln, Neb.

Taylor Automobile Co.—33 Orange St., Albany, N. Y. (Locomobile.) Garage, repairing.

Taylor Bros. Co.—Rochester, N. Y. Mfrs. hydrometers.

Taylor, Chas. S.—Great Barrington, Mass. Garage.

Taylor Co., H. D.—101-105 Oak St., Buffalo, N. Y. Mfrs. curtain fasteners and metal trimmings.

Taylor Co., N. & G.—308 Chestnut St., Philadelphia, Pa. Mfrs. tinplate andterne plate of all kinds; steel sheets No. 6 to No. 16 gage. U. S. standard; fine solders, pig tin, pig lead, open hearth steel billets 1½ in. sq. to 3½ in. sq inclusive, for forging or rerolling purposes. Est. 1810.

Taylor F. S.—Pres. Pilot Garage & Supply Co., Worcester, Mass.

Taylor Gue, Ltd.—84 Peel St., Birmingham, England. Mfrs. springs.

Taylor Iron & Steel Co.—100 Broadway, New York City. Mfrs. steel castings.

Taylor, J. F.—Asst. Sec. and Treas. American Oak Leather Co., Kenner St. and Dalton Ave., Cincinnati, O.

Taylor, James.—Taylor House, Coatsville, Pa. (Rambler.)

Taylor, L. J.—Earlville, Ill. (Reo, Premier.)

Taylor, N. Earle.—Clerk Pilot Garage & Supply Co., Worcester, Mass.

Taylor, Ted.—South Park St., Streator, Ill. Garage.

Taylor Trunk Co., C. A.—39 Randolph St., Chicago, Ill. Mfrs. automobile trunks.

Taylor, Wade A.—Niles, O. (Pope-Hartford.)

Teaboldt, Charles Roy.—Sec., Treas. and Asst. Mgr. Garford Motor Car Co. of New York. B. March 20, 1880, in Peru, Ind. Ed. High School at Clinton, Mich., and Cleary College at Ypsilanti, Mich. Director Garford Motor Car Co. of New York. Mem. A. C. A., New Jersey A. C. Res., 353 W. 117th St. Office, 1540 Broadway, New York City. Connected with automobile trade since 1903, with the

Packard Motor Car Co.; came to N. Y. Branch in fall of 1904; was with them until Aug. 1, 1907, when resigned to go With Garford Co.

Teagle, Frank H.—Pur. Agt. American Ball Bearing Co., Edgewater Park and L. S. and M. S. Ry., Cleveland, O.

Technical Literature Co., The.—220 Broadway, New York City. Pubs. the Technical Literature Monthly.

Technical World Magazine.—Pub. at Chicago, Ill

Technique Automobile, La.—Pub. at 49 quai des Grands-Augustins, Paris, France.

Tedge.—See Gate

Tee.—A pipe-fitting shaped like a letter T, used for joining three sections of a pipe

Teegarden & Putt.—Goshen, Ind. (Rauch and Lang.)

Teel Mfg. Co.—Medford, Mass. Mfrs. tool boxes, foot rests, robe rails, tire

cases, tire irons, automobile tops and trunk racks.

Tegan Bros. & Snyder.—236 Jefferson Ave., Detroit, Mich. Garage.

Telford.—A macadam-like pavement in which the bottom dressing consists of upright pointed stones. See Macadam.

Tell-tale.—An indicator used to show when a certain number of revolutions have been made by a machine. (2) On a vessel, a tiller-indicator.

Tell-tale Lights.—See Lights, Tell-tale.

Tempering.—A molecular modification which metals, alloys or other substances undergo when they are submitted to a sudden cooling. The result of tempering is the hardening of the articles treated and a modification of their properties of elasticity, resistance, etc. Tempering is practised on steel especially, but has likewise been applied to cast iron, which is hardened by a sudden cooling in a metallic box.

In the tempering of a tool, the latter is first hardened by heating to a temperature not exceeding that of "cherry-red," and then suddenly cooled by plunging it into cold water. If of proper quality, the steel should now be so hard as to scratch glass. If it be then cautiously heated, it will gradually be rendered softer and less brittle. By stopping the heating at the proper moment, and again cooling by water, the tool may be left with the requisite temper for the purpose desired. To enable this to be judged, a portion of the tool is carefully brightened after hardening. As the metal is heated, a succession of tints appear on the surface of the metal. These tints change as the temperature rises, and indicate with sufficient accuracy for practical purposes the exact moment when the heating must be stopped. The tints may be classified as in the following table, which also gives the temperature attained, and the principal tools for which each temperature is requisite:

Colors.	Temp. Fahr.	Tools.
Pale straw.	430°	Certain tools for cutting metal.
Darker straw....	440° to 470°	Metal - working tools cold chisels, and wood-working tools
Brownish yellow....	500°	Plane - irons, chipping chisels and other tools subject to shock or percussion.
Light purple....	530°	Springs.
Dark purple	570°	Saws.

Tempering has been applied to glass for the production of "tempered glass."

By extension of the word, the term "mass-tempering" is applied to an operation of "cementation" which consists in superficially "steeling" iron objects by heating them in a tight iron box in contact with charcoal, horn or burned leather, prussiate of potash, etc.

Tempering, Mass.—See Tempering.

Template, or Templet.—A mould or pattern, usually of sheet-iron or wood, used to indicate the outline or form to be given to a piece of work. The exact form of a template is obtained by careful measurements taken from working drawings. The form of the apparatus used in sheet-metal working is sometimes called a "break."

Temple Auto Co.—Temple, Tex. (Holman, Rapid).

Temple Auto Co., Ralph.—1219-1221 Michigan Ave., Chicago, Ill. (Rapid, National, Jackson, Pullman, Temple, Marvel.)

Temple, Geo. E.—Designer, Bay State Auto Co., 112 Norway St., Boston, Mass.

Temple, M. D.—Pres. Temple Pump Co., 15th St. and 15th Pl., near Canal St., Chicago, Ill.

Temple Press, Ltd.—7 Rosebery Ave., London, E. C., England. Publishers maps.

Temple Pump Co., The.—15th St. and 15th Pl., near Canal St., Chicago, Ill. Mfrs. single, double and 4-cylinder gasoline, stationary, portable and traction engines. Cap. \$150,000. Surplus, \$66,000. Est. 1853. M. D. Temple, Pres.; T. R. Fleming, Treas. and Mgr.; M. J. Miksch, Vice-Pres.; C. P. Miller, Sec.

Temple, T. W.—118 S. Main St., McPherson, Kan. Garage.

Temple, William Chase.—Retired. B. Starke, Bradford Co., Florida, Dec. 28, 1862. Ed. Delaware State Normal University, class '79, graduated in June,

1879, class valedictorian. Director Pittsburgh & Washington Coal Co., Rex Carbon Coal Co., Davison Lumber Co., Ltd., Atlas Mining Co., Point Loma Chemical Co. Mem. A. C. A. (first Life Member), A. C. Pittsburgh (ex-pres. and first Life Member), Duquesne of Pittsburgh, Cuyamaca, and Country of San Diego, Cal. Res. Point Loma, Cal., Pittsburgh, Pa., and Winter Park, Fla. Used first car 1899. Used seventeen cars, domestic and imported, in eight years, '99 to '07. Recreations: Golf and automobiling.

Templeton, D. F.—Montgomery House, Morristown, Pa. (Maxwell.)

Tenacity.—See Tensile Strength

Tench, F. M.—Vice-Pres. New Amsterdam Motor Co., 152 W. 56th St., New York City.

Ten Eyck, F. E.—Pres. Leather & Brass Mfg. Co., 24-26 E. Genesee St., Auburn, N. Y.

Tennant Motor Ltd.—1449 Michigan Ave., Chicago, Ill. (Peerless, Mercedes.)

Tenon.—A projection of rectangular cross-section at the end of a piece of timber to be inserted in a mortise in another piece of timber. See Mortise.

Tensile Strain.—A strain consisting of an elongation produced in a piece of material by a pull or tensile stress.

Tensile Strength.—The cohesive power by which a material resists an attempt to pull it apart in the direction of its fibers. This bears no relation to its capacity for resisting compression. Cast iron, for example, which has a comparatively low tensile strength, say of 30,000 pounds, requires a force of 100,000 pounds or more to the square inch to crush it.

Tensile Stress.—A force which tends to elongate a body.

Tension.—A system of forces tending to draw asunder the parts of a body combined with an equal and opposite system of resisting forces of cohesion holding the parts of the body together. (2) The condition or state of a body when acted upon by such forces. (3) The expansive force of a gas or vapor.

Tension, High.—See High Tension.

Tension-rod.—A stay or tie-rod in a truss or structure which connects opposite parts and prevents them from spreading asunder. A tie-rod.

Tension-roller.—A tightening-pulley, as for a belt. See Pulley, Jockey.

Tenvoorde, J. H.—Minneapolis, Minn. (Deere.)

Termaat & Monahan Co.—Oshkosh, Wis. Mfrs. gasoline marine motors.

Terminal.—The clamping device, usually a screw, at each end of a battery used for connecting it to the wires which complete the circuit. See Binding Screw.

Terminal Holder Specialty Co., The.—1251 Michigan Ave., Chicago, Ill. Mfrs. wire terminals.

Terre Haute Automobile Club.—Terre Haute, Ind. John S. Cox, Sec.

Terre Haute Carriage & Body Co.—101 Wabash Ave., Terre Haute, Ind. Mfrs. wooden and metallic bodies.

Terriere, H. W.—Pres. Chicago Vulcanizing Co., 1461-1463 Michigan Ave., Chicago, Ill.

Terrill, L. A.—Designer Commercial Truck Co., of America, 1222 Arcade St., Philadelphia, Pa.

Terrot et Cie.—Dijon, France. Mfrs. motorcycles.

Terry, Chas. A.—Sec. and Treas. Cooper Hewitt Electric Co., 111 Broadway, New York City.

Terry, Charles Thaddeus.—Lawyer. B. Albany, N. Y., Sept. 16, 1867. Ed. Williams College, '89; Columbia Law School, '93; New York Law School 2 years; student History, Economics, Literature, University of Berlin. Admitted to bar, 1893; prize lecturer on equity and code pleading and practice, 1893-5. Lecturer, 1897-1902; professor law since 1902, Columbia Law School. Mem. Phi Beta Kappa, Bar Association of N. Y., N. Y. Law Inst., Albany Society. Clubs: University, Lawyers, Republican, Phi Delta Phi (Pres.), Phi Delta Theta (Pres.). Counsel National Association of Automobile Manufacturers, Chairman Legislative Committee and Counsel American Automobile Association. As Chairman of the A. A. A. Legislative Board he prepared the Federal automobile bill, introduced in the 59th Congress, and again in the 60th Congress, where it is still pending. Res., 23 E. 77th St., Office, 100 Broadway, New York City.

Terwilliger & Co., Wm. B.—32 Division St., Amsterdam, N. Y. Mfrs. steam automobiles.

Terwilliger-Stone Leather Co.—210 New Jersey Railroad Ave., Newark, N. J. Mfrs. leather.

Test, Chas. E.—Pres. National Motor Vehicle Co., E. 22nd St., Indianapolis, Ind.

Testard, H. A.—341 St. Charles St., New Orleans, La. (Buick, Pope-Toledo, Cadillac.)

Teste, E.—18 cité Lemiére, Belleville, Paris, France. Mfr. horns.

Teste, Georges Robert.—144 Rue de Courcelles, Paris. Born at Pacy-sur-Eure, March 30, 1874. Dealer, representing the Panhard-Levassor, Mercedes, Renault and other cars. Formerly foreman in the de Dion-Bouton works. Tricycle racer between 1896 and 1901. Business Mgr. of an agency of the Panhard cars from 1901 to 1904. At present head of the Teste establishment.

Tetrahedral.—A term applied to the hull of a boat in which the bottom, the two sides, and the deck are all roughly triangular with their points together at the bow.

Teudeloff Halloria Motorfahrzeugwerke.—Halle-am-Saal, Germany. Mfrs. Halloria motorcycles.

Teves & Hendricks.—411 Berry St., Brooklyn, N. Y. (Smith.)

Tew, B. T.—Hempstead, L. I., N. Y. (Haynes.)

Texas Automobile Co.—San Antonio, Tex. Garage.

Thatcher & Sons.—Mattoon, Ill. Repairing.

Thayer, F. E.—1028 S. Main St., Los Angeles, Cal. (Darracq.)

Thedford's Garage.—315 W. 96th St., New York City. Rental service.

Theim Mfg. Co.—Minneapolis, Minn. Mfrs. gasoline automobile motors.

Therm.—The amount of heat required to raise one gramme of water at its maximum density one degree centigrade. The same as "small calorie." See Calorie.

Thermal Unit.—See Calorie.

Thermic Energy.—See Energy, Thermic.

Thermite.—A mixture of aluminum powder and ferric oxide used in Goldschmidt's process of reducing metals, and employed also in the soldering of iron pipes etc., where a very high temperature is required.

Thermo-chemistry.—That branch of chemistry which deals with the measurement of the heat evolved or absorbed in reactions, and which applies the result of such measurements to the solution of various chemical problems.

Thermo-electricity.—That part of general electricity which deals with the direct transformation of heat into electricity or inversely.

Thermo-siphon.—The cooling of motors is assured in certain types of automobiles, not by an ordinary pump forcing the water to circulate from the motor to the radiator, but simply by a "thermo-siphon." In this arrangement, the top and bottom of the water jacket which surrounds the motor are connected by many pipes to a large honey-comb or gilled-tube radiator. The water circulates then simply by a difference

in density, the warmest water reaching the top of the cylinder and then the radiator, and the water, relatively colder, owing to its stay in the radiator, naturally descending to the lower part of the cylinder. In the figure, M represents the cylinder of the motor; R, the thermo-siphon; T, the hot-water outlet-tube; T₁, the cooled water inlet tube.

Thermodynamic Function.—See Entropy.

Thermodynamics.—The investigation of the relations between heat and other forms of energy.

Thermometer.—An instrument for measuring the temperature of bodies,

or the degree of intensity of their sensible heat. In Europe there are three different kinds of thermometers: (1) Fahrenheit's, which is used chiefly in Great Britain, Holland and North America, the freezing-point on which is at 32°, and the boiling point 212°; (2) Réaumur's, which was that chiefly used in France before the Revolution, and now generally used in Spain,

and in some other continental states, and the freezing point, or zero, on which is 0°, and the boiling point 80°; (3) The Celsius, or Centigrade thermometer, now almost universally used throughout France, and in the northern and middle kingdoms or Europe, and the zero or freezing-point on which is 0°, and boiling-point 100°.

To convert degrees, Centigrade or Réaumur, into degrees Fahrenheit:

Let F = Number of Fahrenheit degrees.

C = " " Centigrade "

R = " " Réaumur "

$$F = \frac{9C}{5} + 32; \quad F = \frac{9R}{4} + 32;$$

$$C = \frac{5(F - 32)}{9} \quad R = \frac{4(F - 32)}{9}$$

Thermostat.—An automatic apparatus for controlling and regulating temperature. Thermostat regulators are employed on several steam-cars to control the by-pass valve as well as to regulate the supply of gasoline to the burner. When the steam is superheated too much the apparatus shuts off the fire, which it opens again when cooler steam reaches it; the cooler steam meaning that the water (under the action of pump and by-pass) is nearer the thermostat, so that more fire is needed to convert it into steam.

Thery, Leon.—10 Rue Chaligny, Paris. Born at Paris, April 16, 1879. After having taken part in almost all of the mile, kilometre, etc., hill races, disputed at Nice, Gaillon, Trouville, etc., Thery, in 1903, entered into the employ of Richard Brasier, for whom he won the French elimination tests, and then the Bennett cup races two years in succession, in 1904 at Taunus, and in 1905 at Auvergne.

Theuveny.—80 rue Taitbout, Paris, France. Publishers maps.

Thevenin Frères, Seguin et cie.—116 bvd. Richard-Lenoir, Paris, France. Mfrs. lubricators.

Thibault, E. J.—Mgr. Oakland Branch Geo. P. Moore Co., Inc., 231 Twelfth St., Oakland, Cal.

Thiesen, Fred.—Chilton, Wis. (Jewel.)

Thimble.—An iron ring, with an external groove, worked into a rope or fabric for the purpose of receiving another rope; a large eyelet (see figure). (2) A sleeve or tube

through which a bolt passes, and which may act as a stay.

Thimble-joint.—A sleeve joint with an interior packing to keep the joints of pipes tight during expansion and contraction.

Thirty-first St. Garage.—316 Thirty-first St., Chicago, Ill. Garage.

35 Per Cent. Auto Supply Co.—83 Chambers St., New York City. Est. 1905. Complete line of automobile supplies. A. B. Norwalk, Pres., Gen. Mgr. and Treas.; H. Saxon, Sec. Branch, 1663 Broadway, New York City.

Tholen Bros.—304 Shawnee St., Leavenworth, Kan. (Cadillac.)

Thomas & Bros., G. P.—Batavia, N. Y. (Pierce, Waltham.)

Thomas & Lowe Machinery Co.—Sabin and West Exchange Sts., Providence, R. I. (Autocar, Pope-Toledo.)

Thomas & Tolman Auto Co.—1828 L St., N. W. Washington, D. C. (Pullman.)

Thomas et Cie, Auguste.—58 quai des Charbonnages, Brussels, Belgium. Mfrs. springs.

Thomas Auto-Bi Co.—1443 Niagara St., Buffalo, N. Y. Mfrs. motorcycles

Thomas Brass & Iron Co.—Waukegan, Ill. Mfrs. pipe, brass fittings.

Thomas, Edwin Lozier.—Vice-Pres. E. R. Thomas Motor Co. B. Evansville, Ind., Nov. 28, 1880. Ed. Upper Canada College, Toronto, Ont. Director E. R. Thomas Motor Co., E. R. Thomas Realty Co. Mem. A. C. Buffalo, Country C. (Buffalo). Res. 506 Delaware Ave. Office 1200 Niagara St., Buffalo, N. Y.

In the trade since Sept., 1900. Recreation: Touring.

Thomas Detroit Co., E. R.—2704-2718 Jefferson Ave., Detroit, Mich. Makers of Thomas-Detroit car, first marketed in

1906. Two different models made since. Cap. \$300,000. Hugh Chalmers, Pres.; H. E. Coffin, Vice-Pres. and Designer; R. D. Chapin, Treas. and Gen. Mgr.; J. J. Brady, 2d Vice-Pres. and Factory Mgr.; F. O. Bezner, Sec. and Purch. Agt.; J. G. Utz, Designer.

Thomas, E. R.—Pres. Allen-Kingston Motor Car Co., 3 W. 44th St., New York City.

Thomas, E. P.—Mgr. Belting Dept. Republic Belting & Supply Co., 1616 W. Third St., Cleveland, O.

Thomas, Edwin Ross.—Manufacturer and capitalist. B. Webster, W. Moreland Co., Pa., 1850. Ed. high school, Evansville, Ind., Duff's College, Pittsburg, Pa. Pres. E. R. Thomas Motor Co., E. R. Thomas Realty Co., and International Motor Cab Co. Director Central National Bank of Buffalo, American Savings Bank of Buffalo, Buffalo Copper & Brass Rolling Mill, L. I. Motor Parkway, Mem.

clubs: A. C. A., A. C. Buffalo, American Motor League, Buffalo Launch, Buffalo Motor Boat, Royal Canadian Yacht, Buffalo, Ellicott, Buffalo Country, Buffalo Park. Res. 125 North St., Office 1200 Niagara St., Buffalo, N. Y. In the trade since 1902. Used first car 1902. An amateur yachtsman, experimenting with automobile type motor boats, built "Flo Flo," 60 hp., and "Butterfly," 300 hp. Recreations: Yachting, golf and fishing.

Thomas, F. C.—Pomona, Cal. (Maxwell.)

Thomas, H. J.—Designer Reo Motor Car Co., Lansing, Mich.

Thomas, J. Clarence.—Beaton and Collins St., Corsicana, Tex. Garage.

Thomas, J. R.—1208 Connecticut Ave., Washington, D. C. Garage. (Maxwell)

Thomas Motor Co., E. R.—1200 Niagara St., Buffalo, N. Y. Makers of the Thomas Flyer, Town car and Motorcab; first automobile marketed in 1898. Cap. \$500,000; surplus \$750,000. E. R. Thomas, Pres.; E. L. Thomas, Treas.; J. M. Edsall, Sec.; Gustave Chedru and Howard E. Coffin, Designers; K. L. McDonald, Pur. Agent; M. B. Hatch, Sales Mgr.; F. L. Faurote, Advt. Mgr.

Following are the principal events and the records in which the Thomas cars have figured: World's non-stop record, 507 hours, 29 minutes. Perfect score in the 1906 Glidden tour. Two perfect scores in the 1907 Glidden tour. Road record, Buffalo to Rochester, 68 miles, in

1 hour, 32 minutes and 45 seconds. Stock touring car record for 5 miles, standing start, in 4:55; 1 mile in 57-2-5 seconds at Atlantic Beach; 1 mile, 55-4-5 seconds, Atlantic Beach. Lowered 50-mile stock touring car record, Hawthorne track, Chicago, to 1:06:19. Again lowered 50-mile world's record for stock touring cars, Point Breeze track, Philadelphia, 1:04:19 $\frac{1}{4}$. 1907.—June 1, E. L. Mathewson broke 50-mile record at Overland Park (Colo.) track; time, 55:43-4-5. July 4, Wildwood, N. J., won Free-for-all; open to cars listing \$3,500 and under; special mile, 120-hp. Thomas first; time, 44 seconds. Nov. 16, Thomas one of seven to finish with perfect score in 24-hour run of the New Jersey Auto and Motor Club; 22 entries. June 29, Brinker and Ralph Baird in Thomas runabout broke record from Denver to Colorado Springs in 1 hour, 59 minutes. May 30, Hood lowered record 2 hours and 13 minutes in winning the 100-mile National Championship on circular track at Bennings race course in Thomas sixty. May 30, W. C. Hood won 100-mile race at Bennings track, Washington, in Thomas car. July 13, Won Chicago 24-hour endurance race on the Harlem track. C. A. Coey driving distance, 846 miles; eighteen cars entered. July 4, Peoria, Ill., 6-hour race; Coey and Thomas first; ran 269 miles. Aug. 6, Atlantic City; Montague Roberts driving 120-hp. Thomas; free-for-all; 1 mile, 40-1-5 seconds. Aug. 9, 24-hour race on the Brighton Beach track; winner, Thomas, driven alternately by Roberts and B. McIlried; distance traveled, 997 miles. Aug. 25, Olympic Club, 5 miles, free-for-all; first, Thomas 70 runabout, driven by Bert Dingley, and third, Thomas 70 runabout, Roy Rehm; time, 5 minutes, 25-4-5 seconds. Sept. 15, Cincinnati, O.; 6-hour endurance race; won by J. Sharp in Thomas car. Sept. 14, Sacramento, Cal.; 10-mile race won by Bert Dingley in Thomas Speedway Flyer; time, 11:15. Nov. 9, Thomas-Detroit broke record of run of 135 miles, from Los Angeles to San Diego, in 4 hours, 39 minutes. May 7, Thomas one of four to make perfect score in run of the Motor Club of Harrisburg. Feb. 12, 1908, started in New York-Paris race.

Thomey-Cavalleris, K. L.—Vice-Pres. Acetylene Gas Illuminating Co., 105 Walker St., New York City.

Thompson & Co.—State and Whitaker Sts., Savannah, Ga. (Maxwell, Reo, Rambler.)

Thompson & Co., T. W.—28 Deptford Bridge, Greenwich, England. Mfrs. storage batteries.

Thompson & Lipcomb.—Washington St., Lacon, Ill. (Jackson.)

Thompson, Alfred.—Pres. Erie Stamping & Mfg. Co., 646 W. 12th St., Erie, Pa.

Thompson, Alvah M.—Pres. Metropolitan Automobile Co., Sommerville, Mass.

Thompson, Arthur.—Vice-Pres. Erie Stamping & Mfg. Co., 646 W. 12th St., Erie, Pa.

Thompson Auto Co.—1924 Westminster St., Providence, R. I. Garage.

Thompson Automobile Co., Andrew C.—413 Park Ave., Plainfield, N. J. Garage.

Thompson, C. E.—Gen. Mgr. Cleveland Cap Screw Co., 2216 Clarkwood Rd., Cleveland, O.

Thompson Co., E. J.—5917-5919 Penn Ave., Pittsburgh, Pa. Mfrs. wooden and metallic bodies.

Thompson, E. R.—Automobile editor Journal of Commerce, New York City.

Thompson, F. H.—36-38 Elm St., Portland, Me. Mfrs. machinery spring.

Thompson, Geo. Lee.—Pres. The Autolight & Motor Supply Co., Inc., 506-8 N. Broad St., Philadelphia, Pa.

Thompson, J. E.—Supt. Repair Dept., F. A. Bryson, 5, 7, 9 Perry St., E., Savannah, Ga.

Thompson, R. C.—Asst. Treas. and Mgr. Globe Optical Co., 403 Washington St., Boston, Mass.

Thompson, T. E.—Canastota, N. Y. (Maxwell.)

Thompson, Walther S.—Sec. Metropolitan Automobile Co., Sommerville, Mass.

Thompson's Chelsea Garage.—California Ave., Atlantic City, N. J. Garage.

Thomson Co., Robert.—254 Court St., Rochester, N. Y. (Pope-Toledo, Pope-Hartford, Pope-Waverley.)

Thordasen Electric Co.—153 S. Jefferson St., Chicago, Ill. Mfrs. spark coils.

Thorn, W. & F.—Raneleigh House, Lower Grosvenor Pl., London, S. W., England. Mfrs. bodies.

Thornhill Co., H. W.—Dallas, Tex. (Rapid.)

Thornhill, W. C.—Minneapolis, Minn. (Frayer-Miller, Reo.)

Thornycroft & Co., Ltd., John I.—Homefield, Chiswick, London, England. Mfrs. Thornycroft gasolene automobiles and steam commercial trucks.

Thorpe, B. E.—117 W. 16th St., San Francisco, Cal. (Jewel.)

Thorpe, Geo. B.—Sec. The Grant Mfg. & Machine Co., 90 Silliman St., Bridgeport, Conn.

Thorpe, R. E.—Los Angeles, Cal. Garage.

Thorpe, Ray P.—Sec. and Treas. Corbaley & Thorpe Auto Co., 443-449 Emerson St., Palo Alto, Cal.

Tnousand Island Boat & Engine Co.—Morristown, N. J. Mfrs. gasolene marine motors and motorboats.

Thrall, Frank R.—Treas. and Gen. Mgr. Waterman Marine Motor Co., 1506-1512 Fort St. West, Detroit, Mich.

Thrall, Geo.—Sec. and Treas. Detroit Screw Works, Riopelle and Franklin Sts., Detroit, Mich.

Thread.—A helical ridge around a screw. See Screw.

Three Rivers Furnace & Foundry Co.—Three Rivers, Mich. Mfrs. gray iron castings.

Three Square.—Three-sided, or triangular in section.

Three-throw Crank.—See Crank.

Throon & Sons, J. E.—Trenton, N. J. (Winton.)

Throop, B. M.—33 Walnut St., Geneva, O. Repairing.

Throop Perforating Co.—80 Terrace, Buffalo, N. Y. Mfrs. body irons, transmission gears, metal gear-wheels, machine works, perforated metal, and sprockets.

Throttle.—See Valve, Throttle.

Throttling.—Regulating the supply of steam in a steam-engine, or of gas in a gas or gasolene-motor, by means of a throttle-valve.

Throw.—The radial reach of a crank, cam or eccentric.

Throw, Crank.—See Crank and Throw.

Throw, Eccentric.—See Eccentric and Throw.

Thrust.—A stress between two bodies in contact, and particularly that along the axis of a rod or shaft.

Thrust-bearing.—See Bearing, Thrust.

Thrust-collar.—See Collar, Thrust.

Thrust-load.—A load which comes parallel to the shaft which the bearing supports. One at any other angle is partly radial and partly thrust.

Thumb-nut.—See Nut, Thumb.

Thumb-Screw.—See Screw, Thumb.

Thüringische Maschinen und Fahrradfabrik.—Mülhausen, Thuringia, Germany. Mfrs. motorcycles.

Thurlow, J. A.—10th and Delaware Sts., Wilmington, Del. (Queen.)

Thurston Mfg. Co., The.—356 E. 57th St., Chicago, Ill. Mfrs. spark plugs.

Thwart.—One of the transom planks which keep the sides of a boat asunder.

Thwartship.—See Athwartship.

Tibbetts, N. H.—Groveton, N. H. (Lambert.)

Tichenor, W. A.—Pres. Commercial Battery Co., 204-206 Michigan St., Chicago, Ill.

Tickler.—A small button or plug, which, in most carburetters, is situated at the top of the float-chamber, and upon which a pressure is exerted in order, through a plunger, to depress the float for the purpose of admitting a larger quantity of gasoline, so as to facilitate the starting of the motor. Such an operation is called "tickling" the carburetter.

Tidewater Automobile Club.—510 Atlantic Trust Bldg., Norfolk, Va. Frederick Lewis, Sec.

Tie-bar.—See Link, Drag.

Tie-rod.—A member (usually a thin rod) of a structure which exerts a tensile force between two other parts. (2) The same as drag-link, q. v.

Tiel & Co., Geo.—413 Arch St., Philadelphia, Pa. Mfrs. cloth and carpet trimmings.

Tierney, S. P., & Stantial Co.—Stoneham, Mass. Garage.

Tierney, S. P.—147 Main St., Springfield, Mass. (Cameron.)

Tiffany, Calvin H.—Willimantic, Conn. Garage.

Tiffin Cycle & Auto Co.—Tiffin, O. (Pope-Waverley.)

Tifft, J. E.—Vice-Pres. Auto Supply & Storage Co., 1416 Madison Ave., Baltimore, Md.

Tightening Pulley.—See Pulley, Jockey.

Tilden, Philip S.—Sec. Franklin H. Kalbfleisch Co., Broadway and 16th St., New York City.

Tiley-Pratt Co., The.—Essex, Conn. Mfrs. nipples, power-driven tire pumps.

Tiller.—A beam or iron bar fitted into the head of the rudder, and by means of which the latter is moved. (2) On a motor-car, a steering-lever fulcrumed at the center of the dash or footboard, and moving laterally to effect the steering.

Timer.—A device, called also a "commutator," "circuit-breaker" and "contact-maker," designed to establish and break the primary or low tension current at the proper moment with relation to the posi-

tion of the piston within the cylinder.

The different kinds of timers or commutators employed are: "Touch-contact" or "make-and-break," "roller contact," "sliding contact," and "brush contact." The timer used on a four-cylinder motor usually consists of a fiber ring, in the inner circumference of which are fixed, at equal distances from each other, four hardened steel contact-points, which are individually connected by wires to separate units of the spark-coil, and thence through separate wires to the spark-plug in each cylinder. The fiber ring surrounds a shaft rotated by bevel-gear from the cam-shaft, between the pairs of cylinders. Attached to the shaft, inside the ring, is an arm having at its extremity a hardened steel contact-roller, which, as the shaft revolves, passes over each of the contact-points in the ring. As the roller passes over these points, the contact is made and broken, and lines of force are agitated in each of the spark-coil units, creating an induced current in the secondary winding. (2) A form of stop-watch for indicating only relative time, as in timing a race.

Timer, Brush-contact.—See Timer.

Timer, Make-and-break.—See Timer.

Timer, Roller-contact.—See Timer.

Timer, Sliding-contact.—See Timer.

Timer, Touch-contact.—See Timer.

Times Square Auto Co.—1599-1601 Broadway, New York City. (Second-hand cars.) Est. 1904. Cap. \$10,000. Morris Froehlich, Pres.; Jesse Froehlich, Treas. and Sec.; Oscar Weingarten, Vice-Pres.

Timing.—A term applied to the operation of advancing and retarding the spark in an ignition system. (2) The regulation of the parts of a mechanism so that all the motions shall take place in due order and time.

Timing-gear.—See Gear, Timing.

Timing-lever.—The same as ignition-lever. See Lever, Ignition.

Timken, Henry.—Pres. Timken Roller Bearing Axle Co., Canton, O.

Timken, H. H.—Vice-Pres. Timken Roller Bearing Axle Co., Canton, O.

Timken Roller Bearing Axle Co.—Canton, O. Mfrs. roller bearings and roller bearing axles. Henry Timken, Pres.; H. H. Timken, Vice-Pres.; W. R. Timken, Sec. and Treas.; E. W. Lewis, Asst. Sec. and Sales Mgr.; A. R. Demory, Gen. Supt.; H. W. Alden, Mechanical Engineer; G. C. Kimbark, Cashier. Branches: New York, 219 W. 46th St.; Chicago, 429 Wabash Ave.

Timken, W. R.—Sec. and Treas. Timken Roller Bearing Axle Co., Canton, O.

Timmins & Butler.—286 Ellicott St., Buffalo, N. Y. Garage.

Timperley, Chas.—14 Mary Ann St., Birmingham, England. Mfrs. make-and-break plugs.

Tin.—A white metallic body, the most fusible of ordinary metals. its melting point being 442° F., or 228° C. Pure tin is perhaps of all substances that which produces the least friction in iron, but, for bearings, its softness has prevented it from being very extensively employed in a pure state. When pressed upon the rubbing surface it yields and becomes extended in the direction of the length of the pillow. Alloyed with copper, it gives bronze, and with lead, various solders for plumbers and tinsmiths. Thin sheets of soft iron covered with tin by dipping are termed "tin-plates." In contact with air, while in fusion, it oxidizes more or less completely, and forms stannous and stannic-oxides, floating as a slag or scoria on the metal itself. Oxide of tin constitutes "tin putty," which is used for polishing metals.

Tin-foil.—Tin or a tin-like alloy rolled into very thin sheets.

Tin-plate.—See Tin.

Tin-putty.—See Tin.

Tincher Motor Car Co.—South Bend, Ind. Mfrs. gasoline automobiles.

Tindel, Adam.—Pres. and Treas. Tindel-Morris Co., Eddystone, Pa.

Tindel-Morris Co.—Eddystone, Pa. Mfrs. automobile crank shafts and machinery for manufacturing automobile shafts. Est. 1862. Adam Tindel, Pres. and Treas.; L. I. Morris, Vice-Pres.; L. W. Gruber, Sec.

Tingley & Co., Chas. O.—Rahway, N. J. Mfrs. tire cement, tire patches and tire plugs.

Tingue Mfg. Co.—Seymour, Conn. Mfrs. cloth and carpet trimmings.

Tioga Auto Co.—Broad and Tioga Sts., Philadelphia, Pa. (National.)

Tip.—See Burner.

Tippecanoe Auto Co.—112-114 N. 5th St., Lafayette, Ind. (Reo, Jackson, Overland.)

Tippel, Alfred Josef.—XIII Linzerstrasse, Vienna, Austria. (Lambert.)

Tippitt, J. E.—Vice-Pres. Auto Supply & Storage Co., 1416 Madison Ave., Baltimore, Md.

Tire.—A band or rim around the periphery of a vehicle-wheel, usually of iron, steel or rubber, and sometimes of leather, and more rarely of paper or wood. All motor-vehicles use tires of rubber, with the twofold object of obtaining a desirable spring effect and securing the requisite adhesion to the road. There are two varieties of rubber tire in use for every kind of vehicle except cycles, viz., the solid and the inflatable pneumatic tire. At present pneumatic tires

are almost universally employed on motor-cars, while solid tires are found only on electric vehicles designed for use on city streets, or on trucks and the heavier types of passenger and commercial vehicles. The solid tire is sometimes provided with small hollows or tunnels let into it lengthwise, when it is more appropriately called a "cushion" or "cellular" tire. The shape of solid tires varies, some having a flat tread and nearly straight sides, others a curved tread conforming somewhat to a half circle, others, called "sectional," with tread surface composed of a number of projections from a rubber strip, which can be moulded in as many sections as desired, etc. See Tire, Pneumatic.

Tire-band.—A band for protecting a tire or for lacing over an injured portion of it.

Tire-bolt.—See Bolt, Tire.

Tire-brake.—See Brake, Tire.

Tire, Cellular.—See Tire.

Tire, Clincher.—A type of rubber tire which is held on the rim by the pressure of the air against its edge.

Tire-cover.—A casing of leather, rubber, etc., for holding pneumatic tires. It is usually fastened to the body and foot-board by irons.

Tire-creeping.—See Creeping.

Tire, Cushion.—A tire similar to the solid tire, except that it is provided with cellular or tubular openings with a view to producing greater resiliency than is possible with a solid tire.

Tire, Detachable.—A double-tube pneumatic tire, which is removable from the rim.

Tire-gaiter.—The same as tire-sleeve.

Tire, Inflation.—Naturally, tires should be inflated proportionally to the weight that they have to carry, but in every case amply. An insufficiently inflated tire becomes very quickly ruined through rim cutting or sheering between the ground and the metallic felly.

All tire makers advise that pneumatic tires be always kept at a constant pressure. In fact, if a tire be too "soft," the canvas is apt to rupture, while if it is too much inflated it bursts in consequence of a diminution in the resistance of the canvas and the increase of pressure resulting from the heat engendered by the revolution of the wheel.

In order to find out whether the exact pressure has been reached, it is absolutely necessary to have an air-pump provided with an excellent gauge. The proper dimensions and air-pressures of double-tube tires, as given by Michelin, are:

For loads of from 350 to a maximum of 600 pounds per wheel, 2½ inches in diameter, inflation pressure, 50 pounds.

For loads of from 440 to 660 pounds

per wheel, $3\frac{1}{2}$ inches diameter, inflation, 70 pounds.

For loads of from 550 to 990 pounds per wheel, $3\frac{1}{2}$ inches in diameter, inflation, 71 to 78 pounds.

For loads of from 660 to 1,140 pounds per wheel, 4 inches diameter, inflation, 71 to 78 pounds.

For loads of from 880 to 1,320 pounds per wheel, $4\frac{3}{4}$ inches diameter, inflation, 71 to 78 pounds.

For loads of from 1,100 to 1,650 pounds per wheel, $5\frac{1}{2}$ inches diameter, inflation, 71 to 85 pounds.

In further elaboration of the subject, it may be said that the proper inflation of a tire may be judged by the extent to which it flattens when running. When fully loaded the tire should never flatten more than two-fifths of an inch, and even on the level streets of a town, never more than three-fifths of an inch.

Tire-lever.—See Lever, Tire.—

Tire, Paper.—An automobile tire built up in one piece on the wheel by wrapping gummed paper about the latter to the desired thickness, and then bolting the channel-flanges to the sides. The resilience may be increased by inserting a band or cushion of rubber between the rim and the paper tire

Tire-patch.—See Patch.

Tire, Pinching of.—See Pinching.

Tire, Pneumatic.—There are two varieties of the pneumatic tire, the single and the double-tube. The first, in all its forms, consists of an inner or air-tube, constructed of thin rubber inclosed in an outer case or "shoe" made of strong fabric and a tougher or denser kind of rubber. The single-tube tire differs from the double-tube in the fact that the inner or air-tube is vulcanized to the outer tube, making the two tubes really one. The double-tube tire is the one most commonly used on motor-cars, because of the several advantages it presents, such, for example, as its immunity from "creeping," and from rolling off, like the single-tube tire.

The pneumatic tire, however, has two great disadvantages: (1) Its rapid wear and, consequently, its enhanced cost; and (2), the ease with which it bursts or is punctured. Some inventors have tried to correct this last defect by devising what are called "non-puncturing" tires, but the results obtained have been at the expense of great weight and an increased cost. Pneumatic tires offer the great inconvenience of side-slipping or "skidding" on soft, greasy, wet or even very dusty surfaces. This can be remedied more or less by the use of "non-skids," which are usually formed of a band of chrome leather cemented to the shoe and studded with rivets, which grip the surface and prevent lat-

eral displacement. These are applied to the rear wheels, and are effective in a certain measure only. See Skidding and Non-skid.

Tire-protector.—A supplementary tread composed of leather or other suitable material for protecting a pneumatic tire.

Tire-pump.—See Pump, Tire.

Tire-rim.—See Rim.

Tire-shoe.—The casing of a pneumatic tire.

Tire-sleeve.—A sleeve, called also a "gaiter," for protecting or repairing an injured portion of a pneumatic tire.

Tire, Solid.—A tire composed of a solid band of rubber. See Tire.

Tire-tank.—See Tank, Tire.

Tire-tool.—A tool, called also a "tire-iron," for rolling a tire-shoe on or off the rim.

Tire-valve.—See Valve, Tire.

Tires, Leather.—During the last few years considerable use has been made of leather for tires owing to several important discoveries in rendering the material resistant to water. The most popular method of preparing rawhide for tire-making is by the chrome process (see Chrome, Leather), the details of which are not known, but the result of which is a leather possessing much of the softness and strength of rawhide, while being nearly waterproof. Although the principal use of leather in tire-making is in covers for ordinary rubber tires, not only pneumatics, but solid tires are now being made of the material.

Tires, Metric.—American equivalents of:

Metric Sizes.	Approx. Size in Inches.
650x 65	26x2 $\frac{3}{4}$
700x 65	28x2 $\frac{1}{2}$
750x 65	30x2 $\frac{1}{2}$
800x 65	32x2 $\frac{1}{2}$
830x 65	33x2 $\frac{1}{2}$
860x 65	34x2 $\frac{1}{2}$
700x 85	28x3 $\frac{1}{4}$
750x 85	30x3 $\frac{1}{4}$
800x 85	32x3 $\frac{1}{4}$
860x 85	34x3 $\frac{1}{4}$
810x 90	32x3 $\frac{1}{4}$
840x 90	32x3 $\frac{1}{2}$
870x 90	34x3 $\frac{1}{2}$
910x 90	36x3 $\frac{1}{2}$
960x 90	38x3 $\frac{1}{2}$
1010x 90	40x3 $\frac{1}{2}$
815x105	32x4
875x105	34x4
915x105	36x4
820x120	32x4 $\frac{1}{2}$ -5
850x120	33x4 $\frac{1}{4}$ -5
880x120	34x4 $\frac{1}{2}$ -5
920x120	36x4 $\frac{1}{4}$ -5
1020x120	40x4 $\frac{1}{2}$ -5
1080x120	42x4 $\frac{1}{4}$ -5

Tire Safety Device Co.—214 W. 124th St., New York City. Mfrs. tire valves.

Tirrill Gas Machine Lighting Co.—75 Fulton St., New York City. Mfrs. storage tanks.

Tischbein, Willy.—Pres. Continental Caoutchouc Co., 43 Warren St., 2100 Broadway, New York City.

Titanic Steel.—See Steel, Titanic.

Titanium.—A rare metal discovered by Klaproth in 1794. It is not known in a pure condition. It has been obtained containing 2 per cent. of carbon by heating an intimate mixture of carbon and titanium dioxide in an electric furnace. So obtained it is a very hard white metal, so hard as to scratch steel, and very light. Its purest ore is rutile. It is now used in the construction of aeroplanes. See Rutile.

Titchiner, C. E.—Binghamton, N. Y. Garage.

Titman, Leeds & Co.—128 N. Broad St., Philadelphia, Pa. (Matheson, Stud-baker.)

Titworth, D. E.—Vice-Pres. Spicer Universal Joint Mfg. Co., 3d St. and Madison Ave., Plainfield, N. J.

Titus, L. H.—Glen St., Glen Cove, L. I., N. Y. Garage; repairs.

Tobin, A. W.—Pres. Continental Motor Mfg. Co., Muskegon, Mich.

Tobin, Benj. F.—Sec. and Treas. Continental Motor Mfg. Co., Muskegon, Mich.

Tobin-Gerlinger Steel Castings Co.—West Allis, Wis. Mfrs. steel castings.

Tobin, Wm.—Foreman J. E. Loneragan & Co., 211-15 Race St., Philadelphia, Pa.

Tocanier e Cia., A.—27 Corso Genova, Milan, Italy. Mfrs. marine motors.

Todd, Edwin S.—Sec. and Treas. Clark Bros. Bolt Co., Milldale, Conn.

Todd, James B.—322 Peachtree St., Atlanta, Ga. (Stoddard-Dayton.) Est. 1906. Repairing.

Toe.—The lower end of a vertical shaft which rests in a step-bearing, q. v. (2) An arm on the valve-lifting rod of a steam-engine. (3) A projection from the foot-piece of an object to give it a broader bearing and greater stability.

Toepfer's Sons, Frank.—413 National Ave., Milwaukee, Wis. (Earl.)

Toggle-joint.—See Joint, Toggle.

Toggle-lever.—See Lever, Toggle.

Tokheim, J. J.—Pres. and Gen. Supt. of Factory, Tokheim Mfg. Co., 815 N. 1st St. W., Cedar Rapids, Ia.

Tokheim Mfg. Co.—815 N. 1st St., W. Cedar Rapids, Ia. Mfrs. oil pumps and tanks of all sizes and weights for gasoline, naphtha, cylinder oil, etc., portable gasoline tanks, shop and factory oil outfits. Cap. \$30,000. Est. 1902. J. J. Tokheim, Pres. and Gen. Supt. of Factory; W. H. Dutton, Sec., Treas. and Mgr.

Tolch & Co.—Fulham, London, England. Mfrs. clutches.

Toledo Automobile Club.—Dr. Chas. P. Wagar, Sec. and Treas., Toledo, O.

Toledo Metal Wheel Co.—163 W. Main St., Rochester, N. Y. Mfrs. nipples.

Toledo Motor Boat & Power Co.—Toledo, O. (Haynes.) Mfrs. motor boats.

Toledo Motor Car Co.—1012 Madison Ave., Toledo, O. (Columbia, Winton, American Mercedes, Pope-Toledo, Baker.)

Toledo Storage Battery Co.—102 Oliver St., Toledo, O. Mfrs. storage batteries. Cap. \$50,000. Est. 1902. J. M. Skinner, Pres.; A. C. Ash, Vice-Pres.; Geo. J. Miller, Electro-Chemist; E. P. Breckenridge, Sec., Treas. and Gen. Mgr.

Tollerton, I. G.—Alliance, O. (Jewel.)

Tollner & Sons, Hugo.—292 Taaffe Pl., Brooklyn, N. Y. (Baker.)

Toluene.—A hydrocarbon closely allied to benzene (formula C_7H_8). It is extracted from the light coal-oils and constitutes one of the elements of the industrial products called benzols. It is extensively used in the india rubber industry for the same purposes as benzene. See Benzene.

Toman Bros.—Trenton, N. J. (Rambler.)

Tomenson, J. S.—Pres. Toronto Automobile Co., 6 Adelaide St., Toronto, Can.

Tompkins, Dr. Geo. J.—701 Church St., Lynchburg, Va. (Maxwell.)

Tompkins, Ray.—Vice-Pres. Eclipse Machine Co., Elmira, N. Y.

Tonawanda Iron & Steel Co.—Iron-ton St., Tonawanda, N. Y.; 60 Erie Co. Bank Bldg., Buffalo, N. Y. Mfrs. sheet and bar iron and steel.

Tone, F. I.—Designer and Gen. Mgr. American Motor Car Co., Indianapolis, Ind.

Toner, T. J.—Pres. Motor Car Maintenance Co., 247 W. 49th St., New York City.

Tongue.—A projection to fit a groove.

Tongue-joint.—See Joint, Tongue.

Tonneau.—An open vehicle having in front two bucket-seats or a single comfortable seat for two, and at the rear a body resembling in form, though quite vaguely, a cask cut through the middle. The rear affords accommodation for 2 or 3, on a seat parallel with the front one, or for four on two opposite seats parallel with the long axis of the car. The characteristic feature of the tonneau is a rear door by which to enter, and at the same time, rear panels rounded to form a rotunda. The rear entrance tonneau is now a thing of the past.

Tool Steel Castings Co.—90 Canal St., Boston, Mass. Mfrs. steel castings.

Toole, J. H.—Mgr. Chicago Branch,

Waltham Mfg. Co., 433 Wabash Ave., Chicago, Ill.

Tooley, A. J.—Vice-Pres. American Gasolene Motor Co., Baldwinsville, N. Y.

Tooling.—A term employed to denote machine processes in general.

Toot Toot.—311 Battery St., San Francisco, Cal. Pub. by the Toot Toot Pub. Co. monthly.

Tooth.—Something resembling a tooth in form or use, as one of the serrations of a saw or the cogs of a gear-wheel.

Top, Canopy.—A non-folding motor-vehicle top.

Topeka Automobile Club.—R. D. Montgomery, Sec., Topeka, Kan.

Topeka Automobile & Cycle Co.—7th and Quincy Sts., Topeka, Kan. Vulcanizing; supplies.

Toplitz, B. L.—Gen. Mgr. the Allenhurst Garage & Automobile Station, 135-47 W. 37th St., New York City.

Toplitz, George.—878 Broadway, New York City. Mfrs. ladies' and men's wearing apparel.

Toppan Boat Mfg. Co.—9 Haverhill Boston, Mass. Mfrs. motor boats.

Topsides.—That portion of a vessel's hull above the water-line.

Toquet Launch & Motor Co., The.—Saugatuck, Conn. Mfrs. motor boats.

Torbensen Motor Car Co.—Bloomfield, N. J. Mfrs. gasolene commercial automobiles.

Torch.—An auxiliary device for starting the fire in the gasolene burners of steam carriages.

Torch, Gasolene.—A lamp for the repair of leaks where the soldering-iron is used. It burns gasolene and can be filled from the supply of the motor-car. See Soldering.

Torchon et Meunier.—7 rue des Acacias, Paris, France. Mfrs. automatic starters.

Torgler, E. R.—Toledo, O. (Jewel.)

Torgorah, John.—Gottenborg, Sweden. (Northern.)

Toronto Automobile Club.—P. E. Doolittle Pres., Toronto, Can.

Toronto Automobile Co.—6 Adelaide St., Toronto, Can. (Pope-Toledo, Pope-Waverley, Pope-Hartford.) Incorporators: W. R. Hicks, Mgr., and J. S. Tomenson.

Torque.—A technical term for the effort that tends to cause a shaft to revolve. See Moment of Force.

Torque-rod.—See Torsion-rod.

Torrey, E. S.—Rockland, Mass. (Caddillac.)

Torrey Roller Bushing Co.—Bath, Me. Mfrs. gasolene marine motors, hub caps and name plates.

Torrilhon Société Anonyme des Anciens Établissements, J. B.—10 Faubourg Poissonnière, Paris, France. Mfrs. pneumatic rubber tires.

Torrilhon Société Anonyme des Établissements.—Chamalières, Clermont-Ferrand, France. Mfrs. solid tires.

Torsion.—Twisting or the effect of twisting.

Torsion-brake.—A dynamometric apparatus for measuring the horse-power of turbines.

Torsion, Elasticity of.—If one end of round bar, say a shaft (see figure), be rigidly fixed, and to the other be applied a couple, P, tending to produce a rotation which the resistant, R, tends to prevent, the stress produced in the bar will be in the nature of a "shear," and the

line ba originally at ca will the the "angle of torsion." The shear, then, is equal to the angle, α . If the actual amount of tangential force applied per unit of area to the upper end of the bar be q , we have the co-efficient of elasticity of

$$\text{Torsion} = \frac{q}{\alpha}$$

Such co-efficient is termed also the "simple rigidity." In the case of a solid round bar, as here supposed, the calculation of the co-efficient depends upon dividing the bar up into imaginary concentric disks, 1, 2, 3, each of infinitesimal thickness, and then effecting a summation of the results by integral calculus.

Torsion, Resistance to.—The torsional strength or resistance to twisting, in pounds per square inch, of various materials is as follows: Cast-iron, 25,000; Bessemer steel, 80,000; cold drawn steel, 80,000; cold rolled steel, 70,000; tool-steel, 100,000; wrought-iron, 45,000.

Torsion-rod.—A rod, called also a torque-rod," which, in nearly all motor-cars, extends from the rear live axle to the gear-case or a cross-piece of the frame, and the object of which is to prevent the tendency of the driving bevel-gear to roll around on the driven bevel, rather than to revolve it. Were it not for this rod, a continual strain would exist on the parts on account of the tendency of the axle-casing to revolve around the axle, instead of the latter being revolved inside of the casing. The torsion-rod maintains the casing in a correct position and prevents the bevel-gear from getting out of line.

Totman Carriage Works.—12th and French Sts., Erie, Pa. Garage.

Touch-contact Timer.—See Timer.

Touch-spark.—See Ignition.

Touring-car.—A car with stationary

rear seats and a capacity for carrying 5 to 6 persons, and of from 6 to 24 h.p.

Tourisme, Le.—Pub. at 17 rue de Helder, Paris, France.

Tourneur, C. et E.—20 rue Reaumur, Paris, France. Mfrs. jacks.

Tournier les fils de.—Morez, Jura, France. Mfrs. goggles.

Toutain fils et Cie, Frémy.—4 rue Thiébaud, Havre, France. Mfrs. automobile motors.

Touzelet, J.—Dourdan, Seine-et-Oise, France. Mfr. tire pumps.

Towe, Phillip A.—103 North St., Pittsfield, Mass. Garage.

Tower & Lyon Co.—95 Chambers St., New York City. Mfrs. Champion and Perfection screw drivers, engineers' wrenches, involute wrenches, combination plyers. Cap. \$100,000. Est. 1865. Inc. 1902. John J. Tower, Pres.; Thos. D. Halliwell, Vice-Pres.; Warren M. Tower, Treas.

Tower & Son, J. D.—Mendota, Ill. (National)

Tower, J. A.—Riverbank Court, Cambridge, Mass. Garage.

Tower, John J.—Pres. Tower & Lyon Co., 95 Chambers St., New York City.

Tower, Warren M.—Treas. Tower & Lyon Co., 95 Chambers St., New York City.

Towle & Co., E. H.—25 W. Main St., Waterbury, Conn. (Locomobile, Franklin, Cadillac.) Garage; repairs; supplies.

Towle, A. N.—540 Wabash Ave., Chicago, Ill. Garage.

Towne Patent Steering Wheel Co.—214 L. A. Trust Bldg., Los Angeles, Cal. Mfrs. steering wheels.

Townsend, Arthur R.—1148 Bedford Ave., Brooklyn, N. Y. (Knox.)

Townsend, Fred L.—Treas. Geo. H. Lowe Co., 509 Tremont St., Boston, Mass.

Townsend, G. M.—Maryville, Mo. (Earl.)

Townsley, Dr. R. H.—Wagner, S. D. Garage.

Toyah Rapid Transit Co.—Toyah, Tex. (Buick.)

Trabold, A.—217 Woodvale Ave., Johnstown, Pa. (Mitchell.)

Track.—The "track," "gauge" or "tread" of a vehicle is the distance from the center of the tire, on one side of the car, to the center of the tire on the same axle at the other side of the car. The track of automobiles usually varies from 50 inches in light cars to 60 in large ones, but the standard automobile track in America is the same as the railroad gauge, 56½ inches.

Traction, Co-efficient of.—The power required per unit of mass to move a motor-car at a constant speed on a given surface. It is generally expressed in pounds per ton.

Traction Tread Tire & Tube Co.—1695 Broadway, New York City. Mfrs. pneumatic tires.

Tractor.—A motor-vehicle used for hauling other vehicles.

Tractor Co., The.—3d and Trumbull Sts., Elizabethport, N. J. Mfrs. steam commercial automobiles.

Tracy, Joseph.

—Consulting Engineer, designer and racing driver. Was third in the 1905 Vanderbilt race, driving a Locomobile racer, and made creditable performances in many other races on both road and track. Is now devoting the major part of

his time to consulting work and experimenting.

Trageser Steam Copper Works, John.—447-457 W. 26th St., New York City. Mfrs. tanks and brass and copper tubing.

Tragin, E.—15 rue Montalivet, Paris, France. Mfr. la Providence motorcycles.

Trailer.—A vehicle hauled by a "tractor."

Train.—A set of wheels, or wheels and pinions in series, through which motion is transmitted in regular consecution

Trainer & Co., T. W.—Cambridge Bldg., Chester, Pa. (Glide, Jackson.)

Transfer Auto Station.—234 Dudley St., Boston, Mass. Garage.

Transformation of Energy.—See Energy

Transformer.—Same as Converter. See Converter (2).

Transformer, Rotary.—Same as rotary converter. See Converter.

Transmission, Flexible.—Flexible transmissions may be divided into two groups according as it is a question of transmitting an effort of torsion or traction. In the first case, flexible shafts are employed, which serve to connect a tool to its motor, the relative position of the latter being any, whatever. Flexible transmissions generally consist of two cores of steel wire wound in a very close spiral in two opposite directions. In the case of efforts of tractions, to be transmitted in any direction, the Bowden transmission may be profitably employed. This consists of a galvanized piano-wire sliding in a flexible, but incompressible tube, the extremities of which are fixed. The accompanying figure

gives a diagram of the Bowden device. The tube is held between two stops, C. C. Upon pulling the free extremity, D, of the cable, A, any motion desired is produced at the other. An antagonistic spring is necessary to pull the whole back to place, when the action on the point, D, ceases. The Bowden transmission has been applied to motor-cycle brakes, and, in some cases, to automobiles. An example of this latter application may be found in the cable leading to the brake-drums on the hubs of a motor-car.

Transmission-gear.—The gearing through which the power from the motor in a motor-vehicle is transmitted to the rear axle. There are four distinct types of transmission-gear, viz., sliding-gear, planetary-gear, individual clutch and friction drive. The first two systems are in general use, the individual clutch being employed only to a limited extent, and the friction drive having but few advocates. See Sliding-gear, Planetary-gear, and Friction-drive.
